PROF. CHARLES SMITH MORRIS, A.M., LL.D.

Of the Philadelphia Academy of the Natural Sciences

With the Assistance of the Following

ASSOCIATE EDITORS AND SPECIAL CONTRIBUTORS:

PROF. FREDERIC A. LUCAS, M.D., Ph. D.

Curator Department of Comparative Anatomy, U. S. National Museum, Washington, D. C.

PROF. MARCUS BENJAMIN, A.M., Ph D., F.C.S.

Of the Smithsonian Institute, Washington, D. C.

PROF. AMOS EMERSON DOLBEAR, A.M., Ph.D.

Professor of Physics, Tuft's College, Mass.

PROF. LEWIS SWIFT, Ph.D., F.R.A.S.

Director of Echo Mountain Observatory, California.

PROF. J. MARK BALDWIN, A.M., Ph.D.

Professor of Experimental Psychology, Princeton University.

PROF. SIMON NEWCOMB, LL.D., M.N.A.S.

Director U. S. Naval Observatory, Georgetown, D. C.

REV. JOHN F. HURST, D.D., LL.D.

Bishop of the M. E. Church and Chancellor of the American University, Washington, D. C.

MANSFIELD MERRIMAN, C.E., Ph.D.

Professor of Civil Engineering, Lehigh University.

CHARLES S. DOLLEY, A.M., M.D.

Late Professor of Biology, University of Pennsylvania.

REV. GEORGE T. PURVES, D.D., LL.D.

Professor of New Testament Literature and Exegesis, Princeton Theological Seminary.

PROF. DANIEL G. BRINTON, A.M., M.D.

Of the University of Pennsylvania, and President of the American Association for the Advancement of Science.

lating in a given time through any section of an artery will, *ceteris paribus*, be according to its diameter and its nearness to, or distance from, the heart.

Cafe (*kā-fē*) *n.* [Fr.] Coffee (the grain, the powder, and the infusion); also a coffee-house.

Cafenet, *n.* [Turk. *khāneh*, a house.] In Turkey, an inn, coffee-house, or caravanserai.

Caffa. See KAFFA.

Caffeic Acid, *n.* (Chem.) A substance existing in coffee. It much resembles gallic acid. (Sometimes called *Caffianic* or *Chlorogenic acid*.)

Caffeine, or **THEINE**, (*kā-fē-ēn*) *n.* (Chem.) A crystalline alkaloid found in tea, coffee, Paraguay tea, and in guarana, a species of chocolate prepared from the fruit of the *Paullinia sorbites*. Tea contains from 2 to 4 per cent. of caffeine, coffee but 1 per cent. It is easily obtained from tea by making a strong infusion of the leaves, mixing it with subacetate of lead, which precipitates the tannin, and transmitting a current of sulphuretted hydrogen through the liquid to precipitate the excess of lead. On evaporating the solution, and allowing it to cool, the caffeine crystallizes out in long silky needles. It has a weak, bitter taste, and fuses at 352°. Water and alcohol dissolve but a small quantity in cold, but it is very soluble in boiling water and ether. The fact that caffeine forms the essential principle of three substances used by widely different nations is a very curious one, and shows that the craving which it satisfies is as natural as it is universal. The use of tea or coffee as an article of diet seems to exercise a very important influence in retarding the waste in the tissues of the body. Its effect on the human system has, however, yet to be fully studied. *Form.*, $C_8H_{10}N_4O_2$.

Caffraria (*kā-fā-ri-ā*), **KAFFRARIA**, or **KAFFIR-LAND**, a region of S. Africa, extending from the N. E. confines of Cape Colony, in about Lat. 32° and 34° S., to Delagoa Bay; Lon. between 27° 30' and 29° 30' E. It is bounded on the W. by the Transvaal Territory, on the E. and S. by the Indian Ocean, and on the N. by a range of mountains running E. and W. *Surface*, mountainous, but beautifully wooded, and watered by several rivers. *Prod.* Millet, maize, and fruit. *Zoöl.* Elephants, lions, hippopotami, rhinoceroses, &c. *Clim.* Healthy.—Between 1835 and 1851, the Kaffirs made frequent incursions upon Cape Colony, and a war in 1847 led to an appropriation of a large portion of their territory, called *British Caffraria*, and in 1865 incorporated in Cape Colony. Another war broke out in 1877, which ended in the overthrow of the Kaffirs. By 1888 all C. up to the borders of Natal, with the exception of East Pondoland (a British protectorate) had become part of Cape Colony.

Caffre, **CAFFIR**, **KAFIR**, or **KAFFIR**, (*kā-fēr*) *n.* [Arabic, *kāfir*, an infidel.] An inhabitant of Caffraria in South Africa. The color of the C. is neither black, like that of the negro, nor of the color of a faded leaf, like that of the Hottentot, but a deep brown. Hair short, curling, and woolly; but it is not of the wooliness of the negro. Nose tolerably elevated; lips large and thick; but the lower maxillary bone does not project in the remarkable manner seen in the negro, and consequently the facial angle is much greater. The body, instead of being, as in the Hottentot, diminutive and feeble, is muscular and athletic, and the stature is equal to that of the European race, the peculiarities of the female form in their Hottentot neighbors having no existence among them; and the genius of their language is distinct and peculiar. In the useful arts they have made considerable progress. Besides domesticating the ox and sheep, they have also tamed the horse and goat, and their agriculture extends to the cultivation of rye and millet. It is a singular and distinctive trait that they practise universally the rite of circumcision. Of the origin of the practice they can give no account; and it has been most probably derived from intercourse, at some remote period, with some people by whom it was practised. They are believed to have received the name of *Caffre* from the Mohammedans, on account of their refusal to adopt the religion of Islam.

Caffre-bread, *n.* (Bot.) See ENCEPHALARTOS.

Caffristan, **CAFRISTAN**. See KAFIRISTAN.

Cafila, **Cafila**, **Kafila**, *n.* [Ar.] In Oriental countries, a caravan of travellers or merchants.

Caftan, **Kaftan**, *n.* [Fr. *caftan*; Turk. *gaftân*.] A kind of vest or body-garment worn by the Turks, Arabs, and Persians.

—*v. a.* To clothe with a caftan. (R.)

Cag, *n.* Same as KEG, *q. v.*

Fig. 469. — GIRL IN DANCING DRESS.

Caga'yan, a province in the island of Luzon, E. Archipelago; *pop.* abt. 60,000.

Caga'yon-soo'loo, an island of the E. Archipelago, in Lat. 6° 58' N., and Lon. 118° 28' E. It is abt. 20 m. in circumference, well wooded and elevated.

Cage, (*kāj*) *n.* [Fr. *cage*; Dan. *kerie*; Scot. *cavie*; Lat. *cavea*, an excavated place.] Originally, a hollow place, cave, or den; specifically, an enclosure formed of wire, twigs, &c., for confining birds and beasts: a stall; a coop.

—“And singing birds in silver cages hung.” — Dryden.

—A prison for petty malefactors.

“Stone walls do not a prison make,
Nor iron bars a cage.” — Lovelace.

(Carp.) An outer framing of timber used in building.

(Mach.) An appliance used to keep a valve in its place.

—*v. a.* To fasten in a cage; to shut up or confine.

Cage'ville, in Tennessee, a post-office of Haywood co.

Cage-work, *n.* (Shipbuilding.) The uppermost carved work of the hull of a ship.

Cagli, (*kā'lyē*) (anc. *Callis*) a town of central Italy, provs. Urbino and Pesaro, at the foot of Mount Petraro, 14 m. S. of Urbino; *pop.* 10,116.

Cagliari, (*Kā'lyairē*) (anc. *Calaris*), a maritime city of the island of Sardinia, of which it is the capital, is seated on a bay of the same name, on the S. shore of the island, in Lat. 39° 13' 14" N., Lon. 9° 7' 48" E. This city consists of four quarters, and a suburb, and has an imposing appearance from the sea. It has some splendid public buildings, as the royal palace, the citadel, the cathedral, and the university. It also contains 30 churches, a college of nobles, a public library, 21 convents, many schools, &c. The port is one of the best and safest in the Mediterranean, and the Gulf of Cagliari, 24 m. across, has good anchorage everywhere, after getting soundings. *Manuf.* Cotton fabrics, soap, saffron, &c., with a large trade in corn, legumes, salt, oil, and wine. — C. is very ancient, its foundation being carried back to the fabulous ages. It was the residence of the king of Sardinia, from 1798 to 1814, during the occupation of his continental dominions by the French. The latter bombarded it unsuccessfully in 1793. *Pop.* 28,244.

Cagliari, PAOLO. See VERONESE.

Cagliostro, ALESSANDRO, COMTE DE, (*kā'lye-os-tro*), the assumed title of a great impostor, whose real name was GIUSEPPE BALSAMO, b. at Palermo, of poor parentage, 1743. Having lost his father at an early age, he was placed under the protection of the Friars of Mercy, whose order he entered as a novice. Here he acquired the elements of chemistry and physic; but he speedily made his escape, and committed so many frauds in Palermo, that he was obliged to abscond. After visiting various parts, he at length reached Naples, where he married a woman of abandoned character, with whom he travelled to Spain, Portugal, and England, pretending to supernatural powers, and wringing considerable sums from those who became his dupes. In England they established an order of what they called *Egyptian Masonry*, and as their dupes were of the higher class, they easily obtained from them the loan of valuable jewels, on pretext of some intended ceremonial. With these they went to Paris, and lived there in the utmost extravagance. The Count, however, was thrown into the Bastille, on a charge of being concerned in the fraud of the celebrated “diamond necklace” of Marie Antoinette; and, upon obtaining his liberty he was compelled to quit France. He then went to England again, and soon after to Italy, where his wife divulged some of his crimes to the Inquisition. He was confined in the dungeons of the Castle of St. Angelo, and p. there in 1795. The *Mémoires Authentiques*, circulated under his name, are apocryphal.—Alex. Dumas, Sen., founded his well-known romance of *The Memoirs of a Physician*, on events in the life of C.

Cag'mag, *n.* An English provincialism for a tough, old goose;—heuce, the term is applied to rough, unpalatable food.

—An inferior breed of sheep.

Cagnano, (*kan-yā'no*), a town of S. Italy, prov. of Capitanata, 25 m. N.E. of Foggia; *pop.* 4,500.

Cagnola, LUIGI, MARQUIS DE, (*kan-yo'la*) an Italian architect, b. of an illustrious family at Milan, 1762. He was a member of the State council, and was much engaged in political affairs. His most celebrated works are the *Arco della Pace*, commenced in 1807, and the *Porta Ticinese* at Milan, the *Campanile* at Urgnano, completed in 1829, and the *Mausoleum* for the Metternich family. D. 1833.

Cahaw'ba, in Alabama, a river rising near the E. border of Jefferson co., and falling into the Alabama at Cahawba, in Dallas co. It is navigable for small boats for 100 m.

—A village, the former cap. of Dallas co., on the right bank of the Alabama river, about 92 miles below Montgomery.

Cahier, (*kā-ē-yā*) *n.* [Fr., from Lat. *codex*.] A number of sheets of paper tied loosely together.

(French Hist.) The reports and proceedings of certain assemblies; as those of the States-General, the clergy, the notables, &c. The famous cahiers presented by the States-General to the King of France, at their convocation, June 24, 1789, contains the best account of the then state of France. They were systematized and condensed in a book in 3 vols., called *L'Esprit des Cahiers*, to which the reader is referred.

Cahir, or **CAHER**, (*kar*), in Ireland, 2 small islands off the coast of Mayo.

—A thriving market-town of co. Tipperary, on the river Suir; *pop.* 4,000.

—A parish of Queen's co.

Cahiragh, (*kā'ler-ah'*) in Ireland, a parish of co. Cork.

Cahireiveen, (*Kar'se-reen*), in Ireland, a town of co. Kerry, 2½ m. E.N.E. of Valentia; *pop.* 1,569. Here Daniel O'Connell was born, 1775.

Cahircon'ree, in Ireland, a mountain of co. Kerry. On the summit are the remains of Druidical altars. Height, 2,764 feet.

Cahirconlish, (*kā-er-kau'lish*), in Ireland, a parish and village of Limerick co.; *pop.* 676.

Cahoes, COHOES, COHOOS, in New York, a thriving city of Albany co., on the right bank of the Mohawk river; *pop.* (1890) 22,500; (1897) abt. 25,000.

Cahoes Falls, in Mohawk River, N. York, 3 m. above its mouth. The river is here about 1,000 feet wide; and the rock over which it pours extends across, in a direct line from S.W. to N.E., and is 70 feet high. From the bridge three-quarters of a mile below, the falls are in full view.

Caho'ka, in Missouri, a post-village of Clark co., 20 m. W. of Keokuk, Iowa.

Caho'kia, in Illinois, a village of St. Clair co., at the mouth of Cahokia Creek, 5 m. E. of St. Louis.

Cahokia Creek, in Illinois, flows through Madison co., and enters the Mississippi River at Cahokia village.

Caho'fa, in Kansas, a flourishing township of Lyon county.

Cahoot, *n.* A company or partnership; as, to go in cahoot with a person. (A vulgarism used in the S. and W. States of the Union.)

Cahors, (*kā-hūr*) a town of France, dep. Lot, of which it is the cap., on the Lot, 60 m. N. of Toulouse. It is ill built, with crooked and narrow streets, but presents to notice some few fine ancient buildings. *Manuf.* woollens and paper. It has also a fair trade in an excellent red wine, the *Vin de Grave* (raised in its neighborhood), and in oil, hemp, and flax. C. is an ancient Roman station, and the birthplace of Pope John XXII., of the poet Clement Marot, and of Murat, king of Naples. *Pop.* 15,228.

Cah'to, in California, a post-village of Mendocino co., 44 m. N. of Utah.

Ca'phas, high-priest of the Jews, who condemned Christ, and was afterwards dismissed from his office by Vitellius, upon which he put an end to his life.

Ca'cos, a group of small rocky islands of the Bahamas, W. Indies, in Lat. 21° N., Lon. 72° W.

Cafa, **Caipha**, or **Haifa**, (*kā'i-fāh*) a sea-port town of Palestine, situated opposite Acre, upon a spur of Mount Carmel, and on the S. side of a wide semicircular bay, 4 miles across. It is the ancient *Hefa*, or *Sycaminopolis*. It covers but a small space of ground, and contains only a few minarets. The houses are built of rough unhewn sandstone, plastered over with lime, the roofs flat. *Pop.* abt. 2,000—Moslems, Christians and Jews. C., having a better anchorage than Acre, is fast eclipsing that city as a port, and within the last few years almost all the trade of Acre has been transferred to it. The river Kishon, referred to in Scripture, flows past the town.

Caille, NICOLAS LOUIS DE LA, (*kail*), an eminent French mathematician and astronomer, b. at Rumigny, 1713, became assistant to Cassini at the Observatory of Paris and afterwards professor of mathematics at the Collège Mazarin. In 1751 he visited the Cape of Good Hope for the purpose of studying the stars of the southern hemisphere, and he determined the position of 9,000 previously unknown. His principal works are, *Astronomie Fundamenta*, *Cours de Mathématiques pures*, *Cælum Australe Stellarum*, &c. D. 1762.

Caillet, GUILLAUME. See JACQUERIE.

Cailliand, FREDERIC, (*kail'le-ā*), a French traveller and geologist, b. at Nantes, 1787. After visiting Holland, Italy, Greece, Turkey, and Sicily, he passed into Egypt, and under the auspices of the Pasha, explored a portion of the Nile. He afterwards went into Nubia, and discovered, on Mount Zabarah, the emerald-mines which have been worked in the reigns of the Ptolemies; and was enabled, by his own exertions, to transmit to the pash ten pounds' weight of the precious stones which he found in the vast excavations of the mountain. He visited Thebes, and returned to Paris in 1819; but, before the expiration of the same year, he once more set out for Egypt, to prosecute his travels. He now visited the remains of the temple of Ammon, and other oases in the desert, and subsequently discovered Assour, above the confluence of the Taccasse with the Nile. In 1822 he returned to Paris, and afterwards took up his residence in Nantes. The results of his travels and discoveries are given to the world in various volumes. D. 1869.

Caillié, RENÉ, a French traveller, b. 1799 at Mauzé, celebrated for his journey to Timbuctoo. His notes, travel, arranged by M. Jomard, were published under the title of *Journal d'un Voyage à Tombouktou et Jenné dans l'Afrique Centrale*, 3 vols., Paris, 1830. D. 18.

Cail'loma, or CAYLLOMA, a town of Peru, cap. of province of the same name, dep. of Arequipa; *pop.* province abt. 27,000.

Caillon Lake, (*kail-loo'*), in Louisiana, in Terre Bon parish, 2 m. N. of the Gulf of Mexico, and about 10 long. It is connected with the Gulf of Mexico by Caillon Bayou.

Caimacan, CAIMAICAN, or KAIMACAN, (*kā'imā-kān*), [Turk.] A dignitary in the Ottoman empire, corresponding to that of lieutenant-governor. There are usually two C.'s, one residing at Constantinople as the governor, the other attending the Grand Vizier in the capacity of lieutenant. Sometimes there is a third, who attends the Sultan.

Cai'man, *n.* See CAYMAN.

Cain, (*kāin*). The first-born of the human race, and first murderer. (See ABEL.) He became an outcast, travelling to the E. of Eden, where he built a city.

ad a son, named Enoch. The Jewish tradition is, that he was slain by Enoch.

in, in *Indiana*, a growing township of Fountain county.

in'an, (*Script.*) son of Enos, and father of Mahalabel. — 2. Son of Arphaxad and father of Salah.

in Creek, in *S. Carolina*, joins the Catawba a few miles S.W. of Lancaster Court-House.

ines'ville, in *Missouri*, a post-office of Harrison co.

in'ites, or **Cain'ians**, *n. pl.* (*Ecol. Hist.*) A Gnostic sect that arose in the 2d century. They pretended that Cain was produced by a superior virtue to that which reduced Abel, who was thus easily overcome. They honored all the worst characters mentioned in Scripture, Judas among the number. Origen did not regard them as Christians.

inozo'ic, *a.* [*Gr. kainos*, recent, *zoe*, life.] (*Geol.*) A term applied to the upper stratified systems holding recent forms of life, as distinguished from *Mesozoic* (holding intermediate), and *Paleozoic* (holding ancient and extinct forms). The *C.* period embraces the tertiary and out-tertiary systems.

in's, in *Georgia*, a post-vill. of Gwinnett co.

in's, in *Pennsylvania*, a small post-village of Lancaster co.

in's Store, in *Kentucky*, a post-office of Pulaski co.

ins'ville, in *Tennessee*, a post-village of Wilson co.

in'tuck, in *N. Carolina*, a P. O. of New Hanover co.

in'ville, in *Wisconsin*, a post-office of Rock co.

ique. Caic, (*kā'ek'*) *n.* [*Fr. caïque*; *Sp. caïque*; *It. uccio*, from *Turk. qūig*, boat.] A skiff attached to a galley.

A boat used on the Bosphorus: as, the Sultan's *caïque*.

ira, (*sū ē'ra*) *n.* [*Fr. "It (the Revolution) shall go on."*] (*Hist.*) The burden of a famous revolutionary song, beginning with—

"Ah, ça ira, ça ira, ça ira!
Les aristocrates à la lanterne!"

It was composed in 1790 in denunciation of the French aristocracy, and for 4 years inflamed the lower classes, and incited them to deeds of cruelty. The melody is older than the words, having been a favorite air with Queen Marie Antoinette. It is not true, as has been asserted time and again, that this has become naturalized among the French national songs. This sanguinary song, associated with the most terrible scenes of the Revolution, is repudiated in France, even by those who are enthusiastic *doctrinaires* of the first Revolution.

ira, in *Virginia*, a post-village of Cumberland co., on Farris River, 60 m. W. of Richmond.

ird, (*kaird*) *n.* One who tramps the country to find work; an itinerant tinker; a vagrant.

"The tribes of gipsies, jockies, or *cairds*." — *Sir W. Scott*.

irn, (*kārn*) *n.* [*W. carn*; *Gael. carn*, *cairn*; *Ar. kern*, little hill.] A round or conical heap of stones erected as a sepulchral monument. They are found on the hills of England, Wales, and Scotland, and some have assigned to them a peculiar character, as receptacles for the bodies of criminals burnt in the wicker images of the Druids, &c. According to some antiquaries, *cairn* is distinct from *carneid*, the Welsh name for heaps of stones in the tops of high mountains (*Carneid David*, *Carneid Jewellyn*, &c.), which are said to have been sacrificial. Some cairns are undoubtedly sepulchral. In common language, a *cairn* is distinguished from a *barrow*, the former being a heap of stones, the latter a mound of earth; but in all probability they had for the most part the same object, and the difference of materials was merely occasioned by local circumstances. — See *BARROW*. A pile of stones erected as a landmark, as in exploring, surveying, &c.

irn'gorm Stone, *n.* (*Min.*) The name given to pellucid wine-yellow varieties of smoky quartz, after the mountain of Cairngorm, in Scotland, where they are found. They are much used for seals, brooches, and the larger forms of jewelry.

iro, or **KAHIRA**, (*Ar. El Kahireh*, "the victorious," sometimes called **GRAND CAIRO**, and by the inhabitants *Hus*), the modern capital of Egypt, and the second city of the Mohammedan world: chief residence of the Viceroy, and seat of his govt., near the right or E. bank of the Nile, about 12 m. above the apex of its delta, 112 m. E. of Alexandria, 97 S.E. W. of Damietta, and 75 W. of Suez, on the railway from Alexandria to Suez. Viewed from a distance, *C.* has a magnificent appearance, but, like most other Eastern cities, the charm departs upon closer inspection. A great part of it has long had an unenviable name for squalor and consequent unhealthiness, but the rigid police surveillance established by the later viceroys has effected such a change, that for cleanliness, as well as order, quiet, and the absence of crime, *C.* may now rank with the best governed cities of the civilized world. This city contains 240 principal streets, 46 squares, 11 bazaars, 140 children's schools, 300 public cisterns, 1,166 coffee-houses, 65 public baths, 406 mosques, and several good hospitals. The whole city is surrounded by a stone wall, and possesses a strong citadel built by Saladin about 1176. It is entered by four gates of considerable size and magnificence. *C.* has been of late greatly improved, and can no longer be altogether described as little better than a labyrinth of tortuous, narrow, unpaved lanes. New streets have been cut through the more crowded districts; and the Ezbekeeyah, the principal square of the city, has been transformed into public gardens with a lake in the center, while houses and shops of considerable pretensions have sprung up in the neighborhood. Within the citadel are the palace and harem of the Khedive, the mint, divan, state mosque, and arsenal. *C.*

has always been, and still is, the seat of the best schools for Arabic literature, and Mohammedan theology. Most European nations, as well as the American, have vice-

Fig. 470. — STREET IN CAIRO.

consuls here: it is the seat of the patriarch of the Coptic church; there are both Roman Catholic and Greek convents, and an English church. Few Europeans, however, reside in *C.* The neighborhood of this metropolis abounds with palaces and objects of great interest (too numerous to mention here). *C.* has manufactures of arms, accoutrements, gunpowder, clothing, paper, &c. — This city is supposed to have been founded by Jauhar, an Arab general under the first Fatimite caliph, in 970. The caliph Moez afterwards made it the cap. of his dominions, which distinction it retained until the overthrow of the Mameluke dynasty by the Turks, in 1517. It was the residence of the pasha of the Turkish prov. of Egypt till 1798, when it was taken by the French, who held it until its capture by the English and Turks, in 1801. *C.* was the scene of the massacre of the Mamelukes, by order of Mehemet Ali, in 1811. *Pop.* Including the port of Bonlac on the Nile, and Old Cairo, the number of inhabitants is 353,551, of which number abt. 250,000 are Egyptian Moslems, 10,000 Copts, and the remainder Jews and foreigners. *C.* was occupied by the English in Sept., 1882.

Ca'ro, in *Illinois*, the cap. of Alexander co., at the junction of the Ohio and Mississippi rivers, on a low point of land forming the S. extremity of the State, and subject to inundations. It is the S. terminus of the Illinois Central R.R., which connects with the Mobile and Ohio line, and is an important shipping point both by rail and water. *Pop.* in 1897, est. 15,000.

Cairo, in *Iowa*, a post-village of Louisa co., 7 m. W. of Wapello and 30 N.N.W. of Burlington.

Cairo, in *Kentucky*, a small village of Henderson co.

Cairo, in *Missouri*, a post-office of Randolph co.

Cairo, in *New York*, a post-township of Greene co., is drained by Catskill Creek.

Cairo, in *Ohio*, a village of Allen co., 6 m. N. of Lima.

— A post-office of Stark co.

Cairo, in *South Carolina*, a post-office of Edgefield district.

Cairo, in *Tennessee*, a village of Sumner co., on Cumberland River, 30 m. N.E. of Nashville.

Cairo, in *West Virginia*, a post-village of Ritchie co., 30 m. E. of Parkersburg.

Cais'son, *n.* [*Fr.* from *caisse*, a box or chest.] (*Mil.*) A tumbril, or wagon, in which ammunition for the use of artillery is carried. — A large wooden chest charged with powder and shell, and buried under or near any fortification, to be exploded, if necessary, like a mine.

(*Mar.*) A machine for raising vessels, resembling an enormous chest, with an air-tight chamber in the interior, which will not allow it to sink beyond a certain depth. In order to raise the vessel, it is sunk by letting the water into it, and brought under the ship's bottom, and there secured. The holes through which the water entered are then closed, and the water pumped out. This causes it to rise and lift the vessel, bringing the bottom out of the water for inspection and repairs, which can be thus effected without bringing the vessel into dock, or hauling her on shore.

(*Arch.*) A sunken pavel in a flat or vaulted ceiling, or in the soffit of a cornice: in ceilings they are of various geometrical forms, and often are enriched with rosettes or other ornaments.

(*Civil Engineering.*) An inclosure or large vessel, in which the foundations of a bridge are built in the dry; and the vessel being brought over the position assigned to it (the ground being first properly dredged, or prepared to receive it), the sides are removed, and the whole structure then subsides into its place. Sometimes the

sides are designed to remain, and the foundations in those cases are protected by loose stones thrown down around the caisson. — The term is also applied to a kind of gate, for the purpose of closing the entrance to graving docks or other similar works.

Caitawist'ky Creek, in *North Carolina*, flowing S.W. into Chowan River.

Caith'ness, a maritime county of Scotland, occupying its N.E. extremity, having on the W. the co. of Sutherland, and N.E. and N. the ocean. Dunnet Head, on the N. shore of this co., in Lat. 58° 40½' N., Long. 3° 22' W., is the most northerly point in Great Britain. *Area*, 712 sq. m. *Surface*, mountainous, and in many tracts covered by extensive moors. *Soil*, poor: oats and potatoes being the staple crops. Wick and Thurso, its principal towns, are, at present, the chief seats of the British herring fishery.

Caitiff, (*kā'tif*) *n.* [*It. cattiro*; *Lat. captivus*, a captive; from *capio*, to take.] Originally, a captive or slave. In a modern sense, a degraded wretch; a mean villain; a despicable slave.

"Vile caitiff! vassal of dread and despair,
Unworthy of the common breathed air." — *Spenser*.

— *a.* Resembling, or partaking of, the qualities of a caitiff; mean; vile; despicable.

Cains, or **KAY**, (*kaze*) **JOHN**, B. at Norwich, England, 1510, was physician of Edward VI. and queens Mary and Elizabeth. He d. at Cambridge, 1573, leaving his estate for the founding of Gonville Hall, Cambridge, into a college, now called Gonville and Caius College.

Cajanus, *n.* [From the Malay name *Catjang*.] (*Bot.*) A genus of plants, sub-order *Papilionaceæ*. The species yield a kind of pulse, known as pigeon-peas, much used for food by the poor of the West Indies. In Jamaica, pigeons are usually fed with these seeds; hence, their English name.

Cajaput, *n.* (*Bot.*) See *MELALEUCA*.

Cajazzo, (*kah-jat'zo*), a town of S. Italy, prov. Caserta, on a hill near the Volturmo, 11 m. N.E. by E. of Capua. This town is very ancient, and is defended by a castle built by the Lombards. *Pop.* 6,501.

Caj'eput, *n.* See *MELALEUCA*.

Cajetan, (*kah-ya-tan*'), **THOMAS DE VIO**, an Italian cardinal, B. at Gaeta, 1469. In 1518, Leo X. sent him as legate into Germany, his high character and his learning giving him great weight and influence. Luther appeared before him at Augsburg, but their conferences were without result: the legate insisting on one point—retraction—and the monk steadily refusing. *C.* was soon after named Bishop of Gaeta, was again sent into Germany in 1523, and was taken prisoner at the sacking of Rome in 1527. D. 1534.

Cajole, (*ka-jöl'*) *v. a.* [*Fr. cajoler*.] To coax; to court; to wheedle; to entrap; to delude or deceive by flattery.

"Thought he 'tis no mean part of civil
State prudence, to cajole the devil." — *Hudibras*.

Cajole'ment, *n.* Deception by wheedling measures; cajolery.

Cajoler, *n.* One who cajoles; a flatterer; a deluder.

Cajol'ery, *n.* Flattery; a wheedling to delude.

Cake, (*kāk*) *n.* [*Du. kock*; *Swed. kaka*; *Ger. kuchen*, from *kochen*, to cook, to boil; *Lat. coquo*, to cook, to bake.] A small round mass of dough baked; a composition of flour, butter, sugar, &c., baked into a small round mass.

"Dost thou think, because thou art virtuous, there shall be no more cakes and ale?" — *Shaks*.

— Anything in the form of a cake; a mass of matter concentered; as, a *cake* of soap.

"And cakes of rustling lee come rolling down the flood." — *Dryden*.

— *v. a.* To form into a cake or mass.

— *v. i.* To concenter, or form into a hard mass.

"And clotted blood that cak'd within." — *Addison*.

Ca'kile, *n.* (*Bot.*) A genus of plants, order *Brassicaceæ*. The Sea Rocket, *C. maritima*, native of the sea-coast and of the lake-shores of New York, is a smooth, succulent plant, branching and procumbent, 6-12 inches long. Leaves minute-deutal, caducous; flowers on short, fleshy peduncles, in terminal spikes or racemes; petals purple, obtuse at end; blossoming in July.

Cak'ing Coal, *n.* A term applied to those kinds of bituminous coal which form a pasty cake, or swell and expand in the fire somewhat in the manner of borax when exposed to heat.

Cal, *n.* (*Mining.*) In Cornwall, England, a term given to a kind of iron gossan stone found in the bryle and backs of lodes, much of the color of old iron; reckoned a poor brood with tin.

Calabar', a territory of Western Africa, situate on Cross River, which is of considerable magnitude, and forms, at its mouth, a species of estuary, opening into the Bight of Biafra. The principal towns on its banks are Accoos, Coons, and Omun, or Bosun, on an island of the same name. There are also places called Duke Town, and Creek Town, which are the seats of missions. — *New Calabar*, a branch of the Niger, falls into the Bight of Biafra. The town of *C.* is situated on an island formed of two branches of the river. Since 1884, all of *C.* is embraced in the British Niger Protectorate.

Calabar' Bean, *n.* The product of the *Physostigma venenosum*, imported from Africa, where it is used medicinally, and as an ordeal in cases of suspected crime; if it causes vomiting, it indicates *innocence*; if purging, *guilt*. It operates as an emetic and purgative, and also as a narcotic poison; it induces fainting fits, and partial paralysis. It has been lately asserted that the *C. B.* is an antidote to Strychnia.

Calaba'sas, in *Arizona*, a post-office of Pima co.

Cal'abash, *n.* [*Sp. calabaza*.] The fruit of the Calabash tree, also called Bottle-Gourd. It contains a pale yellow.

juicy pulp, of an unpleasant taste; and is covered with a greenish yellow skin, enclosing a thin, hard, and woody shell, which is employed in the West Indies in lieu of various kinds of domestic utensils, such as bottles, cups, and goblets of every description. They are often highly polished, and curiously carved with colored figures. The rinds of gourds are also sometimes similarly used, and called *Calabashes*.

Fig. 471. — CALABASHES.

Calabash-tree, *n.* (Bot.) See CRESCENTIA.

Calaboose, *n.* [From *Sp. calabozo*, a dungeon.] A term given in some parts of the U. S. to a prison, jail, or cell.

Calabozo, an inland town of S. America, in Venezuela, prov. Caracas, near the Guarico River, 11 m. N. by E. of Capan; Lat. 8° 55' N., Lon. 67° 42' W. Many of its inhabitants are prosperous cattle farmers. Pop. abt. 5,000.

Calabria, (*ka-la'bré-a*), a former province of the Neapolitan dominions, and now the most S. portion of the kingdom of Italy, between 37° 46' and 40° 7' N. Lat., and 15° 39' and 17° 13' E. Lon.; having N. the prov. Basilicata, N.E. the Gulf of Tarento, S.W. the Strait of Messina, and in the rest of its extent, the Mediterranean. It comprises the chief of the two peninsulas at the extremity of Italy, and forms what is called the "foot of the Italian boot." The surface of *C.* is very mountainous, being intersected by the lateral chain of the Apennines, which attain here a considerable height, Monte Silo reaching an elevation of 4,632 feet above sea-level. The plains are few and of no great extent, but it is well watered by mountain streams, and has many small lakes. No part of Europe presents a greater variety of fine scenery than this. It is truly a land "of the olive and the vine, the mountain and the flood." — *Soil and Prod.* The former is generally good, producing corn, olives, capers, saffron, and cotton; fruits of every kind flourish luxuriantly; the coasts abound with fish, and the woods with game. Timber of large size is plentiful, and marble, alabaster, crystal, and rock-salt yield in abundance. The Calabrese may be generally termed a race of mountaineers, good-looking, and picturesque in their dress, but prone to brigandage and mendicancy. — Before the Roman dominion, *C.* formed part of *Magna Græcia*, a region that comprised all Italy S. of Naples. After the fall of the Roman Empire, it fell under the sway of the Goths, and subsequently of the Greek emperors, the Arabs, and finally of the Normans. At the reorganization of the old provs. under the govt. of the king of Italy, in 1861, *C.* was divided into the 3 new provs. of *Cosenza*, *Reggio*, and *Catanzaro*. Pop. 1,306,104.

Calade, *n.* (*Manège*.) The rise of an elevated ground for the exercise of horses.

Caladimm, *n.* (Bot.) A genus of plants, order *Araceæ*. The species are mostly natives of S. America and the West Indies, and are frequently cultivated as stove-plants in this country for the sake of their elegant spotted stems and neat leaves. They have the same general appearance as the species of *Arum*, and resemble them in being all more or less acrid. The species *C. sequinum* is highly poisonous, and when any part is chewed, the tongue swells so much that the power of speech is lost. On this account, it has received the popular name of "dumb-cane." *C. sagittifolium*, the Brazil cabbage, is cultivated in many parts of the world for its leaves and root-stock, which, when boiled, are edible. The leaves are preferred, and are said to form a most nutritious and delicate vegetable. The corms of many other species, when cooked, are edible.

Calah, (*Anc. Geog.*) a city of Assyria, built by Ashur, or Nimrod (*Gen.* x. 11, 12). It was at some distance from Nineveh, and is thought to have been near the river Lycus, the great *Zab*, which empties into the Tigris.

Calahorra, (*anc. Calagurnis Nasica*), a city of Spain, prov. Soria, on the Cidacos, 24 m. S.E. of Logroño. It possesses an agricultural trade. Quintilian is reputed to have been born here. Pop. 7,816.

Calais, (*kal'aiz*), a fortified sea-port town of France, dep. Pas-du-Calais, on the Straits of Dover, 19 m. N.N.E. of Boulogne. It is generally well built, the houses being of brick, and the streets broad and straight. A new tidal harbor, 15 acres in extent, quay wall, graving dock, and other improvements, costing abt. \$14,000,000, will soon revolutionize *C.* The ramparts, which are planted with trees, form an agreeable promenade. *C.* derives its principal importance from its being the nearest French port to England; it is only 20½ m. from the S. Foreland, and 22½ from Dover, with which it has daily steam-communication. The mail steamers from Dover, arriving twice a day, make the passage in about 1½ hours. The entrance to the harbor is between two piers nearly ¾ m. in length. The anchorage is good. — *Manf., &c.* Lace, salt, and liquors; vessels are fitted out for the deep-sea fisheries, and the town derives much benefit from the transit of travellers to and from England. Edward III. of England took *C.*, after a long and memorable siege, in 1347. The obstinate resistance made by the besieged so much incensed that monarch, that he determined to put to death six principal burghers of the town, who, to save their fellow-citizens, had magnanimously placed themselves at his disposal. By the tears and entreaties of his queen Philippa, he, however, spared them. The English held possession of *C.* for more than two centuries, and its loss (being taken by the Duc de Guise in 1558) so much affected Mary, Queen of England, that

when dying she is said to have uttered, "When I am dead, you shall find Calais lying in my heart." In 1596, it was taken by the Archduke Albert, but in 1598 was restored to France. Pop. 1890, 55,000.

Fig. 472. — CALAIS. — THE OLD BELFRY.

(From "Voyage dans l'Ancienne France.")

Cal'ais, in *Maine*, a city of Washington co., 28 m. N. by W. of Eastport, at the head of tide-water on St. Croix River, 30 m. from the sea, and opposite the English town of St. Stephen, with which it communicates by means of 4 bridges. Lumber and ship-building are the two most important branches of trade.

Calais, in *Minnesota*, a village of Crow Wing co., 12 m. E. of Mississippi River.

Calais, in *Ohio*, a post-village of Monroe co., about 100 m. E. of Columbus.

Calais, in *Vermont*, a post-township of Washington county.

Calaité, *n.* (*Min.*) See TURQUOISE.

Calamagrostis, *n.* (Bot.) A genus of plants, order *Graminææ*. It is distinguished by having a contracted panicle; glumes 2, subequal, acute, or acuminate; paleæ 2, mostly shorter than the glumes, surrounded with hair at base, lower one mucronate, mostly awned below the tip, the upper one often with a stipitate pappus at base. *C. Canadensis* and other species are found in the U. States.

Calamanco, (*kal-al-mang'ko*), *n.* [*Sp. calamaco*, from *L. Lat. camelauum*, from *camelus*, a camel.] A woollen stuff of a fine gloss, and checkered in the warp, originally made of camel's hair.

"He had a red coat, flung open to show a calamanco waist-coat." — *Tatler*.

— A kind of cap or mitre.

Calamander-wood, *n.* See DIOSPYROS.

Calamar, *Calamary*, *n.* (Zool.) See SQUID.

Calambac, *n.* A name sometimes applied to a fragrant species of *AGALLOCHUM*, *q. v.*

Calambour, *n.* A commercial name for a species of aloes-wood, or *AGALLOCHUM*, used by cabinet-makers. It is of a light, friable texture, less fragrant than calambac, and of a dusky or mottled color.

Calamianes, (*kal-al-mi'ah-neez*), a group of islands, in the E. Archipelago, Lat. about 11° 25' to 12° 20' N., Lon. 120° E. Calamianes, the largest of the group, is about 35 m. long by 15 broad. It is a Spanish settlement.

Calamiferous, *a.* Reedy; producing reeds.

Calamine, *n.* [*Lat. calamus*, a reed.] (*Min.*) A native carbonate of zinc.

Electric calamine is a silicate of zinc, found in various parts of America in rhombic prisms and in massive incrustated aggregations. On being heated, it possesses electric properties; whence its name. It is an important ore of zinc. — See ZINC.

Calamine, in *Wisconsin*, a post-village of Lafayette co., on the Pecatonica River, 10 m. S. of Mineral Point.

Calamine, or **Calamus**, in *Wisconsin*, a township of Dodge co., 11 m. W. of Juneau.

Calamintha, *n.* [*Gr. kalos*, beautiful, *mintha*, mint.] (Bot.) A genus of plants, order *Lamiacææ*. Some species are known respectively by the trivial names of mountain-balm, cat-mint, basil-balm, and wild basil. The first, which is also termed the common calaminth (*C. officinalis*), has aromatic leaves, which are frequently employed by country people to make herb-tea, and as a pectoral medicine.

Calamite, *n.* (*Min.*) A soft, translucent kind of tre-

molite of an asparagus-green color, found in rhombic prisms in serpentine, at Normarken in Sweden.

(*Pal.*) Fossil stems occurring abundantly in the coal-measures. They are hollow-jointed cylinders, with longitudinal furrows, and their flattened condition proves that they must have been so soft as to offer little resistance to pressure. The true affinities of the gigantic plants, of which these are the remains, have not yet been perfectly determined. According to the published researches of Messrs. Binney and Carruthers, they would belong to the actual order *Equisetaceæ*.

Calamitous, *a.* [*Lat. calamitosus*; *Fr. calamiteux*.] Miserable; involved in distress; unhappy; wretched; — applied to persons.

"This is a gracious provision God Almighty hath made in favor of the necessitous and calamitous." — *Calamy*.

— Full of misery; making wretched; distressful; — in relation to external circumstances; as, a calamitous event.

"In this sad and calamitous condition." — *South*.

Calamitously, *adv.* In a calamitous manner; inducing distress.

Calamitousness, *n.* Misery; wretchedness; distress.

Calamity, *n.* [*Lat. calamitas*. Probably from *cado*, to fall, through *adj. calamis*, written by Pompey *cadamis*.] A downfall; any great misfortune; disaster; distress; affliction; unhappiness; misery; adversity.

"Calamity is man's true touchstone." — *Beau. and Fletcher*.

Calamus, *n.*; *pl. Lat. CALAMI*, Eng. CALAMUSES. [*Lat.* from *Gr. kalamos*, a stalk, stem, or reed.] A sort of reed, probably the stem of *Arundo donax*, which the ancients used as a pen for writing. To this day the Arabs generally write with a reed pen that they call *kalām*. — The name was also applied, by the ancient poets, to a pipe of reed, probably resembling a modern fife or flageolet, on which enamoured shepherds would play.

(*Bot.*) A genus of plants, order *Palmaceææ*. It consists of numerous species, all having very slender stems, which are found climbing over the trees in the forests of the hotter parts of the East Indies. Some of the best descriptions of walking-canes are obtained from the plants of this genus. The Malacca cane is the produce of *C. Zalacca*; Rattan cane, of *C. scipionum* and *rudentum*; and Partridge cane, of an undetermined species. — The natural section of *C. draco* constitutes the best *D'Juran* or *Dragon's blood*, a dark-colored, insipid resin; a second, or rather inferior, kind is produced from the fruit from which the natural secretion has been removed by heat and bruising; the third, and most inferior, kind appears to be the refuse of the last process. — *C. aromanticus* is the name given by the ancients to a plant generally supposed to be the Sweet flag, (see ACORUS,) and probably identical with the *Sweet C.* and *Sweet Cane* mentioned in Scripture (*Exod.* xxx. 23, and *Jer.* vi. 20).

(*Anat.*) The name of *C. scriptorius* is given to a small, angular cavity, situate at the superior extremity of the medulla, in the fourth ventricle of the brain, which has been, by some, supposed to resemble a pen.

Calando, *n.* [*It.*] (*Mus.*) Growing slower and softer, diminishing in loudness and force from forte to piano. It differs from *decrescendo* or *diminuendo*, as the tempo at the same time, is slightly retarded, but not so much as in *ritardando*.

Calandra, *n.* [*Fr. calandra*.] (*Zool.*) A genus of coleopterous insects, family *Curculionidææ*, some of the minute species of which commit great havoc in granaries, both in their larval and perfect state. The species are very numerous, and among them is the well-known Corn-weevil (*Calandra granaria*). This insect bores a hole into the grain with its proboscis, and there deposits a egg, which turns to a little grub, and devours the whole of the inside of the grain, leaving the husk entire. At other species of *C.*, distinguished by its having four red spots on its elytra, attacks rice in the same way as the one above mentioned does wheat. These insects must not be confounded with the still more destructive larvæ of the Corn-moth (*Tinea granella*), which also attacks stored grain; nor with the orange-colored maggots of the Wheat-fly (*Cecidomyia tritici*), which are found in the ears of growing wheat. Although the grain-weevils are not actually injurious to vegetation, yet as the name properly belonging to them has often been misapplied, some remarks upon them here may not be inappropriate. The true Grain-weevil or Wheat-weevil of Europe (*Calandra granaria*), in its perfect state, is slender beetle of a pitchy red color, about one-eighth of an inch long, with a slender snout slightly bent downwards. This little insect, both in the beetle and grub state, devours stored wheat and other grain, and often commits much havoc in granaries and brew-houses. Its powers of multiplication are very great, for it is stated that a single pair of these destroyers may produce about six thousand descendants in one year. The female deposits her eggs upon the wheat after it is housed, and the young grubs hatched therefrom immediately burrow in the wheat, each individual occupying alone a single grain, the substance of which it devours, so as often leave nothing but the hull; and this destruction goes on within, while no external appearance leads to its discovery, and the loss of weight is the only evidence of mischief that has been done to the grain. In due time the grubs undergo their transformation, and come out of the hulls in the beetle state, to lay their eggs for another brood. These insects are effectually destroyed by kiln-drying the wheat; and grain that is kept cool, well-ventilated, and frequently moved, is said to be exempt from attack.

Fig. 473. — RICE-WEEVIL, (*C. oryza*.)

alan'gay, *n.* A species of white parrot.

alexander, an Indian philosopher, much esteemed by Alexander the Great. At the age of 73, being seized with illness at Pasargada, he caused a funeral pile to be erected, which he ascended with a composed countenance, and expired in the flames, saying, that having lost his health and seen Alexander, life had no more charms for him. B. C. 323.

alapoo'ya, or **Calapoo'ia River**, (also written CALAPUYA,) in Oregon, a stream of Linn co., flowing into the Willamette at Albany.

alapoo'ya, in Oregon, a village of Linn co., on the Calapooya River, 24 m. E. of Albany.

alappa, *n.* (Bot.) The *Box crab*, a genus of crustacea of the Decapods family. They have crested chelæ, which are large, equal, compressed; with their upper edge, which is notched or crested, very much elevated, and fitting exactly to the external border of the shell or carapace, so as to completely cover the mouth and anterior parts; the rest of the feet short and simple; carapace short and convex, forming behind a vaulted shield, under which the posterior legs are hidden when the animal is in a state of repose; eyes mounted on short pedicles, and not far apart. There are several species widely diffused: some inhabit the seas of the Indian archipelago, and of New Holland; others are met with in the Pacific and Atlantic oceans, the seas of South America, &c.; others, again, inhabit the Mediterranean sea. They frequent the fissures of rocks, some of them at a great depth. The females deposit their eggs in summer.

al'ary, in Ireland, a parish of co. Wicklow.

alas, JEAN, a Protestant merchant of Toulouse, memorable as the victim of judicial murder. His eldest son committed suicide; and as he was known to be attached to the Roman Catholic faith, a rabble cry arose that he had on that account been murdered by his father. It was in vain that the unhappy parent pointed out the fact that he had a Roman Catholic servant who was uninjured. He was condemned literally without the shadow of a proof of his guilt, and put to death by being broken on the wheel. Voltaire generously pleaded the cause of the unhappy family, the process was revised, and the widow procured a pension. The unjust and ignominious death of C took place in 1762.

alascibet'ta, a town of Sicily, Val di Caltanissetta, cant., 15 m. N.E. of the latter city; pop. 5,575.

alash', *n.* [Fr. *calèche*; Pol. *kolaska*, from *kolo*, a wheel.] A small low-wheeled carriage or chariot, employed for taking exercise in parks, gardens, &c. It is generally provided with a hood or covering, which can be raised or drawn down at the pleasure of the occupant, so as to make it either a close or an open carriage.

"Daniel, a sprightly swain, that us'd to flash
The vigorous steeds, that drew his lord's calash."—King

A hood or covering of a carriage movable at pleasure.

A sort of stiffened hood for protecting a lady's head-dress.

alasparr'a, a town of Spain, prov. Murcia, 40 m. N.W. of Murcia city; pop. 5,886.

alatabello'ta, or **CALTABELLOTA**, a town of Sicily, Val di Girgenti, on the summit of a high mountain, near to, and overlooking, the river of the same name, 10 m. N.E. of Sciacca; pop. 6,186.

alatafi'ui, a town of Sicily, Val di Napani, 8 m. S.W. of Alcamo. This is an ugly, ill-built place, but situated in a fine country. Pop. 10,536.

alatagirone, or **CALTAGIRONE**, (*ka-la'tazh-e-ro-nai*), a town of Sicily, Val di Catania, 35 m. S.W. of the latter city. This is, perhaps, the richest, best governed, most industrious, and handsomely built city in the island. *Manf.* Porcelain, saffron, colors, &c. Pop. 20,411.

alatañazor, a town of Aragon, Spain, about 10 m. S.W. of Soria, celebrated for a great victory over the Christians obtained by Almanzor, in 1001; pop. about 1,500.

alataniset'ta, or **CALTANISSETTA**, a fortified town of Sicily, cap. of prov. of same name, in a large and fertile plain, on the Salso, 62 m. S.E. of Palermo. It is handsome and well built. Pop. 20,411.

alatay'ud, (anc. *Bilbilis*), a city of Spain, prov. of Aragon, on the Jalon, 45 m. S.W. of Saragossa, and 115 N.E. of Madrid. It is a pleasant, handsomely built city, and possesses thriving manufactures of cloths, paper, and leather. It is noted as being the birthplace of Martial. Pop. 10,803.

alathian-violet, *n.* (Bot.) See GENTIANA.

alathium, or **Calathid'ium**, *n.* [Gr. *kalathion*, a little basket.] (Bot.) A term employed by some German botanists to denote that kind of depressed inflorescence which is found in composite flowers. It is in reality an umbel with all the flowers sessile.

alatra'va la Vieja, in Spain, the remains of the ancient city of Calatrava, the *Oretum*, or *Orea*, of the Romans, on the Guadiana, prov. La Mancha, 12 m. N.E. of Ciudad Real, and 15 N. of Almagro. The order of the *Knights of Calatrava* had its origin here. The city being menaced by the Moors, in 1158, was abandoned by the Templars, who had held it for 10 years, and Sancho III. promised it to anyone who would undertake its defence. Raymond, abbot of Fietero, and Diego Velasquez offered themselves for the task, and were furnished with

money, arms, and ammunition. A crusade was proclaimed, and plenary indulgences were granted to all who should be found at the defence of the city. The Moors, alarmed at the report of these preparations, abandoned the enterprise, and Velasquez, in his turn, made several incursions into their territories. Upon this, the king confirmed the grant, with new donations. The order was then regularly organized into two classes, one for the service of the choir, and the other for the field; but the knights, on the death of Raymond, separated themselves from the monks, and chose a grand-master distinct from the abbot, who returned with his monks to Fietero. The knights subsequently acquired great fame and riches in their contests with the Moors; but having sustained serious reverses, and quarrelling among themselves, the Pope adjudged the grand-mastership in perpetuity to the crown of Spain. The order has lost most of its possessions, and, at present, is little more than an order of rank. The robe of the order is a white mantle, with a red cross cut out in the form of lilies, on the left breast.

Calave'ras, in California, a N. central co., with an area of about 1,000 sq. m. It derives its name from Calaveras River, running centrally through it, is bordered by Amador co. on the N.W., by Alpine on the N.E., by Tuolumne on the S.E., and by Stanislaus and San Joaquin cos. on the S.W. The Mokelumne River separates it from Amador, and the Stanislaus River from Tuolumne co. Bear Mountain, a rocky, wooded range, about 2,000 feet high, strikes northward across the middle of the co., dividing this central portion into two sections, the lower of which includes a rich copper-mining district, and also many valuable quartz lodes. Placer mining is profitably conducted in a number of localities. Through an elaborate system of canals this co. is generally well supplied with water. Agriculture, viniculture, and stock-raising receive a good deal of attention in C. Its magnificent grove of mammoth trees (*Sequoia gigantea*) is a great center of attraction for visitors. Cap. San Andreas. Pop. in 1897, about 9,200.

Calcaire-grossier, (*käl-kaïre-gros'se-ai*.) [Fr. coarse limestone.] (Geol.) An important member of the Eocene group of beds in the Paris basin, usually coordinated with the Barton, Bagshot, and Bracklesham beds of England. A compact silicious limestone called *calcaire-siliceux* (flinty limestone), takes sometimes the place of the Calcaire-grossier, in the same basin.

Calca'neal, *a.* (Anat.) Pertaining to the great bone of the heel, or *calcaneum*; as, *calcaneal arteries*.

Calca'neum, *n.* [Lat. *calx*, gen. *calcis*, the heel.] (Anat.) See HEEL.

Cal'ear, *n.* [Lat. *calcaria*, a lime-kiln.] (Glass Manf.) A small oven or reverberatory furnace, in which the first calcination of sand and potash is made for turning them into frit, from which glass is ultimately made.

(Bot.) A petal lengthened at the base into a hollow tube or spur;—called also *nectaretheca*.

Cal'carate, *a.* [Lat. *calcar*, spur; from *calx*, heel.] (Bot.) Furnished with a spur, as the flower of the violet.

Calca'reo-argilla'ceous, *a.* Consisting of, or pertaining to, calcareous and argillaceous earth.

Calca'reo-bitu'minous, *a.* Consisting of, or containing, lime and bitumen.

Calca'reo-sil'icious, *a.* Consisting of, or belonging to, calcareous and silicious earth.

Calcareous, (*käl-kaï'ri-us*), *a.* [Lat. *calcarius*, from *calx*, *calcis*, a stone, limestone, lime.] Partaking of the nature of lime or chalk; containing lime.

Calca'reous Earth, *n.* (Min.) The same as lime, of which there are various combinations, as marble, limestone, marl, gypsum, &c.

Calca'reousness, *n.* State or quality of being calcareous.

Calca'reous Spar, **Calcite**, *n.* (Min.) Crystalline carbonate of lime, composed (when pure) of 44 per cent. of carbonic acid and 56 lime. It occurs massive, disseminated and crystallized, in numerous forms, all of which are reducible to an obtuse rhombohedron, which is the primary form. The color is generally white, with a vitreous lustre, but sometimes it is of various shades of gray, red, green, or yellow, owing to an admixture of iron, manganese, bitumen, or other impurities. It passes from perfect transparency to complete opacity. The white transparent varieties are often iridescent. The purest and most limpid kind of this spar is procured in Iceland, which, in common with other transparent varieties, exhibits double refraction to a remarkable degree. Calcite spar is a mineral of universal occurrence found in veins and rocks belonging to every formation, in all parts of the world.

Calca'reous Truffa, **CALC-TEFF**, *n.* (Min.) A mineral formed in volcanic districts by the deposition of calcareous matter in a more or less compact form.

Calca'reous Waters, *n. pl.* (Geol.) Carbonate of lime dissolved in pure water to the extent of 2 or 3 grains to the gallon; but when carbonic acid is present,

Fig. 475.

RED CROSS OF KNIGHTS OF CALATRAVA.

it is much more freely taken up. If, however, the temperature be raised, the carbonic acid escapes, leaving behind a crystalline deposit of carbonate of lime. In nature, enormous crystalline concretions of this kind are formed by water charged with carbonic acid, percolating calcareous strata.—*Stalactites* are formed by water charged with carbonic acid and carbonate of lime dripping from the roof of a cavern, and leaving behind a portion of carbonate of lime before it drops. When it falls on the floor of the cavern, another deposition of calcareous matter takes place, forming a *stalagmite*, which gradually rises to meet the stalactite above it; in this way a natural pillar is formed. Most spring-water contains carbonate of lime held in solution, which is deposited on the sides of the vessel when the carbonic acid is expelled by heat. In steam-boilers this becomes a great inconvenience, and is obviated by adding sal-ammoniac to the water. Chloride of calcium is formed, which remains dissolved, while the carbonate of ammonia is volatilized with the steam. Water containing carbonate of lime in solution, or *hard water*, as it is popularly termed, is therefore softened by means of boiling. Hard water precipitates soap as *stearate* and *margarate of lime*, forming the well-known curdy precipitate. Until the whole of the lime is thrown down, no lather can be formed; hard water is, therefore, very economical for washing purposes.

Calcasieu, in Louisiana, a river rising in the W. part of the State, and flowing into the Gulf of Mexico, after a course of 250 m. Not navigable.

—A S.W. parish, bounded on W. by the Sabine River, on S.E. by the Mermentau, and intersected by Calcasieu River. Area, 5,500 sq. m. Surface, undulating, interspersed with savannas and plains. Soil, fertile near the streams. Pop. (1897) abt. 25,000. Cap. St. Charles.

Cal'casieu Lake, in Louisiana, in the above parish, is an expansion of Calcasieu River; length, 18 m.; breadth, 6 m.

Calcaval'la, *n.* A Portuguese sweet wine, highly esteemed.

Cal'ceated, *a.* [Lat. *calceatus*.] Shod: fitted with shoes.

Calcedon'ic, **Calcedo'nian**, *a.* See CHALCEDONIC.

Cal'cedony, **Calcedo'nyx**, **Cal'cedon**, *n.* See CHALCEDONY.

Cal'ceiform, *a.* See CALCEOLATE.

Calceola'ria, *n.* [Lat. *calceola*, a little shoe.] A genus of plants, order *Scrophulariaceae*, distinguished by the following characters: calyx 4-partite; corolla 2-lipped, the lower lip being inflated so as to form a bag, and the shape of the sole, in some species, resembling that of a slipper, fruit, a capsule, semi-bivalvular, with bifid valves; only two fertile stamens. The species are native of S. America. In Chili and Peru they occur in such abundance as to give a peculiar aspect to the landscape. Most of them have corymbs of showy flowers, generally yellow, but sometimes purple. They are extensively cultivated by florists, and by crossing the species some lovely hybrids have been produced. Some of the species are used in S. America for dyeing.

Cal'ceolate, **Calceiform**, *a.* (Bot.) Slipper-shaped as a petal of the lady's-slipper.

Cal'ces, *n. pl.* See CALX.

Calc Grit, *n.* (Geol.) The name given to a subordinate member of the oolitic series of rocks in England, lying above and below the coral rag. This rock consists of crushed shells mixed with a large proportion of sand the whole cemented into a poor grit-stone with laminae of clay, and passing into tough marly rock.—See CORAL RAG.

Calchas, (*käl'häs*), a celebrated soothsayer, son of Thestor, lived in the 12th century, B.C. He accompanied the Greeks to Troy, in the office of high-priest, and prophesied the principal events which were destined to take place regarding that doomed city. He had received the power of divination from Apollo, and was informed that as soon as he found a man more skilled than himself, he must perish. This happened near Colophon, after the Trojan war. He was unable to tell how many figs were on the branches of a certain tree; and when Mopsus mentioned the exact number, Calchas died through grief.

Cal'ci, *n.* (Hind. Myth.) See CALLI.

Calceiferous, *a.* [Lat. *calx*, lime, and *ferre*, to bear.] Containing carbonate of lime.

Calceiferite, *n.* [Lat. *calx*, and *ferrum*, iron.] (Min.) A hydrated phosphate of iron and lime related to *Wrenite*; found in the form of yellowish modules in a deposit of clay at Battenburg, in Rhenish Bavaria.

Calcification, *n.* The process of change into a stony substance containing much lime, as in the formation of teeth.

Cal'ciform, *a.* [Lat. *calcis*, and *forma*, form.] In the form of lime or chalk.

Cal'cify, *v. i.* [Lat. *calx*, lime, and *facere*, to make.] To change into a stony condition, in which lime is a principal ingredient, as in the formation of teeth.

—*v. a.* To make stony by depositing or secreting a compound of lime.

Cal'cigrade, *n.* [Lat. *calx*, the heel, *gradior*, I walk.] Who or which walks on the heel, viz: so that the heel sinks deeper than the foot. Also used adjectively.

Cal'cimine, *n.* [From *calx*.] A superior kind of white or colored wash for walls.

—*v. a.* To wash walls with calcimine.

Calci'nable, *a.* [From the verb CALCINE.] Capable of being calcined; susceptible to calcination.

Cal'ciuare, *v. a.* Same as CALCINE, *q. v.*

Calcination, *n.* [From Lat. *calx*, lime.] (Chem.) The process of subjecting a body to the action of fire, to drive off the volatile parts, whereby it is reduced to a condition that it may be converted into a powder: thus marble is converted into lime by expelling the carbonic

acid and water; and gypsum, alum, borax, and other saline bodies are said to be *calcined* when they are deprived of their water of crystallization.

(*Metal.*) To oxidize metal into a calx.

Calcinator, *n.* An apparatus used in calcination.

Calceine, (*kal-sen'*) *v. a.* [*Fr. calciner*, from *Lat. calx*, *calcis*, a stone, lime, chalk.] To reduce a substance to a calx or powder, or to a friable state; as, to *calceine* a bone.

—To oxidize into a metallic calx.

—*v. i.* To be converted by heat into a powder or friable substance, or into a calx.

Calceiner, *n.* The person, or thing, that calcines.

Calcite, *n.* [*Lat. calx*, lime.] (*Min.*) A general term under which are comprised the different varieties of carbonate of lime.

Calcitratio, *n.* The act of kicking.

Calcium, (*kal'se-um*), *n.* (*Chem.*) A metal of the 2d group, having for its analogues barium, strontium, and magnesium. It is one of the most abundant substances in nature, forming a very large portion of the crust of the earth. It occurs in nature in combination with fluorine as fluor-spar, with oxygen and carbonic acid as chalk, limestone, and marble, and with oxygen and sulphuric acid as gypsum, which is hydrated sulphate of lime. *C.* was first obtained by Sir Humphrey Davy by electrolysis, in 1808; but little was known of its properties until Dr. Matthiessen formed it by the electrolytic decomposition of a mixture of the chlorides of calcium and strontium. It is a light-yellow metal, of the color of gold alloyed with silver; it is rather harder than lead. It melts at a red heat, and is very malleable. It tarnishes in a day or two even in dry air, and in moist air it becomes slowly oxidized. It burns with a brilliant white light when heated in air, chlorine, or the vapors of iodine, bromine, and sulphur, and rapidly decomposes even at ordinary temperatures. It has also been obtained by MM. Liès-Bondart and Jobin by acting on iodide of calcium with sodium. No other metal is so largely employed in a state of combination as *C.*, for its oxide, *lime* (*CaO*), occupies among bases much the same position as that which sulphuric acid holds among the acids, and is used, directly or indirectly, in most of the arts and manufactures. The sp. gr. of *C.* is 1.55; equivalent 20; symbol *Ca*. — See *LIME*.

Chloride of *C.* may be obtained from the residue remaining in the retort after the preparation of ammonia, by adding to it a slight excess of hydrochloric acid and evaporating. On cooling, the solution deposits crystals containing six atoms of water of crystallization. These crystals, which are six-sided prisms, are highly deliquescent. By fusing at a heat not exceeding 392° Fahr., four equivalents of water are expelled, and the remaining white porous mass is extremely useful in the laboratory for drying gases. Further fusion expels the whole of the water. Anhydrous chloride of calcium, on being mixed with water, gives rise to a considerable elevation of temperature; while the crystallized or hydrated salt, mixed with snow or water, depresses the temperature to —82° Fahr. *C.* of *C.*, *Form.* *CaCl*, from its deliquescent properties, is recommended for watering the streets of cities.

Fluoride of *C.* occurs somewhat abundantly in the mineral kingdom as fluor-spar, which is generally associated with the ores of tin, lead, copper, and zinc. It is found in crystals, the primitive form of which is the cube. They are generally yellow or purple, and sometimes pale green, or even colorless. On being heated, they decussate violently, and emit a peculiar bluish-green phosphorescent light, which is probably due to electricity. Fluoride of calcium is sparingly soluble in water. It is soluble to some extent in nitric and hydrochloric acids, from which ammonia precipitates it unchanged. Sulphuric acid decomposes it, forming sulphate of lime with the evolution of hydrofluoric acid. It is principally used in the laboratory for this latter purpose. It is also employed as a flux in copper-smelting. *Form.* *CaF*.

Phosphide of *C.* is a compound interesting as the source of the phosphides of hydrogen. It is prepared by distilling phosphorus over lime heated to a low redness, a mixture of phosphide of lime and phosphate of calcium being the result. Phosphide of calcium is a dull red substance, hard enough to strike fire with steel. When powdered and exposed to the air, it slacks, emitting phosphuretted hydrogen. In its unslacked form, it is decomposed when thrown into water, phosphuretted hydrogen being evolved, which ignites spontaneously. *Form.* *CaP*.

Sulphides of *C.* There are several compounds of *C.* with sulphur, the principal of which are the protosulphide, which is known by the name of Canton's phosphorus, and the pentasulphide.

Calceographer, *n.* A practiser of calcography.

Calceographic, **Calceographical**, *a.* Pertaining to calcography.

Calceography, *n.* [*Lat. calx*, chalk, and *Gr. graphein*, to write.] The art of drawing with chalk, or of engraving after that style.

Calc-sinter, **Calc-spar**, *n.* (*Min.*) Same as *CALCAREOUS SPAR*, *q. v.*

Calculary, *a.* [*Lat. calcularius*, from *calculus*, a pebble.] (*Med.*) Relating to the disease of the stone in the bladder.

—*n.* (*Bot.*) A congeries of little stony knots in the pear, and other fruits, formed by concretions of the sap.

Calculate, *v. a.* [*Lat. calculo*, *calculatus*, from *calculus*, a small stone or pebble, from *calx*.] In the original sense, to count or compute by the help of small pebbles. —To compute or reckon by the ordinary rules of arithmetic; as, to *calculate* one's expenses.

—To compute or ascertain by reckoning; as, to *calculate* a nativity.

"A cunning man did *calculate* my birth." — *Shaks.*

—To adjust: to fit or adapt, as the means to an end; as, to *calculate* a system.

"The reasonableness of religion . . . is . . . *calculated* for our benefit." — *Tillotson.*

—*v. i.* To make a computation; to estimate; as, to *calculate* a sum. — In the U. States, this term is used to express to *intend*, to *determine*, &c.; as, to *calculate* to take a wife.

Calculating-machine, *n.* A piece of mechanism for assisting the human intellect in the performance of arithmetical operations. The system of logarithms, invented by the celebrated Napier of Merchiston, in 1614, which is of the greatest assistance to mathematicians and others in the computation of figures, by shortening the ordinary operations, seems to have been instrumental in directing attention to the construction of an instrument by which arithmetical results could be produced by mechanical means, although the *abacus* had been long used in Europe and Asia for effecting calculations; and Napier himself had produced what may be termed an elementary calculating-machine, consisting of rods with four faces, known as *Napier's Bones*. The first instrument which can be justly called a calculating-machine, was invented by Blaise Pascal, in 1642, when he was about nineteen years of age. It was more especially contrived for the calculation of sums of money, although it would also perform the ordinary operations of arithmetic with numbers on the common, or decimal scale of notation. It consisted of a set of cylinders, with numbers marked on their external surface, moving on axles to which wheels were attached, with a certain number of notches cut in their circumference. Among the various *C. M.* which have been invented lately, the two devised by Mr. Babbage, but never fully executed, are by far the more elaborate. The invention of the brothers Scheutz was based on the description of Mr. Babbage's Difference Machine, and is similar to it in general principles, though it varies from it in some points in the method adopted in its construction. It was purchased by Mr. Rathbone, of Albany, U. S., for \$5,000, and presented by him to the Dudley Observatory in that city. As it is a matter of extreme difficulty to understand the construction and operation of a complex *C. M.* without a description so complicated with figures and mathematical demonstrations as to be incompatible with the nature of the present work, we therefore refer to the special works of Mr. Babbage on this subject: *Passages from the Life of a Philosopher*, and *History of the Analytical Engine*.

Calculation, *n.* The art or process of calculating or reckoning; computation; estimate.

"Cypher, that great friend to *calculation*." — *Holder.*

Calculative, *a.* Pertaining to calculation.

"Long habits of *calculative* dealings." — *Burke.*

Calculator, *n.* One who calculates, computes, or reckons.

Calculatory, *a.* [*Lat. calculatorius*.] Belonging to calculation.

Calculus, *a.* [*Lat. calculosus*.] Stony; gritty; hard, like stone.

(*Med.*) Affected with the stone or gravel.

Calculus, *n.* [*Lat.*] (*Physiol.*) The general term for inorganic concretions of various kinds, formed in various parts of the body, and bearing in shape or composition a general resemblance to stones. Such concretions receive different names, according to the organ or parts in which they form; thus, the chalk-stones, or concretions formed on the joints of gouty subjects, are called *arthritic calculi*; when deposited in the articulations, *articular calculi*. In the gall-bladder or ducts, they are denominated *biliary calculi*; and in other parts, *lacrimal, pancreatic, pulmonary*, according as they are found in the duct of the eye, the pancreas, or the lungs. The only two varieties of these several calculi to which we shall refer are those found in the bladder and the bile. For these, see *GALL-BLADDER*, and *URINARY CALCULI*.

(*Math.*) In modern usage, the term is employed to denote any branch or any operation of mathematics which requires or may involve numerical calculation; and therefore may be applied to the whole of the mathematical sciences, excepting pure geometry. Thus, that part of algebra which treats of exponents is called the *exponential calculus*. In like manner the phrases *calculus of definite integrals*, *calculus of functions*, *calculus of variations*, &c., are used to denote certain branches of the higher mathematics. — See *DIFFERENTIAL CALCULUS*; *INFINITESIMAL CALCULUS*; *INTEGRAL CALCULUS*; *VARIATIONS*, &c.

Calcutta, a celebrated city of Hindostan, prov. Bengal, cap. of the British dominions in the East, and seat of the supreme government, on the Hooghly River, an arm of the Ganges, about 100 m. N. of the Bay of Bengal, Lat. 22° 33' N., Lon. 88° 17' E. On approaching *C.* from the sea, it presents a magnificent appearance, with its elegant villas on each side of the river, the government botanical gardens, its numerous spires of churches and temples, and the strong and regular citadel of Fort William. This city extends along the bank of the Ganges for 6 m., and has an average breadth of 2 m. A handsome quay, the *Strand*, about 40 ft. above low-water mark, embanks the river for about 3 m., and is furnished with about 30 principal *ghauts*, or landing-places. The river here is about a mile in width, and is crowded with shipping. The European residents live mostly in the Chowringhee suburb of the city, and at Garden Reach, in beautiful and detached villas. The citadel of *C.*, or Fort William, is not only the strongest and most complete fortress in India, but also in the British dominions, re-

quiring a force of 10,000 men for its proper garrison. *C.* is popularly denominated the "City of Palaces," and this is not an overdrawn appellation. It is certainly replete with magnificent buildings, but, nevertheless, like all Eastern cities, it contains quarters, inhabited by the native people, which are dingy-looking and mean. Among the principal public edifices are the Government

Fig. 476. — GOVERNMENT-HOUSE.

House, Mint, Custom House, the Scotch, Portuguese, Greek, and American churches, the Courts of Justice, Colleges, Hospitals, &c. The environs of this city are very attractive, and its market is admirably supplied with the choicest game, fruits, &c. European society here is gay and convivial; but a certain degree of formality prevails, and the Brahminical institution of "caste" would appear to have communicated itself to all the ranks and classes of Europeans. The commerce of *C.* is very extensive; the average of its annual imports for the last ten years was about \$125,000,000; exports, \$140,000,000. *Pop.* (with suburbs) 794,645.

Calcutta, in *Ohio*, a post-office of Columbiana co. **Caldarium**, *n.* [*Lat.*] (*Rom. Arch.*) An apartment in a bath heated for the purpose of causing perspiration. Vitruvius, however, uses the word to signify a hot bath.

Caldas, FRANCISCO JOSÉ DE, a S. American naturalist, b. at Popayan, New Granada, in 1773. He was employed by the Congress of New Granada to complete the *flora* of Bogota, when the disturbed state of public affairs interrupted the work; and Caldas and his colleague, Don Lozano, having sided with the patriot party, were put to death by the Spanish general Morillo, in 1816.

Calder, the name of several English rivers, none of which are of much importance.

Calderite, *n.* (*Min.*) A massive variety of garnet found in Nepal.

Calderon, DON SERAFIN-ESTEVAN, a Spanish modern poet, and professor of poetry and rhetoric in the university of Granada. His principal works are, *Poesias del Solitario*, *The Literature of the Moriscos* (1838), *Andalusian Scenes* (1847). B. 1801; D. 1867.

Calderon de la Barca, DON PEDRO, a very distinguished Spanish dramatist, was b. in 1600. He studied at the university of Salamanca, and after a residence at the court, he entered the army, and served in Italy and Flanders. In 1640 he settled at Madrid, was made a knight of St. James, and director of the court theatre. About 1652 he took holy orders, and was made a canon of Toledo. Calderon was a most prolific writer, beginning at the age of 14, and writing his last *auto* at 80. After he entered the church he wrote only sacred pieces, and became indifferent to his comedies and other earlier works. He had a marvellously fertile imagination, crowds his plays with incident and action, and clothes his thoughts and sentiments in the richest and most exuberant language. Among the most admired of his dramas are, *Love after Death*, *The Secret in Words*, *The Constant Prince*, *The Dawn in Copacavana*, *Purgatory of St. Patrick*, &c. One of the most celebrated of his "autos," or sacred pieces, is the *Devotion of the Cross*. Calderon d. in 1683.

Caldron, (sometimes written CAULDRON,) *n.* [*Fr. chaudron*; *Lat. caldarium*, from *calidus*, *calidas*, warm, hot, from *caleo*, to be warm or hot.] A large kettle, or boiler, for heating or boiling liquids.

"The limbs, yet trembling, in the *caldrons* boil." — *Dryden.*

Caldwell, in *California*, a village of Sacramento co., 22 m. E. by S. of Sacramento.

Caldwell, in *Iowa*, a post-village and township of Appanoose co., 36 m. S.S.W. of Ottumwa.

Caldwell, in *Kentucky*, a W. co., bounded on S.W. by Tennessee River, on N.E. by the Tradewater Creek, and is intersected by the Cumberland River. *Area*, 700 sq. m. *Surface*, diversified; *soil*, fertile. Iron ore and coal are abundantly found on the banks of the rivers. *Cap.* Princeton. *Pop.* (1890) 13,200.

Caldwell, in *Louisiana*, a N. central parish, has an area of 528 sq. m. It is bounded on the E. by Bonf Bayou, and intersected by Washita river, which is navigable by steamboats through the parish. *Cap.* Columbia. *Pop.* (1890) 5,814.

Caldwell, in *Missouri*, a N. W. co., area 435 sq. m. Shoal creek, an affluent of Grand river, flows through the middle of the co., from W. to E. *Surface*, level; *soil*, fertile. *Cap.* Kingston. *Pop.* (1897) abt. 17,200.

Caldwell, in *New Jersey*, a post-village and township of Essex co., about 10 m. N. W. of Newark.

Caldwell, in *New York*, a pleasant village of Warren

county, 62 miles N. of Albany, in the midst of a picturesque region, at the S. end of Lake George. It contains the ruins of Fort William Henry, and Fort George, souvenirs memorable in the French and Revolutionary wars.

Caldwell, in *North Carolina*, a N.W. co., area 450 sq. m. The Yadkin River rises in the county, and the Catawba touches its S. border; the S.E. part of the county is mountainous. In general, the land is fertile. *Cap.* Lenoir. *Pop.* (1890) 12,300.

Caldwell, in *Ohio*, a post-village, cap. of Noble co., 25 m. N. by W. of Marietta.

Caldwell, in *Texas*, a S. central co., bounded on the S. W. by San Marcos River. *Area*, 540 sq. m. *Surface*, undulating. *Cap.* Lockhart. *Pop.* (1890) 15,800.

A town, the cap. of Burleson co., about 85 m. E. by N. of Austin. *Pop.* (1897) about 2,000.

Caldwell, or **Caldwell Prairie**, in *Wisconsin*, a post-village of Racine co., 25 m. S.W. of Milwaukee.

Caldwell, CHARLES, an American physician and medical writer, b. in Orange co., North Carolina, in 1772. He studied medicine at Philadelphia, and, in 1795, began his career as an author by translating from the Latin, Blumenbach's *Elements of Physiology*. His writings soon became numerous. In 1819 he became professor of the institutes of medicine in Transylvania University, Lexington, Ky. He subsequently founded a medical school in Louisville, and d. there in 1853.

Caldwell, REV. JAMES, an American revolutionary patriot, b. in Charlotte co., Va., 1734. After graduating at New Jersey Coll., he became Presbyterian pastor at Elizabethtown. During the growing antagonism between the Colonies and Great Britain, C. warmly took the side of the former, and when hostilities commenced, became chaplain to the Jersey brigade, and took an active share in its campaigns, fighting, as it were, like one of the old Cromwellian type, "with the sword in one hand and the Bible in the other." He was accidentally shot by a sentinel, at the Point, New York, Nov. 24, 1781, and buried at Elizabethtown, N. J., where a costly marble monument covers the remains of the "soldier-parson."

Caleb, son of Jephthah, of the tribe of Judah, 15th cent. B. C., was sent by Joshua, with one man from each of the other tribes, to view the land of Canaan, of which he gave a faithful description, and thereby raised the spirits of the people. He possessed the country of Hebron, and d. at the age of 114.

Calebee Creek, in *Alabama*, Macon co., flows into Tallapoosa River.

Caleche, (*ka-lash'*) [Fr.] See **CALASH**.

Caledon, in *Ireland*, a market-town of Tyrone co., on the Blackwater River; *pop.* 1,166.

Caledonia, the name given by the Romans to that part of Scotland which lay between the Firths of Forth and Clyde, and which was partially inhabited by the tribe of *Caledonii*. The name *Caledonii* disappears about the beginning of the 4th cent., when the inhabitants of Scotland begin to be spoken of as *Scots* and *Picts*. The word *Caledonia* has been retained as a kind of poetical name for Scotland.

Caledonia, in *Illinois*, a vill., former cap. of Pulaski co., on the Ohio River, 220 m. S. of Springfield.

Caledonia, in *Iowa*, a village of Dubuque co., 9 m. W. by S. of Dubuque.

A post-village of Ringgold co., 80 m. S.S.W. of Des Moines.

Caledonia, in *Michigan*, a post-township of Kent co., on the Thorn Apple River, 12 miles S. E. of Grand Rapids.

A township of Shiawassee co.

Caledonia, in *Minnesota*, a township and village, capital of Houston county, 14 miles west of the Mississippi River, and 20 miles south-west of La Crosse, Wisconsin.

Caledonia, in *Mississippi*, a post-village of Lowndes co., abt. 154 m. N.E. of Jackson.

Caledonia, in *Missouri*, a post-village of Washington co., abt. 70 m. S.S.W. of St. Louis.

Caledonia, in *New York*, a post-village and township of Livingston co., on the Genesee River, 20 m. S.W. of Rochester.

Caledonia, in *Ohio*, a village of Hamilton co., on the Ohio River.

A post-village of Marion co., on the west branch of the Whetstone River, 54 m. N. of Columbus.

Caledonia, in *Pennsylvania*, a post-village of Elk co., 140 m. N.W. of Harrisburg.

Caledonia, in *Tennessee*, a flourishing village of Henry co., 120 m. W. of Nashville.

Caledonia, in *Texas*, a village of Rusk co., 22 m. E. by S. of Henderson.

Caledonia, in *Vermont*, a N.E. co., bounded on the S.E. by the Connecticut, and drained by the Passumpsic, Lamolille, and Wells rivers. *Area*, abt. 650 sq. m. This co., mountainous, but generally fertile, has several sulphur springs, and abundance of granite and limestone. *Cap.* St. Johnsbury.

Caledonia, in *Wisconsin*, a township of Columbia co., on Wisconsin River.

A village and township of Trempealeau co., on Black River, 5 m. S. of Galesville.

A township of Waupaca county, 20 m. N. W. of Oshkosh.

Caledonia, in prov. of Ontario, a village of Haldimand co., 20 m. E.S.E. of Brantford.

Caledonia, in *Wisconsin*, a post-township of Racine co., 20 m. S. of Milwaukee.

Caledonian, *n.* A native, or inhabitant of Caledonia, the ancient name of Scotland.

Caledonian, *a.* Pertaining to Caledonia; Scottish: as, the *Caledonian Hunt*.

Caledonia, (*New*) See **NEW CALEDONIA**.

Caledonia Springs, in prov. of Ontario, a village and watering-place of Prescott co.

Caledonia Station, in *Illinois*, a township of Boone co., 13 m. E.N.E. of Rockford, and 12 m. S.S.E. of the town of Beloit.

Caledonite, *n.* [From *Caledonia*, Scotland.] (*Min.*) A cupreous sulpho-carbonate of lead, found in minute bluish-green crystals, associated with other ores of lead.

Calefacient, *a.* [Lat. *calefacere*, to make warm.] Making warm or hot. (*R.*)

—*n.* (*Med.*) Any substance medicinally applied to the body to produce external or superficial heat, and effect a mild kind of counter-irritation. The warming plaster, poultices of mustard and flour, hot water and turpentine, hartshorn and oil, belong to the class of what may be termed calefacients.

Calefaction, *n.* [Lat. *calefactio*.] Art or operation of making warm or hot. — State of being heated or hot.

Calefactor, *a.* A small stove. (*R.*)

Calefactor, *n.* [Lat. *calefactorius*.] That which heats, or communicates heat.

Calefy, *v. i.* [Lat. *calefy*—*calidus*, warm, hot, and *fio*, to become.] To become hot or warm; to be heated. (*R.*) —*v. a.* To make hot or warm.

Calembourg, (*kal'am-boörg*) *n.* [Fr.] A French expression for what in English is called a *pun*. A certain Westphalian Count Calenberg (*Kahlenberg*), who visited Paris in the reign of Louis XV., and was famous for his blunders in the French language, is said to have given the name to this species of *jeu de mots*.

Calendar, *n.* [Lat. *calendarium*, from *calendæ*, the first day of the old Roman month, from *calo*, Gr. *kaleo*, to call. See **CALENDS**.] (*Chron.*) A distribution or division of time into periods adapted to the purposes of civil life: also a table or register of such divisions, exhibiting the order in which the seasons, months, festivals, and holidays succeed each other in the year. The most remarkable calendars are:—1. The *Hebrew C.* The year of the Jews was a lunar one, being composed of 354 days, divided into 12 months, which had alternately 29 and 30 days. In order to make this lunar year accord with the solar year, the Hebrews supplied, seven times in nineteen years, an intercalary month of 29 days. Each month was divided into periods of 7 days, or weeks, the Saturday being celebrated under the name of *Sabbath*.

—2. The *C. of the Greeks*, whose year was likewise lunar, and composed of 12 months, containing alternately 29 and 30 days. To accommodate this year to the solar one, the Greeks added every two years a supplementary month. Each month was divided into three decades.

—3. The *Roman*, or *Julian C.* The Roman year, under Romulus, contained only 10 months, or 304 days. Under Numa, however, the year was extended to 12 months, or 355 days; but, although nominally thus defined, the *C.* did not in reality fix anything more precise than the commencement of the months and seasons; and through the ignorance or negligence of the priests, the utmost derangement subsequently arose. To obviate this confusion, Julius Caesar, in 46 B. C., effected a reform, by the introduction of the Julian *C.*, in which the length of the solar year was fixed at 365 days, to which was added, every four years, a day called *bissextile*.

This *C.* was adopted not only by the Romans, but also by all the modern nations, and remained in use until the introduction of the *C.* of Gregory XIII. The Roman year had 12 months, each being divided into unequal parts by the *Calends*, *Nones*, and *Ides*; (see these words.) —4. The *Gregorian C.* This mode of distributing time was the result of the reform inaugurated by Gregory XIII. (See **BISSEXTILE**.) It came into operation in Oct., 1582. The Greeks and Russians have refused to adopt the Gregorian *C.*, retaining the *old style* or Julian *C.* Hence it is necessary to deduct 12 days from the *new style*, in order to make it agree with the old. —5. The *Ecclesiastical C.* The adaptation of the civil to the solar year is attended with no difficulty; but the church *C.*, for regulating the movable fasts, imposes conditions less easily satisfied. The early Christians borrowed a portion of their ritual from the Jews. The Jewish year was luni-solar; that is to say, depended on the moon as well as on the sun. Easter, the principal Christian festival, in imitation of the Jewish passover, was celebrated about the time of the full moon. Differences of opinion, and consequently disputations, soon arose as to the proper day on which the celebration should be held. In order to put an end to an unseemly contention, the Council of Nice laid down a specific rule, and ordered that Easter should always be celebrated on the Sunday which immediately follows the full moon that happens upon, or next after, the day of the vernal equinox. In order to determine Easter according to this rule for any particular year, it is necessary to reconcile three periods, namely, the week, the lunar month, and the lunar year. To find the day of the week on which any given day of the year falls, it is necessary to know on what day of the week the year began. In the Julian *C.* this was easily found by means of a short period or *cycle* of 28 years, after which the year begins with the same day of the week. In the Gregorian *C.* this order is interrupted by the omission of the intercalation in the last year of the century. The connection of the lunar month with the solar year is an ancient problem for the resolution of which the Greeks invented cycles and periods, which remained in use with some modifications till the time of the Gregorian reformation. The author of the Gregorian *C.*, Luigi Lilio Ghiraldi, or, as he is frequently called, *Aloysius Lilius*, employed for the same purpose a set of numbers called *epacts*. —6. *New French C.* A new reform of the *C.* was attempted to be introduced in France during the period of the first revolution. This was

adopted by a decree of the National Convention of Oct., 1793. The year was therein divided into 12 months, of 30 days each, 5 complementary, or "sans-culottides" days, being added at the end of each year. The commencement of the year was fixed at midnight of the 22d Sept. (the autumnal equinox), and retrospectively, the new year, or Year I. of the Republic, began on the 22d Sept., 1792. Fresh names were given to the months and the days, the titles of the months being, for the autumn season, *Vendémiaire*, *Brumaire*, and *Frimaire*; for the winter season, *Nivôse*, *Pluviôse*, and *Ventôse*; for the spring season, *Germinal*, *Floréal*, and *Prairial*; and for the summer season, *Messidor*, *Thermidor*, and *Fructidor*; these names having reference to agricultural labors, or the state of nature in the different seasons of the year. Each month was divided into three *decades* (10 days each), each day bearing, instead of the name of a saint, that of an agricultural product, implement, or animal useful in cultivating the earth. This *C.* remained in force during 13 years, and was abolished by decree of Napoleon I. on Jan. 1, 1806. —See **ERA**, **CYCLE**, **DOMINICAL LETTER**, **EPOCH**, **GOLDEN NUMBER**, **HEGIRA**, **METONIC CYCLE**, **YEAR**, &c.

Calendar, *v. a.* To register; to enter in a calendar.

Calendarial, *a.* Pertaining, or relating, to the calendar.

Calender, *n.* [O. Fr. *calendrer*; Sp. *calentar*, to heat, from Lat. *calere*.] A machine or hot-press used to press cloths, and make them smooth and glossy; one who follows the business of calendering.

"My good friend the calender." — *Cowper*.

—One of a Dervish sect of Oriental countries, called after its founder.

—*v. a.* To press under or over a heated roller, or a hollow iron cylinder filled with hot coals: to press between rollers for the purpose of making smooth, glossy, and wavy, as cloths, paper, &c.

Calendering, *n.* (*Manuf.*) The subjection of cloth, paper, and other articles to a machine, which, when so prepared, are *calendered*, literally meaning *hot-pressed*; by passing between cylinders or rollers, they acquire a level or uniform surface. After goods are bleached and washed, they are twisted and tangled, so that they would not pass smoothly between the cylinders.

They are previously passed over the surface of a water-cistern, and reaching the rollers in a damp state, they unfold themselves readily. The first pair of rollers over which the cloth is passed, does not dry or quite smooth it. The rollers in the calender are fixed in a vertical series in an upright frame, the rollers being pressed forcibly together by lever-power. The lower rollers are generally grooved to remove creases; the upper rollers are smooth. In passing between these, the cloth is smoothed and stretched, when it is wound upon a roller, ready to be starched. The cylinders were formerly made of wood, but they are now made of paper and cast-iron, or copper; a cylinder of paper working against one of iron, as the paper cylinders combine some slight degree of elasticity with the extraordinary hardness they possess. These cylinders are made of discs, or plates, or thick pasteboard, with a hole in the centre to receive an iron axis, and others near the circumference, through which long iron bolts, with nuts and screws at either end, are passed. Iron plates are added at the ends of this cylinder of pasteboard discs, and the whole is tightly compressed by the action of the screws. The surface of the roller is rendered true by turning it in a lathe. The iron cylinders which are used in conjunction with those of paper are hollow, and heated by the introduction of steam, or red-hot heaters. —The starch is made from flour, fermented and strained to separate the bran: a little indigo is added to give a blue tint, and the liquor thickened with porcelain clay, or calcined gypsum, to give apparent strength and thickness to the cloth, and make it more attractive to the purchaser. The starch is laid on by a stiffening mangle: the cloth first passing under a roller into a trough containing the starch-liquor, becomes filled with starch, and then carried upwards, passes between rollers of brass and wood, tightly fitting against each other, by which the superfluous starch is pressed out, and falls down into the trough below. The cloth is then dried by being passed over tin or copper cylinders, heated by steam. Muslins are merely stretched on long frames to dry. The finish for cotton goods is generally by *glazing*, which gives a bright gloss to the material. In this case the cloth must first be dampened, which is done by passing it over a cylinder, while a brush is at the same time scattering fine sprays of water on the stuff. It is then passed between the rollers of the colors, and gets a silky lustre. *Cap-*

Fig. 477.

per-embossed rollers are occasionally used for producing figures and patterns on velvet goods. After the cloth has received its final gloss, it is smoothly folded on a clean board, and taken to be measured preparatory for sale. There are upwards of one hundred ways for making up goods. Muslin is made up in book-folds, in pieces of 24 yards; usually two half pieces are made up in one book. Cambrics and linens are in pieces 34 inches wide, and 8½ yards long, folded up small, and tightly pressed. Handkerchiefs are sometimes folded in dozens.

Calendog'rapher, *n.* [Lat. *calendarium*, and Gr. *graphein*, to write.] A maker of calendars.

Calendrer, *n.* A calender; one who calenders things.

Calendrical, *a.* Of the nature of a calendar; belonging to a calendar.

Calends, or **KALENDS**, (*kal'endz*), *n. pl.* [Lat. *calenda*, from *calo*, to call or proclaim; Gr. *kaleō*.] (*Chron.*) In the ancient Roman calendar, the *C.* were the first days of each month. The Roman month was divided into three periods by the *Calends*, the *Nones*, and the *Ides*. The *Calends* were invariably placed at the beginning of the month; the *Ides* at the middle of the month, on the 13th or 15th; and the *Nones* (*nōvem*, nine) were the 9th day before the *Ides*, counting inclusively. Those days comprised between the *calends* and the *nones* were denominated *days before the nones*; those between the *nones* and the *ides*, *days before the ides*; and those from the *ides* to the end of the month, *days before the calends*. Hence the phrases *pridie calendas*, *tertio calendas*, &c.; meaning the second day before the *calends*, or last day of the month, the third day before the *calends*, or last but one of the month (the *calends* of first day of the following month being included in the reckoning), and so on. In the months of March, May, July, and Oct., the *ides* fell on the 15th day, and the *nones*, consequently, on the 7th. In all the other months the *ides* fell on the 13th, and the *nones*, consequently, on the 5th. The number of days receiving their denomination from the *C.* depended on the number of days in the month and the day on which the *ides* fell. For example, if the month had 31 days, and the *ides* fell on the 13th (as happened in Jan., Aug., and Dec.), there would remain 18 days after the *ides*, which, added to the 1st of the following month, made 19 days of *calends*. Hence the 14th day of Jan. was styled the *nineteenth before the calends* of Feb.; the following day, or 15th of the month, was the *eighteenth before the calends*, and so on.

Calendula, *n.* (*Bot.*) The Marigold, a genus of plants, order *Asteraceae*. The species *C. officinalis* is the *Pot marigold* of our gardens, the *Gold-blume* of the Germans, the *Succi* of the French, and the *Farrancio* of the Italians. Formerly, many medicinal virtues were ascribed to this plant, and its flowers were usually added to soups to color them, and also to act as "comforters of the heart and spirits." Saffron is frequently adulterated with yellow florets of the marigold.

Calendulin, *n.* (*Chem.*) A mucilaginous substance or species of gum, obtained from the marigold (*Calendula officinalis*).

Calenture, *n.* [Fr.: from Sp. *calentura*, heat, from Lat. *calere*, to be warm.] (*Med.*) A word applied to all sudden diseases of the head and brain, such as seen in former times much subject to in the low latitudes of America and India, in which the patient was deprived of all consciousness, and appeared to be laboring under an attack of sudden mania, or inflammation of the brain. After suffering intense pain, the patient was seized with the hallucination of the sea being an extended plain of verdant pasture, and which nothing short of personal restraint could prevent him from rushing forth to stroll in. The disease which nearest approaches to the *C.* is now called *SUNSTROKE*, *q. v.*

Calepin, *n.* (*kāl-e-pān*), a French name denoting a collection of literary or scientific notes or information; a pocket-book in which one inscribes his observations or reflections. The word is derived from AMBROGIO CALEPINO, a learned Italian monk of the Augustines, who spent all his life in the compilation of a dictionary of the Latin and Italian languages, which became very famous, and passed through many editions. He died blind, in 1511.

Caler's Hill, in *N. Carolina*, a P. O. of Jackson co.

Cales'cence, *n.* [Lat. *calescens*.] Increasing warmth or heat.

Cale'ta, in *Texas*, a post-office of Trinity co.

Calf, (*kūf*), *n.*: *pl.* CALVES, (*kūvz*). [*A. S.* *cealf*; Swed. *kalf*; Goth. *kalbo*; Ger. *kalb*; Gael. *colpa*; Sansk. *kalabha*, an elephant's calf.] The young of the cow, and of other animals of the bovine genus.

—A dolt; an ignorant, stupid, cowardly person.

"Some silly, doating, brainless calf." — Drayton.

—The fleshy, protuberant part of the human leg behind; as, a footman's *calves*.

—A small floating mass of ice, detached from a berg.

Calf (*The Golden*). See **GOLDEN CALF**.

Calfkiller Creek, in *Tennessee*, (E. central part,) falling into Cumberland River, in White co., about 10 m. S.W. of Sparta.

Calfsp'ature River, or **North River**, in *Virginia*, rising among the Alleghany Mountains, in Augusta co.; it flows into James River; length abt. 100 m.

Calf-skin, the skin of a calf; leather made of the hide of the same.

"Thou wear a lion's hide! doff it for shame,
And bang a calf's-skin on those recreant limbs." — Shaks.

Cal'houn, JOHN CALDWELL, one of the most eminent American statesmen of the present century, was b. in S. Carolina, Mar. 18, 1782. He graduated with distinction at Yale College, in 1804, and was admitted to the South Carolina bar in 1807. After serving for two sessions in the legislature of his native State, he was elected its

representative to Congress in 1811. From that time until his death, a period of nearly 40 years, he was seldom absent from Washington, being nearly the whole time in the public service, either in Congress or in the Cabinet. Few American statesmen have had so much experience in public affairs, or have preserved so high a reputation for ability and uprightness. Though an active party leader, and often engaged in the most exciting political contests, not the slightest imputation was ever thrown upon his private character, or the sincerity and manliness of his public conduct. When he first entered Congress, the difficulties with England were fast approaching actual hostilities, and *C.* immediately took part with that section—the *Young Democracy* as they were termed—of the dominant party whose object it was to drive the still reluctant administration into a declaration of war. They succeeded, and as a member of the Committee on Foreign Relations, *C.* reported a bill for declaring war, which was passed in June, 1812. He afterwards strenuously supported all the necessary measures for carrying on hostilities with vigor, especially that for chartering a national bank, to aid in providing the requisite funds, though the bill for this purpose could not be carried till 1816. At the same period he also supported bills for effecting internal improvements, and for encouraging domestic manufactures, by imposing protective duties—measures which his later policy strongly condemned. When Monroe formed his administration, in 1817, *C.* became Secretary of War, a post which he filled with great ability for 7 years, reducing the affairs of the department from a state of great confusion to simplicity and order. In 1824, he was chosen Vice-President of the U. States under John Q. Adams, and again, in 1828, under General Jackson. With the latter, he did not long continue on amicable political relations, but entered into fierce opposition, when the President, and a majority of Congress, determined to enforce submission to the law of 1828, imposing a heavy protective tariff. It was at this period that *C.* broached his famous "Nullification Doctrine," which is substantially, that the U. States is not a union of the people, but a league or compact between sovereign States, any of which has a right to judge when the compact is broken, and to pronounce any law to be null and void which violates its conditions. In short, *C.* was the first great advocate of the disastrous doctrine of Secession. From this time forward, that is, for the last 17 years of his public service, *C.* hardly aspired to be considered a national statesman acting for the whole country; he was content—he was even proud to be viewed only as a Southern statesman. Hence his advocacy of the extreme doctrine of State-Rights; his censure of the Missouri Compromise, passed 13 years before, when he was himself in the cabinet; his support of all measures tending to the extension of slave-holding territory; and finally, his proposal to amend the Constitution by abolishing the single office of the presidency, and creating two presidents, one for the North, and the other for the South, to be in office at the same time. The place in which he advocated these doctrines was his own favorite arena—the floor of the United States senate, where he continued for the rest of his life, except for a short time at the close of Mr. Tyler's administration, when he accepted the office of Secretary of State, in order to complete a favorite measure—the annexation of Texas. At this period of his life, his policy respecting European affairs was pacific; and it should be remembered, that he probably prevented a war with England on the Oregon question. He b. at Washington, in 1850. "*C.*'s eloquence," says Daniel Webster, "was part of his intellectual character. It grew out of the qualities of his mind. It was plain, terse, strong, condensed, concise, sometimes impassioned, still always severe. He had the basis, the indispensable basis of all high characters, and that was unspotted integrity, unimpeached honor and character." *C.* is the author, among other works, of *A Disquisition upon Government*, and *A Discourse on the Constitution of the United States*.

Cal'houn, in *Alabama*, an E. N. E. county bordering on Georgia.—Area, 1,170 sq. m. Its mountain ridges are full of mineral wealth, iron ores, fine marbles, and limestone being most abundant.—Products are corn, wheat, oats, pork, live-stock. Large manufacturing interests exist at Anniston (*q. v.*).—*Rivers*, the Coosa, Tallapoosa, Tallasahatchee and Chacolochee.—*Cap.* Jacksonville.—Pop. (1890) 33,835; (1897) about 37,500.

Cal'houn, in *Arkansas*, a S. co., bounded on S. W. by the Washita, and E. by Moro river, the former of which is navigable for steamboats. Surface, undulating; soil, mostly fertile, producing chiefly cotton and Indian corn. *Cap.* Hampton. Pop. (1890) 7,267.

—A township of Columbia co.

Cal'houn, in *Florida*, a W. co., bordering on the Gulf of Mexico; bounded on the E. by Apalachicola river, and on S. W. by St. Joseph's Bay. *Cap.* Blountstown. Pop. (1890) 2,094.

Cal'houn, in *Georgia*, a S. W. co.; area, 300 sq. m. It is watered by Ichawaynochaway creek. Surface, level; soil, productive. *Cap.* Morgan. Pop. (1890) 8,438.

—A flourishing township and village, capital of Gordon county, 80 miles N. W. of Atlanta, and 50 from Chattanooga.

—A S. village of Lumpkin co., 50 m. N. N. E. of Atlanta.

Cal'houn, in *Illinois*, a W. co.; area, 260 sq. m. Surface, broken. *Cap.* Hardin. Pop. (1890) 7,652.

Cal'houn, in *Iowa*, a W. co., washed by Raccoon river. *Cap.* Rockwell City. Pop. in 1890, 13,100; in 1897 est. at 16,900.

—A township of Calhoun co.

—A post-township of Harrison co.

Cal'houn, in *Kentucky*, a twp. of McLean co.

Cal'houn, in *Michigan*, a S. W. central co.; area, 720 sq. m.; intersected by St. Joseph's and Kalamazoo rivers and drained by Battle creek. Surface, undulating; soil, luxuriant. White and burr oak are in abundance; also, quarries of sandstone. *Cap.* Marshall. Pop. (1894) 47,471.

Cal'houn, in *Mississippi*, a N. cent. co., drained by the Yallobusha river. *Cap.* Pittsborough. Pop. (1890) 14,688.

—A post village of Madison co., 16 m. N. by E. of Jackson.

Cal'houn, in *Missouri*, a post-village of Henry co.

Cal'houn, in *Missouri*, a station of the Missouri Pacific

Railroad, in Franklin co., 59 m. W. of St. Louis.

Cal'houn, in *Nebraska*, Washington county. More correctly Fort Calhoun (*q. v.*).

Cal'houn, in *N. Carolina*, a P. O. of Henderson co.

Cal'houn, in *S. Carolina*, a village of Anderson district

115 m. W. N. W. of Columbia.

—A post-office of Abbeville district.

Cal'houn, in *Tennessee*, a township and village of McMinn co., on the Hiwassee River; pop. of township 71.

Cal'houn, in *Texas*, a S. co.; area, 484 sq. m.; bounded on S. W. by Guadalupe River, and on N. E. by Matagorda and Lavaca bays. Surface, level. *Cap.* Port Lavaca.

Cal'houn, in *W. Virginia*, a central co. Area, 300 sq. m., watered by Little Kanawha river. Surface, uneven. *Cap.* Grantsville. Pop. (1890) 8,200.

Cal'hounsville, or **MACALLISTERSVILLE**, in *Pennsylvania*, a post-village of Juniata co.

Ca'li, *Ca'lee*, *n.* (*Hind. Myth.*) The tenth avatar, or incarnation, of the god Vishnu.

Cal'i, (*ka-lee'*), or **SANTIAGO DE CALI**, a town of S. America, in New Granada, 70 m. N. by E. of Popayan; Lat. 30° 25' N., Lon. 76° 30' W. It lies on the W. slope of the Andes, and is a wealthy and well-built place. Pop. 4,200.

Cal'fatour-wood, *n.* An East India dye-wood, somewhat resembling red sandal-wood.

Cal'ibre, **Cal'iber**, *n.* [Fr. *calibre*, said to be from Lat. *aquilibrare*, to balance equally, to have perfect equality, because the bore must be equal, else the piece will burst.] (*Gunnery*.) The diameter of the bore of a cannon, or gun. It is measured in terms of inches, and in smooth-bored guns is always rather larger than the shot.—See **WINDAGE**.

—Diameter of a round body, as a bullet.

—Compass or capacity of the mind; extent of mental or intellectual qualities. (Used in a figurative sense.)

Calibre-rule. (*Gunnery*.) A gunner's calipers; an instrument used to determine the diameter of shot.—See **CALIPERS**.

Calibo'gus, *n.* A cant term used in the U. States for a beverage concocted of rum and spruce beer.

Cal'ibrate, *v. a.* To determine the calibre of.

Cal'ibration, *n.* The art or process of graduating the estimated calibre of a thermometer-tube.

Cal'ice, *n.* See **CHALICE**.

Cal'ico, *n.* (*Manuf.*) A stuff made of cotton, first imported from Calicut in India.

—Printed cotton cloth, coarser than muslin. (U. States.)

Cal'ico-printer, *n.* One who pursues the business of printing calicoes.

Cal'ico-printing, *n.* (*Fabrics*.) The art of printing ornamental figures on cotton cloths, for detailed description of which see **SECTION II**.

Cal'icular, *a.* [Lat. *caliculus*, a small cup.] Shaped like a cup; resembling a cup.

Cal'icut, a maritime dist. of Hindostan, in the province of MALABAR, *q. v.*

CALICUT, a maritime town, cap. of above dist., and of the prov. Malabar, 102 m. S. W. of Seringapatam, and 380 W. S. W. of Madras; Lat. 11° 15' N.; Lon. 75° 52' E. It exports teak, pepper, sandal-wood, cardamoms, cori corderage, and wax, but has no good harbor. This was the first place in India made by the Portuguese under Vasco de Gama, who arrived here May 18, 1498. In 1509, the Portuguese were repulsed with great slaughter while making an attack on the place. In 1766, *C.* was taken by Hyder Ali, and, subsequently, Tippoo Sahib destroyed both fort and town, but on the conquest of the prov. by the British, it was restored. Calico is believed to have been first manufactured here, whence the name is derived. Pop. estimated at 24,000.

Ca'tid, *a.* [Lat. *calidus*.] Hot; fiery; ardent; fervent.

Calidasa, (*kal'e-da'sa*), a much-admired Hindoo poet. Tradition pronounces him one of the *nine gems* who lived in the court of King Vicramaditya. He wrote several poems which display a remarkable genius. His *Sacuntala* was translated by Sir William Jones, and was the first work which made his name known to Europeans. Supposed to have flourished under the reign of Vicramaditya II., in the 5th century.

Cal'id'ity, *n.* A state of warmth; heat.

"Ice . . . will not endure the potential calidity of many waters." — Browne.

Cal'iduct, *n.* [Lat. *calidus*, hot, and *duco*, to lead.] A pipe or fine to conduct heat.

Cal'if, *n.* See **CALIPH**.

California, one of the United States of America, extending along the W. coast from 32° 28' to 42° N. Lat., having S. the peninsula of Lower California, a province of Mexico; E. by Nevada and the Rio Colorado; W. by the Pacific Ocean, and N. by the State of Oregon, from which it is separated by the 42d parallel of Lat.—*Desc.* In outline this State forms an irregular parallelogram, with an average length of about 700 m., and a breadth of nearly 200 m.—*Area*, 158,360 sq. m. or more than 100,000,000 statute acres, of which 35,000,000 are arable; 23,000,000 pasture, and about 5,000,000 swampy and inundated lands, but possibly reclaimable. The water surface amounts to nearly 4,000,000 acres; sandy plains and deserts take up about 10,000,000; while the balance, say 23,000,000 acres, is given to heavily-wooded mountain ranges.—*Mountains and Valleys*. The State throughout

John Caldwell Calhoun

1782-1850

ts area is mountainous, and the Sierra Nevada extends, under different names, and with different altitudes, from the S. extremity of the peninsula to Alaska. The length of this chain, and its constituents, embrace a distance of nearly 500 m. in length through the State, and 300 in width. The highest peaks of this chain are Mount Shasta (some 15,000 feet above sea-level), Spanish Peak, Lassen's Butte, Pilot Peak, Mounts Tyndall, Whitney, Dana, Lyell, &c. These vary in altitude from 10,000 to 15,000 feet, and principally take a line running N. 31° W. The Sierra Nevada chain is remarkable for its parallelism and proximity to the sea, its great elevation, and its numerous volcanic peaks, stretching far above the line of perpetual snow. Its distance from the coast varies from 150 to 200 m., so that the area of this portion of the country exceeds 100,000 sq. m. The great mountain wall of this Sierra intercepts the warm winds charged with vapor, which sweep across the Pacific Ocean, precipitates their accumulated moisture in fertilizing rains and snows upon its western flank, and leaves cold and dry winds to pass on to the E. Hence, the characteristic difference of the two regions, — mildness, fertility, and a superb vegetable kingdom on the one side; comparative barrenness and cold on the other. Between the Lat. of 34° and 41°, a range of lower mountains runs close along the shore, the culminating point of which, Monte Diablo, close to the Bay of San Francisco, attains to the height of 3,674 feet. The valley between this coast chain and the grand barrier of the Sierra Nevada comprises the valleys of the Sacramento and San Joaquin, 500 m. long, and by far the most valuable portion of C. The W. flank of the Sierra belongs to the latter. It is a long, wide, timbered, grassy slope, with intervals of arable and, copiously watered with numerous and bold streams, and without the cold which its name and altitude might imply. It is from 40 to 70 m. in width from the summit of the mountain to the termination of the foot-hills on the edge of the valleys below. Timber ranks first among the products of this slope, the whole being heavily wooded, first with oaks, which predominate to about half the elevation of the mountain, and then with pines, cypresses, and cedars, the pines in majority, and hence called the *Pine Region*, as that below is called the *Oak Region*, though mixed with other trees. The highest summits of the Sierra are naked, massive, granite rocks, covered with snow in sheltered places, all the year round. The cypress, pines, and cedar are between 100 and 250 feet in height, and from 5 to 12 ft. in diameter, with clean, solid stems. Grass grows on almost all parts of the slope, except towards the highest summits, and is fresh and green all the year round, being neither killed by cold in winter, nor dried by drought in summer. The foot-hills of the slope are sufficiently fertile and kindly to admit of good settlements, while valleys, oves, beaches, and meadows of arable land are found throughout. Many of the numerous streams, some of them even considerable rivers, which flow down the mountain side, make handsome, rich valleys, and furnish good water-power. The climate, in the lower part of the slope, is that of constant spring. That portion of the coast-line between Bodega Bay on the S., and Mendocino co. on the N., has, with some exceptions, a bleak and arid appearance. The Salinas and Russian River valleys, trending E. and W., are highly fertile, and produce the finest cereals, fruits, and vegetables raised on this part of the coast. Among the inland valleys are those of Napa, Sonoma, Petaluma, Amador, San Ramon, &c. That division of the Monte Diablo range called the *Sierra Costa Hills*, presents many lofty peaks, the most elevated of which, Mount San Bernardino, is 8,500 feet high. — *Bays, Rivers, Lakes, &c.* The principal feature in the country between the Sierra Nevada and the ocean is the great bay or inlet of the sea called San Francisco. It has a narrow entrance, the famous "Golden Gate," (Fig. 479,) abt. a mile in width, in 37° 48' N. Lat. Within, it expands into a noble basin stretching N.N.W. and S.S.E. 60 or 70 m., and E. about 50 m., being divided into the three great compartments of San Pablo Bay on the S., Santa Clara on the S., and that of Suisun on the E., and affording accommodation for all the navies of all the countries in the world. Its coast-line of about 275 m. is highly diversified, displaying a singularly rich and varied outline. Two great rivers, the Sacramento from the S., and the San Joaquin from the S., fall into this bay. The Suisun, Napa, Sonoma, and Petaluma rivers, all embouch into San Pablo Bay on the N., and are navigable by steamers. Other extensive indentations of the coast of C. are, the bays of San Diego, San Pedro, San Luis Obispo, and Monterey, all to the S. of San Francisco; and Tomales, Humboldt, and Trinidad to the N. Besides the rivers above mentioned, are the Salinas (navigable), the Pajaro, Santa Inez, Santa Ana, &c. to the S., and the Russian, Mad, and Eel rivers, &c. to the N. of the Golden Gate. The principal lake is that of Tulare (but), in the upper part of the San Joaquin valley, between 35° and 36½° Lat., surrounded by extensive swamps overgrown with luxuriant bulrushes, and receiving all the streams in the S. end of the valley. In the wet season it attains to a great size, its surplus waters being discharged into the San Joaquin. In the dry, it is much reduced in limit, and is, in some places, fordable. C. possesses many fine cataracts, as the Yosemite Falls (Fig. 478) in the valley (Fig. 2635) of the same name, with a sheer descent of 2,550 feet; the Pohono, or "Bridal Veil," falling 1,000 feet; the Nevada, the Vernal, &c. — *Soil, Vegetation, &c.* The appearance of the N. and S. portions of this State differs considerably, the former being much better timbered than the latter. Below Lat. 39° the forests are limited to some scattered groves of oak, in the valleys and along the river bottoms; and of red-wood on the ridges and in the gorges of the hills,

the latter being sometimes, also, covered with dwarfish shrubs. With these exceptions, the country is clothed in the wet season with the finest herbage, consisting either of different grasses, or of wild oats, which, in the valleys especially, flourish luxuriantly. But in the latter

Fig. 478. — YOSEMITE FALLS.
(Since 1877 a Government Reservation.)

part of the dry season, it has a burnt-up, scorched appearance, and is often subject to destructive fires. N. of Lat. 39°, the forests are extensive and valuable, and are fitted to supply all but inexhaustible supplies of timber. In Mariposa and Calaveras cos. are found the "Big Trees" (*sequoia gigantea*, Fig. 2339), monarchs of the forest, from 250 to 325 feet high, and probably 1000 year old! So far as is known, they surpass anything of the kind that the world can show. The soil of the coast region, and W. slope of the Sierra, is generally, a deep, black, alluvial mould, porous, and extremely fertile, producing grain in the richest abundance, and fruits and vegetables of the most superb and various kinds. The N. part of the country is well suited to the growth of wheat, barley, rye, and oats. All the edible roots of the Atlantic coast find, even, a finer development here: and apples, peaches, pears, vines, &c., come to the highest possible perfection. In the S. valleys, between the coast and the Sierra, the climate is sufficiently hot to mature maize, rice, and tobacco. The heat and drought of summer make irrigation a most important auxiliary in agricultural operations; but it is not indispensable. In Lat. 34° 16' N., apples, pears, plums, figs, oranges, grapes, peaches, and pomegranates may be found growing together with the tropical products of the plantain, banana, cocoa-nut, sugar-cane, and indigo, and all prolific in yield, and unsurpassable in quality. Humboldt was of opinion that the olive oil of this region is equal to that of Andalusia, and the wine resembling that of the Canary Islands. The mission of San Luis Obispo (Lat. 35°) bears a special distinction for the excellence of its olives,

Fig. 479. — GOLDEN GATE.

which are finer and larger than those of the Mediterranean. Of late years, wine-growing is cultivated in the fertile coast-lands lying S. of the Golden Gate, to

a great extent, and this industry promises to still further develop itself into a rivalry with the grape products of Southern Europe. — *Climate.* The temperature of C. is a good deal higher than that in the corresponding latitudes on the E. coast of America. The year is divided into two seasons, — the dry, from May to Nov., and the wet. In the latter, the rains, though not by any means continuous, are frequent and heavy. In the S. parts, the dry season commences earlier and continues longer than in the N. During the prevalence of the latter, the district immediately contiguous to the shore is infested with fogs and cold winds from the sea. But within the coast range the climate is delightful: the mid-day heats not being so great as to hinder labor, while the nights are cool and pleasant. C. may be truly termed the "Italy" of this continent. — *Zoöl.* Among the wild denizens are found bears, wolves, bighorn, or mountain sheep, otters, beavers, hares, &c. The elk, the white and black-tailed deer, and the American antelope, roam the forests and grassy plains. The sea contains exhaustless stores of fish. — *Minerals and Mining.* The vegetable and animal products of this State have, hitherto, been reckoned but of little account, compared with its mineral productions, particularly with the gold found in the beds of some of its rivers and ravines. There are three distinct gold regions in C., though the first two are connected by outlying "placers" and "leads." 1st. *The Eastern Range*, extending from the summit ridge of the mountains to within about 25 m. of the edge of the plains. This district possesses about 1,000 sq. m. of available mining territory, including both placers and veins of gold-bearing quartz. 2d. *The Middle Placers*, situated at about an average distance of 20 m. from the line of the higher foot-hills, and having its W. border within about 4 m. of the edge of the plains. This district covers an area of about 6,000 sq. m., and the mining is mainly gold-washing. 3d. *The Valley Mines*, which are situated among the lower foot-hills of the mountains, and extend thence westward to the E. edge of the plains of the San Joaquin and Sacramento rivers, to an extent of from 3 to 5 m. These mines extend from N. to S. a linear distance of about 250 m.; and the amount of territory that they occupy is probably not less than 6,000 sq. m. The profitable mining of the deposits, in these, as in middle placers, has required the construction of extended watercourses for the washing of the gold from the sand and gravel. The varieties of mining are: *Placer mining*, which bears considerable analogy to coal mining in Pennsylvania, adits being driven into the hills, and often through solid rock, to the locality where the gold deposit exists; *Hydraulic mining*, where a broad, open ditch is carried through the hills, and the sides washed down by directing a powerful stream of water on them; *River mining*, in which, when the rivers are low, the streams are diverted from their courses by means of flumes, tail-races, &c., and the beds of the rivers thus exposed and their sands washed for gold — this can only be carried on for about six months of the year; *Gulch mining*, in which a large flume is formed below the surface of the earth in such a manner as to receive all the adjacent streams after being used by the miners; and lastly, *Quartz mining*, which requires a considerable investment of capital, but is profitable. In this description of mining the gold-bearing quartz is crushed by powerful stamps, in mills driven by steam, water, or mule power, to the fineness of flour, and then the gold taken up by means of quicksilver by the usual washing process. The total value of gold produced in C., from the discovery of the mines in May, 1848, to Dec. 31, 1894, and deposited at the U. S. Assay offices, was \$767,568,763. Gold is not the only valuable mineral yielded by C. Silver exists, and has been profitably mined in El Dorado, Mariposa, Santa Barbara, and Santa Clara cos.; and most of the gold contains a considerable portion of silver. Many millions' worth have thus been obtained since the period of the gold discovery. Copper, strongly impregnated with gold and silver, is found in Placer, Shasta, El Dorado, and other counties. Quicksilver in the form of cinnabar is largely produced at the New Almaden, Guadalupe, Anorora, and other mines. Iron, in large quantities and various forms, is found in all the coast range; in Placer co., in a condition approaching to native iron in purity, and in Mariposa co., in the form of hydrate. Sulphate of iron in large quantities occurs near Santa Cruz, and magnetic iron in the same region. The mining of quicksilver, copper, iron, &c., has also been very profitable. Platinum is almost as widely dispersed through the State as gold, though in smaller quantities; osmium and iridium are closely associated with it. Tin is also found in several parts of the State, and will probably ere long be mined with advantage. Chromium, gypsum, nickel, antimony, bismuth, sulphur, lead, salt, saltpetre, borax, good coal and petroleum, in large quantities, marbles of extraordinary beauty, alabaster granite, bluish-stone, lime, &c., are the other principal mineral products of the State. Mineral springs abound. It was known from the statements of the earliest visitors of the country, that gold had been found, or was known to exist, in C.; but these statements had either been forgotten, or made no impression till late in May, 1848, when the auriferous deposits were discovered, that attracted so much attention, and had such wonderful results. They were found on the S. fork of the American River, a tributary of the Sacramento, at a place now called Coloma. The news of the discovery, and of the unparalleled richness of the deposits, spread with extraordinary rapidity; and before the end of the season about 5,000 men had been attracted to the spot, and their enterprise had been rewarded by the acquisition of the precious metal to the value of \$5,000,000. During the season of 1849, emigrants of all

descriptions, and from the remotest countries, including Americans, Mexicans, Chileños, Europeans, South-Sea Islanders, and Chinese, crowded in swarms to the Sacramento and its affluents. The foreigners resorted principally to the S. mines, which gave them a great superiority in numerical force over the Americans, and enabled them to take possession of some of the richest in that part of the country. After the discovery, in 1851, of the Australian fields, the "gold-fever" in this region somewhat abated in intensity, and its surplusage of miners, or "diggers," found a new vent for their energies. *Agric.* The husbandry of this State has greatly developed itself within the last few years. Since the comparative subsidence of the gold frenzy, the majority of her citizens have energetically turned their attention to the agricultural resources of the soil, and have achieved wonderful results. In 1867, a breadth of 684,376 acres of wheat yielding about 15,000,000 bushels was harvested; in 1890 C. had 52,984 farms, with a total acreage of 21,427,293, while the product of the land far exceeded in value that of the mines of precious metals. The value of farming property, including land, buildings, machinery, &c., was \$711,806,340; live stock, \$60,259,230; agricultural products, \$87,033,290. Since then the value of farming products has largely increased. C. wheat is claimed to be the best raised in the U. S. and commands in Europe the highest market price. The yield in 1895 was 40,097,798 bushels. The yield of barley was over 17,000,000 bushels. Oats are raised in much smaller quantities. Maize does not prosper in this soil, probably on account of the lack of sufficient moisture. Rye and buckwheat are but little attended to. Rich grasses, clovers, and roots are plentiful, and greatly encourage the feeding of cattle as a staple industry; the dairy produce is excellent. Several million pounds of butter are annually produced, a great part of which is exported. Cheese is made in considerable quantities. Sheep-farming is profitable, and turns out many million pounds of wool annually. There were in the State in 1896, 2,962,126 sheep, valued at \$5,483,784. Only two States, Texas and Montana, surpass this number, while the value of C. sheep is the highest in the States. Wine-making has become an extensive and important industry. In 1890 there were 200,000 acres in grapes, and there is a much wider area to-day. In addition to the production of wine and brandy, there were exported 1,372,195 boxes of raisins. A new and important product of C. is beet-root sugar, to which its soil seems remarkably well adapted, and in which it has already gone far beyond any of the other States. A statement of three years' product will suffice to show the rapid rate of progress: in 1892 the yield was 8,175,438 lbs.; in 1893, 21,801,288 lbs.; and in 1894, 35,088,969. No later reliable statistics are available, but the above will suffice to show a remarkably rapid advance. The raising of tropical fruits, oranges, lemons, figs, apricots, olives, &c., and of temperate fruits, such as peaches, pears, cherries, &c., has become a highly important feature of C. agriculture, and vast quantities of these fruits, dried or otherwise preserved, are exported annually to the East. The raisins of C. are among the best in the world, while bee-keeping is an industry of great importance, C. honey being of unsurpassed excellence. The productiveness of C. has been enormously increased by the wide-spread practice of irrigation, rendered necessary by the rainless climate of much of the southern region, and useful wherever applied. The Merced, Kern Co., Fresno and Tulare canals have redeemed fully 1,000,000 acres of fertile land, while irrigation canals elsewhere have added largely to the gain. Much of this irrigation has been achieved by the sinking of artesian wells, of which there are large numbers in the farming districts of the State.—*Manuf.* C. will, no doubt, soon possess manufacturing interests sufficiently extensive to form a powerful element in her system of industrial economy. Woolen goods, blankets, flannels, broad-cloths, &c., are produced to a considerable extent, and of admirable quality. At the Paris Exposition of 1867, the blankets and flannels from this State surpassed all their American competitors. Coarse cotton and flax goods are also manufactured. Flour is manufactured extensively. Iron, machinery, engines, lumber, leather, hides, gunpowder, chemicals, agricultural implements, saddlery, furniture, &c., form other and important features in the manufacturing operations of this State.—*Finance.* The assessed value of real and personal estate at the end of the year 1896 was over \$1,200,000,000; the State debt \$2,286,500. The principal towns are San Francisco, Los Angeles, Oakland, Sacramento (the capital), San José, San Diego, Stockton, Alameda, Fresno, Vallejo, Santa Barbara, &c.—*Government.* C. was ceded by Mexico to the United States in 1848. On their arrival in the territory, the new emigrants from the United States, and other distant countries, found themselves in a singular position. There were few inhabitants, and no government or police in the country; and the immigrants were totally unacquainted with the Spanish laws, by which the property and affairs of the settlers had hitherto been regulated. In consequence, the greatest confusion and disorder took place. Congress soon became aware of this untoward state of things, and of the importance of the vast addition made to its territory. But the efforts of the govt. to organize the country into a new State, or to subject it to a constitutional regime, were obstructed at the outset by the formidable difficulty of deciding whether slavery should or should not be allowed in the new State; and the disinclination or inability of Congress to decide this question prevented the admission of C. into the Union, either as a State or Territory. Under these circumstances the Americans in the country displayed their singular capacity for self-government, by promptly

and unanimously adopting the manly and safe course of forming themselves into a State. In June, 1849, representatives were chosen from all parts of the territory, to meet for the purpose of framing a constitution. The new State was admitted into the Union in 1850, and Sacramento declared to be its capital. By the terms of the State Constitution, the legislature of C. consists of the senate and assembly, and convenes annually at Sacramento on the first Monday in January. The senate is composed of 40 members, chosen from 28 senatorial districts, and the term of office is two years. The lieutenant-governor is *ex-officio* president of the senate. The assembly is composed of 80 members, elected annually, and the presiding officer is chosen from their own body. The pay of the legislative members is, for the first 90 days of the session, \$10 per diem, and for the remainder of the session \$5 per day, and mileage at the rate of \$4 for every 20 miles of travel from their residence by the nearest mail-route to the capital. The constitutional amendments provide for biennial sessions, to commence on the first Monday in Dec. Members of the assembly are to be chosen for two years, and senators for four years.—*Mining.* The *débris* arising from the effect of hydraulic mining has produced cause for serious alarm in this State. It consists in practically burying large areas of land under the mining *débris*, or "slickens," and sand. The territory most seriously affected thus far, has been on the Yuba, American, and Bear rivers; the loss thereby to agricultural property was estimated by the State Engineer as reaching \$6,000,000 in 1880. This valuation is only what may be called the *direct* damage. Millions of property in the valley of the Sacramento are threatened with certain destruction. This area alone covers nearly 1500 sq. miles of fertile territory, and the estimated value of this land, together with other similarly situated, is placed at the large sum of \$60,000,000; a total certainly worthy the immediate attention of the State authorities. To add to this loss, is the possible destruction of many of the rivers as water-way. It is a query then for the State to solve, if the destruction caused by the manner hitherto adopted in this process of mining will not by far exceed the product of these mines. The annual out-put of the hydraulic mines is placed at about \$14,000,000. Canals constructed by private companies for purposes of mining and navigation are of extraordinary extent. Steamers make the passage from New York and New Orleans to Aspinwall, respectively, in about 7 and 4 days; and allowing three days for the conveyance of freight across the Isthmus, and 10 days for the voyage from Panama to San Francisco, the passage from New York to the latter is made in 20, and from New Orleans in 17 days.—*Hist.* C. was discovered by Cabrillo, a Spaniard, in 1542. In 1578, Sir Francis Drake sailed along its shores, prolonging his voyage to the 48th degree of Lat. From this circumstance the name *New Albion* was sometimes formerly given to the country N. of San Francisco. It was not colonized by the Spaniards till 1768. The latter founded establishments in various parts of the country under the names of *Presidios* and *Missions*; the former being military posts, and the latter a sort of semi-religious foundations under the guidance of the Franciscan friars. Like the Jesuits, these fathers exerted themselves to instruct the Indians in the art of husbandry, and apparently their efforts were crowned with success. But here, as in other parts, the civilization of the Indians appears to have been wholly forced and factitious; and when the missions were deserted by the friars, the natives relapsed into their original barbarism. Their numbers have since rapidly declined; and it is probable, that at no distant period the race will be entirely extirpated. Americans seem generally to regard them as a sort of *fera natura*, or at best as irreclaimable savages without the pale of humanity. In 1830, C. began to be resorted to by American and English hunters, and other adventurers; who soon began to think of emancipating themselves from the feeble dominion of Mexico. The latter was overthrown in 1836. Subsequently the country became a prey to all sorts of disorders—adventurers from the U. States and Mexico alternately getting the ascendancy. After the war between the two countries in 1846, the Mexicans having been defeated at all points, finally ceded C. to the Union in 1846. Pop. in 1860 was 372,994; in 1870, 560,285; in 1880, 864,686; and in 1890, 1,208,130, including more Chinese than elsewhere in the U. S. In 1879, C. adopted a new constitution, embodying many novel provisions. Stock gambling, excessive charges by gas and telegraph companies, and lobbying are prohibited. Judges are not permitted to draw pay, unless under oath that no cause remains undecided, which has been submitted for decision for the period of ninety days. Eight hours is made a legal day's work on all public works. Freight and passenger rates for all transportation companies is regulated. Citizenship is restricted to those not of Mongolian blood.—C. possesses two superior astronomical observatories, the Lick, in charge of the Univ. of C., on Mt. Hamilton, near San José, and that on Echo Mountain, near Los Angeles, under the able direction of Prof. Lewis Swift.

California, in Missouri, a thriving town, the cap. of Moniteau Co. Pop. (1897) about 2,000.

Caligat'ion, *n.* [Lat. *caligatio*.] Darkness; cloudiness. (R.)

Caliginous, *a.* Obscure; dim; affected with darkness. (R.)

Caliginously, *adv.* In a dark or obscure manner. (R.)

Caligo, *n.* [Lat. *caligo*.] (Med.) Dimness or obscurity of vision. Hence, C. forms part of the name of various diseases of the eye attended with dimness or loss of sight; as, *caligo corneæ*, *lenticis*, *humorum*, &c.

Calig'raphy, *n.* See CALLIGRAPHY.

Calig'ula, CALIUS CÆSAR, the 4th of the Roman emperors, son of Germanicus and Agrippina, B. 12 A.D., received his surname from *caliga*, a kind of shoe which was worn by the common soldiers, and which he frequently wore himself in order to gain their affections. C. early devoted himself to courting the favor of Tiberius, and so far succeeded in ingratiating himself with the emperor, that he was soon promoted to responsible offices of state. The uncertainty of succession which followed the death of Tiberius, who was put to death probably by one of C.'s favorites (*Tac. Ann.* vi. 50), together with the general popularity which C. himself enjoyed, afforded him a favorable opportunity of succeeding to the sovereign power (A.D. 37). His government began well, and with symptoms of great clemency; but his conduct was soon changed. He became addicted to intemperance and cruelty, and his extravagance knew no bounds. He took upon himself the highest titles of honor, and even had temples erected and sacrifices offered to him as a god. It seems probable that his grandmother Antonia died by his orders. According to Dion Cassius, he frequently visited the prisons in person, and ordered all the captives, untried, guilty or not, to be thrown to wild beasts. Sometimes he would order a number of the spectators to be seized and thrown among them, after having had their tongues cut out, that their cries might not interrupt his ferocious delight. Old age and weakness rather attracted than averted his cruelty. He even put to death Macro, who had been the means of his elevation, and his wife with him. A favorite horse, *Incitatus*, he fed with gilt oats and delicious wines; he appointed him a great number of attendants, and treated him with the most absurd attentions. He erected a bridge over the sea from Baia to Puteoli, on which he rode along, enjoying the sight of numbers of persons drowning under his order. He made great preparations for a war against the Germans, and crossed the Rhine with a large army, but returned without having seen a single enemy. He invaded and plundered Gaul, and banished his sisters Agrippina and Livia. It is said that C. had a design to destroy the works of Homer, Virgil, and Livy. After a reign of less than 4 years, and in the 29th year of his age, he was murdered by a band of conspirators, headed by Cassius Chærea, a tribune, A.D. 41. The character of this emperor is pretty accurately given by Seneca (*De Ira*), when he says that nature seems to have intended to show in the instance of C. how much harm can be done by the greatest vices leagued with the greatest power.

Cal'in, *n.* [Fr.] An alloy of tin and lead, used in China to make tea-canisters, &c.

Calipash', *n.* [Fr. *carapace*.] (Cookery.) The green fat of turtle.

Calipee', *n.* [See CALIPASH.] (Cookery.) The yellowish gelatine of turtle.

Calipers, **Cal'iper Compasses**, *n. pl.* Compasses with curved legs, for measuring the calibre (whence the name) or diameter of cylinders, balls, or other round bodies. C. of the best sort are made with a scale having different sets of numbers engraved on it, like a sliding-rule, for the purpose of exhibiting at once various relations depending on the magnitude of the diameter of the body measured. Thus, as the weight of balls of the same metal are in a constant ratio to the cubes of their diameters, the scale may be so graduated and numbered that the observer may read off either the diameter in inches or the weight in pounds. Other numbers having a less immediate application are also frequently attached; for example, the degrees of a circle, the proportions of Troy and avoirdupois weight, tables of the specific gravities and weights of bodies, &c. It is obvious that these may be varied infinitely, according to the purposes proposed to be accomplished.

Caliph, CALIF, KALIF, or KHALIF, (*kal'if*) *n.* [Ar. *khalaf*, to succeed.] Originally, a successor, vicar, deputy, or lieutenant, but afterwards applied chiefly to the successors of Mohammed in the supreme power. As representatives of the prophet Islam, the C. exercised a power which was primarily spiritual; and in theory, therefore, he claimed the obedience of all Mussulmans. In practice the claim was soon disregarded; and the Fatimite caliphs of Africa, and the sovereigns of the Omniad dynasty of Spain each professed to be the only legitimate representatives of Mohammed, in opposition to the Abbasside caliphs of Bagdad. The latter caliphate reached its highest splendor under Haroun-al-Raschid, in the 9th century; but his division of the empire among his sons showed how completely the C. had lost sight of the spiritual theory of his office. For the last 200 years the appellation of C. has been swallowed up in *Shah*, *Sultan*, *Emir*, and other titles peculiar to the East.

Caliphate, KAL'IFATE, CAL'IPHSHIP, KHAL'IFSHIP, *n.* Office, dignity, or government of a caliph.

Calipp'ic, *a.* (*Chron.*) Relating to the Calippic period. In ancient chronology, a correction of the Metonic cycle, proposed by Calippus. The Metonic cycle was a period of 19 solar years, at the end of which time the new moons return again on the same days of the year. The period contained exactly 6,940 days. Now 6,940 days exceeds 235 lunations by only seven hours and a half. At the end of 4 cycles, or 76 years, the accumulated excess of $7\frac{1}{2}$ hours amounts to one whole day and six hours. Calippus therefore proposed to quadruple the period of Meton, and to deduct a day at the end of it by changing one of the months of 30 days into a month of 29 days. The period of Calippus is sometimes referred to as a date by Ptolemy.—See METONIC CYCLE.

Calippus, a mathematician of Cyzicus, who lived in the 4th cent. B.C.—See CALIPPIC.

Calisthenic, *a.* Pertaining, or relating, to calisthenics; as, *calisthenic exercise*.

Calisthenics, (*kal-is'then'iks*), *n. pl.* [Gr. *kalos*, beautiful, fair, and *sthenos*, strength.] Exercises designed to promote grace of movement and strength of body. See GYMNASICS.

Caliver, *n.* (*Gan.*) A hand-gun in common use about 1600, that could be discharged from the shoulder without a rest. It was fired by means of a matchlock. The barrel was shorter than that of the old musket, and much lighter, and the diameter of its bore was made according to a fixed standard; hence the name of the weapon, corrupted from calibre.

Calix, *n.* See CALYX.

Calixtines, *n. pl.* (*Ecol. Hist.*) The name of one division of the Bohemian reformers, who, in the 15th century, protested against the errors of the Church of Rome, and maintained their independence by force of arms, until the death of Huss, his followers split into two principal parties, under the names of *Taborites* and *Calixtines*; of which the latter were the most moderate, and held out chiefly on the ground of the refusal of the popes (*calyx*) to the laity, whence they derive their name. Their hostility was at length propitiated by indulgence on this point; the Church of Rome declaring expressly at the same time, that the giving or withholding of the sacramental wine is a matter of ecclesiastical ordinance merely, and neither the one nor the other essential to the reception of the benefits of the eucharist. The Council of Basle (1431) says, "Sive sub una specie sive duplici quis communicat, secundum ordinationem seu observationem ecclesie, proficit, digné communicantibus ad salutem." — The same name is given to the followers of George Calixtus, *q. v.* a German divine of the 17th cent., who proposed a reconciliation between the Roman Catholics, Lutherans, and Reformed Church on the basis of the Apostles' Creed.

Calixtus, a saint, and one of the early popes, succeeded Zephyrinus A. D. 219, and D. 223. He is said by some to have suffered martyrdom. One of the Roman catacombs was named after him.

Calixtus II. son of William, Count of Burgundy, succeeded Pope Gelasius II. 1119, and D. 1124.

Calixtus III. (Alfonzo Borgia), a Spaniard, succeeded Nicholas V. 1455, and D. 1458. He was maternal uncle of Rodrigo Borgia, whom he made Cardinal, and who became afterwards Pope Alexander VI.

Calixtus, GEORGE, (properly *Callisen*.) the most spirited and independent theologian of the Lutheran Church in the 17th cent., B. Dec. 14, 1586, in Schleswig-Holstein. He was educated at Flensburg and Helmstedt, devoting himself in the latter place to philosophical studies. A few years after he turned his attention to theology, and started, in 1609, to visit the universities of northern Germany, returning in 1611 to Helmstedt, here, through his polemic disputations on the dogmas of the church, he was declared an original genius and a courageous combatant of the prevailing prejudices. Soon after, in company with a rich Hollander, he travelled through Germany, Holland, England, and France, turning in 1613 to Helmstedt, where the following year he became professor of theology, and in 1636 abbot of Königsbutter. He was one of the greatest honors and ornaments to the University of Helmstedt, to which he was attached his whole life. D. 1656.

Caliyuga, *n.* (*Hindoo Chron.*) The Hindoo æra of the Deluge. Hales remarks: "Though the date of the chronological æra *Caliyuga* be invariably fixed to B. C. 302, the historical æra of that name fluctuates considerably. The *Bhavagat* reckons it B. C. 1913; the *Vishnu Parana*, B. C. 1995; other *Paranas*, B. C. 1370; the followers of Jina, B. C. 1078."

"The authority of the lord Manchester, who had trod the same paths, was still called upon." — *Clarendon*.

—To proclaim, or utter aloud; to publish: as, to call goods at auction.

To call back. To revoke; to retract; to recall.

"He also is wise, . . . and will not call back his words." — *Isa. xxi. 2.*

To call in. To collect, as outstanding debts, money, &c.; to recall from circulation, as currency notes.

"If clipped money be called in all at once, . . . I fear it will stop trade." — *Locke*.

—To summon together; to invite.

"He fears my subjects' loyalty,

And now must call in strangers." — *Sir J. Denham*.

To call a party. To buy a person's name in a court of law, and summon him to give evidence, or perform some duty. — To call for. To demand; to require; to claim; as, religion calls for virtue.

"Madam, his majesty doth call for you,

And for your grace, and you, my noble lord." — *Shaks.*

To call forth. To bring or summon to action; as, we must call forth our powers. — To call out, to challenge to a duel; to summon to fight; to muster into service; as, to call out the troops.

"When their sovereign's quarrel calls 'em out,

His foes to mortal combat they defy." — *Dryden*.

To call off. To summon away; to divert; as, to call off his attention; to be called off duty.

To call over. To recite a roll of names; to read aloud a list or muster-roll; as, the men were called over.

To call up. To bring into retrospect or recollection; to restore to view; as, to call up memories of the past; to bring forward into action or discussion; as, to call up members for a division. — To call to mind, to revise in the memory; to recollect; as, to call to mind an anecdote.

—*v. i.* To utter with a loud sound; to address or hail by name. (Often preceding *to*;) as, to call to a boot-black.

"Go, call a coach, and let a coach be called,

And let the man who calleth be the caller." — *Carey*.

—To stop at a place or house without intention of staying; to make a short visit; as, to call at the club. (Sometimes used with *in*.)

"I first of all called in at St. James's." — *Spectator*.

To call on, or upon. To make a brief visit to; as, to call on a friend.

"And as you go, call on my brother Quintus." — *Ben Jonson*.

—To solicit payment of a debt; to ask assistance, as, to call on a bank for a loan.

"I would be loth to pay him before his day; what need I be so forward with him, that calls not on me?" — *Shaks.*

—To implore; to pray to; to invoke; as, to call upon Heaven to witness.

"Thrice call upon my name." — *Dryden*.

—*n.* A vocal address of summons or invitation; as, a bugle-call.

"The moving mountains hear the powerful call." — *Pope*.

—A demand; a requisition; a claim; as, a call on charity.

"Dependence is a perpetual call upon humanity." — *Addison*.

—A divine vocation or summons; an awakening to true religion; as, to have a call to preach the gospel.

"Yet he at length . . . by some wondrous call,

May bring them back repentant and sincere." — *Milton*.

—Calling; vocation; employment. (*Calling* is more frequently used in this sense.)

"Still cheerful, ever constant to his call;

By many follow'd, lov'd by most, admir'd by all." — *Dryden*.

—A short visit; as, to make a call.

(*Naut.*) A pipe or whistle used by a boat-wain and his assistants when summoning sailors to their duty.

(*Sporting.*) A note blown, as to sound a call. — A sound made in imitation of a bird, a decoy when shooting.

Call of the house. In legislative assemblies, a calling over the names of the members to discover absentees, &c.

(*Stock Exch.*) The privilege of calling for, or buying, a certain stock at a specified price, within a given time. See PCT.

Calla, *n.* [Gr. *kallos*, beauty.] (*Bot.*) A genus of plants, order *Orontiaceæ*. The most interesting species is *C. palustris*, from the arid rhizomes of which the Laplanders prepare a kind of bread, by drying, washing, grinding, and baking. The arid juice cannot be thoroughly removed without great labor in washing the rhizomes. This species is found in shallow water, in the Middle and N. States.

Callahan, in *Fla.*, a p. o. and R.R. centre of Nassau co.

Callahan's Corners, in *N. Y.*, a post office of Albany co.

Callaite, *n.* (*Min.*) See TURQUOISE.

Callan, in *Ireland*, a river rising 6 m. from the city of Armagh, and flowing into the Blackwater at Charlemont, co. Tyrone.

Calland's, in *Virginia*, a P. O. of Pittsylvania co.

Callao, (*kal-la-ô*'), a fortified sea-port town of Peru, 6 m. W. of Lima, of which it is the port; Lat. 12° 3' 45" S., Lon. 77° 13' 7" N. It is a meanly-built place, but possesses a considerable trade. The roadstead is by far the best on the Peruvian coast, with good anchorage in from 7 to 10 fathoms. An excellent carriage-road connects this town with Lima. *C.* is of comparatively modern origin; the former town having been wholly destroyed and submerged in the dreadful earthquake of 1746. Pop. about 33,000.

Callao, in the China Sea, a small island in Lat. 15° 48' N., Lon. 108° 30' E., 16 m. from the mouth of the Fai-Po River. Area, about 10 sq. m.

Callao, in *Indiana*, a post-office of La Porte co.

Callao, in *Missouri*, a twp. and vill. of Macon co., 79 m. W. of Hannibal.

Callapooya Indians, a tribe found in Oregon, between the Columbia and Willamette rivers.

Callaway, in *Kentucky*, a post-office in Bell co.

—A. S. W. county, on the border of Tennessee. Area, 450 sq. m. Watered by the Tennessee River forming its N. limit) and by Clark's River. Surface, diversified; soil, fertile. Cap. Murray.

Callaway, in *Missouri*, a county in the E. central part of the State N. of the Missouri River. Area, 743 sq. m. Drained by Cedar and other creeks. Surface, mostly undulating prairie. Soil, Very fertile, with sub-strata of coal, iron ore, and limestone. Potter's clay is abundantly found. Cap. Fulton.

Call-bird, *n.* A bird trained to allure other birds by its call, into a snare or decoy.

Call-boy, *n.* A boy whose duty it is to repeat orders issued by a captain of a steamer to the engineer, &c.; also, one who summons the actors during the progress of a theatrical performance.

Callcott, JOHN WALL, an English musical composer, b. at Kensington, 1766. He has produced numerous and highly esteemed works, among which we will quote his fine piece, *Oh, Sovereign of the Willing Soul*, and his *Musical Grammar*. His mind gave way under excess of study, and he d. 1821.

Callcott, SIR AUGUSTUS WALL, an English landscape-painter, brother of the preceding, b. 1779. His best paintings are those called *Morning, Evening, Waiting for the Passage Boat*, and *Harvest in the Highlands*. D. 1844.

Calle, *La*, (*kal*), a seaport on the coast of Algeria, 75 m. from Tunis. It is the seat of the French coral fishery. Pop. about 700.

Callensburg, in *Pennsylvania*, a post-village of Licking township, Clarion co., on Clarion River, about 65 m. N.N.E. of Pittsburg.

Callensville, in *Kentucky*, a village of Pendleton co., on the S. branch of Licking River.

Call'er, *n.* One who calls.

Callanee, an inland town of Hindostan, prov. Arrunghabad, pres. Bombay, 24 m. N.E. of that city; Lat. 19° 15' N., Lon. 73° 15' E. It is the cap. of a dist. of the same name.

Callichthys, *n.* [Gr. *kalos*, beautiful, and *ichthys*, a fish.] (*Zool.*) A genus of abdominal Malacopterygious fishes, family *Siluridae*. The body and head are protected by large, hard, scaly plates; the mouth is furnished with four long cirri; the teeth are very small; the eyes are also small, and situated on the side of the head. They are natives of South America and other hot climates, where the rivers frequently dry up; and they cannot only live for a considerable time out of water, but they are said to perform long journeys over land, directing their course to some other stream.

Callicoon, or **Colticoon**, in *New York*, a township of Sullivan co., on the Delaware River, 90 m. S.W. of Albany.

Callicoon Creek, in *New York*, Sullivan co., falling into the Delaware River.

Callicoon Depot, in *New York*, a post-office of Sullivan co.

Callieratidas, a Spartan general, who lived in the 4th cent. B. C., and succeeded Lysander in the command of the Lacedæmonian fleet. He took Methymne, and blockaded Conon, in Mitylene, but was conquered and killed the same year by the Athenians, at Arginusæ.

Call'id, *a.* [Lat. *callidus*.] Crafty; cunning; shrewd. (*R.*)

Call'idity, *n.* [Lat. *calliditas*.] Cunning; shrewdness; craftiness.

Callid'imm, *n.* [Gr. *kalos*, beautiful, and *eidōs*, form.] (*Zool.*) Small beetles, infesting houses, and very destructive to woodwork, especially of spruce and fir. One of this family (*Callidium bajulus*), a flattish, rusty-black insect, will, according to Messrs. Kirby and Spence, not only eat their way through the rafters of a house, but even bore through sheet-lead; fragments of lead having been found in their stomachs.

Callig'onmm, *n.* [Gr. *kalos*, beautiful, *gonia*, angle.] (*Bot.*) A genus of plants, order *Polygonaceæ*, characterized by a quadrangular fruit, winged at the angles. The species *C. pallasia*, which is found on the sandy steppes near the Caspian Sea, is valued by the wandering Kal-mucks for the acid juice of its fruit and shoots, and for the nutritious gum which may be obtained from its root.

Callig'rapher, *Calig'rapher*, *n.* One skilled in calligraphy, or fine penmanship.

Calligraph'ic, *Calligraph'ical*, *Calligraph'ic*, *Calligraph'ical*, *a.* [Fr. *calligraphique*.] Pertaining, or relating to, calligraphy.

Callig'raphist, *Calig'raphist*, *n.* [Fr. *calligraphie*.] A calligrapher.

Calligraphy, *Caligraphy*, (*kal-ig'ra-fî*), *n.* [Gr. *kaligraphia*.] The art of elegant penmanship, or handwriting. The scribes, who made a profession of copying MSS. before the invention of printing, have been termed *calligraphers*. Their art consisted, not merely in writing, but also in embellishing their work with ornamental devices called *illumination*; but which was also practised as a distinct employment. Among the MSS. of the early part of the Middle Ages, which are extant, there are some sumptuous specimens of the art, written in letters of gold, vermilion, &c., and on leaves of different colors, but that fashion went early out of use; and in general, it may be said, that the current writing of calligraphers diminished in beauty and in laborious minuteness, especially in Italy, during the centuries immediately preceding the invention of printing. — See ILLUMINATION.

Callimachus, (*kal-lim'a-kûs*), a Greek poet and historian, b. at Cyrene, in the 3d cent. B. C. He was tutor of Apollonius, the author of the *Argonautica*. Only 6 hymns and 73 epigrams remain of his numerous writings.

Callimachus, a Greek architect, lived in the 5th cent. B.C., and is said to have invented the capital so much admired in the Corinthian order of Grecian architecture.

Calliman'co, *n.* Same as CALAMANCO, (*q. v.*)

Call'ing, *n.* The act of inviting, summoning, or naming; as, the *calling* of a division-list.

—Employment; occupation; vocation; as, every man to his *calling*.

"I left no *calling* for this idle trade,
No duty broke, no father disobey'd." — Pope.

—Business; trade; profession; class of persons engaged in the same employment or occupation.

"It may be a caution not to impose celibacy on whole *callings*." — Hammond.

—Divine vocation; invitation, summons, or impulse towards religion.

"St. Peter was ignorant of the *calling* of the Gentiles." — Hakewill.

Call'inger, a strong fortress of Hindostan, in the presidency of Bengal. It is built of stone, on the top of a mountain, 1,200 feet above the neighboring plains. It was captured by the British in 1812. Lat. 24° 58' N., Lon. 80° 25' E.

Callin'icus, an ancient architect, b. at Heliopolis, Egypt, who invented the Greek fire, and communicated his secret to the emperor Constantine Pogonat, who is said to have made use of it to burn the Saracen fleet at Cyzicus in 670. A. D.

Call'ius, an orator of Ephesus, who flourished about the 6th cent. B. C. He is said to have invented elegiac poetry.

Calliope. [Gr., from *calos*, beautiful, and *ops*, *opos*, a voice.] (*Myth.*) The first of the Muses, who presided over epic poetry, or over poetry in general. She was said to be the mother of Orpheus, of the Sirens, &c. She was usually represented as a young girl, with majestic appearance, crowned with laurel, holding in one hand a trumpet, and in the other an epic poem.

(*Astron.*) The 45th asteroid, discovered by Hind in 1852.

—A steam-organ, or instrument constructed like an organ, in which the tones are produced by steam instead of wind. It is of American origin, and an application of the steam-whistle applied to railroad locomotives.

Calliope, in Iowa, a village, cap. of Sioux co., on the Sioux River, 36 m. N. by W. of Sioux City.

Callipash', *n.* See CALIPASH.

Callipee', *n.* See CALIPEE.

Callipers, *n.* See CALIPERS.

Callistephus, *n.* (*Bot.*) A genus of plants, order Asteraceæ. The species *C. chinensis*, China Aster, has a stem about 18 inches high, with long branches, each terminated by a single, large head; rays, dark purple, disc, yellow, blossoming from July to Sept. Cultivation has produced splendid varieties, double and semi-double, with white, blue, red, flaked and mottled rays.

Callisthenes, a Greek philosopher, b. 365 B. C. He was a disciple and grandson of Aristotle, and accompanied Alexander the Great in his expedition to Asia. He refused to acknowledge the alleged divinity of this hero, and even had the misfortune to displease him by his raileries. He was afterwards accused of conspiracy, and put to death B. C. 328.

Callisthen'ies, *n. pl.* See CALISTHENIES.

Callithrix, *n.* [Gr., fair-haired.] (*Zoöl.*) A genus of Saguins, comprising the squirrel-monkeys, which are of small size and prettily colored. They are found chiefly on the banks of the Orinoco.

Callitrichaceæ, *STARWORTS*, *n. pl.* (*Bot.*) An order of plants, alliance *Euphorbiales*. This order consists of a few obscure, small, aquatic herbaceous species, all of which belong to the genus *Callitriche*. The distinctive character resides in the presence of several one-seeded carpels, combined into a single pistil with two styles, and altogether destitute of any floral covering. *C. Verna* is common in shallow streams and muddy places in the U. States.

Callitriche, *n.* (*Bot.*) See CALLITRICHACEÆ.

Callitris, *n.* (*Bot.*) A genus of plants, order Pinaceæ.

The Arar-tree, *C. quadrivalvis*, yields the resin called Sandarach, juniper resin, or gum-juniper, which is imported in large quantities from Mogadore. It is much employed in the preparation of varnishes. When powdered, it is called pounce. The timber furnished by this tree is very durable, and is used by the Turks for the floors and ceilings of their mosques.

Callo'sa de Euser'ria, a town of Spain, prov. Alicante, 18 m. S.S.W. of Denia. It is situated in a fine country, producing fine fruits, oil, and wine. Pop. 4,290.

Callo'sa de Segur'o, a town of Spain, prov. Alicante, 4 m. E. of Orihuela, on the Seguro; pop. 4,263.

Callose, *n.* [See CALLOUS.] (*Bot.*) Possessing callosities or hard spots.

Fig. 480. — CALLITRIS QUADRIVALVIS,
(Arar-tree.)

Callosity, (*kal-lós'e-té*, *n.* [Fr. *callosité*; L. Lat. *callositas*, from *callus*, hard.] Preternatural hardness of the skin, as that of the hands through hard labor.

(*Surg.*) Induration, or any part morbidly hard, as the edges of an indolent ulcer.

(*Bot.*) A thickened spot.

Callot, JACQUES, an eminent engraver, b. at Nanci, 1593, of a family recently ennobled. His father discountenancing his choice of a profession, he fled from home in order to make his way to Rome, the capital of the fine arts. Falling in with a troop of gipsies, he travelled in their company as far as Florence, from whence he went to Rome, where he met some acquaintances of his family, who compelled him to return home. He ran away a second time, and was a second time brought back, by his elder brother, whom he met at Turin. During his youthful adventures, as the story goes, his morals were preserved uncorrupted, by his constant prayer that he might grow up a good man, excel in his profession, and live to the age of 43. He set out a third time, with his father's tardy concurrence, studied for a long time at Rome, and returned to Nanci, where he married. He acquired considerable wealth, and his fame was such that he was invited to witness and perpetrate the events of the siege of Breda, and afterwards the sieges of Rochelle and Rhé, but he declined to commemorate the subsequent capture of his native place, and likewise refused a pension and lodging at Paris, offered to him by Louis XIII. He d. 1635, of complaints incidental to the practice of his art. His invention is lively and fertile, and he had a singular power of enriching a small space with a multitude of figures and actions. He engraved both with the burin, and the needle; but his best works are free etchings, touched with the burin, delicately executed, and sometimes wonderfully minute. There is a want of unity and breadth of effect in some of his larger engravings, which is not surprising in one who did not practice painting, and engraved even fewer pictures than most of his profession, working chiefly from original designs. His principal works are the *Sieges* above mentioned, the *Miseries of War*, the *Temptations of St. Anthony*, and a set of *Capricci*.

Callotechnies, (*kal-to-tek'niks*, *n. pl.* [Gr. *kalos*, beautiful, and *techné*, an art.] The fine or ornamental arts.

Callous, (*kal'us*, *a.* In a state of hardness; indurated; hardened; as, a *callous* ulcer.

—Hardened in mind; insensible; unfeeling; obdurate.

"Fattened in vice, so *callous* and so gross,

He sins, and sees not, senseless of his loss." — Dryden.

Callously, *adv.* In a callous or insensible manner.

Callousness, *n.* State of being callous; hardness; induration; — applied to the body.

"The skin becomes the thicker, and so *callousness* grows upon it." — Cheyne.

—Insensibility; obduracy; — applied to the mind or heart.

"Abandoned to a *callousness* and numbness of soul." — Bentley.

Callow, (*kal'lo*, *a.* [A. S. *calo*, *calow*; Ger. *kahl*; Celt. *calbh*; Lat. *calvus*.] Bald; destitute of feathers; naked; unfeathered; as, a *callow* brood.

"And teach the *callow* child her parent's song." — Prior.

Calluna, *n.* [Gr. *kalluno*, to adorn.] (*Bot.*) A genus of plants, order *Ericaceæ*.

Callus, *n.* [Lat., hardness.] (*Surg.*) That tough, flexible substance thrown out in all cases of fracture between the two ends of broken bones, binding them together, and which is soon filled up by osseous or bony matter, till the union of the fracture is complete; after which all the callus thrown out like a stiff glue round the broken bones is gradually absorbed, and the finger is unable to detect where the injury was.

(*Hort.*) The new formation over the end of a cutting, before it puts out roots.

Calm, (*küm*, *a.* [Fr. *calme*; Du. *kalm*. Said to be from Gr. *malakos*, soft, gentle.] Still; quiet; free from wind; peaceable; undisturbed; serene; as, a *calm* sea.

"Calm was the day, and through the trembling air,
Sweet breathings Zephyrus did softly play." — Spenser.

—In a state of mental rest; undisturbed by passion or excitement; tranquil; unruffled; serene; placid; composed; as, a *calm* demeanor.

—*n.* Absence of wind; stillness; tranquillity; quiet; freedom from motion and agitation; placidity.

"Ne'er saw I, never felt, a *calm* so deep." — Wordsworth.

(*Mar.*) That state of complete rest in the air when there is no wind stirring. The regions in the immediate vicinity of the equator are the parts of the ocean where the mariner is overtaken by the most frequent and most durable calms. In the Atlantic Ocean the region of calms has a breadth of six degrees. The Pacific Ocean derives its name from being characterized by an equatorial belt of calm region averaging five degrees in breadth, and lying between the south-eastern and north-eastern trade-winds. In these calm latitudes rain is constantly falling. The calm latitudes of the Atlantic Ocean are situated between the Tropic of Cancer and Lat. 29° N. — See TRADE-WINDS.

—*v. a.* To reduce to a state of calmness; to still, to quiet, as the elements.

"Neptune we find busy, in the beginning of the *Aeneis*, to *calm* the tempest raised by *Æolus*." — Dryden.

—To pacify; to appease; to deliver from agitation or excitement; to allay; to tranquillize; to assuage; as, to *calm* a troubled spirit.

Calmar, a fortified sea-port town of Sweden, on the W. side of a narrow strait of the Baltic, separating the island of Eland from the continent, 90 m. N.E. by E. of Carlsrona; Lat. 56° 40' 30" N., Lon. 16° 26' 15" E.

The town, built of wood, stands on the small island of Quarnholm; its port is small but safe and commodious. *Manuf.* Woollens, tobacco, and potash. Tar, alum, hemp, and timber are extensively exported. Here, in 1397, was concluded the famous treaty which united the kingdoms of Sweden, Denmark, and Norway under the rigorous sceptre of Queen Margaret, surnamed the "Northern Semiramis." Here, also, in 1520, Gustavus Vasa disembarked to deliver his country from the domination of foreigners and of a sanguinary tyrant. Pop. 9,200.

Calmar, in Iowa, a post-village and township of Winnebago co., 45 m. W.N.W. of McGregor, and 9 m. S.S.W. of Decorah.

Cal'm-browed, *a.* Wearing the look or appearance of calmness.

Calmer, (*küm'er*, *n.* He who, or that which, calms.

"Angling was . . . a *calmer* of unquiet thoughts." — Walton.

Calmet, AUGUSTIN, (*kal'mai*, a learned and laborious French Benedictine, b. in Lorraine, 1672. He wrote *Literat Commentary upon all the Books of the Scripture*, 23 vols. 4to; a *History of the Old and New Testament*, 4 vols. 4to; a *Historical, Critical, and Chronological Dictionary of the Bible*; a *Universal History*, 15 vols. 4to; and other learned works. D. 1757.

Cal'm'na, in Africa, a town of Dahomey, 15 m. from Abomey; pop. 16,000.

Cal'mly, (*küm'li*, *adv.* In a calm or serene manner without storm or violence.

"His curled brows,

Frown on the gentle stream, which *calmly* flows." — Denham.

—Quietly; temperately; mildly; without passion.

"Serenely pleasant, *calmly* fair." — Prior.

Calmness, (*küm'nes*, *n.* State of being calm; quietness; tranquillity; opposed to storminess; as, the *calmness* of the weather.

"While the steep, horrid roughness of the wood
Strives with the gentle *calmness* of the flood." — Denham.

—Composure; freedom from excitement or passion; mildness; as, *calmness* of manner.

"Till *calmness* to your eyes you first restore,
I am afraid, and I can beg no more." — Dryden.

Cal'mueks, *n. pl.* This name was given to one of the principal divisions of Tartars by the Mohammedan Mongols. Expelled from China in 1672, they settled on the banks of the Volga. Repeatedly invited to return, the great transmigration of these hordes commenced Jan., 1772, when above 300,000 of the tribe of the Torguts set out for their original seat in China. By the end of May they crossed the Torgan, after a march which they endured such terrible hardships that 250,000 of their number perished in its progress. The tribe, the Derbets, or Tcheros, who remained in Russia, took possession of the Steppe between the Don and the Volga where they are now associated with the Cossacks of the Don. The *C.*, who are descendants of the Scythian barbarians of antiquity, are small and thin, with brown complexion, round faces, piercing eyes set near together, thick lips, wide nostrils, projecting cheek-bones, large and prominent ears, and black, thick, and bristling hair which is shaved off the greater part of the head,—taken altogether, the ugliest in appearance of all the tribes of men. They are slothful, but intelligent, curious, a violent and deceitful, though hospitable. They are nomadic, dwelling in conical tents. Their principal riches consist in horses and sheep. They are almost always horseback, and have bow-legs, with their feet turned towards each other. Their religion is Buddhism, but some of them have been converted to Christianity or Mohammedanism.

Cal'my, (*küm'y*, *a.* Calm; peaceful; unruffled; tranquil. (Used in poetical composition.)

"It was a still and *calmy* day." — Fabrice Quene.

Cal'm, in Pennsylvania, a post-office of Chester co.

Calne, (*kän*, a borough of England, in Wiltshire, 89 W. of London. *Manf.* Flax. Pop. 5,696.

Calno, in New Jersey, a post-office of Warren co.

Caloden'dron, *n.* (*Bot.*) A genus of beautiful tree order *Rutaceæ*, natives of S. Africa.

Calog'raphy, *n.* Same as CALLIGRAPHY, *q. v.*

Calo'ma, in Iowa, a post-office of Marion co.

Cal'omel, *n.* [Gr. *kalos*, good, *melas*, black, from qualities of the Ethiop's mineral to which the name was originally applied.] See MERCURY, (CHLORIDE OF)

Calomne, CHARLES ALEXANDRE DE, a French statesman b. at Douai, 1734, who succeeded Necker in 1783 as controller-general of the finances, and found not a sin crown in the treasury. In this office he continued 1787. During this period he maintained the public credit by a punctuality till then unknown in the payments of the royal treasury, though he found it drained to lowest ebb. He labored with unwearied assiduity to store the equivoque between the annual income and expenditure, and to provide a supply for the emergency of the state, without increasing the burdens of the people. For this purpose he advised the king to revive ancient usage of convening the national assemblies the "notables," to whom he proposed the bold project of suppressing the pecuniary privileges and exemptions of the nobility, clergy, and magistracy. This measure alarmed those powerful bodies, and M. de Calonne found it necessary to retire to England, where he wrote elegant defences of himself, — his *Requête au Roi*, *Réponse à l'Ecrit de M. Necker*. He subsequently turned to Paris, where he d., 1802.

Calophyl'lum, *n.* [Gr. *kalos*, beautiful, *phyllon*, leaf (*Bot.*) A genus of plants, order *Clusiaceæ*, including many valuable timber-trees. *C. angustifolium*, the key-tree of Penang and the islands to the eastward

Bay of Bengal, furnishes fine straight spars. *C. calaba* and *C. inophyllum*, besides yielding timber, produce oils from which good burning oil is obtained. The fragrant resinous substance known as E. India lacumaha is a product of the species of this genus.

Calopogon, *n.* (*Bot.*) A genus of plants, order *Orchidaceae*. The Grass Pink, *C. pulchellus*, found in swamps and moist meadows in the U. States and Canada, is a very beautiful plant, with large purple flowers, remarkable for their inverted position.

Caloric, (*ka-lor'ik*), *n.* [From *Lat. calor*, heat, from *caleo*, to be warm or hot.] Warmth; heat: the principle or matter of heat, or the simple element of heat. This term is applied by the French chemists to designate the matter of heat, it having been formerly assumed that the phenomena of heat were dependent upon the presence of a highly attenuated, mobile, and imponderable form of matter.—See *HEAT*.

Caloricity, *n.* Pertaining to caloric or heat, or to the principle of heat.

Caloricity, *n.* A faculty in living beings of developing heat to resist external cold.

Caloriduct, *n.* [*Lat. calor*, and *ducere*, to conduct.] A tube for conducting heat.

Calorific, *a.* [*Lat. calor*, heat, and *facio*, I make.] Having the power of producing heat.

Calorific, *a.* [*Lat. calor*, heat, and *ferre*, to bear.] This term is applied to those non-azotized materials of food in the form of fat, starch, sugar, and gum, which are believed to be employed in the production of heat.

Calorific, *n.* [*Lat. calor*, heat, and *ferre*, to bear.] An apparatus used for distributing heat through convectors, &c.

Calorific, *a.* [*Fr. calorifique*; *Lat. calor*, and *facio*, to make.] That has the quality of producing heat: causing heat: heating; as, "A calorific principle."—*Gray*.

Calorific Rays, a term applied to the invisible heating rays, which emanate from the sun, and from burning all heated bodies.

Calorification, *n.* [*Fr. calorification*.] The production of animal heat.

Calorimeter, *n.* [*Fr. calorimètre*; *Lat. calor*, heat, and *metrum*, a measure.] (*Chem.*) An instrument for measuring the quantity of heat given out by bodies in passing from one temperature to another.—See *HEAT*.

Calorimetric, *a.* Pertaining to the use of the calorimeter.

Calorimetric, *n.* [*Lat. calor*, and *moveo*, I put in motion.] (*Phy.*) This term has occasionally been applied to a peculiar form of the voltaic apparatus, composed of a pair of plates of great extent of surface, the electricity of which, when transmitted through good conductors, produces intense heat.

Calorimetric, *n.* [*Lat. calor*, heat, and *mordicans*, biting.] (*Med.*) A particular kind of heat, that sometimes attends typhus and other fevers, and is considered a dangerous symptom. It is biting and pungent, rather than burning, and leaves a smarting sensation on the fingers for several minutes after touching it.

Calosoma, (*ka-lō'sa*), *n.* (*Zool.*) A genus of beautiful coleopterous insects, belonging to the family *Carabidae*, one of which (*C. sycophanta*) is about one inch long. There are about 30 species of these insects, the prevailing coloring being some shade of green, with a kind of brassy hue. They are very useful in many places, for the number of noxious caterpillars they destroy.

Calotropis, *n.* [*Gr. kalos*, beautiful, *tropis*, keel, in allusion to the keel of the flower.] (*Bot.*) A genus of tropical plants, order *Asclepiadaceae*. The species *C. gigantea*, or *procera*, yields the medicinal bark known as Indar bark, which has been much employed in India for the treatment of cutaneous affections, and occasionally as a substitute for ipecacuanha. It contains a peculiar principle, called *mudarine*. The fibres of the bark are known under the names of *ak* and *mudar* bres. The bark of the root of *C. Hamiltonii* has similar properties, and is said to yield the fibres termed *Yercum*.

Calotte, (*ka-lōt'*), *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calotte, *n.* [*Fr. calotte*; *Celt. cal*, the head, and *ot*, habitation, covering.] A cap or coif of hair, satin, or other material; a skull-cap formerly worn by Roman Catholic ecclesiastics.

Calque, *v. a.* See *CALK*.

Calquing, (*kal'ing*), *n.* The process of copying or transferring a drawing. It is effected by rubbing over the back of the original with a fine powder, or red chalk, or black lead: the smeared side is then laid on a sheet of paper, and the lines of the drawing are traced by a blunt pointed needle, which imprints them on the paper underneath. Another method is to hold the drawing up to a window, with a sheet of paper before it: the outlines will appear through, and may be pencilled off without damage to the original.

Calry, in *Ireland*, a parish of Sligo co.

Caltanissetta, a town of Italy, in Sicily, 25 m. N.E. of Girgenti. It has mineral springs and extensive sulphur works. *Pop.* 17,192.

Caltha, *n.* [*Gr. kaluthos*, a goblet.] (*Bot.*) A genus of plants, tribe *Helleboreae*. The species *C. palustris*, found throughout the Northern States, and commonly known as the Marsh Marigold, grows wild in marshy places, and has showy bright yellow flowers.

Caltonica, a town of Italy, in Sicily, 15 m. from Girgenti, near which are sulphur works: *pop.* 8,315.

Caltrap, *Caltrop*, *n.* [*A. S. coltrappe*, a species of thistle: *Fr. chausse-trappe*; *It. calcatreppo*; *L. Lat. calcare*, to tread, and *tribolo*, *Lat. tribulus*, a thistle.] (*Mil.*) An instrument armed with four iron spikes, so contrived, that when thrown to the ground one point enters it, leaving the remaining three projecting upward. It is generally used for impeding the progress of cavalry, by wounding the horses' feet.

Fig. 451. — CALTROP.

Caluire, a town of France, dep. Rhone, on the Saone, 3 m. N.N.E. of Lyons: *pop.* 6,045.

Calumbina, *n.* (*Med.*) A well-known bitter root, obtained from the *Jateorhiza palmata*, also called *Cocculus palmatus*, a native of the woods on the E. coast of Africa. The *C.* root is cut into thin circular slices, and being dried in the sun, is exported to every part of the world. It is of a light brown color, with slightly aromatic odor, and an intensely bitter taste: but, like quassia, is destitute of the tannin usually found in vegetable bitters. *C.* acts on the system as a stomachic and tonic, and, from its want of astringency, is one of the most useful bitters we possess, and particularly serviceable in cases of indigestion proceeding from biliary disturbance, for which, in combination with dried carbonate of soda and ginger, it becomes a most valuable remedy.

Calumbine, *n.* (*Chem.*) A bitter substance, obtained from the *calumbina* root.

Calumet, *n.* [*Fr. calumet*: from *Lat. calamus*, a reed.] (*Med. Hist.*) A large, beautifully adorned pipe used by the North American Indians as the emblem of peace. The first notice of the *C.* among European writers is to be found in Hernando de Soto's account of his expedition through the Southern provinces in 1490.—The *C.* of war, of a different make and fashion, is used when proclaiming war.

Calumet, in *Michigan*, a fine town of Houghton co. Here is the richest copper mine in the world. *Pop.* (1890) 2,192; (1897) about 3,000.

Calumet, in *Wisconsin*, an E. county, bounded W. by Winnebago Lake, drained by the branches of Manitowoc River, and traversed by a high ridge nearly parallel to the lake; *cap.* Chilton Centre.

—A post-village and township of Fond du Lac co., 12 m. N.E. from the latter.

Calumnick, or **Calumet**, a river rising in La Porte co., Indiana, and flowing westward into Illinois, discharges its waters into Lake Michigan.

Calumniator, *v. a.* [*Lat. calumniator*, lengthened form of *calvor*, to devise tricks and artifices against, to attack with artifices: *It. calumniare*; *Fr. calomnier*.] To devise tricks and artifices against; to attack with artifices or false accusations; to defame falsely and maliciously; to slander; to detract from; to accuse falsely; to asperse.

"Love, friendship, charity, are subject all
To envious and calumniating time."—*Shaks.*

—*r. i.* To utter calumnies; to utter or propagate slanderous reports falsely and maliciously.

"Even those that should be the most liberal, make it their business to disdain and calumniate one another."—*Sprat.*

Calumniation, *n.* Act of calumniating; false and malicious accusation.

Calumniator, *n.* [*Lat.*] One who calumniates or slanders another; one who maliciously circulates false accusations or reports; a slanderer.

"He that would live clear of the envy and hatred of potent calumniators, must lay his finger upon his mouth, and keep his hand out of the ink-pot."—*L. Estrange.*

Calumniatory, *a.* Slanderous; maliciously false.

Calumnious, *a.* [*Lat. calumniosus*.] Partaking of calumny; slanderous; bearing or implying calumny; injurious to reputation; as, a calumnious report.

"Virtue itself 'scapes not calumnious strokes."—*Shaks.*

Calumniously, *adv.* Slanderously.

Calumniousness, *n.* Quality of being calumnious; defamation; slander; false accusation.

Calumny, (*kal'um-ni*), *n.* [*Lat. calumnia*.] False accusation; false and malicious defamation; slander; detraction; falsehood; backbiting; evil-speaking.—See *LIBEL*.

"Be thou as chaste as ice, as pure as snow,
Thou shalt not escape calumny."—*Shaks.*

Calvados, a maritime dep. of France, so called from a chain of rocks of that name stretching along parts of its coast; bounded N. by the English Channel, E. by the dep. Eure. S. by Orne, and W. by La Manche. *Surface*, flat. *Soil*, generally good, producing excellent crops of cereals. Apples are largely cultivated, and cider is the common beverage of the country. The horses of this dep. are reckoned to be the finest in France: and milch cattle, and hogs, are bred in great numbers. *Prin. towns*, Caen, the capital, Lisieux, Bayeux, Falaise, Honneur, &c. *Pop.* 474,909.

Calvart, DENIS, B. at Antwerp, 1555. He opened a school for artists at Bologna, where he had among his pupils, Guido, Albano, and Domenichino. His best painting is *The Holy Family* in the church of St. Gineseppe, at Bologna. D. 1619.

Calvary, (*kal'ra-re*), *n.* [*Lat. calvaria*, from *calva*, the scalp without hair, from *calvus*, bald.] Originally, the brain-pan: the skull: whence, a place of skulls; particularly, the place where Christ was crucified.—See *GOLGOTHA*.

—A sculptural representation of the Passion of the Saviour, placed upon a natural or an artificial rock, or upon an architectural base.

(*Her.*) A cross; generally called *cross-calvary*.

Calvary, in *Ohio* a post-office of Morgan co.

Calve, (*kär*), *v. t.* [*A. S. calfan*, from *cealf*.] To bring or cast forth a calf, as a cow.

"When she has calv'd, then set the dam aside,
And for the Uster progeny provide."—*Dryden.*

—Used metaphorically, in the sense of to bring forth young; to produce offspring. (*R.*)

"The grass cloes now calv'd."—*Milton.*

Calvello, a town of S. Italy, prov. Basilicata, 13 m. S. of Potenza: *pop.* 6,878.

Calventura Islands, a group of 3 islands in the Bay of Bengal, off the coast of Aracan; their centre being in Lat. 16° 53' N., Lon. 94° 29' E.

Calvert, LEONARD, the first governor of Maryland, was the second son of George, 1st, and brother to Cecil, 2d, Lord Baltimore, (*q. v.*) He arrived in the colony at the head of 200 emigrants in 1633-4, commissioned to attempt the foundation of an English barony on the shores of the Chesapeake, founded on the feudal principles both of rank and property. The democratic principles pervading the new settlement prevented, however, the fruition of his scheme, although the proprietary form of govt. remained in Maryland till the American revolution. In 1644, in consequence of an insurrection breaking out in that colony, *C.* took refuge in Virginia, from whence he returned, in 1646, with an armed force, re-assumed the govt., and restored general tranquillity. D. 1647.

Calvert, GORGE HENRY, an American man of letters, b. in Baltimore, Maryland, in 1803. His grandfather, Benedict Calvert, a descendant of the Baltimore family, though a loyalist in the revolutionary contest, was an intimate friend of General Washington. *C.* graduated at Harvard College in 1823, and then went to Europe and studied at Göttingen, where he imbibed a taste for German literature, which colored many of his subsequent productions. After his return to America he edited a newspaper for a while, and in 1832 published *Illustrations of Phrenology*. Among his later writings are, a *Volume from the Life of Herbert Barclay* (1833); a translation of Schiller's *Don Carlos* (1836); *Count Julian*, a tragedy (1840); a translation in part of *The Göthe and Schiller Correspondence* (1845); *Scenes and Thoughts in Europe* (1816-52); and *Göthe, his Life and Works* (1872.)

Calvert, in *Maryland*, a county bordering on Chesapeake Bay; area, 250 sq. m. It is a peninsula, formed by the Chesapeake and Patuxent rivers. *Surface*, undulating; *soil*, moderately fertile; staple products, tobacco and Indian corn. *Cap.* Prince Frederick. *Pop.* in 1890, 8,901.

Calvert Island, on the W. coast of British N. America, Lat. 51° 30' N., Lon. 128° 10' W.—Also a group of islands in the Pacific, Lat. 5° 55' N., Lon. 172° 10' E.

Calverton Mills, in *Maryland*, a post-office of Baltimore co.

Calves-snout, *n.* (*Bot.*) A name of the snap-dragon. See *ANTIRRHINUM*.

Calvey, in *Missouri*, a post-village of Franklin co., 43 m. S.W. of St. Louis.

Calvi, a fortified seaport town of Corsica, on the N.W. coast of the island, on a gulf of the same name: Lat. 42° 34' 7" N., Lon. 8° 45' 16" E. It has a good harbor and roadstead, and was taken by the English in 1794, after a 51 days' siege. *Pop.* 2,275.

Calville, (*kal'vil*), *n.* [*Fr.*] (*Hor.*) A variety of apple, of which there are numerous sub-varieties. The Calvilles diminish in thickness from the middle towards the calyx, where they form a point: they have regular ribs, and a large open seed-chamber: also a pleasant smell, and are unctuous to the touch. They are never altogether streaked: they have a fine loose flesh, with a flavor somewhat resembling that of the raspberry or strawberry. The White Winter *C.* is in high repute, both as a culinary and dessert apple.

Calvin, JOHN, (*kal'rin*), whose real name was CHAUVIN, which, after the custom of that age, he Latinized into CALVINUS, was the son of a cooper of Noyon, in Picardy, and was born in 1509. He early distinguished himself by his learning, abilities, and inquiring character, and, having entered into holy orders, the result of his Scrip-

tural researches was his secession from the Church of Rome and adhesion to the Protestant party in the twenty-fifth year of his age. The persecution against the Protestants in France forced him to retire to Basle, in Switzerland; and here, in 1535, he published his famous *Institutes of the Christian Religion*. The year following, he was chosen Professor of Divinity and one of the pastors of the church at Geneva. The strict discipline which he sought to introduce gave rise to ill feelings on the part of the citizens. He was banished from Geneva, and withdrew to Strasburg, where he filled the same posts as in the former city. He was deputed to assist when diets were held by order of the Emperor Charles V. at Worms and at Ratisbon, for the purpose of composing, if possible, the religious differences which were rending the Roman Church. Bucer accompanied him, and he conferred with Melancthon and other leaders of the Reformers. The people of Geneva now besought him to return. Complying with their request, he arrived there September 13, 1541, and straightway established a form of ecclesiastical discipline, and a consistorial jurisdiction with power of inflicting all kinds of canonical punishments, which seemed, to many, a yoke quite as hard to endure as that imposed by Rome. Calvin's inflexible character bore down, however, all opposition; and so sternly and rigorously did he carry out his own rules that he condemned to the stake and caused to be burnt his once intimate friend, Michael Servetus, for writing against the doctrine of the Trinity. Great as were Calvin's services to the cause of the Reformation, this was an act which will forever affix a stigma to his name. Calvin's life was one of unremitting labor. As preacher, spiritual magistrate, and theological writer, he knew no rest. He maintained an active correspondence with the churches in England, France, Germany, and Poland, and issued volume after volume from the press, not of ephemeral matter, but of the weightiest import, and which feed numberless spiritual lamps of the present day. His works, which fill nine folio, or some sixty octavo volumes, are a complete library of theological literature. As commentator, more especially, Calvin excels. He is surpassed by others in knowledge of the original languages of Scripture, but in developing its meaning he has few equals. "His works," writes a competent authority, "present specimens of exegesis that deserve to be ranked among the best extant, because they are occupied with the *spiritual essence* of the Bible — with the *theology* of the inspired writer." Calvin died on the 27th of May, 1564.

Calvin, in *Michigan*, a flourishing township of Cass county.

Calvin, in *Pennsylvania*, a post-office of Huntingdon co.

Calvinism, (*kal'-vin-izm*), *n.* (*Theol.*) The theological doctrines or tenets of Calvin. — See CALVINIST.

Calvinist, *n.* (*Ecol. Hist.*) One who embraces and follows the theological doctrines of Calvin; the second great Reformer of the 16th century, and founder of the Church of Geneva. The distinguishing tenets of this celebrated theologian refer to points both of discipline and doctrine. He was the first to reject the episcopal form of church government, originally it is said, with great reluctance, and compelled thereto by the want of regularly ordained ministers; but he afterwards maintained the exclusive divine appointment of the Presbyterian system, which has since obtained favor in Scotland, and among the French Protestants, and has had numerous adherents both in England and the U. States. The doctrinal opinions of Calvin, however, have not been permanently received among those who have adopted his views respecting the ministry. On the contrary, in England and Geneva, there are many Presbyterians Arminian in sentiment. It was at the Synod of Dort, in 1618, that the points in dispute between the Calvinists and Arminians were most accurately distinguished, and arranged under five heads, upon which the former party asserted the following opinions:—1. *Of Predestination* — that all men have sinned in Adam, and are become liable to the curse; but that God has by an eternal decree chosen some from the beginning to whom He should impart faith of His free grace, and consequently salvation. 2. *Of the Death of Christ* — that is a sufficient sacrifice for the sins of the whole world; and the fact that some only believe and are saved, whereas many perish in unbelief, arises not from any defect in this sacrifice, but from the perversity of the non-elect. 3. *Of Man's Corruption* — that all men are conceived in sin and born the children of wrath, and are neither willing nor able to return to God without the aid of the Holy Spirit. 4. *Of Grace and Free-will* — that the influence of the Spirit upon our fallen natures does not force, but only quickens and corrects them, inducing them gently to turn themselves towards God by an exercise of their free will. 5. *Of Perseverance* — that God does not wholly take away His Spirit from His own children, even in lamentable falls; nor does He permit them to fall finally from the grace of adoption, and the state of justification. These opinions, which were laid down at the Synod of Dort, represent the sentiments of the founder of this school, and of the ancient or *Strict Calvinists*. In modern times, a class has arisen who consider that the above tenets go too far, and these are known as *Moderate Calvinists*; and there are others known as *High Calvinists*, who think that they do not go far enough. Calvinism originally existed in its greatest purity in the city of Geneva, whence it extended into Germany, France, the United Provinces of the Netherlands, and Great Britain. In Germany the followers of Calvin constitute the Reformed Church. In France, Calvinism was abolished by the revocation of the Edict of Nantes. In Holland it still continues to be the prevailing religion. In England it was adopted and made the public rule of faith in

the reign of Edward VI.; but since the time of Elizabeth it has been on the decline, though, latterly, a revival has been taking place. In Scotland, Calvinism, as established by John Knox, the disciple of Calvin, has been most enduring, and exists there in its greatest purity. Generally, however, the extreme doctrines of Calvin may be said to be rapidly losing ground, though Calvinism, in its milder form, is the professed creed of Presbyterians, Independents, Baptists, Methodists, &c., in both the U. States and Great Britain. — See SUB-LAPSARIANS; SUPRA-LAPSARIANS.

Calvinistic, Calvinistical, *a.* Pertaining to Calvin, or to his tenets in theology; as, a *Calvinistic* minister.

Calvinize, *v. a.* To convert to the doctrines of Calvinism.

Calvish, (*kür'ish*), *a.* Resembling a calf.

Calvity, *n.* [*Fr. calvitie*, from *Lat. calvus*, bald.] Absence of hair, particularly at the top or hind part of the head.

Calvy, in *Missouri*, a post-office of Franklin co.

Calx, (*kalks*), *n.*; *pl.* CALXES or CALCES, (*kalk'sez* or *kalk-sez*) [*Lat. calx, calcis*; allied to *Gr. chalix*.] (*Chem.*) A term formerly applied to the product of the oxidation of a metal, when heated in the air, and now limited to lime prepared by calcination. — See LIME.

Calybio, *n.* (*Bot.*) The name adopted by some carpologists for such a one-celled, inferior, one or few seeded fruit, enclosed in a capsule, as the acorn of the oak, the mast of beech, &c.

Calycanthaceae, (*käl-e-kän-thai'se-e*), *n. pl.* (*Bot.*) An order of plants, alliance *Rosales*. — *DIAG.* Flowers consisting of numerous imbricated scales, and convolute cotyledons. — This order consists of but two genera, *Calycanthus* and *Chimonanthus*, which agree in having: 1st, an imbricated calyx and corolla that pass insensibly into each other, and combine at their bases into a thick fleshy tube; 2d, a small number of perigynous stamens, whose anthers are adnate, and are tipped by a projection of the connective; 3d, several one-seeded nuts enclosed in the tube of the calyx; and 4th, a convolute embryo, destitute of albumen. Their wood is remarkable for the glandular nature of the woody tubes; and for having, in addition to the usual structure of exogens, four imperfect axes with concentric circles, lying at equal distances in the bark near the circumference, on which they produce externally four elevated lines or wheels. The nature of these additional axes constitutes a problem which no one has yet been able to solve. — The species are natives of Japan and N. America. The flowers, and in some species the bark and leaves, have a peculiar aromatic fragrance. The bark of *C. floridus*, the Carolina allspice or sweet-scented shrub, is sometimes used as a substitute for cinnamon-bark. The flowers are of a chocolate color.

Fig. 482. — *C. FLORIDUS*.
(Carolina Allspice.)

Calycanthus, *n.* (*Bot.*) See CALYCANTHACEAE.

Calyceae, (*käl-e-se-rai'se-e*), *n. pl.* (*Bot.*) A small order of plants, alliance *Campanales*, differing from *Asteraceae* in nothing but their seeds having albumen, and being pendulous, and in their antlers being only half syngonesis.

Calyceiflorae, *n. pl.* (*Bot.*) An artificial division of polypetalous dicotyledonous plants, proposed by Jussieu and adopted by Professor De Candolle. It is characterized by the stamens adhering more or less to the side of the calyx; or, in the language of the French school of botanists, being perigynous.

Calyceiform, *n.* [*Gr. calyx*, a cup, and *forma*, form.] Having the form of a calyx.

Calyceinal, Calycine, *a.* Pertaining to, or situated on, a calyx.

Calyceol, *n.* [*Lat. calyculus*, dim. of *calyx*.] (*Bot.*) A row of small leaflets often found at the base of the involucre of compound flowers. An outer calyx.

Calyceled, (*kal'i-kld*), *a.* (*Bot.*) Calyculate; supplied with bracts resembling a calyx.

Calyculate, Calyculated, *a.* Furnished with an outer accessory calyx, or set of bractlets resembling a calyx, as in *Dianthus*, (c, Fig. 484.)

Calydon, (*Anc. Geog.*) a city of *Ætolia*, celebrated as the place where the wild boar was hunted by all the princes of the age. This boar-hunt, under the name of *Calydonian chase*, has been much celebrated by the poets. — See MELEAGER.

Calymene, *n.* [*Gr. kekalymene*, concealed.] (*Pal.*) A name devised to express the obscure nature of a genus of Trilobites (fossil crustaceans), distinguished from all other Trilobites by the faculty the species possess of rolling the body up into the form of a ball, in the same manner as the recent genera, *Armadillo*, *Glomeris*, &c., viz., by approximating the two extremes of the trunk at the under part.

Calyon, *n.* Flint or pebble stone, used in building walls, &c.

Calypso, (*Myth.*) The daughter of Oceanus and Tethys, or of Nerens, or, according to Homer, of Atlas, reigned in the solitary wooded isle of Ogygia, far apart from all gods and men. Ulysses being thrown upon her island by shipwreck, she treated him kindly, and

promised him immortality if he would marry her. He was fascinated by her charms, but unwilling to desert his wife and his native land; she detained him, however, seven years, and bore him two sons. This incident forms a considerable portion of the *Odyssey* of Homer.

(*Bot.*) A genus of plants, order *Orchidaceae*. The species *C. Americana*, or *bulbosa*, is a rare and beautiful plant, found in Vermont, Michigan, &c. It is distinguished by having leaves solitary, radical, broad-ovate, veined; lip narrowed and subunguiculate at base; sparsely bifid, longer than the lip, with acute teeth; scape 6-8 inches high, sheathed, bearing a single purplish flower at top.

Calyptolite, *n.* (*Min.*) An altered zircon, occurring in minute, short, square prisms of a dark-brown or greenish-brown color, at Haddam and Middletown, Connecticut.

Calyptrorhynchus, *n.* (*Zoöl.*) A genus of birds of the *Psittacidae* or Parrot family, found in Australia. The plumage is generally black, occasionally ornamented with large spots of a clear red, orange, or sulphur color, forming wide bands on the tail. The beak is short and considerably elevated.

Calyptra, Calyptr, *n.* [*Gr. and Lat. calyptra*, a covering.] (*Bot.*) The hood or veil of the spore case of a moss, or a body like it.

Calyptraeidae, *n.* [*Gr. calyptra*, a head-dress.] The Bonnet-Limpet, order *Gasteropoda proper*. This family contains mollusks having a patelliform shell, to the concavity of which adheres either a smaller conical shell, like a cup in a saucer, or a semicircular testaceous process, forming the commencement of a columella. There are 160 living, and 100 fossil species. The family, originally formed by Lamarck, is composed of the genera *Calyptraea*, *Crepidula*, *Pileopsis*, *Metoptoma*, *Platyceras*, *Hipponyx*, and *Phorus*.

Fig. 483.

CALYPTRAEA EQUESTRIIS.
(Philippines.)

Calyptrate, *a.* (*Bot.*) Furnished with a calyptra, or something like it.

Calyptriform, *a.* (*Bot.*) Shaped like a calyptra or candle-extinguisher, as the calyx of *Eschscholtzia*.

Calystegia, *n.* [*Gr. calyx*, and *stegē*, covering.] A genus of plants, order *Convolvulaceae*. About 20 species have been described, natives of the temperate parts of America, Europe, and Asia; all herbaceous, lactescent, and climbing. Our wild convolvulus of the hedges, or Great Bindweed, *C. sepium*, found in hedges and low grounds, from Canada to Carolina, may be taken as the type. This plant, with its trailing and twining, is very ornamental. The expressed juice of the root is purgative, and forms a preparation called false or German scammony.

Calyx, (*kä-lyks*), *n.*; *pl.* Eng. CALYXES, *pl.* Lat. CALYCES.

[*Lat. calyx*; *Gr. kalyx*, from *kalypto*, to cover; *Fr. calice*.]

(*Bot.*) The external envelope of a flower. It is composed of modified leaves, called *sepals*, which are usually green. Within the whorl of sepals there is generally another whorl of leaves, called the *corolla* (which see), but sometimes the calyx is the only envelope of the parts of fructification. The calyx may either consist of a number of separate sepals, as in the poppy, buttercup, and wall-flower, or these parts may be more or less united, as in the fuchsia, melon, and tobacco. In the former case, the calyx is termed *polysepalous* or *polyphyllous*; in the latter, *monosepalous* or *monophyllous*, or, more correctly, *gamosepalous* or *gamophyllous*. Sepals are generally of a more or less oval, elliptical, or oblong form, with the extremity either blunt or acute. In their direction they are *erect*, or pointed upwards; *concurrent*, or turned inwards; *divergent* or *patulous*, spreading outwards; or if their apices are turned downwards, *reflexed*. When of the usual green color, they are said to be *foliaceous* or *herbaceous*; but when colored, as in the fuchsia and tropæolum, *petaloid*. Whatever be its color, the external envelope must be considered as the calyx. In describing a polysepalous calyx, the number of parts is indicated by the prefix of a Greek numeral; thus a *trisepalous* calyx has three sepals, a *pentasepalous* calyx five; and so on. When the sepals are of equal size and like form, and arranged in a symmetrical manner, the calyx is said to be *regular*; when they are of different sizes and forms, it is *irregular*. In a monosepalous or gamosepalous calyx, the parts adhere in various ways. Thus the union may only take place near the base, as in the pimpernel, when the calyx is said to be *partite*; or it may extend to about the middle, as in the centaury when it is *cleft* or *fissured*; or the joining may leave but a small portion of each sepal free, as in the lychnis, so as to form a *toothed* calyx; or the union may be complete, as in the chrysanthemum, in which case the calyx is termed *entire*. The number of partitions, fissures, or teeth, is also indicated by Latin numerals, as in the terms *quinque-partite* (five-parted), *quinquefid* (five cleft), and *quinque-dentate* (five-toothed). In a monosepalous calyx the part formed by the union of the sepals is sometimes called the *tube*, the free portion

Fig. 484. — PINK,
(*Dianthus*).
a. corolla; b. calyx;
c. bractlets.

limb, and the orifice of the tube the *throat*. The tube of the calyx sometimes adheres, more or less, to the ovary, as in the iris, gooseberry, currant, and in all plants of the Composite order. When such adhesion takes place, the calyx is said to be *adherent* or *superior*, because it appears to arise from the summit of the ovary. When there is no such adhesion, the ovary being quite distinct, as in the wall-flower and buttercup, the calyx is described as *free*, *non-adherent*, or *inferior*. Many other terms which are sometimes applied to the calyx are explained under the heads LEAF, COROLLA, and FLOWER.

(*Anat.*) [Written also *calix*.] One of the small cup-like membranous canals, which surround the papillae of the kidney, and open into its pelvis, whither they convey the urine. Their number varies from 6 to 12 in each kidney.

im, Diego, a Portuguese navigator and traveller, who, in 1484, visited Congo as far as 22° S.

im, a river of England, rising in Essex, and falling into the Ouse, 4 m. from Ely.—Another, which rises in Gloucestershire and runs into the Severn.

im, n. [W. *cam*, bent, crooked.] (*Machinery*.) A contrivance for converting a uniform rotatory motion into a varied rectilinear motion. The end of a rod which is free to move only in the direction of its length is held in contact, by the action of a spring, or weight, with the edge of an irregularly shaped mass, which revolves uniformly upon an axis. A varied motion is thus communicated to the rod, which carries with it the machinery by which the motion is to be applied. This contrivance is much used in the machinery for lace-making.—See ROSE-ENGINE.

imach'o, or **Camax'o**, in Brazil, prov. of Santa Catharina, a series of locks connected with one another by natural canals. One of them is large, the others small. They are commonly named *Jaguaruna*, *Garupaba*, and *Santa Martha*.

imaieu. (*ka-ma'yoo*), n. [Fr.] A stone engraved in relief.—See CAMEO.

(*Painting*.) A painting executed in different shades of one color is said to be *en camaieu*. This term may be applied to drawings in sepia and Indian ink, and even to those in chalk and pencil. It is synonymous with the expression "monochrome;" but it was also originally applied to paintings in which more than one color appeared, although one particular tint prevailed, and almost concealed the others.

imail', n. [It. *camaglio*.] A short cloak, or capuchin, sometimes made of fur.

(*Mil*.) In armor, a throat-guard made of chain-mail. A purple ornament worn by a bishop over his rochet.

imak', in Georgia, a village of Warren co., 46 m. W. of Augusta.

imalduli, **Camaldulen'sians**, **Camal'dulites**, **Camal'dulites**, n. pl. (*Ecol. Hist.*) A religious order (now almost extinct), founded at Camaldoli, or Campu Malduli, a desert spot on the lofty heights of the Apennines, about 39 m. from Florence, by Romualdo, an Italian, in 1023. They follow the rule of St. Benedict, and are divided into *Cenobites* and *Eremites*.

Ymann, in Brazil, the name of a town, a bay, and an island. The bay is 75 m. S.W. of Bahia, and the town has a pop. of about 2,000.

manche', in California, a post-village of Calaveras co., 22 m. S.W. of Mokelumne Hill.

manche, in Iowa, a township and village of Clinton co., on the Mississippi River.

manche Indians. See COMANCHE.

ma'no Island, in the State of Washington, separated from the main land by a narrow channel. It is about 2 m. long, and forms part of Island co.

mapuan', a river of Brazil, prov. of Matto-Grosso. It is 70 m. long, and is one of the head-streams of an affluent of the Paraguay, called Tacuary or Taquari.

maran'ca, a river of W. Africa, in Guinea, rising in the Kong Mountains, lat. 9° N., lon. 9° 15' W. After a course S.W. of about 250 m., it falls into Yawry Bay on the coast of Sierra Leone.

ma'ra Nutmeg, n. A false or wild nutmeg, obtained from the *Acrotichium Camara*, a plant of the Laurel order, growing in Guiana. It is also known as the Ackawa nutmeg by the natives, who employ it as a spice.

mar'go, MARIE ANNE, a celebrated danseuse, b. in Brussels, 1710, descended from an ancient Roman family named Cuppi by her father's side, and from the Spanish house of Camargo by her mother's. She made her debut at the Opera in Paris in 1726, delighted the public till more by her beauty than by her dancing, and became very popular. She remained attached to the Opera until 1751. D. 1770.

mar'go, in Illinois, a township of Douglas co., 22 m. S. of Urbana.

mar'go, in Indiana, a post-office of Jefferson co.

mar'go, in Iowa, a village of Lee co., on Des Moines River, 10 m. N.W. of Keokuk.

mar'go, in Kentucky, a P. O. of Montgomery co.

mar'go, in Mississippi, a village of Monroe co., on Town Creek, 20 m. N. of Aberdeen.

mar'go, in Pennsylvania, a post-village of Lancaster county.

mar'go, in Tennessee, a post-office of Lincoln co.

margue' (La), a river island of France, dep. Bonnes-du-Rhone, and forming, in fact, the delta of the Rhone. It is quite flat, and but partially cultivated, and mostly composed of mud-banks and arid sand, affording pasture to wild horses, cattle, and sheep.

marilla, (*kam-ah-ril'yah*), n. [Sp.] a small room.] A king's private room or audience-chamber.

(*Hist.*) A term employed in modern political phrase-

ology to signify the influence of secret and unaccredited counsellors in matters of state or government. In Spain, where the term was first used, this influence had a most pernicious effect. Under Ferdinand VII. the name was applied to those flatterers by whom that monarch was mostly influenced, and who were generally men without talent, and opposed to every kind of reform. The term was also much used in France during the reign of Charles X. In England, the term is nearly synonymous with *clique*.

Camar'ines, in the island of Luzon, the name of two provinces, C. North, and C. South.

Camas'sia, n. [From *quamash*, its native name.] (*Bot.*) A genus of plants, order Liliaceae. The species *C. esculenta*, a native of the W. States, has edible roots, which are used by the Red Indians under the name of *quamash*. They are also known as biscuit-roots. This species is by some included in the genus *Phalangium*.

Cama'yen, n. See CAMALET.

Cam'ba, in Ohio, a post-office of Jackson co.

Cambacères, JEAN JACQUES DE, (*kam-bas'a-raiz*), a distinguished French senator, b. at Montpellier, 1753. He adopted the law as a profession, and succeeded his father as counsellor of the audit office of Montpellier. When the Revolution broke out, he was chosen to represent the order of the nobles in the legislative assembly, and soon afterwards as a deputy to the convention. During the reign of terror, which followed the condemnation of Louis XVI., C. endeavored, though cautiously, to check the illegal and arbitrary measures of the assembly. Subsequently, he was a member of the Council of Five Hundred, and devoted much time and labor in the classification of the civil laws; and in 1796, drew up a *Projet de Code Civil*, which became the basis of the Napoleonic code of which he was one of the compilers. He was a zealous supporter of Napoleon in the revolution of the 18th Brumaire, and accepted the office of second counsel under him, which he held till Napoleon was elected emperor: after which he was elevated to the office of arch-chancellor, with the perpetual presidency of the senate: had bestowed on him the title of duke, &c., &c. On the abdication of Napoleon, in 1814, C. withdrew into private life: but on the return of the emperor from Elba, he was again promoted to the office of minister of justice. After the final overthrow of Napoleon, C. was banished from France on the ground of his having voted for the death of Louis XVI.: but in 1818 he was reinstated in all his civil and political rights, and permitted to return to Paris, where he d. in 1824.

Cambay', a maritime town of Hindostan, prov. Gujerat, in the Guicowar's dominions, formerly a celebrated and flourishing seaport, but now much decayed. It is 72 m. N.N.W. of Surat, and 200 N. of Bombay. Many fine Hindoo and Mohammedan remains are to be seen here. *Exp.* Grain, indigo, tobacco, &c.—This city and adjacent territory prospered under the Moguls. In 1780 it was tributary to the Mahratta peishwa, since whose fall his rights have devolved on the British govt., to whom the nabob yields allegiance. *Population* (1845) 31,390. The gulf of C. is 72 m. long, 2 m. wide at its entrance: lat. between 21° 5' and 22° 17' N., lon. between 72° 19' and 72° 51' E.

Cam'ber, n. [Fr. *cambrer*, to vault, to bend.] (*Arch.*) The small rise which is given to a piece of framing, a roof, or an opening of any kind in a building, for the purpose of compensating for the settlement of the various parts, or for the necessary subsidence of the joints, is known by the name of *camber*. It is given in order to prevent the beam or the piece of timber or stone from becoming concave on the upper surface, either by its own weight, or by the load it may have to carry.

(*Ship-building*.) A term signifying a curvature upwards. A deck is said to be cambered when higher amidships than at the bow or stern.

(*Naut.*) A small dock for boats and timber. *Cambered beams* are those used in the flats of truncated roofs, and raised in the middle with an obtuse angle, for discharging the rain-water towards both sides of the roof.

Cambered, (*kam'berd*), a. Having a convexity upward.

Cam'bering, a. (*Naut.*) Arching in the middle; as, a *cambering deck*.

Cam'berwell, a suburb of London, 2 miles S.W. of St. Paul's Cathedral.

Cam'berwell Beauty, n. (*Zoöl.*) A species of butterfly, genus *Vanassa*, q. v.

Cam'bial, a. [Lat. *combiialis*, from *camlire*, to exchange.] (*Com.*) Pertaining to money exchanges.

Cambia'so, LUCCA, called LUCHETTO DA GENOVA, a distinguished Italian painter, b. at Genoa, 1527. His best works are the *Martyrdom of St. George*, and the *Rape of the Sabinas*. D. in Madrid, 1585.

Cambio, (*kam'bo*), [*It.*, exchange.] A term sometimes used in the mercantile phraseology of various countries, particularly of Holland, in the sense of exchange.

Cam'bist, n. [*It.* *combiasta*, from Lat. *camlire*, to exchange; Fr. *changer*.] One who exchanges foreign money, or deals in foreign notes or bills of exchange. It is also applied to a book in which the weights, measures, and moneys of different countries are converted into those of one particular place; as, Kelly's *Universal Cambist*.

Cam'bistry, n. The science of money exchanges, weights, measures, &c.

Cam'bium, n. [Lat. *cambio*, to exchange.] (*Bot.*) In spring, when the sap of plants is in motion, there may be seen between the bark and the wood, if they are gently separated, an apparently mucilaginous liquid, which seems at the same time both to unite and separate the bark from the wood. This liquid has been called C. by the early botanists, and the part which it

plays in the phenomena of vegetation is most important. In a short time this C. changes its mucilaginous appearance, and becomes a cellular tissue, which ultimately becomes thickened plectenchyma. It is from this generative tissue, in fact, that all the succeeding layers of wood are developed. In most dicotyledonous plants, the cambium is gradually matured into wood from within outwards; but in the monocotyledonous and flowerless cormophytes it often remains, in great part, in a delicate and soft condition, forming what are called the proper vessels.

(*Med.*) A name formerly applied to a fancied nutritive juice, which was supposed to originate in the blood, to repair the losses of every organ.

Cambo'dia, or **Cambo'ja**, a territory of India, beyond the Ganges, formerly one of the most flourishing in that peninsula, but at present mostly divided between the empire of Anam, the kingdom of Siam, and the French. It lies between lat. 5° 30' and 15° 30' N., and lon. 103° and 107° E.: having N. Laos, E. Cochinchina, W. Siam, and S. the ocean and the French possessions. The principal rivers are the Cambodia or Mekong, and the Saigon. C. exp. camboge, gum, hides, &c. The natives resemble Siamese, and are, mostly, Buddhists.—*Cap.*, Cambodia. *Pop.*, abt. 1,000,000. C., under French protectorate since 1863, was annexed to Cochinchina (q. v.) in 1884, and taken under French administration.

CAMBODIA, or **CAMBOJA**, the ancient cap. of the above territory, is situated on both sides of the Mekong, nearly 200 m. from the sea: lat. 13° N., lon. 104° 35' E.

CAMBODIA (CAPE), the S. extremity of Cambodia, lat. 3° 30' N., lon. 104° 55' E., at the N. entrance of the Gulf of Siam.

CAMBODIA RIVER. See MEKONG.

Camboge', GAMBAGE, n. (*Med.*) A gum resin exuded by one or more species of *Garcinia*, trees found principally in Cambodia. It is soluble in alcohol, forms an emulsion with water, and has a brilliant yellow color. It is used more frequently as a pigment than as a medicine, exercising only one action on the animal system—that of a powerful cathartic, unless taken in excessive doses, when it induces vomiting and acute pain. On account of its rapid action, and producing watery evacuations, C. is a drug of great importance in all cases of dropsy, apoplexy, and where a brisk effort and copious discharge from the bowels are required. It should not, however, be given alone, but combined with aloes, colocynth, and scammony.

Cam'boose, n. (*Naut.*) See CABOOSE.

Camborne', a town of England, co. Cornwall, 12 m. W.N.W. of Falmouth. In its immediate neighborhood are the copper mines of Balcoate, 1,000 feet in depth. *Pop.* 7,928.

Cam'bra, in Pennsylvania, a post-village of Luzerne co., 25 m. N.E. of Danville.

Cam'brasin, n. A species of fine linen, resembling cambric, manufactured in Egypt.

Cam'bray, or **Cam'brai**, a well fortified city of France, dep. Nord, cap. arrond., on the Scheldt, 32 m. S.S.E. of Lille. Its fortifications were improved by Vauban; the town is pretty well built, and has a magnificent *place d'armes*. Its principal public buildings are the Cathedral, the Hotel de Ville, and the Theatre, and it has some good schools of art, and a public library. C. was formerly an archbishopric, and has to boast of having had Fenelon, who died here in 1715, among its prelates. C. has long been famous for its manufacture of fine linens and lawns, whence all similar fabrics are called *cambrics*. It has also manufactures of thread, cottons, soap, leather, linens, &c.—This is a very ancient city, having been an important place under the Romans. In 1508 the League of Cambray was concluded here. It was formed by Maximilian I. of Germany, Louis XII. of France, the king of Aragon, Ferdinand of Spain, and Pope Julius, against the Venetian republic. In 1529 peace between Francis I. and Charles V. was so concluded here. This was called the *Ladies' Treaty*, being negotiated by Margaret of Austria, Charles V.'s aunt, and Louise of Savoy, Francis I.'s mother. In 1536 this treaty, which was disadvantageous to France, was broken. *Pop.* 22,207.

Cam'brel, n. See GAMBEL.

Cam'bria, the ancient name of Wales, the *Britannia Secunda* of the Romans. The name is derived from that of *Cimbri* or *Cymri*, by which the Welsh have always called themselves.

Cam'bria, in Iowa, a post-village of Wayne co., 60 m. S. by E. of Des Moines.

Cambria, in Michigan, a township in Hillsdale co., 5 m. S.W. of Hillsdale.

Cambria, in New York, a post-township of Niagara co., 22 m. N. of Buffalo.

Cambria, in Pennsylvania, a S.W. central county, on the W. slope of the Alleghany Mountains; area, about 670 sq. m. Conemangh Creek and the W. branch of the Susquehanna rise in this co., which has a very broken surface, and is extensively covered with forests of pine and other timber. Bituminous coal and iron ore are abundant and largely raised. *Cap.* Ebensburg. *Pop.* (1890) 66,375.

—A township in the above co.

Cambria, in Wisconsin, a p.-v. of Columbia co.; p. 502.

Cambria Mills, in Michigan, a post-village of Hillsdale co., on Palmer Creek, 37 m. W. by S. of Adrian.

Cambrian, a. Pertaining or relating to *Cambria* or Wales.

—n. A native or inhabitant of *Cambria* or Wales; a Welshman.

Cam'brian System, n. (*Geol.*) The lowest classified groups of fossiliferous rocks, lying next below the

Silurian. The Potsdam sandstone of this country is included in it by Lyell, and the sandstones and conglomerates of Lake Superior are referred by Logan to the same group, or possibly to one still older. — *N. American Cyclop.*

Cambrie, (*kām'brīk*), *n.* A kind of thin, white, and fine fabric made of flax or linen; — supposed to be first manufactured at Cambray, whence the name is derived. — A fabric made in imitation of linen cambric.

"And cambric handkerchiefs reward the song." — *Gay*.

Cambridge, an inland county of England, having N. co. Lincoln, E. Norfolk and Suffolk, S. Essex and Hertford, and W. Bedford, Buckingham, and Northampton. Area, 548,480 acres. Surface, generally flat. Soil, clayey and stubborn. The most N. portion of the co. consists of the Isle of Ely, which has separate jurisdiction within itself. This district was formerly a vast fen, known as the *Belford Level* (q. v.), and having been drained at a great expense, it now grows great quantities of wheat, oats, &c. Flax and hemp are also extensively raised. Dairy husbandry is carried to great perfection, and Cambridge butter has long enjoyed a high reputation. Manufactures and minerals of no importance. *Prin. towns.* Cambridge, Ely, Newmarket, Wisbeach.

CAMBRIDGE, a borough, cap. of the above co., and the seat of one of the great English universities, on the Cam, 48 m. N. by E. of London. The greater part of this town is embosomed in the foliage of the gardens of its numerous colleges. The streets are mostly narrow and irregular, houses ancient, and the place is well lighted, paved, and sewered. Of the fine churches here, we may mention St. Mary's, St. Sepulchre's, and Trinity. C. derives a considerable trade from the agricultural products of the surrounding country; but its chief prosperity is derived from its university.

CAMBRIDGE UNIVERSITY. This celebrated seat of learning and education dates from certain public schools estab-

Fig 485. — ST. PETER'S COLLEGE, OR PETER-HOUSE.

lished in the town in the 7th cent. The first college was founded under royal charter in 1237. The number of colleges established are 20, viz.: St. Peter's College; Clare Hall; Pembroke Hall; Caius and Gonville College; Trinity Hall; Corpus Christi College; King's College; Queen's College; Catharine Hall; Jesus College; Christ's College; St. John's College; Magdalen College; Trinity College; Emmanuel College; Sidney-Sussex College; Downing College; Cavendish, Selwyn, and Ayerst College. — The university statutes were confirmed by Victoria on July 31, 1858. The university "is a union of 20 colleges or societies, devoted to the study of learning and knowledge." Each college is a body corporate, but is controlled by the senate of the university, consisting of members from each of the 20 colleges. By act of that senate, March, 1881, women students are admitted to regular examination, and entitled to the degrees and honors previously confined to young men.

Cambridge, in Alabama, a post-village of Randolph co., 80 m. S. by E. of Tuscaloosa.

Cambridge, in Illinois, a post-village, cap., of Henry co., 140 m. N. by W. of Springfield.

Cambridge, in Iowa, a village of Cedar co., 27 m. N. W. of Davenport.

— A post village of Story co., on the S. Skunk river, 22 m. E. by N. of Des Moines.

Cambridge, in Maine, a post-township of Somerset co., 50 m. E. by N. of Augusta.

Cambridge, in Maryland, a township and village, cap. of Dorchester co., on Choptank river, 50 miles S. E. from Annapolis.

Cambridge, in Massachusetts, a city of Middlesex co., separated from Boston to the W. by the river Charles, which is nearly 1 m. in width. Two bridges connect it

with Boston and one with Charlestown. It was settled in 1631, at first under the name of *Newtown*, and was incorporated as a city in 1846. C. is a fine and wealthy place; it has a court-house, county jail, a State arsenal, numerous churches, and many splendid private buildings. C. is divided into 3 distinct portions: *Cambridgeport*, *East Cambridge*, the business portion of the city, and *Old Cambridge*, the residence of literary and scientific men, it being the seat of the celebrated HARVARD COLLEGE, q. v. The house used by Washington for his headquarters, and afterwards inhabited by the poet Longfellow, is still standing. C. carries on a large amount of business. Its population, rapidly increasing, was 52,740 in 1880, 70,028 in 1890, and abt. 82,500 in 1897.

Cambridge, in Michigan, a post-township of Lenawee co., 10 m. N.W. of Adrian.

Cambridge, in Minnesota, a post-village, cap. of Isanti co., on Rum River, 40 m. N. of St. Anthony.

Cambridge, in Missouri, a post-village of Saline co., on the Missouri River, 50 miles east by N. of Lexington.

Cambridge, in New Hampshire, a township of Coos co., 100 m. N. by E. of Concord.

Cambridge, in New York, a post-township of Washington co., 33 m. N.N.E. of Albany.

Cambridge, in Ohio, a city, cap. of Guernsey co. Has large manufacturing interests, while within the city limits are coal mines and natural gas and oil wells. Pop. (1890) 4,361; (1897) abt. 5,600.

Cambridge, in Pennsylvania, a village of Venango township, Crawford co., on French Creek, 15 m. N.N.E. of Meadville, and 25 S. of Erie.

— A post-village between Lancaster and Chester cos., 22 m. E. by N. of Lancaster.

Cambridge, in South Carolina, a village in Abbeville district, 60 m. W. by N. of Columbia.

Cambridge, in Vermont, a post-township of Lamoille co., on the Lamoille River, 33 m. N.E. by N. of Montpelier.

Cambridge, in Wisconsin, a post-village of Dane county, on the Koskonong River, 22 miles E. by S. of Madison.

Cambridge, or **Cambridge City**, in Indiana, a post-village of Wayne county, on the Whitewater River.

Cambridgeport, in Vermont, a post-village in Brandon township, Windham co.; it contains a bed of soapstone.

Cambro-Briton, *n.* A native of Wales; a Welshman.

Cambroune, PIERRE JACQUES ETIENNE, a French general, b. 1770. He entered the army during the Revolution, and served in most of Napoleon's campaigns. He commanded the Imperial guard at Waterloo; and when the day was lost, being surrounded by the enemy and summoned to surrender, he expressed his refusal by an energetic word that does not admit translation, which word was afterwards paraphrased into the celebrated sentence, — "The Guard dies, but does not surrender!" He was left for dead on the field, but recovered, and lived till 1842.

Cambyan, an island of the E. archipelago, 15 m. from Celebes, 20 m. long, by 15 broad; Lat. 5° 21' S., Lon. 121° 57' E.

Camby'ses, the second king of the Medes and Persians, succeeded his father, Cyrus, B. C. 529. He led an army against Egypt (B. C. 525), defeated the Egyptian king Psammetichus in a great battle, and reduced Egypt to the condition of a Persian province. The ruin of many of the monuments of Egypt is attributed, and perhaps to a certain extent correctly, to the fury of the barbarian invaders and of their king, who was mad. From Egypt, C. marched southwards against the Macrobian Ethiopians, (a people whose geographical position is not certain,) but his army, after suffering severely in the deserts, and being compelled to eat one another, returned to Thebes with much diminished numbers. A detachment of the Persian army, which was sent from Thebes against the Ammonium (*Sivah*), was lost in the desert. After committing numberless extravagances in Egypt, putting his brother Smerdis to death, marrying his sister, which was contrary to the Persian custom, and then killing her by a kick during her pregnancy, C. died (B. C. 521) of an accidental wound from his own sword at Ecbatana, a town of Syria (not Ecbatana the capital of Media). Ctesias says that C. d. at Babylon.

Camden, WILLIAM, a celebrated English antiquary, b. in London, in 1551. After quitting the university, he became one of the masters of Westminster School, and in 1592 was appointed head-master. In the year 1586 he published the first edition of his great work, the *Britannia, or the History of the Ancient Inhabitants of Britain, their Origin, Manners, and Laws*; a remarkable work, written in very elegant Latin. The whole of his leisure time was devoted to his favorite pursuit, and in preparing more complete editions of his standard work. Died in Kent, in 1628, and was buried in Westminster Abbey. Camden founded a professorship at Oxford, and left all his manuscripts and literary productions to his friend, Sir Robert Cotton.

Camden, CHARLES PRATT, MARQUIS, a distinguished English judge and statesman, youngest son of Sir John Pratt, Chief-Justice of the Court of King's Bench, was born in 1714, and after having studied for the law, was called to the bar in 1738. After nearly twenty years devoted to close study and but little employment, he finally made himself a name, and in 1757 was appointed attorney-general, entered the House for a rotten borough, and four years later was created lord chief-justice. In 1765 he was raised to the peerage as Baron Camden. He distinguished himself at once by his exertions in behalf of the American colonies, and in 1766 rose to the

highest legal dignity, that of lord high chancellor. Died in 1794, leaving the reputation of being one of the most astute lawyers who ever sat on the woolsack.

Camden, in Alabama, a post-village, cap. of Wilcox co., situated 4 m. S. of Alabama River.

Camden, in Arkansas, a city, cap. of Ouachita co., on the W. bank of Washita river, 110 m. S. by W. of Little Rock. Pop. (1890) 2,571; (1897) abt. 2,700.

Camden, in Delaware, a flourishing post-village of Kent county, 3 miles S. of Dover, on a branch of Jones creek.

Camden, in Georgia, a S. E. county, bounded on S. by St. Mary's river, and also watered by the Santilla river; area, 600 sq. m.; surface, mostly level; soil, sandy; cap., St. Mary's; pop. (1890) 6,200.

Camden, in Illinois, a post-village and township of Schuyler co., 12 m. W. from Rushville.

Camden, or **Camden Mills**, in Illinois, a post-village of Rock Island, on Rock River.

Camden, in Indiana, a post-village of Carroll co., on Deer Creek, 65 m. N.N.W. from Indianapolis.

— A post-village of Jay co., on Salamonie River.

Camden, in Iowa, a post-village of Story co., on Skunk River, 8 m. W.N.W. of Nevada.

Camden, in Maine, a post-village and township of Knox co., on W. of Penobscot Bay, 40 m. S.E. by E. of Augusta.

Camden, in Michigan, a post-township in S.W. of Hillsdale co.

— A village of Kent co., 23 m. S.E. of Grand Rapids.

Camden, in Minnesota, a township of Carver co., on Crow River, 40 m. W.N.W. of Minneapolis.

Camden, in Mississippi, a village of Madison co., 40 m. N.N.E. of Jackson.

Camden, in Missouri, a central county, intersected by Osage River, and drained by Niangua, Little Niangua, and Grand Anghuze; area, 600 sq. m. The surface presents a succession of hills and fertile valleys. Iron and lead are found here. Cap. Linn Creek.

— A township and village of Ray co., on Missouri River, 7 m. S.S.W. of Richmond. Grain, hemp, and tobacco are exported in large quantities.

Camden, in Nebraska, a post-village of Seward co., 75 m. W. of Nebraska City.

Camden, in New Jersey, a W.S.W. county, bounded on N.E. by Pensanken Creek, N.W. by the Delaware, and on S.W. by Big Timber Creek; drained by Cooper's Creek. Area, 220 sq. m.; surface, level; soil on E. sandy, and on W., a fertile loam, producing fruits and vegetables for the Philadelphia markets. Iron and glass are the chief manufactures; marl is abundantly found. Cap. Camden. Pop. (1897) 100,104.

— A city, port of entry, and cap. of the above co., on the left bank of Delaware river, opposite the city of Philadelphia, and connected with it by 5 ferries. The streets are regular, wide, and adorned with fine public buildings, churches and dwellings. C. is the terminus of several railroads and has extensive iron works, ship-yards, iron foundries, cotton and woolen mills, and many other large manufacturing interests. The city was chartered in 1831, governed by a mayor and common council. Its proximity to Philadelphia has greatly aided the growth of its population, which in 1880 was 41,658; in 1890, 58,320; in 1897, about 64,000.

Camden, in New York, a twp. and vill. of Oneida co., 35 m. N. of Utica.

Camden, in North Carolina, a N.E. county, bordering N. on Virginia, S. and S.W. on Albemarle Sound and Pasquotank River.

Camden, in Ohio, a post-village of Preble co., 38 m. N. of Cincinnati.

— A township of Lorain co.

— A village of Lorain co., 7 m. W. of Oberlin.

Camden, in S. Carolina, the capital of Kershaw district, 112 m. from Charleston, on the Wateree River navigable to this point by steamboats. Two battles were fought here, the first in August, 1780, between Gates and Cornwallis, and the second in April, 1781, between Greene and Rawdon. A monument to Baron de Kalb was erected in 1825, of which Lafayette laid the corner stone.

Camden, in Tennessee, a township and village, cap. of Benton co.

— A township of McNairy co.

Camden Court-House, in North Carolina, a post-village, cap. of Camden co. on Pasquotank River, 219 m. E.N.E. of Raleigh.

Camden Point, in Missouri, a post-village of Platte co., 34 m. N.N.W. of Independence.

Camdenville, in Kentucky, a village of Anderson co., on Salt River.

Came, *imp.* of COME, q. v.

Came, *n.* [Scot. *caim*, a comb.] A glazier's tool to cast lead.

Camel, *n.* [Fr. *chameau*.] (*Naut.*) A machine invented by the Dutch for carrying vessels into harbor where there is not a sufficient depth of water. It consisted of two large boxes, or half-ships, built in such manner that they could be applied on each side of the hull of a large vessel. On the deck of each part of C. a number of horizontal windlasses were placed, from which ropes proceeded on one side, and being carried under the keel of the vessel, were attached to the windlasses on the deck of the other part. When about to be used, as much water as necessary was suffered to run into them: all the ropes were then cast loose, and the beams were placed horizontally through the port-holes of the vessel, the ends resting on the camels alongside. When the ropes were made fast, and the vessel properly secured, the water was pumped out, on which the camels rose and bore up the vessel.

Cam'el, n. [Lat. *camelus*; Gr. *kamēlos*; Heb. *gamal*: found in all the Semitic languages; probably from Ar. root *chamal*, to bear.] (Zool.) A genus of ruminating animals, without horns, tribe *Camelinae*, or *Camelina*, further distinguished by the possession of incisive, canine, and molar teeth; the upper lip is divided; the

Fig. 486. — HEAD OF DROMEDARY.

neck long and arched; having one or two humps or protuberances upon the back, and naked callosities at the joints of the leg, the lower part of the breast, &c. They have a broad, expanded, elastic foot, terminated in front by two comparatively small hoofs, or toes; the whole structure of it being admirably fitted for enabling the animal to travel with peculiar ease and security over dry, stony, and sandy regions. The native country of this genus is said to extend from Mauritania to China, within a zone of 1,000 m. in breadth. — The common Camel (*Camelus Bactrianus*), having two humps, is found only in the northern part of this region, and exclusively from the ancient Bactria, now Turkestan, to China. It is larger than the Dromedary; the limbs are not so long in proportion to the body: the muzzle is larger and more tumid; the hair of a darker brown, and the usual gait slower; but the most obvious distinction is afforded by the Bactrian Camel having two humps, and the Dromedary, or Arabian Camel having but one, which single hump occupies the middle of the back, rising gradually on all sides towards its apex. The Arabian, or single-hump Camel (*Camelus dromedarius*) is found throughout the entire length of this zone, on its southern side, as far as Africa and India. The general height of the Arabian Camel, measured from the top of the dorsal hump to the ground, is about six feet and a half, but from the top of the head when the animal elevates it, not much less than nine feet; the head, however, is generally so carried as to be nearly on a level with the hump, or rather below it, the Camel bending the neck extremely in its general posture. In some particular attitudes, perhaps, the Camel may be said to have an elegant and picturesque appearance, yet its general aspect, and more especially its dorsal hump, at first sight, is apt to impress on the mind the idea of deformity, rather than a truly natural conformation. — It is highly probable that the Camel has long ceased to exist in its wild or natural state, as it has been enslaved by man from the earliest times of which we have record. Unlike the elephant and other animals which cease to breed in a state of captivity, the Camel is as prolific as if at liberty; and vast numbers are raised and employed throughout the East, especially in the commerce carried on between the people residing in the vicinity of the great deserts. In regions where water is scarce, and wells or springs are several days' journey distant from each other, it would be impossible to traverse the country with the usual beasts of burden. But the Camel can abstain from drinking for seven or eight days together without injury — an important advantage, which is owing to the possession of an additional cavity in the stomach, destined to receive water, whenever it can be procured, and capable of retaining it unchanged for a long time. But, besides a reservoir of water to meet the exigencies of long journeys across the desert, the Dromedary and Camel are provided with a storehouse of solid nutriment, on which they can draw for supplies long after every digestible part has been extracted from the contents of the stomach: this store-house consists of one or two large collections of fat stored up in ligamentous cells supported by the spines of the dorsal vertebrae, and forming what are called the humps. When the *C.* is in a region of fertility, the hump becomes plump and expanded; but after a protracted journey in

Fig. 487. — CAMEL, (*Camelus Bactrianus*.)

the wilderness it becomes shrivelled and reduced to its ligamentous constituent, in consequence of the absorption of the fat. Possessing strength and activity surpassing that of most beasts of burden, docile, patient of hunger and thirst, and contented with small quantities of the coarsest provender, the *C.* is one of the most valuable gifts of Providence. There is nothing, however, in the external appearance of the animal to indicate the existence of any of its excellent qualities. In form and proportions, it is very opposite to our usual ideas of perfection and beauty. A stout body, having the back disfigured by one or two humps; limbs long, slender, and seemingly too weak to support the trunk: a long, thin, crooked neck, surmounted by a heavily proportioned head, are all ill suited to produce favorable impressions. Nevertheless, there is no creature more excellently adapted to its situation, nor is there one in which more of creative wisdom is displayed in the peculiarities of its organization. To the Arabs and other wanderers of the desert, the *C.* is at once wealth, subsistence, and protection. The milk furnishes them with a large part of their nutriment. The flesh of the young animal is one of their greatest luxuries; of the skins they form tents, or manufacture them into saddles, harness, pitchers, shields, and many other articles; the various sorts of hair, or wool, shed by the *C.*, are wrought into different fabrics; and its very excrements serve as fuel, or are applied to other useful purposes. — These animals are trained, when extremely young, to the labors which they are afterwards to perform: and with this view, when but a few days old, their limbs are folded under their body, and they are compelled to remain on the ground while they are loaded with a weight, which is gradually increased as they increase in strength. The pace of the *C.* is a high and swinging trot, which, to persons unaccustomed to it, is at first disagreeable and apparently dangerous, but is afterwards tolerably pleasant and secure. The Arabians in general ride on a saddle that is hollowed in the middle, and has at each bow a piece of wood placed upright, or sometimes horizontally, by which the rider keeps himself in the seat; and the animal is guided, or stopped, by means of a cord that serves as a bridle, and is affixed to a ring which is passed through his nostrils. Small *C.* carry from 600 to 800 lbs.; the largest and strongest bear 1,000 lbs. or upwards from thirty to thirty-five miles a day; but those which are used for speed alone are capable of travelling from sixty to ninety miles a day. When a caravan of *C.* arrives at a resting or baiting place, they kneel, and the cords sustaining the load being untied, the bales slip down on each side. They generally sleep on their bellies, crouching between the bales they have carried; the load is, therefore, replaced with great facility. In an abundant pasture, they generally browse as much in an hour as serves them for ruminating all night, and for their support during the next day. But it is uncommon to find such pasturage, and they are said to prefer nettles, thistles, cassia, and other prickly vegetables, to the softest herbage. — The female goes with young twelve months, and brings forth one at a birth. Her milk is very rich, abundant, and thick, but of rather a strong taste; though when mixed with water it forms a very nutritive article of diet. Breeding and milk-giving *C.* are exempted from service, and fed as well as possible, the value of their milk being greater than that of their labor. The young *C.* usually sucks for twelve months; but such as are intended for speed are allowed to suck, and exempted from restraint for two or three years. The *C.* arrives at maturity in about five years, and the duration of its life is from forty to fifty years.

Fig. 488. — SKELETON OF DROMEDARY, (*Camelus dromedarius*.)

Camel-backed, (kam'el-backt,) a. Hump-backed; having a back like a camel.

Camel'leon, n. (Zool.) See CHAMELEON.

Camel'idæ, n. pl., or CAMELINA. (Zool.) A tribe of ruminants, family *Bovidae*, including the camels of the Old World and the Llamas of America.

Camel'ina, n. (Zool.) See CAMELIDÆ.

(Bot.) A genus of plants, order *Brassicaceæ*. The Golden Pleasure, *C. sativa*, a native of Europe, but found in our cultivated fields, has small yellow flowers, in paniculated racemes. It is cultivated in France for its seeds, from which an excellent oil is obtained.

Camellia, n. [Called after Father Camelli, or Kamel, the Jesuit.] (Bot.) A genus of plants, order *Ternstroemiaceæ*. It contains ten or twelve species, which are peculiar to S. Asia. They are lofty evergreen shrubs, with large beautiful flowers, varying from white to red, and rose color. The principal species is the *C. Japonica*, a native of Japan, and introduced by Camelli into Europe, in 1739. For many years this handsome plant was only found in the gardens of the curious or scientific botanist. Now it is cultivated throughout N. America and Europe with as great ardor as the rose or dahlia. Numerous varieties have been produced, and at the present day, not fewer, it is said, than 1,500 are known. The trade in camellias is one of very considerable importance in the U. States as in Europe. *C. Sasanqua*, the Sasanqua tea, is a native of China, and produces

suow-white flowers. The leaves when dried have a sweet smell, and are mixed with tea to give it a grateful odor. The Chinese women use a decoction to wash their hair with. From the nut is expressed an oil which is considered equal to the best which comes from Florence. *C. oleifera* yields also a valuable oil much esteemed in China.

Cam'elopard, n. (Zool.) See GIRAFFE.

Camelopar'dalus, n. (Astron.) The camelopard, a constellation made by Hevelius out of the unformed stars which lie scattered between Persens, Anriga, the head of Ursa Major, and the Pole Star. It contains 58 small stars, the five largest of which are only of the 4th magnitude.

Camelot, (kam'e-lôt,) n. (Com.) See CAMLET.

(Lit.) The name of the town where tradition states King Arthur kept his court. — "Many-towered Camelot." — Tennyson.

Cam'elry, n. A place where camels are collected to be laden and unladen.

Camel's Rump, or Camel's Back Mountain, n. in Vermont, one of the highest peaks of the Green Mountains: height 4,188 feet.

Cam'el-swallower, n. Applied to a weakly credulous person, or to one who is punctilious in small matters while negligent of greater.

Cameo, (kam'e-ô,) n. [It. *cammeo*; Lat. *gemma*, a gem.] (Fine Arts.) A term applied to gems of different colors sculptured in relief. The art of engraving on gems boasts of high antiquity, having been practised with various degrees of success by the Egyptians, Greeks, and Romans. It was revived in Italy in the 15th century, and is even at the present day cultivated with considerable success. The *C.* of the ancients were usually confined to the agate, onyx, and sard, which, on account of the variety of their strata, were better suited to display the artist's talents; but they are also occasionally found executed on opal, beryl, or emerald, and even on a sort of factitious stone, the *Vitrum obsidianum* of Pliny, distinguished by the moderns as the antique paste. (*Encycl. Metrop.*) One of the most famous *C.* is the onyx at present in Paris called the *Apotheosis of Augustus*. It is one foot in height, and 10 inches in width. Cameo is sometimes, but wrongly, written Camaieu.

Cam'era, n. [Lat., a chamber.] (Arch.) In Greek architecture, an arched or vaulted roof, covering, or ceiling, formed by circular bands or beams of wood, over the intervals of which a coating of lath and plaster was spread; they resembled, in their construction, the hooped awnings now commonly in use.

— The term of the *camera obscura* used in photography.

Cameralis'tic, a. Pertaining to public revenue and finance.

Cameralis'tics, n. pl. [Fr. *cameralistique*, from N. Lat. *cameralista*, financier.] (*Polit. Econ.*) The science of public finance, or that branch of political economy which comprises the means of raising and disposing of public revenue.

Camera Lucida, (kam'e-rä loo-se-dä,) [Lat., light chamber.] (Optics.) An instrument invented by Dr. Wollaston for the purpose of enabling any one, without a knowledge of the rules of drawing or perspective, to delineate distant objects, or trace the outlines of landscapes, &c., with perfect accuracy. It consists of a quadrangular glass prism, *a, b, c, d*, by means of which rays of light are bent, by two reflections, into a path at right angles to their previous direction. A ray of light proceeding from *O* enters the face of the prism at *a*, and continues its course in a straight line till it meets the adjacent side of the prism at *b*, and making with it a very acute angle, is wholly reflected in the direction *b c*. At *c* it again meets the side of the prism, and is in like manner reflected in the direction *c E*. The eye being placed at *E*, sees the image of the object on the surface of the prism at *c*, and refers it to *P*, on a plane *M N*, which may be covered with a sheet of white paper. The point of a pencil can also be seen on the paper, and thus the accurate outline of the object may be traced. It is easy to see from this the proper form which the crystal should have. By the laws of optics, the size of the picture will bear the same relation to the object delineated, that the distance of the eye from the paper bears to the distance of the object. Hence, in order to increase or diminish the size of the picture, the prism is mounted in a brass frame, supported by brass tubes capable of being lengthened or shortened at pleasure. A thin brass plate, affixed to the upper surface of the prism, and having a small hole in it for the observer to look through, keeps the eye in its proper place, and procures steadiness of vision. A convex lens may be placed over the hole in the brass plate, for the purpose of magnifying the image; or a concave lens placed before the prism at *a* will adapt it to short-sighted persons. The instrument is extremely convenient on account of its portability. There are various improvements and modifications of the camera lucida, the best of which is that contrived by Signor Amici of Modena, in which a triangular prism is combined with a plate of glass having parallel surfaces. The camera lucida has been most successfully employed in delineating the forms of wonder and beauty revealed by the microscope. The instrument used for this purpose resembles that commonly applied to landscape-drawing, but is provided with a fitting, which adapts it to the eye-piece of the microscope. The steel disc of Sümmer-

Fig. 489.

ing is used by many microscopic draughtsmen instead of the camera. This contrivance is a little disc of polished steel, placed at an angle of 45° with the eye-piece, so as to receive the magnified image of the object and reflect it upwards upon the retina of the observer. The disc is smaller than the aperture of the pupil, and the drawing-pencil can at the same time be seen very well as it traces the image apparently thrown down on the paper beneath. When either the camera or steel disc is used, the body of the microscope must, if possible, be placed horizontally.

Cam'era Obscura, *n.*, (*obs-ku'ra*.) [Lat., dark chamber.] (*Optics*.) An apparatus by which the images of external objects are thrown on a white surface, and represented in a vivid manner in their proper colors, shapes, &c. Hence the apparatus may be used for the purposes of delineation, as well as the camera lucida; but as it is from its construction less convenient, it is chiefly used for the production of images or pictures upon surfaces sensitive to light in the art of photography, and cameras of great optical perfection are now constructed for this purpose. The common camera obscura is thus constructed: Through a convex lens, or small circular hole at C, the light is admitted into a darkened room or box, so that rays proceeding from an object A B, and falling on a white ground within the room, paint an image of the object in it in an inverted position, *a b*. Sometimes a mirror D is placed in the interior of the box, making an angle of 45° with its sides, whereby the image is thrown down on the bottom of the box at *a b*, and by means of the reflection restored to its natural position. The best ground for receiving the image is plaster of Paris, formed somewhat concave. The image is viewed through an oblong aperture cut in the box. The most perfect camera obscura is formed by placing an inclined mirror in a revolving frame at the top of a building, by which the rays are thrown down on a convex lens in the roof, and the images of all the surrounding objects received on a table. The images being accompanied by the motions belonging to the objects, a very pleasing picture is formed. The invention of the camera obscura is usually ascribed to Baptista Porta, who lived in the 16th century. — See PHOTOGRAPHY.

Fig. 490.

Camera'ria, *n.* [Named after Joachim Camerarius.] (*Bot.*) A genus of plants, ord. *Apocynaceae*. The species *C. latifolia*, native of S. America, is named the Bastard Mauchneel-tree, from its resemblance in quality to that formidable tree.

Camerarius, JOACHIM, (*käm'e-räir'e-us*.) a German scholar, b. at Bamberg, 1500. He embraced the doctrines of the Reformation, was made professor of belles-lettres at Nuremberg, and afterwards removed to Leipsic to superintend the university of that city. He aided his friend Melancthon in drawing up the famous *Confession of Augsburg*, and wrote some valuable books, mostly on classical and religious matters. D. 1574. — His son, JOACHIM, b. 1554, made botany his favorite study. D. at Nuremberg, 1598.

Cam'erate, *v. a.* [Lat. *cameratus*, from *camero*, from *camera*; Celt. *cam*, crooked, curved.] (*Arch.*) To build in the form of a vault or cell.

Cam'rated, *p. a.* (*Arch.*) Having the form of a vault; arched; as, the *camerated* roof of a church.

(*Conch.*) A term applied to the shells of certain Cephalopods which are divided by transverse partitions into a series of chambers traversed by a siphon. Most of the species are now extinct.

Camera'tion, *n.* [Lat. *cameratio*.] (*Arch.*) The vaulting or formation of an arch.

Cameri'no, a town of Central Italy, prov. Macerata, 5 m. S.S.W. of Ancona. It is pretty well built, and has a fine cathedral and other public buildings. *Manf. Silk*. Pop. 13,039.

Camerlin'go, *n.* (Same as *chamberlain*.) A title given to one of the cardinals who administers the principal affairs of civil government at Rome.

Cam'eron, REV. RICHARD. See CAMERONIANS.

Cam'eron, in *Georgia*, a post-office of Screven co.

Cam'eron, in *Illinois*, a village of McDonough co., 8 m. S.W. of Galesburg.

—A post-office of Warren co.

Cam'eron, in *Missouri*, a city of Clinton co., 35 m. E. of St. Joseph.

Cam'eron, in *New York*, a post-village and township of Steuben co.

Cam'eron, in *N. Carolina*, a post-office of Moore co.

Cam'eron, in *Ohio*, a post-office of Monroe co.

Cam'eron, in *Pennsylvania*, a N.W. central co. Area, 400 sq. m.; drained by Sinnemahoning creek. Surface, undulating. *Cap.*, Emporium. Pop. (1890) 7,240.

—A post-village of Cameron co.

—A township of Northumberland co.

Cam'eron, in *Texas*, a S. co., bordering on the Gulf of Mexico and separated from Mexico by the Rio Grande. Area, about 3,000 sq. m. The soil is generally fertile. There are numerous salt lakes, the largest of which, named Sal del Rey, would furnish inexhaustible quantities. *Cap.*, Brownsville. Pop. (1890) 14,500.

Cam'eron, in *Texas*, a city, the capital of Milan co., on Little River, 58 m. N.E. from Austin City.

Cam'eron, in *W. Virginia*, a township of Marshall co., 28 m. S.S.E. of Wheeling.

Camero'nians, *n. pl.* (*Eccl. Hist.*) The followers of one Richard Cameron, who entered Sanguhar, Scotland, 22d June, 1680, and made a public declaration that Charles II. had, by usurpation over civil and religious

liberties, forfeited all right to the crown. They separated from the Presbyterians, refused the terms of accommodation proposed by Charles II., and demanded the rigorous observance of the "Solemn League and Covenant" received by Parliament, 25th Sept., 1643. They are, on this account, frequently called *Covenanters* (*q. v.*). Cameron was killed in a skirmish with the royal troops, 20th July, 1680, and his followers were dispersed. They published declarations against the test of 1681, 12th Jan., 1682; against the royal authority, 25th Oct., 1684, and 28th May, 1685. The C. renewed the covenants in 1712, and formed themselves into a presbytery called the *Reformed Presbytery*, 1st Aug., 1743. They are still existing in Scotland, as a small but tenacious body, distinct from other sects. The entire number is estimated at about 6,000. The standards of the church are the Westminster Confession of Faith, the larger and shorter catechism, and a *Testimony*, authorized and issued by the Synod in 1839.

Cam'eronites, *n. pl.* (*Eccl. Hist.*) Some French Calvinists, the followers of John Cameron, are thus designated. He was b. at Glasgow in 1580, and in 1600 went to France, where he held professorships at Sedan and Saumur. Mosheim says that this divine and his followers "devised a method of uniting the doctrines of the Genevans respecting the divine decrees, as expounded at the Synod of Dort, with the views of those who hold that the love of God embraces the whole human race." They were also called *Hypothetical Universalists*. Cameron, who was stabbed in the streets of Montauban, D. in 1625.

Cameron Mills, in *New York*, a P. O. of Steuben co. **Cameroons'**, in Africa, a river falling into the Bight of Biafra, near Lat. 4° N., Lon. $9^\circ 40'$ E. — A cape which is on an island in the estuary of this river. — A peak about 13,000 feet above sea, the highest point of a range of mountains of the same name, Lat. $4^\circ 13'$ N., Lon. $9^\circ 10'$ E. This country came under German protection in 1884.

Cam'eta, a town of Brazil, on the Tocantins, 85 m. S.W. of Para or Belem.

Cami'la, in *Geo.* a p. v. cap. of Mitchell co.

Cami'lus, in *New York*, a township and village of Otsego co., 7 m. W. of Syracuse.

Cami'lus, MARCUS FURIUS, a celebrated Roman, who lived in the 4th century after the foundation of that city. There is so much of the fabulous in all that is told about him, that one might very reasonably suppose that Livy and Plutarch have derived the traditions respecting this warrior from some old poem. (Niebuhr, *H. R.*, vol. ii. p. 472.) That there was such a person, and that his actions entitled him to the gratitude of his countrymen, cannot, we think, be doubted. C. was created dictator five times, and triumphed four times, but never served the office of consul. (Plutarch, *Camill. init.*) His first dictatorship was in the 10th year of the siege of Veii, which was taken by him probably by means of a mine, by which part of the wall was overthrown. He also conquered the Faliscans, who, according to the legend, yielded unconditionally to him in consequence of his generosity in restoring to them their children, whom a traitorous schoolmaster had delivered into his hands. (Plutarch, *Camill. x.*) He was impeached, in A. U. C. 364, by the tribune L. Apuleius, on a charge of peculation in the distribution of the plunder of Veii, and his guilt was so manifest that even his own clients could not acquit him. (Liv. v. 32.) Camillus retired to Ardea, and lived there as an *inquilinus* till the battle of the Allia and the capture of Rome; he then took up arms for his country, and led the Ardeates against the Gauls, over whom he obtained some advantages. At length the people, sensible of the necessity of his recall, restored him to his civic rights, and after two battles, the one fought in the city, and the other on the road to Gabii, he completely exterminated the invading army. In his fourth dictatorship he had some more disputes with the plebeians, in consequence of which he abdicated his office. (Liv. vi. 38.) He died of the plague B. C. 365. His son and brother were also eminent men; but, with these exceptions, no one of his family, according to Tacitus (*Annal.* ii. 52), obtained military renown till the age of Tiberius, when Furius Camillus, proconsul of Africa, triumphed over the Numidians. The son of this Camillus raised a rebellion in Dalmatia in the reign of Claudius, and proclaimed himself emperor; but in a few days his soldiers returned to their allegiance, and Camillus committed suicide.

Cam'inus, *n.* [Lat.] According to Pliny, a smelting furnace.

Ca'mion, *n.* [Fr.] (*Mil.*) A kind of tumbril or wagon used for the transport of cannon.

Camisade', **Camisa'do**, *n.* [Fr. *camisade*, from O. Fr. *camise*, shirt.] (*Mil.*) A shirt formerly worn by soldiers over their armor or uniform, in order to recognize one another in the dark, during a night attack. (o.) — A night attack made on an enemy by soldiers wearing the *camisado*.

"They had appointed the same night, . . . to have given a *camisado* upon the English." — Hayward.

Cam'isards, *n. pl.* (*French Hist.*) The title given to the Protestant insurgents in the Cevennes, after the revocation of the Edict of Nantes, from having worn their shirts over their dress by way of disguise, on the occasion of some nocturnal attacks. Their principal leader, Cavalier, succeeded so far as to effect a capitulation in their favor, with the French govt. He subsequently entered the English service, and at his death was governor of Jersey.

Cam'isated, *a.* Dressed with a shirt over uniform, &c.

Cam'let, *n.* [Fr. *camelot*; Gr. *kamelō-tē*.] Literally, a camel's skin, or a garment made of the same. A stuff

originally made of camel's hair, now made chiefly of wool or goat's hair. (Sometimes written *camelot*.)

"He had on him a gown, . . . of a kind of water *camelot*." — Bacon.

Cam'leted, *a.* Undulating like *camelot*; veined.

Cam'tin, or **Crum'tin**, in *Ireland*, a parish of co. Antrim.

Cam'ma, in *Ireland*, a parish of co. Roscommon.

Cam'mas, **Ca'mas**, *n.* (*Bot.*) See CAMASSIA.

Cam'mock, *n.* [A. S.] (*Bot.*) See ONONIS.

Ca'mene. See MUSES, (*THE*.)

Camoens, LUIZ DE, (*kam'o-ens*), the greatest poet of Portugal, b. at Lisbon about 1524. After having studied at Coimbra, he returned to Lisbon, fell in love with a lady of honor, was banished by royal authority to Santarem, joined the expedition of John III. against Morocco, and lost his right eye in a naval engagement with the Moors in the Straits of Gibraltar. On his return to Lisbon, his bravery as a soldier was no more honored than his genius as a poet. Disappointed in all his hopes, he determined to leave forever his native land, and sailed for India, 1533. Offended by certain abuses of the Portuguese authorities in India, C. ventured to expose them in a satire, entitled *Disparates na India*, "Follies in India," in which he treated even the viceroy with ridicule. For this offence the poet was banished, 1556, to Macao, where he lived several years, and was engaged in writing *Os Lusíadas*. In 1561 he was recalled from his banishment. Unhappily, in returning to Goa, he suffered shipwreck, and lost all his property, excepting his epic poem. After other wanderings and misfortunes, C. took ship for Lisbon, where he arrived in 1569. He dedicated *The Lusiad* to the young king, Sebastian, who bestowed on C. a very small pension, and permission to remain at the court of Lisbon. Even this small pittance was taken away after the death of Sebastian, and C. was left in such poverty that a faithful Indian servant begged in the streets of Lisbon for the support of the great epic poet of Portugal. C.'s lyric poems, written during this time of destitution, contain many pathetic lamentations. He died obscurely in the hospital at Lisbon, 1580. *The Lusiad* (*Os Lusíadas*, "the Lusitanians") celebrates the chief events in the history of Portugal. Among the most famous passages are the tragical story of Inez de Castro, and the apparition of the giant Adamastor, who appears as the Spirit of the Storm to Vasco de Gama, when crossing the Cape. The versification of *The Lusiad* is extremely charming. Patriotic sentiments pervade the whole work. Besides his epic poem, C. wrote sonnets, odes, elegies, eclogues, epigrams, satires, epistles and three comedies. The best edition of *The L.* was published in Paris (1873). This poem has been also translated into nearly all modern languages. See LUSIAD.

Camoghe, (*kam'og*.) a mountain of Switzerland, 7 m. from Lago Lugano, height 8,800 feet.

Camogli, (*kam'ol-y*.) a town of N. Italy, built in the waters of the Gulf of Genoa, 13 m. E.S.E. of Genoa city; pop. 6,611.

Cam'olin, in *Ireland*, a town of co. Wexford, on the river Bann.

Cam'omile, **Cham'omile**, *n.* [Gr. *chamaimelon*, earth-apple, from its flowers smelling like apples.] (*Bot.*) See ANTHEMIS.

Camouflet, (*kām-oo'flai*), *n.* [Fr.] (*Mil.*) When sappers and miners have driven a gallery close to any part of the works of a besieged town, a countermine is sometimes made by the besieged, charged with a composition so called, the explosion of which destroys the works of the attacking party, and kills or injures the men employed in the trenches with its intolerable and suffocating odor.

Ca'mous, **Camoy's**, *a.* [Fr. *camus*, flat-nosed, from Lat. *camurus*, crooked.] Flat; level; depressed; — spoken of the nose. (o.)

"Many Spaniards, . . . have not worn out the *camoy's* nose unto this day." — Browne.

Camp, *n.* [A. S. *camp*; Fr. *camp*; Dan. and Swed. *kamp*; Ger. *kampf*; Lat. *campus*, a field or plain.] The ground on which an army pitch their tents; ground or spot on which any collection of tents are erected.

"From camp to camp, . . . the hum of either army stilly sounds." — Shaks.

—A series of huts, tents, &c., orderly arranged; as, a miner's *camp*. (Used in the sense of temporary habitation.)

(*Mil.*) The station of an army, with its artillery, baggage, and other accessories, when it has taken the field for purposes of war. The history of camps involves that of the military art in all ages and in all countries. The Lacedæmonians appear among the first people who directed their attention to this subject. Their camps, whenever it was practicable, were of a circular form, which was said to possess the advantage that from the centre, where the general with the flower of the troops lay, help could soonest be afforded to any point menaced by the enemy. The other States of Greece, Macedonia, and Carthage, adopted the same leading principle, but accommodated the form and disposition of their camps to the nature and strength of the ground which they intended to occupy. It was from the Romans that the art of castrametation first acquired any systematic regularity. The form of the Roman camp was invariably quadrangular; it was surrounded by regular intrenchments, and was so admirably arranged that each cohort, legion, and individual knew exactly the point which he ought to occupy, and the part to which instant attention should be directed in the event of alarm. In modern times, and prior to the use of cannon, it is supposed that European armies were encamped in the field on a plan similar in general principles to that adopted by the Romans, the ground being marked out and a position assigned to

Luís de Camoëns

1524-1580

each division. But the practice of grouping the tents or huts in the form of a square or circle has been abandoned for some two centuries or more, to avoid exposing the army to the fire of the enemy in one mass; and it is now considered better to place the tents along an extended front, each regiment occupying the position it would take if the army were drawn up in order of battle, and the tents not showing a greater extent in front than the regiment would occupy when drawn up two deep. A battalion 1,000 strong would therefore require a space in front of abt. 1,000 ft. for the extent of the line of tents, as it would occupy this space when drawn up in file. A regiment of cavalry drawn up two deep, consisting of eight troops of eighty men each, would occupy a front of 960 feet. The tents for the infantry are placed in rows at right angles to the front; the tents of the captains and subalterns occupy another line; and the tents of the field-officers, the sutler's tent, and the field-officers' horses, are grouped behind these. The tents of the advanced-guard are placed about 500 ft. to the front, in the centre of the battalion, and the tents of the rear-guard are pitched about fifty feet to the rear of the sutler's tent. The regiment parades in front of the first line of tents, between these and the tents of the advanced-guard. A somewhat similar arrangement is adopted for cavalry; the tents of the privates are pitched in lines perpendicular to the front, and the horses are picketed between them. When an army is encamped, the infantry is generally disposed in the centre in two lines, with the reserve occupying another line in the rear; the cavalry is placed on either side, and the artillery is placed on the flanks with the cavalry, or in the rear. When an encampment is formed, great attention is always paid to the position of the ground around it, and all approaches are fortified against attack by redoubts and intrenchments. Advanced guards are also thrown out all around to guard against surprise or sudden attack. — See LINES OF INTRENCHMENT.

The whole body of persons encamped in the same spot, as of soldiers, miners, travellers, &c.

"Next to secure our camp and naval pow'rs." — Pope.

(Agric.) A mound of earth for the storage of potatoes, &c., for protection against frost. (Called also *barron*, *pie*, and *hog*.)

-A game at ball, anciently practised in England.

-v. a. To encamp, or lodge in tents, as an army, or travellers.

"Had our great palace the capacity

To camp this host, we would all sup together." — Shaks.

-v. i. To pitch a camp; to encamp. — See ENCAMP.

"They camped out at night." — W. Irving.

camp, in Iowa, a township of Polk co.

campagna, (*kam-pain'ya*), a town of S. Italy, prov. Salerno, cap. of dist., surrounded by high mountains, 18 m. E. of Salerno. Pop. 10,504.

campagna di Roma, a district of Southern Italy, and embracing one of the most unhealthy tracts in that peninsula, if not in Europe. The Campagna extends along the western coast for nearly 70 miles, with a breadth of 40, and is bounded on the north by the States of the Church, south and east by Naples, and west by the Mediterranean, here called the Tuscan Sea. The ground, which never rises above 200 feet above the sea, is almost entirely volcanic, and the lakes are formed by craters of extinct volcanoes. The vapors rising from this district, and especially the *Solfatara*, produce the pestilential atmosphere styled *Aria Cattiva*. Some of the popes, especially Pius VI., have endeavored to drain the Pontine Marshes, and, during the dominion of the French in Italy, General Miollis made great improvements in drainage, timber-planting, and cultivation in the Campagna. The name of *Campagna di Roma* was adopted in the Middle Ages, to distinguish the country from the neighboring Campania, or *Campagna Felice*, in the kingdom of Naples.

campagnol, (*kam-pan'yol*), n. [Fr.] (Zool.) See MEADOW-MOUSE.

campaign, (*kam-pān'*), n. [Fr. *campagne*; It. *campagna*, from Lat. *campus*, an open field.] An open field; a large, level tract of country.

"Where Tiber rolls majestic to the main,
And fattens, as he runs, the fair *campaign*." — Garth.

(Mil.) A term applied to a series of operations in warfare, by which any important end is achieved. It was formerly taken to mean that which was done by an army between the time that it left its winter-quarters for active operations in the field during the summer months, until it entered them again. During this time the soldiers were under canvas, or without shelter in the open field; and hence the name.

-v. i. To serve in a campaign.

campaigner, (*kam-pān'ēr*), n. One who serves in a campaign; a veteran; an old soldier; one who has been under the enemy's fire. "She was an old *campaigner*." Thackeray.

campan, (*kam'pa*), a valley and small town of France in the recesses of the Pyrenees, dep. of the Upper Pyrenees. The valley of Campan is at the source of the Adour, and comprehends in reality two valleys, one of them watered by the Adour, and the other by the Traspors, a tributary of the Adour. The delightful scenery of the valley of Campan forms one of the attractions of the neighboring watering-place Bagnères-de-Bigorre, the most frequented in this part of France. The little town of Campan is on the left bank of the Adour, a short distance above Bagnères. The Pic du Midi de Bigorre, which overlooks the valley, rises to the height of 9,544 ft.

Campan, JEANNE LOUISE HENRIETTE, B. at Paris, 1752. At 15 years of age she was appointed reader to the

princesses, daughters of Louis XV. In 1770 she married M. C., and was soon after appointed first lady of the bed-chamber to Marie Antoinette, then dauphiness. She remained with Marie Antoinette during her husband's reign, and was with her in the first scenes of the Revolution, up to the storming of the Tuileries on the 10th of August, when she narrowly escaped with her life. Being forbidden to follow her mistress to her prison in the Temple, she retired into the country, and at last opened a boarding-school at St. Germain-en-Laye. The establishment prospered, and was patronized by Josephine Beauharnais, who sent her daughter Hortense to it. In 1806, when Napoleon founded the establishment at Ecouen for the daughters and sisters of the officers of the Legion of Honor, he appointed Madame C. to superintend it. After the restoration, the school of Ecouen being suppressed, Madame C. retired to Mantes, where she died in March, 1822, leaving behind her a character for mild virtues, and considerable information and accomplishments. She has written — *Mémoires sur la Vie Privée de Marie Antoinette, Reine de France, suivis de Souvenirs et Anecdotes Historiques sur les Règnes de Louis XV., et Louis XVI.*, translated into English in 1823. She gives the most faithful and impartial account of Marie Antoinette. Her recollections of the old court of Louis XV. are also curious.

Campana, n. [Sp. and It., from L. Lat. *campana*, bell.] (Eccl.) The bell of a church.

(Bot.) The pasque-flower.

Campana, an island on the W. coast of Patagonia; Lat. 48° 30' S., Lon. 75° 30' W. It is 55 m. long, with an average breadth of 10.

Campana, (La), a town of Spain, in Andalusia, on the Madre-Vieja, 37 m. E.N.E. of Seville; pop. 5,917.

Campana, **Campanula**, **Gut'tæ**, n. pl. (Arch.) The drops of the Doric architrave.

Campanules, n. pl. (Bot.) An alliance of plants. DIAG. Epigynous Exogens, with dichlamydeous monopetalous flowers, and an embryo with little or no albumen. The campanul alliance includes the orders *Campanulaceæ*, *Lobeliaceæ*, *Goodeniaceæ*, *Stylidiaceæ*, *Valerianaceæ*, *Dipsacaceæ*, *Calyceaceæ*, and *Asteraceæ*.

Campanario, a town of Spain, in Estremadura, 62 m. E.S.E. of Badajoz; pop. 5,730.

Campaned', a. (Her.) Bearing campanes, or bells.

Campanella, TOMMASO, (*kam-pa-nel'la*), an Italian philosopher, b. in Calabria, 1568, was a monk of the Dominican order. His *Philosophia Sensibus Demonstrata*, &c., published in 1591 at Naples, which contained a defence of Telesius, exposed him to the hatred of the orthodox monks and schoolmen. In 1599 he was seized at Naples, and committed to prison on suspicion of being engaged in a conspiracy against the Spaniards, who were then masters of his country. He was imprisoned 27 years, and was several times tortured, five times brought to trial, and finally sent to Rome at the request of the Pope. In 1634 he escaped and went to France, where Cardinal Richelieu allowed him a pension. His principal works are, *De recti Ratione studentii*, in which are some excellent rules for philosophizing, *Aphorismata Politica*, and *De Monarchia Hispanica*. D. 1639.

Campanes', n. pl. (Her.) Bells. (R.)

Campanha, a town of Brazil, prov. of Minas Geraes, on the Palmello; pop. 7,000.

Campania, n. See CAMPAIGN.

Campānia, (Anc. *Gerg.*) was that part of S. Italy now called *Terra di Lavoro*, q. v. The word C. is probably derived from *campus*, a plain. The Liris was the boundary between C. and Latium. To the North, C. was divided by the high Apennines from the country of the Marsi (the present Abruzzo), and to the N.E. by the mounts Callicula, Tifata, and Taburnus from the country of the Samnites. A continuation of the same ridge between Abella, which was in C., and Abellinum, which was in Samnium, continued the boundary to the E. as far as the sources of the Sarnus. The off-set which there detaches itself from the same ridge, and runs in a W. direction, forming the peninsula of Surrentum, divided C. from the country of the Picentini, the present province of Salerno. These were the limits of C. under Augustus, when it formed one of the eleven regions of Italy. The limits of C. were afterwards extended, and it was made to embrace the country of the Picentini, Beneventum, and also part of the E. Latium. It was celebrated from the remotest times for its extraordinary fertility, and its soft and genial climate. The Osci, or Opici, and Ausones (probably all one people), are the first inhabitants of C. recorded in history. Etruscan colonies afterwards spread to this country, and founded twelve cities, including Capua, which became the principal city of C. The Etruscans of C. appear to have degenerated from their ancestors, and to have become licentious, insolent, and idle. The Etruscans were driven out or conquered by the Samnites, who finally yielded to the Romans. To prevent confusion as to the use of the term C., it should be observed that the district belonging to Capua was first called *Campanus Ager*, and this restricted and original meaning of the term should not be confounded with the subsequent enlarged meaning of the term C. as used by Strabo for instance, and other writers after his time. The Campanians of Capua, after being allies of Rome, took the part of Hannibal, and were severely treated by the Romans in consequence. Livy (xxiii. xxv.) speaks at length of the Campanians, their manners, and the part they took in the second Punic war. LITERARY, Teanum, Calatia, Vulturum, Baiæ, Atella, Acerræ, Abella, Nuceria, Nola, and the Greek colonies of Cumæ and Parthenope, or Neapolis (Naples), were all towns of C. in the enlarged meaning. The island of Capræ (Capri) was reckoned a part of C. The Volturnus was its principal river.

Campaniform, a. [From Lat. *campana*, bell, and *forma*, form.] (Bot.) Bell-shaped.

Campanile, n. [It., bell-tower.] (Arch.) This term is, properly speaking, applied to a bell-tower, whether it be attached

to a civic or ecclesiastical building. Though the word has been adopted in the English language from the Italian, and applied to the bell-towers of churches especially, it more correctly belongs to those towers near churches, but detached from them, which may be seen in many of the cities of Italy. The principal of these are the C. of Cremona, which is of the extraordinary height of 396 ft.; that of Florence, 268 ft. high, built from the designs of Giotto; the *Garisendi Tower* at Bologna, built in 1110, and the *Leaning Tower* of Pisa. This characteristic feature of Italian architecture is now frequently applied to domestic styles, rising then usually over the entrance, and terminating in a room of small size at the top, which often answers the purpose of the belvedere.

Fig. 491. — THE CAMPANILE OF FLORENCE.

Campaniliform, a. [It. *campanilla*, a little bell, and *forma*, form.] Campaniform; having the shape of a bell.

Campanologist, n. A bell-ringer; one skilled in the art of bell-ringing.

Campanology, (*kam-pan-ol'ō-jē*), n. [Lat. *campana*, a bell, and Gr. *logos*, a treatise.] The art of ringing bells. — A treatise on bell-ringing.

Campanula, n. [Dim. of Lat. *campana*, a bell.] (Bot.)

A gen. of plants, forming the type of the order *Campanulaceæ*. It includes several American species, which are known to all lovers of wild flowers. *C. rotundifolia*, the Hare-bell or Rock-bell-flower, found in all the States on damp rocks and rocky streams, is an exceedingly delicate plant, 1 foot high, with blue, bell-shaped flowers. *C. aparinoides*, the Prickly Bell-flower, found in wet meadows, from Canada to Georgia, has small white flowers, on thread-like, flexuous peduncles at the top of the stem. *C. Americana*, the American Bell-flower, found in fields, hills, &c., from Pennsylvania to Illinois, is from 2 to 3 feet high, and is also cultivated in gardens. *C. illinoensis*, 3 to 5 feet high, is found in the prairies of Illinois.

Fig. 492. — HARE-BELL,
(*Campanula rotundifolia*.)

Campanulaceæ, n. pl. (Bot.) An order of plants, alliance *Campanales*. — DIAG. Ovary 2 or more celled, free or half united; others, naked stigma, and valvate regular corolla. — They are herbaceous plants or undershrubs, yielding a white milk. Leaves nearly always alternate, exstipulate; calyx superior, persistent; co-

rolla monopetalous, regular; stamens equal in number to the lobes of the corolla, with which they are alternate; fruit dry, capsular, opening by lateral fissures or valves at the top, many-seeded; seeds with fleshy albumen. There are 29 genera and 500 species, chiefly natives of the temperate parts of the Northern hemispheres.

Campanularia, *n.*, **Campanularidae**, *n. pl.* (Zool.) In the system of Gray, a genus and family of zoöphytes, class Anthozoa.

Campanulate, *a.* (Bot.) Campaniform; bell-shaped.

Camp-bedstead, *n.* A trestle bedstead; a portable bedstead made to fold up in a small compass for soldiers' use.

Campbell, (*kam'li*), the family-name of the dukes of Argyll, the most distinguished of which are noticed under the head ARGYLL.

Campbell, ALEXANDER, the founder of the religious sect called *Campbellites* or *Disciples of Christ*, b. 1788. He withdrew from the Presbyterian Church in 1812, received baptism by immersion the same year, and formed several congregations, which united with the Baptist association; but at the same time protesting against all human creeds as a bond of union, accepting the Bible alone as the rule of faith and practice. In 1827, he was excluded from the fellowship of the Baptist churches, and his followers began to form into a separate body. At the time of his death, in 1866, they numbered about 500,000. Bethany College, in Bethany, Va., was founded by C. in 1841. D. 1866.

Campbell, GEORGE, a Scotch Presbyterian divine, b. at Aberdeen, 1719, author, besides other works, of a *Philosophy of Rhetoric*, published in 1766, which is still a standard work on the subject. D. 1796.

Campbell, JOHN, b. at Edinburgh, 1708. He was the author of several valuable works, particularly the *Lives of the English Admirals*, and the *Present State of Europe*. He also wrote part of the *Ancient Universal History*, and *Modern Universal History*. D. 1775.

Campbell, JOHN, LORD, b. 1779, was Lord Chancellor of Ireland in 1841, and Lord Chief Justice of the Court of Queen's Bench in 1850. In June, 1859, he was appointed Lord Chancellor, under the Palmerston administration. In 1846 he produced his *Lives of the Lord Chancellors*, &c., in 7 vols., republished in Philadelphia; and in 1849 the *Lives of the Chief Justices*, in 3 vols. D. 1861.

Campbell, THOMAS, a distinguished British poet, b. in Glasgow, 1777. His *Pleasures of Hope*, published at the early age of twenty-one, is replete with romantic beauty and generous enthusiasm; his *Gertrude of Wyoming* abounds in the most beautiful home-scenes, and is marked by the most perfect delineation of character and passion. His *O'Connor's Child* is full of antique grace and passionate energy, while his noble lyrics or war-songs form the richest offering ever made by poetry at the shrine of patriotism. His prose works are also numerous, and his *Specimens of the British Poets* are models of chaste, yet animated criticism. He d. at Boulogne, 1844.

Campbell, SIR COLIN. See CLYDE, (LORD.)

Campbell, in Georgia, a N.W. central county, intersected by Chattahoochee River, and drained by Sweetwater Creek. Area, 360 sq. m. Surface, undulating. Soil, various. Grain and cotton are the chief productions; gold, iron, and soapstone are the principal minerals. Capital, Fairburn. Pop. in 1890, 9,200.

Campbell, in Illinois, a post-village of Coles co., 8 m. S. W. of Charleston.

Campbell, in Indiana, a township of Jennings county.

—A township of Warwick co.

Campbell, in Kentucky, a N. co., bordering on Ohio river; area, 120 sq. m.; bounded on the W. by Licking river. Surface, diversified; soil, very fertile. Cap., Newport. Pop. in 1890, 44,200.

Campbell, in Michigan, a post-township of Ionia co., 30 m. W. by N. of Lansing.

Campbell, in Tennessee, a N. E. county, bordering on Kentucky, and drained by affluents of the Cumberland river. Area, 450 sq. m. The central part of the co. is traversed by a ridge of the Cumberland Mountains; the surface being generally hilly, and thickly wooded. Cap., Jacksborough. Pop. in 1890, 13,500.

Campbell, in Virginia, a S. county, with an area of 116 sq. m. It is bounded on N. by James river, and on S. by Staunton river; being also drained by Otter and Falling rivers. Surface, uneven; soil, generally fertile. Iron ore and granite are abundantly found. Cap., Rinstburg. Pop. in 1890, 41,000.

Campbell, in Wisconsin, a township of La Crosse co., on Mississippi river.

Campbell Court-House, in Virginia, a village (now Rustburg), 130 m. W. S. W. of Richmond.

Campbell Island, in the S. Pacific, lat. 52° 33' S., lon. 169° 9' E. It is a lonely, mountainous, and small island, only 36 m. round, but valuable on account of its harbors.

Campbellites, (*kam'el-lites*) *n. pl.* See DISCIPLES OF CHRIST.

Campbell's Bridge, in South Carolina, a post-office of Marion district.

Campbellsburg, in Indiana, a post-village of Washington co., 45 m. N.W. of New Albany.

Campbellsburg, in Kentucky, a township of Henry co., 31 m. N.W. of Frankfort.

Campbell's Creek, in Indiana, flows through Huntington co. into the Wabash.

Campbell's Grove, in Iowa, a village of Cass co., 180 m. W. by S. of Iowa City.

Campbell's Mills, in Connecticut, a post-office of New London co.

Campbellsport, in Ohio, a village of Portage co., 3 m. S.E. of Ravenna.

Campbell's Station, in Tennessee, a post-office of Knox co.

Campbellsville, in Kentucky, a p.-v. and twp., cap. of Taylor co., 75 m. S.S.W. of Frankfort.

Campbellsville, in Tennessee, a post-office and small place of Giles co. An action took place here, on Nov. 6, 1863, between a Union corps commanded by Burnside, and a Confederate force under Longstreet, in which the latter was repulsed with a loss of about 370 men, the National loss being about 300.

Campbellton, in Florida, a P. O. of Jackson co.

Campbellton, in Georgia, a post-village, formerly the cap. of Campbell co., on the Chattahoochee river, 100 m. N. W. of Milledgeville.

Campbellton, in Mississippi, a village of Itawamba county.

Campbellton, in Missouri, a P. O. of Franklin co.

Campbellstown, in Ohio, a post-office of Preble co.

Campbelltown, in New York, a village and township of Steuben co., on Conhocton river.

Campbelltown, in Pennsylvania, a post-village of Lebanon co.

Campbellville, in Pennsylvania, a post-office of Sullivan co.

Campbelton, or **Campbeltown**, (*kam'el-ton*), a seaport of Scotland, co. Argyll, and its most important town, on the E. coast of the long, narrow peninsula of Cantyre. It is a neat and thriving place, with an excellent harbor, having from 6 to 13 fathoms water. Steam communication is regular between this place, Glasgow, and the W. coast of Scotland. Pop. 6,636.

Camp-boy, *n.* A boy on camp service.

Camp Call, in North Carolina, a P. O. of Cleveland co.

Camp-ceiling, *n.* (Arch.) A kind of ceiling used in the construction of attics or garrets.

Camp Creek, in Ohio, a township of Pike co., on the Scioto River, 28 m. S. by W. of Chillicothe.

Camp Creek, in Tennessee, a post-office of Greene co.

Camp Douglas, in Utah, a military post of Salt Lake co., 3 m. E. of Salt Lake City.

Campeachy, (*kam-pe'che*), a seaport town of Yucatan, Mexican Republic, lat. 19° 50' N., lon. 90° 33' W. It is a handsome city, with a good dock, and a large trade in cotton, wax, and logwood, called also *Campeachy wood*. Pop. 20,000.

Campello, in Massachusetts, a post-village of Plymouth county.

Camp Elkwater, in West Virginia, a post-office of Randolph co.

Camp Equipage, *n.* (Mil.) A general name for all the tents, furniture, fittings, and utensils carried with an army, applicable to the domestic rather than the warlike wants of the soldier. In the days when armor was worn, the C. E. was enormously heavy and complicated. In the present day, a certain amount of C. E. is provided for a given number of troops.—See ENCAMPMENT, TENT, &c.

Camp'er, PIETER, a Dutch physician and anatomist, b. at Leyden, 1722. Having lost his parents at the age of 26, he visited England, France, and Germany, where he cultivated the acquaintance of men of letters. To the study of medicine he united that of many other sciences, and cultivated a taste for the fine arts. He designed, painted, and modelled with exactness and elegance; but he excelled in the study of philosophy and natural history. His works on these subjects are in 6 vols. 8vo., enriched with over 100 folio plates. D. 1789.

Camp'erdoun, a village of Holland, on the North Sea, 22 m. from Amsterdam. It gives its name to the victory obtained off its coast by Admiral Duncan over the Dutch fleet, Oct. 11, 1797.

Campes'tral, **Campes'trian**, *a.* [Lat. *campestris*, from *campus*.] Pertaining to an open field; growing in a field or open ground.

"But the *campestral*, or wild beech, is blacker and more durable." — Mortimer.

Camp'-fight, *n.* (Old Eng. Law.) A legal combat allowed let two persons to a point of controversy at issue.

Camp-follower, *n.* A sutler or any other kind of people who follow an army with the intent of getting money from the soldiers.

Camp'hausen, WILHELM, a German historical painter, b. at Düsseldorf, 1818. His chief productions are, *Cavaliers and Roundheads*, *Charles II. in the Retreat from Worcester*, *Charles I. at the Battle of Naseby*, *Prince Eugene at Belgrade*, *Godfrey de Bouillon at Ascalon*, &c. D. 1885.

Camphene, CAMPHILINE, CAMPHILENE, DADYL, *n.* (Chem.) A product obtained by acting on turpentine with hydrochloric acid. Hydrochlorate of camphene is formed, which is transformed into camphene by the abstraction of the hydrochloric acid by the aid of quicklime. It boils at 273°, and is without any action on polarized light.

Camphine, *n.* (Chem.) A commercial name applied to a pure variety of oil of turpentine, which is said to be furnished by the *Pinus Australis*.

Camphire, *n.* The ancient name of CAMPHOR, *q. v.*

Camphogens, (*kam'fo-jens*), *n. pl.* (Chem.) A series of hydrocarbons, which when treated with hydrochloric acid, form artificial camphor or terebenthes. They include oil of turpentine, oil of lemons, oil of rne, and one or two others.

Camphogen, *n.* The same as CAMPHENE, *q. v.*

Camphor, (*kam'fur*), *n.* [L. Lat. *camphora*; late Gr. *kaphoura*; Ar. *kâfour*; Fr. *camphre*; It. *camfora*.] (Chem.) A peculiar concrete substance: a pure resin existing in many plants, only obtained in large quantities from two: namely, *Camfora officinarum* and *Dryoba-*

lanops aromatica. The former, an evergreen tree growing in China, Formosa, and Japan, yields almost all the camphor of European commerce. The C., which may be regarded as a solid volatile oil, is diffused through the entire plant, and is separated from the root, trunk, and branches. These parts are cut into chips, and boiled in water till the camphor begins to adhere to the stirring-rod, when the liquid is strained and allowed to stand until the C. concretes. It is then sublimed into inverted straw cones contained within the earthen capitals of the stills. Vast quantities of this crude C. are procured from the provinces of Fo-kien, in China, and the opposite island of Formosa: but some of good quality is exported from Japan. It is generally in small grayish, slightly sparkling grains, which, by aggregation, form crumbling cakes. Refined C. is prepared by mixing the crude product with lime, and subliming it into thin glass vessels of a peculiar shape, which are afterwards cracked so as to obtain the C. in concavo-convex cakes, each about three inches thick, with a hole in the middle. C. is colorless and translucent, and has a strong, penetrating, aromatic odor, and a bitter, rather pungent taste, though leaving a sensation of coolness in the mouth. Its specific gravity is from .98 to .99: so that it floats upon water, and, evaporating while doing so, undergoes a curious rotatory movement. It volatilizes slowly at ordinary temperatures, melts at 288° Fahr., boils at 400°, and burns with a bright flame. It is soluble in alcohol, ether, oils, and dilute acids; also to a certain extent in water. The *Borneo C.*, *q. v.*, named also *Sumatra C.*, greatly resembles the ordinary camphor, but is never seen in European commerce, because the Chinese give a price for it eighty or hundred times greater than that at which they sell their own camphor. It does not appear, however, that the Sumatra camphor is in any way preferable to that of China. The same tree which affords this rare substance yields also a pale yellowish limpid fluid, called *liquid camphor*, or *camphor oil*. Artificial camphor, closely resembling the natural product, may be formed by acting upon oil of turpentine with hydrochloric acid. It differs from true camphor in burning with a sooty flame, and in giving off, when heated, the odor of turpentine. Chemically considered, C. is a compound of carbon, hydrogen, and oxygen, in the proportions expressed by the formula $C_{10}H_{16}O$.

(Med.) C. is used both internally and externally, and it would take a page to enumerate all diseases and affections in which it may be used with advantage. Raspaïl, the founder of a peculiar system of medicine widely adopted in France, elevates C. almost to the dignity of universal medicine. See RASPAÏL (SYSTEM OF).—In moderate doses, C. will allay nervous irritations and produce quietude and placidity of feeling. In very large doses it acts as a narcotic, and is said to be poisonous. Insects are kept from attacking specimens of natural history by placing pieces of C. in the cases in which such specimens are preserved.

—*v. a.* To camphorate, or impregnate or wash with camphor. (R.)

Camphora, *n.* (Bot.) A genus of plants, order *Lauracea*, yielding the camphor of commerce. The camphor-tree, *C. officinarum*, the *Laurus camphora* of older botanists, is a tree with lax, smooth branches and bright-green leaves. It is a native of China and Japan, and is cultivated in most of the warmer parts of the world. The camphor is obtained by boiling the timber. The tree is extensively cultivated in the island of Formosa, and the camphor is taken to Canton, which is the principal port for exportation. The exports from China may be reckoned at about 400,000 lbs. annually.

Camphoraceous, (*kam-fer-a'sh-us*), *a.* Of the nature of camphor; partaking of camphor.

Camphorate, *v. a.* To impregnate with camphor; as, a camphorated liquor.

Camphorate, *n.* (Chem.) A salt resulting of the combination of camphoric acid with a base.

Camphorate, *a.* Pertaining to, or impregnated with, camphor.

"By shaking the saline and camphorate liquors." — Boyle.

Camphorated, *a.* Impregnated with camphor; as, a camphorated draught.

Camphoric Acid, *n.* (Chem.) It is formed when camphor is acted on by concentrated nitric acid. It crystallizes in lamellar or acicular crystals, which have a bitterish, sour taste. They melt at 158° Fahr. and dissolve slightly in water. Camphoric acid forms salts with the various bases.

Camphor-oil, *n.* (Chem.) A liquid which exudes when the bark of the Borneo camphor-tree is incised. It is a solution of camphor in a hydrocarbon termed *borneene*.

Camphor-tree, *n.* (Bot.) See CAMPHORA.

Camphrone, (*kam'frôn*), *n.* (Chem.) A volatile liquid obtained on passing camphor vapor over red-hot lime.

Camphuysen, DIRK, an eminent Dutch painter, b. at Gorkum, 1580, whose landscape and moonlight pictures are extremely beautiful. D. 1627.

Cam'pi, an Italian family of artists, who founded, at Cremona, in the middle and near the close of the 16th c., an eclectic school of painting, parallel with that founded by the family Caracci. GIULIO C. (1500-1572) was the head of the school. He studied painting, sculpture, and architecture under Giulio Romano. His female heads, like those of his brothers, are remarkably beautiful. — ANTONIO C. studied, under his brother, both painting and architecture. He was also a plastic artist, an engraver, and the historian of his native place. — VINCENZO C. (b. before 1532, d. 1591) seems to have followed the guidance of Antonio rather than that of Giulio, and excelled more in small figures than in large pictures. His paintings of fruits are highly valued. — BERNAR-

DINO C. (B. 1522, D. about 1590), a kinsman of the three brothers C., was the most famous of the whole. Lanzi terms him "The Annibale Caracci" of the school. He chiefly followed Raphael, yet without servile imitation. Many of his works are found in Milan and Cremona. In the latter place, the cupola of the choir in the church San Gismondo is Bernardino's masterpiece.

Cam'pl, a town of S. Italy, prov. of Terra di Otranto, 9 m. from Lecce. *Manf.* straw hats. *Pop.* 4,428.

Camp'ing, *n.* In some parts of England, a game at ball. **Camp'ing Creek**, in S. Carolina, flows into Saluda River in Lexington district.

Camp'ion, *n.* (*Bot.*) See LYCHNIS and SILENE.

Campistron, JEAN GALBERT DE, a French poet, b. at Toulouse, 1656. He was much celebrated in his time, and was a friend of Racine. D. 1723.

Camp Izard, in Florida, a post-office of Marion co.

Camp'pli, a town of S. Italy, prov. Teramo, 9 m. N. of that city: *pop.* 7,714.

Camp Luce, in Iowa, a village of Madison co., 130 m. W. of Iowa City.

Camp McDermitt, in Nevada, a post-office of Humboldt co.

Camp'-meeting, *n.* A meeting of religious persons, held principally by those of the Methodist persuasion, in some quiet, retired spot, where they remain for some days together, for preaching and continuous devotional exercises.

Cam'po-bas'so, a fortified town of S. Italy, cap. of prov. of the same name, 53 m. N.E. of Naples. *Manf.* Fine cutlery. *Pop.* 13,820.

Cam'po Bas'so, NICCOLÒ, COUNT DA, a celebrated commander of Italian mercenaries, lived in the latter half of the fifteenth century. He had first supported the house of Anjou, in the kingdom of Naples, but afterwards transferred his services to their opponent, Charles the Bold, Duke of Burgundy. By pandering to the prejudices and caprices of that headstrong prince, he acquired great influence over his mind, and, in the end, availed himself of the confidence placed in him by the duke to sell him to his enemies. While the Duke was engaged in the siege of Nancy, in 1477, on the approach of a superior force under Ferrand, Duke of Lorraine, to relieve the place, Campo Basso deserted to the enemy immediately before battle. The Burgundians were, in consequence, defeated, and the duke himself slain. The treacherous Italian was supposed to be the murderer, as the bodies of some of his men were observed near the spot where the unfortunate prince was found killed and stripped the day after the battle.

Cam'po Bel'lo, an island of New Brunswick, at the mouth of Passamaquoddy Bay, Lat. 44° 57' N., Lon. 66° 53' W. It is 8 m. long, and from 1 to 3 m. broad; and at its N. end has a light-house 60 feet above high-water mark.

Campo'bello, in S. Carolina, a post-office of Spartanburg district.

Cam'po de Crip'ta'na, a town of Spain, province Ciudad-Real, 50 m. N.E. from Ciudad-Real city: *pop.* 5,966.

Cam'po For'mio, a town of S. Italy, prov. Friuli, 4 m. S.W. of Udine. This place is famous in history for the treaty of peace concluded here, Oct. 17, 1797, between France and Austria, respectively represented by Gen. Bonaparte and the Count of Coblenz. Austria ceded the Netherlands, Milan, and Mantua, and received as compensation the districts Istria, Dalmatia, and the left bank of the Adige, in the Venetian states, and the capital, Venice; while France took the remaining territory of Venice, its possessions in Albania, and the Ionian Islands. *Pop.* 1,749.

Cam'po-Major, a frontier and fortified town of Portugal, prov. Alentejo, 12 m. N.N.E. of Elvas, and 15 N.W. of Badajoz. It is an ill-built, dirty, miserable place. *Pop.* 5,127.

Campoma'nes, PEDRO RODRIGUEZ, COUNT OF, a distinguished Spanish statesman, b. in Asturias, 1723. In 1765 he was appointed fiscal advocate to the royal council of Castile, and was made afterwards minister of state. He was a friend of Aranda, and took part in the expulsion of the Jesuits by that minister. He labored zealously to rouse the industry of Spain from its state of torpor, and wrote several good works on the education of the people, and especially of the artisans. Under the ministry of Florida Blanca, Campomanes was removed from the council, and lived afterwards in retirement. D. 1802.

Cam'pos, a town of the island of Majorca, 22 m. S.E. of Palma, and 7 from the sea: *pop.* 4,541.

Cam'po San'to, *n.* [*It.* Holy Field.] The name given in Italy to a cemetery or burying ground, but more especially to an enclosed place of interment, surrounded internally by an arcade, and destined to receive the remains of persons of distinction. The most famous C. S., and that from which the others derived their name, is that of Pisa, in the neighborhood of the Dome, and consecrated to the memory of men who had deserved well of the republic. It was founded by Archbishop Ubaldo, towards the end of the 12th century. The architect was Giovanni Pisano. It contains an area of 400 feet in length, and 118 in breadth; and is surrounded by a lofty wall, on the inner side of which a wide arcade runs round the whole enclosure, giving to it the character of a magnificent cloister. The lofty circular arches of the arcade are filled with the richest Gothic tracery. The walls are adorned with frescoes, which are of great interest and value, both absolutely and with reference to the history of art. These remarkable paintings are supposed to date before the middle of the 14th century, and are ascribed to Buffalmacco. But the most marvelous productions are those of Giotto, of Simone Memmi,

the friend of Petrarch, and of Audrea and Bernardo Orcagna. As a museum of classical antiquities, the C. S. is perhaps even more remarkable than in any other point of view. Altars, sarcophagi, bas-reliefs, statues, inscriptions, everything that is interesting or curious which has come into the possession of the Pisans for centuries, they have accumulated within its walls.

Campo Santo, a small town of N. Italy, 15 m. from Modena, celebrated for having been the theatre of a sanguinary battle, fought between the Spanish and Austrian forces in 1743.

Cam'pos dos Goitacazes, (*goi-ta-ka'zais*), a town of Brazil, on the Parahyba, abt. 160 m. from Rio Janeiro: *pop.* 4,500.

Campo Seco, (*kam'po sã'ko*) (i. e., "dry plain.") in California, a post-office of Calaveras co., 12 m. S.W. of Mokelumne Hill.

Camp Point, in Illinois, a post-township in Adams co., 22 m. E.N.E. of Quincy.

Camp Pinckney, in Georgia, a village in Camden co., on St. Mary's River.

Camp Ridge, in S. Carolina, a post-office of Williamsburg district.

Camp Run, in Ohio, a post-office of Crawford co.

Camp'-sheeting, *n.* A piled enclosure, frequently erected at the foot of an embankment, or a cutting in a shaft or compressible formation. A camp-sheeting consists of: 1, a guide pile; 2, a *whale*, or a horizontal piece of timber; and, 3, a series of planks driven in, so as to enclose the space required for the foundation, usually of the thickness of 3 inches, though this thickness is by no means necessary. A camp-sheeting is, in fact, nothing more than an enclosure by means of a series of planks driven flatwise to the direction of the thrust, and the thickness of the planks is that most commonly obtained in the market; its object being to resist the outward thrust of the earthwork, on which it is proposed to build, under the influence of a direct load.

Camp Stockton, in Texas, a post-office of Bexar co.

Camp'-stool, *n.* A stool with crossed legs, enabling it to be folded up.

Camp'ti, in Louisiana, a post-village of Natchitoches parish, on Red River, 65 m. S.S.E. of Shreveport.

Camp'ton, in Illinois, a post-township of Kane county.

Camp'ton, in Iowa, a post-village of Delaware co., 50 m. W. by N. of Dubuque.

Camp'ton, or **Comp'ton**, in Kentucky, a post-village, the capital of Wolfe co.

Camp'ton, in New Jersey, a village of Essex co., 3½ m. S.W. of Newark.

Camp'ton, in New Hampshire, a post-township of Grafton co., 45 m. N. by W. of Concord, and intersected by Merrimack River.

Camp'tonville, in California, a post-village of Yuba county, near N. Yuba River, 41 miles N.E. of Marysville.

Camp'town, in Pennsylvania, a post-village of Bradford co., on Wyalusing Creek, 13 m. E.S.E. of Towanda.

Campulitropous, *a.* Same as CAMPYLOTROPOUS, *q. v.*

Campus Mar'tius, (*Roman Antiq.*) The "Field of Mars," an extensive plain or meadow without the walls of Rome, and adjoining the Tiber, where the levies of troops were made by the tribunes selected to command the legions, where the ballot for the conscription was drawn, and where all military exercises, drills, and evolutions were performed. It was also a gymnasium for the Roman youths, where they threw the discus and javelin, practised their horses, and competed in foot and chariot races. It was in the C. M. that the great assemblies of the people took place to elect their public officers, military and civil tribunes, and other magistrates of the city.

Campus Scelera'tus, (*Roman Antiq.*) This name was given to a spot within the walls, and close by the Porta Collina, where those of the vestal virgins who had transgressed their vows were entombed alive, from which circumstance it took its name.

Camp'ville, in Connecticut, a post-office of Litchfield co.

Camp'ville, in New York, a post-village of Tioga co., 240 m. from New York city.

Camp-vine'gar, *n.* A mixture of vinegar, with Cayenne pepper, soy, walnut-catsup, anchovies and garlic.

Camp Watson, in Oregon, a village of Grant co.

Camp Wildcat, in Kentucky, in a spur of the Cumberland Mountains. An engagement occurred here, 21st Oct., 1861, between a National force commanded by Gen. Schöepf, and a body of Confederates led by Gen. Zollicoffer, in which the latter were worsted.

Campylosp'ermous, *a.* (*Bot.*) Applied to a seed or seed-like fruit, when rolled up so as to form a longitudinal furrow, down one side, as that of the sweet Cicely.

Campylo'tropous, **Campylo'tropal**, *a.* [*Gr.* *kampylos*, to bend, and *tropo*, to turn.] (*Bot.*) Applied to an ovule which grows unequally, and consequently curved upon itself, so as to bring the apex round to the vicinity of the base, the chalazal and the orifice being at length brought nearly into contact at the point of attachment; as in the Mignonette.

Cams, KARL GUSTAV, an eminent German physician, physiologist, psychologist, and artist; b. 1789, in Leipzig, where his father had a dyeing establishment. He graduated in Leipzig, in 1811, and in this year established himself as lecturer on comparative anatomy, which branch had not been taught in Leipzig up to that time. He soon devoted himself to obstetrics and diseases of females. In 1814, he was made professor of obstetrics and director of the obstetrical clinic in the newly organized medical and surgical academy in Dresden; and, in 1862, was elected president of the Royal Leopold-

Carolina Academy. He has been an arduous student in the sciences, and a voluminous writer. He wrote: *Lehrbuch der Zoölogie*, (1818;) *Lehrbuch der Gynäkologie*, (1820;) *Erläuterungstafeln zur Vergleichenden Anatomie*, (1826;) *Grundzüge der Vergleichenden Anatomie und Physiologie*, (1828,) *Ueber den Blutkreislauf der Insekten*, (1827;) *Vorlesungen über Psychologie*, (1831;) *Atlas der Kranioskopie*, (1843;) &c., &c., and many others on scientific subjects, and some on art studies.

Cam'toos, or **Gam'toos**, in S. Africa, a considerable river of the E. division of Cape Colony. It rises in the Nieuwveldt Mountains, and, after a course of 200 m., falls into the sea, 20 m. from Uitenhage.

Camus. We insert this article principally to make the distinction between several French mathematicians of this name. 1. François Joseph des Camus, b. 1672, d. 1732, author of *Traité des Forces Mouvantes*, 1722, and editor of *Varignon's Mécaniques*, 1725. He d. in England, whither he had gone in search of employment. 2. Charles Etienne Louis Camus, b. 1699, d. 1768, was the companion of Clairaut, Lemonnier, and Manpertuis, in the measurement of the meridian in Lapland, author of the *Hydraulique, Cours de Mathématiques*, and a list of works which may be found in Hutton's Dictionary. He was also concerned in the verification of Picard's Degree, 1757. 3. Nicholas le Camus de Mézières, b. 1721, d. 1789, author of various works on architecture, his profession.

Cam'us, **Cam'is** *n.* A thin dress.

"All in silken *camus*, lily white." — *Spenser*.

Cam'-wheel, *n.* (*Mach.*) See CAM.

Cam'-wood, *n.* [Probably an abbreviation of *Campachy-wood*.] The wood of *Baphia nitida*, (see BAPHIA.) It is used in dyeing, instead of Brazil-wood, and gives a finer and more durable red.

Can, *n.* [*Du. kan*; A. S. *canna*; Ger. *kanne*; W. *canu*, or *ganu*, to contain, from *gan*, capacity.] A cup or vessel for holding liquor, generally made of tin, or other metal.

"His empty *can*, with ears half worn away,

Was hung on high, to boast the triumph of the day." — *Dryden*.

— A term used in Scotland for a chimney-pot.

Can, *v. i.* (*imp. COULD*.) [A. S. *cunnan*; Goth. *kunnan*, to know; Ger. *können*.] Originally, to know how to; hence to have intellectual, moral and gradually physical ability to; to be able to; to be competent to; to possess the means to; (of things) to have sufficient capacity to.

Ca'na of Gal'ilee, called by the natives *Kefr Cana*; or *Kana-el-Jil*, a town of Palestine, — celebrated in Scripture as the scene of our Lord's first miracle, when he turned water into wine. — is now a small village of a few hundred inhabitants, who are principally Greek-Christians or Nazarenes, situated about 13 m. W. of the Sea of Galilee, and 6 m. N. of Nazareth.

Ca'na, in Indiana, a post-office in S.W. of Jennings co., 70 m. S.S.E. of Indianapolis.

Canaan, the son of Ham, and grandson of Noah. His numerous posterity seem to have occupied Sion first, and thence spread into Syria and Canaan. The Jews believe that he was implicated with his father in the dishonor done to Noah, which was the occasion of the curse under which he and his posterity suffered.

Ca'naan, the land peopled by Canaan and his posterity, and afterwards given to the Hebrews. This country has at different periods been called by various names, either from its inhabitants, or some circumstances connected with its history. — 1. *The Land of Canaan*, from Canaan, the son of Ham, who divided it among his sons, each of whom became the head of a numerous tribe, and ultimately of a distinct people. (Gen. x. 15–20, xi. 31.) This did not, at first, include any land east of the Jordan. — 2. *The Land of Promise*, from the promise given to Abraham that his posterity should possess it. (Gen. xii. 7, xiii. 15.) These being termed Hebrews, the region in which they dwelt was called — 3. *The Land of the Hebrews*, (Gen. xl. 15;) and — 4. *The Land of Israel*, from the Israelites, or posterity of Jacob, having settled there. This name is of frequent occurrence in the Old Testament. It comprehends all that tract of ground on each side of the Jordan, which God gave for an inheritance to the Hebrews. At a later age, this term was often restricted to the territory of the ten tribes. — 5. *The Land of Judah*. This at first comprised only the region which was allotted to the tribe of Judah. After the separation of the ten tribes, the land which belonged to Judah and Benjamin, who formed a separate kingdom, was distinguished by the appellation of "The land of Judah," or *Judea*; which latter name the whole country retained during the existence of the second temple, and under the dominion of the Romans. — 6. *The Holy Land*. This name appears to have been used by the Hebrews after the Babylonish captivity. (Zech. ii. 13.) — 7. *Palestine*, (Ex. xv. 14,) a name derived from the Philistines, who migrated from Egypt, and having expelled the aboriginal inhabitants, settled on the borders of the Mediterranean. Their name was subsequently given to the whole country, though they in fact possessed only a small part of it. By heathen writers, the Holy Land has been variously termed Palestine, Syria, and Phœnicia. — See PALESTINE.

Canaan, in Connecticut, a post-village and township of Litchfield co., 35 m. N.W. by W. of Hartford.

Canaan, in Indiana, a post-village of Jefferson co., 84 m. S.E. of Indianapolis.

Canaan, in Iowa, a township of Henry co.

Canaan, in Maine, a post-village and township of Somerset co., 5 m. E. of Kennebec River, and 35 m. N. by E. of Augusta.

Canaan, in Missouri, a post-village of Gasconade co., 44 m. E.S.E. of Jefferson City.

Canaan, in New Hampshire, a post-township of Grafton co., 52 m. N.W. of Concord.

Ca'naan, in *New York*, a post-township of Columbia co., 24 m. S.E. of Albany.

Canaan, in *Ohio*, a township of Athens co.

—A township of Madison co.

—A township of Morrow co.

—A post-township of Wayne co., 55 m. S.E. of Sandusky City.

Canaan, in *Pennsylvania*, a post-township of Wayne co., 8 m. W. of Honesdale.

Canaan, in *Vermont*, a post-township of Essex co., 110 m. N.E. of Montpelier.

Canaan Centre, in *New York*, a post-village of Columbia co., 26 m. S.E. of Albany.

Canaan Four Corners, in *New York*, a post-village of Columbia co., 25 m. S.E. of Albany.

Canaanites, the descendants of Canaan. Their first habitation was in the land of Canaan, where they multiplied extremely, and by trade and war acquired great riches, and sent out colonies all over the islands and coasts of the Mediterranean. When the measure of their idolatries and abominations was completed, God delivered their country into the hands of the Israelites, who conquered it under Joshua. The following are the principal tribes mentioned in Scriptures:—The CANAANITES proper, who inhabited partly the plains on the W. side of the Jordan, and partly the plains on the coast of the Mediterranean Sea; the HIVITES; the GIRGASITES; the JEBUSITES; the AMORITES; the HITTITES; and the PERIZZITES, *q. v.*

Canannitish, *a.* Relating, or pertaining, to Canaan; as, the *Canannitish* nation.

Canaan Valley, in *Connecticut*, a post-office of Litchfield co.

Canada, (DOMINION OF,) a vast territory of N. America, and one of the most important and prosperous portions of the British empire. The Dominion of *C.* is bounded N. by Baffin's Bay, the Arctic Ocean and the U. S. territory of Alaska; S. by the U. S., the river St. Lawrence, and the grand chain of lakes connecting it with the Lake of the Woods, and thence by the 49th parallel to the Gulf of Georgia; E. by the Atlantic Ocean, and W. by the Pacific Ocean and Alaska. The Dominion of *C.* comprises the provinces of Ontario and Quebec (known previous to the confederation of the British N. A. provinces as Upper and Lower Canada), New Brunswick, Nova Scotia, Prince Edward Island, British Columbia, Manitoba, Assiniboia, Saskatchewan, Athabasca, Alberta, and the N.W. Territories. The four provinces first named were united on the 1st of July, 1867, and formed the nucleus of the already extensive Dominion of *C.* In June, 1870, the whole of the Hudson Bay Company's Territory was transferred to the Dominion of *C.*, out of which were formed the province of Manitoba and the N.W. Territories. On the 1st of July, 1871, British Columbia joined the confederation; and in 1880, such British possessions in N. America other than Newfoundland, as were not in the Dominion, were annexed thereto. The area of the Dominion is 3,456,383 sq. m. The present article is limited to general remarks on the Dominion of *C.*, and a more detailed description of Ontario and Quebec, or *C.* proper, the other portions of the Dominion will be described at considerable length under their respective names as they occur elsewhere in this work.—The area of the province of Ontario is 219,650 sq. m., and that of Quebec is 227,500 square miles.—The Ottawa or Grand river, which has its sources in abt. 48° 30' N. Lat., and 80° W. Lon., and flows in an E.S.E. direction till it unites with the St. Lawrence near Montreal, forms nearly in its whole extent the line of demarcation bet. the 2 provs. Quebec comprising the whole region lying N.E. of the Ottawa, on both sides of the St. Lawrence; while Ontario comprises all the territory lying S. and W. of that river. The latter is entirely an inland prov.; but from its having the great lakes and a part of the St. Lawrence for its boundary, it has a vast command of internal navigation, and a ready access to the ocean.—Desc. The N. portion of both Upper and Lower *C.* consists of a table-land, little of which has been hitherto explored. In Upper Canada, E. of Huron, it has an average elevation of perhaps from 1,200 to 1,300 feet. It is covered with forests interspersed with ravines, swamps, and torrents, and abounds with lakes, which, anywhere but in the neighborhood of the immense lakes of this continent, would be deemed of considerable size. The coast of Lower *C.*, N.E. of the Saguenay, is less lofty than S.W. of that river, but of a very uninviting description. The interior of this part of the country, as described by the Indians and Esquimaux, by whom alone it is traversed, is composed of rocky cliffs and low hills, scattered over barren plains, diversified with thick forests of stunted pines, and checkered with small lakes. The cultivated country N. of Quebec does not extend far, being hemmed in by hill ranges. But as these ranges gradually recede from the St. Lawrence, and the country, at first diversified by varied eminences, sinks into a level plain, the surface of settled and cultivated land increases; and this is especially the case as we approach and penetrate Upper *C.* The peninsula or great plain of this province, between lakes Huron, Erie, and Ontario, comprising about 20,000 square miles, consists, for the most part, of alluvial soil, on a calcareous substratum. It is of varying fertility; but, on the whole, is believed to be the best grain country of any of the more N. portions of the American continent. A large part of this fine plain is still covered with lofty forests; it has, however, some prairies, or primeval meadows; but these are not extensive. At some remote period, it had evidently formed part of the bed of a vast inland sea, of which the five great lakes having been the deepest, are now the principal remaining portions. N. of Lake Ontario, two terraces intervene between the

plain on the shore of the lake, and the table-land in the N., decreasing somewhat in fertility as they increase in height, and separated from each other, and from the plain, by two ranges of hills of moderate elevation. The most S. of these two ranges unites near Lon. 80° with a third, which passes N. and S. from Natasawanga Bay, in Lake Huron, to the W. extremity of Lake Ontario. The combined range, after encircling the head of the latter lake, crosses the bed of the Niagara River, forming the ledge over which are the celebrated falls, and is finally lost in the territory of the U. States. That part of Lower Canada S. of the St. Lawrence, extending between Lon. 72° 30' and 74° 30', and entering into the district of Montreal, consists, for the most part, of an extended plain almost completely flat, except that some detached hills diversify the surface, one of which, that of Ronville, is 1,000 feet in height. It is less extensive than the plain on the opposite shore of the river, and contains no large towns, but it is in many respects equally fertile and well-watered, and the cities are dependent on it for a large proportion of their supplies. To the S. and E. it ascends by degrees into the mountainous region, forming the boundary between the British and U. States territories. The aspect of the S. shore of the estuary of the St. Lawrence, between Lon. 69° 30' and 72°, though bold and hilly, is not mountainous, as on the opposite shore; and the hill ranges are interspersed with valleys, and even plains, of some extent, many of which, from the encouragement afforded by the contiguous markets of the capital, have been brought into very tolerable cultivation. E. of Kamouraska, the country is diversified by some abrupt eminences, while population and culture become more limited; and in the dist. of Gaspé the mountains rise into two chains of considerable elevation, enclosing a lofty plateau. The most southerly of these chains bounds on its S. side, the valley of the Restigouche and St. John rivers.—*Lakes, Rivers, &c.* Besides the great lakes indenting the W. outline of the country, *C.* contains numerous minor, yet still large-sized, bodies of water. In Lower *C.* the lakes and rivers have been estimated to cover 3,200 sq. m. of surface: the principal of the former hitherto discovered are Lake St. John, with an area of 840 sq. m.; those of Manicouagan, Piretibe, and others N. of the St. Lawrence, and Memphremagog, S. of that river. In Upper *C.*, the chief are Nipissing Lake, Temiscaming, and St. Ann's, in the high table-land; and the Simcoe Lake in the upper terrace country of the Home district. Among the rivers falling into the St. Lawrence, or into the lakes which form a part of its system, there are some deserving of special mention whether for their utility as regards navigation, or their agency in fertilizing the soil. In the peninsula of Upper *C.*, the Thames originates in the dist. of London, near Lat. 43° and Lon. 81°, and after a course of about 150 m. chiefly S.W., falls into Lake St. Clair, situate between Lakes Huron and Erie. This river is navigable for large vessels, 15 m. up to Chatham, and intersects and waters a fine, fertile country. Next in magnitude is the Ouse, rising in the Home district, about Lat. 44°, Lon. 80° 10', running generally S.E. and falling into the N.E. extremity of Lake Erie. Parallel to this river for about 50 m., runs the Welland or Chippeway River, which in one part of its course forms a portion of the canal between the Ouse and Lake Ontario, by means of

Fig. 493.—SAGUENAY RIVER.

which the Falls of Niagara are avoided. The Trent, in the Newcastle district, connects with various lakes, and after a tortuous course, discharges itself into the Bay of Quinté in Lake Ontario. The Lake Balsam is separated only by a short portage from that of Simcoe which discharges its waters into Gloucester Bay (Lake Huron) by the Severn River. A short and valuable line of direct water communication between the lakes Huron and Ontario is apparently impeded only by the intervention of this short portage, and by the rapids of the Severn, which river is, however, no more than 20 m. in length. The St. Lawrence, the great lakes, &c., are elsewhere treated of in this work. The Saguenay, (see Fig. 493,) a large and deep river, one of the principal tributaries

of the St. Lawrence, emptying into its estuary 120 m. N.E. of Quebec, is famous for the sublime and almost unique grandeur of its scenery. The Restigouche, which bounds the dist. of Gaspé S., and falls into Chaleur Bay, is the only river of any importance in *C.* not belonging to the St. Lawrence basin.—*Clim.* The climate of *C.* is subject to great extremes of heat and cold; the thermometer ranging between 102° above, and 36° below, the zero of Fahr. In such an extensive region there is, of course, some difference in this respect; as we ascend the St. Lawrence not only a more S. parallel is reached, but the country is less wild and exposed than that near its entrance; so that whilst Quebec has been said to have the summer of Paris, and the winter of St. Petersburg, the great plain of Lake Erie has the climate of Philadelphia. Still, the Canadian climate, as a whole, is very severe; all the streams are, in winter, locked up by ice, and the ground is covered everywhere, to an average depth of 5 or 6 feet by snow, for 4 or 5 months of every year. Frosts usually commence in Oct., whilst the weather, by day, is still mild and serene. But with Nov. begins a succession of snow-storms and tempests from the N. and E., accompanied by a great increase of cold; and this sort of weather usually continues to the 2d or 3d week of Dec., when the atmosphere again becomes serene, but the cold still more intense, so that the rivers become suddenly frozen over. Towards the latter part of April, or, in late seasons, the beginning of May, the ice begins to break up; a sudden increase of temperature stimulates vegetation, and makes its growth almost perceptible to the eye; so that spring and summer can scarcely be recognized as distinct seasons. May and June are occasionally wet, but the summers, in general, are very fine and hot. Thunder-storms are of great violence, and the Aurora Borealis is frequent and vivid. Fogs are of unusual occurrence, except in the dist. of Gaspé, and on the St. Lawrence, where they often seriously obstruct navigation. The length and severity of the Canadian winter is a heavy drawback on the country, and lays the farmer under serious difficulties and privations not experienced in countries where the climate is milder, as in the contiguous States of Indiana and Illinois. For 5 or 6 months almost all agricultural operations are suspended, so that time is not left in the rest of the year for the proper preparation of the ground for the crops, and other necessary labors. Horses, cattle, and other farm stock require a proportionally large supply of fodder for their keep; and to these causes must be ascribed the leanness of the animals, the high price of produce, and the cheapness of labor as compared with the U. States. But there is a material difference between the Lower and the Upper province. In the latter the severity and the length of the winter are materially diminished. The soil too is generally better; and the quality of the wheat improves nearer to the S. limit of the prov.—*Bot. and Veg.* The greater portion of both provs. of the Dominion is covered by extensive forests, principally pine. The silver and American firs, Weymouth and Canadian pines, white cedar, maple, birch, American ash, bass-wood, hickory, and several species of oak, are abundantly found. Of the smaller plants, the *Zizania aquatica* may be noticed as peculiar to *C.*, and abounding in most of the swamps (a grass not unlike rice, and affording food to birds, and occasionally to the Indian tribes), and the Ginseng, and Canadian lily, common to this country and Kamtschatka. Sugar from the maple-tree is manufactured in considerable quantities. The live-oak is well adapted for ship timber; and the various kinds of wood available for no other purpose, serve to supply the pot- and pearl-ash manufactories.—*Prod. C.* may, on the whole, be considered a fertile region; the upper prov. much more so than the lower. Tobacco, hemp, flax, and the different kinds of grain and pulse are successfully cultivated; as are all the commoner fruits and vegetables of the temperate zone.—*Minerals.* Iron, copper, lead, tin, silver, marble, and lithographic stones. *C.* is supposed to be rich in minerals, but its wealth below ground has only been partially explored. Copper and iron ore are at present the chief produce of the mines.—*Trade and Industry.* The manufacturing industry in Canada is unimportant. Timber is the principal article of export; but large quantities of barreled beef, pork, flour, wheat, butter, vegetables, fruit, &c. are also exported. The importations consist chiefly of wines, spirits, molasses, tobacco, tea, coffee, refined sugars, and manufactured goods. The trade of *C.* is chiefly with the U. S. and Great Britain, the greater part of the imports being derived from Great Britain, but the greater part of the exports going to the U. S. In 1895-96 the total value of the exports was \$118,500,000, and that of the imports \$115,000,000.—*People.* The majority of the population of Lower *C.* are of French origin. These French-speaking inhabitants are for the most part descendants of settlers from Normandy, established in the colony previously to 1759. Their number is about 1,415,000. Neither the conquest nor the long period which has since elapsed, has wrought any great change in their character and habits; nor has their increasing numbers induced them to make any considerable encroachments on the wilderness around; on the contrary, they have continued within their original limits, subdividing the land more and more, and submitting to a constantly decreasing ratio of comfort. They are frugal, honest, industrious, and hospitable, but cling with unreasoning tenacity to ancient prejudices and customs; by temperament, cheerful, social, engaging, and (from the highest to the lowest) distinguished for courtesy and real politeness, they retain all the essential characteristics of the French provinces previously to the Revolution, and present the spectacle of an old stationary society, in a new and progressive

world. The inhabitants of the upper prov. consist principally of emigrants from Great Britain, and from Germany and Holland. The native Indians still occupy portions of this colony on Lakes Superior and Huron, and along the whole extent towards the N. boundaries, but the numbers are rapidly diminishing, and they are fast degenerating from their original spirit and character, so that the utter extinction of the race seems inevitable, as civilization advances on the wilderness, to which only they appear to be adapted. The emigration from Ireland is far below what it was some years ago. Many of the emigrants who land in Quebec ultimately settle in the U. S., while a comparatively small number of those who land in New York find their way to C.—*Government.* The legislative authority is vested in a parliament of two houses, the Senate and the House of Commons. The former consists of 81 members nominated for life by the governor, and of the same number elected by the people. The House of Commons comprises 215 members, chosen by as many electoral districts and boroughs—92 from Ontario, 65 from Quebec, 21 from Nova Scotia, 16 from New Brunswick, 6 from British Columbia, 5 from Manitoba, 6 from Prince Edward Island, and 4 from the Northwestern Territories. Members must be possessed of freehold property of the value of not less than \$1,000. Electors in counties and towns respectively must be possessed of the yearly value of \$25 and \$35. The House is elected for 4 years, but may be previously dissolved by the governor, in which case a new election must take place immediately. The executive is vested in a gov. general, styled "Governor-General of the Dominion of Canada," and appointed by the Crown. He has a salary of \$50,000 per annum, and holds authority in the name of the sovereign of Great Britain. The gov. general has the power to give or withhold the royal assent to bills passed by the Senate and House of Assembly, or to reserve the same till the royal pleasure be expressed. Such bills are assented to by the governor, in the name of the Crown, are, nevertheless, subject to disallowance by the sovereign within two years after the receipt of authentic copies by one of the principal secretaries of state in Great Britain; and no bills, reserved for the consideration of the crown, have any force, unless the royal assent be signified within two years.—*Finances.* The revenue of the Dominion for the financial year ending June 30, 1896, was \$35,200,000; expenditures, \$39,724,000. More than one-half of the revenue of C. is obtained from custom duties, and the rest from excise dues and other indirect taxations. On June 30, 1896, the net public debt was \$260,365,000. Public works had cost \$181,717,980.—*Army.* The Imperial Government assumes charge of the naval defense of C. The military establishment consists of (1) a corps of about 2,000 men

Fig. 494.—CITADEL OF QUEBEC.

forming the Imperial garrison at Halifax, and the naval station at Esquimaux on the Pacific, and (2) a militia force consisting of about 35,000 men in active service or 3 years, and of all male inhabitants between the ages of 16 and 60 as a reserve force.—*Rel. and Educ.* There is no State Church. All the religious sects existing in the U. S. are represented in C., but the most important are the Roman Catholic Church, which has about 1,990,460 adherents, and is governed by one archbishop and eight bishops, and the United Church of England and Ireland, governed by five bishops and numbering about 644,100 worshippers. Upper and Lower C. have separate school laws adapted to the religious elements prevailing in either. The chief universities are Toronto, McGill (Montreal), and Laval (Quebec).—*Prim. towns.* In upper C., Toronto, Hamilton, Kingston, Ottawa (cap. of the Dominion), and London. In lower C., Montreal and Quebec.—*Hist.* C. is said to have been discovered by Sebastian Cabot in 1497. Its name is taken from the Indian word *kanata*, which signifies a collection of huts. In 1535, it was taken possession of by Jacques Cartier, in the name of Francis I., and called *Nova France*. In 1542, La Roche of Roberval, at no great distance from Quebec, founded the fort of Charlesbourg; and in 1608, Samuel Champlain laid the foundation of Quebec. In 1617 a French expedition was formed to explore the colony; after which the English

made several attempts between 1689 and 1711, without much success. In 1754 the war between France and England broke out, and continued till between 1759–60, when C. was conquered by the British, and definitely ceded to them by the treaty of Paris in 1763. One of the chief events of this war was the taking of Quebec, in 1759, where the French general, Montcalm, and the British leader, Wolfe, both fell, mortally wounded. During the American war of independence, Canada, in 1775, was invaded, but without success. In 1791 an Act of Parliament divided Canada into two provinces—an Upper and a Lower. In 1812, during the second American war, Upper and Lower Canada were the scenes of frequent combats bet. the British and Americans. In 1837 and 1838 both provinces were shaken by a violent insurrectionary movement, which was finally quelled. The two provinces were again united in 1841. In 1867 took place the formation of the Dominion of C., as already stated.—The admission of Newfoundland into the Dominion is one of the questions of the day, and was an important feature in the manifesto issued, April, 1896, by Sir Charles Tupper, on his assuming his short-lived premiership. The election which ousted his party in July, 1896, marks an epoch in Canadian politics, the Liberals never having been in power but once before since the formation of the confederation in 1867.—*Pop.* (1895) 5,021,046.

Canada, in New Mexico, a vill. a few m. N. of Santa Fé.

Canada Balsam, n. See TURPENTINE.

Canada-rice, n. (Bot.) See ZIZANIA.

Canada-way Creek, in New York, of Chautauqua co., flows into Lake Erie.

Canaden'sis, in Pennsylvania, a post-office of Monroe co., 16 m. N. of Stroudsburg.

Canadera's Lake, in New York, N. of Otsego co., is 4 m. long and $1\frac{1}{2}$ wide.

Canada'nian, n. A native of Canada.

—a. Relating to Canada.

Canadian, or North Channel, one of the two passages into which the strait of the St. Lawrence is divided by the island of Anticosti: it is 30 m. in breadth and contains a number of islands, the most important of which are the Mingan islands.

Canada'nian, in Oklahoma, a S. central co. bordering partially on Indian Territory. Cap. El Reno. *Pop.* (1897) abt. 13,500.

Canadian River, rises in New Mexico, among the mountains of the Guadalupe Range, abt. 200 m. N.N.E. of Santa Fé. The first part of its course for some 100 m. is nearly S., after which it flows in an E. direction through the N. of Texas, and the S. part of Indian Territory, entering the Arkansas River abt. 500 m. from its mouth. Its entire length is abt. 900 m. During the dry season it is a small, shallow stream, but, like other Western rivers, is subject to inundation at the breaking up of winter. Its waters are slightly colored (whence it is sometimes called the "Rio Colorado"), and have a brackish taste.—*Branches.* The North Fork (or Rio Nutria) of the Canadian, rising near 37° N. Lat. and 103° W. Lon., flows nearly parallel with the main stream, which it joins abt. 100 m. W.S.W. of Fort Smith. The Rio Nutria may more properly be regarded as a tributary than as a branch or fork of the Canadian River.

Canada'ice, in New York, a post-township of Ontario co., 218 m. W. of Albany.

Canaille, (ka-nál') n. [Fr.: Sp. *canalla*; from Lat. *canis*, dog.] The rabble; the "great unwashed;" the mob; the riff-raff.—Before the revolution in France, this word was applied by the nobility to all who were not of their own rank; and afterwards the people themselves adopted it in contempt of the aristocracy, when it came to lose its offensive signification. At present, the French apply the term only to such as have been guilty of some base act.

Canajoharie, in New York, a post-village and township of Montgomery co., on Mohawk River, 55 m. W.N.W. of Albany.

Canakin, n. [Dim. of CAN, q. v.] A little can, or cup.

Canal, n. [Fr.: It. *canale*; Ger. *kanal*; Lat. *canalis*, from *canna*, Gr. *kanna*, a hollow reed.] An artificial channel filled with water, formed for the purpose of draining, or irrigating, of supplying towns with water, or of inland navigation. The C. by which the Lago Fucino drains into the river Liri may be cited as an illustration of the first use; of the second, the canals with which ancient Egypt was intersected, and in our own time the C. of Suez; of the third, the artificial aqueducts of antiquity, or in modern times, the New River, by which London is in a great measure supplied by the streams from the head of the river Lea, and the Canal de l'Oure, by which Paris is supplied from the valley of the Marne;—but the term is usually applied to channels made for the purpose of inland navigation, with which our country is more splendidly furnished than any country in Europe, the Netherlands excepted. That the importance of C. as a means of inland navigation attracted attention even in the earliest ages, is manifest from the *Fosse Philistina*, large canals (Pliny, iii. 16), at the mouth of the Eridanus in Liguria, as well as from the grand design of the Cnidians, a people of Caria, in Asia Minor, to dig a channel through the isthmus which joined their territory to the continent. (Herod. ii. 78.) The attempt of the Egyptians to unite the Nile with the Red Sea, and that of the Greeks to make a navigable passage from the Ionian Sea into the Archipelago, have often been mentioned, and though in both cases unsuccessful, still it shows how they recognized their importance. There is no country in the world where the advantages of C. are more appreciated than in China. From time immemorial the rivers that intersect that vast empire have been united by innumerable C.; and the Grand Canal is said to be

the most stupendous work of the kind that has ever yet been executed. Russia, too, despite all the innumerable difficulties peculiar to that country, is traversed by an unbroken line of water communication from St. Petersburg to the Caspian Sea. In the Netherlands, the construction of C. commenced in the 12th century, and to them may be attributed the present prosperity of Holland. France, too, has from a distant period exercised the skill of her engineers in the construction of C. for inland navigation. The first was the canal of Briare, which opens a communication between the Loire and the Seine, and thence between Paris and the western provinces; but the greatest engineering work of this kind ever attempted in that country is the canal of Languedoc, which connects the Mediterranean with the Atlantic, and allows vessels of 100 tons burden to pass along its entire length. It is nearly 150 m. long, with upwards of 100 locks. In the U. States, the earliest constructed were the South Hadley and the Montague canals, both undertaken by a company chartered in Massachusetts in 1792. Many long C. have been made in U. S., for example, the Erie C., 363 m. long, completed in 1825; the Chesapeake and Ohio, 185 m., completed in 1850; the Wabash and Erie, 374 m., completed in 1853; the Ohio canal, 332 m., and the Miami and Erie, 291 m. locks, all of stone masonry, were originally 90 ft. long in the clear, and 15 ft. wide, but recently they have been greatly enlarged. Since the introduction of railroads, the C. have lost a great deal of their importance. They are nevertheless still used for transportation of heavy freights, and may be of much service for regular irrigation of dry lands. (Continued in SECTION II.)

(Anat.) A term applied to many parts of the human body. *Canalis arteriosus* is a blood-vessel in the fetus, which unites the pulmonary artery and the aorta, but which disappears after birth. *Canalis venosus*, a C. which, in the fetus, conveys the blood from the vena porta of the liver to the ascending vena cava. *Canalis nasalis*, a C. going from the internal canthus of the eye downwards into the nose. The *alimentary C.* extends from the mouth to the anus.

Canal of the Larmier. (Arch.) The channel recessed upwards on the soffit, for preventing the rain-water from reaching the lower part of the cornice.

Canal of the Volute. (Arch.) The face, in the Ionic capital, of the circumsolutions enclosed by a listel.

Canal, in Indiana, a post-office of Warwick co.

Canal, in Pennsylvania, a post-village and township of Venango county, on French Creek, 8 miles N.W. of Franklin.

Canal-boat, n. A barge or boat used on canals.

Canal-coal, n. See CANNEL-COAL.

Canal Dover, in Ohio, a flourishing village and township of Tuscarawas co.—See DOVER.

Canale, (ka-na'la') a town of N. Italy, in Piedmont, 10 m. from Alba; *pop.* 4,065.

Canale, ANTONIO, commonly called **Canaletto**, CANALETTI, or IL TONTO, a celebrated Italian painter, b. at Venice, 1697. For some years he labored at scenic painting, and then proceeded to Rome. He is said to have used the camera-obscura to obtain his accuracy of outline. On the advice of Amiconi, Canaletto proceeded to England and remained there 2 years. His paintings are eminently favorites of the collectors, for there is hardly a gallery but possesses two, if not more, examples of this master. Still, his paintings do not reach much beyond the higher class of scene-painting. There is poetry in the subjects, but little in the master. He painted one uniform sunshine. In fine, he thought less of his art than of its emoluments: so from an artist he gradually degenerated into a mechanic. Among his higher paintings may be mentioned the drawing of the inside of King's College Chapel, Cambridge, England, distinguished by its perspective accuracy and lightness of color. D. 1768.

Canal Fulton, in Ohio, a town of Lawrence township, Stark co., 125 m. N. E. of Columbus. *Pop.* abt. 1,400.

Canal Gulch, in Idaho, a mining place of Shoshone co. Here are "placer" gold mines.

Canaliculate, Canaliculated, a. [Lat. *canaliculus*, channelled.] (Bot.) Channelled; having a groove, pipe, or canal.

Canalis, n. [Lat.] (Arch.) A water-pipe or gutter; it is used in architecture for any channel, such as the flutings of columns; the channel between the volutes of an Ionic column.

Canalization, n. A system of canals. (R.)

Canal Lewisville, in Ohio, a P. O. of Coshocton co.

Canal Port, in Illinois, a village of Cook co., 4 m. S.W. of Chicago.

Canal Winchester, in Ohio, a post-village of Violet township, Franklin co., 16 m. N.E. of Columbus; *pop.* about 550.

Canandaigua, (kán-an-däg'-wa), in Michigan, a village of Oakland co., 38 m. N. by W. of Detroit.

—A post-village of Lenawee co., 14 m. S.W. of Adrian.

Canandaigua, in New York, a thriving manuf. town, capital of Ontario county, on a lake of same name, 29 miles S. E. of the city of Rochester, and 230 miles W. by N. of Albany. Lat. 42° 54' N., Lon. 77° 17' W. *Pop.* (1897) abt. 7,200.

Canandaigua Lake, in New York, W. central part, length 15 m., breadth, varying from $\frac{3}{4}$ to $1\frac{1}{2}$ m.; surface about 437 feet above Lake Ontario. Its outlet flows into Mud Creek at Lyons, to form Clyde River, a tributary of Seneca River.

Cananore, (kan'a-nor), a maritime town of Hindostan, prov. Malabar, 45 m. N.W. of Calicut, and 66 S.E. of Mangalore; Lat. 11° 42' N., Lon. 75° 27' E. It trades with Bengal, Arabia, Sumatra, and Surat, from which it imports horses, piece goods, almonds, sugar, opium,

silk, benzoin and camphor. Its exports are chiefly pepper, cardamoms, sandal-wood, corn and shark-fins. It is the capital of the *talookdarate* of Cherichal, a lotty and uneven tract, extending for two miles inland from the fort, and some years since containing, together with the town, about 11,000 inhabitants. Its territory is now subordinate to the British, but has long been governed by a succession of *Ranees*, or female sovereigns, whose authority has extended over most of the Laccadive islands. *C.* is the head military station of the British in the province of Malabar.

Canar, in S. America, a small town of Ecuador, 150 m. from Quito, celebrated for its numerous ruins, and for a palace of the Incas, in an extraordinary state of preservation.

Canara, a maritime dist. of Hindostan, prov. Madras, comprising the ancient countries of Tulava and Haiga, with small portions of Malabar and the Hindoo Kanakana. It lies chiefly between Lat. 12° and 15° N., and Lon. 74° and 76° E.; having N. Goa and Dharwar (Beja-poor), E. the latter prov. and Mysore; S. Goorg and Malabar and W. the ocean; length, N. to S., 230 m.; average breadth about 35 m.; area, 7,477 sq. m. The province is bounded by the W. Ghauts, but includes a portion of the country above them, called *Carnata*, of which the name of this district is a corruption most improperly applied. —*Surface*. Generally rugged and uneven, but heavily wooded. The Mangalore is the chief river. —*Soil and Climate*. Similar to those of Malabar. —*Prod.* Teak and other large timber, sissoo, bamboo, the varnish tree of Burmah, nux vomica, catechu, cassia, sandal-wood, nutmegs, mangoes, &c. *C.* is the granary of rice for Arabia, Goa, Bombay and Malabar; and both the climate and soil, especially in the valleys, are highly adapted for its culture. Many different tribes inhabit *C.* The Jains are more numerous here than in any other part of India, and many ancient Jain temples exist in tolerable perfection. There are about 50,000 Roman Catholics in *C.*, mostly descendants of the Portuguese, Dutch, French and Danish colonists. —*Manuf.* Sugar and salt. —*Exports*. Rice, betel, black pepper, coconuts and oil, and raw silk. —*Imp.* Cloths, cottons, blankets, tobacco, black cattle, &c. *Chief Towns*. Mangalore, Barcelore and Calliampore, all in the S. —*Pop.* perhaps 1,000,000. —Tulava was governed by its own princes till A. D. 782; from that year till 866 it was subject to the rajahs of Bijnagar and afterwards to the princes of Ikeri. It escaped the Mohammedan conquests till 1765–66, when Hyler Ali invaded and conquered it, after which it suffered all the horrors of anarchy, till the death of Tippoo, in 1799, when it passed into the hands of the British.

Canard (*ka-nürd'*). [Fr. a duck; hence, humorously, a piece of news of no more real import than the quacking of a duck; cf. Eng. CACKLE.] A fabricated story or statement, of a sensational character; a fictitious newspaper report.

"A silly canard circulated . . . about England having joined France and Russia," &c.—*London Eng. Standard*.

Canard-er, *v. n.* [Fr.] (*Mil.*) To fire under cover, or from a place of safety.

Canaries. See CANARY ISLANDS.

Canaris, CONSTANTINE, a Greek patriot, b. in the island of Ipsara, abt. 1790. At the outbreak of the war of independence he was captain of a merchant vessel. In June, 1822, shortly after the barbarous devastation of the island of Scio by the Turks, he conducted to the harbor of that island two fire-ships manned by Ipsariotes and Hydriotes and succeeded in attaching them to the vessels of the Capudan Pasha and Capudan Bey, of which the former, illuminated at the time in celebration of the Ramadan, was blown up with hundreds of men. This deed was followed in the same year by a similar exploit in the harbor of Tenedos, which saved the Greek fleet from destruction, and filled the Turks with terror. On Aug. 17, 1824, he revenged the Turkish cruelties in his native island by a new victory at Samos. In 1848–49 he was minister of the navy, again in 1854; resigned May, 1855. In 1858 he sent back all his orders and commissions, resolved henceforth to be only a private citizen. In 1862 he returned to public life and was made prime minister. Died at Athens, Sept., 1877.

Canarium, *n.* [Malay, *Canari*.] (*Bot.*) A genus of plants, order *Ameyllaceæ*. The species are natives of the Spice Islands and parts of Asia. *C. commune* is cultivated for the sake of the kernels of its fruit and for the fragrant resinous substance which exudes from its bark. The latter probably constitutes the Manilla Elemi of commerce. *C. microcarpum* yields an oil very like copaiba, known in ship-building yards as Damar. Other species produce edible fruits, useful oils and resins.

Canarsie, New York, a post-office of Kings co.

Canary (*ka-nä'ry*), *n.* (*Music*.) A lively dance-tune, in three-eighth time, that came at first from the Canary Islands. It was introduced by Purcell in his *Diocletian*, but is now long obsolete.

—*a.* Of, or belonging to, the Canary Islands.

—A canary-bird (*q. v.*)

—Of a light yellowish color.

Canary-bird, *n.* [Fr. *serin* de Canarie; Ger. *der Canarienvogel*; It. *canario*.] The *Carduelis canaria*, or *Fringilla canaria* of Linnaeus, a well-known songster, which may be found caged in every house where the inmates are fond of song-birds. It is a native of the Canary Islands, but naturalized in Europe and in the United States. The color of the wild *C.* is a dusky gray; whereas in the domesticated *C.* we have a great variety of colors—green, yellow, white, brown, gray, &c. This is, of course, owing to the numerous cross-breeds this species has been subjected to. It breeds freely with several other species: the gold-finch, the bull-finch, the siskin, the green-bird, and the linnet,

among the number. Altogether, it is reckoned that there are no less than thirty varieties of the *C.* The best authority on the subject says:—"Those *C.* that have the upper part of the body of a dusky green or linnet-brown, and the under part of the yellowish-green of the green-bird, with dark-brown eyes, are the strongest, and most nearly resemble the primitive race. The yellow and the white have often red eyes, and are the most tender. The chestnut are the most uncommon, and hold a middle rank for strength and length of life between the two extremes. The *C.* that is most admired among us now is one with the body white or yellow; the head (particularly if crested), wings, and tail, yellowish-dun. The second in degree is of a golden yellow, with the head, neck, wings, and tail black, or, at least, dusky gray. Next follow the gray or blackish, with a yellow head and collar, and the yellow, with a blackish or green tuft, both of which are very much valued. As for those that are irregularly spotted, speckled, or variegated, they are much less sought after, and are used to pair with those of one color,—white, yellow, gray, brown-gray, and the like." (Bechstein's *Cage-Birds*.) In its native home, the *C.* builds its nest in thick, bushy, high shrubs and trees, with roots, moss, feathers, hair, &c.; pairs in February, lays from four to six pale-blue eggs, and hatches five, and often six times in the season. Bechstein gives the following directions for getting and keeping good *C.*:—"The most essential is to choose from among the young that which promises a fine tone, and to seclude it from all other birds, that it may learn and remember nothing bad. The same precaution is necessary during the first and second moulting; for, being likely to re-learn, if I may say so, its song, it would introduce into it, with equal ease, foreign parts. It must be observed whether the bird likes to sing alone or in company with others; for there are some which appear to have such whims, liking to hear only themselves, and watch out for whole years if they are not humored on this point. Others sing faintly, and display their powers only when they can try their strength against a rival. It is very important to distribute regularly to singing-birds the simple allowance of fresh food which is intended for the day. By this means they will sing every day equally; because they will eat uniformly, and not pick the best one day, and be obliged to put up with the refuse the next. About two spoonfuls of dry food is sufficient for the daily nourishment of a *C.*"

Canary-grass, *n.* (*Bot.*) See PHALARIS.

Canary Islands, or CANARIES, (believed to be the *Fortunate Insule* of the ancients,) a group in the N. Atlantic ocean, belonging to Spain, between 27° 40' and 29° 40' N. Lat., and 13° 32' and 18° 20' W. Lon., 135 m. N.W. of Cape Bojador on the W. coast of Africa, and 650 m. S.W. of Cadiz. This group consists of 7 principal islands, viz., Arecife, Guia, La Laguna, Orotava, Les Palmas, Santa Cruz de la Palma, and Santa Cruz de Tenerife, also called Gomez y Hierro. The total area of the 7 islands embraces 3,256 sq. m. English geographers often describe Arecife under the name of *Lanzarote*, Guia, under the name of *Canary*, and Gomera y Hierro, as *Ferro*. Adjoining these chief isles, and included in the Canaries, are the small islands of Gracioso, Clara, and Allegranza. They are called the *Little Canaries*, are situated to the N.W. of Lanzarote, and connected with that island by a bank, on which there is, for the most part, 40 fathoms water. Lanzarote is the most easterly, Allegranza the most northerly, and Hierro, or Ferro, the most southerly and westerly of the

Fig. 495. — PEAK OF TENERIFFE.

group. This last-mentioned island has acquired considerable celebrity, from its having been selected by the early modern geographers as the point where they placed the first meridians, or from which they began to reckon the longitude. In some countries this method is still kept up, but the English and French adopt for their first meridians those passing through the observatories of Greenwich and Paris. The most W. part of Ferro, La Dabessa, is 18° 9' 45" W. of the meridian of Greenwich, and 20° 30' W. of that of Paris.—*Desc.* These islands are all of volcanic origin, very mountainous, their coasts precipitous, and the channels between them very

deep. The greatest elevation is the Peak of Tenerife, 11,400 ft. above sea-level. In all the islands there are plentiful traces of extinct volcanoes; in Lanzarote still continues active. The *C.* have no rivers, but they are watered in certain seasons by heavy mountain torrents. There are few roadsteads, and no close harbors, the bay of Palmas offering, perhaps, the best to be found.—*Clim.* Hot, but healthy.—*Soil and Prod.* The soil is very fertile, producing grains and fruits, of both the torrid and temperate zones, in abundance. *G.* (or Canary) and Tenerife are the best watered, and most fertile and finest cultivated of the group. The latter island yields a good growth of wines. Much brandy is distilled and exported. Among the other chief exports are silk, honey, wax, and cochineal. Cattle and ponies have been introduced from Europe. The Canary-bird is still found in these islands. The fisheries are on a large scale and employ an important quota of the population. *Manf.* Coarse woollens, silks, and linens. *Prin. towns*. Santa Cruz, in Tenerife, and Las Palmas, in Canary, the chief commercial ports. The islands are governed by the Spanish laws, under a governor-general who resides at Santa Cruz. The military force is composed of 25,000 men.—The *C.* were first discovered in 1330, and 1400 the French took possession of them. The conquest of the whole of the islands was afterwards effected by Spain before the end of the 15th century. *Pop.* 239,800.

Canary-seed, *n.* The seed of the canary-grass, used as food for birds.

Canary Wine, *n.* A wine made in the Canary Islands and also known by the name of *Teneriffe*. In taste resembles Madeira; it is made from grapes which have been gathered before they are ripe, and, when new, a sour and unpleasant taste. After being kept carefully for two or three years, its mildness increases greatly, and, like Madeira, it is greatly improved by journey to the tropics. More of it is produced on the island of Tenerife than on the other Canary Islands. The name of Canary is only applied to the Bidogue wine, and never to the Malvoisie, or Malmsey, of the Canary Islands.

Canary-wood, *n.* A sound, light, orange-colored wood (*Persea Indica*), brought from S. America in the name of Madeira mahogany, and used for cabinet work, turnery, &c.

Canasana, in Tennessee, a post-village of Polk co., 170 m. E.S.E. of Nashville.

Canasera, *n.* in New York, a post-village of Allegany co., 12 m. N. by W. of Hornellsville. *Pop.* abt. 700.

—A village of Madison co., 210 m. W. of Albany.

Canastota, in New York, a post-village of Lewis township, Madison co., 22 m. W. of Utica, on the N. York Central R.R., and terminus of the Cazenovia and Canastota R.R.

Canaster, *n.* [Sp. *canasta*, a basket.] A kind of tobacco used for smoking, and prepared from the dried leaves of the plant coarsely triturated;—named from sort of rush basket in which it is usually packed in America.

Canborough, in Ontario a post-village of Hamilton co., 35 m. S.E. of Hamilton.

Can-buoy, (*kan'boi*) *n.* (*Naut.*) A large, float conical buoy.

Cancale, a sea-port of France, dep. Ile-et-Vilaine, cant., 9 m. E. of St. Malo, and 45 N. of Rennes, on W. side of St. Michael's Bay. It has a good anchor and has a considerable trade in the excellent oysters which are found in the bay. *Pop.* 7,000.

Can-can, *n.* [Fr.] A name given to the French cotillon dance with poses and movements of a suggestive to modesty and delicacy. It originated in 1825 the *bals de la chaumière*, with the students and the settes of Paris, and gradually made its way, though with many protests, to the public stage.

Cancel, (*kan'sel*), *v. a.* [Fr. *canceller*; Lat. *cancelum* make like a lattice; from *cancelli*, a lattice, dim. *cancer*, a lattice.] Originally, to make cross-bars or tice-work; to cross the lines of a writing, and delete them; to obliterate; to blot out; to expunge; as *cancel* a signature.

"I pass the bills, my lords, for cancelling your debts." *South*

—To annul; to destroy; as, to *cancel* an obligation.

"I here forget all former griefs, Cancel all grudges." —*Shaks.*

(*Printing*.) To suppress, or replace by other print matter; as, to *cancel* a leaf.

—*n.* (*Printing*.) The suppression or reprinting of a certain portion of a work. —A leaf to cut away by bookbinders, and another reprinted leaf substitute part of a sheet, usually indicated by a *, †, ‡, &c., in signature.

Canceller, (*kan-se-leer'*) *v. i.* (*Sport.*) In falconry to turn in flight;—spoken of a hawk.

"He makes his stoop, but . . . is forced to *canceller*." —*Mass*

—*n.* The turn of a hawk to recover herself, when on wing, having missed her aim in the stoop.

"The fierce and eager hawks . . . make sundry *cancellers*." *Drayt*

Cancellarian, *a.* Pertaining to a chancellor canceller-ship. (*R.*)

Cancellariate, *a.* Relating, or belonging to canceller-ship. (*R.*)

Cancellaria, *n.* [Lat. *cancellatus*, cross-barred.] (*Z.*) A genus of molluscous animals belonging to the *mostomata* of De Blainville. There are many species most of which are found in the Indian, African, and American seas. The shell is characterized as ovate-turreted; spire generally short, slightly elevated, pointed; mouth oval, having either a very short canal or a notch only; the outer lip marked within by transverse ridges; inner lip spread over part of the lip-whorl, terminating in a straight, thick, obtuse

nella, with several irregular plaits. The shells are rare, but not remarkable, and are usually rough to the touch, and striped.

cellate, *n.* (*Bot.*) Applied to leaves consisting entirely of veins, without connecting parenchyma, so that the whole leaf looks like a plate of open net-work. Instances of this kind occur in *Ouvirandra fenestralis*, the lattice-leaf plant, but they are extremely rare.

cellated, *a.* Cross-barred; marked with lines crossing each other.

(*Anat.*) Formed of cancelli; as, the "cancellated structure of bones."

cancellation, *n.* The act of crossing out a writing, the manual operation of tearing or destroying a written instrument. — (*Math.*) The act of striking out common factors, in both dividend and divisor.

celli, *n. pl.* [*Lat.*, pl. of *cancellus*, dim. of *cancer*, a crab or lattice.] Among the Romans, the term for iron gratings and trellis-work. In modern buildings, atticed windows made with cross-bars of wood, iron, &c.

(*Anat.*) The spongy, honey-combed appearance observed in all bones between their external and internal plates.

cellous, *a.* (*Anat.*) Cellular.

cancer, (*kan'ser*), *n.* [*Lat.* *cancer*; *A. S.* *cancere*; formed from *Gr.* *karkinos*, a crab; *Sansk.* *karka*, a crab.] (*Zoöl.*) A genus of decapodous short-tailed crustaceæ, family *Decapoda*. (See *BRACHYURA*.) Linnaeus arranged all the crustaceæ belonging to the *Decapoda* *Brachyura*, under the general name of cancer. Recent zoologists have restricted the genus within narrow limits, so as to contain only a few species. The common large edible crab, *C. pagurus* (Fig. 493), is the best known of these, though even this is removed by some to a separate genus, *Platycarcinus*. The carapace is large, rounded in front, narrow posteriorly, and the dorsal surface is granulated. Its color is reddish-brown, but the hands and claws are smooth and black. Of all the short-tailed crustaceæ, the crab is the most esteemed as an article of food, and the fishery constitutes an important trade on many parts of the coast. Their food consists of dead animal matter. The females are impregnated almost immediately after shedding their shell. The spawn is carried by them for a considerable time, and deposited at intervals during the spring and summer. When the young are first hatched, they are very unlike the parent, and were till lately considered as a distinct genus, and described under the name of *Zoea*. Several species of *Zoea* have been enumerated, which are either the young of different species of *C.* or only different stages of growth of these young crabs.

(*Astron.*) The crab, the fourth sign of the Zodiac which the sun enters on June 21st, when he reaches his greatest northern declination, the first point of which is 90° distant from the first point of Aries, and is called the *Summer Solstice*. The parallel circle through this point is called the *Tropic of Cancer*. The zodiac contains 83 stars, of which one of the 3d magnitude, *Acubens*.

(*Med.*) A peculiarly malignant and dangerous disease, so called because the ancients believed that the yellow and discolored veins and lines leading from the seat of the disease bore some resemblance to the crab, but professionally known as *carcinoma*. *C.*, to use the popular name, is divided into two forms or stages — *scirrhus*, or *concreted*, and *ulcerated*, or open cancer: the first being the primary stage, when the disease consists merely of a hard, painful tumor or swelling; the second, that advanced condition when the skin, having become involved, is in a state of open ulceration, discharging from its ulcerous mass a thin, irritating, and fetid discharge. Of all the diseases that fall to the care of the surgeon, cancer is the most distressing to witness, and most hopeless to attend, for all parts of the body are liable to its inroads; though the organs most frequently attacked are the breasts of females, the glands generally, the womb, lips, tongue, eyes, nose, tonsils, and the skin. The lower lip in men, and the mammae in women, are, however, the parts most frequently invaded by the disease. — Cancer seldom occurs under twenty-five years of age, the most general period for its attack being from fifty to sixty. A peculiarity of this disease is, that the younger the patient when attacked, the more rapid is the progress of the disease. Thus, in youth, cancer will frequently run its career in a few weeks, while in age it will continue in a state of torpidity for years. The tumor at first is small, hard, indolent, and nearly insensible, with little or no discoloration of the surrounding skin. It remains in this state for a longer or shorter period, but at length it passes into a more active condition; — the tumor increases in size, the skin changes to a livid or red appearance, and pain begins to be felt in it. The pain, which is of a shooting or lancinating nature, is at first slight, and occurs at considerable intervals; but it increases by

degrees, and the intervals diminish until it becomes almost constant. The cutaneous veins become turgid, and the surface of the tumor presents to the feel a knotty, uneven surface. Sometimes the skin never actually breaks, but usually, after a longer or shorter period, the tumor ulcerates and becomes an open sore. The discharge is of a thin, fetid, acrid nature, which corrodes the surrounding parts. The sore presents thick jagged edges and a soft centre, eaten, as it were, into irregular cells. The shooting pains are now much increased, and are of a very violent nature. The disease pursues its onward course; sometimes it seems as if it had exhausted itself, and was allowing nature to work a cure by the formation of new flesh; but this is merely a delusion, for it soon recommences its destructive course, and at length, it may be after years, it seizes upon some vital organ, or the patient sinks exhausted by the pain and continued drain upon his system. Of the cause, nature, or treatment of this terrible disease little is, unfortunately, known. By some it is regarded as constitutional, by others as local; some maintain that it is hereditary, others that it may be transmitted by inoculation. So far as may be judged from the conflicting evidence on these points, there does seem, in general, to be a certain constitutional predisposition to this disease. The evidence is against its being transmitted by inoculation. If *C.* be at any period merely a local disease, it can only be in its earliest stage, for in a short time the whole system seems to be infected with it; and hence it is that after a time the extirpation of the original tumor so often fails in effecting a complete cure. Though *C.* is, unfortunately, by no means uncommon, it is not all, nor even the majority of tumors that bear a general resemblance to it, that are cancerous; in fact, it is often with the greatest difficulty that the cancerous or non-cancerous nature of a tumor can be determined; the presumption always is, in the case of a tumor getting well, that it was not *C.*; hence the great importance, in every suspicious case, of having recourse to a skillful surgeon. The only hope of a cure in *C.* is by extirpating the tumor in its earliest stages; and even this, after all, frequently affords but a temporary relief. According to Mr. Paget (*Lectures on Surgical Pathology*), the average duration of life after the appearance of *C.* is 49 months. In 49 cases, in which the *C.* was once removed by operation, the average duration of life was somewhat more than 49 months; and hence he concludes that the average duration of life is not materially affected by the removal of the local disease, but adds, that it is probable that the progress of the more rapid cases is retarded by the operation. Sometimes, in place of the knife, escharotics, as chloride of zinc, are had recourse to, but with no better success. Though a cure may not be expected, much good may be effected by means of palliatives; the patient is to be sustained by good nourishing diet, but all stimulants are to be avoided, and everything that would tend to increase the activity of the disease. The state of the general health is to be carefully attended to, and both mind and body kept as free from excitement as possible. In the local treatment of this disease, sedatives, as hemlock, henbane, and opium, are to be had recourse to in order to allay the pain. Among the lower animals this disease is not of infrequent occurrence, the animals most liable to its attack being the dog and cat.

Can'cerate, *v. i.* [*Lat.* *cancerare*.] To become cancerous; to grow into a cancer.

"But striking his fist upon the point of a nail in the wall, his hand cancerated." — *L'Estrange*.

Cancer'ation, *n.* A growing cancerous, or into a cancer.

Can'cerite, *n.* (*Pal.*) A petrified crab.

Can'cerous, *a.* [*Fr.* *cancéreux*.] Like a cancer; having the qualities of a cancer.

Can'cerously, *adv.* In the manner of a cancer.

Can'cerousness, *n.* The state of being cancerous.

Can'cer-root, *n.* (*Bot.*) See *EPIPHEGUS*.

Canche, (*kansh*), a river of France, dep. Pas-de-Calais. It rises near E-trées, and, after a course of 50 m., falls into the British Channel.

Can'ceriform, *a.* [*Lat.* *cancer*, and *forma*, shape.] Having the form of, or resembling, a crab. — Cancerous; in the form of a cancer.

Can'cerine, *a.* Having the qualities of a crab.

Can'cerinite, *n.* (*Min.*) A silicate of alumina and soda with carbonate of lime; remarkable as an instance of a silicate containing carbonic acid as a constituent element. It occurs in the Ural Mountains and other places, both massive and in crystals.

Canceroid, (*kan'kroid*), *a.* [*Lat.* *cancer*, and *Gr.* *eidōs*, form.] (*Zoöl.*) Resembling, or relating to, a crab (*cancer*). (*Med.*) That which assumes a cancerous appearance.

Candora, *n.* (*Zoöl.*) See *BOAT-BILL*.

Candace, (*kān-dai'se*), a name borne by the warrior queens of Ethiopia, in the later period of the kingdom of Meroë. The most distinguished of these in history invaded Egypt 22 B. C., but was defeated by the Romans, and compelled to sue to Augustus for peace. This she obtained, with a remission of the tribute imposed on her by Petronius, one of the generals of the Roman army. Another *C.*, probably the successor of the preceding, had her high treasurer converted to Christianity by the preaching of Philip the Evangelist (*Acts* viii. 27).

Can'dahar, a fortified city of Cabul, in a plain near the Urgundaub River, 200 m. S.W. of Cabul, and 260 E.S.E. of Herat; Lat. 32° 30' N., Lon. 66° 15' E. (See Fig. 44.) The city is regularly built, most of the streets meeting at right angles; its houses are generally of brick, and often with no other cement but mud. Four long and broad bazaars meet in the centre of the city, in a small circular space about 45 yards in diameter, and

covered with a dome, where proclamations are made, and the bodies of criminals exposed. The bazaars are lived with well-supplied shops, and there are many caravanseras and mosques, the principal building of the latter kind being the tomb of Ahmed Shah, formerly an inviolable sanctuary. A great variety of trades are carried on, and the streets are filled with a noisy and bustling crowd from morning till night; but unlike most Afghan cities, there are here no water-sellers, the want being well supplied by canals from the Urgundaub, whence subterranean or open water-courses are carried to the different streets, and there are, also, numerous wells. The vicinity of *C.* is fertile, and abounds with gardens and orchards, producing the finest fruits and vegetables, especially pomegranates. The climate is mild and healthy. — Persian traditions and the conjectures of European geographers agree in assigning the foundation of *C.* to Alexander the Great. The present city was built in 1754, by Ahmed Shah, who made it the cap. of his dominions, — an honor which his successor Timour transferred to Cabul. Pop. estimated at 50,000, the major portion of which are Afghans.

Can'daules, a king of Lydia, put to death by his favorite, Gyges, at the instigation of the queen. Gyges subsequently slew her also, and assumed the crown, 718 B. C.

Candeish', a *soubah* or prov. of the Deccan, in Hindostan, between Lat. 20° and 22° N., and Lon 73° and 77° E.; having N. Malwah, E. Gundwana, S. Berar and Aurangabad, and W. Gujerat; length E. to W., about 210 m.; average breadth, 80 m. It is penetrated by the three mountain ranges of the Sautpoora on the N.; the Chandore on the S.; and the Sydaaree or W. Ghants, in its S.W. parts. The Tuptee and Nerbudda rivers drain this prov. Soil, generally fertile, producing grain, cotton, and indigo. The hilly ranges are inhabited by Bheels, a small refractory, thieving set of people, who pretend to be Hindoos of the Brahmin and Rajpoot castes. This prov. is comprised within the several territories of the Guicowar, Scindia, the Nizam, and the British govt. Prin. towns. Boorhanpoor, Aseerghur, and Gaulna.

CANDEISH, an inland *zillah* or dist. of the above prov. pres. Bomhay, between Lat. 20° and 21° 42' N., and Lon. 73° 37' and 76° 22' E.; length, E. to W., about 180 m.; greatest breadth 115 m. Area, 12,527 sq. m. This dist. is nearly covered with jungle, and agriculture only partially prevails. Schools are established under the British govt., and the Moslems remain the most ignorant of the inhabitants. Pop. 475,500.

Candela'brum, *n.* [*Lat.* *pl.* CANDELA'BRA: Eng. *pl.* CANDELA'BRUMS. [*Lat.* from *candela*, candle.] The Latin name for the stand, or support, on which a lamp was placed. Candelabra varied in form, and were highly decorated with the stems and leaves of plants, parts of animals, flowers, and the like. There was no article of furniture in which the ancients displayed more taste and elegance than in candelabra. The etymology of the word would seem to assimilate the *C.* to our candlestick; it is, however, quite certain that the meaning of the word *candela* was nothing more than that of a lamp, and that the *candelabrum* was a support, more or less heavy in construction, upon which the lamp was placed, or whose top was hollowed out for the reception of oil, or some other combustible. Generally speaking, there were 2 species of candelabra: those which ended upwards in the form of a brazier, so nearly approaching the form of a portable altar as to be almost confounded with it; and those which possessed accessories and ornaments of the same character as those before described, but much higher in relief, and of marble. The first species must be classed with the tripod, and there seem to be reasons for believing that it was used only in temples and in small chapels. They were frequently sculptured in triezes, usually accompanied by genii and instruments of sacrifice. In the tabernacle of the temple of Jerusalem the golden *candlestick*, or, more properly, Candelabrum, stood on the left hand of one entering the Holy Place, opposite the table of show-bread. It consisted of a pedestal; an upright shaft; six arms, three on one side, and three on the opposite side of the shaft; and seven lamps surrounding the shaft and arms. The arms were adorned with three kinds of carved ornaments, called *cups*, *globes*, and *blossoms*. Its lamps were supplied with pure olive oil, and lighted every evening. In the first temple there were ten candelabra of pure gold, half of them standing on the north, and half on the south side, within the Holy Place. In the second temple there was but one, resembling that of the tabernacle. This was

Fig. 497.

SMALL ROMAN CANDELABRUM.
(British Museum.)

carried to Rome, on the destruction of Jerusalem; it was lodged in Vespasian's temple to Peace, and copied on the triumphal arch of Titus, where its mutilated image is yet to be seen. (See visions of the candlestick by Zechariah and John, *Zeck.* iv. 2-12; *Rev.* i. 12-20.) — The modern *C.* exhibit as much variety in the form of the vase, or brazier, which it is their principal business to support, as in the body and base of the support itself. Sometimes they are capricious to excess, the contrivance and design of the foliage being such as to display more skill than propriety of taste. Others there are, however, which are exquisite models of form, taste, ornament, and execution. The word is also commonly applied to a chandelier, or candlestick with ornamental branches.

Candelaro, (*kan-dai-la-ro*), a river of Naples, prov. Capitanata. It rises in Mount Liburno, and after receiving the Triolo, Salsola, and Celone, during a course of 40 m., it falls into the Adriatic Sea.

Can'dent, *a.* [Lat. *candens*.] Hot to the highest degree; of a white heat; glowing with intense heat.

Canderos, *n.* A kind of resin brought from the E. Indies, from which small ornaments are sometimes made.

Candesceence, *n.* See INCANDESCENCE.

Can'di, in the island of Ceylon. See CANDY.

Can'dia, (Island of.) See CRETE.

Can'dia, (or MEGALO-KASTRON), a fortified maritime city, cap. of Crete, in the Mediterranean, on the N. shore of that island, near its centre, 34 m. W. of Spinalonga, and 64 E.S.E. of Canea; Lat. 35° 21' N., Lon. 24° 8' 15" E. The city derives its name from the word *khandah*, signifying an intrenchment in the language of the Saracens, by whom it was built. The present fortifications are of Venetian construction; they are massive, bastioned, and furnished with outworks. The port is formed by two moles, which, bending towards each other, project about 250 yards into the sea. It is at present so choked up by sand that a vessel drawing more than 8 ft. water cannot enter. The town is generally well built. The principal streets are wide, roughly paved, but clean, furnished with fountains, and adorned with clumps of trees. *P.p.* about 11,000. — For history, see CRETE.

Candia, in *N. Hampshire*, a post-township of Rockingham co., 15 m. S.E. of Concord.

Can'did, *a.* [Lat. *candidus*, from *candeo*, to shine, from *caneo*, to be gray or hoary; Sansk. *can*, to shine.] Fair; frank; open; dispassionate; ingenuous; as, a *candid* man.

—Fair; just; impartial; sincere; as, a *candid* statement.

Can'didaey, *n.* Candidatship; position of being a candidate.

Candidate, *n.* [Lat. *candidatus*, pl. *candidati*; from *candidus*, white; from the white toga, or dress with white marks, worn in ancient Rome by those who sought offices or preferments.] One who proposes himself, or is proposed, for some office, station, or honor.—One who aspires after preferment, distinction, or some high attainment.—It is followed by *for* when it relates to the office or station; as, "a candidate for the Presidency,"—and by *of* when it relates to the class of persons who propose him, or of whom the support is solicited; as, "a candidate of the Republican party."

—One who by meritorious actions or services is justly deserving of distinction or reward; as, a *candidate* for university honors.

"Art thou, fond youth, a candidate for praise?"—Pope.

Can'didateship, *n.* The state of being a candidate; candidacy.

Can'didature, *n.* State of one who is brought out, or put forward, as a candidate: candidatship.

Can'didly, *adv.* In a candid manner; without trick or disguise; fairly; frankly.

Can'didness, *n.* Candor; ingenuousness; openness of mind; frankness.

"It presently observes the candidness of a man's very principles." South.

Candied, (*kan'did*), *p. a.* [See CANDY.] Preserved or incrustated with sugar; as, *candied* fruit.

"Let the candied tongue lick absurd pomp."—Shaks.

—Converted into sugar; gradually formed into sugar; as, *candied* rock.

Can'dify, *v. i.* [Lat. *candificare*.] To make white; to whiten. (*R.*)

Can'diot, *Can'diote*, *n.* (*Geog.*) A native or inhabitant of the island of Crete, or Candia.

Can'dite, *n.* (*Min.*) A kind of pleonaste (*Spinel*) in which part of the magnesia is replaced by protoxide of iron. It is found in the rivers and alluvial district near Candy. Whence the name *Candite*, in Ceylon.

Canditeer, *n.* (*Fortif.*) A frame covered with fagots and brush-wood, used for the protection of workmen at fortifications.

Candle, (*kan'dl*), *n.* [A.S. *candel*; Lat. *candela*, from *candeo*, to shine; W. *canwyll*; Pers. *kandeel*; Fr. *candle*; Sp. and It. *candela*.] A torch; a taper; a light; a cylindrical body of wax, tallow, &c., surrounding a wick, and used for giving light; as, a sperm *candle*.

"Here burns my candle out, ay, here it dies."—Shaks.

To hold a candle to. A metaphorical phrase, implying an inferior degree of comparison.

"Others aver that he to Handel
Is scarcely fit to hold a candle."—Byron.

Excommunication by bell, book, and candle. See EXCOMMUNICATION.—To sell by the candle. To sell at auction by the light of an inch, or so, of candle, bids being only permitted until the candle burns itself out.—*Rush-candle*. A long, thin candle with a wick of rushes.

(*Hist.*) The time at which *C.* were first used has not been ascertained. There are several instances of candles being mentioned in the Old and New Testaments; but the context proves in most cases that the Hebrew should

be translated *lamp*, and not *candle*. For example, the seven-branched candlestick is ordered to have seven lamps made for it, and Aaron is directed to use olive-oil as the fuel thereof. Torches are mentioned in various ancient writings, and from them, no doubt, candles were gradually developed. Pliny, however, describes a candle made of brittle rushes, which clearly corresponds to our modern rush-light. In the later days of the Romans, wax candles were much used by the upper classes. In the Middle Ages, candles of the same material were made, weighing as much as 50 lbs.; and the Britons and Anglo-Saxons used ornamented tapers in their processions. The use made of candles by King Alfred for horological purposes is too well known to need further allusion. Good old Gilbert White of Selborne describes rush-lights as being made and used by the cottagers in his time. The manufacture of *C.* progressed but little until the beginning of the present century, when candle-making attained rapidly its actual perfection.

(*Manuf.*) *C.* are made of either wax, spermaceti, stearine, or tallow, or some compound or modification of these; but of whatever they may be made, they are formed either by dipping or casting, and hence the names, *dips* and *moulds*. When dips are to be made, a quantity of wicks of spun cotton are prepared by a machine, and doubled so as to form a loop at the top, through which a stick is passed. A number of wicks are arranged in a line on each stick, and several sticks placed side by side on a frame, which is attached to one end of a balance-beam (called by the workmen the "horse's head"), with weights at the other end, according to the weight of the candles to be made. The frame, with the wicks upon it, is suspended over a cistern of melted tallow (kept warm by a small fire or flue), into which it is lowered, so that the wicks dip into the tallow; this is repeated two or three times, till a coating of tallow is formed on the wicks, which are then placed aside to cool, while others are served in the same way, and so on over and over again, till each frame weighs enough to exactly counterpoise the weight at the other end of the beam. Mould candles are made by pouring melted tallow into a wooden trough, in the bottom of which pewter moulds of the size of the candles required are fixed in such a way that they open into the troughs by the ends, which correspond to the bottoms of the candles to be cast in them. The other end of the mould is brought to a point, with a small hole in it, through which the wick is passed and fastened to a stick running along the moulds; and as the moulds are placed in two lines, two sticks are sufficient for the trough. Melted tallow, or spermaceti, is poured into the trough, and when cold, the superfluous quantity is removed, and the candles drawn out of the moulds. *Wax candles* are made by pouring melted wax down the wick till sufficient has adhered to it, then rolling the candle on a marble slab till it is even, and afterwards polishing with a cloth. A tallow *C.* should be half sheep's and half bullock's tallow, for hog's tallow always gives an offensive smell. The *C.* moulding-machine, is the result of several inventions, and has superseded the old methods.

Can'dleberry-tree, *n.* (*Bot.*) See MYRTLE.

Candle-bomb, (*kan'dl-bum*), *n.* A small glass bubble filled with water, which, if placed in the wick of a candle, bursts by the expansion of the steam into which the water is converted.

Can'dle-coal, *n.* See CANNEL-COAL.

Can'dle-holder, *n.* One who holds a candle for another;—hence, by implication, one whose assistance to another is of small importance.

"For I am proverb'd with a grandsire phrase
To be a candle-holder, and look on."—Shaks.

Can'dle-light, *n.* The light emitted by a candle.

"Before the day was done, her work she sped,
And never went by candle-light to bed."—Dryden.

—The quantity of candles required for use during a certain time.

"I shall find him coal and candle-light."—Molineux.

Can'dlemas, *n.* [*Candle* and *mass*; A.S. *masse*, candle-feast.] (*Ecl. Hist.*) In the Roman Catholic Church, a festival held on the 2d of February to commemorate the Purification of the Virgin. The name probably arose from the number of lighted candles used in the processions of the day; or, perhaps, from a custom of consecrating candles on that day for the rest of the year.

Can'dle-mine, *n.* A mass or mine of tallow, or other fatty matter.

Can'dle-stick, *n.* [A.S. *candel-sticca*.] Originally, a stick to hold a candle. In a modern sense, an instrument or utensil of metal (both precious and vulgar) applied to the same purpose.—See CANDELABRUM.

Can'dle-stuff, *n.* Any fatty substance of which candles may be made, as tallow, wax, grease, &c.

"By the help of oil, wax, and other candle-stuff."—Bacon.

Can'dle-waster, *n.* One who wastes or consumes an undue quantity of candles by sitting up late, whether for study or dissipation.

"Patch grief with proverb, make misfortune drunk with candle-wasters."—Shaks.

Can'dock, *n.* A weed growing in rivers.

"Water-lilies, candocks, reate, and bulrushes."—Walton.

Can'dolle, AUGUSTIN PYRAMUS DE, an illustrious Swiss botanist, b. at Geneva, 1778. Having finished his studies at Paris, he soon attracted the notice of Cuvier and Lamarck, whom he aided in various scientific researches; and in 1808 was appointed to the chair of botany at Montpellier. Obligated to quit France for having taken office under Napoleon during the Hundred Days, he found refuge in his native city, where a chair of natural history was expressly instituted for him, and where he continued, for many years, to extend the boundaries of

his favorite science by his lectures and publication. His chief works are, a *Théorie Élémentaire de Botanique Regni Vegetabilis Systema Naturale*; *L'Organographie et la Physiologie Végétales*, &c.; in all of which he seeks to enforce what is called the "natural arrangement," now generally adopted. D. 1841.

Can'dor, **Can'dour**, (*kan'dèr*), *n.* [Lat. *candor*, from *candeo*. See CANDID.] Fairness; frankness; sincerity; openness of heart; ingenuousness of mind.

"He should have so much of a natural candour and sweetness . . . as might convey knowledge with a sort of gentle insinuation."—Watts.

Can'dor, in *Pennsylvania*, a post-village of Washington co., 20 m. W. of Pittsburgh.

Can'droy, *n.* (*Mach.*) A machine used in cotton-printing.

Can'dy, *v. a.* [It. *candire*; Pers. *kandi*, sugar; Sansk. *khand*.] To conserve or dress with sugar; to boil in sugar; as, to *candy* fruits.

"With *candy'd* plantains, and the juicy pine,
On choicest melons and sweet grapes they dine."—Waller.

—To form into congealed or crystallized masses; as, to *candy* sugar.

—To incrust or cover with crystals or congelations.
"Since when those frosts that winter brings
Which *candy* every green."—Drayton.

—*v. i.* To take on the form of candied sugar; as, jam *candies* by keeping.

—To be formed into congealed crystals, as *candy*.

Can'dy, *n.* [Fr. *candi*; It. *candito*.] (*Confectionery*) A name applied to ordinary sugar when procured in large crystals by the long-continued boiling and slow cooling of a concentrated solution of sugar; a conserve of sugar; a sweetmeat.

(*Comm.*) In the E. Indies, a weight of twenty *maunds* or 243 imperial bushels.

Can'dy, an inland town of Ceylon, at the head of an extensive valley, in Lat. 7° 17' N., and Lon. 80° 36' E. about 1,400 feet above sea-level, 80 m. E.N.E. of Colombo and 95 S.W. of Trincomalee. It is surrounded by wooded hills and mountains, varying from 200 to 2,000 feet in height, and stands on the border of an artificial lake, but its situation, though beautiful and romantic, is insecure. At a distance of 3 m. it is nearly surrounded by the Mahavilly Ganga, here navigable only for small boats. Temples are very numerous, and considered almost indispensable appendages to the houses of the opulent; in the greater number, lights are constant kept burning; and in one of them the celebrated tooth said to have been Buddha's, is kept! *C.*, better known as *Kandy*, was taken by the British in 1815. P. 1895, 20,250.

Can'dy-tuft, *n.* (*Bot.*) See IBERIS.

Cane, (*kān*), *n.* [Lat. *canna*; Gr. *kanna*; Heb. *kane*, from root *kāna*, to set upright; Fr. *canne*; Sp. *caña*.] (*Bot.*) A name commonly applied to any small smooth stick, but more correctly limited to the stem of a small palm or large grass.—See BAMBUSA, CALAMUS; see also SUGAR-CANE.

—A reed, or slender pipe of wood, used as a walking-stick.
"Sir Plume, of amber snuff-box justly vain,
And the nice conduct of a clouded cane."—Pope.

—A lance; a dart made of cane.

"The flying skirmish of the darted cane."—Dryden.

—A measure of length. The French cane is obsolete. In Naples, it measures 7 feet 3 inches and a half.

—*v. a.* To beat with a cane, or walking-stick; as, to *caned* a scoundrel.

"He was caned by a brutal tutor."—Macaulay.

—To furnish with cane, &c.; as, to *caned* a chair's bottom.
Cane, or **Ken**, a river rising in Bundeledund, Hindostan near Lat. 23° 54' N., and Lon. 80° 13' E., and, after N.N.E. course of 230 m., entering the Jumna in Lat. 24° 47' N., and Lon. 80° 35' E. It is too rapid and rugged for navigation, and is remarkable for the matchless beauty of its pebbles.

Cane'a, or **Khan'a**, a fortified sea-port of the island of Crete, on the N. coast, 65 m. W.N.W. of Candia, Lat. 28° 28' N., Lon. 24° 2' E., on the site of the ancient *Cydon*. It is a neat town, the buildings being almost all Venetian. Its harbor is the best in the island; it has a light house, and is defended by a fort. *Manf.* Chiefly sees *Pop.* 8,000, of whom about two-thirds are Mohammedan.
Canea'dea, in *New York*, a post-township of Albany co., 10 m. N. W. of Angelica, intersected by the Genesee river.

Cane'-brake, *n.* (*Bot.*) A term applied to the extensive growths of the *Arundinaria Macrospora*, the most gigantic of the grasses which occur in the southern portions of the U. States, where the plant often reaches the height of 15 and 18 feet. The *Arundinaria macrospora* is closely allied to the *Bambusa arundinacea*.—See BAMBUSA.

Cane Creek, in *Alabama*, of Benton co., flowing into Coosa River.

Cane Creek, in *Arkansas*, a post-office of Conway co.

Cane Creek, in *Illinois*, a village of Gallatin co., m. N.N.W. of Shawneetown.

Cane Creek, in *Missouri*, falls into Big Black River 3 m. from N. boundary of Arkansas.

Cane Creek, in *Missouri*, a small post-village of Butler co.

Cane Creek, in *North Carolina*, a post-office of A. maure county.

Caned, *a.* Made white, or filled with white matter; said of vinegar.

Cane Hill, in *Arkansas*, a township of Washington county.

Cane Hill, in *Missouri*, a post-office of Cedar co.

Cane'-hole, *n.* A hole made in the ground for planting cuttings of the sugar-cane.

anella, (*kā-nūllā*), *n.* (*Bot.*) A genus of plants, ord. *Candaceae*. The inner bark of *C. alba* forms the *Canela* of the apothecaries. The tree is common in many parts of S. America and in the W. India islands, where it is often called Wild Cinnamon. The bark is removed with an iron instrument, and, after being deprived of the epidermis, it is dried in the shade. It is seen in flat or quilled pieces, of a light buff color, and, from having been contoured with Winter's bark (see *DRIMYS*), it is sometimes called spurious Winter's bark. Being an excellent aromatic, stimulant, and tonic, it is frequently used in medicine, and also as a spice. Distilled with water, it yields a reddish-yellow, fragrant, and very acrid essential oil, which is often mixed with, and sometimes sold as, oil of cloves.

anella'ceæ, *n. pl.* (*Bot.*) An order of plants, alliance *Berberales*. This order has but two genera: *Canela* and *Cinnamodendron*. Its characters are almost identical with those of the *OLACACEÆ*, *q. v.*

an'emah, or **Causemah**, in Oregon, a village of Clackamas co., on the Willamette River, 2 m. above Oregon City.

ane'-mill, *n.* A sugar-mill; a mill for grinding sugar-canes.

aneph'oræ, *n.* [*Gr. kanēphoroi*, basket-bearers.] (*Arch.*) A term applied to figures of young persons of either sex, bearing on their heads baskets containing the materials of sacrifice. They are frequently confounded with *Caryatides*, from their resemblance in respect of attitude, and in the modern abuse of their application. — See *CARYATIDES*.

ane Point, in Georgia, a village of Tronp co., 36 m. N. of Columbus.

anes'cent, *a.* [*Lat. canescens*.] Growing white, or approaching to a white color.

ane Spring Depot, in Kentucky, a post-office of Bullitt co.

anes Venat'ici, *n. pl.* [*Lat.*] (*Astron.*) The Greyhounds. One of the constellations formed by Hevelius in the N. hemisphere. It is represented on the celestial globes and charts by the figures of two dogs, which are also distinguished by the names of *Asterion* and *Chara*.

anes'ville, in Indiana, a S.E. village of Grant co., 60 m. N.E. of Indianapolis.

añete, a seaport town of Peru, cap. of a prov. of its own name, dep. of Lima; *pop.* of prov., 20,000.

ane'-trash, *n.* Refuse, or macerated, sugar-canes.

ane Valley, in Kentucky, a post-office of Adair co.

ane'ville, in Louisiana, a post-office of Jackson co.

aney, in Arkansas, a post-office of Nevada county.

aney, in Texas, a post-office of Matagorda county.

aney Bayou, (*kā'ne bi'oo*), in Texas, a small stream entering the Gulf of Mexico at the head of Matagorda Bay.

aney Branch, in Tennessee, a post-office of Green co.

aney Branch, in Tennessee, a village of Greene co.

aney Creek, in Kentucky, a village of Morgan co.

aney Creek, in Tennessee, a village of Greene co.

aney Creek, in Texas, flowing through Montgomery co., into the San Jacinto River.

aney Fork, in Tennessee, a tributary of Cumberland river. It rises among the Cumberland Mountains, and flowing in a N.W. direction a distance of 125 m., empties itself into the above river at Carthage, Smith co.

aney Spring, in Tennessee, a P. O. of Marshall co.

aneyville, in Kentucky, a post-village in Grayson co., 110 m. S.W. of Frankfort.

an'field, in Illinois, a village of Cook co., 12 m. N.W. of Chicago.

an'field, in Minnesota, a post-village of Fillmore co., 16 m. S.W. of Preston.

an'field, in Ohio, a post-township in Mahoning co., 17 m. S. by E. of Warren.

A post-village, cap. of Mahoning co., 60 m. S.E. of Cleveland, and 64 m. N.W. of Pittsburg; it is situated in a rich and undulating country, in which stone-coal and iron ore are abundant.

an'field, in Pennsylvania, a village of Bradford co., on the Susquehanna River, 4 m. E. of Towanda.

ang, Canque, (*kānk*), *n.* An instrument of punishment in China. See *KEA*.

angal'lo, a town of Peru, on one of the branches of the Apurimac, cap. of Cuzallo province, which has a *pop.* of 22,000.

angas de O'nis, a town of Spain, in the Asturias, 45 m. E.S.E. of Oviedo; *pop.* 6,720.

an'-hooks, *n. pl.* (*Naut.*) Ropes with flat hooks at each end, used for hoisting barrels or light casks.

anicat'ti, a town of Italy, in Sicily, prov. Girgenti, 5 m. E.N.E. of Girgenti city, on the Naro; *pop.* 20,112.

anic'ula, *n.* (*Astron.*) The Dog-star, a name of *SIRIUS*, *q. v.*

anicular, *a.* [*Lat. canicularis*.] Pertaining to, or measured by, the Dog-star.

anicular Days, *n. pl.* See *DOG-DAYS*.

anicular Year, *n.* (*Chron.*) The ancient solar year of the Egyptians; so called because its commencement was determined by the heliacal rising of the Dog-star. The Egyptians chose this star for their observations, either on account of its superior brightness, or because its heliacal rising corresponded with the annual overflow of the Nile. At a very early period of history the Egyptians had perceived that the solar year contains 365 1/4 days, for their common years consisted of 365 days, and every fourth year of 366, as in the Julian calendar.

anic'ule, *n.* [*Lat. canicula*.] The Dog-star; figuratively, the *DOG-DAYS*, *q. v.*

an'idæ, *CANIDA*, *n. pl.* [*Lat. canis*, a dog.] (*Zoöl.*) The Dog family, comprising digitigrade carnivora without retractile claws and with all the feet apparently four-toed; the forward ones, however, with a rudimen-

tary thumb high up. This family is divided into the two genera *CANIS* and *VULPES*, *q. v.*

Canigou, (*kān't-goo*), a mountain in France, and one of the culminating points of the Pyrenees, 125 m. from Perpignan. Height 9,157 feet.

Canine, *a.* [*Fr.*; *Lat. caninus*, from *canis*, a dog.] Having the properties or qualities of a dog; having a resemblance to the structure of a dog.

Canine appetite. A disease (among the old doctors), where the patient was said to have an insatiable hunger, which, like that of a dog or wolf, could never be appeased. — **Canine teeth**. The dog- or eye-teeth. Four teeth, two situated in each jaw, and one on each side of the four incisors. In man, though extremely useful, these teeth are, in a measure, only rudimentary, while in the dog and lower animals they are fully developed, and known as the *fangs*. The canine teeth are now generally called the *cuspidati*, or teeth with one point. For the function and growth of this set of teeth, see *TEETH*. — **Canine letter**. The letter R, *q. v.*

Can'ing, *n.* A beating with a stick or cane.

Can'no, (*PRINCE OF*) See *BONAPARTE*, (*LUCIEN*).

Ca'nis, *n.* [*pl. CANES*.] [*Lat.*] (*Zoöl.*) A genus of the *Canidæ*, including the dog, wolf, and jackal. Its principal characters are, six incisors and two canines in each jaw, six molars on each side of the upper jaw, and seven molars on each side of the lower jaw, making in all forty-two teeth, of which there are twenty in the upper, and twenty-two in the lower jaw. The first three molars in the upper, and the first four molars in the lower jaw, are trenchant, and pointing or lacerating teeth; the succeeding molar in the upper jaw is very large, with two sharp cutting points towards the outer edge, and a small tubercle on the inner side interiorly; the others are smaller, and all furnished with tubercles. The first of these tuberculate molars in the upper jaw is very large. In all the wild varieties of the species of *Canis* the muzzle is elongated, and the ears are carried erect; the tongue is unprovided with cuticular spines: the fore-feet have five toes, the hind-feet four only; both are armed with non-retractile claws; the cæcum is cylindrical, and coiled upon itself; the anal glands are of moderate size; the coitus is prolonged. The dog (*Canis familiaris*, Linn.) is distinguished from the wolf and jackal by his recurved tail; but the varieties, as to size, form, color, and quality of the hair, are almost infinite. The dog is the most complete, singular, and valuable conquest ever made by man over the brute creation: each individual is devoted to his particular master, assumes his manners, knows and defends his property, and remains attached to him till death, and all this neither from constraint nor want, but solely from the purest gratitude and truest friendship. The swiftness, strength, and scent of the dog have rendered him man's powerful ally against all other animals, and have perhaps mainly contributed to the establishment of society. Some naturalists think the dog is a reclaimed wolf, and others that he is a domesticated jackal; nevertheless, dogs that come again to the wild state, revert neither into the one nor the other species. The wild dogs, and those that belong to savages, as the *dingo*, resemble, it is true, the wolf in the shape of the head, their straight pricked ears, rough and thick hair, long bushy tail, and lounging gait; moreover, they never bark, but utter a sharp cry or long melancholy howl, like the jackal and wolf; yet they are plainly distinct from both. The Esquimaux dogs present the first traces of a deviation from the wild type; the figure of the legs is more determined, and their pace bolder and more rapid: still they manifest their near relationship to the wolf in their sharp nose, pricked ears, and inability to bark. The Esquimaux and the people of Kamtschatka use these dogs as beasts of draught: six or seven dogs will draw a sledge laden with eight or ten hundred-weight at the rate of seven or eight miles an hour, and will easily, under these circumstances, perform a journey of fifty or sixty miles a day, when the snow is hard and smooth, and the road level. — The Newfoundland dog may be regarded as the next removed from the Esquimaux variety. These fine and sagacious animals are employed in their native island to draw sledges and carts laden with wood and fish, and to render many other useful services performed elsewhere by the horse. The readiness with which the Newfoundland dog takes the water, his aptitude to fetch and carry, and his powerful and active swimming, have been the means of preserving the lives of many human beings. Another variety of dog nearly allied to the Newfoundland breed, and belonging to the same subdivision (*Aricularius*, Linn., or *Spaniel* tribe), has been trained by the benevolent monks of the convent situated near the top of the mountain of Great St. Bernard, to hunt out and extricate such unfortunate travellers as may have been buried under the snow-drifts or avalanches, while attempting the neighboring dangerous pass between Switzerland and Savoy. In Europe, the shepherd's dog offers the example of one of the purest races of the domesticated animal, and that which, in its straight ears, its hair and tail, approaches nearest to the original stock. The shepherd's dog, though outwardly resembling in many points the "dingo," possesses a greater cerebral development, which continues to increase together with intelligence in the spaniel and barbet. Guided by the form of the cranium, we should associate the spaniel and its immediate varieties with the shepherd's dog, the wolf dog, the Newfoundland and Mount St. Bernard dog, and the Esquimaux dogs, in one family (*Sagaces*). A comparison of the crania indicates a closer affinity of the "dingo" with the family *Pugnaces*, including the mastiff and Danish dog, than with the *Sagaces*. After the pugnacious mastiff and its varieties, as the bull-dog, remarkable for the shortness and strength of

its jaws, come the hound, the pointer, and the terrier, in the order of cerebral development. The varieties of this family (*Venantes*) differ between themselves chiefly in the size and proportions of the limbs: the greyhound is longer and more lank, its frontal sinuses are smaller, and its scent weaker. — The bandy-legged turnspits, and

Fig. 498. — ENGLISH SPANIEL.

the small pet dogs, as the pugs, poodles, Italian greyhounds, King Charles' breed, &c., are the most degenerated productions of the genus, and exhibit the most striking instances of that power to which man subjects all nature. — With some exceptions, among this latter anomalous group, all the domestic varieties of the genus *Canis* are easily and naturally referable to one or other of the three great tribes above mentioned, of which the mastiff, the hound, and the spaniel may be regarded as the several types, and which we have named *Pugnaces*, *Venantes*, and *Sagaces*, from their prominent attitude respectively for the combat, the chase, and those more varied and complicated services which seem to demand for their fulfilment a greater amount of intelligence in our canine auxiliaries. In all the varieties of the dog, the following circumstances in his economy are constant: — He is born with his eyes closed; he opens them on the tenth or twelfth day; his teeth commence changing in the fourth month; and his full growth is attained at the expiration of the second year. The period of gestation is sixty-three days, and from six to twelve pups are produced at a birth. The dog is old at fifteen years, and seldom lives beyond twenty.

Canis Major, *n.* [*Lat.*, the greater dog.] (*Astron.*) A constellation of the southern hemisphere, below the feet of Orion. It contains *SIRIUS*, the brightest of all the stars, and its place may be found by means of this star, which is on the continuation of the line through the belt of Orion. It contains 31 stars. See *SIRIUS*.

Canis Minor, *n.* [*Lat.*, the lesser dog.] (*Astron.*) A constellation situated about 5° N. of the Equinoctial, and midway between Canis Major and Gemini. *PROCYON*, of the first magnitude, is its principal star, and lies in a direct line between *SIRIUS* and *POLLUX*: so that the position of the constellation may be found by means of this star. It contains 14 stars.

Canis'nia, in Louisiana, a small lake about 4 m. S.W. of Red River.

Can'isteo, in New York, a post-village and township of Steuben co., 37 m. W.N.W. of Corning, and 328 m. from New York City.

Canisteo River, in New York, rises in Alleghany co., and falls into the Tioga River in Steuben co.

Can'ister, in Minnesota, a township of Dodge county.

Can'ister, *n.* [*Lat. canistra*, -trum, from *canna*, a cane.] A small basket made of split canes or reeds; a wicker-basket; a small box or case for tea, coffee, &c.

Canister-shot, *n.* See *CASE-SHOT*.

Can'ker, *n.* [*A. S. cancre*; *Lat. cancre*; *Fr. chancre*.] Anything that gnaws, corrodes, devours, or destroys.

(*Med.*) This term, though now seldom used in medicine, formerly implied an eating, spreading sore, or ulcer, occurring more particularly in the month, whence it was called *cancreum oris* — a gangrenous form of scrofulous ulcer, dependent on a diseased state of the system, the result of unwholesome or insufficient food, and, like thrush, or *aphtha* of the tongue and gums, rather the symptom or consequence of disease than a disease itself, and as such, only to be cured by constitutional means, and a strict attention to diet and regimen. Sometimes, however, canker of the month assumes a malignant character: the gum becomes involved in the mischief, the teeth fall out, a thin fetid discharge takes place, the cheek suffers, in time, with an excessive flow of saliva, and a gangrenous ulcer harasses the patient both by night and day.

(*Farriery.*) A disease which appears in the feet of horses, and in the ears of dogs. In the horse it is produced very often by damp and dirt, but in some cases it is constitutional. Ulceration takes place between the outer casing of horn and the tender part of the foot which the horn protects. It is attended with considerable inflammation, the horn becomes detached in parts, and proud flesh is formed. The portions of horn that are separating from the foot should be removed, and the sore dressed at first with a caustic preparation to stop the growth of proud flesh, and afterwards with Friar's Balsam. Until a cure is effected, the foot should be protected with tow, which should be changed daily. Care should be taken to keep the foot clean and dry. In dogs, inflammation of the ear produces ulceration and the formation of proud flesh in the interior of that organ. Bathing with warm water will often check the disease; and if this will not do, Goulard's Lotion should be applied, to which a little alum may be subsequently added to heal the ulcer. In some cases, the disease appears at the edge of the flap of the ear, when means must be taken to prevent the dog from irritating the sore by scratching, and it must be dressed with an ointment in which a fair proportion of alum has been mixed.

(*Hort.*) A disease in trees, which attacks the young shoots and branches first of all, and at last appears in the trunk. If not cured, or its progress prevented by cutting back the tree, that it may throw out new branches, it will gradually destroy it in the course of a few years. It is produced by accidental injury to the branches, or by superabundant moisture about the roots, that a stiff sub-soil will not allow to drain away.

Can'ker, v. a. To eat, corrode, corrupt, or consume.

"A tithe purlin'd cankers the whole estate."—*Herbert.*

—To infect; to pollute.

"An estate cankered with the acquisitions of rapine."—*Addison.*

—v. n. To grow corrupt; to decay by corrosion.

"Or what the cross, dire-looking planet smite,
Or hurtful worm with canker'd venom bite."—*Milton.*

Can'ker-bit, a. Bitten with an envenomed tooth.

"By treason's tooth bare-gnawn and canker-bit."—*Shaks.*

Can'ker-bloom, Can'ker-blossom, n. The flower, or blossom of the *Dog-rose*.

Can'kered, p. a. Of a venomous or malignant temper; envenomed; crabbed; cankered.

Can'keredly, adv. Crossly; adversely.

Can'kerous, a. Corroding like a canker.

Can'ker-worm, n. (*Zoöl.*) See *GEOMETRIDÆ*.

Can'kery, a. Rusty; cankered.

Can'ner, n. (*Kentucky*), a post-office of Hart co.

Can'na, n. (*Zoöl.*) An antelope of S. Africa (*Antelopa oreus*), called also Eland. It attains the weight of 800 to 1,000 lbs., and has horns very long and straight, with a spiral ridge.

(*Bot.*) A genus of plants, order *Marantaceæ*, or Arrow-root family. One or more species growing in the W. Indies yield *tous-les-mois*, a very pure and useful starch, now largely consumed. The exact species from which this is obtained cannot be definitely ascertained; but it is probable that the three known respectively as *C. edulis*, *C. glauca*, and *C. archiras*, furnish the supply. The rhizome called *African turmeric*, from its resemblance in appearance and properties to ordinary commercial turmeric, is said to be the produce of *C. speciosa*. The seeds of *C. indica* are commonly called *Indian shot*, on account of their black color and peculiar hardness.

Cannabina'ceæ, HEMP-WORTS, n. pl. (*Bot.*) An order of plants, alliance *Urticales*.—*DIAG.* Solitary suspended ovule, and hooked exalbuminous embryo, with a superior radicle. They are rough herbs with a watery juice, having the following structural characters:—Leaves alternate, lobed, stipulate; flowers small, unisexual, dioecious, the males in racemes or panicles; calyx scaly, imbricated; stamens 5, opposite the sepals, with thread-like filaments, the females in spikes or strobiles, each flower with one sepal surrounding the ovary; fruit indehiscent; seed without albumen. There are only two genera—*Cannabis* and *Humulus*, the Hemp and the Hop, and each consists of but one species. They are natives of the temperate parts of Europe and Asia.

Can'nabis, n. [*Lat.* and *Gr.*, hemp.] (*Bot.*) A genus of plants, order *Cannabina'ceæ*. The only species is *C. sativa*, the HEMP, *q. v.*

Can'næ, CANNE, a village of S. Italy, prov. Cosenza, near the Ofanto (anc. *Aufidas*), 8 m. W.S.W. of Barletta. The village is near the site of the ancient city of Cannæ famous for the decisive victory gained in its vicinity by Hannibal over the Romans, 217 B.C. The scene of action is marked out to posterity by the name of *Campo di Sangue*, "field of blood," and spears, lance-heads, and other relics of armor still continue to be turned up by the plough. *Pop.* 4,670.—See HANNIBAL.

Cannanee' Creek, in Georgia, flows into the Ocmulgee River in Irwin co.

Can'nel-coal, CANAL-COAL, CANDLE-COAL, BRANCH-COAL, PARROT-COAL, n. A variety of bituminous coal, which differs from the purer kinds of ordinary coal, and jet, in containing extraneous earthy matters, which render it specifically heavier than water. It varies much in appearance, but is generally of a brown or black color, with a dull earthy to a brilliant waxy lustre. It is very dense and compact, and not easily frangible, breaking with an uneven or largely conchoidal fracture, and does not soil the fingers. When burning, it splits and crackles, without melting, and leaves 3 or 4 per cent. of ash. Being hard enough to take a polish, it is sometimes made into ornamental articles like jet; but its principal value is as a gas-coal. The name is a provincial pronunciation of the word *candle*, which has been applied to it in consequence of the bright flame with which it

burns, or because the poor people of some places in the colliery districts of England sometimes use it instead of candles. It is called *Parrot-coal* in Scotland, from the way in which it crackles or chatters in the fire.

Can'nelton, in Indiana, a prosperous post-town of Perry co., on the Ohio River, 120 m. below Louisville, Kentucky. Extensive beds of coal are found; also, sandstone and fire-clay.

Can'nelton, in W. Virginia, a P. O. of Kanawha co.

Can'nelures, n. pl. [*Fr.*] (*Gun.*) Circular grooves cut in the cylindrical part of a cylindro-conoidal shot.

Can'nequin, n. (Com.) A white cotton cloth brought from the E. Indies.

Cannes, (kahn), a port and bathing resort of France, on the Mediterranean, dep. Var, cap. cant., 25 m. E. of Draguignan. Its port is only open to fishing-vessels and similar small craft. Napoleon I. landed in the neighborhood of this place, March 1st, 1815, on his return from Elba.

Can'nibal, n. [Supposed to be a corruption of *cari-bales*, a name given by Columbus to the *Caribs*, the original inhabitants of the W. India islands, who were reputed to be man-eaters.] One who eats human flesh. See CANNIBALISM.

—a. Relating to cannibalism.

Can'nibalism, n. The act or practice of eating human flesh by mankind; anthropophagy.

(*Hist.*) In the *Odyssey* of Homer we have the story of Polyphemus devouring human flesh; and in Herodotus, the Massagetæ (i. 216) are said to eat their aged parents. The Padæi of India (*Herod.* iii. 99) were in the habit of killing and eating their relations when they fell ill; a story which some would reject with as little show of reason as others would believe it. Modern facts, the truth of which is put beyond all doubt, confirm the statements of Herodotus. Among the ancient Tupis of Brazil, when the Pajé (chief) despaired of a sick man's recovery, he was by his advice put to death and devoured. Herodotus (iv. 26) also says that among the Issedones, when a man's father dies, his relations come and help to eat the dead man, whose flesh they render more palatable by mixing it with that of some animal. In the Middle Ages, these stories of *C.* were wonderfully enlarged, and people who had not yet embraced Christianity were pretty generally set down as anthropophagi. When the Lombards invaded Italy at the end of the 6th century, it was reported of them that they ate human flesh; and a century later the same aspersions were cast on the Slavonian tribes. It became the fashion to bandy the accusation between enemies; thus, during the Crusades, the Saracens said the Christians ate human flesh, as well as the unclean flesh of swine; while the Christians on their side maintained that the Saracens ate men, women, and children, and were particularly fond of a sucking Christian babe torn from the breast of its mother. The giants and ogres of our nursery tales are only the Saracens of the Holy Wars seen through the magnifying-glasses of tradition and romance. It does not much surprise us that in those rude ages men should try to fix a revolting practice on their sworn foes, but we can hardly understand why the minstrels of the Christians should convert their most approved heroes into cannibals, and praise them for the quantity of infidel flesh they devoured. Yet Richard I. is put in this predicament by the author, or authors, of the romance of *Richard Cœur de Lion*. According to the poem, the first symptom of the king's recovery from a dangerous sickness at Acre was a violent longing for pork, and as pork was difficult to procure in a Mohammedan country, his cook dressed him a Turk's head, of which Richard ate with good appetite, and felt himself restored in consequence. After some more repasts of the same kind, he is made to say:

"King Richard shall warrant,
There is no flesh so nourissant
Unto an English man,—
Partridge, plover, heron, ne swan,
Cow ne ox, sheep ne swine,—
As the head of a Sazeyne."

The old travellers abound in stories of *C.*, which we may almost invariably pronounce to be false. Few persons would now credit that the Indians and Chinese sold human flesh in the market, or that the Grand Khan of Tartary fattened his astronomers and magicians with the carcasses of condemned criminals; but the statements of Marco Polo regarding the Battas, a people of Sumatra, have been confirmed. When America was discovered, *C.* was found to prevail to a very great extent, and as late as the year 1866, it is well known that two Brazilian officers exploring the Pachitea River, were eaten by the natives. In New Zealand and many parts of Africa, *C.* is systematically practised, with some; human flesh being regarded as a great delicacy, and even preferred to every other kind of food. M. Du Chailin states that the Fans, a people of Equatorial Africa, not only devour the bodies of captives, but even the bodies of those who have died of disease, purchasing for that purpose the corpses of neighboring tribes, and disposing in the same way those of their own. He relates that "a party of Fans, who came down to the sea-shore, once actually stole a freshly-buried body from the cemetery, and cooked it and ate it among them; and, at another time, a party conveyed a body into the woods, cut it up, and smoked the flesh, which they carried away with them."

Can'nibally, adv. In the manner of a cannibal. *Shaks.*

Canning, GEORGE, a British orator and statesman, b. in London, 1770. His father, who was from Ireland, was a man of considerable abilities; but having offended his family by marrying a lady without fortune, came to London, entered himself of the Middle Temple, and was called to the bar. Like many others similarly situated,

he soon abandoned the law for literature; but this failing to provide him with the means of support, he commenced business as a wine-merchant, and failed. Repeated disappointments seriously affected his health and spirits, and he died, broken-hearted, on the very day that his infant son was one year old. His widow, reduced by dire necessity, had recourse to the stage for support, and married an actor; he also died, and she then became the wife of Mr. Hunn, a linen-draper of Exeter. But she had the happiness to live to see the success of her son, and to receive from him at all times the tenderest marks of filial affection. The friends of his father first placed him at Hyde Abbey School, Winchester, and afterwards at Eton, where he greatly distinguished himself as a scholar, and formed many connections which were of great service to him in after-life. While at Eton he displayed great skill as an author, in his contributions to the *Microcosm*, a periodical work conducted by the senior scholars. At Oxford, also, he distinguished himself, and proceeded thence to Lincoln's Inn, his oratorical talents suggesting the bar as the profession best adapted for him. Being introduced to the House of Commons by Mr. Pitt, he abandoned the law, and devoted himself wholly to politics. His strenuous and able support of the minister was rewarded in 1796 with an under-secretaryship of state; and in the year 1800 he was placed in affluence by his marriage with Miss Joanna Scott, the daughter of General Scott, with a fortune of \$500,000. His talents as a poet and political writer were unquestionable, and he made an expert use of them in the articles he contributed to the *Anti-Jacobin*, a celebrated publication, in which the Whigs were wittily, unmercifully, and in some cases unjustifiably, held up to popular contempt. After the death of Pitt, and the dissolution of the coalition ministry of Fox and Grenville, Canning became Foreign Secretary in Perceval's administration; and to him may justly be ascribed the line of British policy in Spain, which destroyed the hopes of Napoleon, and led to his final overthrow; for, as he once emphatically declared, "his had been the hand which committed England to an alliance with Spain." Having, as it was alleged, unfairly endeavored to procure the removal of Lord Castlereagh from office, a duel took place, and both parties had to quit office. In 1812, he was elected a member for the great commercial town of Liverpool; and in 1816 he again became minister, being appointed President of the Board of Control. In this situation he made himself extremely unpopular by his defence of the Six Acts, and other no less obnoxious measures. On the return of Queen Caroline to England in 1820, Mr. Canning retired from office, that he might not have occasion to vote against her. This did not prevent his being appointed Governor-General of India in 1822; and he had already made preparations for his departure, when the death of the Marquis of Londonderry caused the seals of the Foreign Office to be delivered to Mr. Canning. In conjunction with Mr. Huskisson, he now advocated a course of both home and foreign policy strikingly at variance with that of which he had for years been the wittiest and readiest, if not the most profound, defender. His new policy was as popular as his old had been obnoxious; and the Earl of Liverpool being seized with paralysis, from which there was no hope of his recovery, Mr. Canning reached the grand object of his ambition—that of being the acknowledged head of the administration. But though the new premier was popular with the country, the party with whom he had in a great measure ceased to act rendered his task a difficult one. The opposition to him was fierce, almost rancorous; and it was soon obvious that he was suffering both in mind and body from over-exertion and constant excitement. These, aggravating the effects of a severe cold, caught while attending the funeral of the Duke of York, brought on a most painful inflammatory disease, which terminated his life at the age of 57, in 1827.

Canning, SIR STRATFORD. See STRATFORD DE REDCLIFFE (Viscount).

Canning, in U. Canada, a village of Oxford co.

Can'non, n. The origin and development of *C.* in general has been already considered under ARTILLERY (*q. v.*). In the present article it is proposed to deal only with the processes of manufacture, and the stages of progress through which the modern highly effective ordnance has come into existence. Previous to 1846 all *C.* were made with smooth cylindrical bores, their sizes being designated by the weight of their solid shot or the diameter of the bore. For rifled *C.* the diameter of the

Fig. 400.—9-INCH FRASER GUN, WITH WROUGHT-IRON TUBE.

bore is alone used, except in England, where a very imperfect method of designating the calibre by the weight of the piece, in hundred-weights and tons, is often employed. Artillery began its modern career with the invention of gunpowder, the earliest record of construction of *C.* going back to the middle of the fourteenth century. The first known use of *C.* in battle was by Edward III against the Scotch and French (1327-1346). Their effect was probably rather to terrify than to injure the enemy. From this time forward *C.*

rapidly and into use. At first guns of small caliber, throwing stones or balls of 3 or 4 lbs. weight, were alone used, but they soon grew in size, and by the end of the century field guns were employed throwing stones of 40 or 50 lbs., while siege guns threw projectiles of 200 lbs. weight.—*Mode of Construction.* These early *C.* were made of iron bars laid and joined together lengthwise, and bound by iron hoops, or wood wound with rope and sometimes wire. One of these still in existence, the great "Mons Meg," made at Mons, Brittany,

MULTIPLE CANNON OF THE SEVENTEENTH CENTURY.

in 1456, and now in the castle of Edinburgh, is constructed of iron bars hooped together. Its bore is 20 inches. The "Tsar *C.*," in the arsenal of the Kremlin, Moscow, is a great bronze piece of about 30 inches caliber. It was made early in the seventeenth century. The great Turkish guns defending the Dardanelles are 15 feet long and 36-inch bore. These huge guns are without trunnions and were laid immovably, being useless except when the object of attack was directly opposite them. As late as 1807 they were used against

CANNON USED AT THE BATTLE OF CRÉCY, A.D. 1346.

the British fleet under Admiral Duckworth in its passage up the Dardanelles. Another mode of construction was introduced by Gustavus Adolphus, who employed what were called leather *C.* These were made of thin metal tubes, strengthened with bands and cords, while around them was shrunk a tightly-fitting cover of boiled leather, varnished exteriorly.—*Projectiles.* The projectiles of early *C.* were chiefly rounded stones, which were not generally replaced by cast-iron balls until the 16th century.—*Hist.* Cast-bronze *C.* were in use as early

ELBOW-SHAPED MORTAR, ABOUT A.D. 1500.

as 1401, and cast-iron *C.* began to be made about the middle of the fifteenth century. Early in the art ofannon-making the breech-loading principle was suggested, but its application was very crude and unsatisfactory. Brass *C.* were first cast in England in 1535, the first record of the use of shells was at the siege of Naples, by Charles VIII, 1494 A. D. Mortars for throwing shells were introduced in Germany in the latter part of the sixteenth century, and in France somewhat later. The shell was ignited before being placed in the mortar, and the charge then ignited. Dangerous as

this practice was, it continued in use for half a century. The *howitzer*, a short *C.* for throwing large shells, was introduced near the end of the seventeenth century. In 1799 the *carronade*, a short *C.* of large caliber, was brought into use, but no long *C.* for firing shells by direct fire were introduced until 1812, when the *cannon* was invented by Col. Bamford, of the U. S. Ordnance Department. (Continued in SECTION II.)

Cannon, n. (Mech.) A hollow cylinder through which a revolving shaft passes, as the prolonged eye of a wheel when bored to fit a spindle or shaft on which it is intended to work loosely.

(Billiards.) Act of hitting two or more balls with the ball propelled by the cue; a carrom; a carambole.

Can'nun, in Michigan, a village and township of Kent co., 30 m. N.N.W. of Hastings.

Cannon, in Minnesota, a township of Rice co., intersected by the Cannon River.

Cannon, in Tennessee, a central co.; area, 220 sq. m. It is drained by Stones River and the Caney Fork of Cumberland River; surface, uneven; soil, productive; cap. Woodbury.

Cannonade, n. [Fr.] An attack with cannon or heavy artillery.

—*v. n.* To attack with cannon or heavy artillery; to batter with cannon.

—*v. a.* To discharge cannon or large guns.

Cannonading, n. Act of battering with cannon-shot.

Can'nun-ball, n. A ball to be shot from a cannon.

Can'nun-bone, n. (Farriery.) The single metatarsal bone of the horse.

Cannon City, in Minnesota, a township of Rice co., on Cannon River, 3 m. N.E. of Faribault.

Cannoneer, Cannonier, n. [Fr. cannonnier.] An engineer who manages cannon.

Can'nun-metal, n. An alloy of copper and tin. See CANNON.

Cannon River, in Minnesota, has its source near 44° N. Lat., and 93° 25' W. Lon., and flows a distance of 80 m., joining the Mississippi River at Red Wing Village.

Cannon River Falls, in Minnesota, a post-township of Goodhue co., on Cannon River, 15 m. S. of Hastings; pop. about 350.

Can'nunry, n. Cannon collectively; artillery. (r.)

Can'nonsburg, in Kentucky, a post-office of Boyd co.

Can'nonsburg, in Michigan, a post-village of Kent co., 60 m. W.N.W. of Lansing.

Can'nonsburg, in Ohio, a village of Carroll co., 27 m. S.E. of Massillon.

—A post-village of Hancock co., 12 m. S.S.W. of Findlay.

Cannon's Creek, in S. Carolina, flows eastward into Broad River, near the N. extremity of Lexington district.

Can'nun-shot, n. A cannon-ball.—The distance to which a cannon will throw a ball; as, to be within *can'nun-shot*.

Cannon's Mill, in Ohio, a P. O. of Columbiana co.

Cannon's Store, in Tennessee, a P. O. of Sevier co.

Can'nonsville, in New York, a p.v. of Delaware co., on Coquago River, 35 m. E. of Binghamton.

Can'nun [*can* and *not*]. A very common combination of the verb *can*, and the negation *not* (q. v.).

Cannon'chee, in Georgia, a small river rising in Emanuel co., and flowing S.E. into the Ogeechee River, 12 m. S.W. of Savannah. The little Cannouchee unites with it in Bryan co.

Cann'stadt, a town of Württemberg, on the Neckar, 3 m. N.E. of Stuttgart. It has mineral springs much frequented during the season. Pop. 6,216.

Can'nular, a. [Lat. cannula, a small reed.] Hollow, like a bamboo or tube.

Can'ny, a. A Scotch word, used in various senses, as cautious, prudent, artful, wary, frugal, gentle, safe, easy, fortunate, worthy, good, neat, pretty.—It is applied to persons or things having pleasing or useful qualities; as, a *canny* Scot.

Ca'no, ALONZO, a Spanish painter, sculptor, and architect; he was surnamed the "Michael Angelo" of Spain. His colossal statues of St. Peter and St. Paul were so admirably executed, that foreign artists from all parts travelled to see and copy them. Unhappily, in the midst of his triumph and celebrity, he became the victim of a horrible suspicion. During his absence from home, his wife was murdered and his house robbed by an Italian servant; and *C.* being suspected, was put to the rack. The torture itself could not shake his firmness, and as there was no evidence against him, he was released. He then entered the Church; and although he strictly attended to his religious duties, his love of the arts was unabated, and the "ruling passion" was so strong, that on his death-bed he averted his face from the crucifix of his confessor, because it was illy carved. B. 1600; d. 1664.

Ca'no, in Iowa, a township of Iowa co.; pop. about 400.

Canoe, (ka-noo') n. [Of Indian origin.] A small boat used by uncivilized nations, and usually formed of the body or trunk of a tree, excavated by cutting or by burning, and then trimmed into a suitable shape. Sometimes the *C.* is made of the tough bark of trees ingeniously sewed together, and the fissures and joints filled up with bitumen; others are made of seal-skins stretched out by ribs and bars of whalebone; and others again of frames of wicker-work, covered with skins or hides. The *C.* is adapted to receive either one or twenty occupants; it is generally impelled by paddles instead of oars, made with large blades like wooden shovels, and used perpendicularly. The *C.* used by the Canadian Indian is remarkably light and fragile, and though made of bark not more than a quarter of an inch in thickness, he will fearlessly trust himself on the mighty rivers of his country, permit himself to be sucked into the rapids, and flashing onwards as if riding the lightning, shoots the roaring cataract, and after some moments lost in

mist and foam, emerges from the seething caldron a hundred feet below, dancing on the heaving pool like a sea-bird, and dashing the tide in sprays of silver from his merged wings. Some nations and tribes display great ingenuity in the construction of their *C.*, and join the bark or skin so neatly, by means of long grass or shreds of sinews for thread, as almost to defy discovery of the seam. The Esquimaux extends his skins so artistically, both at bottom and top, as to form for himself a deck, leaving only a round hole for his body to enter, so that when seated his legs are under the deck, which then comes level with his middle. These are called *raïak*, or man-boats; while the larger, undecked *C.* are denominated *umiak*, or the woman-boats, from being used to transport the females and domestic appurtenances. The paddle to this *C.* is about 10 feet long, and flat at both ends. In the South Sea, the natives, in addition to their small fishing-boats, have large *C.* consisting, in fact, of two long *C.* firmly united by means of a stage or platform that rests on the gunwale of each, and on which they can step either one or two masts, to expand their straw mats in the shape of lateen sails; or they are propelled by the paddles, a row of natives being placed on each side to propel the vessel through the water. Such double *C.* are used either for mercantile purposes or as war-ships, the great sweep of deck admitting the conveyance of a considerable number of warriors. See also CANOEING, in SECTION II.

Canoe, in Iowa, a township of Winneshiek co., 30 m. W. of Lansing.

Canoe, in Pennsylvania, a township of Indiana county.

Canoe Creek, in Alabama, flows into Coosa river, through St. Clair co.

Canoe Place, or Newman's Mills, in Pennsylvania, a village of Indiana co., on Susquehanna River, 70 m. from Pittsburg.

Canoga, in New York, a post-village of Fayette township, Seneca co., 10 m. S.E. of Waterloo.

Canon, n. [A.S. and Fr. canon; Gr. kanon, from kanon, a reed; Heb. kaneh, a reed, a measuring-rod. See CANE.] In its original sense, a cane or reed used as a measure or rule. Specifically, a law or rule in general.

(Eccl. Hist.) A book containing the rules of a religious order used in monastic institutions.—A list or catalogue of the canonized saints of the Roman Catholic Church.—A dignitary of the Church; one who possesses a prebend, or revenue allotted for the performance of divine service in a cathedral or collegiate church. Canons were of various kinds: as, *cardinal canons*, *diocesan canons*, *expectative canons*, *foreign canons*, *lay or residential canons*, *tertiary canons*, and *regular and secular canons*. The order of regular *canons* of St. Augustine was spared at the time of the Reformation, and it continues in the Anglican Church to the present day. They are still nominally what they once actually were,—the council of the bishop for the administration of the affairs of his diocese.—and they constitute the chapter of the body known as the *Dean and Chapter*.—See CANON LAW, and CANON OF SCRIPTURE.

(Music.) A vocal composition consisting of two, three, or four parts, in which the several voices begin at fixed intervals consecutively; sometimes each voice commences with the same, sometimes with different notes. Canons may be *finite* or *infinite*; the former end, like other compositions, with a cadence, while in infinite canons the theme is begun again before the parts which follow are concluded. They are so constructed as to form a perpetual *fugue*, but differ from ordinary fugues; for in the latter it is sufficient for the subject to be repeated occasionally according to the laws of counterpoint, while in the former it must be strictly repeated by all the succeeding parts. In ancient music, canons were rules for determining the intervals of notes. Among the ancient Greeks this term signified what is now called a *monochord*.

(Surg.) An instrument used by surgeons in sewing up wounds.

(Printing.) A kind of large type principally used in posting-bills. It was used for printing the canons of the Church. Whence its name.

(Games.) In Billiards, a carrom, or carambole, q. v.

Cañon, CANYON, (kan'yun') n. [Sp. cañon, a tube.] A term commonly used in the Trans-Mississippi States of the Union, and in Mexico, to designate a deep gully, ravine, or gorge, between high banks or cliffs; as, the Yosemite Cañon; the Grand Cañon, (q. v.)

Cañon (kan-yon', or kan'yon) City, in California, a village of Trinity co.

Can'on-bit, n. That part of a horse's bit that enters the mouth.

Cañon City, in Colorado a gold-mining village, cap. of Fremont co., on the Arkansas River, 100 m. S. by W. of Denver.

Cañon City, in Nevada, a village of Lander co., near Reese River, 180 m. E. of Carson City, and 12 m. S. of Austin.

Cañon City, in Oregon, a village of Umatilla co., on the Middle Fork of John Day River, 190 m. S.E. of the Dalles.

Can'oness, n. (Eccl. Hist.) One of a class of religious women in France and Germany. Their convents were termed *colleges*. They did not live in seclusion. The College of Remiremont was the oldest establishment of this order in France. Similar noble monasteries still exist in Germany, and the revenues and dignities of some belong to Protestants.

A.D.

CANON TYPE.

Can'ongate Marriages, *n. pl.* (*Hist.*) In the middle of the 18th century, couples were married at public-houses in the Canongate, Edinburgh, by unauthorized persons. Hence the term by which such marriages were known.

Canon'ic, Canon'ical, *a.* [*Lat. canonicus*. See *CANON*.] Pertaining to a canon: according to the canon or rule; regular; stated; spiritual; ecclesiastical.

"No such book was found amongst those canonical Scriptures." — *Raleigh*.

(*Ecc. Hist.*) **Canonical hours**. The name given to certain stated times of the day assigned to the offices of prayer or devotion. They are principally observed in the Roman Catholic Church, and are *prime, terce, sext, and none*, — the first, third, sixth, and ninth hours of the day; *i. e.*, at six, nine, twelve, and three o'clock; *vespers* in the evening, at six; *complin*, as completing the services of the day; and *matins and lauds* shortly after midnight. In England, the canonical hours are from 8 to 12 o'clock, before or after which marriage cannot be legally performed in any parish-church. — *Canonical letters*, in the ancient Church, were testimonials of the orthodox faith sent by the bishops and clergy to each other in order to keep up the Catholic Communion, and to distinguish Christians from heretics. — *Canonical life*, the method or rule of living prescribed by the ancient clergy who lived in community. — *Canonical obedience* is that submission which, by the ecclesiastical laws, the inferior clergy are bound to pay to their bishops, and religious persons to their superiors. — *Canonical punishments* are those which the Church has it in its power to inflict; as, in Roman Catholic countries, excommunication, penance, and the like. — *Canonical sins*, in the ancient Church, were such as were deemed capital or mortal; as, idolatry, murder, heresy.

Canon'ical Form, *n.* (*Math.*) A term denoting a form, usually the simplest or most symmetrical, to which, without loss of generality, all functions of the same class can be reduced. The theory of canonical forms is of the highest importance in algebra and geometry; as yet, however, it is in an incomplete state.

Canon'ically, *adv.* In a canonical manner; in a method agreeable to the canon.

Canon'icalness, *n.* Quality or state of being canonical.

Canon'icals, *n. pl.* The full dress of the clergy worn when they officiate: as, an ecclesiastic in full *canonicals*.

Canon'icate, *n.* A canonry; the office of a canon.

Canon'ici, *n. pl.* [*Lat.*] (*Ecc. Hist.*) A term applied in early times to the clergy, from their names being enrolled in a canon or catalogue of some church.

Canon'icity, (*kan-on-ic-ite*), *n.* Quality of being canonical: state of belonging to the canon or genuine books of Scripture.

Canon'ies, Canon'ica, *n.* The name applied by Epicurus to his system of logic, as consisting only of a few rules or canons. Rejecting the dialectics of the Stoics, *C.* treated of the means by which knowledge, both physical and ethical, was obtained, and of the conditions or *criteria* of truth. These conditions, according to him, were *sensations, ideas* or *imaginings*, and *affections*. From these three sorts of consciousness we get all our knowledge, which is either *physical or moral*; the former perceived by the *sense*, the latter by the *understanding*. In reality, *C.* correspond very much to what is now termed *psychology*.

Canon'icum, (*kān-on-ic-kum*), *n.* In a general sense, this term denotes a tax or tribute. It is more particularly used in the Greek Church for a fee paid by the clergy to bishops, archbishops, and metropolitans, for degrees and promotions. It is also applied to the first fruits paid by the Greek laity to their bishops or priests, and which is regulated according to the number of houses or *fires* in a place.

Canon'icut Island, in *Rhode Island*, in Narragansett Bay, is 2 m. long and $\frac{1}{2}$ m. broad. On the S. extremity is a light-house.

Canon'isant, *n.* (*Math.*) The name given to an auxiliary quantic, upon which depends the resolution of a given quantic in its canonical form.

Canon'ist, *n.* One who is versed in canon law; one skilled in the study and practice of ecclesiastical law.

Canonis'tic, *a.* Relating to a canonist.

"Apt scholars of this canonistic exposition." — *Milton*.

Canoniza'tion, *n.* (*Ecc. Hist.*) In the Roman Catholic Church, a solemn declaration that a beatified servant of God possesses a special glory in heaven, on account of which he is proposed to the special veneration of the whole Church. After the beatification of the deceased has taken place, the principal condition which is exacted, in order to go on with the process of canonization, is, that the newly beatified should perform two miracles, which must stand the test of a most rigorous examination, and be judicially approved by the competent tribunal. After this, several consultations are held, the Pope issues the decree of *C.*, and a magnificent ceremony takes place at St. Peter's church, at which the Pope officiates in person.

Canon'ize, *v. a.* [*Fr. canoniser*; *It. canonizzare*.] To enrol in the canon or catalogue as a saint; to declare a person to be a saint.

Canon'izer, *n.* One who canonizes.

Canon Law, *n.* (*Ecc. Hist.*) A collection of ecclesiastical constitutions, decisions, and rules, instituted for the government and regulation of the Rom. Catholic Church, although many of the ordinances have been admitted into the ecclesiastical system of the Anglican Church, and still influence other Protestant bodies. It consists principally of ordinances of provincial and general councils, and the decretal epistles and bulls of the Holy See. The *Codex Canonum*, with the *Capitularies* of Charle-

magne, and the decrees of the popes from Siricius to Anastasius IV. (385–1184), formed the chief part of the *C.* down to the 12th cent. In 1114, Ivo, Bishop of Chartres, collected the decrees made by the popes and cardinals, and this work was completed by Gratian, a Benedictine monk, and published in 1140. Raimundus Barcinus, chaplain to Gregory IX., published in 1234 the decretals, which were rescripts or letters of the popes, in answer to questions on ecclesiastical matters submitted to them. The work consisted of 5 books, to which Boniface VIII. added a sixth in 1298. Clement V. added what were called the *Clementines* in 1308. John Andreas added a commentary called the *Novellæ* in the 14th cent., and John XXI. or XXII. the *Extravagans* in 1317. To these have been since added some decrees by later popes, and the whole form what is now known as the *Corpus Juris Canonici*, or the great body of the canon law received by the Roman Catholic Church.

Canon-lawyer, *n.* One skilled in the canon law.

Canon of Scripture. (*Ecc. Hist.*) The term canon, as applied to the Scriptural writings, has been taken with various significations. At one time it expressed simply a catalogue of church belongings; at another, it was interpreted to denote an authorized specification of all holy books, appointed to be publicly read. Later, it was narrowed in its application to those inspired writings recognized by Christian believers. The *C.* of the Old Testament was the work of many years. The earliest record of the collection dates from 130 B. C., and is quoted by Josephus: and the Jews, it would appear, regarded it with especial veneration. The Alexandrine version was more particularly held as inspired writings by the Jews of Greece, rather than by the Palestine Hebrews. This version differed from the former in being supplemented by the 14 books of the *Apocrypha*, which were not judged to be of prophetic origin, however, but merely as forming an appendix of peculiarly valuable moral and religious precepts. The early Christians first accepted the Greek version in its entire extent as canonical; but later, when the Hebrew language came to be understood, this judgment was, to a certain degree, reversed. The canons of the Greek Church closely resemble each other. Those of Melito (A. D. 177), Nazianzen (A. D. 379), and of Amphilochius (A. D. 379), coincide with one another in containing all the Jewish books except Esther, but excluding the *Apocrypha*. Origen, Cyril (348), and the Council of Laodicea (363), agree in including all the Hebrew books, and that of *Baruch*. Athanasius again adopts *Baruch*, and excludes *Esther*. The Roman Catholic Church, following the example of the Latins, regarded the Jewish opinion of the *Apocrypha* as erroneous, and declared them canonical by a decree of the Council of Trent. At the period of the Reformation, the theologians of the school of Luther repudiated the acceptance of the *Apocryphal* writings, and adopted the Jewish view of them. The *C.* of the New Testament was founded upon, in a great degree, the ruling principles of the Old, and became gradually accepted as inspired writings to a partial extent. Origen held that the four Gospels, Acts, 12 Epistles of Paul, 1 Peter, 1 John, and perhaps, also, the Apocalypse, were undoubtedly sacred and genuine. The *C.* of the Greek Church agree in accepting all the books of the New Testament excepting the Apocalypse. The Council of Hippo (A. D. 393) ordained that the New Testament should consist of the 4 Gospels, Acts, 13 Epistles of Paul, 1 to the Hebrews, 2 of Peter, 3 of John, 1 of James, 1 of Jude, and the Apocalypse of John. The Council of Carthage (397) confirmed this decree, but ranked Hebrews among Paul's 14 Epistles. Pope Innocent I. afterwards decided that the *C.* of the Latin Church should include the above catalogue. Luther, still later, excluded Hebrews, James, Jude, and the Apocalypse. The Council of Trent (1545), in confirming the *C.* of Hippo and Carthage, established them by oecumenical authority. The Greek Church thereupon followed, and gave canonical effect to the *Apocrypha*, the Catholic Epistles, and the Apocalypse. The Socinians and Swedenborgians have since taken other views, but, generally speaking, the three Churches, Catholic, Greek, and Protestant, have received as canonical the entirety of the Holy Scriptures.

Can'oury, Can'onship, *n.* The office of a canon: an ecclesiastical benefice in a cathedral or collegiate church.

Can'on'sburg, in *Pennsylvania*, a borough of Washington co., 18 m. S.W. from Pittsburg.

Canoo'chee, or Cano'chee, in *Georgia*, a post-office of Emanuel co.

Cano pus. (*Anc. Geog.*) A city of Egypt, 12 m. from Alexandria. It received its name, it is said, from Canopus, the pilot of the vessel of Menelans, who was buried in this place. Some affirm that the modern Aboukir stands on its site.

(*Myth.*) An Egyptian god of the water, represented under the form of a vase, surmounted with a man's or animal's head.

Canopy, (*kān'ō-pī*), *n.* [*Fr. canapé*; *Gr. kōnōpeion*, from *kōnōps*, a gnat or mosquito.] An ornamental covering over a seat of state, and in its extended signification, anything which affords protection from above; as, a covering over a bed, a mosquito screen, a covering over the head, &c. In this sense it is also used in architecture, to denote a decorated covering over a throne, altar, pulpit; the head of a niche or tomb, &c.

"Now spread the night her spangled canopy,
And summoned every restless eye to sleep." — *Fairfax*.

— *v. a.* To cover with a canopy.

"And they were canopied by the blue sky." — *Byron*.

Canoo'rons, *a.* [*Lat. canorus*, from *canor*.] Musical; tuneful; melodious; as, "A canorous peal of laughter." — *De Quincey*.

Canoo'ronsness, *n.* Quality or state of being musical or melodious.

Canoo'sa, (*anc. Canusium*), a town of S. Italy, prov. Bari, cap. cant., near the Ofanto, 15 m. S.W. of Barletta. The old city, said to have been founded by Diomed, or in a period antecedent to the records of Roman history, was in ancient times one of the most considerable cities in this part of Italy for extent, population, and magnificence. It reached the acme of its prosperity under Trajan. It was reduced to its present condition by a series of disasters inflicted on it by the Goths, Saracens, and Normans. Pop. 14,601.

Canoo'sia, or Canoo'sa, in *Miss.*, a v. of St. Louis co. **Canos'sa**, a town of Central Italy, in the province of Modena, 11 m. S.W. of Reggio, with a castle in which the emperor Henry IV. performed penance before Pope Gregory VII., in 1077. Hence the expression, "going to Canossa." See HENRY IV. of Germany.

Canou'an, in the West Indies, the central of the Grenadine islands.

Canova, ANTONIO, a celebrated Italian sculptor, b. 1757, at the little village of Passagno, in the Venetian territory. The seigneur of the village, having seen the figure of a lion modelled by Canova when only 12 years of age, placed him with Torretti, of Vienna, at that time the greatest living sculptor. At the close of his studies in Vienna he settled at Venice, and manifested the originality of his powers by various works. From Venice he passed to Rome, where he was greatly patronized, and in a comparatively brief time was admired by all Europe, and more or less employed by every European potentate. Fortune and honors flowed in upon him, and he used them wisely and honorably. Among his numerous works the finest are *Cupid and Psyche*, *Venus and Adonis*, *Mary Magdalen*, and *Napoleon holding the Sceptre*. To *C.* belongs the honor of having restored to sculpture the position which it had lost among the modern fine arts. After Michael Angelo Buonarrotti, and Bernini, he was the third of epoch-making Italian sculptors. His delicate execution and masterly treatment of marble are unrivalled, and even his faults — viz., his exaggerated nicety and carefulness, and his use of corrosives to produce fine finish — served to attract by the novel effects which they produced. The essential characteristic of all his works is sentiment — often verging, however, on sentimentalism, — and this also, like his delicacy in details, was accordant with the taste prevalent in his time, and was the chief cause of his popularity. D. 1822.

Canoo'inite, *n.* (*Min.*) A silicate of soda and alumina, with carbonate of lime, from the Miasget in the Ural. Three varieties are also found in the granite of Litchfield, Maine.

Canquaga (*kan-kwah'ga*) **Creek**, in *New York*, a stream of Erie co., falling into Lake Erie 20 m. S.S.W. of Buffalo.

Canrobert, (*kān-rob'air*), FRANÇOIS CERTAIN, a marshal of France, b. 1809. He entered the army as a private, rose rapidly through the successive ranks of his profession, was sent to Africa as a sub-lieutenant in 1835, and participated in the attack on Constantine. In 1848, as colonel, he commanded an expedition against the Arabs, and afterwards against the Kabyles, in both of which he was successful. On the formation of the army to operate against Russia, he was appointed to the command of the first division in the Crimea, and fought at Alma. Succeeding Marshal St. Arnaud as commander-in-chief of the French army, he was in the thickest of the fight at Inkermann, where he had a horse killed under him. In May, 1855, he resigned his command owing to ill health. In 1859, he distinguished himself in the battles of Magenta and Solferino, and was created a marshal of France. In 1870, he commanded the 6th army corps against Prussia. He was elected senator in 1876. Died Jan. 28, 1895.

Can'so, (*Cape*), the eastern extremity of Nova Scotia and the southern boundary of the entrance of Chebucto or Chedabucto Bay. It is in Lat. 45° 17' N., and Lon. 61° W. — 2. (*STRAIT*), a passage, 17 miles in length and 2½ in average breadth, connecting the inlet just mentioned with the Gulf of St. Lawrence, so as to form an island of Cape Breton. Of the three channels between that inland sea and the open ocean, it is the one that is least frequented by European vessels.

Can'statt, KARL FRIEDRICH, a German physician and medical author, b. 1807. He studied at Munich, Vienna and Würzburg, where he graduated M.D., in 1829. Upon the cholera breaking out in Paris in 1832, he went there to make observations on that disease, then to Switzerland, and afterwards to Brussels, where the Belgian govt. established a cholera hospital under his care. After practising for some years in Brussels and Paris, he returned to Germany, and, in 1843, was appointed Professor of Clinical Medicine, and Director of the Hospital in Erlangen, where he d. 1850. Besides his monograph on the cholera epidemic, Bright's disease, &c., his work upon *Special Pathology and Therapeutics*, from a clinical point of view, has been a standard one for many years. He has done great service to medical science and knowledge by the establishing and editing since 1842 of the *Yearly Report on the Progress of Medicine and Surgery*, (*Jahresbericht über die Fortschritte der gesamten Medicin*), which since his death has been edited by Drs. Eisenmann, Friederich, Scherer, Virchow, &c.

Cant, *v. a.* [*Ger. kanten*.] To raise or tilt on the edge or corner, as a cask, &c., in order to cause its contents to run out more freely. — To turn over or around; to toss; to jerk; as, to *cant* a bucket.

(*Carp.*) To cut the angle of a square piece of timber or board.

— *n.* A toss, jerk, or throw; as, to give a ball a *cant*.

(*Naut.*) A piece of wood attached to a ship's deck for the support of a bulkhead.

(*Arch.*) A term used to express the sides of a polygon turned from the spectator, on an angular deflection from a straight line which is neither in the same direction to the horizontal, nor to the perpendicular, line of the base.

Cant. *v. i.* [*Lat. canto*, from *cano*.] To speak in a singing, whining, or hypocritical tone of voice; to talk in a jargon, or with affectation.

"That uncouth affected garb of speech, or canting language." *Sanderson.*

To use the particular tone, dialect, or phraseology of a sect or party; as, a *canting* fanatic.

"While I did limits to the king prescribe,
And took for oracles that canting tribe." — *Roscommon.*

Canting Arms. (*Her.*) Canting devices in the form of a ribbon on the bearer's name.

n. A whining, sing-song, hypocritical manner of speech, either in conversation or preaching.

"And preaching in the self-denying cant." — *Dryden.*

The idiomatic jargon and peculiarity of speech incidental to certain sects and occupations.

"I write not always in the proper terms of navigation, land service, or in the cant of any profession." — *Dryden.*

An empty, solemn, affected form of speech, peculiar to a sect; assumed sanctity; religious hypocrisy.

Slang; barbarous jargon peculiar to thieves, beggars, &c.; as, costermonger's *cant*.

"To introduce and multiply cant words, is the most ruinous corruption in any language." — *Swift.*

ant. *v. a.* [*It. incantare*.] To cry out or proclaim a public sale; to sell by auction.

A sale by auction.

"Numbers . . . sell their leases by cant." — *Swift.*

ant. *a.* Vulgar; inelegant; affected; as, a *cant* song.

ant. (*kant.*) A contracted colloquialism for *can not*.

antab. *n.* [An abbreviation of *Cambridge*.] A native or inhabitant of *Cambridge*, the modern Cambridge, England. More particularly applied to a student of the university. (Used as a colloquialism.)

"The rattle-pated trick of a young *Antab*." — *Sir W. Scott.*

antabile. (*kan-tab'i-le.*) *adv.* and *n.* [*It.*, from *cantare*, to sing. See *CANTATA*.] (*Mus.*) In instrumental as well as in vocal music, *C.* denotes the easy flowing of sounds of a melody, in contradistinction to highly elaborated passages. In songs, the melodies which lie chiefly in the middle region of the voice are marked *C.* or *Cantilena*; extreme tones of the voice have a peculiar *tímbre* and character quite foreign to the cantabile. *C.* marked at the beginning of a piece means rather slow than quick.

antabri. (*kán-tai'brē.*) *n. pl.* (*Anc. Hist.*) The name of a tribe anciently inhabiting part of N. Spain, and the last in the Iberian peninsula to submit to the Roman yoke in the reign of Augustus, by whom they were subdued B. C. 25. Agrippa suppressed an insurrection among them B. C. 19, when the greater part of the nation perished by the sword, the survivors being driven from their mountain fastnesses, and compelled to reside in the valleys, where they were kept in awe by strong garrisons established by Tiberius. The Basques are regarded as the descendants of this fearless and warlike people.

antabrian. *a.* Pertaining to *Antabria*, the ancient name of what is now known as the Basque country, in Spain.

antabrian Mountains. the W. continuation of the system of the Pyrenees, in Spain, extending as far as Cape Finisterre. Some of their summits attain an elevation of 10,000 feet.

antabrigian. (*kan-ta-briji'an.*) *n.* [See *CANTAB.*] A graduate or student of the University of Cambridge, Eng.

antacuzenus. *Cantacuzene.* JOHANNES, a Byzantine emperor, B. about 1300. After filling several important offices, he was proclaimed emperor by the nobles and soldiery; and he endeavored to heal the wounds which five years of civil war had inflicted on the state; but the jealousy of Palæologus, the rebellion of his own son, and other disasters, induced him to resign the crown and to retire to a monastery, where he employed himself in literary labors. The date of his death is not known, but he is said to have lived above a century. *C.* may be considered as one of the greatest among the successors of Constantine.

ant'al. an inland dep. of France, formed of parts of the ancient districts of Haute-Loire and Velay, between 44° 37' and 45° 26' N. Lat., and 2° 5' and 3° 14' E. Lon.; bounded N. by Puy-de-Dôme, E. Haute-Loire, S.E. Lozère, S. Aveyron, and on the W. by Lot and Corrèze. — *Surface.* Mountainous; the highest summit, Plomb-de-Cantal, being 6,040 feet above sea-level. — *Soil.* Poor, and agriculture very backward. — *Prod.* Buckwheat, chestnuts, hemp, and flax. Pasturage is good, and large herds of cattle and sheep are fattened for export. — *Manf.* Coarse woollens, linens, and laces; copper and brass goods; paper, leather, &c. — *Chief Towns.* Aurillac, St. Flour, Murat, and Mauriac. *Pop.* 264,575.

antalenp. *Cantaloupe.* *Cantalupe.* *n.* [*It. cantalupo.*] (*Bot.*) See *CUCUMIS*.

antankerous. *a.* Vile; bitter; malicious; contentious; as, a *cantankerous* humor. — *Thackeray.* (Colloq.)

ant'ar. *Canta'ro.* *n.* [*Sp.* and *It.*] A weight of quantity used in E. Europe. In Greece it is equivalent to 123.20 lbs., avoirdupois; and in Turkey to 44 *okes*, or 125 lbs. av. — In Spain, a liquid measure containing from 2 to 4 gallons.

ant'aliver. *CANTALEVER, CANTILEVER.* *n.* [From *cant* and *lever*.] (*Arch.*) A piece of wood framed into the

front or side of a house, and projecting beyond it, to sustain the eaves and moulding of a cornice carried upon it. — *Cantilever Bridge.* See *BRIDGE*.

Fig. 500. — CANTALIVER.

Cantarini. SIMONE, (*kan-ta-re'ne.*) B. 1602, styled "the Pesarese," an Italian painter, whose works are often mistaken for those of his great master Guido. D. 1648.

Canta'ta. *n.* [From *It. cantare*, to sing.] (*Mus.*) A musical composition for voices, usually of considerable length and importance, and of which there are several kinds. It consists of an intermixture of air and recitative, and was at one time extended to such a length as to form a sort of small opera, but is now, however, ordinarily written for only one voice with a *thorough bass*, though sometimes for several, accompanied by one or more instruments. According to Du Cange, the word *cantata* was used in the Church as early as the year 1314 to express what is at present understood by *anthem*, with which word it is still synonymous in Germany. *cantatas* being chiefly confined, among the Lutherans, to sacred music.

Canta'tory. *a.* Whining; singing in an affected manner. (*R.*)

Cantatrice. (*kan-to'trē-che.*) *n.* [*It.*] (*Mus.*) A professional singer of the female sex.

Cant'ed. *pp.* (*Arch.*) Applied to a pillar or turret when the plan is of a polygonal form.

Canteen. (*kan-tē'n.*) *n.* [*Fr. cantine*; *It. cantina*; — *Celt. cant*, a vessel, and *in*, wine.] (*Mil.*) A vessel used by soldiers for carrying liquor, usually made of tin. — A small case for containing soldiers' personal necessities, &c.

— A place in barracks where provisions, liquors, coffee, &c. are sold; a sutler's store.

Cant'el. *n.* See *CANTLE*.

Can'temir. DEMETRIUS, hospodar of Moldavia, B. 1673, is author of *The System of the Mohammedan Religion, History of the Rise and Fall of the Ottoman Empire*, &c.; D. 1723. — His son, ANTOCHUS, PRINCE *C.*, B. at Constantinople, 1709, was educated in Russia, and employed in some important embassies by that country. He was the author of several poems, and translated Anacreon into Russian. D. 1744.

Can'ter. (*kan-ter.*) *n.* (*Manege*) A moderate gallop formerly called a *Canterbury gallop*, said to be derived from the pilgrims riding to Canterbury at this pace. The action is so called when the horse's fore-feet are raised nearly together, with a leap or spring.

— A rapid passing over anything; as, a *canter* over the columns of a newspaper.

— *v. i.* To move as a horse in a canter, or easy gallop.

— *v. t.* To ride upon a canter; as, to break from a trot into a canter.

Can'ter. *n.* A whining or canting person; a beggar.

— One who speaks in canting language, or makes hypocritical pretensions to goodness.

"The days when he was a *canter* and a rebel." — *Macaulay.*

Canterbury. (*kán'ter-ber-re.*) a sort of table forming a place of deposit for music, books, papers, &c.

Can'terbury. a city, county, and borough, and the

Fig. 501. — CANTERBURY CATHEDRAL, (West Front.) metropolitan see of England, co. Kent, in a fertile valley, watered by the Stour, 53 m. S.E. by E. of London. This

is a very ancient city, but now much modernized, being well paved, built, and lighted. The cathedral is a noble pile, and forms a conspicuous object from whatever part of the city it may be viewed. It stands on the site of the cathedral anciently founded by St. Augustine, in connection with the monastery of Christ Church, established by Ethelbert, king of Kent, on his conversion to Christianity by St. Augustine, in 587. The oldest part of the present structure dates from 1184. The ancient celebrity of this cathedral is partly attributable to its being associated with the first establishment of Christianity in England, but more especially to the murder of its famous archbishop, Thomas A'Becket, at the foot of one of its altars, in 1170. This place subsequently became an object of pilgrimage, and the shrine of the sainted martyr was visited for centuries by devotees from every part of Europe. — *Manf. Brawn.* Hop-picking forms an important industrial feature of the surrounding country. *Pop.* in 1895, 23,125.

Can'terbury. in *Delaware*, a post-village of Kent co., 8 m. S. of Dover.

Can'terbury. in *Connecticut*, a township of Windham co.

Can'terbury. in New Zealand, a settlement founded by a committee of English Episcopalians in the N. part of the island, with Christchurch for its capital, and Lyttelton for its port. Area, about 2,400,000 acres of a generally fertile land.

Can'terbury-bell. *n.* (*Bot.*) A name given by gardeners to the *Campanula medium*. — See *CAMPANULA*.

Can'terbury-gallop. *n.* (*Man.*) See *CANTER*.

Can'terbury-tale. *n.* A kind of fanciful romance; so designated from the "Canterbury Tales" of Chaucer.

Cante'rii. *n. pl.* [*Lat.*] (*Arch.*) A term employed in ancient architecture to denote the beams of wood in the framework of a roof, extending from the ridge to the eaves, corresponding to the rafters of a modern roof. The word was also applied to two inclining reeds fixed in the ground some distance asunder and meeting at the top, for the support of vines.

Cantharadine. *n.* (*Chem.*) The crystalline blistering principle contained in the *Cantharis vesicatoria*, or Spanish blister-fly, first obtained by Robiquet. To procure it, the flies are digested in alcohol. The alcoholic solution is afterwards evaporated to dryness, and washed with cold ether, which dissolves out the cantharadine. When pure, it is insoluble in water, but very soluble in boiling alcohol. Lard containing one five-hundredth part of cantharadine will produce a very powerful blistering effect when applied to the human skin.

Canthar'idæ. *n. pl.* (*Zoöl.*) A family of coleopterous insects, numerous, much variegated in colors, of moderate size, and generally living on vegetable substances. They are distinguished by the head being dilated behind the eyes, and then suddenly narrowed into a short neck. When alarmed, they counterfeit death; and some varieties at the same time emit a thick yellowish fluid, with a disagreeable smell, from the articulations of the legs, &c. Many species of the genus *Cantharis* possessing medicinal properties, are natives of Europe, India, and America. The *Cantharis vesicatoria* is the common blister-fly of the shops. The striped *Cantharis*, *C. vittata*, called Potato-fly, is a native of N. America and very destructive to potato-fields. The genus *Myiobris* contains several species, which have properties similar to those possessed by the *Cantharis*; and the genus *Meloe* has also various species which have all the properties of the blister-fly.

Fig. 502.

SPANISH FLY, OR BLISTERING BEETLE,
(*Cantharis vesicatoria.*)

(*Med.*) The Cantharides, and especially *C. vesicatoria*, possess stimulating properties of a special order, acting, when powdered and applied externally, as a rubefacient and blister; and when taken internally, on one set of organs only, that of the kidneys and bladder, or urinary system. So important is this latter action, that in ordering a blister, or prescribing the drug in any form, this action ought never be forgotten, as a most painful retention of the water, or strangury, will frequently follow the application of even a small blister, or a trifling dose of the tincture of the flies. On this account, and to obviate any such symptoms frequent draughts of barley-water or linseed tea should be given while under the influence of *C.* In many affections of the kidneys, bladder, uterus, and urethra, *C.* judiciously employed is a medicine of singular efficacy, in which cases it is used in the form of tincture, *Tinctura tytta*, the dose being from 5 to 15 drops every four or eight hours, in some appropriate combination. In certain forms of dropsy and diseases of the skin, it is also employed with benefit, given in the same dose. As an external application, the tincture, combined with castor-oil, rosemary, and essential oil of bitter almonds, makes an excellent application to the head for the growth of the hair; and as a stimulant in certain conditions of chronic rheumatism, the compound *C.* liniment is highly beneficial. The most important preparation is the plaster, *Emplastrum tytta*, made of snail, rosin, yellow wax, and powdered *C.* — In an over-dose, the *C.* act as an irritant poison, producing very serious consequences. — See *POISON*, (2) *ANIMAL POISONS*.)

Can'tharis. *n.; pl.* CANTHARIDES. [*Lat.*] A genus of beetles, fam. CANTHARIDÆ, *q. v.*

Can'tharus, *n.* (*Arch.*) In ancient architecture, a fountain or cistern in the atrium or court-yard before churches, at which persons washed before they entered the sacred buildings.

Can't-hook, *n.* An American phrase for a wooden lever with an iron hook at the end, for canting or turning over heavy logs.

Can'thus, *n.* [*Gr. kanthos.*] (*Anat.*) The corner of the eye, where the upper and under eyelids meet.

(*Antiq.*) Among the ancients, the tire of a wheel; a hoop of iron or bronze fastened on to the felloe, to preserve the wood from abrasion.

Can'tica, or **Can'ticoy**, *n.* An Indian word, said to be sometimes applied, in New York, to a dancing assembly, or to a noisy conversation.

Canticle, (*kan'te-kl.*) *n.* [*Fr. cantique; It. cantico; Lat. canticulum, dim. of canticum.*] A little song. — (*pl.*) The Song of Solomon, one of the Books of the Old Testament. See SOLOMON'S SONG.

Cant'ii, *n. pl.* See KENT.

Cant'ile, *v. a.* See CANTLE.

Cant'ile'ua, *n.* [*It.*] See CANTABILE.

Can'tilever, *n.* (*Arch.*) See CANTALEVER and BRIDGE.

Cantillate, *v. a.* [*Lat. cantillare, from cantare.*] To chant; to recite musically.

Cantillation, *n.* Chanting; musical recitation.

Cant'ingly, *adv.* With cant.

Cant'ingness, *n.* Quality of speaking in cant.

Cantiniere, (*kan-tin'-är.*) *n.* [*Fr. from cantine, a canteen.*] (*Mil.*) A female camp-follower; one who attends soldiers to dispense liquid refreshment.

Can'tire, or **Kintyre**, a peninsula running between the Frith of Clyde and the Atlantic Ocean. It forms the S. extremity of Argyshire, Scotland. Ext. 40 m. long, with an average breadth of 6½. — The MULL is the S.W. point of the peninsula, and has a light-house 297 ft. high. Lat. 55° 19' N., Lon. 5° 49' W.

Cantle, (*kān'tl.*) *n.* [*From O. Fr. chantel; Fr. chateau; It. canto, a corner.*] A fragment, piece, or corner of any thing.

"A huge half-moon, a monstrous cantle out." — *Shaks.*

(*Saddlery*) The protruding part of a saddle behind. (Often written *cantel.*)

Cant'let, *n.* [*Dim. of CANTLE, q. v.*] A little corner; a small piece; a fragment.

"Huge cantlets of his huckler strew the ground." — *Dryden.*

Cant'ling, *n.* (*Brick-making.*) The lower of two courses of burnt bricks, which are placed on the top of a clamp before fire is applied.

Cant'-moulding, *n.* A bevelled surface, neither perpendicular to the horizon, nor to the vertical surface to which it may be attached.

Can'to, *n.; pl. CANTOS.* [*It., from Lat. cantus, from cano, to sing; Fr. chant.*] A song; a part or division of a poem; as, the fourth *canto* of "Don Juan."

"Write loyal cantos of contemned love." — *Shaks.*

(*Mus.*) The treble part of a musical composition. — See SOPRANO.

Can'to-fer'mo, *n.* [*It., firm song.*] (*Mus.*) The subject, song, or theme. Every part that is the subject of counterpoint, whether plain or figured, is called by the Italians *canto-fermo*.

Canton, (*kan'ton.*) *n.* [*Fr. canton; It. cantone, from cantu; Ger. kante, a corner.*] (*Geog.*) A small division of territory.

"That little canton of land called the 'English pale.'" — *Davies.*

(*Geog.*) A division of territory forming a separate state or government. In France the term is applied to small sub-divisions of a department. In Switzerland, it is given to the 22 districts of which that country is composed, and which, while they form a federal union like the U. States, are governed each by a separate judicature and particular laws.

(*Her.*) An ordinary formed either at the dexter or sinister chief of the escutcheon, by two lines meeting at right angles, proceeding from the top or sides of the shield. By the word *canton* is always understood a *canton dexter*, unless otherwise expressed.

— A distinct portion or division; as, the *cantons* of a painting. — A small community of persons.

— *v. a.* [*Sp. acantonar.*] To divide into cantons, or small parts or districts, as territory.

"To have all the mighty empires and monarchies of the world cantoned out into petty states or principalities." — *Addison.*

Cantoned Building, (*Arch.*) A building is thus termed when its corner is adorned with a pilaster, an angular column, rustic quoins, or anything that projects against the wall.

(*Mil.* Pronounced *kan-tōn'.*) To allot separate quarters to different parts or divisions of an army or body of troops.

Can'ton, (called by the Chinese *Sang-Ching*, the "provincial city,") a maritime city of China, on its S. coast, cap. of the prov. of Quang-tong, and residence of the provincial authorities; the principal emporium of the Farther East, and the first port in China at which any Europeans were established. It stands on the N. bank of the Choo-Kiang, or Pearl River, and the E. bank of its affluent, the Pe-Kiang, 60 m. N.N.W. of the Chinese Sea, and 1,200 S. by W. of Peking; Lat. 23° 9' 10" N., Lon. 113° 14' 30" E. It is nearly square in form, about 6 m. in circuit, built generally on level ground, except on its N. side, and is divided into two unequal walled parts, the outer, or *Chinese*, and the inner, or *Mantchu* (Tartar) City. The suburbs are perhaps as populous and extensive as the city itself. The streets are narrow, but paved, and are defended by strong gates which are closed every night. Streets of business are each devoted to one distinct branch of trade. Several canals intersect the city and suburbs. Houses built of brick

are the rule, those of mud, stone, and wood proving the exception. The residences of the lower orders are, however, but wretched mud hovels. The foreign factories, or *hongs*, as the Chinese call them, are situated in the S.W. suburb, where they extend from E. to W. for about 1½ furlong. They occupy a muddy flat, which has been gained from the Choo-Kiang River, which they face, being separated from it by a quay about 100 yards wide. This space, which is considered as belonging to the European merchants, is raised in, and forms a promenade, called *Respondentia Walk*. Near it is another small open space, about 50 or 60 yards square, walled in, and laid out as a garden, with gravelled walks and flower-beds. These narrow limits, until recently (see CHINA), bounded all the territory assigned to foreigners within the Celestial Empire; even the quay and enclosure were not obtained without considerable difficulty, and the European and American merchants could not build a few steps on the water's edge without express permission from the authorities. There are 13 hongs, or factories, including the American, British, French, Dutch, Austrian, Swedish, Danish, and Parsee establishments. They are among the handsomest buildings in the city, and usually consist of three, four, or more brick or granite buildings surrounding a kind of close, or court; two tolerable European hotels occupy portions of two of them. Fires are frequent, and the Chinese have very generally adopted the use of engines for their suppression. The city is subject to inundations, and is tolerably well supplied with fresh water from numerous reservoirs, springs, and wells. A large part of the pop. of C. resides on the water. For 4 or 5 miles opposite the city, and both above and below it, the river is crowded with vessels and rafts of all descriptions and sizes. Each one is registered, and the whole number in the neighborhood of the city is reported to amount to 84,000. Upwards of 120 different temples are enumerated in, and adjacent to, the city, and this does not include the whole number. The principal is the Buddhist temple on the island of Houan, in the river opposite C. Its buildings are numerous, chiefly of brick, and it covers, with its courts and gardens, 6 or 8 acres, which are surrounded by a lofty wall. There are two other considerable Buddhist temples in the N. W. part of the old city, and also a Mohammedan mosque, with a dome and minaret 160 feet in height. C. has several charitable institutions and hospitals; notably one of the latter, established by an American missionary in 1835, has been productive of much benefit. There are 14 high schools, and about 30 colleges in this city, and it is estimated that about half the inhabitants are able to read. The manufactures of C. are numerous and important; silk fabrics, shoes, and brass and iron-ware being the principal. The book-trade is considerable. A great part of the trade of China with the rest of the world, passes through C. The Russians are the only nation not having a resident or factory here. The European trade, now so immense, originated in a commercial treaty between Emmanuel, King of Portugal, and the Emperor of China, in 1517. In 1634, some British ships first touched at Canton. In 1680, the direct trade of the East India Company with China commenced. The great mass of the foreign commerce is carried on by English and Americans, but the Chinese are gradually becoming active competitors for this trade. Tea is the great article of export, next to which comes silk and cotton. About 15,000,000 lbs. of tea, and 6,000,000 lbs. of raw silk are annually imported from C. into the U. S. There is a direct line of steamers between San Francisco and Canton. The entire trade between C. and the U. S., is valued at \$10,000,000, annually. Pop. 1897, est. 1,600,000.

Can'ton, in Alabama, a village of Wilcox co., on the Alabama river, 75 m. S.W. of Montgomery.

Canton, in Arkansas, a post-village of Sharp co.

Canton, in Connecticut, a township of Hartford co.

Canton, in S. Dakota, a thriving city, cap. of Lincoln co. Pop. (1897) about 2,000.

Canton, in Georgia, a post-vil. and twp., cap. of Cherokee co., 130 m. N.W. of Milledgeville, on the Etowah river.

Canton, in Illinois, a city of Fulton co., 70 m. N.N.W. of the city of Springfield. Pop. (1890) 5,604.

Canton, in Indiana, a post-village of Washington co., 45 m. S.W. of Columbus.

Canton, in Iowa, a post-village of Jackson co., on the Maquoketa River, 30 m. S.S.W. of Dubuque. — A township of Benton co.

Canton, in Kansas, a village of Anderson co., 45 m. S. of Lawrence co.

Canton, in Kentucky, a post-village and township of Trigg co., on the Cumberland River, 240 m. W.S.W. of Frankfort.

Canton, in Maine, a post-township of Oxford co., 25 m. W.N.W. of Augusta, intersected by the Androscoggin River.

Canton, in Massachusetts, a post-village and township of Norfolk county, 14 miles S. of Boston. Cotton goods, thread, copper, machinery, &c., are manufactured here.

Canton, in Michigan, a post-township of Wayne co., 200 m. W. of Detroit.

Canton, in Minnesota, a thriving township of Fillmore county. — A post-office of Mower co.

Canton, in Mississippi, a flourishing city, cap. of Madison co., 25 m. N. E. of Jackson. Pop. ab. 2,500.

Canton, in Missouri, a town of Lewis co., on the Mississippi river, 191 m. above the city of St. Louis. Pop. (1897) about 2,700.

Canton, in New Jersey, a post-village of Salem co., 9 m. S. S. E. of Salem.

Can'ton, in New York, a township and post village, cap. of St. Lawrence co., on Grass River, 20 m. E.S.E. of Ogdensburg.

Canton, in Ohio, a thriving manufacturing city, capital of Stark co., 118 m. N. E. of Columbus and 98 W.N.W. of Pittsburg, Pa. Pop. (1897) about 30,000.

Canton, in Pennsylvania, a township and village of Bradford co., 24 m. W.S.W. of Towanda, on Towanda Creek.

— A township of Washington co.

Canton, in Texas, a precinct of Smith co.

Canton, in Texas, a post-village, cap. of Van Zandt co., 27 m. N. of Athens, and 27 E. of Kaufman.

Canton, in W. Virginia, a post-office of Marion co.

Canton, JOHN, an ingenious English mechanic and experimentalist, b. 1718. The chief of his discoveries was that of the means of making artificial magnets D. 1772.

Canton'al, (*kan'ton'-al*) *a.* [*Fr.*] Pertaining to a canton divided into cantons.

(*Mil.* Pron. *kan-tōn'al.*) Divided into cantonments, or troops.

Canton Centre, in Connecticut, a post-village in Hartford co., 16 m. N.W. of Hartford.

Cantonese, *a.* (*Geog.*) Pertaining, or relating, to Canton, China.

— *n.* An inhabitant or native of Canton.

Can'tonite, *n.* (*Min.*) A variety of sulphide of copper, crystallizing, like galena, in cubes instead of hexagonal crystals. It is of a bluish-black color, and has a sub-metallic lustre. It is named after Canton Mine in Georgia, where it occurs.

Can'tonize, *v. a.* To parcel out into small divisions or cantons.

"The whole forest was in a manner cantonized amongst a very few in number." — *Howell.*

Cantonment, (*kan-tōn'ment*) *n.* [*Fr. cantonnement* (*Mil.*) When troops are detached, and quartered in different adjacent towns and villages, they are said to be in *cantonments*.

Cantonment Gibson, in Indian Territory. See FORT GIBSON.

Canton Point, in Maine, a post-office of Oxford co.

Canton River, the "Che-Kiang," or *Pearl River* of the Chinese, is the lower part of the Pe-Kiang. It has a navigable course of 300 m., and 40 m. below Canton is called the Bocca Tigris. It is studded all around Canton with numerous islands, upon which rice is cultivated, and many forts are placed.

Canton's Phosphorus, *n.* (*Chem.*) Protosulphide of calcium, obtained by heating sulphate of lime with charcoal. It appears to absorb light on exposure, and to emit it in the dark. It was first prepared by J. Canton.

Cantoon', *a.* A stuff or fustian with a fine cord visible on one side.

Cant'-pieces, *n. pl.* (*Naut.*) Pieces of timber fastened to the angles of fishes (wooden supports) and side-trails to supply any part that may prove rotten.

Can'trap, **Can'trip**, *n.* [*O. Dan. gan, witchcraft; and Icel. trapp, a trampling.*] A spell; an incantation — A mischievous trick. (*Scottish.*)

"And by some devilish can'trip sleight

Each in its cault hand held a light." — *Burns.*

Cantred, **Cantret**, (*kan'terd.*) [*W. cantref, from cant, hundred, and tref, a village.*] In Wales, a division of land or territory, similar to the English *hundred*.

"The king re-grants to him all that province, reserving only the city of Dublin, and the cantreds next adjoining." — *Davies.*

Can'trelle, in Louisiana, a post-office of St. James co.

Can'trell's Cross-Roads, in Tennessee, a post-office of McMinn co.

Cant-timbers, *n. pl.* (*Shipbuilding*) Those timbers or ribs of a ship, which are situated fore and aft, or the two ends, where she becomes narrower below.

Canti, CESARE, an Italian historian, b. at Brivio, ne Milan, 1805. When only 18 years of age, he became professor of literature in the college of Sondrio in the Valteline, from which he went to Como, and thence Milan. He embraced the liberal cause, and his *Reflections on the History of Lombardy in the Seventeenth Century*, published at Milan, excited the hostility of the Austrian government, by which he was imprisoned for three years. In his captivity he wrote an historical romance *Margherita Pusterla* (1835), a work which has often been compared to the *Promessi Sposi* of Manzoni. It has composed various religious hymns, and his poem *Alfiso*, his *Lettura Giovanili*, which have passed through more than 30 editions, and the articles which he has contributed to the *Biblioteca Italiana*, and the *Indicatore* of Milan, have popularized his name throughout Italy. He belongs to what has been called the "Famantic School" founded by Manzoni and Silvio Pellico. This author has published *Storia Universale*, which has been translated into English, French, and German *History of Italian Literature* (1851); *History of the Last Hundred Years* (1852), &c. Died March 11, 1895.

Can'tu, or **CANTURIO**, a town of N. Italy, in Lombardy 5 m. S.E. of Como. It has had iron manufactures ever since the 10th century. Pop. 6,274.

Can'twell's Bridge, in Delaware. See ODESSA.

Can'ty, *a.* A term used in Scotland, and the N. of England, in the sense of merry, cheery, gay, lively; as, "a *can'ty* dame." — *Wordsworth.*

Can'nek, *n.* A cant name for a person who is of Canadian birth. (Used in the U. States.)

Canu'la, *n.* [*Lat. dim. of canna, a reed.*] (*Surg.*) The sheath of an instrument called a *trochar*; a kind of small bayonet, the finely pointed extremity of which protrudes beyond the canula about half an inch, so that when plunged into a collection of water, or pus, the trochar is withdrawn, and the sheath, or canula, is

Behind, allows the fluid to be discharged in a stream through its tube or pipe. The canula is always made of silver, and, if necessary, can be left in the sac, and secured by strings to the body. See TROCHAR.

an'ute, (the Great.) KNUP, or KNUT. The rich and fertile island of Britain was a constant temptation to the inhabitants of the shores of the Baltic, and of the less genial country stretching thence to the north, forming the modern kingdoms of Norway and Sweden. These people, the *Northmen*, as they were designated by the people of the more southern parts of Europe, possessed a navy which seems to have been far superior to that of any other State, and which enabled them to make at pleasure descents upon the coasts of all the countries bordering on the English seas. Much of the history of the Anglo-Saxon kings is the history of their contests with these formidable neighbors. The genius and military talents of Alfred for a while saved the country from their oppressions; but when he was dead, and was succeeded by a race of princes inferior to himself, the nation became less able to make an effectual resistance. Danes became settled in many portions of the island, tribute was paid to them, and finally, in the person of C., one of the greatest men in the line of this northern sovereignty, they accomplished that which they had so long desired, the entire subjugation of the Anglo-Saxon people, and the extinction, for a time, of the Anglo-Saxon sovereignty. This then is the light in which we are to contemplate C.: the king by birth and inheritance of the people now known as Danes, Normans, and Swedes, and as the man who accomplished the work of his father Sweyn in displacing the posterity of Egbert from the sovereignty of England. He reigned for twenty-two years (A.D. 1014 to A.D. 1036), during which period the country was at peace. Englaud, of all his possessions, he chose for his usual residence. He died at Shaftesbury, and was interred at Winchester, the usual place of interment of the Saxon kings. C., successful in war, was, in peace, humane, gentle, and religious. William of Malmesbury says of him, that by his piety, justice, and moderation, he gained the affection of his subjects, and an universal esteem among foreigners. The beautiful little story of the rebuke which he gave to the flattery of his courtiers, a story which it would be an unreasonable scepticism to doubt, found as it is in some of the oldest and best chronicles, makes his name and his virtue more familiar to the English nation than all the encomiums of their chroniclers, or than his acts of piety in his journey to Rome, and in the foundation of the two monasteries of Saint Bennet of Holme and Saint Edmund's Bury. The reigns of the two sons of C. were short and disturbed. In 1041, the posterity of Egbert, in the person of Edward, son of King Ethelred, regained the throne. This was Edward, called the *Confessor*. His reign was harassed by the Danes under Sweyn, another son of C. They also disputed the sovereignty with Harold, the son of Earl Godwin, who assumed the crown on the death of Edward; and England might have suffered much longer from attempts of the northern chiefs, had it not fallen under the sway of the race of Norman princes, who governed with a more vigorous hand than that of the Anglo-Saxon chiefs.

in'vas, n. [Fr. *caneras*; Lat. *cannabis*, hemp.] A coarse, unbleached cloth made of hemp or flax, chiefly used to make sails for shipping, tents, &c.—Also, a light material woven with the warp and woof at intervals, so as to leave square interstices between them, and used by ladies for tapestry and Berlin-wool work.—Painter's canvas, on the contrary, is a material of very close texture, called "ticking." It is generally purchased stretched on frames of various sizes, and primed with a light neutral gray or drab tint ready for use.

(Naut.) The sails of a ship, taken generally.

"Set every stitch of canvas to woo the freshening wind." *Mackay*.

z. Made of canvas: as, a *canvas awning*.

in'vas-back, n. (Zool.) The *Aythya vallisneria*, a sea-duck of the genus *Aythya*, peculiar to N. America, and perhaps the most delicious of all water-fowl. It is 2 feet long, and 3 feet wide, and when in good order weighs three pounds. The beak is large, and of a glossy black; the head and part of the neck of a rich glossy reddish-chestnut hue, ending in a broad space of black that covers the upper part of the breast; back, scapulars; lower part of the breast, and belly, white, faintly marked with an infinite number of transverse wavy lines, or points; wing-coverts gray-spotted; tail very short, and pointed; legs and feet very pale ash. The female is smaller, and not so brightly colored as the male. These birds arrive in the United States, from the north, about the middle of October, and, principally, assemble in the numerous rivers in the neighborhood of Chesapeake Bay. When they first arrive they are very lean; but from the abundance of their favorite food, they become fat about November. The excellence of the flesh of the C. B. causes them to be much sought after for the market, where they always command a high price.

in'vas-climber, n. A sailor; one who goes aloft to fur and handle sails.

in'vass, v. a. [O. Fr. *cannabasser*, from Lat. *cannabis*, hemp.] To sift something, as if through canvas; to search; to examine; to scrutinize.

"I have canvassed the matter with all possible diligence." *Woodward*.

Fig. 503. — CANVAS-BACK DUCK.
(*Aythya vallisneria*.)

—To debate; to discuss; as, to *canvass* a question.

—To go through the form of solicitation; as, to *canvass* a city for votes.

—v. i. To solicit votes or interest; to use efforts to obtain; to make interest in favor of; preceding *for*; as, to *canvass for* a seat in Congress.

—n. The act of examining the returns of votes for a public officer. This duty is usually intrusted to certain officers of a state, district, or county, who constitute a board of canvassers or scrutineers. The determination of the board of canvassers of the persons elected to an office is *prima facie* evidence only of their election. A party may go behind the canvass to the ballots, to show the number of votes cast for him. The duty of the canvassers is wholly ministerial.

—Examination after the manner of debate or discussion. "I deemed worthy the *canvass* and examination of sober and considerate men." — *More*.

—A seeking, solicitation, or effort to obtain.

Can'vasser, n. One who solicits votes, or goes about to make interest. — One who examines the returns for a public officer; a scrutineer.

Can'ville, in Kansas, a post-village of Neosho co.

Can'y, a. [See CANE.] Consisting of canes; having canes in plenty.

—Made of canes.

Can'y Hollow, in Virginia, a post-office of Lee co.

Can'yon, n. See CANYON.

Can'yon (or CAÑON) City, in Colorado, the capital of Fremont co. Pop. (1890) 2,825; (1897) abt. 3,500.

Can'yon City, in Oregon, the capital of Grant co.

Can'yonville, in Oregon, a vill. of Douglas co., on S. Fork of Umpqua River, 26 m. of Roseburg.

Canzone, (kân-zô'ne, n. [It., from *cantare*, to sing.] (Poet.) A kind of lyric poem. Adopted, with some alteration, from the poetry of the Troubadours, it found its way into Italy in the 13th century. It is divided, like the Greek strophic ode, into stanzas, in which the number and place of rhymes and metre of verses respectively correspond. The last stanza, commonly shorter than the others (the ode of the *epidius*), is called *congedo* or *ripresso* in old French *venuey*, and consisted, generally, of a valedictory address to the canzone itself. It received its classical stamp principally from Dante and Petrarch; and with Tasso and Chiabrera it began to deviate from its strict form.

Canzonet, (kân-zô-net', n. [It. *canzonetta*, dim. of *canzone*, a song. See CANTO.] (Mus.) A short song, in one, two, or three parts. The Neapolitan *C.* has two strains, each of which is, like the French *vaudeville*, sung twice over. The Sicilian *C.* is in a kind of jig-time, with six or twelve quavers in the bar. Sometimes both are rondos, and repeat the first strain for an ending.

Caoutchine, (kâ-oot'chin, n. (Chem.) A liquid substance obtained from caoutchouc or INDIA-RUBBER, q. v.

Caoutchouc, (kâ-oot'chouc, n. (Bot.) The Indian name of a very valuable substance, called also *Gum-elastic*, and, more generally, *INDIA-RUBBER*, q. v.

Caoutchouc Mineral, n. (Chem.) An elastic bituminous mineral, resembling caoutchouc in its physical properties. A few specimens of this substance have been found in a lead-mine in Derbyshire, England; and in bituminous limestone at Woodbury, in Connecticut.

Cap, (kap, n. [A. S. *cappe*; Dan. *cap*; Ger. *kappe*; Fr. *cappe*, probably from the root of Gr. *skapō*, anciently *kepō*, to cover.] A covering for the head; the garment that covers the head.

"Here is the *cap* your worship did bespeak." — *Shaks*.

—An ensign of a certain dignity; as, a cardinal's *cap*.

"Henry the Fifth did sometimes prophesy,
If once he came to be a cardinal,
He'd make his *cap* co-equal with the crown." — *Shaks*.

—The top; the highest; the uppermost; as, the *cap* of a mountain-peak.

"Then art the *cap* of all the fools alive." — *Shaks*.

—A wooden bowl for containing food, whether solid or liquid.

—A reverence or salutation, made by moving or removing the *cap*. (O.)

"Should the want of a *cap* or a cringe so mortally discompose him?" — *L'Estrange*.

(Arch.) The mouldings which form the head of a pier or pilaster.

(Joinery.) The uppermost part of an assemblage of principal or subordinate parts. The term is applied to the capital of a column, the cornice of a door, the capping or uppermost member of the surbase of a room, the hand-rail of a stair, when supported by an iron stay, &c.

(Naut.) A thick, strong block of wood with two holes through it, one square and the other round, used in ship-building to confine together the head of a mast and the lower part of that next above it.

(Gun.) *Cap of a cannon.* See APRON. — *Cap of a musket, &c.* See PERCUSSION-CAP.

Cap of Maintenance, (Hist.) The Cap of State carried before the English sovereigns at their coronation. — *To set one's cap at, or for.* Spoken of a woman who adopts artful methods of gaining a man's affections.

—v. a. To cover; to cover the top or end.

"The bones next the joint are *capped* with a smooth cartilaginous substance." — *Derham*.

—To deprive of a *cap*.

"Boys use sometimes to *cap* one another." — *Spenser*.

—To furnish with a *cap*; as, to *cap* a musket.

—To render or make complete; to give the finishing point to; to consummate; as, to *cap* a joke.

"There is an author of ours, whom I would desire him to read, before he ventures at *capping* characters." — *Atterbury*.

To cap verses. To name alternately verses beginning with a particular letter.

—v. i. To uncover the head out of deference; as, to *cap* a college dignitary. (O.)

Capability, n. Capacity; quality of being capable.

Capable, (kâ'pa-bl, a. [Fr. *capable*; from Lat. *capio*, to take or seize.] Having capacity or ability to take, hold, contain, or comprehend; as, a ship *capable* of carrying a large freight.

—Having sufficient ability, power, skill, or fitness to perform or execute; with powers to know, understand, or comprehend; equal to; qualified for; as, a *capable* general.

Capableness, n. Capacity; strength of understanding; state or quality of being capable.

Capac, in Michigan, a post-office of St. Clair co.

Capacify, (ka-pas'i-fy, v. a. To qualify. (R.)

Capacious, (ka-pâ'shus, a. [Lat. *capaz*, *capacis*, from *capio*.] Holding, containing, or embracing much; wide; large; as, a *capacious* harbor.

—Extensive; comprehensive; able to take a broad view of things; capable of great designs; as, a *capacious* mind.

Capaciously, adv. In a wide or capacious manner.

Capaciousness, n. State or quality of being capacious; largeness.

Capacitate, (ka-pas'i-tât, v. a. To make able or capable; to enable; to qualify.

"By this instruction we may be *capacitated* to observe these errors." — *Dryden*.

Capacitation, n. Act of making capable. (R.)

Capacity, (ka-pas'e-ty, n. [Fr. *capacité*; Lat. *capacitas*, from *capaz*, from *capio*.] State or power of being capable or capacious; power of containing or holding; extent of room or space; — used in relation to physical things.

"Space, considered in length, breadth, and thickness, I think, may be called *capacity*." — *Locke*.

(Philos.) The susceptibility of the mind of being affected by a particular class of emotions. It signifies literally "room for," and denotes the passive power of the mind as distinguished from *faculty*, which is active power. It is an aptitude to receive certain modifications of our consciousness, in receiving which we are passive. The terms power, faculty, capacity, are more appropriately applied to natural than acquired capabilities, and are then inapplicable to mere habits.

—Ability; active power; elementary strength.

"A cause with such *capacities* endued." — *Blackmore*.

—Outward condition, state, circumstances, or character; as, in the *capacity* of an author.

"You desire my thoughts as a friend, and not as a member of parliament; they are the same in both *capacities*." — *Swift*.

(Law.) Ability, power, qualification, or competency of persons, natural or artificial, for the performance of civil acts depending on their state or condition as defined or fixed by law; as, the *C.* to devise, to bequeath, to grant, or convey lands, to make a contract, and the like.

(Geom.) The solid contents of a body.

Capacity for heat. Experiment shows that different quantities of heat are required to raise different bodies to the same temperature, and those substances which require the largest quantity of heat to be raised to a given temperature are said to have the greatest *capacity for heat*. — See HEAT.

Cap-a-pie, (kâp-a-pe', [O. Fr., head to foot.] From head to foot; all over; entirely; as, a knight armed *cap-a-pie*. — See ARMOR.

Caparison, (ka-par'le-zon, n. [Fr. *caparaçon*; Sp. *caparazon*, a cover, augmentative of *capa*, a cape, covering.] The covering or housing of a horse; a cloth or trapping laid over the saddle or furniture of a horse.

"Their horses cloth'd with rich *caparison*." — *Dryden*.

—Sumptuous, or fine, clothing.

"My heart groans beneath the gay *caparison*." — *Smollett*.

—v. a. [Fr. *caparaçonner*.] To cover with a cloth, as a horse.

"The steeds *caparisoned* with purple, stand." — *Dryden*.

—To dress finely; to be attired richly.

"I am *caparisoned* like a man." — *Shaks*.

Capar'isoned, a. (H-r.) Applied to a war-horse fully equipped for the field.

Cap-case, n. A band-box; a travelling case.

Cape, (kâp, n. [Fr. *cap*; It. *capo*; Lat. *caput*, head.] (Geog.) The extreme point of a promontory, or of that portion of land which juts out into the sea beyond the general line of the coast; a headland; as, *Cape Horn*. On rocky and much indented coasts, capes generally terminate in acute angles, whence they are sometimes denominated *points*, and if the portion of the land which projects is small or not high, the appellation assigned to it in England is *ness*, as *Sheerness*; in Scotland, *mull*, as the *Mull of Galloway*.

—The neck-piece of a cloak or coat that covers the shoulders; as, a policeman's *cape*.

"He was clothed in a robe of fine black cloth, with wide sleeves and a *cape*." — *Bacon*.

—A description of wine made at the Cape of Good Hope, resembling inferior sherry.

—v. i. (Naut.) To head towards; as, the schooner *caped* north-east by north.

Cape Agul'has, the most southern point on the coast of Africa, E. of the Cape of Good Hope; Lat. 34° 51' 30" S., Lon. 19° 36' 30" E.

Cape Al'bert, in the E. part of Ellesmere Island, on Smith's Sound; Lat. 79° 20' N., Lon. 78° W.

Cape Alexan'der, at the entrance of Dease Strait, on N. coast of British America; Lat. 68° 55' N.; Lon. 106° 45' W.

Cape Al'fred, the S.E. extremity of Victoria Land, on Victoria Strait; Lat. 69° 40' N.; Lon. 161° 20' W.

Cape An'derson, at the entrance of Behring's Straits on the E. point of the island of St. Lawrence; Lat. 63° N.; Lon. 168° 30' W.

Cape An'guilla, on the coast of Newfoundland; Lat. 47° 54' N.; Lon. 59° 17' W.

Cape Ann, in *Massachusetts*, the E. extremity of Essex co., 31 m. N.W. by E. of Boston; Lat. 42° 38' 18" N.; Lon. 70° 34' 42" W. Thatcher's Island, about 2 m. E. of the southern point, forms the northern limit of Massachusetts Bay, upon which are 2 fixed lights, $\frac{1}{2}$ of a m. apart, and 90 ft. above the level of the sea.

Cape Anne, the N.W. extremity of N. Somerset, at the entrance of Peel Sound; Lat. 74° 5' N.; Lon. 95° W.

Cape Ar'ago, in *Oregon*. See ARAGO.

Cape An'gris, in *Missouri*, a post-village of Lincoln co., on Mississippi River, 67 m. from St. Louis.

Cape Bar'ing, at the entrance of Russell's Gulf, in the N.W. of Wollaston Land; Lat. 70° N.; Lon. 117° 20' W.

Cape Bar'row, in the N. of British America, on the Arctic Ocean; Lat. 68° 5' N.; Lon. 111° W.

Cape Bath'urst, in British America, on the Arctic Ocean; Lat. 70° 30' N.; Lon. 127° 30' W.

Cape Bea'ta, on S. coast of Hayti; Lat. 17° 42' N.; Lon. 71° 20' W.

Cape Beau'fort, a headland of *Alaska*; Lat. 69° N.; Lon. 163° W.

Cape Beaufort, a headland of British America, on E. of Cockburn Gulf; Lat. 67° 40' N.; Lon. 96° W.

Cape Bex'ley, a headland in the N. of British America; Lat. 69° N.; Lon. 114° 45' W.

Cape Bird, the S. extremity of N. Somerset, on Victoria Strait; Lat. 71° 53' N.; Lon. 95° W.

Cape Blanco de Santa Maria, on W. coast of *California*; Lat. 29° 28' N.; Lon. 115° 20' W.

Cape Blanco, or **Oxford**, in S.W. of *Oregon*, 25 m. N. of the mouth of Rogue river; Lat. 42° 40' N.; Lon. about 124° 45' W.

Cape Bo'ius Head, in *Ireland*, a headland on the N.W. of the entrance into Ballinaskelligs Bay; Lat. 51° 48' N.; Lon. 10° 15' W.

Cape Bon, or **Ras Adder**, the northernmost point of Africa, on the Mediterranean, 58 m. N.E. of Tunis; Lat. 37° 4' 20" N.; Lon. 10° 53' 35" E.

Cape Bonavis'ta, on the E. coast of Newfoundland, forming the S.E. limit of a bay of the same name; Lat. 48° 42' N.; Lon. 53° 8' W. It has a light-house.

Cape Breton, (*bré'ton*), a large, irregularly shaped island of British America, separated from the N. extremity of Nova Scotia, of which prov. it is a part, by a narrow, navigable channel. It forms the S.E. boundary of the Gulf of St. Lawrence, and lies between 45° 27' and 47° 4' N. Lat., and 59° 45' and 61° 38' W. Lon. Area, about 4,000 sq. m. The island has many fine harbors; that of Sydney, on the E. coast, being one of the best in the prov. Louisbourg, once so famous in American history, lies on the S.E. coast of the island. The climate of C. B. is subject to considerable extremes; the mean summer heat is said to be 80° Fahr., while in winter 20° below zero is not a very uncommon degree of cold. This island possesses strata of coal in such plenty, that it is believed there is enough to supply the world for centuries; gypsum and salt are also largely found. The vegetable products resemble those of Canada. The exports consist chiefly of timber to Great Britain, fish to the W. Indies, coal to the U. States, and corn. *Cap. Sydney*. The French first colonized this island in 1712, but it was taken from them by the English in 1745, under whose rule it has since remained. *Pop.* in 1891, 86,790.—The most E. co. of C. B. island and Nova Scotia.

Cape Bul'len, to the S. of N. Devon, and W. of Lancaster Sound; Lat. 74° 25' N.; Lon. 85° W.

Cape By'am Martin, in Prince William's Land, at the N.W. extremity; Lat. 75° 35' N.; Lon. 77° W.

Cape Canav'eral, in *Florida*, on the E. coast, 135 m. S.E. of St. Augustine, has a revolving light in a tower 55 feet high; Lat. 28° 27' N.; Lon. 80° 33' W.

Cape Can'so, or **Can'sean**, in Nova Scotia, at S.E. extremity; Lat. 45° 17' N.; Lon. 61° W.

Cape Catoche', in Central America, a headland forming the N.E. extremity of the peninsula of Yucatan; Lat. 21° 36' N.; Lon. 87° 6' W.

Cape Charles, in Labrador, on the northern coast, and at the entrance of the Straits of Belleisle; Lat. 52° 15' N.; Lon. 55° 20' W.

Cape Charles, in *Virginia*, in the S. part of Northampton co., 25 m. N.N.E. of Norfolk. There is a light-house, showing a revolving light on the N. end of Smith's Island, about 65 feet above the level of the sea; Lat. 37° 3' N.; Lon. 76° 2' W.

Cape Chig'necto, or **CHIGNITOU**, in Nova Scotia, a promontory at the head of the Bay of Fundy; Lat. 47° 24' N.; Lon. 64° 37' W.

Cape Chud'leigh, in Labrador, a headland at the entrance of Hudson's Straits; Lat. 60° 12' N.; Lon. 65° 25' W.

Cape Church'ill, in British America, a headland on the W. shore of Hudson's Bay; Lat. 58° 48' N.; Lon. 93° 12' W.

Cape Clar'ence, a headland at the northern extremity of Jones's Sound, Baffin's Bay; Lat. 76° 45' N.; Lon. 77° 45' W.

Cape Clar'ence, in N. Somerset, a headland in N.W. part, at the entrance of Barrow's Straits; Lat. 73° 50' N.; Lon. 90° 10' W.

Cape Clear, a bold promontory, rising 400 feet above the level of the sea, on the S. side of Clare Island, near the W. extremity of St. George's Channel, and about 7 m. S.E. from Baltimore, co. Cork, Ireland. Adjoining the Cape is a light-house of the first class, with revolving lights, having the lantern elevated 455 feet above

the level of the sea. The light-house is in Lat. 51° 26' 3" N., Lon. 9° 29' 30" W. This is the point from which ships leaving St. George's Channel for the W. usually take their departure, and those arriving prefer making it their landfall.

Cape Cockburn, (*kō'burn*), a headland on the northern part of British America; Lat. 68° 50' N.; Lon. 115° W.

Cape Cod, a sandy peninsula forming the S.E. extremity of Massachusetts, co. Barnstable, and enclosing Cape Cod Bay on the S and E. It is about 65 m. long, and varies from 1 to 20 m. wide. The N. extremity is called *Race Point*, on which is a revolving light 155 feet above the level of the sea. Lat. 42° 3' 40" N.; Lon. 70° 14' 48" W. The light-house called *Cape Cod* is a fixed light on the Clay Ponds (Highlands), 200 feet above high-water mark, Lat. 42° 2' 24" N., Lon. 70° 4' 18" W. Though a sandy district, the cape is no barren waste; its numerous bays furnish many harbors, and about these are pleasant and thriving villages of intelligent and enterprising people. — See BARNSTABLE.

Cape Col'borne, in the southern part of Victoria Land, in the Arctic Ocean; Lat. 68° 50' N.; Lon. 105° 10' W.

Cape Col'ony. See CAPE OF GOOD HOPE.

Cape Com'bermere, in the S.W. part of Ellesmere Island, in Baffin's Bay; Lat. 77° 5' N.; Lon. 75° 45' W.

Cape Com'fort, a headland of Southampton Island, in Hudson's Bay; Lat. 64° 55' N.; Lon. 82° 30' W.

Cape Como'rin, the most southern extremity of Hindostan; Lat. 8° 5' N., Lon. 77° 37' E.; so low that from the deck of a large ship it is not discernible above the distance of 12 to 16 m.

Cape Concepcion, in *California*, the S.W. extremity of Santa Barbara co.; Lat. 34° 26' N.; Lon. about 120° 25' W.

Cape Corrien'tes, on the S.W. coast of Mexico; Lat. 20° 22' N.; Lon. 105° 35' W.

Cape Corrien'tes, a headland near the S.W. extremity of Cuba; Lat. 21° 45' N.; Lon. 84° 30' W.

Cape Cruz, on the S. coast of Cuba; Lat. 19° 47' N.; Lon. 77° 42' W.

Cape da-Ro'ea, the most western headland of Portugal, with a light-house and fort, 30 m. from Lisbon.

Cape Den'high, (*dēn'be*), in *Alaska*, on W. coast, forming the extremity of a peninsula in Norton Sound; Lat. 61° 17' N.; Lon. 161° 53' W.

Cape Desola'tion, in *Greenland*, is the S.W. extremity of Nunar-Sook Island; Lat. 60° 50' N.; Lon. 48° 50' W.

Cape Di'amond, in prov. of Quebec, at the confluence of the St. Charles and St. Lawrence rivers, being the extremity of a promontory 333 feet above the river, upon which stands the citadel of Quebec.

Cape Diamonds. See AFRICA; DIAMONDS; DIAMOND FIELDS, and VAAL.

Cape Diggs, in Brit. Am., on the channel from Hudson's Bay to Hudson's Strait; Lat. 62° 45' N., Lon. 79° W.

Cape Disappoint'ment, in *Washington*, near ent. of Columbia river; Lat. 46° 12' N., Lon. 124° 15' W.

Cape Dis'cord, in *Greenland*, on the E. coast; Lat. 60° 30' N., Lon. 44° 30' W.

Cape Dnd'ley Diggs, a promontory on the W. coast of Greenland; Lat. 76° 15' N., Lon. 69° 7' W.

Cape Dun'das, the N. extremity of Prince of Wales Land, at W. entrance of Baring Channel; Lat. 74° N., Lon. 100° W.

Cape Dun'glison, projecting from Grinnell Land into Smith Strait; Lat. 78° 44' N., Lon. 77° 5' W.

Cape Dy'er, in W. of Prince of Wales Land, at the entrance of Oummaney Bay; Lat. 73° 20' N.; Lon. 101° 30' W.

Cape Eg'mont, on S.E. coast of Prince Edward Island, at the entrance of Egmont Bay; Lat. 46° 28' N., Lon. 64° 10' W.

Cape Eliz'abeth, in *Maine*, 6 m. S. by E. of Portland. On this headland are two light-houses, about 300 yards apart, with lights 140 feet above the level of the sea; Lat. 43° 33' 36" N., Lon. 70° 11' 36" W.

Cape Eliz'abeth, in *Maine*, a township of Cumberland co., 2 m. S. of Portland.

Cape Eliz'abeth, in *Maine*, a post-village of Cumberland co., 2 m. S. of Portland.

Cape Fair'weather, on W. coast of N. America; Lat. 58° 55' N., Lon. 138° W.

Cape False, on the coast of Central America; Lat. 15° 13' N., Lon. 83° 22' W.

Cape Fare, in *Missouri*, a village of Taney co., 160 m. S.S.W. of Jefferson City.

Cape Fear, the S. point of Smith's Island, *N. Carolina*. About 1 m. from the shore stands Bald Head Light-house, which with a light is 90 feet high, and is 110 feet above the level of the sea; Lat. 33° 48' N., Lon. 77° 37' W.

Cape Fear River, in *N. Carolina*, the name given to the Haw and Deep rivers after their junction. Cape Fear River flows into the Atlantic near 33° 55' N. Lat. and 78° 5' W. Lon., by two channels separated by Smith's Island. It is navigable for steamboats 120 m. from its mouth, up to Fayetteville.

Capefigue, BAPTISTE HONORÉ RAYMOND, (*kap'feg*), a very prolific French historian and miscellaneous writer. B. at Marseilles, 1801. He has produced upwards of 100 volumes, but few of them, if any, will survive their author. D. 1872.

Cape Finistère, in France, dep. Finistère, is the most W. headland of France; Lat. 48° 20' N., Lon. 4° 50' W.

Cape Finisterre, in Spain, the most W. headland on the coast of Galicia; Lat. 42° 54' N., Lon. 9° 16' W.

Cape Flat'tery, in *Washington*, a high promontory in N. W. extremity of Lewis co., bounded by the Straits of Juan da Fuca on the N. E., and the Pacific Ocean on S. W.; Lat. 48° 45' N., Lon. 124° 30' W.

Cape Flin'ders, N. America, in Kent Peninsula, at the entrance of Coronation Gulf; Lat. 68° 15' N., Lon. 109° 15' W.

Cape Flor'ida, in *Florida*, the E. point of Key Biscayne, 330 m. S. by E. of St. Augustine.

Cape Foul'weather, in *Oregon*, the N. W. of Lehton co.; Lat. 40° 45' N., Lon. 124° 15' W.

Cape Fox, on N. coast of Anticosti Island; Lat. 49° 22' N., Lon. 62° 10' W.

Cape Frank'tin, at S.W. extremity of Kent Peninsula, on Dease Strait; Lat. 68° 40' N., Lon. 109° W.

Cape Fred'erick VII., in N. of Prudhoe Island, N. of Smith's Sound; Lat. 79° 40' N., Lon. 70° 15' W.

Cape Freels, on E. coast of Newfoundland; Lat. 49° 38' N., Lon. 53° W.

Cape Ful'terton, on Hudson's Bay; Lat. 64° 10' N., Lon. 88° 20' W.

Cape Gar'ry, in the S. of N. Somerset, forming the S. boundary of Creswell Bay; Lat. 72° 23' N., Lon. 83° 30' W.

Cape Gas'pé, in prov. of Quebec, a headland on the Gulf of St. Lawrence; Lat. 48° 45' N., Lon. 64° 10' W. It is the N. boundary of the Bay of Gaspé, an inlet of the Gulf of St. Lawrence.

Cape Girardeau, in *Missouri*, an E.S.E. co., bordering on the Mississippi River. Area, 875 sq. m. It is bounded on the E. by the Mississippi River, and drained by Apple Creek; surface nearly level; soil rich and extensively cultivated. *Cap. Jackson*. *Pop.* 22,960.

—A city of the above co., on the Mississippi river, 45 m. above the mouth of the Ohio river. *Pop.* in 1890, 4,297.

Cape Gra'cias-a-Di'os, a headland on the Mosquito coast, in Central America; Lat. 14° 55' N.; Lon. 83° 15' W.

Cape Grim'ington, on E. coast of Labrador; Lat. 55° 55' N.; Lon. 61° 45' W.

Cape Guar'dafui, the most E. point of Africa, at the entrance of the Sea of Bab-el-Mandeb; Lat. 11° 50' N.; Lon. 51° 20' E.

Cape Hal'kett, in *Alaska*, a headland in the Arctic Ocean, bounding Harrison Bay on the W.; Lat. 70° 48' N.; Lon. 151° 55' W.

Cape Ham'ilton, on the W. coast of Wollaston Land, in the Arctic Ocean; Lat. 68° 30' N.; Lon. 116° 30' W.

Cape Har'dy, on N. part of Prince of Wales Land, at the entrance of Baring Channel; Lat. 73° 55' N.; Lon. 97° 30' W.

Cape Hath'erton, the W. extremity of Prudhoe Island, in Smith's Sound; Lat. 78° 30' N.; Lon. 75° 30' W.

Cape Hat'teras, on the E. of *N. Carolina*, and 120 m. S. by E. of Cape Henry. About $\frac{1}{4}$ m. from the point of the cape is a light-house which is 95 ft. above the level of the sea. Lat. 35° 14' N.; Lon. 75° 30' W.

Cape Hay'tien, (formerly CAPE FRANÇAIS and CAPE HENRY), a seaport town on the N. coast of the island of Hayti. It has the safest harbor of the island. *Pop.* Perhaps 10,000. Lat. 19° 40' N.; Lon. 69° 54' W.

Cape Henlo'pen, on the E. coast of *Delaware*, and on the S.W. of the entrance into Delaware Bay, 13 m. S.S.W. of Cape May. On it is a fixed-light 182 ft. above the level of the sea. Lat. 38° 47' N.; Lon. 75° 5' 30" W.

Cape Henri'eta Maria, in British America, the dividing line on the W. between Hudson and James Bays; Lat. 55° 10' N.; Lon. 82° 30' W.

Cape Hen'ry, on the N.E. coast of *Virginia*, at the S. entrance to Chesapeake Bay, 12 m. S. by W. of Cape Charles; Lat. 36° 50' N.; Lon. 76° 4' W. On it is a fixed light, 120 ft. above the level of the sea.

Cape Hope Advance', a headland of British America, on Hudson's Straits. Lat. 61° 45' N.; Lon. 72° 10' W.

Cape Horn, a famous promontory of S. America, commonly regarded as the S. extremity of that continent. In point of fact, however, Cape Horn does not belong to the continent, but to a small island of the same name the most S. of the Terra del Fuego group, separated from the continent by the straits of Magellan, or Magelhaens. Cape Horn is the most S. point of the island and is high, black, precipitous, destitute of all vegetation, and having a most desolate appearance. According to Wendell, it is in Lat. 59° 29' 21" S., Lon. 67° 14' W. Malespina places it in Lat. 55° 58' 30" S., Lon. 67° 21' 15" W. The dangers attending the doubling of Cape Horn have, in consequence of the improvements in navigation, been very greatly diminished. The coast may be approached with comparatively little danger; the water being deep, and free from either rocks or shoals. Different opinions are entertained as to the proper season for passing the Cape. Captain Basil Hall preferred the summer (that is the winter of the N. hemisphere), on account of the great length of the day, and the comparative fewness of icebergs and floating masses of ice, which are always dangerous.

Cape Isabel'ta, a headland of Boothia Felix, in British America; Lat. 69° 26' N.; Lon. 93° 51' W.

Cape Isabel'ta, in the E. part of Ellesmere Island, at the entrance to Smith's Sound; Lat. 78° 10' N.; Lon. 78° W.

Cape Island City, in *New Jersey*, on Cape Island Cape May co., 100 m. S.S.E. of Philadelphia. It is one of the most fashionable watering-places in the United States, now generally called CAPE MAY.

Cape Jer'emil, on the N.W. coast of Hayti, 18 m. E. of Donna Maria Cape; Lat. 18° 16' N.; Lon. 74° 12' W.

Cape Ka'ter, in the S.W. of Cockburn Island, on the Gulf of Boothia; Lat. 71° 53' N.; Lon. 90° W.

Cape Kaye, a promontory in the W. of Cockburn Island, N. of Fitzgerald Bay; Lat. 72° 30' N.; Lon. 9° 30' W.

Cap'el, *n.* (*Mining*.) A stone composed of quart

senori, and hornblende, usually occurring in one or both walls of a lode, and more frequently accompanying tin than copper ores.

Cape Lady Franklin, a head-land on S.W. of Wollaston Land, at the entrance of Dolphin and Union straits; Lat. 68° 30' N.; Lon. 113° W.

Cape la Hague, a promontory of France, forming the N.W. extremity of the peninsula of Cotentin, dep. Manche. It juts into the English Channel, opposite the Island of Alderney.

Cape la Hogue, often confounded with Cape la Hague, is situated on the E. side of the same peninsula. Here the French were defeated in 1692 by the united English and Dutch fleets.

Capelan, *CAPELIN*, *CAPLIN*, *n.* (*Zool.*) The *Molotus villosus* or *Grenulanicus*, a small fish very abundant on the coast of Greenland, chiefly used as bait for cod.

Cape Lean, or *Loop Head*, on W. coast of Ireland, at the mouth of the River Shannon; Lat. 52° 32' N.; Lon. 9° 45' W.

Cape Lewis, in the W. part of Greenland, on Baffin's Bay; Lat. 75° 35' N.; Lon. 58° 40' W.

Cape Linguetta, a head-land of European Turkey, 2,200 feet high. It forms the termination of the *Chimara*, or *Acroceraunian Mountains*, and bounds the E. entrance into the Adriatic.

Cape Lisburn, on the W. coast of Alaska, extending into the Polar Sea; Lat. 69° 6' N.; Lon. 165° 22' W.

Capella, *n.* (*Astron.*) A bright star of the first magnitude, on the left shoulder of Auriga. It is also called *Capra*, or the *she-goat*, a name also sometimes given to Capricorn. The poets fable C. to be Amalthea's goat, which suckled Jupiter in his infancy.

Capellet, *n.* [*Fr. caplet*] (*Farriery*.) A swelling on the point of a horse's elbow, resembling a wen.

Cape Lookout, in Hudson's Bay; Lat. 55° 30' N.; Lon. about 85° 40' W.

Cape Lookout, E. of N. Carolina, 85 m. S.W. of Cape Hatteras, has a light 100 ft. high; Lat. 34° 37' N., Lon. 76° 33' W.

Cape Lookout, in Oregon, situated E. of Yamhill co.; Lat. 45° 30' N.; Lon. 124° W.

Cape Louis Philippe, in the S. of Wollaston Land in the Arctic Ocean; Lat. 68° 35' N.; Lon. 104° 35' W.

Cape Malabar, at the S.E. extremity of Massachusetts; Lat. 41° 34' N., Lon. 69° 55' W.

Cape May, in New Jersey, a county at the S. extremity of the State; area, 265 sq. m. It is bounded E. by the Atlantic, W. by Delaware Bay, and partly N. by Tuckahoe Creek. Its soil is alluvial, and surface level. A beach, situated on the Atlantic coast, and covered with grass to the width of about 2 m., is divided by numerous inlets through which the sea penetrates into the marshes, and forms salt-water lakes or lagoons. Near Dennisville is a deposit of cedar timber of an indefinite depth, which, from the growth of vegetation above it, is believed to be at least 2,000 yrs. old. *Cap.* Cape May Court-House. Pop. (1890) 11,270.—**CAPE MAY**, a headland at the South extremity of N. Jersey, and at the entrance to Delaware Bay, has a light which revolves once in three minutes, and is elevated 90 ft. above the level of the sea.—A borough of above co., famous as a summer resort. See *CAPE ISLAND CITY*.

Cape May Court-House, in New Jersey, a post-town, cap. of Cape May co., in Middle township, 80 m. S. of Trenton. Pop. (1890) 1,250.

Cape Melville, a promontory of Greenland, forming the W. boundary of Melville Bay.

Cape Mendocino, in California, near the S.W. of Humboldt co.; Lat. 40° 28' N.; Lon. 124° 26' W.

Cape Monte Christi, on the N. coast of Hayti; Lat. 19° 54' N.; Lon. 71° 45' W.

Cape Napier, in the S. of Prince Albert Land, at the entrance of Russell Gulf; Lat. 70° 30' N., Lon. 116° 40' W.

Cape Neddock, in Maine, 35 m. S.W. of Portland. The light-house is situated on Goat Island, and contains a fixed light 33 ft. high; Lat. 43° 10' N., Lon. 70° 35' W.

Cape North, the N. E. extremity of the island of Cape Breton; Lat. 47° 2' N., Lon. 60° 25' W.

Cape North, on the N. coast of Prince Edward Island, in the Gulf of St. Lawrence; Lat. 47° 5' N.; Lon. 64° 5' W.

Cape North, the northernmost point of Europe, at the N. extremity of the island of Magerøe, Norway. It consists of a long chain of precipitous rocks, jutting out into the sea, about 1,200 feet high; Lat. 71° 10' N., Lon. 25° 48' E.

Cape of Good Hope, a celebrated promontory near the S.W. extremity of the African continent; Lat. 32° 23' 40" S., Lon. 15° 32' 25" E. It was first discovered by an European, Bartolomeo de Diaz, a Portuguese navigator, in 1486. Diaz, however, merely saw it; the violence of the winds, the shattered condition of his ships, and the turbulence of his crews, prevented him from doubling it; and these circumstances doubtless induced him to name it *Cabo Tormentoso*, or "Stormy Cape," but his sovereign, John II. of Portugal, believing it to be at, or near, that remote extremity of Africa, which the Portuguese had been so long endeavoring to reach, designated it *Cabo da Buena Esperanza*, of which the name we give it is a translation. Vasco de Gama doubled it in 1497, after which it continued for more than a century and a half to be indiscriminately resorted to by European navigators.

CAPE OF GOOD HOPE (*COLONY OF*) usually called *CAPE COLONY*, an extensive colony, or rather territory, so called from the above cape, belonging to Great Britain, in S. Africa, comprising the greater portion of the extremity of that continent S. of Lat. 29° 30', and between Lon. 17° and 27° 30' E. It is bounded on the N. by the Orange River, N. E. by Basutoland, E. by

Natal, S. and W. by the ocean. Area, 221,310 sq. miles. The colony has a coast-line of 1,150 m., broken by numerous bays, the chief of which are St. Helena, Saldanha, and Table bays on the W., and Plattenburg, Simon's, and Algoa bays, &c., on the S. coast.—*GEN. DESC.* The whole country consists of three great plateaux of increasing elevation, forming belts of fertile land, covered with rich vegetation. These are intersected by three great chains of mountains, the *Lange Klop* (or *Long Pass*), running E. and W.; the *Groote Zwaarte Bergen* (Great Black Mountains) reaching sometimes an elevation of 4,000 ft.; and the *Nieuwveldt Gebirge*, between Lat. 32° and 33°, connecting towards the E. with the *Sneeubergen* (Snow Mountains), the highest range in S. Africa, the highest range of which is estimated at not less than 10,000 ft. above the sea, and is covered with snow half the year round. Between this and the second chain is the *Great Karroo*, an arid desert plain nearly 500 m. long by 100 broad. This, however, bears no resemblance to the Sahara, or Arabian deserts, being a sort of table-land, or elevated basin, thinly covered with an argillaceous soil on a substratum of rock or gravel. This plain is occasionally watered by mountain torrents, and is almost destitute of vegetation. The whole tract of country to the N. is much more sandy, barren, and thinly inhabited, than that to the E., which seems to increase in beauty and fertility in proportion as it is distant from the Cape. The principal rivers are the Orange with its many affluents, the Great Berg, the Elephant, the Great Fish River, &c. Considering the great extent of coast, good harbors are few. Saldanha Bv., 65 m. N.W. of Cape Town, is by far the most commodious.—*CLIMATE*. Healthy, though occasionally humid. The mean temp. of the year at Cape Town is about 67° Fahr., that of the coldest month being 57°, and of the hottest 79°.—*MIN.* &c. The general geological character of this country is that of a region of sandstone resting on a bed of granite. Saltpetre, salt, coal, iron, limestone, argilliferous lead, and valuable deposits of diamonds, are among the chief mineral products.—*VEGET.* The flora of the Cape is very varied and beautiful, comprising most European flowers, with many of the richest exotics. Timber of merchantable size is scarce. The aloes grow to perfection, and commands as much as \$100 per cart-load in Cape Town market.—*ZOOLOG.* The zoological character in this colony is analogous to that of Africa generally, though it possesses some peculiar varieties of mammals, as the Cape buffalo and the Springbok.—*AGRIC.* &c. The territory suffers generally from a want of water, hence agriculture is much restricted in its operations; grazing land is, however, plentiful, and forms pasture-lands of very large extent. The soil in some parts is very fertile, producing grain crops of undoubted excellence. The vine is largely cultivated, and some good growths of wine are produced; one of which, the Constantia, brings a high price even in Europe. The more tropical varieties of fruits, and tobacco, are in abundance, and of excellent quality. Sheep-farming is the ruling industry of this territory, and wool the leading article of export.—*MANUFACT.* Leather, rope, hats, &c.—*EXPORTS*. Wool, skins, ostrich feathers, soap, butter, wines, flour, salt, provisions, horses, ivory, whale-oil, aloes, argols, &c.; while the *IMPORTS* comprise East and West India produce and manufactured goods. Exports for 1895-96, \$3,990,680, a large part being Cape diamonds; the imports were \$8,000,000.—*INHABITANTS*. The aboriginal inhabitants are divided into Hottentots and Kaffirs. Malays and Afrikaners (the offspring of a black mother and Dutch father) are numerous, while the remaining portion is composed of English, Dutch, and French colonists.—*GOV.* The executive consists of a governor (appointed by Great Britain), and a council also nominated by the Crown. The legislative power is vested in a council (or Senate) of 22 members, and a House of Assembly of 75 members elected by the body politic. This colony, formerly the key of the Indian Ocean, is the station of both a large military and naval force, but the opening of the Suez canal has greatly diminished its political importance.—*CHIEF TOWNS*. Cape Town (the cap.), Grahamstown, Kimberly.—*HIST.* In 1650, the Cape promontory was colonized by the Dutch, who retained occupation, and largely extended their territory, until 1795, when the English took possession. In 1800 it was restored to the Dutch who ceded it to the English in 1815. Pop. (1895) 2,011,000.

Cape Palmas, a headland of W. Africa, at the S. extremity of the republ. of Liberia; Lat. 4° 22' N., L. 7° 44' W.

Cape Parry, in the Arctic Ocean. There are three capes of this name: the first in Lat. 69° N., Lon. 123° 35' W.; the second in Lat. 72° 22' N., Lon. 22° 2' W.; and the third in Lat. 77° 6' N., Lon. 71° 23' W.

Cape Perpetua, in Oregon, situated near the N.W. point of Umpqua co.; Lat. 44° 15' N.; Lon. abt. 124° 10' W.

Cape Pillar, a high mass of rocks at the S.W. entrance, from the Pacific Ocean, into the Straits of Magellan, and on the N.W. coast of Terra del Fuego.

Cape Porpoise, in Maine, 24 m. S.W. of Portland. The light is on the S.W. side of Goat Island, and is 33 feet high; Lat. 43° 21' N., Lon. 70° 25' W.

—A post-office of York co.

Cape Prince of Wales, a remarkable promontory, forming the most N.W. point of N. America, in Behring's Sea; Lat. 65° 33' 30" N., Lon. 157° 59' 10" W. It terminates in a peaked mountain, which presents a very bold face to the sea. A very dangerous shoal stretches N.E. from the cape.

Cap'er, *v. i.* [*Fr. cabrer*, from *L. Lat. capra*, a she-goat.] To leap; to skip or leap like a she-goat; to dance frolicsely; to prance; to spring.

"He that will caper with me for a thousand marks, let him lend me the money, and have at him."—*Shaks.*

—*n.* A leap; a spring; a skip; a jump.

"The treasurer is allowed to cut a caper on the straight rope."—*Swift.*

Naut. A privateering craft formerly employed by the Dutch.

Caper, *n.* [*Fr. capre*; *Lat. capparis*; *Gr. kapparis*; *Sansk. caphari*, ginger.] (*Bot.*) The flower-bud of the caper-bush. See *CAPPARIS*.

Cape Race, the S.E. extremity of Newfoundland; Lat. 48° 40' N., Lon. 52° 54' W.

Caper-bush, *Caper-tree*, *n.* (*Bot.*) See *CAPPARIS*.

Capercailzie, (*kä-per-käl'ze*), *n.* (*Zoöl.*) See *GROUSE*.

Caper-cutting, *n.* Leaping or dancing about in a fantastic and frolicsome manner.

Cape Ren'el, the N. extremity of N. Somerset, on Barrow Strait; Lat. 74° 10' N., Lon. 93° 15' W.

Cap'erer, *n.* One who dances or capers about nimbly.

"The tumbler's gambols some delight afford;
No less the nimble caperer on the cord."—*Dryden.*

Cape Resolution, a head-land of British America, near the entrance of Hudson's Strait; Lat. 61° 29' N.

Cape River, properly *Faunks*, taking its popular name from the proximity of its mouth to Cape Gracias-a-Dios, on the E. reach of the Mosquito shore in Central America. After a generally N.E. course of nearly 300 m., it enters the Caribbean Sea, about Lat. 14° 59' N., and Lon. 83° 11' W., being navigable for a considerable distance upwards.

Caper-naum, (*anc. Gerg.*) a city of Galilee in Palestine, about 70 m. N. by E. from Jerusalem. It is situated on the N.W. shore of the Sea of Tiberias. It was a place of considerable importance in the time of Christ, who describes it as *exalted unto heaven*. The place derives its chief interest from the manner in which it is mentioned in the New Testament. It was here that Jesus Christ commenced his public ministry; and in its neighborhood he delivered the Sermon on the Mount. Its continued impotence and unbelief, notwithstanding the peculiar opportunities with which it was favored, led to the denunciations pronounced against it. No town now exists on the spot which is usually recognized as the C. of Scripture. This place is now called *Tell-hün*, *Tell-hüm*, *Tell-hown*, *Tal-hern*, or *Tel-hoom*, according as travellers variously pronounce the Arabic name, near which the rivulet El Eshe empties itself into the Lake of Tiberias. The view of the lake from this place is peculiarly grand and impressive. C. is now only a Bedouin station; but the former existence of a town of some importance is proved by fragments of buildings, broken stones, and broken pottery, strewn to a considerable extent around. The foundations of a large and magnificent edifice may still be seen; but not enough of the building itself to determine whether it was a temple or a palace. Dr. Robinson inclines to restore the ancient traditions which identified C. with *Khan-Minyeh*, a ruined village on the N. border of the plain of Gennesareth.

Cape Robertson, the S. extremity of Prudhoe Island, in Baffin's Bay; Lat. 77° 35' N., Lon. 72° 20' W.

Cape Romain, in N. Carolina, a very low point of land, 57 m. N.E. of Charleston. It has a fixed light on the E. end of Great Racoon Key, 57½ ft. above the level of the sea; Lat. 33° 1' N., Lon. 79° 54' W.

Cape Roman, or *ROMANO*, on the W. coast of Florida, a long, low point, containing mangrove trees, 312 m. S. S.W. of Tallahassee; Lat. 25° 41' N., Lon. 80° 5' 30" W.

Cape Ro'manzoff, on the W. coast of Alaska, near the entrance to Behring's Straits.

Cape Ro'zier, on the coast of U. Canada, in the Gulf of St. Lawrence, 9 m. from Cape Gaspe.

Cap'er-sance, *n.* (*Cookery*.) A sauce flavored with capers, usually served as a concomitant to boiled mutton.

Cap'er-tea, *n.* A description of black tea.

Cape Sabine, (*sab'in*), in the E. of Ellesmere's Land, on Smith's Sound; Lat. 78° 45' N., Lon. 77° 30' W.

Cape Sa'ble, in Florida, the most southern point of the mainland of the peninsula. Fort Poinsett is situated on it. Lat. 24° 50' N., Lon. 81° 15' W.

Cape Sable, the S.E. extremity of Nova Scotia; Lat. 45° 26' N., Lon. 65° 38' W.

Cape Sable Island, a small island off the S.W. extremity of Nova Scotia.

Cape Saint Francis, on the E. coast of Newfoundland, and on the E. side of Conception Bay; Lat. 47° 48' N., Lon. 52° 51' W.

Cape Saint George, in Florida, the southern point of St. George Island, S. of Franklin co., having a fixed light 65 feet high; Lat. 29° 35' N., Lon. 85° 4' W.

Cape Saint George, on the W. coast of Newfoundland, at the entrance to St. George Bay; Lat. 48° 29' N., Lon. 59° 16' W.

Cape Saint George, on the N.E. coast of Nova Scotia, at the W. entrance to a bay of its own name; Lat. 42° 52' N., Lon. 62° 51' W.

Cape Saint James, the S. extremity of Queen Charlotte's Island; Lat. about 52° N., Lon. 131° W.

Cape Saint John, the E. point of Staten Island, off the coast of Terra del Fuego, in Lat. 54° 46' S., Lon. 63° 45' W.

Cape Saint Lawrence, the N. extremity of Cape Breton, extending into the Gulf of St. Lawrence; Lat. 47° 5' N., Lon. 60° 35' W.

Cape Saint Lucas, the S. extremity of the peninsula of California; Lat. 22° 44' N., Lon. 109° 54' W.

Cape Saint Mary, on the S. coast of Newfoundland, between Placentia and St. Mary's Bay; Lat. 46° 50' N., Lon. 54° 15' W.

Cape Saint Mary, on S.W. coast of Nova Scotia, forming the S. entrance to a bay of the same name; Lat. 44° 7' N., Lon. 66° 15' W.

Cape Saint Nicholas, on the N.W. extremity of Hayti; Lat. $19^{\circ} 51' N.$, Lon. $73^{\circ} 27' W.$

Cape Sambro, on the S.E. coast of Nova Scotia; Lat. $44^{\circ} 30' N.$, Lon. $63^{\circ} 32' W.$ There is a light-house on it.

Cape San Antonio, the W. extremity of the island of Cuba; Lat. $21^{\circ} 51' 5'' N.$, Lon. $84^{\circ} 57' 2'' W.$

Cape San Blas, a head-land on the N. coast of the isthmus of Panama, at the N.W. entrance to San Blas Bay; Lat. $9^{\circ} 35' N.$, Lon. $78^{\circ} 58' W.$

Cape San Blas, or Saint Blas, in Florida, a low point of land extending about 2 m. from the S. coast, and 125 m. S.E. of Pensacola. It has a revolving light 65 feet above the level of the sea. Lat. $29^{\circ} 39' N.$, Lon. $85^{\circ} 21' W.$

Cape San'ta Catalina, on the W. coast of Central America, 70 m. S.S.W. from Nicaragua; Lat. $10^{\circ} 35' N.$

Cape Shackleton, in the W. of Greenland, off Baffin's Bay; Lat. $73^{\circ} 45' N.$, Lon. $56^{\circ} 30' W.$

Cape Small Point, in Maine, on the W. side of the entrance to Kennebec River; Lat. $43^{\circ} 40' 30'' N.$, Lon. $69^{\circ} 48' 48'' W.$

Cape Southampton, the S. extremity of Southampton Island, on Hudson's Bay; Lat. about $63^{\circ} N.$, Lon. $84^{\circ} W.$

Cape Split, a head-land of Nova Scotia, extending into the Bay of Fundy; Lat. $45^{\circ} 22' 40'' N.$, Lon. $64^{\circ} 15' W.$

Capesterre, (La.) or LE MARIGOT, (*kaps'tair, mar'e-go*), a town of Guadeloupe, 13 m. from Basseterre; pop. 4,500.

Capet, HUGUES, (*ka'pai*), the founder of the third, or, as it has been called from him, the *Capetian* dynasty of French princes, of whom little authentic information is preserved. His own great fief, as Count of Paris, gave him considerable predominance; and on the death of the last of the Carolingians, A. D. 987, Louis V. the Slothful (*Le Fainéant*), he successfully usurped the throne, and was confirmed in its seizure by a confederacy of turbulent barons, who, yielding him as much obedience as it suited them, invested him with the nominal title of king. What remains to be told of Hugues Capet after his succession, belongs entirely to general history. The origin of the name of the family has been disputed, and, indeed, by some has been considered as given in ridicule; but the chroniclers in general affirm that he was a knight of ancient and noble extraction. Both the dates of his usurpation and of his death are uncertain, but the former is usually fixed in A. D. 987, the latter A. D. 996. Thirteen kings (14, if we include John, who lived but eight days, and was never crowned) succeeded from his family; and it was not until 1328 that Philip VI. of Valois transferred the sceptre to his own race. The family of Lorraine, which had been excluded by Hugues Capet when he put aside the right of Charles, Duke of Lorraine, uncle of Louis V., proudly boasted of their Carolingian origin; and the party name *Huguenot*, which arose during the wars of the League, has sometimes been attributed to the attachment manifested by the Reformers to the reigning king, the representative of Hugues Capet, in preference to the *Guises*, who were derived from Charlemagne. On the accession of the line of Bourbon, the name was either adopted by them or given to them; and all the processes in the trial of the unfortunate Louis XVI. were directed against Louis Capet.

Cape Three Points, on the E. coast of Yucatan, extending into Honduras Bay.

Capetian Dynasty. See CAPET, (HUGUES.)

Cape Town, a seaport town of S. Africa, the cap. of Cape Colony, on its S.W. coast, and S. shore of Table Bay, at the foot of Table Mountain, about 32 m. N. from the Cape of Good Hope; Lat. $33^{\circ} 55' 56'' S.$, Lon. $18^{\circ} 1' E.$ It is regularly laid out, and is on the whole a fine

Fig. 504. — CAPE TOWN.

and pleasant town. On the W. side of Cape Town, Table Bay is defended by batteries, placed around, and on, the hill called the *Lion's Rump*; on its E. side the town is protected by fortified lines of defence. The principal public buildings are the Government House, new and handsome Houses of Parliament opened in 1885, the Public Library and Museum, Fine Art Gallery, facing the Botanic Garden, the Standard Bank, and Railway Station. Nearer the sea is the old castle, with its ditch, gate, sally-port, &c. Table Bay is capable of containing any number of ships, and forms a good harbor, except June, July, and August, when it is exposed to a heavy swell from the W. A breakwater, and fine new docks and a graving-dock, have been constructed. British residents in India frequently resort to Cape Town

for their health, and the town has generally the appearance of bustle and gaiety. Balls and the theatre are the favorite amusements. The environs of the town are very picturesque. Pop. (1895) 83,720.

Cape Trafalgar, (anc. *Promontorium Junonis*), in Spain, a head-land on the coast of Cadiz, memorable for the naval battle fought near it, Oct. 21, 1805, between the English under Nelson, and the combined fleets of France and Spain. The English gained a complete victory, though with the loss of their commander.

Cape Van Couver, on the S.W. coast of Alaska; Lat. $60^{\circ} 30' N.$, Lon. $163^{\circ} 30' W.$

Cape Verd, the most W. cape of the W. coast of Africa, between the rivers Senegal and Gambia; Lat. $14^{\circ} 43' N.$, Lon. $17^{\circ} 34' W.$

Cape Verd Islands, (Pg. *Ilhas Verdes*), a group in the N. Atlantic ocean, belonging to Portugal, between Lat. $14^{\circ} 20'$ and $17^{\circ} 20' N.$, and Lon. $22^{\circ} 20'$ and $25^{\circ} 30' W.$, about 370 m. W. of Cape Verd, on the W. coast of Africa, which, as well as the islands, derives its name from the greenish tinge given to the adjoining sea by the abundance of sea-weed. The group consists of 14 islands, (of which 7 are inhabited,) besides islets and rocks, having a united area of abt. 1,790 sq. m. They are, in general, mountainous, rocky, and very ill supplied with water; all are evidently of volcanic origin, and, in Fogo, the most elevated of the group, an active volcano still exists. The climate is exceedingly unhealthy, and droughts are of frequent occurrence. The soil is, in general, poor, and vegetation, consequently, partial. Temperate and tropical fruits flourish luxuriantly. Wild animals are infrequent, but the domestic kinds are well nourished. *Exp.* Cotton, indigo, cattle, hides, cotton, cloth, and rum. Santiago, the principal island, and most southerly of the group, contains the town of Ribeira Grande, formerly the cap.; but, during the dry season, the governor-general now usually resides at Porto Praya, which has a good harbor, and is occasionally touched by vessels bound for India. Porto Grande is, however, decidedly the best harbor in the group. In St. Nicoló, the island second in importance, very good cotton stuffs, stockings, &c. are made. The pop. are a mixed race of Portuguese and negroes. These islands were discovered in 1450 by Antonio de Noli, a Genoese navigator, in the service of Prince Henry of Portugal, by which nation they were colonized.

Capeville, in Virginia, a post-village of Northampton co., on E. side of Chesapeake Bay.

Cape Vincent, in New York, a port of entry of Jefferson co., situated on the river St. Lawrence, and 25 m. W.N.W. of Watertown.

Cape Walker, in the W. of Greenland, on Baffin's Bay; Lat. $75^{\circ} 50' N.$, Lon. $59^{\circ} 30' W.$

Cape-weed, n. (*Bot.*) A dye lichen, called *Rocella tinctoria*, obtained from the Cape Verd Islands.

Cape Wrath, a promontory at the S.W. extremity of Scotland; the light is 406 feet above the sea.

Cape York, in the W. of Greenland, on Baffin's Bay; Lat. $75^{\circ} 55' N.$, Lon. $67^{\circ} W.$

Capias, (*ka'pe-as*), n. [Lat., from *capio*.] (*Law.*) Being the first word of distinctive significance in a writ, when writs were framed in Latin, the word *C.* came to denote the whole class of writs by which a defendant's person was to be arrested. — *C. ad respondendum* is a writ commanding the officer to whom it is directed "to take the body of the defendant, and keep the same to answer the plaintiff." This writ, formerly of great importance, is that which is generally intended by the use of the word *C.*

Capib'ara, or **Capyb'ara**, n. (*Zoöl.*) See HYDROCHERUS.

Capilla'ceous, a. Same as CAPILLARY, q. v.

Capillaire, n. [Fr., from Lat. *capillaris*.] A simple syrup flavored with orange-flower water; it is called by this name from the mucilaginous syrup, directed in old pharmacopœias to be made of the *Adiantum Capillus Veneris*.

Capillament, n. [Lat. *capillamentum*, a head of hair.] (*Bot.*) One of the small threads or hairs in the middle of a flower; a filament.

(*Anat.*) Any villous or hairy covering. Also, a small fibre or fibril.

Capillar'ity, n. [Fr. *capillarité*.] State or quality of being capillary.

Capillary, (*kap'il-la-ri*), a. [Lat. *capillaris*, from *capillus*, a hair; allied to *caput*, head.] Resembling a hair; fine; minute; having a bore of very small diameter, like that of a hair, as a tube; as, the *capillary* vessels of animals.

—Pertaining, or relating to, capillary vessels; as, *capillary* action.

(*Bot.*) A term applied to bodies which are long and slender like a hair.

Capillary attraction. (*Phys.*) The term applied to that part of physics which investigates the phenomena produced when solid bodies are brought into contact with liquids. These phenomena are best observed in small tubes, about the diameter of a hair; hence the name. In all cases, although the phenomena are very varied in their nature, the result may be attributed to the mutual attraction of the liquid molecules for each other, and to the attraction between these molecules and solid substances. The following instances are examples of capillary attraction. When a solid substance is immersed in a liquid which wets it, as, for instance, a glass rod in water, the liquid becomes curved upwards towards the side of the solid, making its surface slightly concave, instead of being horizontal. If, however, the liquid does not wet the solid, as, for instance, a glass rod dipped into mercury, the liquid is depressed against the sides of the solid and assumes a convex shape. The

surface of the liquid against the sides of the vessel which contains it is also concave or convex, according to whether the liquid does or does not wet it. If a small tube, instead of a glass rod, is employed, these phenomena become much more apparent. The liquid ascends, or is depressed,

Fig. 505.

according to whether the tubes are moistened by the liquids or not, as represented in Fig. 505. The amount of ascent or depression is proportionately greater, according to the diameter of the tube. Gay-Lussac has demonstrated that liquids ascending or being depressed in capillary tubes are governed by these laws. First, that a liquid ascends in a tube when it moistens it, and is depressed when it does not; secondly, that this ascent and depression are in the inverse ratio of the diameters of the tubes, so long as these do not exceed two or three millimetres; and, thirdly, that the ascent and depression vary with the nature of the liquid and the temperature, but that they are altogether independent of the thickness of the tube and the nature of the substance, provided that it is moistened by the liquid. These laws hold good *in vacuo* as well as in air. Analogous capillary phenomena occur when two bodies of any given shape are immersed in water, provided they are sufficiently near. If two parallel plates of glass are immersed in water, at a short distance from one another, the water will rise between them in the inverse ratio of the separating distance. If the plates are immersed in mercury instead of water, a corresponding depression is the result. When two floating balls, both moistened by the liquid, are so near that the surface between them is not level, they are attracted towards one another. Balls that are not moistened by the liquid in which they float are also attracted in the same manner. Balls made of cork are instances of the former, and balls made of wax of the latter. If one floating ball is moistened by the liquid and the other is not, both balls are repelled. The theory of capillary attraction is one of the most difficult in physics, and can only be completely treated by mathematical analysis. It has been more especially studied by Laplace, Clairont, and Poisson. The effects of capillary attraction are to be observed in many operations in nature. Insects can often move on the surface of water, because their feet are not wetted by the fluid, and a depression is caused which buoys them up. A sewing-needle will float on the surface of water if covered with oily matter. Oil ascends in the wicks of lamps by capillary attraction, and water rises in wood, sponge, bibulous paper, and other porous substances, by the same force.

Capillary, n. A tube with a very small bore; a fine vessel or canal.

(*Anat.*) The capillaries, or capillary vessels, are the minute blood-vessels of the body, which form the connection between the extremities of the arteries and the veins. They vary in size from $\frac{1}{500}$ th to $\frac{1}{3000}$ th of an inch in diameter, being smallest in the brain and largest in the bones. It is in the capillaries that nearly all the changes in the blood take place. It is in them that its carbonization is effected and animal heat produced, and from them that the bile, sweat, and urine are secreted.

Capillature, n. A bush of hair; a frizzled mass of hair.

Capilliform, a. [Lat. *capillus*, a hair, and *forma*, form.] Formed as a hair, or after the manner of hairs.

Capillose, a. Hairy. (R.)

Capio'nia, or **Copio'nia**, in Kansas, a post-village of Nemaha co.

Capistra'no, in California, a post-office in Orange county.

Cap'ita, n. [Lat.] (*Law.*) Heads. This expression is of frequent occurrence in laws regulating the distribution of the estates of persons dying intestate. When all the persons entitled to shares in the distribution are of the same degree of kindred to the deceased person, and claim directly from him in their own right, and not through an intermediate relation, they take *per capita*, that is, equal shares, or share and share alike.

Capital, a. [Lat. *capitalis*, from *caput*, head.] Affecting the loss of the head or forfeiture of life; touching criminality in the highest degree; as, *capital* punishment. First in importance; chief; principal; metropolitan; of great size; as, a *capital* city.

Capital letters. (*Printing*.) Letters used at the head of a paragraph or sentence of printed matter, of a larger size than those forming the body of the page. The letters are of two kinds, *large capitals*, and *small capitals*; thus: A B C; A B C.

Capital stock. (*Com.*) The principal stock or funded means of a bank, corporation, or trading concern.

Cap'ital, n. Influence; ways and means of enlarging one's power; as, to make political *capital* out of a thing.

(*Arch.*) The head or the uppermost member of any part of a building; but it is generally applied in a restricted sense to that of a column or pilaster of the several orders, as in the figures here given, in which it will be seen that the Tuscan capital (No. 1) consists of an abacus or square shelf on the top, and thereunder an ovolo or quarter round, and under that a neck terminated by an astragal or fillet, which latter is always considered as part of the column itself. The Roman Doric capital (No. 2) here given has an abacus, ovolo, and neck, like the last, and also in addition three ann-

lets under the ovolo and a cyma or ogee, with its fillet above the abacus; the Grecian Doric, however, has only a square abacus and small fillets. The Ionic capital

Fig. 506.

(No. 3) consists of three leading parts: an abacus composed of an ogee and a fillet; a ring which forms the scrolls or volutes; and an ovolo and astragal at the lower part. The Corinthian and Composite capitals (Nos. 4 and 5) consist of an abacus of a peculiar form, and are decorated with leaves. The capitals of mediæval art are quite as characteristic of the styles which then prevailed as the classical examples; and the capitals of the tenth, eleventh, twelfth, thirteenth, and fourteenth centuries may be as correctly described as those of ancient art. They usually consist of a square abacus, with foliage arranged in a circular form underneath; and often the foliage is made to assume the form of an octagon or a duodecagon immediately under the abacus, which is modified accordingly. There is, however, more of fancy in the treatment of the capitals of the Middle Ages than in the capitals of the classical orders, as may be seen by a reference to the article upon this subject in the *Glossary of Architecture* by Mr. Parker, or to the publications of the Architectural Publication Society, under the title of a *Dictionary of Terms*. It may suffice here to say that the capitals became more ornate in proportion to the development of art; and that they gradually increased in complication as mediæval architecture approached its apogee.

(*Geog.*) The chief city or metropolis of a state, nation, or territory; as, Paris, the capital of France.

(*Printing.*) A capital letter (See above.)

(*Fort.*) A line drawn through any separate part of a system of fortification, such as a bastion, ravelin, lunette, &c., dividing it into two equal and similar parts. Thus the capital of a bastion is the straight line drawn from the salient angle through the centre of the entrance in the rear.

(*Polit. Econ.*) A term applied to that portion of the produce of labor saved from immediate consumption which is employed to maintain productive laborers, or to facilitate production.

(*Com.*) Principal stock, &c., of a bank, corporation, or monetary undertaking; the sum of money which a merchant, trader, or other individual, embarks in any concern to form its funded basis, or which he contributes to the common stock of partnership; as, a capital of one million dollars.

Capital Punishment. (*Crim. Juris.*) See PUNISHMENT.

ap'italist, *n.* A person who has a capital fund or stock: one who has surplus pecuniary means which he may invest at pleasure; a man of large moneyed resources; as, Rothschild, the great *capitalist*.

apitalization, *n.* Act of converting money or funded stock into capital.—Employment of capital letters in writing or printing.

ap'italize, *v. a.* To convert into capital, as money. To form or print in capital letters.

ap'itally, *adv.* In a capital or excellent manner; chiefly: as, he performed his work *capitally*.—In a manner to cause the forfeiture of a man's head or life; as, to sentence *capitally*.

ap'italness, *n.* State or quality of being capital, or most excellent. (*R.*)

apitana'ta, a province of S. Italy, bounded N. and E. by the Adriatic, and on the S.W. by the Apennines. The greater part of the surface is a sandy plain, sloping from the Apennines to the Adriatic, and watered only by some inconsiderable streams. *Chief town*, Foggia. *Pop.* 312,885.

ap'itan Pasha', *n.* [*Turk. Capudan Pasha.*] The officer who has command of the Turkish fleet, and the management of all naval affairs in the Ottoman empire. He is a pasha of three tails, and a member of the *divan*, or imperial council of state.

ap'itate, *a.* [*Lat. capitatus.*] (*Bot.*) Headed; having a globular apex as the head of a pin; collected into a head.

apita'tion, *n.* [*Fr., from Lat. capitatio, from caput, head.*] Numeration by heads; a numbering of persons.

"He suffered for not performing the commandment of God concerning *capitation*."—*Browne*.

A tax imposed upon each individual by the head; a poll-tax.—The Constitution of the U. States, Art. I, provides that "no C. or other direct tax shall be laid, unless in proportion to the census, or enumeration, therein before directed to be taken."

ap'ite, *n.* (*Feudal Law.*) Tenure in *capite* (in chief) signified a direct holding of land of the king, the ultimate sovereign, without the intervention of any mesne lord.

ap'ite Cen'si, *n. pl.* (*Rom. Antiq.*) The lowest rank of Roman citizens; so called because, having no taxable property, they were counted simply by *heads*, as were the Proletarii, who received their name merely as adding to the population of the state.

apitellate, *a.* (*Bot.*) A diminutive of *CAPITATE*, *q. v.*
apitol, *n.* [*Lat. capitolium.*] The temple of Jupiter, in Rome, built on the summit of Mount Saturnus or the Tarpeian Rock. It was finished by Tarquinius Superbus, and consecrated by the consul M. Horatius,—was burnt in the time of Marius, and rebuilt by Sylla,—

destroyed a second and a third time in the troubles under Vitellius and Vespasian, and lastly raised again by Domitian. Its name was derived from the discovery of the head of *Tollus*, during the excavation of the earth for the foundation. Q. Catullus consecrated this temple to Jupiter Capitolinus, and covered it with gilded brass tiles. The steep ascent of the rock was mounted by 100 steps on the side of the Forum. In the temple were statues of gold and silver, vessels of those metals and of crystal, and 3,000 brass tables on which the laws of Rome were engraved.

—A public edifice for state purposes; as, the *Capitol* at Washington.

Capito'lian, **Cap'itoline**, *a.* [*Lat. capitolinus.*—See *CAPITOL.*] Pertaining, or relating to, the Capitol at Rome.

Capitoline Games. (*Rom. Hist.*) Annual games instituted by Camillus, and held by the ancient Romans in honor of Jupiter Capitolinus. They commemorated the preservation of the Capitol from the attacks of the Gauls.—The name was also given to certain games instituted by Domitian, which were celebrated every five years.

Capit'ular, **Capit'ulary**, *n.* [*L. Lat. capitulare, from capitulum, a small head.*] An act passed in an ecclesiastical chapter.

—Body of laws or statutes enacted by a chapter, or of an ecclesiastical council.—A collection of laws or statutes, embodied in chapters or sections.—A member of a chapter.

"Statutes which shall bind the chapter itself, and all its members or capitulars."—*Aylife*.

—a. Belonging to a chapter or capitulary.

(*Bot.*) Growing in small heads.

Capitularies, *n. pl.* [See *CAPITULAR.*] (*Hist.*) Under this name are more specially known the laws issued by the French kings of the first and second races, in the great assemblies of the nobles and bishops which formed the states of the kingdom, for the administration of civil and ecclesiastical affairs. Childbert, Clothaire, and Dagobert, and afterwards Charlemagne, Louis le Débonnaire, Charles the Bald, &c., issued C. Those of Charlemagne are the most celebrated, being more extensive, more enlightened, considering the age he lived in, and forming a real code of legislation which remained in force long after.

Capit'ularly, *adv.* After the manner of an ecclesiastical chapter.

Capit'ulary, *a.* [*Lat. capitularis.*] Pertaining, or relating, to the chapter of a cathedral.

Capit'ulate, *r. i.* [*From Lat. capitulum, dim. of caput, head.*] To surrender by stipulated treaty, as a garrison.—*v. a.* To yield or surrender on certain heads or conditions. (*R.*)

Capitula'tion, *n.* (*Mil.*) The act by which an officer in command of a fortress or body of troops surrenders to the enemy. The terms of the surrender are stated in a series of articles, to which the expression is more particularly applied. Hoisting a white flag is the sign that the besieged desire to capitulate.

Capit'ulator, *n.* [*L. Lat.*] One who capitulates.

Capit'ulum, *n.* (*Bot.*) The same as *ANTHODIUM*, *q. v.*

Cap'ivi, *n.* (*Bot.*) See *COPAIBA*.

Capiv'ic Acid, *n.* (*Chem.*) An acid found in Balsam of Copaiba, or capivi.

Capiz, (*ka'pēth*), a city on the island of Panay, Philippines, on the N.E. coast; *pop.* 12,000.

Cap'le, *n.* (*Min.*) See *CAPEL*.

Cap'lin, *n.* (*Zool.*) See *CAPELAN*.

—The cap or coupling of a thresher's flail.

Cap-money, *n.* (*Sports.*) In England, money collected by the members of a fox-hunt, and given to the huntsman at the death of the fox.

Cap'nomancy, *n.* [*Gr. kapnomanteia, from kapnos, smoke, and manteia, prophecy.*] Divination by smoke, as practised by the ancients.

Cap'nomor, *n.* [*Gr. kapnos, smoke, and moira, a part.*] (*Chem.*) A colorless oil of peculiar odor, resembling that of ginger, discovered by Reichenbach, amongst other products, in heavy oil of tar. It is limpid and volatile, insoluble in water and solution of potash, but dissolving readily in alcohol, ether, and the essential and fixed oils. Its specific gravity is slightly below that of water. It boils at 345° Fahr., and distils unaltered. It burns with a sooty flame, and is perfectly neutral in its reactions. It is obtained by distilling a solution of crude creosote in potash and with water. With sulphuric acid it forms a purple-red solution. It has not yet been satisfactorily analyzed.

Capoch, (*ka-pōōtsh*), *n.* [*Sp. capucho.* See *CAPUCHIN.*] The hood worn by a monk; the hood of a cloak.

Capo d'Istria, (*ka'po d'est're-ā*) (anc. *Ēgida*), a fortified seaport town of Austria, in Illyria, gov't Trieste, on a small island in the Gulf of Trieste, connected with the mainland by a causeway 1½ m. in length, 5 m. S. of Trieste.—*Manf.* Salt, leather, soap. This place belonged, in the Middle Ages, alternately to the Venetians and the Genoese. *Pop.* 10,104.

Capo d'Istria, *JOHN*, COUNT, a Greek statesman, B. in Corfu, 1780. He entered the service of Russia, was sent as plenipotentiary to Switzerland, and in 1813: attended the congress of Vienna in 1814, and in the following year was plenipotentiary of Russia at the final treaty of peace with France. On the separation of Greece from Turkey, and after the battle of Navarino, in 1828, he was installed president of the Greek government. In this capacity, however, he acquired little credit, being constantly at variance with the people over whom he presided. He was assassinated at Napoli di Romania, 1831.

Ca'po d'Op'era, *n.* [*It.; Fr. chef d'œuvre.*] A masterpiece.

Capoe', *n.* A kind of East India cotton, of fine, short fibre, used for stuffing mattresses, &c.

Capo'ti, in Iowa, a village of Allamakee co., on Mississippi River, a few miles below Lausling.

Cap'on, *n.* [*A. S. capun; Dan. Swed. and Icel. kapun; Gr. kapōn; Lat. capo; Fr. chapon; Swed. and Goth. kappa, to amputate, allied to Gr. kapōō, to cut.*] A young cock cut or castrated, in order to render his flesh more delicate for the table.

Capon Bridge, in West Va., a P. O. of Hampshire co.

Ca'ponet, *n.* A small capon. (*R.*)

Caponiere, or **Caponniere**, (*kā-pō-neer'*), *n.* [*Fr. caponnière.*] (*Fort.*) In permanent fortification, this term denotes a passage leading from one work to another, protected on each side by a wall or parapet, generally of earth, sloping to the bottom of the ditch. When a passage is thus protected on one side only, it is called a *demi-caponiere*. In field fortification, a double stockade covered with planks and earth at the angles of the ditch is called a *caponiere*; it serves to give a flank fire in the ditches.

Caponize, *v. a.* To convert a cock into a capon, by castration.

Capon Springs, in Virginia, a small place and post-office of Hampshire co., in a gorge of North Mountain. In the vicinity are sulphurous and chalybeate waters.

Caponacangany, in U. Canada, a river which, rising on the N. side of the ridge of hills that run parallel to Lake Superior, joins the N. Caugany, and falls into the river Albany, in Lat. 57° 5' N., Lon. 85° 30' W.

Capor'cianite, *n.* (*Min.*) A hydrated silicate of alumina and lime found crystallized and in radiated laminae at Monte Caporciano, near Florence and several other localities in Tuscany. It has a flesh-red color, a pearly lustre, and is only transparent in very thin laminae.

Capot', *n.* [*Fr.*] (*Games.*) A term used in playing piquet, when either party makes every trick, which counts for 40 points.

Capote', *n.* [*Fr. and Sp. capote, from capa, a cloak.*] A long cloak made of muslin or black silk bordered with lace, formerly worn by ladies *en négligé*.

—A long military overcoat, with a hood, worn by the French and other troops.

Caponch', *n.* Same as *CAPOOCH*, *q. v.*

Cap'padine, *n.* Silk waste obtained from the cocoon after the reeling off of the silk.

Cappado'cia, (*anc. Geog.*) A country of Asia Minor, bounded by Lycæonia on the W., by Cilicia and Syria on the S., by Armenia on the E., and by Pontus on the N. During the time that it belonged to the Persian empire, however, it included Pontus, which was called *Lesser Cappadocia*. In A. D. 17, C. was erected into a separate province of the Roman empire by Tiberius. It forms now a part of Caramania.

Cappagh, (*kā'pāh*), in Ireland, a parish of co. Tyrone.

—A parish of co. Limerick.

—A small river and extensive bog in co. Galway.

Cappaghwhite, in Ireland, a town in Munster, 7 m. N. of Tipperary; *pop.* about 1,000.

Capparida'ceæ, *n. pl.* (*Bot.*) An order of plants, alliance *Cistales*.—*DIAG.* Stamens not tetradynamous, tetramerous flowers, exalbuminous seeds, and a closed-up fruit. They are herbaceous plants, shrubs, or even trees, mostly natives of tropical and sub-tropical regions.

The leaves are alternate; the flowers solitary or clustered; sepals 4, sometimes cohering in a tube; petals usually 4, rarely 8, sometimes wanting; stamens generally a multiple of 4, or indefinitely numerous, placed on a hemispherical or an elongated disc; the ovary 1-celled, the style thread-like or wanting; the fruit is either pod-like and dehiscent, or baccate and indehiscent. The two kinds of fruit have led to a division of the order into two sub-orders, viz.,—*Cleomeæ*, characterized by a capsular fruit, and *Capparidææ*, by a baccate fruit or berry. The *Capparidææ* are generally pungent stimulant, and antiscorbutic.

Fig. 507. — *CAPPARIS SPINOSA*.

1, an expanded flower; 2, a petal; 3, a calyx with the stalked ovary; 4, a horizontal section of the fruit; 5, a longitudinal section of the seed; 6, an embryo extracted from the seed-coat.

The *Capparidææ* are generally pungent stimulant, and antiscorbutic.

tic. Some are aperient, diuretic, and anthelmintic. There are 340 species in 28 genera.

Cappanaensh'y, in Ireland, a group of islets in co. Kerry, 3 m. W. of Kemmaire. The remains of the old castle of Cappanaenshy are on the opposite mainland.

Cap'-paper, *n.* A thin kind of paper used for cutting out dress-patterns, &c. — A kind of large writing-paper. See FOOLSCAP.

Cap'paris, *n.* [From *Ar. kapar*, capers.] (*Bot.*) The caper-bush, a genus of plants, sub-order *Cuppareæ*, ord. *Cupparidææ*. The species *C. spinosa* (see Fig. 507) is a trailing shrub which grows in rocky places in the S. of Europe. Its pickled flower-buds are used under the name of *Capers*. They have an agreeable pungency of taste, with a slight bitterness, and have long been in very general use as a condiment, and ingredient of sauces, along with boiled mutton and other kinds of food. They possess medicinal properties, being antiscorbutic, stimulant, and laxative. They are of a grayish-green color, to improve which, however, copper is sometimes used, as in the case of gherkins and other pickles, rendering them poisonous. This can be detected by thrusting a polished iron rod into the vessel which contains the *C.*; the surface of the rod soon becomes coated with copper, if it be present. — The capers used in Egypt are obtained from *C. Egyptiaca*, which is believed to be the *hyssop* of Scripture.

Cap'-peak, *n.* The front piece of a cap, by which it is put on, and taken off, the head.

Cappel', a village of Switzerland, 10 m. from Zurich. Here, in 1531, Ulrich Zuinglius was killed in a conflict with troops of the Roman Catholic cantons.

Capper's Spring, in Virginia, a post-office of Frederick co.

Capping-plane, *n.* In joinery, a plane used for working the upper surface of the rail of a staircase.

Cap'poquin, in Ireland, a town of Waterford co., on the river Blackwater which flows into Youghal harbor; pop. 2,265.

Capp's Creek, in Missouri, a post-office of Newton co.

Cap'ra, *n.* [Lat., she-goat.] See GOAT.

Capra'ria, *n.* (*Bot.*) A genus of plants, order *Scrophulariaceæ*.

Capre'olate, *a.* (*Bot.*) Furnished with tendrils.

Capreo'li, *n. pl.* (*Arch.*) The pieces of timber on the roof of a building which serve to uphold the axes or principals. A fork inclined so as to afford support to anything was formerly called a *capreolus*.

Capreo'lus, *n.* [Lat.] (*Bot.*) Same as *CIRRUS*, *q. v.*

Caprera, (*ka-prai'ra*), a small island in the Mediterranean Sea, off the N. coast of Sardinia. Length, 5 m. This island is famous as being the home of the Italian patriot, Gen. Garibaldi (*q. v.*), who owned a great portion of it, and who died here in 1882.

Cap'ri, (the Roman *Capree*), a rocky but beautiful island in the Mediterranean, situated under the same meridian as the city of Naples, from which it is 20 m. distant. It stands at the southern entrance of the Neapolitan Gulf; it is two miles and a half from Cape Campanella, which terminates the promontory of Sorrento; about ten miles from Cape Miseno, on the other side of the bay, and rather more than twenty from the city of Naples. It is composed of hard calcareous rocks, which are disposed in two masses with a considerable hollow between them. The highest of these two masses is called *Anacapri*, *q. v.*, with a little town of the same name. The town of Capri stands much lower, on a sheltering rock towards the E. extremity of the island. By great industry the islanders have retained and secured patches of good soil on steep hill-sides, and in the midst of rocks and cliffs; the cultivable parts produce most kinds of vegetables and fruits, a small quantity of excellent oil, and a considerable quantity of a light but generous wine. This wine, which is much used at Naples, is of two sorts, *Capri rosso* and *Capri bianco*, or red and white Capri. The whole circuit of the island does not exceed nine miles; but this narrow space is wonderfully crowded with a variety of scenic beauty, remains of antiquity, and historical recollections. Extensive ruins of the villa of Tiberius, who resided a long time at Caprea, are still shown, near a bold perpendicular cliff at the eastern end of the island.

Cap'ric Acid, *n.* (*Chem.*) A volatile fatty acid discovered by Chevreul amongst the products of the saponification of butter. It is also procured by acting on oleic acid or oil of rue with nitric acid. It is also found in small quantities in the fatty acids of cocoa-nut oil. Capric acid crystallizes in fine needles, which fuse at 86°, giving out an odor resembling that of a goat. It is sparingly soluble in boiling water, from which it separates in glistening plates. It has been named capric acid from its peculiar odor, but is now generally termed *valeric acid*, from being easily confounded with caproic and caprylic acids, and from being the acid of which oil of rue is the aldehyd. See CAPRYLIC ACID.

Capriccio, (*ka-prêl'cho*), *n.* [It., whim, fancy.] (*Mus.*) A term applied to certain musical pieces wherein the composer gives way to his fancy, without confining himself to particular measures or keys. They are also called FANTASIA. (*q. v.*)

Capriccioso, (*ka-prêl'che-ô'so*), *a.* [It.] (*Mus.*) In a fanciful, capricious manner or style.

Cap'rice, (*ka-prê's*), *n.* [Fr. *caprice*; It. *capriccio*, from *capra*, a she-goat, an animal remarkable for its freaks.] A freak; a sudden start of the mind; a fancy; a whimsy; a sudden change of opinion or humor, with no apparent reason; as, a woman's *caprice*.

"Their passions move in lower spheres,
Where'er caprice or folly steers." — Swift.

Capricious, (*ka-prîsh'ûs*), *a.* Full of caprice: freakish; whimsical; changeable; fantastical; fanciful; as, a *capricious* mood.

Cap'riciously, *adv.* In a capricious manner; whimsically.

Cap'riciousness, *n.* Quality of being capricious; caprice; whimsicality.

"The capriciousness of a sickly heart." — W. Irving.

Cap'ricorn, *n.* [Lat. *capricornus* — *capra*, a he-goat, and *cornu*, a horn.] (*Astron.*) The 10th sign, and the

Fig. 508. — CAPRICORNUS.

11th constellation, in the order of the Zodiac. The constellation is situated S. of the Dolphin, and E. of Sagittarius. Its mean declination is 20° south, and its mean right ascension 310°. It is, therefore, on the meridian about the 18th of September. The *Sign C*, not the constellation, marks the southern tropic, or winter solstice. The sun, therefore, arrives at this point of its orbit the 21st of December, but does not reach the constellation *C* until the 16th of January. This constellation is denoted by the sign *♑*, representing the crooked horns of a goat. It is usually represented on the globe as having the fore-part of a goat, but the hinder part of a fish. It has 51 stars, none of which are very conspicuous. The two largest, *Giedi* and *Dibih*, of 3d magnitude, are situated in the horns. — See TROPIC.

(*Zoöl.*) A beetle of the genus *Cerambyx*.

Capricorn Islands, a small group in the tropic of the same name, off the E. coast of Australia.

Cap'rid, *n.* [From Lat. *capra*.] Relating to the genus *capra*, or goat tribe of ruminant animals.

Caprification, *n.* [Lat. *caprificatio*.] A fertilization of flowers by the aid of insects, in the way which occurs in the case of the fig, by means of a small fly.

Caprifolia'ceæ, *n. pl.* [Lat. *capra*, goat; *folium*, leaf, in reference to the climbing habit of the plant.] (*Bot.*) The Honeysuckle family, an order of plants, alliance *Cin-c'inales*. Dico. Epipetalous stamens, straight anthers bursting longitudinally, consolidated fruit; and leaves without stipules. They consist of shrubs with the fol-

Fig. 509. — *a*, CAPRIFOLIUM PERFOLIATUM.

b, back view of anther; *c*, horizontal section of ovary; *d*, fruit; *e*, the same in section; *f*, seed; *g*, the same in section, showing the embryo.

lowing general characters: — Leaves opposite and exstipulate; calyx superior, 4-5-cleft, usually bracteate; corolla monopetalous, 4-5-cleft, tubular or rotate, regular or irregular, rarely polypetalous; stamens 4-5, inserted on the corolla, and alternate with its lobes; ovary

inferior, 1-5-celled, usually 3-celled, often with 1 ovule in one cell, and several in each of the others; fruit generally a berry, dry or succulent, indehiscent. There are 16 genera and about 220 species, chiefly natives of the northern parts of Europe, Asia, and America. They often have showy flowers, which are commonly sweet-scented. Many are cultivated in our gardens and shrubberies; as Honeysuckles, which are species of the genera *Caprifolium* and *Lonicera*; Gnelder-roses, species of *Viburnum*; the Laurustinus (*Viburnum tinus*); the Snow-berry (*Symphoricarpos racemosus*); and the common Elder (*Sambucus nigra*). Some of the plants are emetics and mild purgatives; others are astringent; others sudorific and diuretic; and a few are acrid.

Cap'riform, *n.* [Lat. *capra*, goat, and *forma*, form.] Having a goat-like form.

Caprigenous, (*ka-pri'je-nus*), *a.* [Lat. *caprigenus*.] Produced by a goat; as, a *caprigenous* breed.

Caprimulgid'ææ, *n. pl.* (*Zoöl.*) A family of birds, ord. *Incassores*. The GOAT-SUCKER, *q. v.*

Cap'rine, *a.* Pertaining to, or resembling, a goat.

Capriole, (*ka-pri-ôl*), *n.* [Fr., now *cabriole*; It. *capriola*, a young kid, a caper.] (*Manege*.) A leap that a young horse makes without advancing forward, and in such a manner, that when he is in the air, and height of his leap, he jerks out his hinder legs, even and near. — A caper, as performed in dancing.

"With lofty turns and caprioles." — Davies.

— A kind of head-dress formerly worn by ladies.

Cap'riped, *a.* [From Lat. *capra*, goat, and *pedis*, a foot. Having feet like those belonging to a goat.

Cap'rizant, *a.* [From Lat. *capra*.] (*Med.*) Uneven leaping; as, a *caprizant* pulse.

Caproic Acid, *n.* (*Chem.*) An acid obtained during the saponification of butter or cocoa-nut-oil, or by oxidizing oleic acid by nitric acid. It is liquid at ordinary temperatures, has a sweet and pungent taste, and a characteristic odor of acid perspiration. It boils at 388° Fahr., and its specific gravity is .930. It is best prepared by boiling cyanide of anil with alcoholic solution of potash. Ammonia escapes, and a crystalline residuum of caproate of potash is left behind. The salt is dissolved in water, and sulphuric acid is added, which unites with the potash, leaving the caproic acid floating on the surface. Caproic acid forms monobasic salts with the bases. Form. $C_{12}H_{22}O_4$. See CAPRYLIC ACID.

Caproic Alcohol. The hydrated oxide of caproyl or hexyl, the sixth in the series of the homologous radicles. It is often called hexylic alcohol. It is obtained from the fermented mark of the grape, along with propylic, butylic, and amylalcohols, from which it is separated by fractional distillation. It is a colorless aromatic liquid of specific gravity .832, and it boils at 302° Fahr. By heating it with hydrate of potash, caproate of potash is formed, in the same manner that acetate of potash is formed from vinic alcohol when it is heated with hydrate of potash, acetic acid bearing the same relation to vinic alcohol that caproic acid does to caproic alcohol.

Caproic Ether. The caproate of ethyl, and must not be confounded with *caproylic ether*, which would be oxide of caproyl — a substance as yet unknown. It is prepared by distilling caproate of baryta, alcohol, an sulphuric acid together. It is a limpid, oily fluid, boiling at 324° Fahr., and possessing an agreeable fruit odor, resembling that of pine-apple.

Capromys, *n.* [Gr. *kapros*, a boar, and *mys*, a mouse (*Zoöl.*) A genus of Rodentia, of the *Muridæ* or *Ra* family.

Cap'ron, in Illinois, a post-office of Boone co., 21 m N. E. of Rockford.

Cap'royl, or **Hex'yl**, *n.* (*Chem.*) The radicle of caproic alcohol is termed hexyl, from being the sixth of the homologous radicles forming the alcoholic series. It is obtained by the electrolysis of cyanhydrate of potash as a fragrant oil, boiling at 397° Fahr. It is a permanent substance, and remains undecomposed when submitted to the action of sulphuric or moderately strong nitric acid; but by mixing the two it is changed into fatty acid, supposed to be caproic acid.

Cap'ryl, or **Octyl**, *n.* (*Chem.*) The eighth radicle of the homologous alcoholic series, obtained by treating the chloride of capryl with metallic sodium. Its properties have not yet been thoroughly investigated. Form $C_{16}H_{33}$.

Caprylic Acid, *n.* (*Chem.*) One of the volatile acids obtained by Chevreul during the saponification of butter. It is also obtained by the action of nitric or oleic acid. It is a colorless, oily liquid, insoluble in water, but soluble in alcohol and ether, with a disagreeable sudoriferous smell. It becomes solid at 50° Fahr. and boils at 457° Fahr. It is prepared by decomposing caprylate of baryta with sulphuric acid. It forms monobasic salts with the bases, which have not as yet been examined. Form. $C_{16}H_{31}O_4$.

Caprylic Alcohol. Caprylic or octylic alcohol is the hydrated oxide of capryl or octyl, as vinic alcohol is the hydrated oxide of ethyl. It occurs in small quantities in the fermented pulp of the grape: but its most available source is castor-oil, which contains a compound of glycerine and ricinolic acid. This compound, when heated with hydrate of potash, is resolved into hydrogen, sebaceous potash, and octylic alcohol. The following is the process for its preparation, recommended in Miller's *Elements of Chemistry*, vol. iii. p. 129: — "Castor-oil saponified by means of potash or soda, and afterwards an excess of the hydrated alkali is added, amounting to one-half the oil used. The mass is heated in a retort and an oily liquid covered with water distils over. The oily liquid, which is the octylic alcohol, is rectified several times with potash, until the residue is no longer

colored brown. Octylic alcohol is a colorless liquid of a powerful aromatic odor. It is insoluble in water, but dissolves readily in acetic acid, ether, and alcohol. Its spec. grav. is .823, and it boils at 356°.

Caprylic Ether. This name is generally given to the *Caprylate* of ethyl, which may lead to confusion with true caprylic ether, which would be oxide of capryl. *Caprylate* of ethyl is a colorless liquid, with an agreeable odor of pine-apples. Caprylic acid forms ethers with methyl and amyl, which have been investigated by Wills and others.

Cap'sali, a sea-port town of the Ionian Islands, cap. of Cerigo, or Cythera, built upon a narrow ridge, terminating in a precipitous rock near the S. end of the island: pop. 5,600.

Cap Santé, in L. Canada, a post-village of Port Neuf co., on the river St. Lawrence.

Cap St. Ignace, in L. Canada, a post-village of L'Islet co., on the river St. Lawrence, 39 m. S. of Quebec.

Capsella, *n.* [Dim. of Lat. *capsa*, a chest or box; alluding to the fruit.] (*Bot.*) A genus of plants, order *Brassicaceae*. The Shepherd's purse, *C. bursa-pastoris*, is a well-known, troublesome weed, found everywhere in fields, pastures, and roadsides; stem 6-12 inches high, striate, branching; root-leaves rosulate or wavy; stem-leaves very narrow, with two small, acute auricles at base; white flowers, small in racemes, blossoming from April to September.

Cap-sheaf, *n.* The top or crowning sheaf of a stack of grain.

Cap'sicine, *n.* [From CAPSICUM.] (*Chem.*) An alkaloid found in the capsules of the various species of capsicum used in the manufacture of Cayenne pepper. It has a burning taste; is insoluble in water and ether, but soluble in alcohol, and may, when quite pure, be crystallized. It forms salts with nitric, sulphuric, and acetic acids. Its composition is unknown.

Capsicum, *n.* [Lat., from Gr. *kapto*, to bite:—from the acidity of the fruit.] (*Bot.*) A genus of plants, ord. *Solanaceae*, consisting of numerous species, chiefly natives of India or S. America, all remarkable for the presence of an acrid resin called *Capsicine* in their fruits, which are hot, pungent, and stimulating. The Red-pepper, or Cayenne pepper, *C. annuum* of Linnaeus, or *C. fastigiatum* of Blume, has oblong cylindrical fruits, commonly sold as *Chilies*, and used to make a hot pickle, and the liquid known as *Chili vinegar*. There are in gardens several varieties in respect to the fruit which varies in length from 1 to 3 inches: 1, the long, or Cayenne; 2, the depressed globose or Squash pepper, best for pickling; 3, the Cherry pepper, used for pepper-sauce, and in seasoning meat; and 4, the sweet Spanish pepper, used as a salad. They are sown in March in hot-beds, and transplanted in May.—The fruit of the *C. minimum*, Bird-pepper, is most biting of all the species. *Cayenne pepper* consists of the powdered fruits of several species of *Capsicum*, found in the West Indies and South America. In medicine, the fruit of the capsicum is used as a counter-irritant; with salt as a stimulant, in scarlatina; as a gargle in relaxed sore-throat; and in the form of Cayenne lozenges.

Cap-sill, *n.* The upper horizontal beam in the timber framing of viaducts and bridges.

Cap'size, *v. a.* [Probably from Swed. *guppa*, *guppa up*, to strike up, to tilt.] Literally, to tilt up; in a more general sense, to upset or overturn: as, to capsize a boat.

Cap-square, *n.* (*Gunnery*.) The metal fastening which keeps the trunnion of a gun in its proper place on the carriage.

Cap'stan, *n.* [Probably a corruption of *cable-stand*: Fr. *cabestan*.] (*Naut.*) A strong, massive, wooden machine, in form resembling a truncated cone, around which a rope is coiled, and being turned by means of bars, or levers, it affords an advantageous mode of applying manual power to overcome an obstacle. The *C.* is chiefly employed on ship-board, where it is used for weighing anchor, hoisting sail, &c. Men-of-war have commonly two capstans, the largest of which, called the *main capstan*, is placed behind the main-mast, standing upon the first deck, and reaching four or five feet above the second: this is also called the *double capstan*, because it has two drum-heads, and serves two decks for drawing up anchors, and because its force may be greatly accelerated by applying hands on each deck. The other is the *gear, or little capstan*: this stands on the second deck, between the main and mizzen masts. There are several improved forms in use on ships, generally acted by steam.

Fig 511.—CAPSTAN.

Cap'stone, *n.* (*Pal.*) A name given to the fossil encrinite, from its resemblance to a cap.

Capsula, *n.* [*Lat.*] (*Antiq.*) A box used by the ancient Romans for holding books; these boxes were usually made of beech wood, and were cylindrical in form.

Capsular, Cap'sulary, *a.* [Fr. *capsulaire*, from Lat. *capsula*.] Pertaining to a capsule; hollow like a chest.

(*Anat.*) A *C. ligament* is one of the membranous, fibrous, and elastic bags or capsules, of a whitish consistency, thick and resistant, which surround joints.

Capsulate, Cap'sulated, *a.* Enclosed in a capsule, or as in a box.

"The heart lies immured, or capsulated."—Derham.

Capsule, (*kap'sul*.) *n.* [*Lat.* *capsula*, from *capsa*, a chest, a case.] (*Bot.*) A superior, one or more celled, many-seeded, dry, dehiscent fruit. It is *syncarpous*, that is, formed of several carpels united together. The dehiscence, or opening, of the capsule may either take place by valves, as in the fox-glove, primrose, and rhododendron, or by pores near the summit, as in the poppy and snapdragon. The distinctive name of *Pyxis* or *Pyridium* has been given to a beautiful kind of capsule, which opens as if cut around near the summit, and presents the appearance of a cup with a lid. Examples of the latter may be seen in the pimpernel and heubane. The capsule is one-celled in the mignonette, heart's-ease, and gentian; two or more celled in the scrophularia, colchicum, iris, and datura. It is a very common form of fruit, and is found almost universally in some natural orders: such as *Papaveraceae*, *Caryophyllaceae*, *Primulaceae*, *Scrophulariaceae*, *Liliaceae*, *Iridaceae*, and *Gentianaceae*.

(*Anat.*) A fibrous or membranous bag, such as that which encloses the joints of the hip, shoulder, &c., and shuts in the synovial sac, when it is called a *capsular ligament*; and again, when it envelops the liver, and is known as the *capsule of Glisson*.

(*Med.*) A gummy envelope coating nauseous doses of medicine.

(*Chem.*) A small, shallow, evaporating vessel or dish.

(*Gun.*) A PERCUSSION-CAP, *q. v.*

—A covering of metal, tin-foil, &c., used for rendering bottles of wine, &c. impervious to air.

Captain, (*kap'ten*.) *n.* [Fr. *capitaine*; It. *capitano*, from Lat. *caput*, head.] The military commander of a company of soldiers.—The term is also used of officers in the municipal police in a somewhat similar sense: as, *captain of police*, *captain of the watch*.—The commander of a ship of war, and applied, also, to the master of a merchant-vessel.

—Also, a subordinate officer having charge of a certain part of a vessel of war: as, *captain of the main-top*.

—In the U. States, the commander of a merchant-vessel is, in statutes, legal proceedings, and professional language, more generally termed *master*. In some foreign laws and languages he is frequently styled *patron*.—The rank of *C.* in the U. States Navy is next above that of commander: and captains are generally appointed from this rank in the order of seniority. The president has the appointing power, subject to the approval and consent of the senate.

—The foreman of a gang of miners, workmen, &c.

—A military leader; a chief; a skilled warrior; as, *Cæsar* was a great *captain*.

"Foremost captain of the time was he."—Tennyson.

Captain-general. The commander-in-chief of an army or force of militia; more particularly, the degree of rank attaching to a Spanish governor or commander-in-chief: as, the *captain-general* of Cuba. In the U. States, the governor of a State is *captain-general* of the militia belonging thereto.

—*a.* Possessing superiority of rank or position.

"Captain jewels in the carcanet."—Shaks.

Captaincy, *n.* The rank, post, or commission of a captain: as, gazetted to a *captaincy*.

Captaincy-general, *n.* The office or jurisdiction of a captain-general; as, the *captaincy-general* of Catalonia.

Captain Pasha, *n.* See CAPITAN PASHA.

Captainry, *n.* [Fr. *captainerie*.] Chieftainship; authority over a certain people or territory: as, the *captainry* of Clanranald.

"There should be no rewards taken for captainries of counties."—Spenser.

Captainship, *n.* Condition, rank, or authority of a captain or commanding officer.

—Military skill and judgment; as, he displayed good *captainship*.

Captation, *n.* [Fr., from Lat. *captatio*.] The art or accomplishment of obtaining favor by a flattering manner or address. (*o.*)

Cap'tina, in *Ohio*, a post-office of Belmont co.

Cap'tina Creek, in *Ohio*, of Belmont co., flows into the Ohio river.

Caption, (*kap'shun*.) *n.* [*Lat.* *captio*, *captivus*—*capio*, to take, catch, or seize.] (*Law.*) The heading of a legal instrument, in which is shown when, where, and by what authority it is taken, found, or executed.

(*Printing.*) The title of a chapter, cut, &c.

Captions, (*kāp'shus*.) *a.* [*Lat.* *captiosus*—*capio*—*capio*.] Ready to catch at faults or to find fault; disposed to cavil or quibble; censorious; perverse; wayward; as, a *captious* disputant.

—Insidious; ensnaring; perplexing; troublesome.

"She taught him likewise how to avoid sundry *captious* and tempting questions."—Bacon.

Capt'ions, *adv.* In a captions manner.

"Use your words as *captiously* as you can."—Locke.

Capt'ionsness, *n.* Quality of being captions; proneness to fault-finding; peevishness.

"*Captiousness* is a fault opposite to civility."—Locke.

Capt'ivate, *v. a.* [*Lat.* *captivo*, *captivatus*, from *captivus*, a captive.] To take, as a captive or prisoner; to subdue. (*R.*)

"He deserves to be a slave, that is content to have . . . the liberty of his will so *captivated*."—King Charles I.

—To subdue by the influence of attraction or beauty; to enthral: to overpower: to enslave with fascination; to charm; as, her beauty *captivated* all hearts.

"Wisdom so *captivated* him with her appearance that he gives himself up to her."—Addison.

—*a.* Taken captive. (*R.*)

"Women have been *captivate* ere now."—Shaks.

Capt'ivating, *a.* Having power to charm, or engage the affections: as, a *captivating* woman.

Capt'ivation, *n.* Act of taking one captive: as, his *captivation* was complete.

Captive, (*kap'tiv*.) *n.* [Fr. *captif*; Lat. *captivus*, from *capio*, *caplus*.] One who is taken prisoner in war, or by any force or stratagem.

"Our bread was such as *captive's* tears

Have moistened many a thousand years."—Byron.

—One subdued or charmed by beauty or excellence; one ensnared by love, flattery, or woman's wiles.

"Whose words all ears took *captive*."—Shaks.

—*a.* Made prisoner; kept in bondage or confinement.

"My woman's heart

Grossly grew *captive* to his honey words."—Shaks.

—Relating to captivity, duance, or confinement; as, *captive* chains.

"The Stygian floods oppose,

And with circling streams the *captive* souls inclose."—Dryden.

Captivity, *n.* [Fr. *captivité*; Lat. *captivitas*.] State or condition of being a captive or prisoner, or of being in the power of an enemy.

—Subjection; bondage; slavery; servitude.

"For men to be tied, as it were with a kind of *captivity* of judgment."—Hooker.

(*Scrip.*) A term employed in Scripture to denote the punishment inflicted by God on the Jews for their idolatry and wickedness, by allowing them to be removed out of their own land. This was one of the means frequently adopted by eastern monarchs in order to establish their power over vanquished nations: viz., to transport an important part of the population of those nations into their own dominions; and sometimes, also, they established in the vacated territory a portion of their own subjects. To a people like the Hebrews, whose religion was connected with particular places, such a proceeding must have been particularly severe. When personally removed from Jerusalem, they could no longer obey their sacred law in many of its most vital points, and many others they were forced to modify by reason of their changed circumstances. Their first captivity was that of Egypt, from which they were rescued by Moses; but this is to be regarded rather as a providential dispensation than as a penal evil. We read of six captivities that took place during the government of the judges; but the two most signal captivities of this people were those of Israel and Judah after they had been formed into separate kingdoms, and are known as those of Assyria and Babylon. That which is called the First Captivity was not brought about by a single removal of the population; on the contrary, the kingdom of Israel was invaded on several occasions by the kings of Assyria. About B. C. 740, Tiglath-Pileser carried off the more distant trans-Jordanic tribes to Assyria. His successor, Shalmanezar, twice invaded the kingdom which remained to Hosea. He attacked and reduced Samaria after a siege of three years, B. C. 721, and carried off into Assyria and Media the king and the remainder of the ten tribes, and their place was supplied by colonies from Babylon and Susas. This was the end of Israel as a kingdom. More than a century elapsed before the second Babylonish captivity, which overtook the kingdom of Judah. Two distinct deportations are mentioned in the second book of Kings, three in Jeremiah, and one in Daniel. The two principal deportations, however, were—1. That which took place B. C. 598, when Johoiakin, with all the nobles, soldiers, and artificers, were carried away; and 2. that which followed the destruction of the Temple and the capture of Zedekiah, B. C. 588. The seventy years of captivity predicted by Jeremiah are dated by Prideaux from B. C. 606. The Jews in their captivity were not treated as slaves, but as colonists. They had elders and judges among themselves, who governed them and determined disputes according to their own laws. There was nothing to hinder a Jew from rising to the highest eminence in the state, or holding the most confidential offices. The Babylonish captivity was brought to a close by the decree of Cyrus, B. C. 536, and the return of a portion of the nation, under Sheshbazzar or Zernbbabel, B. C. 535. What became of the ten tribes is a subject which has given rise to much discussion. Many attempts have been

Fig. 512.

(From the collection in the National Library, Paris.)

made to discover them living as a distinct community in some distant part of the interior of Asia. The most probable opinion, however, seems to be that the great mass of them became absorbed in the nations among whom they were planted; but that many of them returned with the children of Judah, after the Babylonish captivity, to their own land, by which means they became one people. The sufferings entailed upon the Jewish people under the Romans far exceeded that of any other captivity which they underwent; for they were then reduced to a real state of bondage. According to Josephus, 1,100,000 men fell in the siege of Jerusalem by Titus, and 97,000 were captured during the war. Of the latter, many were cast to wild beasts or butchered in the amphitheatres; others were doomed to work as public slaves in Egypt, and only those under 17 years of age were sold into private bondage. An equally dreadful destruction fell upon the remains of the nation, which had once more assembled in Judaea, under the reign of Hadrian (A. D. 133), as related by Dion Cassius. By these two savage wars the Jewish population must have been effectually extirpated from the Holy Land itself, a result which did not follow from the Babylonian captivity.

Cap'tor, *n.* [Lat., from *capio*.] One who takes as a prisoner or prize.

Capt'ure, *n.* [Fr. *capture*; Lat. *captura*, from *capio*, *captus*] Act of taking or seizing by force; seizure; arrest; as, the capture of an enemy's ship.

—The thing taken; a prize.

—*v. a.* To take or seize by force, surprise, authority, or stratagem; as, to capture an outlying picket.

Capua, (anc. *Capoa* or *Capua*.) a strongly fortified city of S. Italy, prov. Caserta, Terra di Lavoro, on the left bank of the Volturno, in a fine plain 18 m. N. of Naples. The town has a citadel, the work of Vauban, and is reckoned one of the keys of the kingdom. It is a finely built city, and contains many handsome public edifices. Its trade is unimportant. The ancient *C.* was situated about 2½ m. from the modern city. The remains of its amphitheatre, said to have been capable of containing 100,000 spectators, and of some of its tombs, attest its former splendor and magnificence. The amazing fertility of its territory, and the commercial spirit of its inhabitants, rendered *C.* one of the largest and richest cities of ancient Italy. It was destroyed by the Saracens, A. D. 840. Pop. 12,548.

Capuchin, *n.* [Fr. *capucine*, a nun of the order of St. Francis.] A garment for females, consisting of a cloak and hood, after the manner of the Capuchin friars.

—A pigeon whose head is hooded with feathers.

Capuchinus, (*ku-pū'shēnz*), *n. pl.* [Fr. *capucin*, from *capuce*, a cowl.] (*Ecl. Hist.*) A body of friars, of a reformed order of St. Francis, which was established by Matthew de Baschi in 1525. In 1528 they obtained a bull from Clement VII., and in 1529 the order was fully established. This branch of the Franciscans derived their name from the cowl (*caputium*), which they wore, but were at first called *Friars Hermits Minor*. Paul III. confirmed the order in 1536, and gave them the name of *Capuchins* of the order of Friars Minor. The right of preaching, taken from them in 1543, was restored two years later. They were introduced into France in 1573, and into Spain in 1606, but had no houses in England.

Capulet, *n.* See CAPELLT.

Capulin, *n.* [Sp.] The Mexican cherry.

Caput, *n.* [Lat., the head.] (*Anat.*) The head, skull, or cranium; the entire bones and muscles of the head and face, with the brain, and organs; the integument and hair of the several parts. —The term *caput* is also applied to, —1. the upper extremity of a long bone, as the humerus; 2. the origin of a muscle; 3. a protuberance resembling a head, as the *caput gallinæ*, a small eminence in the urethra; 4. the beginning of a part; as *caput coli*, the head of the colon.

—In the English universities, the word *caput* is applied to the great council, or *Senatus Consultum*, consisting of the Vice-Chancellor, a doctor of each of the several faculties of divinity, law, and medicine, and two Masters of Arts, chosen by the senate annually. This body must approve every grace before it can be submitted to the senate.

Capybara, *n.* (Zool.) See HYDROCHERUS.

Car, *n.* [W. *car*; Lat. *currus*; from *curro*, to run; It. *carro*; Fr. *char*.] A small vehicle that runs or moves on wheels. This term is of various application. In England, it is frequently applied to a *hackney-coach*, or four-wheeled vehicle for public hire; also, to that two-wheel conveyance now more generally designated *cab*. The *Irish car* is a one-horse cart, with very low, broad wheels, used for carting out manure, and carrying home grain in the case of soft, peaty soils. Again, the *Irish jaunting-car* is a kind of low, one-horse chaise, commonly without springs, in which the people sit back to back, and with their faces looking sideways; sometimes called a *low-backed car*.

"When first I saw sweet Peggy, 'twas on a market day,
In a low-back'd car she sat, sir, upon a truss of hay." *S. Lover*.

—In the United States, the term *car* is commonly applied to a passenger vehicle running upon rails, which, in England, is called a *carriage*.

—A chariot of war or triumph; as, a triumphal *car*.

"Like captives bound to a triumphant *car*." — *Shaks*.

(*Astron.*) The constellation *Ursa Major*, sometimes called "Charles' Wain," or "Charles' Car."

Carabidæ, *n. pl.* (Zool.) A very numerous family of Coleopterous insects, containing some of the largest of the carnivorous beetles, many of which are adorned

with brilliant metallic colors. The body of these insects is of a very firm consistence, whereby they are enabled to creep about under stones, &c., as well as prevented from falling beneath the power of the insects they attack; most of the species of this family being eminently insectivorous; prowling about in search of their prey, on the surface of the ground, under stones, &c., or beneath the bark of trees, or in the moss growing at their roots. They are accordingly of essential service in keeping down the numbers of noxious insects with which our gardens and pastures might otherwise be overrun. They are not at all, however, exclusively carnivorous. Some of the species exhale a fetid odor, discharging at the same time from the abdomen to a considerable distance, a caustic and acrid fluid. The family *C.* corresponds with the genus *Carabus* of Linnaeus.

Carabine, *n.* (Mil.) See CARBINE.

Carabine-à-tige, *n.* [Fr.] (Mil.) A rifle used in the French service, which has an iron pin fixed at the end of the breech in the line of the axis; on this, the bullet, which is elongated, is forced down by a hard blow of the ram-rod, and so expanded into the grooves.

Carabineer, *n.* (Mil.) A heavy dragoon; a horse-soldier who is armed with a carbine.

Caraboid, *a.* (Zool.) Relating to the Carabus or CARABIDÆ, *q. v.*

Carabus, *n.* (Zool.) See CARABIDÆ.

Carac, *n.* (Naut.) Same as CARACK, *q. v.*

Caracal, *n.* (Zool.) See LYNX.

Caracalla, MARCUS AURELIUS ANTONINUS, (*kā-rā-kāl'lā*.) a Roman emperor, the son of Severus, whose real name was Bassianus, but nicknamed *C.* by the soldiers, in consequence of his wearing a short cassock, of a fashion peculiar to the Gauls. This execrable monster, whose short career was tracked out by rapine and murder, was, upon the death of the Emperor Severus, in 211 A. D., with his younger brother Geta, at once declared his co-successors, and together being invested with the purple, they immediately set out for Rome to be acknowledged by the senate; but the mutual fears and jealousies entertained by each of the other broke out in many disputes before they reached the imperial city, when *C.* being resolved to reign alone, adopted a plan to rid himself of his rival, congenial to his savage and impetuous nature, and followed by a few ruffians, he burst into his mother's chamber, where Geta, fearing his vengeance, had taken refuge; and though the empress mother covered him with her person, *C.* plunged his sword in his brother's body while in the arms of his mother, and leaving his ruffians to dispatch him, left the apartment; and afterwards, with a mockery of religion and fraternal love, gave orders that the murdered Geta should be worshipped as a god. Once freed from all restraint, and sole master of the Roman world, *C.* started on his career of blood, spreading death and terror throughout the land, for not even the crimes of Domitian, or the cruelties of Nero, could match the atrocities of this barbarous monster. Having taken umbrage at the conduct of some of the officials of Alexandria, who had lampooned him, he was resolved to wreak his vengeance on the entire city, and therefore commanded the whole of the inhabitants to be put to the sword, — an order that was executed with frightful exactitude, without respect to age, sex, or condition, the whole people being swept off by a horrible butchery, every house filled with carcasses, and the streets blocked up with heaps of slaughtered men and women. His enormities at length becoming greater than even the debased Romans could bear, Macrinus, one of his generals, took the opportunity of the emperor being with the army in Mesopotamia to excite one of his officers, Martial, a centurion of the body-guard, to murder him. Martial, watching his opportunity, as *C.* accidentally alighted from his horse in a narrow lane near the town of Canne, rushed upon him from behind, and plunging his falchion through his back, left him dead on the spot, A. D. 217, exactly six years after his assumption of the purple.

Caracara, *n.* (Zool.) A South-American bird, genus *Polyborus*, fam. *Falconidae*. It is of the size of the common kite, and has a tail nine inches long. The beak is black and hooked; the plumage tawny, with white and

Fig. 513. — CARACARA.

yellow specks; the feet are yellow, with semicircular long, sharp, black talons. In its food the *C.* seems to be content with any animal substance. It is by no means shy; and though it ventures to approach inhabited places, it rarely molests domestic poultry.

Caracas, or **Caraccas**, (*kā-rak'as*.) a prosperous inland city of South America, capital of the republic of Venezuela, and of Federal district, in a mountainous valley, nearly 2,900 feet above sea-level, 12 m. S. E. of La Guayra; Lat. 10° 30' N., Lon. 56° 55' E. The city is finely situated, and well and regularly built, with wide streets and spacious squares crossing one another at right angles. There are many fine buildings, as the capitol, university, new government house, church of St. Teresa, new market, masonic temple, &c. *C.* is generally healthy, but liable to earthquakes, during that of 1812 it was almost destroyed. It is the chief commercial emporium of the republic, in conjunction with its shipping-port La Guayra, a few miles distant, at which place an expensive breakwater has been built. *C.* was founded by the Spaniards in 1567. Pop. 72,500.

Caracci, LUDOVICO, AGOSTINO, and ANNIBALE, (*kā-rāč'chee*) three of the first painters of Italy, kinsmen, fellow-students, and co-laborers, natives of Bologna, and founders of the Bolognese School. Ludovico, b. 1555, was placed at an early age with Prospero Fontana to study painting. He made such slow progress, that his master dissuaded him from the pursuit; upon which he left Fontana, and thenceforth studied the works only of the great masters, for which purpose he travelled to Venice and Parma. Returning to Bologna, he found his consins Agostino and Annibale (b. 1560) so well inclined to his art, that he persuaded their father, a respectable tailor, to leave their education to him. Agostino, b. 1558, learned engraving from Cornelius Cort, and attained to such excellence, that many of his engravings are only distinguishable from his master's by the superiority of the drawing; his works in that style are highly valued. He never practised painting however, with any constancy. Ludovico retained Annibale with himself. Annibale exhibited a perfect contrast to the phlegmatic calmness of Ludovico, to the accomplished fickleness of Agostino, and to the amiable mildness of both: he was rude and impatient in temper, though of so open and generous a nature, that he is said to have kept his colors and his money in the same box, both of which were equally at the disposal of his scholars. Like Ludovico he travelled about from place to place, improving himself by all that he saw, and aiming to combine in his own works the excellencies of the great works that he studied. The three opened an academy in Ludovico's studio, which became famous for the illustrious pupils whom it sent forth. — The fame of the *C.* reaching Rome, Annibale was invited by Cardinal Odoardo Farnese to adorn his palace with paintings. He went, accompanied by Agostino, but their usual dissensions arose, and Annibale's intolerant devotion to labor drove away his more festive comrade. Annibale spent 8 years of his life on his admirable work of the Farnese Gallery, for which he is said to have received only \$500, a meanness of remuneration, as Lanzi justly observes, almost incredible. He did little after this, and d. 1609. He was buried, according to his own desire, by the side of Raphael. Agostino d. 1602; Ludovico lived until 1619. The works of the 3 kinsmen are principally found in Bologna and Rome. The Farnese Gallery is considered the greatest work of Annibale. The Louvre contains *St. John the Baptist*, by Ludovico, and the *Communion of St. Jerome*, by Agostino, which are respectively reckoned their best works in oil.

Carack, *n.* (Naut.) [Fr. *caraque*; It. *caracca*.] A large trading-ship, formerly employed in the Portuguese East India trade.

"The bigger whale like some huge *carack* lay." — *Waller*.

Caractacus, (*kā-rak'ta-kus*.) a king of the Silures, who inhabited South Wales, was one of the most persistent enemies of the Romans in Britain. For nine years he warred gallantly against the invaders, but at length was completely overthrown. His wife and daughters fell into the hands of the victors, and his brothers surrendered. *C.* himself fled to Cartimandua, queen of the Brigantes, who delivered him up to the Romans. He was carried to Rome 51 A. D., and exhibited to the people by the Emperor Claudius. When he approached the imperial seat, we are told, he addressed Claudius in so noble a manner, that he and his relatives were immediately pardoned. d. abt. 54.

Caracole, *n.* [Fr. *caracole*; Gael. *carach*, winding turning; A. S. *ceran*, to turn.] (*Manege*.) A semi-round or half-turn, which a horseman makes on either side.

(*Arch.*) A term sometimes used for a staircase in a helix or spiral form. (Written also CARACOL.)

—*v. i.* To move in a caracole; to wheel half round.

Caracoli, *n.* An alloy used for inferior jewelry, consisting of gold, silver, and copper.

Carafa, MICHELE, an Italian musical composer, b. in Naples, 1785. His best operas are *Gabrielle di Vergi*, *Ifigenia in Tauride*, *Masaniello*, and *Il Solitario*. d. 1872.

Carafé, *n.* [Fr.] A glass water-bottle.

Caragheen, *n.* (Bot.) See CARRAGEEN.

Caraglio, (*kā-rā'lyo*.) a town of N. Italy, prov. of Coni 6 m. W. of Coni city, on the Grana; pop. 6,782.

Caraites, *n. pl.* A sect among the Jews who adhered closely to the text and letter of the Scriptures, rejecting the rabbinical interpretations and the Cabala.

Karamania. See KARAMANIA.

Caranbola, *n.* (Bot.) See AVERROHA.

Caranbole, *n.* [Fr.] (*Games*.) In Billiards, the stroke called also *cannon*, and *carrom*.

Caramel, *n.* [Fr.] (*Chem.*) A dark-brown substance produced by the action of a temperature of about 400° upon melted sugar. It is very soluble in water, and gives an intensely brown liquid, for which reason it is employed in coloring sauces, gravies, brandy, wines, &c. Form. C₁₂H₉O₉.

Carannas'sa, a river in the presidency of Bengal, which rises in Lat. 24° 34' N., and Lon. 85° 46' E., and after a course of about 150 m. enters the Ganges from the right, in Lat. 25° 28' N., and Lon. 89° 58' E.

Car'aux, *n.* (*Zool.*) A genus of fishes of the *Scombrida*, or Mackerel family, distinguished by having a lateral line with scaly plates, carinated, and frequently spinous. The yellow mackerel, *C. chrysos*, 6-8 inches long, is found on the Atlantic coast of the U. States.

Carapa, *n.* (*Bot.*) A genus of tropical plants, order *Meliacea*. The African species *C. guineensis* yields a fatty oil called kundah, or tallicoomali, which is purgative and anthelmintic. It is expressed from the seeds.

Carapace, **Carapax**, *n.* (*Zool.*) The upper shell of a crab or other crustaceous animal. The hard covering or shell which protects the upper part of the body of the *testudinata*, or turtles.

Carat, *n.* [*Fr. carat*; *Gr. keration*, a little horn, the berry of a pod used as a weight of 4 grains.] A weight of 4 grains used in weighing diamonds, pearls, and other precious stones. The term is also used in reference to the fineness of gold: in expressing which, the mass spoken of is supposed to weigh 24 carats, of 12 grains each; and the pure gold is called *fine*. Thus, if gold be said to be 22 carats fine (or standard), it is implied that 22-24ths are pure gold, and 2-24ths alloy. In the process of assaying gold, the real quantity taken is very small, generally from 6 to 12 grains; and this is termed the *assay pound*. It is subdivided into 24 carats, and each carat into 4 assay grains, and each grain into quarters; so that there are 384 separate reports for gold. When the gold assay pound is only 6 grains, the quarter assay grain only weighs 1-64th of a grain. This will give an idea of the accuracy required in the weights and scales used for such delicate operations. — See ALLOY, ASSAY.

Carava'ca, a town of Spain, prov. of Murcia, 42 m. W.N.W. of the city of that name, and 54 N.E. of Granada. Trade. Marbles, grain, oil, wine, flax, &c. *Pop.* 13,000.

Caravaggio, (*kar-a-vaj'-o*), a town of N. Italy, 24 m. E. of Milan; *pop.* 6,315.

Caravaggio, (*kar-rah-rad'-jo*), MICHELE ANGELO AMERIGHI, (or MERTIGHI NA.), a celebrated Italian painter, b. 1569; d. 1609. The principal merit of his pictures consists in the coloring, which is pure and vigorous; the tints are few, but true to nature. The obscurity in which he involves his design, gives it a certain air of mysterious grandeur; but his figures are replete with the unredeemed vulgarity of the models from which he studied, and the extravagance of a self-taught conceit aggravated by abandoned habits. His principal works are, a *St. Sebastian*, in the Capitol at Rome; the *Supper at Emmaus*, in the Borghese Palace; and the *Entombment of Christ*, in the Louvre.

Caravan, (*kar'a-van*), *n.* [*Fr. caravane*; *Ar. karivan*, from *kar*, trade, commerce.] A company of merchants, travellers, or pilgrims, who associate together in many parts of Asia and Africa, that they may travel with greater security through deserts and other places infested with robbers, or exposed to other dangers. The commercial intercourse of Eastern and African nations has from the remotest ages been carried on chiefly by means of *C.*, as the governments that have sprung up in those continents have seldom been able, even if they had had the will, to render travelling safe or practicable for individuals. Since the establishment of the Mohammedan faith, religious motives, with others of a less exalted character, have tended to augment the intercourse between different parts of the Eastern world, and to increase the number of the caravans. Mohammed, as is well known, enjoined all his followers to visit Mecca once in their lifetime; and large caravans assembled for this purpose in every country where the Mohammedan faith is established. There are four regular *C.'s* which proceed annually to Mecca: the first from Damascus, composed of pilgrims, travellers, and merchants from Europe and Asia; the second from Cairo, for the Mohammedans of Barbary; the third from Zibith, near the mouth of the Red Sea, where those of Arabia and India meet; the fourth from Babylon, where the Persians assemble. Every *C.* is under the command of a chief, or aga (*caravan-bashi*), who has frequently under him such a number of troops or forces as is deemed sufficient for its defence. When it is practicable, they encamp near wells or rivulets, and observe a regular discipline. Camels are almost uniformly used as a means of conveyance, in preference to any other animal, on account of their wonderful patience of fatigue, and their peculiarity of structure, which so admirably fits them for travelling through desert wastes.

A large, close carriage, or a train of such; used for the domiciling and transport of wild beasts, &c. for exhibition. — In Russia, a fleet of barges, or boats of large size, used for the conveyance of hemp, tallow, &c.

Caravaneer, *n.* The conductor of a caravan.

Caravan'sary, **Caravan'sera**, *n.* [*Fr. caravan-sérat*; *Ar. karavansera*; *Pers. serai*, a house for caravans.] A large public building, or inn, for the reception and lodgment of caravans in the desert. Though serving instead of inns, there is thus essential difference between them, that the traveller finds nothing in the *C.* for the use either of himself or his cattle, but must carry all his provisions and necessities with him. *C.* are also numerous in cities, where they serve not only as inns, but as shops, warehouses, and even exchanges.

Caravel, **Car'vel**, *n.* [*Sp. car'vella*; *Lat. carabus*, a sea-crab; a small wicker-boat covered with raw hides.] (*Naut.*) A kind of light-ship, formerly much used by the Spaniards and Portuguese; it had a square poop, and was galley-rigged.

"To board the caravels upon the Main." — *Fanshawe*.

A vessel used in the French herring-fishery.

Caravel'las, a seaport-town of Brazil, on the Bay of Caravellas, S. lat. 17° 49'; W. lon. 39° 26'; *pop.* about 3,000.

Caraway, *n.* See **CARTM.**

Caraway, in *N. Carolina*, a post-office of Randolph co. **Carbanic Acid**, *n.* (*Chem.*) When dry carbonic acid and dry ammonia gas are mixed, a white substance results, which was formerly supposed to be anhydrous carbonate of ammonia. Later investigations proved that it was a compound, containing ammonia combined with carbonic acid. Carbanic acid forms salts with numerous other bases, which are interesting only in a theoretical point of view. *Form.* $C_2H_3NO_4$.

Carbamide, *n.* (*Chem.*) A peculiar compound, formed by the action of ammonia on chloro-carbonic acid. It is said to be identical with *urea*, in which case the equivalent would require to be doubled ($C_2H_4N_2O_2$). Carbamide may be regarded as carbonic acid with an equivalent of oxygen, replaced by an equivalent of amidogen.

Carbazotic Acid, or **PICRIC ACID**, (*kar'bai-zot'uk*), *n.* A complex acid, produced by the action of nitric acid on a number of organic substances, such as phenic acid, salian, phloridzin, silk, indigo, and a number of the resins. It may be prepared in a variety of ways. A large quantity is furnished by heating one part of indigo with 8 or 10 parts of nitric acid, reduced to coarse powder. As soon as the effervescence of nitric oxide has ceased, the liquor is boiled, and nitric acid added from time to time, until no more gas is given off. On cooling, the carbazotic acid crystallizes out in long, pale-yellow, brilliant, not angular plates, which are to be washed, re-dissolved, and re-crystallized. Carbazotic acid is soluble in 50 or 90 parts of cold water, forming a liquid of a bright yellow color. It has an intensely bitter taste, and has been used instead of hops for making bitter ale. It has been employed in dyeing silk and wool, to which, in conjunction with cream of tartar or alum as a mordant, it gives a fine yellow color. Carbazotic acid is sometimes employed as a test for potash, with which it forms a bright yellow crystalline precipitate, even in dilute solutions. Carbazotate of potassium, or picrate, when heated, violently explodes, and was used in the Franco-German war in blowing up bridges, &c.

Carbery, in Ireland, a district in S. of co. Cork.

— A barony of co. Sligo.

— A barony of co. Kildare.

— A small island, in Dunmains Bay, co. Kerry.

Carbet, (*Le*), the cap. of Martinique, 2 m. from St. Pierre; *pop.* about 4,000.

Carbide, *n.* (*Chem.*) A term now employed instead of *carburet* to denote the union of carbon with a base. The most important carbides will be found under the heads of their respective bases.

Carbine, **Car'abine**, (*kär'bîn*), *n.* (*Mil.*) A fire-arm used by cavalry and artillery, shorter in the barrel than the ordinary musket or rifle. It was used by light cavalry as early as the 16th century.

Carbineer, *n.* (*Mil.*) See **CARABINEER**.

Carbolic Acid, **PHENIC ACID**, **HYDRATE OF PHENYL PHENOL**, **HYDRATED OXIDE OF PHENYL**, **PHENILIC ALCOHOL**, *n.* (*Chem.*) A very abundant product of the distillation of coal. Laurent obtained *C. A.* from oil of coal-tar by collecting separately those portions which boil between 200° and 400° Fahr. By mixing with this oil a hot saturated solution of hydrate of potash, a white crystalline substance separates, the supernatant liquid is decanted, and the crystals are dissolved in a small quantity of water. The solution separates into two portions, the denser of which contains carbolate of potash. The potash is abstracted by the addition of hydrochloric acid, and the liquid carbolic acid rises to the surface. The carbolic acid solution is digested with chloride of calcium to remove water, and afterwards exposed to a low temperature. It then crystallizes in long colorless needles, which must be kept from contact with the atmosphere. *C. A.* melts at 95°, and boils between 365° and 370°. The slightest trace of moisture is sufficient to cause the liquefaction of the crystals. *C. A.* is but sparingly soluble in water: it is, however, readily dissolved by alcohol, ether, and acetic acid. It has a burning taste, and an odor of smoke resembling creosote. Its solution does not redden litmus, and leaves a permanent greasy mark on paper if let fall upon it. A splinter of deal dipped in *C. A.* and then into nitric acid becomes dyed blue. *Form.* C_6H_5OH . — The disinfectant, or rather antiseptic, properties of *C. A.* are very remarkable. Recognized some twenty years ago, and used with marked success during the prevalence of cholera by the Frenchman Dr. Jules Lemaire, it is only at the present day that the preventative and curative properties of this powerful agent have been evidenced. Largely used for the treatment of putrid sores, and warmly advocated in cases of measles, whooping-cough, fevers, diphtheria, scarlatina, &c., it is believed that when it shall have been further studied and tested by experiment, the number of important uses to which it will be found applicable may be even further increased. — This acid has besides received important applications in the arts as a disinfectant and deodorizer, namely for the preservation of wood and animal substances. It is also used in dyeing and calico-printing. See **SECTION II.**

Carbon, *n.* [*Lat. carbo*; *Fr. and Sp. carbone*.] (*Chem.*) An elementary non-metallic, solid body, very widely diffused throughout nature. Its purest and rarest form is that of the diamond (see **DIAMOND**), but in the forms of graphite and mineral charcoal it occurs very abundantly in nearly every part of the world. It also occurs, in combination with oxygen, as carbonic acid, in small quantities in the air, and in the waters of most springs. In combination, as carbonic acid, with lime and magnesia, it occurs, in enormous quantities, as limestone, marble,

chalk, dolomite, &c.; whilst, combined with hydrogen, it enters largely into coal, peat, and lignite. From its invariable presence in all organic matter, it has been called the organic element; and Hoffman poetically calls organic chemistry "the history of the wanderings of carbon." From entering thus directly into the vegetable and animal creation, *C.* may be considered as the most important element; and the pouring out of carbonic acid by animals, to serve for the food of vegetables, is one of the many silent chemical operations constantly going on around us. The wonderful provision of Nature by which the carbonic acid cast out by animals as a poisonous product is converted into food for the support of plants, by the action of the sun's rays, has been the admiration of all philosophers and chemists from the days of Lavoisier to the present time. *C.*, as it exists in the form of the diamond, *C_a*, is fully described under that head; and the same may be said of graphite, *C_β*, which is treated of under the head of **GRAPHITE**. Charcoal, or amorphous *C*, *C_γ*, exists as ordinary wood charcoal and lamp-black, generally combined with incompletely burned compounds of *C.* and hydrogen. Coke and animal charcoal are other forms of *C.* Charcoal is made by inclosing wood billets in an iron retort, to which is adapted a tube for conveying the products of combustion to appropriate receivers, and exposing it to a red heat for 4 or 5 hours. Where wood is very abundant, large-heaps, covered with powdered charcoal, leaves, turf, and earth, are fired and allowed to burn slowly for a month or more. Charcoal prepared in this way is superior to that burnt in retorts. — *Animal charcoal*, or ivory-black, is prepared in cylinders, in a similar manner to that employed for wood charcoal. *C.*, in its amorphous condition, is a black, dense, perfectly opaque, insoluble, infusible, inodorous, tasteless body, conducting heat badly and electricity freely. At ordinary temperature it shows no chemical affinities. This property has been taken advantage of by the ancients, who used it for ink. The same property has rendered it a common practice to char the inside of tubs and casks intended to hold liquids: and posts and piles partially charred are found to last longer under water than when immersed in their natural state. Finely divided charcoal has powerful antiseptic properties, and it is coming into use as a deodorizer to be used for purifying the air of sewers. Dr. Letheby's late experiments in this direction appear to prove that, by a proper application of charcoal air-filters, the air in sewers may be rendered wholesome and pure. Charcoal also has the peculiar property of absorbing coloring matter from organic solutions: hence its use as a decolorizer. At high temperatures *C.* combines energetically with oxygen, and will remove it from great numbers of its combinations: hence its use in reducing metallic oxides. Whatever be its source or form, *C.* is chemically the same, and, when burnt in oxygen, forms carbonic acid. Box-wood charcoal was found by Sansure to be capable of absorbing gases in the following proportion:

Hydrogen.....	1.75	times its volume.
Nitrogen	7.5	" "
Oxygen	9.42	" "
Carbonic acid	35	" "
Sulphuretted hydrogen.....	55	" "
Hydrochloric acid	55	" "
Ammoniacal gas.....	90	" "

It will be seen from the above table that the more unwholesome the gas, the greater the quantity absorbed: a fact which appears to point to charcoal as the great disinfectant and deodorizer. Indeed, the great success attending the use of *C.* for filters, both for air and water, is a proof of its efficiency in this direction. *Equivalent*, 12; *sp. gr.* as diamond 3.55, as graphite 1.9 to 2.3. *Symbol* *C.* — *C.* unites with several of the elements to form numerous and very important compounds, which will be found under their respective names.

Bisulphide of C. Equivalent 38, *sp. gr.* 1.27, boiling-point 118.5° Fahr. Only one compound of sulphur and *C.* is known. It is prepared by heating fragments of charcoal to redness in a retort; into which dip a tube reaching to the bottom of the charcoal. From time to time sulphur is dropped through the tube, which is closed again immediately. The sulphur and *C.* gradually combine, and the bisulphide distils over into the receiver, which is kept cool with ice. It is at first yellow, from excess of sulphur; but by being re-distilled several times, it is obtained in a state of purity. It is a colorless liquid, with an acrid, pungent taste, and a foetid odor. It is insoluble in water, but dissolves in ether and alcohol. It is very volatile, and has never been frozen. It burns with a blue flame, giving off sulphurous and carbonic acid gases. It dissolves sulphur and phosphorus readily, and these elements may be obtained in crystals by slow evaporation of their solutions. Berzelius looks on bisulphide of *C.* as a sulphuric acid corresponding to carbonic acid, which is an oxygen acid. This idea is borne out by the fact, that bisulphide of *C.* will unite with several sulphides to form salts, which are called sulpho-carbonates. — $KO \cdot C_2O_2$, carbonate of potash; $KS \cdot CS_2$, sulpho-carbonate of potassium. The solution of phosphorus in bisulphide of *C.* is used in electrotyping objects, which are coated with a film of phosphorus by its means, and rendered capable of receiving an immediate metallic covering when plunged into the solution of sulphate of copper. From certain experiments of Berzelius, it is supposed that a protosulphide of *C.* exists. A mixture of bisulphide of *C.* and solid carbonic acid produces the most intense cold known.

Chloride of C. They are three: Protochloride, C_2Cl_4 ; sesquichloride, C_3Cl_6 ; bichloride, C_2Cl_4 . The first compound is formed by passing the vapor of sesquichloride

of carbon through a red-hot glass tube filled with fragments of glass. Chlorine is liberated, and a colorless liquid obtained, which boils at 240° Fahr. It is regarded as a derivative of olefiant gas, C_2H_4 . The second is formed by acting on Dutch liquid under the influence of solar radiation. It is a volatile crystalline solid, with an aromatic odor resembling camphor. It fuses at 320° and boils at 360° . Its specific gravity is 2, and it is soluble in ether and alcohol. There is also a liquid sesquichloride with the formula C_2Cl_3 , which was obtained by Regnault by passing the vapor of bichloride of carbon through a tube heated to redness. The third, which is often called perchloride of carbon, was obtained by Regnault from wood-spirit and from chloroform by the combined action of chlorine and the sun's rays. Kolbe forms it by passing bisulphide of carbon and chlorine through a red-hot tube. It is a colorless liquid, possessing a peculiar alliaceous odor, and boiling at 172° Fahr. At -9° Fahr. it becomes a solid of pearly crystalline appearance. Besides these compounds of chlorine and carbon, Faraday obtained a sub-chloride of carbon (C_2Cl_2), which formed fine silky crystals, subliming without change by passing the protochloride several times through a red-hot tube.

Oxychloride of C. or **Chloro-carbonic Acid**, or **Phosgene Gas**. Spec. grav. 3.68; symbol $COCl_2$.—When equal volumes of chlorine and carbonic acid are exposed to the sun's rays, they gradually combine, and condense into half their volume. Oxychloride of carbon is a suffocating gas, which is decomposed by water into carbonic acid and hydrochloric acid. It may also be formed by passing carbonic oxide through pentachloride of antimony.

Carbon, in *Pennsylvania*, an E. county, so called from its mines of anthracite; area, 400 sq. m. It is bounded S.E. by the Blue or Kittatinny Mountains, and traversed from N.E. to S.W. by the Lehigh River. It is a mountainous district, possessing immense coal-mines. Anthracite is the principal product of the co. *Cap.* Mauch Chunk. *Pop.* (1890) 38,630.

—A township of Huntingdon co.

Carbon, in *Missouri*, a village of Macon co., 3 m. E. of Macon City.

Carbonaceous, *a.* Pertaining to, or containing, carbon; as, a *carbonaceous* deposit.

Carbonade, **Carbonado**, *n.* (*Cooking.*) The flesh of animals, fowls, &c., cut and scored across, and broiled on live coals.

"If I come in his way willingly, let him make a carbonado of me."—*Shaks.*

Carbonari, (*kär-bon-ä're*), *n. pl.* [It., "charcoal-burners."] (*Hist.*) The name given to a secret political association, formed in Italy at the commencement of the present century, its professed aim being the reorganization and reform of the government of that country. Members of all classes were found in its ranks. In 1814, they formed a plan, subsequently abandoned, of creating a revolution in Naples. In 1820, a constitution was proclaimed at Nola. The same thing occurred at Naples and other places. Ferdinand I. of Naples made concessions; the forces of the C. under General Pepe entered his capital July 9, and the king swore to observe the new constitution on the 13th. The emperors of Austria and Russia, and the Prince of Prussia, met at Troppan, in October, and invited Ferdinand to meet them at Laybach, to which town the Congress was transferred in January, 1821, where measures were determined for an armed interference for the suppression of the revolution. The Austrians entered Italy early in 1821, Naples capitulated March 20, and the revolutionary parliament was closed 4 days afterwards. By an ordinance dated April 10, any person attending the meetings of the C. was to be punished capitally. The society, however, continued to exist, and spreading through France, caused insurrections at Rochelle, Colmar, Toulon, and Marseilles, in 1821, and its influences are supposed to have contributed to the revolution of 1848 in France and Germany. The numerous outbreaks that have occurred in the Italian peninsula since 1821, may be all traced, directly or indirectly, to the machinations of the C. Carbonarism is still in existence in Italy, or at least was so down to very recent times.—*The Calderaii*, "tinkers or braziers who use the coals," was the name given to a loyal society opposed to the C.

Carbonarism, *n.* The political principles of the Carbonari.

Carbonate, *n.* (*Chem.*) A salt resulting of the union of carbonic acid with a salt.

Carbonated, *a.* Combined or impregnated with carbonic acid.

Carbon Cliff, in *Illinois*, a P. O. of Rock Island co.

Carbondale, in *Illinois*, a city of Jackson co., 55 m. S. of Centralia. *Pop.* (1897) abt. 3,000.

Carbondale, in *Penn.*, a city of Lackawanna co., near the source of Lackawanna river, and connected with Honesdale by a railroad 17 m. long. The Lackawanna valley is extremely rich in beds of coal which have been for a long time successfully mined. *Pop.* (1890) 10,840.

Carbon Hill, in *Missouri*, a post-office of Johnston co.

Carbonic, *a.* [*Fr. carbonique*] Pertaining to carbon, or obtained from it; as, *carbonic* gas.

Carbonic Acid, *n.* (*Chem.*) This important compound is obtained when any form of carbon, such as the diamond or pure charcoal, is burnt in oxygen gas. It forms an important constituent of the atmosphere. 100 cubic inches of carbonic acid gas weigh 47.3 grains. Under a pressure of 36 atmospheres, at the temperature of 32° , it becomes liquid; and when the pressure which retains it in the liquid state is removed, the rapidity of the evaporation, and the sudden and enormous expansion of the vapor, are such as to produce a degree of

cold under which the acid solidifies, forming a white concrete substance possessed of very extraordinary properties. Mr. Faraday was the first who liquefied carbonic acid, but it was first described as a solid by M. Thilourier. At common temperatures and pressures, water absorbs its own volume of carbonic acid; under a pressure of two atmospheres it dissolves twice its volume, and so on. Carbonic acid imparts briskness and a slightly pungent and sour taste to water impregnated with it; it also confers the effervescent quality upon many mineral springs. Carbonic acid is recognized by its rendering lime-water turbid. It extinguishes flame and suffocates animals; hence the miners call it *choke damp*. Carbonic acid is contained in marble, chalk, and all the varieties of limestone, from which it is extracted by strong heat, as in the process of burning lime; or by the action of stronger acids, in which case the carbonic acid escapes with effervescence. Mountains of limestone, therefore, are great natural repositories of carbonic acid. This gas is also produced during the respiration of animals, and is evolved in the process of fermentation. *Equivalent*, 44; *sp. gr.*, 1.529; *form.*, CO_2 .

Carbonic Oxide, *n.* (*Chem.*) Carbonic oxide is produced when carbonic acid is passed over red-hot charcoal; from which it will be seen that this gas is formed during the combustion of almost every organic substance. The first result of combustion is, of course, carbonic acid, which, passing over the red-hot coals or wick, as the case may be, parts with an equivalent of its oxygen. The gas, however, is inflamed as fast as it is formed, and re-connected with carbonic acid. It is generally prepared by the decomposition of oxalic acid by sulphuric acid. Oxalic acid consists of C_2H_2 united to an equivalent of water, without which it does not appear to be able to exist. The sulphuric acid abstracts this equivalent of water, leaving the C_2H_2 at liberty to separate into CO, carbonic oxide, and CO_2 , carbonic acid. The latter is absorbed by passing the mixed gases through milk of lime. Carbonic oxide gas thus prepared is colorless and inodorous, burning with a blue flame, and giving rise to carbonic acid. It supports neither combustion nor respiration, one per cent. mixed with air being sufficient to cause dangerous drowsiness. It is now satisfactorily proved that the coma generally resulting in death produced by the combustion of charcoal in close rooms, is due to the formation of carbonic oxide by the carbonic acid formed during combustion, being exposed to the action of so much incandescent material. It is a neutral body, has no action on litmus-paper, does not combine with acids or bases, and has never been liquefied; it is slightly soluble in water. In metallurgical processes, carbonic acid plays an important part by supplying fuel as fast as it is formed. *Equivalent*, 28; *sp. gr.*, 0.967; *form.*, CO.

Carboniferous, *a.* [*Lat. carbo*—carbonis, and *fero*, to bear, or produce.] Producing, or containing, carbon or coal; as, *carboniferous* strata.

Carboniferous Age, *n.* (*Geol.*) The name given to the strata which rest upon the Devonian measures. It commenced, both in America and Europe, with a preparatory marine period, the SUB-CARBONIFEROUS, *q. v.*; had its consummation in a long era of extensive continents, covered with forests and marsh-vegetation, and subject at long intervals to inundations of fresh or marine waters, the *carboniferous*, or *COAL PERIOD*, *q. v.*, and declined through a succeeding period, the PERMIAN, *q. v.* in which the marsh-vegetation became less extensive, and the sea again prevailed over portions of the carboniferous continents. The rocks of the C. A. lie at the surface over large areas of N. America, viz.:—*In the U. States*. 1. Over parts of Rhode Island and Massachusetts, between Newport and Worcester. 2. Along the Appalachian region from New York into Alabama, and spreading W. over half of Ohio, and part of Kentucky and Tennessee, and a little of Mississippi. 3. Over central Michigan. 4. Over much of Illinois, and spreading E. over part of Indiana, S. over part of Kentucky, W. over part of Iowa, Minnesota, Missouri, Kansas, Arkansas, and large portions of the Rocky Mountain slopes. 5. In Texas. 6. About the summits of the Rocky Mountains, near several of the passes; around the Great Salt Basin in Utah; in the Colorado basin, New Mexico, and over some other parts of the Pacific slope of the Rocky Mountains. 7. In N. California.—*In the British Provinces*. 1. Over much of New Brunswick and part of Nova Scotia. 2. In the Arctic, over Melville and other islands between Grinnell Land and Banks Land. The coal measures cover a large part of most of the regions here pointed out, the rest being occupied by the sub-carboniferous and Permian, or by limestones and other barren beds of the carboniferous period. Excepting the areas W. of the Rocky Mountains, the whole pertain to three great regions or basins:—1. The *Interior Continental region*, including the Appalachian area on the E. and stretching W. to western Kansas, and perhaps still further, to, or beyond, the summit of the Rocky Mountains; for carboniferous rocks probably underlie the later beds now at the surface. It is divided into two parts by the Lower Silurian uplift about Cincinnati and the region S.W. 2. The *Atlantic border region*, including the New Brunswick and Nova Scotia region, and that of Rhode Island,—also divided into two parts, a northern and a southern. See SECTION II.

Carbonization, *n.* [*Fr. carbonisation*.] Act or process of carbonizing.

Carbonize, *v. a.* To convert into carbon.

Carbonometer, *n.* [*Eng. carbon*, and *Gr. metron*, measure.] (*Chem.*) An instrument for ascertaining the presence of an excess of carbonic acid, by its action on lime-water.

Carbon Station, in *Illinois*, a post-office of Peoria co.

Car'bonton, in *N. Carolina*, a P. O. of Moore co.

Car'bonto, in *W. Virginia*, a vill. of Kanawh.

Car'boy, *n.* [*Gael. carb*, a basket.] A large globular bottle of green glass, protected by basket-work. They are seldom used, except for containing certain acids and other highly corrosive liquids likely to act upon stoneware. A carboy of oil of vitriol usually contains about 160 lbs. of that acid, or 12 galls. of water.

Carbuncle, (*kär'bung-kl.*) *n.* [*Lat. carbunculus*, dim. of *carbo*, a coal.] A large garnet, cut *en cabochon*; i. e. convex on the under side, and concave on the upper. The light is generally reflected in a flame-like form, hence the name. The clear deep-red garnets from Pegu are most highly valued. There are many substitutes for garnet, such as the cinnamon-stone, which, when cut *en cabochon*, deceives even mineralogists. For the chemical composition of the carbuncle, see GARNET.

(*Her.*) A charge, or bearing, consisting of rays considered as representing the jewel called carbuncle.

(*Med.*) A hard, painful, circumscribed tumor, so called from *carbo*, a coal, because the ancients likened the pain it caused to a burning coal in a state of perpetual activity. It is also called ANTHRAX, *q. v.*

Car'buncled, *a.* Set with carbuncles.

"Armour . . . carbuncled like holy Phæbus' car."—*Shaks.*

—Having a fiery red boil, or spot, called carbuncle; as, a man with a *carbuncled* nose.

Carbun'cular, *a.* Belonging to, or resembling, a carbuncle; fiery; inflamed; red like a carbuncle.

Carbunculation, *n.* [*Lat. carbunculatio*.] (*Bot.*) The blasting of young buds of trees by excessive heat or cold.

Car'buret, *n.* (*Chem.*) See CARBIDE.

Car'buretted Hydrogen, *n.* (*Chem.*) See HYDROGEN.

Car'byle, (**Sulphate of**) *n.* (*Chem.*) Ethionic anhydride, so called by its discoverer Magnus. It is a combination of four equivalents of sulphuric acid with one of olefiant gas.—See ETHIONIC ACID.

Car'cajente, a town of Spain, prov. Valencia, 7 m. N.N.E. of San Felipe. It is a fine prosperous place, with a good trade in silk, cereals, and fruits. *Pop.* 9,735.

Car'cajon, *n.* [*Fr.*] (*Zoöl.*) The American BADGER, *q. v.*

Carcanet, (*kär'ka-net*), *n.* [*Fr. carcan*; *L. Lat. carcanum*; from *Gr. kirkinos*, from *kirkos*, a circle or ring.] A chain or collar of jewels for the collar or neck; as, a *carcanet* of rubies.

Car'cass, **Car'case**, (*kär'kas*), *n.* [*Fr. carcasse*; *L. Lat. carcaissum*, a quiver.] In its original sense, a quiver or case for arrows. The dead body of an animal; as, the *carcass* of an ox.

"He is a vulture, and only waits for the carcass."—*Taylor*.

—The human body;—used in a contemptuous sense.

"To-day how many would have given their honours, To've saved their carcasses?"—*Shaks.*

—Any thing decayed, or in a ruinous state; as, the *carcass* of ship.

"A rotten carcass of a boat, not rigg'd."—*Shaks.*

—The shell, or framework of any unfinished thing, as of a building.

(*Mil.*) A destructive missile discharged from a mortar, like a shell, and designed to set fire to buildings and stores belonging to the enemy. It is a hollow, spherical case of iron, perforated with three holes, and filled with combustible matter, which blazes furiously from these apertures, and cannot easily be extinguished. The composition, which resembles in many points the famous Greek fire of the Byzantines, burns for nine or ten minutes, and is lighted by fuses placed in the holes, which ignite at the moment of discharge. The 13-inch carcass contains 18 lbs. of composition, and weighs nearly 2 cwt. They are said to have been first used in Germany about 1670.

Car'cassonne, a walled city of France, dep. Aude, of which it is the cap., on the river Aude, 34 m. W. of Narbonne. This is a fine and flourishing place, and possesses many noble public buildings, and educational institutions. *Manuf.* Woollen cloths, linens, stockings, soap, paper, nails, &c. C. is very ancient, having been of considerable importance in the days of Caesar. It fell successively into the hands of the Visigoths and Saracens, and suffered much in the wars of the Albigenses. Its last sovereign count ceded it to France in 1247.

Car'cass-roof'ing, *n.* (*Building.*) That which supports the covering by a grated frame of timber work.

Car'cel Lamp, *n.* See LAMP.

Car'cer, *n.* [*Lat.*] The ancient name for a prison or jail.

Car'ceral, *a.* [*Lat. carceralis*.] Pertaining to a prison. (*R.*)

Car'ceres, *n. pl.* [*Lat. carcer*.] (*Arch.*) The cells at the end of a circus, in which were stationed the chariots and horses that contended for the prizes, so that they might be able to start simultaneously at the given signal.

Car'cern'i, *n. pl.* [*Lat.*, dim. of *carcer*, a prison.] (*Bot.*) A name given by botanists to such fruit as that of the lime-tree, which consists of a small number of dry, indehiscent, few-seeded cells cohering round a central axis.

Carcinolog'ical, *a.* Belonging to carcinology.

Carcinology, *n.* [*Gr. karkinos*, a crab, and *logos*, treatise.] The science which treats of the crustacea, as lobsters, crabs, shrimps, &c.

Car'cino'ma, *n.* [*Lat.*] (*Med.*) A hard, glandular swelling, the first stage of cancer, known as scirrhus. See CANCER.

Carcinom'atous, *a.* (*Med.*) Relating to, or partaking of, carcinoma.

Car'cinus, *n.* (*Zoöl.*) See CYCLOMETOPA.

Fig. 514.

Card, *n.* [Fr. *carte*; from Lat. *charta*, paper; Gr. *chor-tis*, a leaf of the Egyptian papyrus.] A paper or piece of pasteboard, used in games, &c.; a piece of pasteboard on which is inscribed a person's name, address, &c.; as, a playing-card, a visiting-card, &c.

—A published notification, containing a brief announcement, explanation, &c.

—A paper on which the points of the compass are marked.

"Upon his cards and compass firm's his eye,
The masters of his long experiment." — *Spenser*.

—*v. i.* To play at cards; to game. — *Johnson*.

Playing Cards. Oblong pieces of pasteboard, inscribed with certain figures and points, and used in various games of skill and hazard. The origin of this invention is obscure. While it has by some been erroneously attributed to the Romans, by others it has been traced, perhaps with more plausibility, to an Asiatic source. The claim, advanced by Mezerai, on behalf of the French, is certainly untenable. *C.* may have been used in France in 1390; but that they were not invented to amuse Charles VI. is evident from the fact that they are mentioned in the Stadtbuch of Augsburg for the year 1275. Tiraboschi speaks of them as used in Italy before the close of the thirteenth century; and the game is noticed in many German books throughout the fourteenth cent. The figures of the four suits were symbolical representations of the four great classes of men; and the names attached to these figures in England arose from a misapprehension of the names originally assigned to them. Thus, by the *hearts* are meant the *gens de coeur* (*cœur*), the choir-men or ecclesiastics, and hence these are called *copas*, or chalices, by the Spaniards; whose word *espada*, sword, indicating the nobility and warriors of the State, has been corrupted into the English *spade*. The clubs were originally *trèfles* (trefoil leaves), and denoted the peasantry; while the citizens and merchants were marked by the diamonds (*carreaux*, square tiles). The word *knave*, (Ger. *knab*, boy,) was used, of course, in its older sense of servant, or attendant on the knights. The French *C.* long retained the names of the four kings David, Alexander, Cæsar, and Charles, who marked respectively the Jewish, Greek, Roman, and Frank empires. The queens, Argine, Judith, Esther, and Pallas, are not so easily accounted for. The first name furnishes an anagram of *regina*, or queen; the others may have been chosen as types of the moral qualities of wisdom, purity, and courage. The modern pack of *C.* consists of fifty-two cards, in four suits—two red, *hearts* and *diamonds*, and two black, *spades* and *clubs*; each suit consisting of three *court* or *picture* cards, the king, queen, and knave, and ten other cards distinguished by the number of their "pips" or spots, from ten to one respectively. The lowest of these is always called the "ace," and the two and three are often called the "deuce" and "tray." The natural rank of the cards in each suit is, king highest, and so on down to ace lowest; but in many games this rank is varied, as in Whist, where the ace is put highest of all, above the king; in Écarté, where it is put between the knave and the ten; and in Bézique, where it is made the highest, but where the ten is put between it and the king. In Quadrille, the rank of some of the *C.* is variable in every hand. Sometimes the pack of *C.* is reduced to thirty-two, by excluding the six, five, four, three, and two of each suit; it is then called a "piquet pack." An immense variety of games are played with *C.*, some involving chance only, some combining chance and skill, the best of them furnishing very agreeable and intellectual amusement. Some are *round games*, in which any number of persons may join, as *Poker*, *Hearts*, *Loo*, *Pope Joan*, &c.; some are for four persons, as *Whist* (the best of all, a time game), and regular *Euchre*; some for two as *Piquet*, *Écarté*, *Bézique*, *Cribbage*; and games have been introduced even for one person, called *Solitaire*, or *Patience*. **Card**, *n.* [Du. *kaarde*; Lat. *carduus*, a thistle; It. *cardo*.] A teazle; an instrument for combing, opening, and breaking wool or flax.

—*v. a.* To comb or open wool, flax, hemp, &c. with a card.

"The while their wives do sit
Beside them, carding wool." — *May*.

Cardamine, *n.* [Gr. *kardia*, heart, *damao*, to strengthen; from its stomachic properties.] (*Bot.*) A genus of plants, order *Brassicaceæ*. *C. pratensis*, the Cuckoo-flower, Lady's-smock, or Bitter-cress, found in swamps N. of New York, blossoms in April or May, when its flowers, which are flesh-colored, white, or a little purple, in a terminal raceme, present a very pleasing appearance. The leaves are anti-scorbutic, and are sometimes eaten as water-cress.

Cardamom, *n.* (*Bot.*) The name given to the capsules of plants belonging to the genera *Amomum* and *Elettaria*. They are three-celled, and contain numerous wrinkled seeds which form an aromatic pungent spice, weaker than pepper, and with a peculiar but agreeable taste. On account of their cordial and stimulant properties, they are employed in medicine, very generally to qualify other medicines; they are also used in confectionery. The *C.* recognized in our pharmacopœias, and called *True* or *Original C.*, also known in commerce as *Malabar C.*, are the produce of *Elettaria Cardamomum*, a native of the mountains of Malabar and Canara. They depend for their qualities on a peculiar pungent essential oil, called *Oil of Cardamom*, which may be obtained from them by distilling with water, and when fresh, is colorless. Other kinds of *C.* occur in Canara, but none is equal to the true *C.* in commercial value.

Cardan, *Jerome*, an Italian physician of great note in his time. Though he appears to have been a consummate empiric, he certainly had considerable talent. He was an excellent mathematician, but so addicted to as-

trology, that having predicted the time of his death, it is said he starved himself in order to verify his prediction. His works on various subjects were printed in 10 vols. folio, at Lyons, in 1603. B. 1501: D. 1576.

Cardan's, in *Ireland*, a parish of Tipperary co.

Cardan's Formulae, *n. pl.* (*Math.*) See CUBIC EQUATIONS.

Card-basket, *n.* A basket for the reception of visitors' cards.

Card-board, or **Card**, *n.* A stiff kind of pasteboard or paper. Ordinary *C.-B.* is made of fine white paper outside, between which are pasted several layers of cartridge-paper. Bristol-board is made altogether of fine white paper. Mill-board is made of coarse brown paper, layers of which are glued together and pressed. It is mostly used by bookbinders. Cards are enamelled by brushing them over with a mixture of China-white and size. After being rubbed with some finely powdered talc, they are polished vigorously with a brush.

Card-case, *n.* A small pocket-case to hold visiting-cards.

Cardenas, a seaport town of the island of Cuba, cap. of an administrative division of that name. It is situated on the N. coast, 120 m. E. by S. of Havana. Its harbor has 5 or 6 fathoms of water, and good anchorage. Pop. 7,225.

Card'er, *n.* A person who cards wool.

"The spinsters, carders, fullers, weavers." — *Shaks.*

—One who plays at cards; a gamester.

Cardia, *n.* [Gr. *kardia*.] (*Anat.*) The superior or œsophageal orifice of the stomach. Also the heart.

Cardiac, **Cardiacal**, *a.* [Lat. *cardiacus*, from Gr. *kardia*, the heart; Sansk. *hrid*.] (*Anat.*) Pertaining to the heart; resembling the heart; as, the *cardiac* arteries. — **Cardial**; strengthening; stimulating the heart to action; bracing the system, &c.; as, a *cardiac* medicine.

Cardiac Wheel. (*Mach.*) See HEART-WHEEL.

Cardiaceæ, *n. pl.* (*Zool.*) A family of Molluscon animals, established by Linnaeus, including the cockles and their allies; the shells of which are all equivalent, or nearly so. There are numerous species, widely diffused; many of them being remarkable for the smallness and delicacy of their shells, as well as for the comparative activity of the animals that form and inhabit them.

Cardiography, *n.* (*Anat.*) An anatomical description of the heart.

Cardialgia, **Cardialgy**, *n.* [Fr. *cardialgie*.] (*Med.*) Impaired appetite, with gnawing or burning pain in the stomach or epigastrium. — *Dunglison*.

Cardiff, a seaport town of England, in S. Wales, co. Glamorgan, on the Bristol Channel, 25 m. W. of Bristol, and 170 W. of London. It possesses magnificent docks, whence coal and iron are yearly exported to the quantity of 1,500,000 tons. These docks are, along with the town, the property of the Marquis of Bute. Pop. in 1897, about 133,000.

Cardiff, in *Iowa*, a village of Mitchell co.

Cardiff, in *Mississippi*, a village of Warren Co., on the E. side of the Yazoo river, 13 m. N. by S. of Vicksburg.

Cardiff, in *New York*, a post-village of Onondaga co., 132 m. W. by N. of Albany.

Cardigan, a maritime co. of England, in S. Wales, having N. the cos. of Merioneth and Montgomery; E. Radnor and Brecon; and S. Carmarthen and Pembroke. Area, 443,357 acres. — *Surface*, undulating; *soil*, fertile. Silver, lead, and copper are extensively found, and slates largely exported. — *Chief Towns*, Cardigan (the chief), Aberystwith, Tregaron, Lampeter. Pop. 73,488.

CARDIGAN, a seaport town, and cap. of above co., on the N. bank of the Tyvi, near St. George's Channel, is 198 m. W.N.W. of London. It is an ancient place, and maintains a considerable shipping-trade. Pop. 4,000.

Cardinal, *a.* [Fr. from Lat. *cardinalis*, from *cardo*, *cardinis*, a hinge.] That serves as a hinge on which anything depends; chief; principal; preeminent; fundamental; as, a *cardinal* virtue. "His *cardinal* perfection was industry." *Clarendon*. — **Cardinal Points**, (*Geog.*) The East, West, South, and North points of the compass. — (*Astrol.*) The cardinal points are those of the rising and setting of the sun, and the zenith, and nadir. **Cardinal Numbers**. The numbers *one, two, three*, &c., in contradistinction to *first, second, third*, &c., which are denominated *ordinal* numbers. — **Cardinal Signs**, (*Astron.*) Aries, Libra, Cancer, Capricorn. They mark the four quarters of the year, or the two equinoxes and two solstices. — **Cardinal Virtues**. Among the ancients, prudence, justice, fortitude, and temperance. — **Cardinal Winds**, (*Meteorol.*) Those which blow from cardinal points of the compass.

—*n.* [Fr. *cardinal*.] (*Ecc.*) An ecclesiastical prince in the Roman Catholic Church. In early times this title was restricted to the 7 bishops of Rome, and the sees within its territory, and the clergy of the 23 principal churches of that city; whence the *College of Cardinals* takes its origin. The number of which this college consisted has varied in

the course of time. It has for some centuries been limited to 70; of whom six were bishops of certain Roman dioceses; 50, styled *cardinal priests*, held their titles from parishes in Rome (many of them being at the same time bishops of foreign dioceses); and 14 were deacons. But in fact there are at present 65 only. The election of the Pope, which is performed by these personages assembled in conclave, is thus concurred in by the 3 orders of clergy, through their representatives. The period at which this election was confined to the cardinals is variously stated. Some have asserted that such was the case as early as 1058; others, not before 1562. It is now understood that the Pope must be chosen from this body. The *C.* are distinguished by a scarlet hat, and a short purple mantle worn over the rochet. Their rank is next to that of the Pope, with whom they form a political council for the secular affairs of Rome; and also an ecclesiastical council, each congregation being presided over by one or more of the cardinals. Authentic information as to their rank and function may be found in the "Papal Calendar" (*Annuario Pontificio*), published annually at Rome. — See CON-SISTORIUM, and CONCLAVE.

—A woman's short cloak.

Cardinalate, **Cardinalship**, *n.* The office, rank, or dignity of a cardinal.

Cardinal-bird, *n.* (*Zool.*) The *Cardinalis Virginianus*, *Loxia cardinalis* of Linnaeus, also called Red-bird, Virginian nightingale, Cardinal-finch, and Cardinal-grosbeak. This American bird is 8 inches in length; its general plumage is a fine red; the bill pale-red, and stout; on the head is a crest; and around the bill, and on the throat, the color is black; the quill and tail feathers are not of so bright a red as the body. The song of the Cardinal-grosbeak very much resembles that of the nightingale, and during the spring and summer its sweet notes are heard from the tops of the highest trees. It is met with in several parts of North America; and is said to collect together great quantities of maize and buckwheat, of which it is very fond.

Fig. 516.

CARDINAL GROSBEEK.
(*Cardinalis Virginianus*.)

Cardinal-flower, *n.* (*Bot.*) See LOBELIA.

Cardinal-grosbeak, *n.* (*Zool.*) See CARDINAL-BIRD.

Carding-machine, *n.* (*Mach.*) A machine in which the fibres of cotton are combed or carded, to disentangle them from each other, and bring them into a proper condition for spinning into yarns and thread. These machines consist of wooden cylinders or drums to which strips of leather are fastened, which are perforated with numerous wires regularly arranged. The wires are short and stiff, and the exterior of the cylinder resembles a circular brush. Several such cylinders are arranged so that the ends of the teeth are nearly in contact; and the cotton being brought to them, is caught up, passed from one to the other, and combed out as the cylinders revolve in the form of beautiful filaments or fleeces, which are removed by a smaller drum-card, called the *doffer*, and again from this by the *doffing-knife*. These filaments, which are of the width of the drum, are next contracted to a narrow ribbon, by being passed through a funnel; and thus narrowed, are called the *cord ends* or *slivers*; and are now ready for the next process of drawing or doubling. — See SPINNING.

Cardington, in *Ohio*, a prosperous post-village and township of Morrow co., 35 m. N. by E. of Columbus; pop. of township 2,199.

Cardiography, *n.* See CARDIAGRAPHY.

Cardioid, *n.* [Gr. *kardia*, the heart, and *eidos*, shape.] (*Math.*) An algebraic curve, so called from its resemblance to the heart. It is generated by adding to, and subtracting from the *radii vectores* through a point in the circumference of a circle, a portion equal to the diameter of the latter.

Cardiology, *n.* [Gr. *kardia*, and *logos*, discourse.] (*Anat.*) A treatise on the heart.

Cardiometry, *n.* [Gr. *kardia*, and *metron*, measure.] (*Med.*) Percussive or auscultative measurement of the heart.

Cardiospermum, *n.* [Gr. *kardia*, heart, *sperma*, seed, in reference to the shape of the seeds.] (*Bot.*) A genus of plants, order *Sapindaceæ*. The Heart-seed or Balloon-vine, *C. halyacabum*, native of Missouri and naturalized in the W. States, is a curious vine, 4-6 feet in length, with remarkably large, inflated membranous capsules.

Carditis, *n.* [From Gr. *kardia*, the heart.] (*Med.*) An inflammation of the heart, characterized by pain in the region of the heart, great anxiety, fever, difficulty of breathing, palpitation, cough, irregular pulse, and fainting. It is applied properly to inflammation of the muscular tissue of the heart itself; but this is a form of disease that rarely occurs alone, being usually accompanied by *pericarditis*, or inflammation of the pericardium, or by *endocarditis*, or inflammation of the lining membrane of the heart. The symptoms and treatment in each case are similar. See HEART, (DISEASES OF THE.)

Cardium, *n.* (*Zool.*) The Cockle, a genus of Mollusca, fam. *Cardiaceæ*. The foot is largely developed, and is a most important organ to the animals, it being used by most of them not merely for progression, but in the excavation of hollows in the sand or mud of the shores on which they dwell. As usually seen, the foot of the Car-

Fig. 515. — CARDINAL'S HAT.

dium, or Cockle, when extended, tapers gradually to a point; and as its diameter is at its largest point much less than the breadth of the shell, it is not apparent by what means the hole that is excavated is made sufficiently large for the reception of the latter: this, however, is accomplished by the distention of the foot with water, through a tube which opens just within the mouth; and thus the size of the borer becomes so nearly equal to that of the shell, that it is enabled, by rotatory motions often repeated, to excavate a burrow large enough to receive the animal with its shell. The shell is generally white, with sometimes a bluish or yellowish cast; it has twenty-six longitudinal ridges, is transversely wrinkled, and has somewhat imbricated striae. The Cockles, with few exceptions, inhabit the ocean only; they abound most on sandy shores, and are used as a wholesome and nonriching food. The most common species is the Edible Cockle (*Cardium edule*).

Fig. 517.
CARDIUM FIMBRIA.

often repeated, to excavate a burrow large enough to receive the animal with its shell. The shell is generally white, with sometimes a bluish or yellowish cast; it has twenty-six longitudinal ridges, is transversely wrinkled, and has somewhat imbricated striae. The Cockles, with few exceptions, inhabit the ocean only; they abound most on sandy shores, and are used as a wholesome and nonriching food. The most common species is the Edible Cockle (*Cardium edule*).

Card-match, *n.* A match made of pieces of card dipped in melted sulphur.

Cardo, *n.* (*Arch.*) A pivot and socket apparatus, by which the doors of the ancients were fixed in their places, and made to revolve in opening and shutting.

Cardoon, *n.* [*Fr. cardon.*] (*Hort.*) A kind of artichoke, the *Cynara cardunculus*, a garden vegetable, native of Canada, the thick, fleshy stalks and ribs of whose leaves are blanched and eaten as an esculent vegetable. They are usually stewed or dressed with marrow, and have been reckoned to possess aphrodisiacal properties. In this country they are not much esteemed, but they form an important object in the European markets, chiefly in France. They are cultivated somewhat in the manner of celery. The seeds are sown in a hot-bed, and when the plants that they produce have become well established, after two or three successive pottings, they are finally planted from three to four feet apart. When they are half-grown, in August, either the stems are earthed up, or they are blanched by having hay-bands turned round them. They are fit for the kitchen by the middle of November. — See *CYNARA*.

Card-party, *n.* A party assembled for card-playing.

Card-rack, *n.* A rack for holding cards, of whatsoever description.

Card-table, *n.* A table expressly adapted for card-playing.

Carduccio, (*kar-dootch'e-o*), the name of two brothers, Florentine painters, who resided principally in Spain, and attained great distinction in the service of kings Philip II., III., and IV. Lived in the 16th century.

Cardue's, *n.* (*Zoöl.*) See *GOLDFINCH*.

Carduus, *n.* [*Lat.*, a thistle.] (*Bot.*) The Thistle, a genus of plants, order *Asteraceae*, consisting of numerous species, some of which are noble-looking flowers. *C. benedictus* and a few others have been used in medicine as tonics and febrifuges. Among the American species we notice the Canada thistle, *C. arvensis*, found in fields, road-sides, and waste places. It is one of the severest pests of the farmer, requiring his constant vigilance to extirpate it from his fields. In England it is called *cursed thistle*. Root creeping, very long, and exceedingly tenacious of life. Stem 3 feet high, with a branching panicle at top. Leaves alternate, thickly beset with thorns. Heads rather small, purple, the involucre nearly thornless, and is the only part of the plant that can be safely handled.

Care, (*kär*), *n.* [*A. S. cæru*, *cearu*; *Goth. kara*; *Gael. car*; *Pers. and Sansk. kārā*, toil, both bodily and mental.] Solicitude; anxiety; trouble; concern; sense of responsibility; as, the *cares* of the world.

"And weep away the life of care
Which I have borne, and yet must bear."—*Shelley*.

—Oversight; charge.

"What wilt thou do when riot is thy care?"—*Shaks.*

—Heedfulness; caution; mindfulness; regard; attention; watchfulness; as, he takes *care* of his money.

"As the ancients
Say wisely, 'Have a care o' th' main chance.'"—*Hudibras*.

—Object of care; watchfulness, or love.

"Blessings be with them, and eternal praise,
Who gave us nobler loves, and nobler cares."—*Wordsworth*.

—*v. i.* To be anxious, or solicitous; to have regard to; to be concerned; as, to *care* for another.

"I care for nobody; no, not I.
If no one cares for me."—*Bickerstaff*.

—To be disposed or inclined to; as, he *cares* not to go.

"Having been now long acquainted, the two sexes did not *care* to part."—*Addison*.

Careen, *v. a.* [*Fr. caréner*, from *carène*, the side and keel of a ship; *Lat. carina*.] (*Naut.*) To heave a ship over on her side, so as to expose her bottom and keel for the purpose of repairs, caulking, &c.

—*v. i.* (*Naut.*) To incline to one side, as a ship under a press of sail.

Careenage, (*ka-rén'aj*), *n.* (*Naut.*) A place to careen a ship; dues paid for careening a vessel.

Careening, *n.* (*Naut.*) The operation of heaving a ship down on one side by the application of a strong purchase to her masts, which are generally supported for the occasion, to prevent their breaking with so great a strain; and by which means, one side of the bottom being elevated above the surface of the water, it may be cleaned or repaired.

Career, (*ka-rér'*), *n.* [*Fr. carrière*, from *car*, *Lat. car-*

rus.] A race-course; the ground; the ground over which a race is run.

"They had run themselves too far out of breath, to go back again the same *career*."—*Sir P. Sidney*.

—A race; a course; a rapid running: as, a horse in full *career*.

"When down the hill he bolds his fierce *career*."—*Shaks.*

—General course of action or movement; course of proceeding; as, his was a brilliant *career*.

"Continue and proceed in honour's fair *career*."—*Dryden*.

(*Sporting.*) In falconry, the flight of a hawk.

—*v. i.* To move or run rapidly.

"The wheels
Of beryl, and *careering* fires between."—*Milton*.

Careful, *a.* Provident; diligent to provide for;—often preceding *of* or *for*; as, *careful* of children.

"What could a *careful* father more have done?"—*Dryden*.

—Full of care; solicitous; anxious; troubled; perturbed; as, a *careful* countenance.

"Slumber embrace me in thy leaden arms,
And charm my *careful* thoughts."—*Denham*.

—Heedful; watchful; attentive; cautious; using care; as, a *careful* operator. (Sometimes followed by *of*.)

"It concerns us to be *careful* of our conversations."—*Ray*.

Carefully, (*kär'ful-ly*), *adv.* With solicitude or anxiety; in a manner betokening care.

"Envy, how *carefully* does it look! how meagre and ill-complexioned!"—*Collier*.

—In a careful, heedful, watchful manner; providently; vigilantly; as, work *carefully* performed.

"You come most *carefully* upon your hour."—*Shaks.*

Carefulness, *n.* Quality of being careful, provident, or anxious; heedfulness; cautiousness.

"The death of Selymus was, with all *carefulness*, concealed by Ferhates."—*Knolles*.

Careless, (*kär'les*), *a.* Having no care; heedless; incantions; unconcerned; negligent; unmindful; as, a *careless* servant.

"So careful of the type she seems,
So *careless* of the single life."—*Tennyson*.

—Free from care, trouble, anxiety;—hence, cheerful, undisturbed; serene; as, *careless* of grief.

"Where once my *careless* childhood stray'd,
A stranger yet to pain."—*Gray*.

—Thoughtless; done or said without care or consideration; heedless of consequences; as, a *careless* answer.

"*Careless* their merits or their faults to scan,
His pity gave ere charity began."—*Goldsmith*.

—Unpremeditated; conceived or contrived without art or method; as, a *careless* rhyme.

"A *careless* shoe-string, in whose tie
I see a wild civility."—*Herrick*.

Carelessly, *adv.* In a careless or negligent manner; without care, thought, or concern; as, it was done *carelessly*.

"Not content to see
That others write as *carelessly* as he."—*Waller*.

Carelessness, *n.* Quality of being careless; heedlessness; inattention; as, *carelessness* in dress.

"Divided between *carelessness* and care."—*Pope*.

Carême, MARIE ANTOINE, (*ka-rain'*), a celebrated French cook, who, abandoned by his parents when quite a child, filled the commonest situations in the kitchen. By his study and labor, however, he raised the culinary art almost to a science, and made his name celebrated at all the courts of Europe. He wrote several works, in which he has laid down the principles of his art. The chief of these is *The Art of Cookery in the 19th Century*. B. at Paris, 1784; d. 1833.

Caress, (*ka-res'*), *v. a.* [*Fr. caresser*, from *Gr. katarrezo*, to fondle, to pat with the hand.] To treat with fondness, affection, or kindness; to fondle; to embrace with tenderness; as, a *caressing* manner.

"The lady *caresses* the rough blood-hound."—*Sir W. Scott*.

—*n.* An act of endearment; an embrace; any act or expression of affection.

"Like other charmers, wooing the *caress*
More dazlingly when darning in full dress."—*Byron*.

Caressingly, *adv.* In a caressing or fondling manner.

Car'et, *n.* [*Lat.*, there is wanting, from *caréo*, to want.] (*Printing.*) A mark, thus A, which shows that something wanting in the line is mentioned below, or inserted in the margin of a page.

Caré-tuned, *a.* Tuned by care; sad; mournful.

Caré-worn, *a.* Worn or fretted with care; as, a *caré-worn* man.

Carex, (*kai'reks*). [*From Lat. careo*, I want, the upper spikes being without seeds.] (*Bot.*) A genus of plants, order *Cyperaceae*, the Sedge family, distinguished by having spikelets 1 or more, either androgynous (with both staminate and pistillate flowers), or with the two kinds in separate spikelets, rarely dioecious; glumes single, 1-flowered, lower ones often empty; stamens 3, stigmas 2 or 3; perigynium of various forms, 1-valved, persistent, enclosing the leucular or triangular achenium. This genus consists of upwards of 450 species, 138 of which are natives of N. America. Some of the species are plants of the very humblest growth, others are 2 or 3 feet in height; all are of unpretending, grassy, or rush-like appearance. Some grow in wet, and others in dry situations; some are of great value in the economy of nature, as forming the principal part of the vegetation of swamps, which they gradually convert into fertile ground. The running roots, or rather *rhizomes*, are of some help to bind the sands of sea-shores, particularly *C. arenaria*, which is carefully planted for this purpose on the dikes of Holland. None are

valued by the agriculturist, as they are very deficient in nutritive quality, and in general they abound only in very inferior pastures, and good tillage and drainage lead to their speedy disappearance. The rhizomes of *C. arenaria*, *C. hirta*, and *C. disticha*, are sometimes used under the name of *German Sarsaparilla*, as a diaphoretic and demulcent medicine—a bad substitute for sarsaparilla. The dried leaves of *C. sylvatica* are used by the Laplanders to cover their legs and hands as a protection from frost-bites and chilblains, being worn in the inside of their shoes and gloves. The *C. vulpinoidea* (fig. 518) is very common in fields in the U. States.

Fig. 518.
CAREX VULPINOIDEA.

Carey, MATTHEW, an American publisher and voluminous author, b. in Ireland, 1760. He was originally a printer and bookseller, but in 1779 he wrote a pamphlet against the oppression of the Irish Catholics, which causing alarm to be felt for his safety, he was secretly sent to Dr. Franklin in Paris, and gained his friendship. In 1783 he started the *Free-man's Journal*, which pleaded the Irish cause with great warmth. He was prosecuted for a libel on John Foster, the Speaker of the Irish House of Commons, and sentenced to Newgate, but he was released at the instance of the Lord Mayor of London, in 1784, and emigrated to Philadelphia, where he published the *Pennsylvania Herald*, the *Columbian Magazine*, and the *American Museum*. He also wrote, in 1814, the *Olive Branch*, and subsequently *Vindicia Hibernica*, the *Philosophy of Common Sense*, &c. D. 1839.

Carey, WILLIAM, a celebrated English Baptist missionary, b. at Paulersbury, Northamptonshire, 1761. His father kept a small school in the village, and apprenticed his son to a shoemaker at Hackleton, where his earnest inquiries into religious subjects attracted the notice, and soon obtained him the friendship of the Rev. Thomas Scott, of Ravenstone. He joined a congregation of Baptists, and in his 20th year began to preach, which he continued for two years, when he was publicly baptized in the river Nen. In 1787 he was intrusted with the charge of a congregation at Leicester; where, persevering in his benevolent object of converting the heathen, he induced other ministers to join him; and, in 1792, they formed themselves into a Baptist Missionary Society at Kettering. C. was nominated to go upon their first mission, and India was selected as the most desirable field for the commencement of his zealous efforts. He arrived in Bengal in 1794, but had the ill fortune to lose all his money and effects by the sinking of a boat in the river Hooghly. After patiently enduring severe toils and privations for three years, (during which period, however, he acquired the Bengalee tongue,) C. preached publicly; but as the East India Company were opposed to his object of forming an establishment inland, in 1799 he proceeded to the Danish settlement of Serampore. This little missionary settlement, consisting of four preachers only, with their wives and families, rapidly increased; a school was opened, and type being sent from England, a translation of the Scriptures was printed in the Bengalee language. C. having made himself a complete master of the native language, was, in 1801, appointed by the governor professor of Sanskrit and other Oriental languages at the college of Fort William, Calcutta. He had many difficulties to contend with, both from the prejudices of the natives, and the political views of influential individuals at home. He, however, never relaxed in the work he had begun, but translated the Scriptures into several of the Indian languages, and lived to witness the success of his ardent exertions for their dissemination among the native tribes. D. 1834.

Carey, ALICE, a distinguished American authoress, b. in Ohio, 1822. Among her most popular productions are the *Chronicles of Cloverbrook*; *Hagar*; *Married, not Mated*; *Children of Cloverbrook*, &c. D. 1871.

Carey, HENRY C., an American statistician and writer on political economy; b. in Philadelphia, 1793. He was formerly at the head of an extensive publishing business, from which he retired in 1838, in order to devote himself to literary studies. In 1836, he produced a work entitled *On the Rate of Wages*, expanded in the following year into a larger work, *The Principles of Political Economy*. His subsequent productions are, *The Credit System in France, Great Britain, and the United States*; *The Past, the Present, the Future*, (being an elaborate attack on Ricardo's theory of rent;) and *Principles of Social Science*, (1858-9.) Many of his works have been translated into foreign languages. D. Oct. 13, 1879.

Ca'rey, in Illinois, a post-office of Pike co.

—A township of Will co.

Carey, in Ohio, a township of Lucas co.

—A flourishing post-village of Wyandot co., on the Mac River, 75 m. N.N.W. of Columbus.

Carey's Mills, in California, a post-village of Alpine co., 75 m. E. of Placerville.

Ca'reyville, in Ohio, a village of Champaign co., 58 m. W.N.W. of Columbus.

ar'gason, n. See CARGO.

ar'go, n. *pl.* CARGOES. [Sp. *cargo*; W. *carg*; *cargu*, to load, from *car*, a vehicle.] The load carried by a ship; the freight; the goods, merchandise, lading, or whatever is carried by a ship (persons and animals excepted); as, a cargo of coals.

"This gentleman was just fitted out for the university with a good cargo of Latin and Greek." — Addison.

ar'goose, n. (Zool.) See COLYMBIDE.

ar'heil, Etienne DE, a Jesuit missionary among the Huron and Iroquois Indians in Canada. He first visited these tribes in 1668, obtained a complete mastery of their language, and was regarded by the savages both as a saint and man of genius. The date of his death is unknown.

aria, (ka're-a.) (Anc. Geog.) A country of Asia Minor, whose boundaries have been dissimilar in different ages. Generally speaking, it was at the S. of Ionia, at the E. and N. of the Icarian Sea, and at the W. of Phrygia Major and Lycia. It has been called *Phœnicia*, because a Phœnician colony first settled there. It afterwards received the name of *Caria*, from Car, one of its kings, who first invented the auguries of birds. Its chief town was Halicarnassus.

aria'eo, a maritime town of Venezuela, prov. of Cumana, 38 m. E.N.E. of Cumana city; Lat. 10° 30' N., Lon. 63° 40' W. Much cotton is grown in the neighborhood, and the climate is unhealthy. Pop. estimated at 7,500.

ar'iated, a. Affected or injured by caries; carious.

aria'ti, a seaport-town of S. Italy, prov. Cosenza, on a high promontory, washed by the Ionian Sea, 15 m. S.E. of Rossano. It is a wretched, poor place, having suffered much from the depredations of the Turks and Algerines, but it is now improving. The best manna of Calabria is produced in the vicinity. Pop. 3,436.

ar'ib, Car'ibbee. (Geog.) The name given by the early European navigators to the inhabitants or aborigines found on the smaller of the West India Islands, and also inhabiting some part of the adjacent American continent. The natives of the larger and more northern islands entertained a great dread of this race of C. from their more warlike and savage nature; and the Spaniards, finding them always a bold and determined enemy, did their utmost to exterminate the whole race, and finally expelled all but a mere remnant from their native possessions. Those who escaped the Spanish sword sought refuge on that part of Southern America near the mouth of the Orinoco, except a few whom the English removed and landed on the island of Ruatan, in the Bay of Honduras. The C. have always been distinguished from the rest of the American peoples by their athletic stature, firmness, courage, and resolution. They treat all other aborigines with contempt, and consider themselves superior to every other race. They were formerly accused of cannibalism, and, there is much reason to suspect, with justice.

ar'ibbe'an, a. (Geog.) Pertaining to the Caribbean Sea, or to the islands of the same name.

ar'ibbe'an, Car'ibbe'an, or Car'ibbe'an Sea, the southern portion of the great ocean gulf between North and South America is thus named. It is bounded by the N. shores of South America and the shores of Central America as far as Yucatan, and beyond that by the coasts of Cuba and St. Domingo. To the E. it is nearly shut in by the chain of the Antilles, terminating in Trinidad. It contains more than 1,250,000 sq. m. of water. The C. S. receives some important rivers from South America. It has also a marine current which sets into it from across the Atlantic. Its waters accumulate, owing to the set of this current, and are forced to pass into the Gulf of Mexico, whence they can only escape by the narrow passage between Florida and the Bahama reefs, thus forming the *Gulf Stream*, q. v. The C. S. is entirely intertropical; its waters are very warm, and its depth is generally between 500 and 1,500 fathoms. It contains the important island of Jamaica. There are no coral reefs in it, except along a part of the south coast of Cuba. Its bed is occasionally disturbed by earthquake action.

ar'ibbee Islands, or LESSER ANTILLES, the name sometimes given to that portion of the W. Indies that includes the vast chain of islands which extends, in a circular sweep, from Anguilla on the N., to Trinidad on the S. They comprise the whole of the Windward and the more S. portion of the Leeward Islands. The principal islands, reckoning from the N., are St. Kitt's, Antigua, Guadaloupe, Dominica, Martinique, St. Lucia, Barbadoes, St. Vincent, Grenada, Tobago, and Trinidad. They derived their name from having been mostly occupied, at the period of their discovery, by a tribe of Indians called *Caribs*, or *Caribbees*, now nearly extinct.

ar'ibou, n. (Zool.) See REINDEER.

ar'ibou, in Maine, a town of Arrostook co. Pop. (1890) 4,087.

ar'ica, (ka're-ka.) n. (Bot.) A genus of plants, order Papayaceæ. The species are natives of South America, and the tropical regions of the Old World. The acrid milky juice of *C. digitata* is said to be a deadly poison. The juice of the unripe fruit, and the powdered seeds of *C. papaya*, are powerful anthelmintics; but the fruit, when cooked, is edible. This plant is said to have the property of rendering meat tender. It is stated that newly-killed meat hung among the leaves soon becomes soft and delicate, and that the flesh of old hogs and old poultry fed on its fruit or leaves is remarkably tender. The leaves are used in some districts as a substitute for soap. The juice is said to be a highly animalized product, resembling animal albumen in its characters and reactions.

ar'icature, (ka'ri-ka-tür.) n. [Fr., from It. *caricatura*, from *caricare*, to load, to charge, from Lat. *carrus*,

a car.] (*Painting, &c.*) An exaggerated representation of any object, in which any natural defects are overcharged, so as to make it appear ridiculous. C. in the pictorial art occupies the same place that burlesque does in literature. The legitimate objects of the one and of the other are the vices and follies of individuals or of classes, and all disagreeable peculiarities of manner and appearance which arise from these. External deformities, which do not spring from the fault of the person afflicted, can never be proper subjects of C. The ancients employed C., as we find from their masks. Among Italian painters, Leonardo da Vinci is a master of this art, representing the quarrelsome, braggart, peevish, gluttonous, clownish with an exaggerated fidelity. Among the French, Callot, and among the English, Hogarth, stand prominently out in this art. The Italians have too strong a sense of the beautiful to have a great relish for C., and the Germans are too grave to excel in these sportive productions. Some of the best specimens of modern C. are to be found in the pages of the daily newspapers, those of Hon. M. A. Hauna, by Davenport, which appeared in a New York daily during the political campaign of 1866, being most remarkable.

Car'icature, v. a. To represent by caricature; to ridicule pictorially; to burlesque; as, to caricature a person.

Car'icatur'rist, n. One who is skilled in caricatures.

Car'icog'raphy, n. [Lat. *carex*, sedge, and Gr. *graphein*, to draw.] A description of the plants of the genus *Carex*.

Car'icous, a. [See CARICA.] Resembling a fig.

Caries, (ka'reez.) n. [Lat. *rottenness.*] (*Med.*) A disease of the bones, analogous to ulceration of the soft parts. It differs from *necrosis* in that, in the latter, the bone is destitute of vitality, which is not the case when it is simply carious. Necrosis corresponds to mortification of the soft parts. Caries most frequently attacks the bones of the spine; but it may affect any of the bones, especially such as are of the spongy texture, as the carpal or tarsal bones, or the heads of the long bones, when they form articulations. The young, or those of a scrofulous habit of body, are most subject to this disease. It sometimes appears spontaneously; at others, as the result of an injury, as a blow or fall. It begins with inflammation, usually attended with a dull, heavy pain and weakness in the part affected. In course of time an abscess forms, which, if not arrested, at length bursts and discharges a thin fluid containing particles of the bones. In caries of the vertebrae, curvature of the spine takes place, more or less, according to the number of vertebrae affected, and paralysis generally sets in. At the articulation of the bones, the part enlarges, the cartilages become affected, and amputation or excision of the joint is often necessary, in order to save the patient's life. Much may be done in arresting the progress of this disease, at least in its earlier stages.

Car'ignano, (kar-reen-yah'no,) a walled inland town of N. Italy, prov. Turin, on the Po, 11 m. S. of Turin. It has manf. of silk. Pop. 5,703.

Carillon, (ka-le-re'yon,) [Fr.] See CHIME.

Car'ima'ta, a name applied to the passage between Borneo and Billiton; also to a cluster of islets in the same passage; and lastly, to the principal member of the group, whose highest point, a peak of 2,000 feet, is in Lat. 1° 36' S., and Lon. 108° 54' E.

Car'imon Java, a cluster of 10 or 12 small islands in the Indian Ocean; Lat. 5° 45' S., Lon. 110° 15' E.

Car'imon, (GREAT AND LITTLE,) 2 islands of the Malay Archipelago, in the Strait of Malacca, 30 m. from Singapore; Lat. 1° 5' N., Lon. 103° 30' E.

Car'imo'na, in Minnesota, a post-village of Fillmore co., in Carimona township, 5 m. W. of Preston, 15 m. S. of Chatfield; pop. 788.

Car'ina, n. [Lat., a keel.] (*Bot.*) The two lower petals of a papilionaceous flower (Fig. 65), which are usually somewhat united along their anterior edges, and together form a body in shape resembling the keel, or rather the narrow prow, of an ancient vessel.

Car'ina'ria, n. A genus of gasteropodous Mollusca, with an elongated, sub-cylindrical, transparent body, furnished with a sort of fin, which performs the part of a rudder. The shells of this genus were formerly known to collectors under the name of *Venus's slipper*, and *Glass nautilus*.

Car'inate, Car'inated, a. [Lat. *carinatus*, keel-shaped.] (*Bot.*) Keel-shaped; as, a *carinate* leaf.

Car'ini, (ka-re'ni,) a town of S. Italy, in Sicily, prov., and 12 m. W.N.W. of Palermo; pop. 11,909.

Car'ino'la, a town of S. Italy; 20 m. from Gaeta, in the neighborhood of which excellent wine is produced; pop. 5,716.

Carin'thia, (Ger. Kärnthen.) (DUCHY OF,) an inland prov. of the Austrian empire, bounded N. and E. by Salzburg and Styria, S. by Carniola and Friuli, and W. by the Tyrol. Area, 3,985 sq. m. This prov. is divided into the circles of Klagenfurt and Villach, or *Upper* and *Lower Carinthia*. Surface, mountainous. Soil, good, in the valleys. Iron and lead is extensively mined, and forms the principal wealth of the province. Agric. prod. Rye, oats, cattle, &c. Manuf. Iron and steel goods, woollens, silks, and cottons. *Prin. towns.* Klagenfurt, the cap., and Villach. — This territory formed part of the empire of Charlemagne, and afterwards belonged to the dukes of Friuli. The house of Austria obtained it in 1321. In 1809, Napoleon annexed it to his empire, but, in 1814, it was restored to Austria.

Car'inthine, n. (*Min.*) A ferruginous and aluminous kind of hornblende, from Carinthia. It occurs massive and disseminated, of a black or greenish-black color, opaque, with a lustre resinous-vitreous externally, but internally splendent.

Car'inthite, n. (*Min.*) See WULFENITE.

Car'iole, n. A small, open, light carriage, somewhat like a calash.

Car'io'p'sis, n. See CARTOP-SIS.

Car'ios'ity, n. Caries; rottenness of a bone.

Car'ious, a. [Lat. *cariosus*, from *caries*.] Rotten; mortified; decayed; as, a *carious* bone.

Car'ipe', a town and valley of S. America, in Venezuela, prov. Cumana, 40 m. S.E. of that city. It is the chief seat of the Cheyma Indian missions.

Car'is'sa, n. (*Bot.*) A genus of plants, order Apocynaceæ. A species of *C. curandas* bears an edible fruit, which is eaten in the East Indies, either alone or with meat, as a substitute for red-currant jelly. The fruits of *C. edulis* and *tomentosa* are also eaten in Abyssinia.

Car'k, n. [W. *carc*, anxiety.] Care; anxiety; solicitude; concern. (R.)

"Fling cark and care aside." — Motherwell.

—v. i. To be careful, solicitous, or anxious.

"What can be vainer than to lie carking for the unprofitable goods of this world?" — L'Estrange.

—v. a. To make anxious or disturbed; to worry with cares. (R.)

"Nor can a man . . . care or cark himself one penny richer." South.

Carl, in Iowa, a post-township of Adams co., 65 m. S.W. of Des Moines.

Carle, n. [Dan. and Swed. *karl*, a man; Ger. *kerl*, a low fellow.] A rustic fellow; a man of mean descent or occupation; a countryman. This term is still current in the provincial parts of Scotland, but in England it has given way to the word *churl*, (q. v.)

—In Scotland, an old man.

"There lived a carle on Kellyburn braes,

An' he had a wife was the plague o' his days." — Burns.

—A kind of hemp.

Car'len, EMILIE FLYGGARE, an eminent Swedish novelist, b. in Stockholm, 1810. Her principal works known in this country are the *Rose of Tistelön*, *The Birthright*, *Ivar, or the Skjut's Boy*, *The Lover's Stratagem*, &c., &c.

Car'lentini, (kar-len-te'ne,) a town of Sicily, prov. Syracuse, 19 m. N.W. of the latter city. It is mean and miserable, having never recovered the effects of the earthquake of 1693. Pop. 5,449.

Car'le'ton, WILLIAM, a distinguished Irish novelist, b. 1798. His works are considered the finest delineations of the Irish peasant character ever penned. His best known productions are, *Traits and Stories of the Irish Peasantry*, *Valentine McClutchy*, *The Black Prophet*, *Willy Reilly and his Colleen Bawn*, *Castle Squander*, &c. D. 1869.

Car'le'ton, in Iowa, a village of Polk co., on the Des Moines River, 115 m. W. of Iowa City.

Car'le'ton, in prov. of Ontario, an eastern co. Area, 898 sq. m. It is connected by railroad with Prescott and Ottawa. Cap. Ottawa.

Car'le'ton Place, in prov. of Ontario, a vill. of Lanark co., on the Mississippi River, 21 m. from Perth, and 30 from Ottawa.

Car'li, GIAN RINALDO, COUNT, (kar'le, an Italian anatomist and archaeologist, b. at Capo d'Istria, 1720. His best work is, *On the History of the Coins and Currency, and on the Institution of the Mints of Italy*. D. 1795.

Car'lie, n. (*Bot.*) See CHARLOCK.

Car'lin, Car'line, n. [From CARLE.] In Scotland, and N. of England, a stout, masculine old woman.

"And Marjory o' the Monjlocks,

A carline old and tough." — Burns.

Car'li'na, n. (*Bot.*) A genus of plants, order Asteraceæ. *C. acaulis*, the Carline thistle, grows on hills and mountains, especially in calcareous soils, in the middle latitudes of Europe. It was formerly in high repute for the medicinal virtues of its root, which, in large doses, act as a drastic purgative; but its use is now confined to veterinary practice.

Car'line, Car'oline, n. [It. *carlina*.] A silver coin, formerly current in Italy, and valued at about 7 cents.

Car'line-thistle, n. (*Bot.*) See CARLINA.

Car'lingford, a seaport of Ireland, co. Lonth, on the S. side of the Lough (or Bay) of the same name, 10 m. E. of Dundalk. The Lough has secure anchorage with a depth of 8 ft. of water on its entrance bar. Its oysters are renowned. Pop. 8,000.

Car'lings, n. pl. (*Shipbuilding.*) Short pieces of timber ranging fore and aft from one deck-beam to another, into which their ends are mortised; they are used to sustain the deck, and bind the principal beams together.

Car'linville, in Illinois, a city, the cap. of Macoupin co., 39 m. S. S. W. of Springfield, and 33 N. E. of Alton; pop. (1890) 3,293; (1897) about 3,500.

Car'isbrooke, a village and par. of England, in the Isle of Wight, 78 m. S.W. of London. It is especially noticeable for its magnificent Norman castle, in which, for upwards of a year, the unfortunate Charles I. of England was imprisoned, and where his daughter Elizabeth subsequently died in captivity.

Car'lish, Car'lishness, n. See CHURLISH; CHURLISHNESS.

Car'liste, (kar'liste,) a walled city of England, co. Cumberland, in an extensive plain at the junction of the rivers Eden, Caldew, and Peterl, which nearly surround it; 250 m. N.W. of London. This is a fine, ancient city, with a noble cathedral, and a fine old castle famous in English history. Manuf. Cotton, hats, iron, leather, biscuits, &c. C. was a Roman station under the name of *Luguwallum*; by the Saxons it was named Caer Luil ("City of Luil"), whence its present name is derived. William the Conqueror built the castle, and it, together with the town, being so near to the Scottish border, was a frequent object of contest for centuries in the wars between the two nations.

Carlisle, in *Illinois*. See **CARLYLE**.

Carlisle, in *Indiana*, a post-v. of Sullivan co., 36 m. S. of Terre Haute, and 6 E. of the Wabash River.

Carlisle, in *Iowa*, a post-village of Warren co.

Carlisle, in *Kentucky*, a twp. and post-village, cap. of Nicholas co.

Carlisle, in *Massachusetts*, a post-township of Middlesex co., 20 m. N.W. of Boston.

Carlisle, in *Michigan*, a post-village of Eaton co., 22 m. N. of Marshall.

Carlisle, in *Nebraska*, a village of Cass co., 36 m. S.S.W. of Omaha City, and 10 m. S. of Platte River.

Carlisle, in *New York*, a post-township of Schoharie co., 36 m. W. of Albany.

Carlisle, in *Ohio*, a village in Jackson township, Brown co.

—A twp. in the central part of Lorain co.

—A flourishing village of Noble co.

—A village of Warren co., 45 m. N. by E. of Cincinnati.

Carlisle, in *Pennsylvania*, a flourishing borough, cap. of Cumberland co., 18 m. W. by S. of Harrisburg, and 125 m. W. of Philadelphia. It is pleasantly situated on the great limestone valley, between the Kittatinny and South Mountains. *Surface*, level; *soil*, uniformly and highly productive. *History*. C. was founded in 1783, and snelled by the Confederates on the night of July 1, 1863. *Pop.* in 1890, 7,620; in 1897, about 8,500.

Carlisle Springs, in *Pennsylvania*, a post-village of Cumberland co., 19 m. W. of Harrisburg, and 4 N. of Carlisle. It is a pleasant summer retreat, and has good accommodations for visitors.

Carlisle's Mills, in *Mississippi*, a village of Perry county.

Carlisle, in *Ohio*, a post-office of Warren co.

Carlists, *n. pl.* (*Hist.*) The supporters of Charles X. of France, after the revolution of 1830, were called *Carlists*. —On the death of Ferdinand VII. of Spain, in 1833, two parties contended for the succession, his brother, Don Carlos, and his daughter, Isabella II. (born 1830), in anticipation of whose birth the Salic Law, which had prohibited the succession of females, had been abolished by a Pragmatic Sanction published March 29th, 1830. The supporters of the former were termed *Carlists*, and of the latter *Christinos*, after Christina the queen-mother. A war followed the accession of Isabella, lasting from 1833 to 1840, in which, after a sanguinary and cruel contest, the Christinos were the victors. Since that period the C. have at various times, but unsuccessfully, risen in arms in Spain; and, after the flight of Isabella II. in 1868, they, in the early months of 1869, again raised the standard of legitimacy, in behalf of Don Enrique de Bourbon, Duke of Madrid, Don Carlos' grandson, and again in 1873, with varying success against the Republic, and against Alphonso XII. in 1875; but the revolt was finally put down in 1876. See also **MARIA CHRISTINA**.

Carlock, *n.* [*Russ.* *karlık*.] A kind of isinglass made from the sturgeon, used in clarifying wine.

Carlockville, in *Tennessee*, a p.o. of Rutherford co.

Carloforte, a walled sea-port of N. Italy, on the small island of San Pietro, near the S.W. coast of Sardinia; Lat. 39° 8' 28" N.; Lon. 8° 17' 28" E. *Manf.* Anchovies, coral, salt. *Pop.* 3,745.

Carloman, the eldest son of Charles Martel, whom he succeeded as king of Austrasia in 741. He and his brother, Pepin, united in defending their dominions against the encroachments of their neighbors, and defeated the Germans in 743. Carloman then entered Saxony, took its duke prisoner, and, after several successful expeditions, became a monk of the order of St. Benedict. He assembled a famous council in 742, whose acts bear his name. D. 755. There were 3 others of the same name: The first was the younger brother of Charlemagne, with whom he had some contention about the kingdom, but, on his death, in 771, left him in full possession. —The second was the son of Louis II., whom he succeeded in 879, in conjunction with his brother Louis III. On the death of the latter, he was declared sole king of France, and was killed in hunting, by a wild boar, in 884. —The third, Carloman, was the eldest son of Louis I., king of Germauy, whom he succeeded, in 876, in the kingdom of Bavaria. He made some partial conquests in Italy. D. 880.

Carlos, Don, son of Philip II. of Spain, was b. 1545. He was deformed and sickly, and of an extremely violent disposition. He was to have espoused Elizabeth of France, but his father, becoming a widower, married that princess himself. This circumstance greatly irritated him, and it is said that he had entered into a conspiracy against his king and father. On this charge he was thrown into prison, where he died about six months after his arrest. The manner of his death is variously stated, some affirming that he was poisoned, bled to death, or strangled, while others attributed his death to his own acts. D. 1568.

Car'los, SAN, a town of Venezuela, S. America, on the Aguerre, 30 m. from Caracas; *pop.* 10,000.

Carlovingians, or CAROLINGIANS. (*Hist.*) The name of the second dynasty of the French kings. They succeeded to the Merovingians in 752, in the person of Pepin the Short, and finished in 987 with Louis V. (*le Fainéant*), who was succeeded by Hugues Capet, the first of the Capetians.

Carlovitz, CARLOVICZ, or CARLOVITZA, a town of the Austrian empire, on the military frontier of Slavonia. The great vine mountain in the vicinity yields the best and strongest qualities of Hungarian wines. A peace was concluded here in 1699, between Austria, Poland, Russia, Venice, and Turkey. In 1848-49, C. was the focus of the Serbian rebellion against Hungary, and the theatre of collision between the Servians and the

Magyars, and at a later period between the Hungarians and the Austrians. *Pop.* 4,785.

Car'low, (formerly CATHERLOUGH,) a co. of Ireland, prov. Leinster, bounded S.E. by cos. Wexford and Wicklow, N. Wicklow and Kildare, and W. Queen's co. and Kilkenny. *Area*, 221,342 acres. *Surface*, diversified. *Soil*, good. This is one of the finest dairy counties in Ireland. *Cap.* Carlow.

CARLOW, a borough, market-town, and cap. of above co., on the Barrow, 45 m. S.S.W. of Dublin. This town is well-built and thriving, and is the great mart of the agricultural produce of the surrounding country. *Manf.* Flour and malt. *Pop.* 9,672.

Car'lowitz, a town of Slavonia. See CARLOVITZ.

Car'lowville, in *Alabama*, a post-office of Dallas co.

Carlsbad, or KAISER-KARLSBAD, ("Charles' Bath,") a town of Bohemia, in the Austrian empire, and one of the most fashionable watering-places in Europe, is situated near the Eger, 72 m. W.N.W. of Prague. The town is most picturesquely placed in a low valley surrounded by wooded hills, and is famous for its hot springs; the Sprudel, the principal of them and the hottest in Europe, has a temp. of 165° Fahr.; and that of Mühlbrunnen, which is the most commonly drunk, 138° Fahr. The town is beautifully laid out, and annually receives some 10,000 to 15,000 visitors, including many of the crowned heads of Europe. C. belongs to the Emperor of Austria. *Stationary pop.* 4,822.

Carlsburg, or KARLSBURG, a royal, fortified town of the Austrian dominions in Transylvania, on the Mares, 32 m. N.W. of Hermannstadt. It is a handsome city, with a fine cathedral, containing the tomb of the famous Hungarian hero John Hunyades. *Pop.* 6,641.

Carlsburg, in *New Jersey*, a village of Cumberland co., 4 m. S.E. of Bridgeton.

Carls'crona, **Carls'cron**, ("Charles' Crown,") a seaport town of Sweden, on the Baltic; Lat. 56° 10' 9" N.; Lon. 15° 53' 25" E. The greater part of the town is built on Tros-oe, and other small islands. The harbor is large and safe, and can accommodate the largest ships. The only practicable entrance to it, on the S. side of the town, is defended by two strong forts. *Manf.* Canvas, linen, leather, and anchors. The town derives its name from Charles XI. of Sweden, who in 1680 conferred on it important privileges, and it has since continued to be the principal naval station of the kingdom. *Pop.* 16,392. C. is the capital of a hilly, but generally fertile province. *Area*, about 1,130 sq. m.; *pop.* about 120,000.

Carls'haven, or **Karls'haven**, ("Charles' Haven,") a seaport of Sweden, prov. Bleckinge, on the Baltic, at the mouth of the Nie, 55 m. W. of Carls'crona; Lat. 56° 12' 40" N.; Lon. 14° 51' E. The harbor is small, but safe. *Manf.* Canvas, woollens, tobacco; ship-building flourishes. *Exp.* Iron, timber, potash, pitch, tar. *Pop.* 6,303.

Carls'ruhe, ("Charles' Rest,") a city of Germany, cap. of the grand-duchy of Baden, circ. Middle Rhine, residence of the Grand-Duke, and seat of the principal State authorities, is situate in the fine plain of the Hardwald, which surrounds it on the N. and W.; 4 m. E. of the Rhine, 37 W.N.W. of Stuttgart, 57 S. by W. of Darmstadt, and 42 N.E. of Strasburg. The town is quite unique in its construction, being built in the form of an outspread fan, or rather wheel, around the grand-ducal palace, from which as a centre 32 public routes radiate. Several of the streets stretch into the forest. C. is in part walled, and has 7 gates. It is a handsome, but rather dull town. The principal public buildings are the grand-ducal residence enclosed by its garden and park, the government offices, mint, barracks, hospitals, and many churches. It has several fine squares, public fountains, and many educational, literary, and artistic institutions. *Manf.* Silks, carpets, chemicals, furniture, carriages, bijouterie, &c. C. is quite a modern city, and has risen round a hunting-seat built by Carl Wilhelm, Margrave of Baden, in 1715.

Carl'stad, a town of Sweden, on the island of Tingvalla, at the mouth of the Klar, on the lake Wenern. It has a considerable trade in copper, iron, corn, salt, and timber. *Pop.* 5,310.

Carl'stadt, a town of Austrian Croatia, co. Agram, at the confluence of the Korana and Dolra with the Kulpa, 32 m. S.W. of Agram. Considerable quantities of the liquor known as *rosolio* are made here. *Pop.* 6,272.

Carl'stadt, in *New Jersey*, a town of Bergen co.

Carl'ton, in *Iowa*, a township in Tama co.

Carlton, in *Michigan*, a township of Barry co., 35 m. W. of Lansing.

Carlton, in *Minnesota*, an E. N. E. county. *Area*, 860 sq. m. *Rivers*. It is drained by St. Louis and Kettle rivers. *Desc.* The surface is uneven, and partly covered with forests of pine and maple. *Cap.* Carlton. *Pop.* (1895) 7,458.

Carlton, in *Minnesota*, a twp. of Freeborn co.

Carlton, in *New York*, a post-township of Orleans co., on Lake Ontario, 35 miles W.N.W. of the city of Rochester.

Carlton, in *Wisconsin*, a post-village and township of Kewaunee county, on Lake Michigan, 8 miles S. of Kewaunee.

Carlton Fort, in British N. America, on the N. branch of Saskatchewan River; Lat. 53° N.; Lon. 61° 12' W.

Carlton's Store, in *Virginia*, a post-office of King and Queen co.

Carl'tonville, in *Ohio*, a village of Meigs co., on the Ohio River, 100 m. S.E. of Columbus.

Carludo'vica, *n.* [In honor of Charles IV. of Spain, and his queen Louisa.] A genus of plants, order *Pandanales*. The unexpanded leaves of *C. palmata* furnish the material employed in the manufacture of Panama hats.

Car'lyle, THOMAS, an English essayist, biographer, and

historian, and one of the most remarkable writers of the age, b. in Scotland, 1795. He was educated at Edinburgh University, and commenced his literary career in 1823, by contributions of able essays to the *Edinburgh Encyclopedia*, and the *Edinburgh Review*. Next followed his translations of Göthe's *Wilhelm Meister*, a work which showed a bent of reading destined to influence materially his future career. Succeeding these appeared his *Life of Schiller*. Between 1830 and 1833, C. wrote his *Sartor Resartus*, and in 1837 he published *The French Revolution*, a history abounding in vivid and graphic descriptions. *Chartism*, and 5 vols. of his *Essays*, appeared in 1839, and in the next year he delivered a series of lectures on *Hero-Worship*, which were afterwards published in a collected form. His *Past and Present* was given to the world in 1843, and in 1850 the *Latent-Day Pamphlets*, essays suggested by the revolutionary convulsions of 1848. —C's *Life of John Sterling* has been described as "one of the finest biographies ever written." In 1845 appeared his great work entitled *Oliver Cromwell's Letters and Speeches, with Elucidations*, which gave him a distinguished place among historians. In 1860-4 C. brought out his *Life of Frederick the Great*. In 1865 he was elected Lord Rector of Edinburgh University. —C's leading characteristic is a rugged earnestness of expression, and a range of thought widened and deepened by his profound acquaintance with the writings of great German thinkers. D. at Lon., Feb. 5, 1881. See Froude's *Reminiscences*, (Lon., 1881.)

Car'lyle, in *Ill.*, a p.-v., cap. of Clinton co., on the Kaskaskia River, 47 m. E. of St. Louis. —In *Kan.*, a p.-v. of Allen co., 75 m. S. of St. Lawrence.

Carmagnola, (*kär-man-yō'lä*,) a town of N. Italy, prov. Turin, near the Po, 15 m. S. by E. of Turin. This is a well built and laid-out place, with an active trade in silk, flax, hemp, corn, and cattle. *Pop.* 14,246.

Carmagnole, (*kär-man'yōl*,) (*Hist.*) The name of a song and dance that originated and became very popular in the time of the first French Revolution. It appeared first in the south of France, and is supposed to have received its name from the town of Carmagnola, in Piedmont. It was commonly sung and danced at public festivals, executions, and outbreaks of popular fury. Afterwards the name was applied to a kind of white jacket worn by the revolutionists, and by all who wished to show their patriotism.

Car'man, *n.*; *pl.* CARMEN. A man who drives a cart or car.

"E'en sturdy carmen shall thy nod obey." — *Gay*.

Carmarthen, in Wales. See CAERMARTHEN.

Car'mel, (MOUNT,) a famous mountain of Syria, extending from the plain of Esdraelon in a N.W. direction, till it terminates in the steep promontory forming the S.W. extremity of the Bay of Acre. At its foot, on the N.E.,

Fig. 519. — MOUNT CARMEL AND KAIFFA, (from the N.E.)

stands the small town of Kaiffa. The name *Mount Carmel* is usually confined to this promontory, the height of which is variously estimated at from 1,500 to 1,800 ft. This mountain is famous in Scripture history, more especially in that of Elijah, being the place where he destroyed the prophets of Baal (1 *Kings* xviii). In more modern times, the mountain has been occupied by monks, who have resided in grottoes cut out of the rock, and in a monastery built near the summit. The latter was destroyed in 1821, but has since been rebuilt.

Car'mel, in *Indiana*, a post-office of Hamilton co.

Carmel, in *Maine*, a post-village and township of Penobscot co., 60 m. N.E. of Augusta, on the Sawadnbscook River.

Carmel, in *Michigan*, a township of Eaton county.

Carmel, in *New York*, a post-village and township, cap. of Putnam co., is pleasantly situated 100 m. S. by E. of Albany.

Carmel, in *Ohio*, a post-office of Highland co.

Carmel, or **San Carlos**, in *California*, a missionary settlement of Monterey co.

Car'melin, **Car'melite**, *a.* Belonging to the order of Carmelites.

Car'melite, *n.* A sort of pear.

Car'melites, *n. pl.* (*Eccles. Hist.*) The religious order of monks of St. Mary, of Mount Carmel, founded in the 12th century. The C. themselves claim an unbroken succession from Elijah, and speak of the Virgin Mary as a Carmelite nun. About 1205, Albert, Patriarch of Jerusalem, prescribed a rule for them, which was confirmed by Honorius III. in 1226. They were driven from Syria by the Saracens, in the 13th century, and became mendicant friars in 1247. Gregory XIII. divided them

Thomas Carlyle

1795-1881

into two branches in 1580, according to a form projected by St. Theresa in 1540, the more rigid being called *Barefooted Carmelites*, because they went barefooted. The Carmelite nuns, or *Carmelites*, were instituted in 1452. They are very numerous in France.

Car'men, in Ireland, a township of Kildare co., 6 m. E. of Athy.

Carmen, an island in the Gulf of California, opposite Loreto. It contains a salt lake with a solid crust of salt several feet thick.

Car'mi, in Illinois, a city, cap. of White co., on the Little Wabash river, 150 miles S. E. of Springfield. Pop. (1897) about 3,200.

Carmichael's, or CARMICHAELSTOWN, in Pennsylvania, a post-village of Greene co., on Muddy Creek, 14 m. E. of Waynesburg.

Car'midine, *n.* (Chem.) An alkaloid contained in the distillate of shale-tar.

Car'minated, *a.* Related to, or having the properties of, carmine: as, *carminated* lake.

Car'minative, *n.* [From Lat. *carmen*, a song, an incantation, a charm.] (Med.) A medicine of a warm, stimulating character, chiefly given to prevent pain or griping in the stomach or bowels, or to allay such when existing, and to dispel flatulence. The list of carminatives is very numerous, and comprises all the aromatic herbs and plants—such as all the mints, thyme, dill, &c.; all the aromatic seeds, from cardamoms to caraway; the whole range of spices, all the essential oils, many of the barks, all the natural balsams, some of the resins and gum-resins—as camphor, galbanum, and assafoetida; and alcohol and opium.

a. Anti-spasmodic; dispelling flatulence.

Car'mine, CARMINE-LAKE, *n.* [Fr. *carmin*.] (Chem.) The coloring-matter of the *Coccus cacti*, or cochineal insect; it consists of carminic acid united with alumina or oxide of tin, according to the mode of manufacture. There are various receipts for the preparation of carmine, but the success of the process depends much on the care with which it is conducted.—Twenty ounces of cochineal and 115 grains of carbonate of soda are boiled in distilled water for twenty minutes; when removed from the fire, three-quarters of an ounce of alum and one-eighth of an ounce of bitartrate of potash are added. The whites of two eggs are now added: and on treating the liquid, the carmine rises to the surface. The carmine is collected in a strainer, washed, and dried at 82° Fahr.

Car'mine Spar, **Car'minite**, *n.* (Min.) An anhydrous arsenate of lead and iron, occurring in translucent needle-shaped crystals, and in spheroidal forms with a columnar structure, at Horhausen in Saxony. The name has reference to the color of the mineral, which varies from carmine to tile-red.

Car'minic Acid, *n.* (Chem.) A purple-brown friable mass, soluble in alcohol and water, and slightly emetic. It unites with bases to form colored salts and precipitates. It may be obtained by treating the powdered cochineal with ether, to remove the fat, and digesting the insoluble portion in water. Acetate of lead is then added, and a lead-like carminate of lead is precipitated. This must be well washed, decomposed by sulphuretted hydrogen, and the filtered solution evaporated *in vacuo*, over sulphuric acid.—Chlorine, iodine, and bromine change its color to yellow, and the fixed alkalis color the aqueous solution purple. With alum, no precipitate occurs until ammonia is added, when it falls down as a brilliant crimson lake. The alkaline earths give purple precipitates, and with salts of tin a bright crimson solution is obtained.

Carmoe, or KARMOE, (*kär'moe*), an island of Norway, at the entrance of the Bukke Fiord, in the North Sea, and 20 miles N.W. of Stavanger, in Lat. 59° 20' N., Lon. 5° 15' E. It is 21 m. long, with an average breadth of 5. Pop. 7,000.

Carmo'na, (anc. *Carmo*), a city of Spain, prov. Seville, 20 m. E.N.E. of the latter city, and 56 W.S.W. of Cordova. It was a flourishing city under the Moors, but few remains, however, exist of its former grandeur. Pop. 17,233.

Car'mot, *n.* (Alchemy.) Among the old alchemists, the substance of which the "philosopher's stone" was believed to be composed.

Carn, *n.* (Mining.) In Cornish mining, a rock; a high rock; a heap of rocks.

Carn, in Ireland, a market-town of co. Donegal, 16 m. N. of Londonderry; pop. about 700.

Car'nae, a village of France, dep. Morbihan. Near it are more than 5,000 granitic obelisks of Druidical origin, which stand perpendicularly in 11 rows parallel to the coast.

Carnage, (*kär'näj*), *n.* [Fr., from L. Lat. *carnatio*, from Lat. *carno*—*carnis*, flesh.] Flesh, or heaps of flesh, as of slain animals in slaughter-houses.

"His ample maw with human carnage filled."—Pope.

—Great slaughter in war; massacre; butchery.

"Man—arrayed for mutual slaughter;

Yea, carnage is his daughter."—Wordsworth.

Carna han, in Oregon, a village of Clatsop co., 14 m. S.S.E. of Astoria.

Car'nal, *a.* [Fr. *charnel*; Lat. *carnalis*; from *carno*—*carnis*, flesh.] Pertaining to flesh; fleshy; sensual; as, a *car'nal* thought. (Opposed to *spiritual*.)

—Lustful; animal; lecherous; libidinous; given to the indulgence of sensual appetite; as, *car'nal* desires.

Car'nalism, *n.* Carnality; indulgence of carnal lusts.

Car'nalist, *n.* One who indulges in sensual gratifications.

Car'nalite, *n.* A man given to worldly thoughts and actions. (R.)

Carnality, *n.* [Lat. *carnalitas*.] Quality or state of being carnal; fleshly lusts or desires.

Car'nalize, *v. a.* To make carnal; to cause to become carnal.

Car'nally, *adv.* In a carnal manner; according to the flesh.

"In the Sacrament we do not receive Christ carnally, but we receive him spiritually."—Taylor.

—In a lecherous or sensual manner.

Car'nal-minded, *a.* Worldly-minded.

Car'nal-mindedness, *n.* Grossness or worldliness of mind.

Carna'ria, *n. pl.* [Fr. *carnassiers*; from Lat. *carno*, *carnis*, flesh.] (Zool.) The name given by Cuvier to a great order of *Mammalia*, which, according to his system, includes all the not marsupial *Ferae* of Linnaeus, and along with them the bats, from the Linnaean order *Primates*. This order was divided into *Cheiroptera*, *Insectivora*, and *Carnivora*.

Carnar'von, in Wales. See CAERNARVON.

Carnar'von, HENRY JOHN GEORGE HERBERT, 3d EARL OF, B. 1800. After finishing his school education at Eton, he repaired to Christ Church Coll., Oxford, and at the close of his university career, he entered upon a well-devised plan of travel, extending over Italy, Spain, and parts of Africa and Greece; the results of which he, from time to time, gave to the world in works abounding in animated and picturesque descriptions. His most popular work is his *Portugal and Galicia*; but his *Moor*, a poem, and *Don Pedro*, a tragedy, evince poetic powers of no mean order. B. 1849.

Carnass'ial, *a.* [Lat. *carnis*, and *edere*, to eat.] Adapted to the mastication of flesh: as, *carnassial* teeth.—Owen.

Carnassier, (*kär-näs'si-ä*), *a.* [Fr.] Carnivorous; ravenous.

Carnat'ic, (The.) a very extensive maritime prov. of S. Hindostan, comprising a considerable portion of the territory under the British presidency of Madras. It extends along the Coromandel coast from Cape Comorin to the River Godeyam, or between Lat. 8° and 16° N., and Lon. 77° 15' and 80° 30' E., having N. the Northern Circars, W. the Balaghaut ceded districts, the provs. Salem and Coimbatore, and the Cochinar Travancore dominions, and S. and E. the Indian Ocean, the Gulf of Manar, and the Bay of Bengal. Length N.E. to S.W. 500 m., average breadth about 90. Total area, 52,023 sq. m. The E. Ghats range of mountains intersect this prov. throughout its whole extent N. of Lat. 11° 20', dividing into the *Upper* and *Lower Carnatic*. The principal rivers are the Pennar, Palar, Cavery, &c. The climate of the Lower Carnatic is one of the hottest in India: that of the Upper is more temperate. Soil, various. Rice, cereals, tobacco, and a little sugar and indigo are cultivated. The cotton raised is chiefly of the dwarf kind (*Gossypium herbaceum*). Famines and droughts are not infrequent in this part of the Indian Peninsula. Most of the population are Hindoos of the Brahminical sect; there are comparatively few Mohammedans, and Hindoo customs are retained in wonderful purity throughout the prov. Chief towns, Madras, Pondicherry, Tranquebar, Tanjore, Arcot, &c. Few provs. exhibit so many large temples, and other public ornaments of civilization and wealth. The Moguls first invaded the C. in 1310, but it was not finally in their possession till the reign of Anrungszebe. In 1717 it was severed, with the Mogul territories in the Deccan, from the throne of Delhi. The C. was conquered by the British in 1783, and its subjugation was completely effected in 1801.

Carnation, (*kär-nä'sham*), *n.* [Fr. *carnation*; from Lat. *carno*, *carnis*, flesh.] The natural color of flesh; flesh color.

"O punish him! or to the Elysian shades

Dismiss my soul, where no carnation fades."—Pope.

(Painting.) That part of a picture wherein the limbs, &c. are represented without drapery.

(Bot.) See DIANTHUS.

Carna'tioned, *a.* Made like carnation color.

Car'ne, or **Car'na**, in Ireland, parish of Wexford and Kildare cos.

Carné'ades, of Cyrene, in Africa, the founder of the third academy at Athens. D. 128 B. C. See ACADEMICS.

Carnelian, (*kär-nē'le-an*), *n.* [Lat. *carnis*, from *carno*, flesh.] (Min.) A variety of Chalcedony, generally of a clear bright-red tint, and passing into common chalcedony through grayish-red gradations. The change is insensible from red to white C. through flesh-red and blood-red, with a greater or less admixture of brown to orange and various tints of yellow. The finest specimens are brought from Arabia, and from Cambay and Surat in India. Both in ancient and modern times, C. has been much used for seal-stones, beads, and other ornaments.

Car'nel-work, **Car'nel-work**, *n.* (Ship-building.) The putting together of the timbers, beams, and planks of a ship, as distinguished from *clinch-work*.

Carneous, (*kär'nē-us*), *a.* [Lat. *carneus*, from *carno*, *carnis*.] Fleishy; having the qualities of flesh; as, *carneous* papillæ.

Carnes'ros, in California, a post-office of Napa co.

Carnes'ville, in Georgia, a post-village, cap. of Franklin co., 110 m. N. by E. of Milledgeville, and 15 m. from the Savannah River.

Car'new, in Ireland, a town and parish of Wicklow co., 7 m. W. of Gorey. In the vicinity of C. is Coolattin, the beautiful mansion of Earl Fitzwilliam, owner of this parish.

Car'ney, *n.* (Farriery.) A disease of horses, in which the month is so turred that they cannot eat.

Carnicobar, in the Bay of Bengal, the most northern of the Nicobar Islands, with a circumference of 40 m.; Lat. 9° 10' N., Lon. 92° 48' E.

Car'nifex, *n.* [Lat. *carnis*, and *facere*, to make.] (Antiq.) The public executioner at Rome, who executed slaves and foreigners, but not citizens, who were punished in a manner different from slaves. He was also the person appointed to administer the torture.

Car'nifex Ferry, in Virginia, a place on the Gauley River, near Summerville. An engagement occurred here, Sept. 10th, 1861, between a brigade of U. S. troops, commanded by Gen. Rosecrans, and a body of Confederates, under Gen. Floyd, in which the latter were defeated, with the loss of a large quantity of stores and war material. The loss of men on either side was unimportant.

Carnifica'tion, *n.* (Med.) Transformation into flesh; a morbid state of certain organs, in which the tissue acquires a consistence like that of fleshy or muscular parts.

Car'nify, *v. i.* To form or make flesh; to resolve into flesh, as nutriment.

"I digest, I sanguify, I carnify."—Sir Matt. Hale.

Carnio'la, [Ger. *Krain*.] (Duchy of,) a prov. of the Austrian empire, having N. Carinthia, E. Styria and Croatia, S. Croatia, and W. the Littoral. Area, 3,645 sq. m. It is divided into the 3 circles of Laybach, Adelsberg, and Neustadt. Surface, mountainous, it being penetrated by the Julian and Carnic Alps; it is, however, diversified by many valleys of the highest fertility. Prod. Wine, fruits, wheat, barley, honey, &c. Min. Iron and lead. The quicksilver mines of Idria are the richest in Europe. Coal, and some varieties of precious stones, are largely found. Manuf. Linens, lace, woollens, flannel, leather, porcelain, &c. Chief Towns, Laybach, the cap., and Gottscheer. This prov. formed part of the ancient *Illyricum*, and its subsequent history is identical with that of Carinthia. (q. v.)

Carnival, *n.* [Fr. *carnaval*; It. *carnoval*, from Lat. *carno*, *carnis*, flesh, and *vale*, farewell: i. e., farewell to flesh.] The name of a festival observed in Roman Catholic countries, immediately before the commencement of Lent, beginning on the feast of the Epiphany, or Twelfth day, and ending on Ash-Wednesday. During the last days of C., all kinds of mummery are practised, and license of every sort abounds. Rome and Venice are now the cities where the C. is celebrated with the greatest effect; but even in them it is rapidly declining.

Carniv'ora, *n. pl.* [Lat. See CARNIVOROUS.] (Zool.) A term applied to all animals which in the structure of their teeth and digestive apparatus, and in their general conformation, show that they are peculiarly adapted for destroying living animals, and for tearing and devouring flesh. In the greater number of the members of this order, the size of the canine teeth is the most obvious mark of distinction; these are large, strong, and pointed, and project somewhat forward, so as to present themselves rather in front of the line of the other teeth. Between the canines of the two sides are six incisor teeth in each jaw, which are provided with sharp cutting edges. The molar teeth, situated behind the canines, are of three kinds:—those which immediately follow the canines, being more or less pointed, and termed *false molars*; the next being especially adapted for dividing and lacerating animal muscle, by the sharp edge of its summit, and termed *carnivorous teeth*; and the last, or hindmost, being more or less rounded or *tuberculated*. The proportion which these different classes of molar teeth bear to each other in degree and development, accords with the relative carnivorous propensity of the different families; for instance, it may be laid down as a general rule, that those carnivorous animals which have the shortest jaw and the least development of the false molars are those in which the sanguinary propensity and the destructive power co-exist in the highest degree. It should also be remembered that the articulation of the jaw does not permit of horizontal movement, the power being simply that of opening and shutting, like a pair of shears. In these, as indeed in all animals, the structure is admirably adapted to their habits. They feed on living animals, and are therefore swift to pursue, and strong to overpower them; they are armed with formidable teeth and claws to tear them in pieces; their sight is keen, and even more so by night than by day; their sense of smell is acute, and their power of hearing delicate; their feet are soft, to enable them to steal silently on their prey; their bodies are long and flexible, so that they may glide unseen; and, finally, their supply of food being uncertain, they are capable of long abstinence. Cuvier divides the C. into the four tribes *Plantigrades*, *Digitigrades*, *Felidae*, and *Amphibia*, q. v. This order has been since divided into various groups by different authors. The division generally followed in the present work being that into the seven following families:—*Felidae* or Cat Family, *Hyænidae* or Hyæna Family, *Canidae* or Dog Family, *Viverridae* or Civet Family, *Mustelidae* or Weasel Family, *Ursidae* or Bear Family, and the *Phocidae* or Seal Family.

Carnivoracity, (*kär-niv-or-ä-s'i-ti*), *n.* Voracious appetite for flesh.

Carnivore, *n.* One of the *carnivora*; a carnivorous animal.

Carniv'orous, *a.* [Lat. *carno*, flesh, and *voro*, to eat.] Eating or feeding on flesh, as certain animals; an epithet applied to animals which naturally seek flesh for food, as the lion, tiger, wolf, dog, &c.

Fig. 520.

SKULL OF THE LION.

Carnosity, *n.* [Fr. *carnosité*.] A fleshy excrescence. "The ulcers are healed, and that *carnosity* resolved."—*Wiseman*.
—Fleshiness; fleshy substance.

Carnot, LAZARE NICOLAS MARGUERITE, (*kür-nô'*) a French mathematician, and war minister under Napoleon, was b. in Burgundy, in 1753, entered the corps of engineers, and received promotion from the Prince of Condé; yet, at the commencement of the revolution he became a decided partisan of the republic, and as a member of the convention voted for the death of the king. During the Reign of Terror he took an active part in public affairs; and, on the establishment of the executive directory, he became one of its five members. In this office he remained till 1797, when, with Barthélemy and others, he was accused as a royalist, and exiled. Bonaparte, on becoming First Consul, recalled *C.*, and made him minister of war. In this office he quarrelled so much with the finance minister that he was at length compelled to resign. He subsequently served Napoleon in various capacities, and under all the aspects of the emperor's fortunes; but the emperor seems always to have undervalued his talents. As a writer, *C.* is very favorably known by his *Réflexions sur la Méta-physique du Calcul Infinitesimal*, *La Géométrie de Position*, and other scientific treatises. D. 1823.

Car'nos, **Car'nose**, *a.* Fleshy; carnosous; pertaining, or relating, to flesh.

"A thick and *carnosous* covering like that of a walnut."—*Browne*.

Car'ny, *v. i.* To delude with specious talk or promises; to use hypocritical expressions of flattery or endearment; as, to *car'ny* with soft talk. (Used as provincial English.)

Car'ob, *n.* (Bot.) See ALGAROBIA-BEAN.

Caroche, (*kä-rôsh'*) *n.* [Fr. *carrosse*, from Lat. *carrus*. See CAB.] A kind of light carriage, like a landau.

Caroched, (*kä-rôshd'*) *a.* Seated in a caroche.

"Beggary rides *caroched*."—*Massinger*.

Car'ol, *n.* [It. *carola*; W. *carawl*, a love song; Arm. *koroll*, a dance; W. *cor*, a choir.] Originally, a song sung as an accompaniment to dancing;—afterwards applied to a religious song used in celebration of Christmas.

—*v. a.* To praise or celebrate in song.

—*v. i.* [It. *carolare*.] To sing; to warble; to sing in joy or festivity.

Car'ol, **Car'rol**, *n.* (Arch.) A small closet or enclosure, to sit and read in.

Car'olan, TURLOUGH O', a celebrated Irish bard, and esteemed the last of the famous harpers of his country, b. 1670. He was the composer of some of the most exquisite ballad music that Ireland has produced. D. 1738.

Car'olin, *n.* [From Lat. *carolus*.] A gold coin of Germany. Its value is about 5 dollars.

Caroli'na, the name of each of two of the United States of America, together called the *Carolinas*. See NORTH CAROLINA, and SOUTH CAROLINA.

Carolina, in *Texas*, a village of Falls co.

—A village of Walker co. on Trinity river, 150 m. E. N. E. of Austin.

Carolina Female College, in *North Carolina*, a flourishing village of Anson county, 10 miles North of Wadesborough.

Carolina Mills, in *Rhode Island*, a village of Washington county.

Carolina Pink, *n.* (Bot.) See SPIGELIA.

Carolina Seminary, in *North Carolina*, a village of Green co.

Car'oline, (AMELIA ELIZABETH,) of BRUNSWICK, Queen of Great Britain. See GEORGE IV.

Car'oline, in *Maryland*, an eastern county, bordering on Delaware. Area, 300 sq. m. It is intersected by the Choptank and Marshy Hope rivers, and bounded on the W. by Tuckahoe River. — *Desc.* The surface is level, and the soil mostly sandy. *Cap.* Denton.

Caroline, in *New York*, a post-village and township of Tompkins co., 12 m. S. E. of Ithaca.

Caroline, in *Ohio*, a village in Venicetownship, Seneca co., 30 m. S. S. W. of Sandusky City.

Caroline, in *Virginia*, an eastern county; area, 480 sq. m. *Rivers.* The Rappahannock forms its boundary on the N., and the Mattaponi flows through it. — *Desc.* The surface is uneven, and the soil near the rivers fertile. *Cap.* Bowling Green.

Caroline Bonaparte, GRAND-DUCHESS OF BERG, and QUEEN OF NAPLES, youngest sister of the emperor Napoleon I., b. at Ajaccio, 1782. She came to France in 1793, married Joachim Murat (*q. v.*) in 1800, became grand-duchess of Berg in 1806, and queen of Naples in 1808. She gained the affections of the people, patronized letters, restored the Neapolitan museum of antiquities, and ordered the excavations at Pompeii. Becoming a widow in 1815, she retired to Haimburg, in Austria, and took the title of Countess of Lipano, the anagram of Napoli. D. 1839.

Caroline Centre, in *N. York*, a P. O. of Tompkins co.

Caroline Depot, in *N. York*, a P. O. of Tompkins co.

Caroline Island, in the S. Pacific Ocean. It is one of the Marquesas group, lying N. of Eimeo; Lat. 9° 57' S., Lon. 150° 25' W. It is but 5 m. in circumference.

Caroline Islands, or NEW PHILIPPINES, a chain of islands in the Pacific Ocean, extending over a space estimated at 2,000 miles. They include various groups; as the Pellew, the Yap, the Egoi, and others. The Ulalan is the most E. of the group, and has a circumference of 24 miles. — *Desc.* Many of the various groups are mere coral reefs, and but little elevated above the surface of the ocean. Those, however, which are capable of bearing vegetation, produce palms, bananas, and bread-fruit-trees. Lat. between 3° and 12° N., Lon. between 132° and 170° E. — The inhabitants of these islands comprise various races, and live mostly by fishing. A great portion of

them are Malays, and make excellent seamen. The islands were discovered in 1543, by Lopez de Villalobos, a Spaniard; but though nominally belonging to Spain, the Spaniards had no settlement upon them. Hence in Aug., 1885, Germany attempted to annex them, but it so inflamed the Spaniards that they were abandoned.

Carolin'ian, *n.* (Geog.) a native or inhabitant of the Carolinas, North or South.

Car'oling, *n.* Act of singing; a singing or warbling.

Carolit'ie, *a.* (Arch.) Decorated with leaves and branches; as, a *carolitic* column.

Car'olus, [L.] An old Eng. gold coin, worth 20-23 shil.

Caron'delet, in *Mo.*, a p. v. of St. Louis co., on the W. bank of the Mississippi, 6 m. S. of St. Louis.

Car'ony, a river of Venezuela, rising in the Sierra Pacaraima, and, after a course of 400 m., joining the Orinoco at about 150 m. from its mouth. It has for its affluents the Paragua and Acaman, but its cataraacts render it unfit for the purposes of navigation.

Caroon', *n.* (Bot.) A species of cherry.

Caro'ra, a city of Venezuela; Lat. 10° 13' N., Lon. 70° 26' W.; pop. 10,000.

Caroteel', *n.* (Com.) A cask or barrel in which dried raisins, &c. are packed for export.

Carot'ie, *a.* [See CAROTID.] Pertaining to stupor.

(Anat.) Belonging to the carotids; as, the *carotic* arteries.

Carot'id, *n.* [Gr. *karotides* — *karoo*, to procure sleep, to stupefy.] (Anat.) The large artery of the neck; so called from a belief that if pressed upon, so as to impede the circulation in it, the individual would fall asleep. On the right side the *C.* is given off from the *arteria innominata*, and on the left it rises immediately from the arch of the aorta. (See fig. 120.) The *C.* on either side divides, near the angle of the lower jaw, into the internal and external branches: the first entering the skull, and supplying the two halves or hemispheres of the brain, the eyes, and other parts with their chief source of nourishment: the second being ramified over the neck, cheeks, scalp, and external ear. The carotids, though not the only, are by far the largest arteries supplying the brain with blood; and, as a consequence, when the main trunk of either is divided, as is so frequently the case in determined suicides, the hemorrhage is almost always fatal.

Carot'id, **Carot'idal**, *a.* Pertaining, or relating, to the carotids.

Caronge, (*kar-oozh'*) a town of Switzerland, on the Aroe, 2 m. from Geneva; pop. 5,836.

Carousal, (*ka-rouz'al*) *n.* [Fr. *carrousel*, from Lat. *currus*, chariot, of the sun.] A magnificent feast; a festivity; a noisy revel or drinking bout.

"This game, these *carousals*, Ascanius taught."—*Dryden*.

Carouse, (*ka-rouz'*) *v. i.* [Ger. *rausch*, with the prefix *ca*; Icel. *russ*, drunkenness; Swed. *rus*, a drunken fit; probably allied to Gr. *karōsis*, drowsiness, as if from drunkenness, from *kara*, the head.] To drink hard with noisy jollity; to drink in a jovial manner; to quaff.

"They sit *carousing*, where their liquor grows."—*Waller*.

—*v. a.* To drink lavishly; to tope; to quaff deeply.

"To Desdemona hath to-night *caroused* Potations pottle deep."—*Shaks.*

—*n.* A drinking bout; a carousal; in the modern vulgar, a spree.

Caronser, (*ka-rouz'er*) *n.* One who carouses; a tippler; a toper; a jovial drinker.

Carousingly, *adv.* In a carousing or jovial manner.

Carp, *v. a.* [Lat. *carpo*.] To catch at small faults or errors; to censure, cavil, or find fault with, without adequate reason; generally with *at* before an object.

"And at my actions *carp* and catch."—*Herbert*.

Carp, *n.* [Fr. *carpe*; It. and Span. *carpa*; Sw. *karp*.] (Zool.) See CYPZINIDÆ.

Car'pal, *a.* [Lat. *carpus*, wrist.] (Anat.) Pertaining to the bones of the wrist.

Carpathian, or **Karpathian Mountains**, (*kar-pai'the-an*), a very considerable range, enclosing Hungary on the N. and E., covering the principality of Transylvania, and forming the N. E. portion of the great mountain system of S. Europe. Including a lower range, called *Kleine Karpathen* ("Little Carpathians"), these mountains commence on the left bank of the Danube, in the neighborhood of Presburg, Lat. 48° 8' N., Lon. 17° 6' E., and after taking many courses and deflections, they again meet the Danube at the town of New Orsova, Lat. 44° 41' N., Lon. 22° 30' E.; making altogether a curved length of about 800 m.; the width of the range varies, and at a rough calculation these mountains may be said to cover 90,000 sq. m. As regards elevation, they do not attain the height of other great ranges, as the Caucasus, or the Alps, the highest measured peaks being under 9,000 feet. The most elevated of the latter is Lomnitz Peak, having an altitude of 8,779 ft. above sea-level. It would be needless here to attempt an enumeration of the mineral wealth discovered in this range; suffice it to say, that gold, silver, copper, iron, lead, cobalt, antimony, sulphur, saltpetre, coal, rock-salt, and cinnabar are found, generally in large quantities. In a word, the *C. M.* appear to be one extensive mine, where nearly all the varieties of mineral riches are produced; in addition to which their recesses yield the opal, one of the noblest and most valuable of gems. The Hungarian name for this mountain-system is *Tatra*.

Car'pel, **Carpel'ium**, *n.* [Gr. *karpōs*, fruit.] (Bot.) A modified leaf, forming the whole or part of the pistil. When several carpels are present, they may be either distinct from each other, as in the columbine, or combined so as to form one body, as in the poppy. The carpels, taken collectively, constitute the *Gynæcium*, or female system of flowering plants. — See PISTIL.

Carpenta'ria, (GULF OF,) a broad and deep indentation of the N. coast of Australia, stretching from 11° to 17° 30' S. Lat., and from 136° to 142° E. Lon.

Carpenta'ria, in *California*, a post-village of Santa Barbara co., about 10 m. E. by S. of Santa Barbara.

Car'penter, *n.* [Fr. *charpentier*; It. *carpentero*; Sp. *carpintero*; Lat. *carpentarius*, a wheelwright, from *carpentum*, a car.] An artificer, whose business it is to shape and frame timber used in the construction of buildings, such as piles, sleepers, posts, girders, joists, partitions, roofs, and battening, and the application of the necessary ironwork. The other part of the timber-work in a building comes within the province of the JOINER, *q. v.*

(Ship-building.) A person engaged in the building of ships, styled a *ship-carpenter*.

(Naut.) The third warrant officer on board a man-of-war. He has charge of the boats, and it is his duty, in conjunction with his mates, to attend constantly to the state of the well in order that a leak may be immediately reported.

Car'penter, WILLIAM BENJAMIN, an eminent English physiologist, b. at Bristol, 1813. He was educated at the University of Edinburgh, where he graduated M. D. in 1839, and commenced practice in Bristol. Having resolved to devote himself exclusively to scientific and literary pursuits, he removed to London in 1843, and was soon after appointed examiner in Physiology and Comparative Anatomy in the University of London, and Professor of Medical Jurisprudence in University College. These offices he held until appointed in 1856 to the Registrarship of the University of London. He is the author of *Principles of General and Comparative Physiology*, *Principles of Human Physiology*, a *Manual of Physiology*, the *Microscope and its Revelations*, *Introduction to the Study of the Foraminifera*, &c. D. 1885.

Car'penter-bee, *n.* (Zool.) See APIDÆ.

Car'pentering, *n.* Carpentry; work or handicraft of a carpenter.

Car'penter's Landing, in *New Jersey*, a village of Gloucester co., on Mantua Creek, 3 m. S. from Woodbury.

Carpenter's Mill, in *Missouri*, a village of Ray co., 120 m. W. N. W. of Jefferson city.

Carpenter's Store, in *Missouri*, a post-office of Clinton co.

Carpentersville, or CARPENTERVILLE, in *N. Jersey*, a flourishing post-village of Greenwich township, in Warren co., 40 m. N. N. W. of Trenton.

Carpentersville, in *Illinois*, a post-office of Kane co.

Carpentersville, in *Indiana*, a post-village of Putnam co., 35 m. W. of Indianapolis.

Car'pentras, a walled city of France, dep. Vaucluse, cap. arrond., at the foot of Mont Ventoux, on the Auzon, 15 m. N. E. of Avignon. *Manuf.* Spirits, leather, madder, soap, silk, &c. *C.* is very ancient, and was, for a short period, under Clement V., the seat of the Holy See. Pop. 12,042.

Car'pentry, *n.* (Arch and Building.) The trade, art, or work of a carpenter. — The assemblage of pieces of timber connected by framing, or letting them into each other, as are the pieces composing a roof, floor, centre, &c. It is distinguished from *Joinery* by the fact that the pieces of timber are put together without the use of other edge tools than the axe, adze, saw, and chisel; whereas joinery requires the use of the plane; the distinction is, however, very artificial, as all wrought timber is planed. The tools ordinarily employed in *C.* are a *ripping-saw*, a *hand-saw*, an *adze*, an *axe*, a *socket-chisel*, a *firmer-chisel*, a *ripping-chisel*, an *auger*, a *gimlet*, a *hammer*, a *mallet*, a *pair of pincers*, and, sometimes, *planes*; but the latter are not necessarily used, as they, in most cases, belong to joinery.

Car'per, *n.* A caviller; one who carps; a censorious person.

"I have not these weeds,

By putting on the cunning of a *carper*."—*Shaks.*

Car'pet, *n.* [It. *carpetta*. Etymol. uncertain.] A kind of stuff embroidered with figures of various fruits, flowers, &c.; an ornamental covering for floors, stairs, &c.; a wrought cover for tables.

—Level ground covered as with grass.

"The *carpet* ground shall be with leaves o'erspread."—*Dryden*.

Car'pet knight. A knight who has not seen service in the field:—hence, a soldier accustomed to a home life of ease and luxury.

"Some of our city captains and *carpet knights* will make this good, and prove it."—*Burton*.

—One who is created a knight for other than military capacity and service.

"He is *knight*, dubbed with unhack'd rapier, and on *carpet* consideration."—*Shaks.*

To be on the Carpet. To be mooted; to be under debate or consideration; to be the subject of deliberation; as, that matter is next to be brought on the *carpet*.

(Manf.) *C.* were first brought into use by the inhabitants of Eastern countries. In Egypt, Syria, Turkey, and Persia, the *C.* is the chief article of furniture to be found in ordinary houses, the peculiar habits of the people requiring but little more in addition. For many years Europe received all her supplies from the East. The manufacture is said to have been introduced into Europe by the French, in the reign of Henri IV. The manufactories of *Beauvais* and of the *Gobelins*, established by Colbert in 1662-1664, are still existing, the latter producing unrivalled fabrics. In England the manufacture of *C.* was not carried to any great extent until the middle of the 18th century. The *Turkey C.* are made in one piece, and generally consist of a dark central ground, figured with a small irregular angular pattern in various rich colors, surrounded by a border. A genuine *Turkey C.* should be free from any admixture of

green, which is the sacred color of the followers of Mahomet. In the U. States the manufacture of *C.* is very extensive, and carried on to great perfection, this country being by far the greatest producer and consumer of *C.* all the countries in the world. The *C.* manufacture is carried on very actively in a number of the States, including Pennsylvania, New Jersey, New York, Massachusetts, and Connecticut, and particularly in the city of Philadelphia. The principal kinds of *C.* made in this country and in England are the Brussels, Wilton, Kidderminster, Tapestry, Axminster, Three-ply and Ingrain, Dutch, Venetian, Printed Felt and Drugget carpet. The Brussels Carpet is a mixture of linen and worsted, but, like the Turkey carpet, the worsted only is shown on the upper surface. The basis or cloth is a coarse linen fabric, and between the upper and under threads of the weft, several (usually five) worsted threads of different colors are firmly bound in. The pattern is produced by drawing to the surface, between each reticulation of the cloth basis, a portion of the worsted thread of the color required at that spot to produce the pattern: these updrawn portions are formed into loops, by being turned over wires, which are afterwards withdrawn, and the loops thus left standing above the basis form the figured surface of the carpet. This will be better understood by reference to the diagram, Fig. 521, which is a slightly magnified section of a Brussels carpet, cut across the wires and the threads of the weft. The large dots above are the sections of the wire; the smaller dots, those of the weft or shoot threads; the waved lines, the warp; the parallel lines, the five colored worsted threads; and the loops over the large dots are the updrawn worsted threads forming the surface of the *C.* The machinery and processes by which this arrangement is produced are rather complex, and require to be seen to be fully understood. The Wilton *C.* is made like

Fig. 521. — CARPET-WEAVING.

the Brussels, but the wire has a groove in its upper surface, Fig. 521, and instead of being drawn out, it is liberated by passing a sharp knife through the worsted loop into this groove, and thus making a velvet pile surface instead of the looped thread. Kidderminster *C.*, sometimes called Scotch *C.*, present the same pattern on both sides, with the colors reversed; thus, if red stars are shown on a white ground on one side, the other side will present white stars on a red ground. These *C.* consist, for the most part, of the interweaving of two cloths, which are woven at the same time, each cloth being perfect in itself, and necessarily of different color. *Tapestry C.* are made in a manner similar to that in which Brussels and Wilton *C.* are manufactured; but only one yarn is used instead of five or more of different colors, as in the *C.* just named. This yarn is dyed at different parts of its length, to suit the requirements of the pattern, and as the whole pattern is printed on the yarns, the machinery required is of a far less complicated nature than when it is required to pull many yarns of different colors above the surface of the cloth which forms the basis in order to produce the desired design. *Axminster C.* are made at Axminster, in Devonshire, in a manner similar to that in which Turkey *C.* are manufactured. Tufts of worsted are tied to a warp of strong linen and secured by a linen weft. The process is tedious, and the *C.* are necessarily expensive; they are made in one piece, to suit the size of the rooms for which they are required. Ingrain *C.*, so called because made of only two ply or thicknesses. The colors are reversed on either side, and the warps as well as the filling may be cotton or worsted. They are made by the Jacquard attachment, and mostly woven on hand-looms. *Dutch and Venetian C.* are much alike in their manufacture. The patterns adopted are usually stripes. The chain consists of stripes of woollen yarns of different colors, and the filling is of wool, hemp, or cotton. The *Printed Felt C.* are made of coarse wools, brought into a compact mass by the process of felting, and the pattern is printed in colors by means of rollers on which it is cut. Within a few years the *C.* industry has developed to such an extent in the U. States, that our production, as above stated, is much larger than that of any other country. Philadelphia, the chief seat of the *C.* industry, has more than 5,000 looms employed on ingrain carpets used in the U. States. In 1890 its carpet product was worth \$22,396,604—half the production of the whole U. S. New York and Mass. are also large producers.

C. a. To cover with a carpet; to spread with carpets.

carpet-bag, n. A travelling-bag; a kind of valise, originally made of carpeting.

carpet-bagger, n. A term applied, in the southern part of the United States, to a certain class of Northern immigrants, especially to those desiring political preferment.

carpeting, n. Cloth for carpets; carpets in general.

carpet-monger, n. A dealer in carpets.—A person prone to ease and luxury.

carpet-way, n. (*Agric.*) Any strip or border of greensward left round the margin of a ploughed field.

carpholite, (kar-fol'it), n. [*Gr. karphos, a dry stalk, and lithos, stone.*] (*Min.*) A hydrated silicate of alumina, manganese, and iron, found at Schlackenwald, Bohemia. It occurs in tufts of minute rhombic prisms, of a straw-yellow color; also massive, radiated, and earthy.

Carphology, n. [*Gr. karphos, the nap of clothes, and lego, I pluck.*] (*Med.*) The picking of the bed-clothes sometimes observed in persons in the delirium of a fever, and regarded as a very dangerous symptom.

Carphosiderite, n. [*Gr. karphos, and sideros, iron.*] (*Min.*) A very rare straw-colored mineral with a resinous lustre and a greasy feel, found in kidney-form masses and incrustations in the mica-slate of Labrador and Greenland. It has recently been analyzed by F. Pisani, who pronounces it to be a hydrated sulphate of peroxide of iron.

Carphostilbite, n. [*Gr. karphos, and stilbite.*] (*Min.*) A straw-yellow and columnar variety of Thomsouite, from Bernfiord, Iceland.

Carpi, a town of N. Italy, 10 m. N. of Modena; pop. 7,148.

Carpingly, adv. In a carping or censorious manner.

Carpi'ni, JOHANNES DE PLANO, a celebrated Franciscan monk, b. in S. Italy about 1210. He was one of the six friars selected by Pope Innocent IV. to proceed to the court of the Emperor of the Mongols, whose warlike advances in 1246 threw Christendom into consternation, in order to pacify the terrible nomadic warriors, and if possible, convert them to Christianity. He wrote an account of his journey in Latin, an abstract of which was published in the *Voyages and Discoveries of Hakluyt.*

Carpi'no, a town of S. Italy, prov. Capitanata, 22 m. N.E. of San Severo; pop. 6,830.

Carpi'uns, n. [*Celt. car, wood, and pino, the head; alluding to its use in making yokes for cattle.*] (*Bot.*) The

Horn-beam, a genus of trees, order *Corylaceæ*. The *C. Americana* is a small tree, 12-20 feet high, common in woods throughout the U. States. The wood is very fine-grained, compact and white, covered with a light gray or ash-colored bark. Leaves 2-4 inches long, half as wide, petiolate. From the ends of the branches hang the long, loose, pale green, leafy aments, consisting of alternate pairs of enlarged scales, with a dark-colored nut at the base of each. It blossoms in April and May.

Carpocra'tes, a native of Alexandria, who in the 2d century revived several Gnostic errors. He rejected the Old Testament and the Gospels of St. Matthew and St. Luke; denied the resurrection of the dead; and advocated the most licentious mode of life. Mosheim calls him "the worst of all the Gnostics."

Carpocratian, (kar-po-krai'shan), n. A follower of CARPOCRATES, *q. v.*

Car'polite, n. [*Gr. carpos, fruit, and lithos, a stone.*] (*Pal.*) A fossil fruit or seed.

Carpologist, n. One versed in carpology.

Carpology, n. [*Gr. carpos, a fruit, and logos, discourse.*] That part of botany which treats of the structure of fruits and seeds.

Car'pophore, n. [*Gr. karpos, fruit, and phora, a bearing.*] (*Bot.*) The stalk of a pistil when it bears the gynaecium alone.

Car'pus, n. [*Lat. (Anat.)*] The segment of the skeleton of the upper or fore limb, answering to the wrist; it consists of eight small bones in the human subject.

Car'quinez, in California, a strait connecting the Bay of San Pablo with Suisun Bay.

Carr, in Indiana, a flourishing township of Jackson county.

—A township of Clarke co.

Carracci, See CARACCI.

Carrack, n. See CARACK.

Carrageen, or IRISH MOSS, n. See CHONDRIUS.

Car'ra, (Lough,) in Ireland, a small lake of Kerry co., about 3 m. long, and 1 m. broad, and is 3½ m. S. of Castlemaine Harbor.

Car'ranteel, in Ireland, a parish of Tyrone co.

Car'ran-Tu'al, the highest mountain in Ireland, in the Macgillicuddy's Reeks range, in Kerry co., 5 m. S.W. of Killarney. Height, 3,410 ft. above the level of the sea.

Carrara, a town of central Italy, prov. Massa-Carrara, on the Lavensa, about 4 m. from the Mediterranean, and 60 W.N.W. of Florence. An academy of sculpture is established here, and several artists have their residence attracted by the convenience of obtaining marble almost cost-free; and the sale of rude marble and of sculptured articles forms an important branch of traffic. The famous Carrara Marble is a white saccharine limestone, which derives its value from its texture and purity. The quarries have been wrought from the age of Augustus, and seem to be now as inexhaustible as ever. Pop. 15,328.

Car'rat, n. See CARAT.

Car'raway, n. Same as CARAWAY, *q. v.*

Car'rel, n. See CAROL, and QUARREL.

Car'rel, ARMAND, b. 1800, an eminent French political writer, chief editor of the Paris National, and a leader of the moderate Republican party. D. 1836, of a wound he received in a duel with M. Emile de Girardin.

Carriage, (kar'rij), n. [*Fr. charriage, from charrier, to carry, from char; It. carro; Lat. currus, a car or*

cart.] Act of carrying, bearing, transporting, or conveying; as, the carriage of goods.

—That which carries: that conveyance which runs on wheels; a coach; any vehicular conveyance; as, a pony-carriage, a railway-carriage, a gun-carriage.

—Behavior; conduct; deportment; demeanor; as, a lady of dignified carriage.

—Management; art or manner of projecting and carrying out a plan or measure; method of transaction; as, the carriage of a plot.

(*Hist.*) Before the 16th century, carriages were only used by kings and the nobility, and the vehicles to which

Fig. 523. — CARRIAGE OF KING JOHN.

that name was given were in reality conveyances little better than carts or wagons, in cold or wet weather fitted with a tilt or awning, and being without springs and built strong, to meet the inequalities, and indeed dangers of the road, could seldom go faster than a jog-trot, a comparative degree of speed by no means desirable, when the jolting, which was the natural consequence of any progression beyond a walk, is taken into consideration. Though horses were often used in the carriages of the early and middle ages, oxen were by no means unusual; and as both from the pain of riding in an unstuffed conveyance, and the almost impossibility of going beyond a walk over such abominable roads as in those days everywhere existed, the ox, as being steady and surer of foot than the horse, appears to have been the most useful animal of the two for that purpose. Fig. 523 illustrates the state-carriage of King John of England, who reigned from 1199 to 1216, copied from a manuscript of the time.—See VEHICLE.

Carriageable, (kar'ij-a-bl), a. Capable of being conveyed in carriages; as, carriageable commodities.

Carriage-horse, n. A horse kept for drawing a carriage.

Car'riboo, n. (Zool.) See CARIBOU.

Car'rick, in Ireland, three parishes of Wexford, Kildare, and West Meath counties.

Car'rick, in Pennsylvania, a P. O. of Alleghany co.

Car'rick, or Carrickbun'got, in Ireland, a parish of Louth co.

Car'rickahooly, in Ireland, an old tower in May co., 5 m. W.N.W. of Newport.

Carrick-a-Rede, in Ireland, an insulated basaltic rock in the co. Antrim, 4½ m. N.W. of Ballycastle, separated from the mainland by a chasm 60 ft. wide, and upwards of 80 ft. deep.

Car'rickbeg, in Ireland, a town in Munster, 14 m. W. N.W. of Waterford, on the river Suir; pop. about 2,500.

Car'rick-bend, n. (Naut.) A kind of knot used on shipboard.

Car'rick-bitt, n. (Naut.) One of the bitts of the windlass.

Carrickfer'gus, in Ireland, a sea-port and town of Antrim co., on Belfast Lough, 9 m. N.N.E. of Belfast; pop. 3,800.

Car'rickmacross, in Ireland, a town in Monaghan co., 12 m. S.W. of Dundalk; pop. 2,000.

Car'rick-on-Shan'non, in Ireland, a town, cap. of Leitrim co., on the river Shannon, 19 m. N.N.W. of Longford; pop. 1,900.

Car'rick-on-Suir, in Ireland, a town of Tipperary, on the Suir, 13 m. S. of Blonimel; pop. about 8,000.

Carrick's Ford, in Virginia, a passage on the Cheat River. Here, on July 13th, 1861, an action was fought between a force of National troops under Gen. Morris, and one of Confederates under Gen. R. S. Garnett of Va., in which the latter were defeated, with the loss of their commander.

Carrier, (kar'reur), n. [*See CARRY.*] One who carries something; a messenger; a dispatcher.

"The loaded carriers from their evening hive."—Dryden.

—One whose avocation or trade is to carry goods for others for hire; a wagoner; a teamster.

"The roads are crowded with carriers, laden with rich manufactures."—Swift.

(*Mach.*) A piece of iron which is fixed by a set-screw on the end of a shaft or spindle to be turned in a lathe, to carry it round by the action of the driver of the centre chuck.

(*Law.*) One who undertakes to transport goods from one place to another.—The *Private C.* incurs the responsibility of the exercise of ordinary diligence only, like other bailees for hire.—*Common C.* are such as carry goods for hire indifferently for all persons. The definition include *C.* by land and water. They are, on the one hand, stage-coach proprietors, railway companies, truckmen, wagoners and teamsters, carmen and porters, and express companies. And, on the other hand, this term

includes the owners and masters of every kind of vessel or water-craft who set themselves before the public as the *C.* of freight of any kind for all who choose to employ them.—Common *C.* are responsible for all loss and damage during transportation, from whatever cause, except the act of God, or the public enemy.—The *C.* is not responsible for losses occurring from natural causes, such as frost, fermentation, evaporation, or natural decay of perishable articles, provided the *C.* exercises all reasonable care to have the loss or deterioration as little as possible.

Car'rier, JEAN BAPTISTE, a monster of ferocity, generated in the French revolution, was b. near Aurillac, 1756. He was sent on a mission to La Vendée, where he caused thousands of victims, men, women, and children, to be drowned, beheaded, or shot, the ordinary mode of execution being too tardy for him. Fifteen thousand individuals perished in this way; in short, the banks of the Loire were strewn with the dead bodies, and the water was so polluted, that it was prohibited to drink it. On the fall of the party called the Mountain, he was tried before the revolutionary tribunal, which condemned him to the guillotine, 1794.

Carriere, MORITZ, a German philosopher and aesthetist, b. 1817, in Griedel, graduated in Berlin, in 1837, as Doctor of Philosophy. In 1849 he became professor of philosophy in Giessen, and since 1853 has been prof. in Munich, lecturing on Aesthetics in the University, and Art History in the Academy of Arts. *C.*'s first writings, viz., "Vom Geist. Schwert- und Handschlag für Franz Bader" (1841), and "Die Religion in ihrem Begriff, ihrer weltgeschichtlichen Entwicklung und Vollendung" (1841), were somewhat in the ideas of Hegel, elevating, however, decidedly the principles of individuality. In his work, "Die Philosophische Weltanschauung der Reformationszeit" (1847), he delineates the transition from the Scholastic to the Cartesian period, and analyzes the systems and doctrines of Giordano Bruno, Campanella, and Jacob Böhme in a new and peculiar manner. Of his other works the most important are: "Religiöse Reden und Betrachtungen für das deutsche Volk" (1856); "Das Wesen und die Formen der Poesie" (1854); "Aesthetics" (1859); "Die Kunst im Zusammenhange der Cultur-entwicklung und die Ideale der Menschheit" (1863); &c., &c.

Car'rier-pigeon, *n.* (Zool.) See PIGEON.

Car'rigaholt, in Ireland, a maritime village of Clare co., on a bay of the same name, 10 m. W. of Kilrush; pop. 450.

Car'rigaline, or BEAVER, in Ireland, a maritime town of Cork co., and 8 m. S.E. of Cork City, on Cork harbor; pop. 8,000.

Carrigallen, in Ireland, a barony in the S.E. of Leitrim co.

—A parish in Leitrim co.

Car'rigdownam, in Ireland, a parish in Cork co.

Car'rignavar, or DUNBULLOGE, in Ireland, a parish of Cork co.

Car'rig-o-Gun'nel, or CARRICKAQUICK, in Ireland, a village in Limerick co., 5 m. W.S.W. of Limerick City.

Car'rigro'hane, in Ireland, a parish in Cork co.

Carrigtohill, in Ireland, a village and parish of Cork co., 3 m. W. of Middletown; pop. 4,000.

Carrigufoye, in Ireland, a small island in co. Kerry, on the estuary of the Shannon, 2 m. N. of Ballylongford.

Carrillon, (Fr. pron. *kär-reel-yon'*), in L. Canada, a village in co. of Two Mountains, on the Ottawa River, 50 m. from Montreal.

Car'riön, *n.* [Fr. *charogne*; It. *carogna*, from Lat. *caro*, *carnis*, flesh.] The dead and putrefying bodies or flesh of animals.

—*a.* Relating to dead and putrefying carcasses; feeding on carcasses; as, a *carriön-crow*.

Car'riön-crow, *n.* (Zool.) The *Corvus corone*, a species of crow which preys upon eggs, young poultry, &c.

Car'ritunk, in Maine, a post-office of Somerset co.

Carri'zo, in Texas, a post-office of Zapata co.

Car'rol, *n.* (Arch.) See CAROL.

Car'roll, CHARLES, the latest surviving signer of the Declaration of American Independence, b. at Annapolis, Maryland, 1737. He studied at Paris, became a member of the Inner Temple at London, returned to his native country in 1764, was elected to Congress in 1775, and, along with the other members, signed the Declaration on Aug. 2d of the following year. In 1804, he withdrew to private life at Carrollton, his paternal estate, where, as his life advanced, he became an object of universal veneration. He survived by 6 years all the other signers of the Declaration, and d. at Baltimore in his 96th year, 1832.

Car'roll, JOHN, brother of the preceding, and first Catholic bishop in the U. States, was b. at Upper Marlborough in Maryland, 1734, and sent for education at the age of 13 to Flanders. From St. Omer's, where he remained 6 years, he was transferred to the colleges of Liege and Bruges. He was ordained a priest and became a Jesuit. In 1775 he returned to America, and engaged in the duties of a parish priest. In 1786 he was appointed vicar-general, and settled at Baltimore. In 1790 he was consecrated, in England, Catholic bishop of the U. States, and returned with the title of the bishop of Baltimore. A few years before his death he was created archbishop. D. 1815.

Car'roll, in Arkansas, a N.N.W. county, bordering on Missouri; area, 1,038 sq. m. It is drained by King's River and Long Creek, affluents of White River. The surface is diversified, and soil fertile. Variegated marble, of a very beautiful description, is found here. *Cap.* Berryville and Eureka Springs. Pop. (1890) 17,290.

Car'roll, in Georgia, a W. county bordering on Alabama; area, 572 sq. m. It is drained by the Chattahoo-

chee and Tallapoosa rivers. The surface is hilly, and the soil moderately fertile. *Cap.* Carrollton. Pop. (1890) 22,300.

Car'roll, in Indiana, a county in the N. W. central part of the State; area, 378 sq. m. It is drained by the Wabash and Tippecanoe creeks. The surface is undulating, and the soil highly fertile and productive. *Cap.* Delphi. Pop. (1897) 21,500.

—A post-village in the above co., on the W. bank of the Wabash River, 75 m. N.N.W. of Indianapolis.

Carroll, in Illinois, a W.N.W. county; area, 416 sq. m. It is drained by Plum, Elk, Horn, Otter, and Rush creeks, and bounded on the W. by the Mississippi. The surface is undulating and diversified with prairies and tracts of timber, and the soil is fertile. Lead is found in considerable quantities. *Cap.* Mount Carroll. Pop. (1897) abt. 20,000.

—A township of Vermillion co.

—A village of Warren co., 60 m. W. N. W. of Peoria.

Carroll, in Iowa, a W. central county; area, 576 sq. m. It is drained by the Middle, Coon, and Racoon rivers. Its soil is generally fertile. *Cap.* Carroll. Pop. (1890) 18,830.

—A township of Fama co.

Carroll, in Kentucky, a county in the N. of the State, bordering on Indiana; area, 200 sq. m. *Rivers.* The Ohio River forms its boundary on the N., and the Kentucky River divides the county into nearly equal parts. The surface is generally rolling except the hills near the Ohio, which are steep; the soil is calcareous and fertile. *Cap.* Carrollton.

Carroll, in Louisiana, a former N. E. parish, situated between the Mississippi River and Beuf Bayou, and bordering on Arkansas; area, 1,050 sq. m. It is now divided into the two parishes of EAST CARROLL and WEST CARROLL.

Carroll, in Maine, a post-township of Penobscot co., 56 m. N.E. of Bangor.

Carroll, in Maryland, a N. county, bordering on Pennsylvania; area, 500 sq. m. *Rivers.* It is drained by Patuxent and Gunpowder rivers and by Pike Creek. *Desc.* The surface is hilly and rocky; the soil, moderately fertile. *Min.* copper and iron. *Cap.* Westminster. Pop. in 1890, 32,380.

—A post-office of Baltimore co.

Carroll, in Mississippi, a N.W. central county. Area, 850 sq. m. It is watered by the Yallobusha and Big Black rivers. The surface is level; the soil is alluvial and fertile. The Yazoo River, which forms the W. boundary of the county, is navigable at all seasons. *Cap.* Carrollton.

Carroll, in Missouri, a N.W. central county. Area, 700 sq. m. *Rivers.* It is bounded on the S. by the Missouri River, and on the E. by Grand River, and is drained by Wyaconda and Big creeks. *Desc.* The surface is undulating and diversified with prairies and forests; the soil is generally productive. *Cap.* Carrollton. Pop. abt. 27,000 in 1897.

Carroll, in New Hampshire, an E. central county. Area, 500 sq. m. *Rivers.* It is drained by the Ossipee and Saco rivers, and has numerous small streams which afford valuable water-power. *Desc.* The surface is mountainous, having the Ossipee Mountain and Conway Peak within its boundaries; the soil is generally productive. *Cap.* Ossipee.

—A post-township of Coos county, 80 miles N. of Concord.

Carroll, in New York, a township of Chautauque co., 20 m. S.E. of Mayville.

Carroll, in Ohio, a county in the E. of the State. Area, 360 sq. m. *Rivers.* It is drained by Conotton, Sandy, and Yellow creeks. *Desc.* The surface is undulating and the soil fertile. *Min.* Stone coal and iron ore. The chief products in 1880 were 450,511 bushels of corn, 233,658 of wheat, 439,698 of oats, and 611,200 lbs. of wool. *Cap.* Carrollton.

—A post-village of Fairfield co., about 22 m. S.E. of Columbus.

—A township of Ottawa co.

Carroll, in Pennsylvania, a township of Cambria county.

—A post-village of Clinton co., 15 m. E.S.E. of Lock-Haven.

—A township of Perry co.

—A township of Washington co.

—A village of Washington co.

—A township of York co.

Carroll, in Tennessee, a W. county. Area, 625 sq. m. *Rivers.* The South Fork of Obion rises in the county, and Big Sandy River flows through it. *Desc.* The surface is nearly level; the soil fertile and extensively cultivated. *Cap.* Huntington.

Carroll, in Virginia, a S.S.W. county, bordering on N. Carolina. Area, 440 sq. m. The New River, or Kanawha, flows along the W. border of this county, which is also drained by Reedy Island River and Chestnut Creek. The Blue Ridge forms its boundary on the S.E. *Min.* Copper, iron ore, and lead. *Cap.* Hillsville.

Carrollite, *n.* (*Min.*) A sulphide of copper and cobalt, of a tin-white color inclining to steel-gray, occurring in a vein of copper pyrites at Finksburg, in Maryland. It has a metallic lustre, and is named after Carroll co., in which it is found.

Carrollsville, in Mississippi, a village of Tishomingo co., 210 m. N.N.E. of Jackson.

Carrollton, in Alabama, a post-village, cap. of Pickens co., on the W. side of Lubbub Creek, 172 m. W.N.W. of Montgomery.

Carrollton, in Arkansas, a township and village, cap. of Carroll co., on Long Creek.

Carrollton, in Georgia, a post-village, cap. of Carroll co., on Little Tallapoosa River, 140 m. W.N.W. of Milledgeville.

Car'rollton, in Illinois, a city, the cap. of Greene co., 70 m. S. W. of Springfield. Pop. (1897) abt. 2,500.

Carrollton, in Indiana, a village and township of Carroll county, 60 miles N. by W. of the city of Indianapolis.

Carrollton, in Iowa, a post-village, cap. of Carroll co., 70 m. W.N.W. of Des Moines, on the Middle Fork of the Racoon River.

Carrollton, in Kentucky, a post-town, cap. of Carroll co., on the Ohio River, abt. 45 m. N.N.W. of the city of Frankfort.

Carrollton, in Louisiana, a post-village of Jefferson parish, on the left bank of the Mississippi, 7 m. above New Orleans. The beauty and splendor of the public gardens attract great attention, and are resorted to by a large number of visitors.

Carrollton, in Maryland, a post-office of Carroll co.

Carrollton, in Michigan, a post-village of Saginaw co., on the Saginaw River, 12 m. above Bay City.

Carrollton, in Minnesota, a post-township of Fillmore co., N.E. of Preston.

Carrollton, in Mississippi, a post-village, cap. of Carroll co., 96 m. N. of Jackson.

Carrollton, in Missouri, a city, the cap. of Carroll county, on Wyaconda creek, 8 miles N. of Missouri river. Pop. (1890) 3,878; (1897) abt. 4,150.

Carrollton, in New York, a township of Cattaraugus co.;

Carrollton, in Ohio, a post-village, cap. of Carroll co., 125 m. E.N.E. of Coluubus.

—A village of Montgomery co., on the Miami River, 45 m. N. of Cincinnati.

Carrollton, in Pennsylvania, a P. O. of Cambria co.

Carrollton, in Texas, a post-office of Upshur co.

Carrollville, or CARROLLSVILLE, in Mississippi, a village of Tishomingo co., 220 m. N.N.E. of Jackson.

Carrollville, in Tennessee, a village of Wayne co., on Cumberland River, 110 m. S.W. of Nashville.

Car'ron, *n.* (*Billiards*.) The same as CANNON, *q. v.*

Car'ron, a town of Scotland, co. Stirling, on the Caron, 2 m. N.E. of Falkirk, known for its very extensive iron foundries. The gun called *carronade* derives its name from this place, where it was first manufactured. Pop. abt. 1,800.

Carronade, *n.* (*Gun*.) A short cast-iron gun, having a chamber to receive the powder similar to a mortar, and attached to the carriage by a bolt, which passes through a large iron eye or loop underneath the gun, instead of working on trunnions, as large pieces of ordnance generally do. It derives its name from the Caron foundry, near Falkirk, where this kind of cannon was first cast. In consequence of the improvements that have lately taken place in gunnery, the *C.* is now but little used.

Carroon, *n.* A rent paid for driving a car in London.—A kind of cherry:—written also CAROON.

Car'rot, *n.* [*Gr. karoton*; Fr. *carotte*; It. *carota*.] (*Hort.*) The fleshy root of the *Daucus carota*. (See DAUCUS.) This kind of esculent is too well known to require any description. For garden purposes there are three principal varieties; namely, the early horn *C.*, a small kind used for the earliest crops; long orange, or Altringham *C.*, a very large kind, for ordinary summer and winter use; and the purple *C.*, a French sort, remarkable for its deep purple color and unusual sweetness. The latter is not so much known as it deserves to be; the two others are in common use. Nothing can be easier of cultivation than the *C.*, provided the soil is light and free from stones; in stiff or rocky soils it is not worth the expense of growing.

The seeds are sown at intervals, from the end of February till the beginning of August; they are lightly raked into the soil, having been previously pressed down with the feet. When they have come up they require no further care than to be hoed to the distance of about six inches apart, and to be kept free from weeds.

(*Med.*) Formerly the *C.* was greatly prized for its diuretic virtues, but has long been expelled from modern practice. As a wholesome and nutritious article of food, when well cooked, the *C.* is a vegetable of great importance, owing most of its nutritious qualities to the large quantity of free saccharine matter contained in it.

Car'roty, *a.* Like a carrot in color; fiery red; as, a *carroty* head of hair.

Car'row, *n.* [*Ir. carach*, deceitful.] In Ireland, a person who wanders about from one gentleman's house to another, and gets his subsistence by occasional gaming with cards or dice.

Car'rowmore, in Ireland, a lake in Mayo co., 4 m. N.E. of Tullogh Bay. It discharges itself into the Owenmore by the river Muinlin.

Carr's, in Kentucky, a post-office of Lewis co.

Carr's Point, in Iowa, a village of Montgomery co.

Carr'sville, in Indiana, a village of Marion co.

Carrsville, in Kentucky, a P. O. of Livingston co.

Carrsville, in Virginia, a post-village of Isle of Wight co., 32 m. W.S.W. of Norfolk.

Carrville, in Tennessee, a post-office of Washington co.

Car'ry, *v. a.* [*Fr. charrier*, from *char*, a car; W. *carrau*, from *car*, a dray, wagon, car; Dan. *kürer*; Swed. *kürä*;

Fig. 524.—CARROTS.

Ger. [arren.] To bear, convey, or transport, by sustaining and moving the thing carried, either by bodily strength, upon a beast of burden, in a vehicle, or in any kind of water-craft. In general, it implies a moving from the speaker, or the place present, or near, to a place more distant, and so is opposed to *bring* and *fetch*, and it is often followed by *from, away, off, out*.

"So down thy hill, romantic Ashbourne, glides
The Derby dilly, carrying three insides."—*Canning*.

—To convey; as, sound is *carried* in the air. — To effect; to accomplish; to prevail; to gain the object; as, to *carry* a point, measure, or resolution; to *carry* a prize; to *carry* a town by assault; sometimes followed by *it*.

"Are you all resolv'd to give your voices?"

But that's no matter; the greater part *carries* it."—*Shaks.*

—To bear; to have.

"In some vegetables, we see something that *carries* a kind of analogy to sense."—*Hale*.

—To imply; to import; as, the matter *carries* with it its own recommendation.

—To urge, impel, lead, or draw; — noting moral impulse; as, to *carry* anything to extremes.

"Men are strongly *carried* to the practice of vice."—*South*.

—To contain, or comprise; as, the question *carries* much force.

—To bear; to show, display, or exhibit to view; as, to *carry* a pleasant face. — To extend, or continue in time, usually with one of the particles *up, back, or forward*; as, to *carry* one's memory *back*. — To extend; — noting space; as, to *carry* a line forward; or in a moral sense; as, to *carry* a joke too far. — To support or sustain.

"*Carry* camomile on sticks, as you do hops upon poles."—*Bacon*.

—To remove; to canse to go or depart; as, to *carry* away a prisoner.

—To bear or produce, as trees; as, "to *carry* shoots upon the stem." *Bacon*. — To transport; to affect the mind with extraordinary impressions. To manage or transact, usually preceding *on*; as, to *carry on* business. — To remove, lead, or drive.

"And he *carried* away all his cattle."—*Gen. xxxi*.

—To transfer; as, to *carry* an account to the ledger. — To fetch and bring, as dogs.

"Young whelps learn easily to *carry*."—*Ascham*.

To *carry* one's self. To behave, deport, conduct, demean.

"He *carried* himself insolently."—*Lord Clarendon*.

To *carry off*. To remove to a distance; to kill; as, to be *carried off* by death.

To *carry on*. To continue; to advance, promote, or help forward; as, to *carry on* a design. — To manage or prosecute; as, to *carry on* farming. — To continue, prosecute, or pursue; as, to *carry on* trade.

To *carry through*. To support to the end; to sustain, or keep from failure or subjugation.

"Grace will *carry* a man through all difficulties."—*Ham*.

To *carry coals*. To bear affronts or injuries tamely. — To *carry coals* to Newcastle. To send anything to a place where it is abundantly found, as coals at Newcastle, England; hence, to take needless or fruitless labor.

To *carry up*. (*Masonry*.) To build up; as, to *carry up* a wall.

To *carry away*. (*Naut.*) To break; to lose by breakage; as, to *carry away* a mast or rope.

ar'ry, v. i. To convey; to propel; as, this rifle *carries* well.

(*Man.*) To bear up the head; said of a horse; (used with reciprocal pronoun.)

(*Sports.*) To run on caked or ice-covered ground which glues to the feet; said of a hare.

To *carry on*, (in a colloquial and vulgar sense,) to speak or act with rudeness, impropriety, or noisiness.

ar'ry, n. Onward motion, as the clouds are said to have a great *carry* when they move with swiftness before the wind.

ar'ry-all, n. A one-horse, four-wheeled vehicle.

ar'ry-all, in Ohio, a post-township in Paulding co.; pop. 1,087.

ar'rying, p. a. Removing, conveying, or transporting from one place to another.

ar'rying Place, in L. Canada, a post-village of Prince Edward co., 5 m. from Trent.

ar'rying-trade, n. (Comm.) The trade or calling of publicly conveying goods from one place to another, at a certain rate of freight, or charge for carriage.

ar'ry-tale, n. A talebearer; a news-dropper.

ar'se, n. [W. cors, bog.] A Goutticism for cultivated alluvial soil; as, the *Carse* of Scotland.

ar'se-ville, in Illinois, a village of Livingston co., on Vermilion River.

ar'son, in Kansas, a post-village of Brown co., 38 m. N.W. of Atchison. — In *Ohio*, a post-office of Huron co.

ar'son City, in Nevada, the county-seat of Ormsby co., and cap. of the State, is situated on the E. base of Sierra Nevada, 4 m. W. of Carson River, and 250 m. N.E. of San Francisco; Lat. 30° 10' N.; Lon. 119° 45' W. It is surrounded by grand mountain scenery, and precious metals are found near by.

ar'son Pass, in California, a pass, 7,972 ft. high, through the Sierra Nevada in Alpine co.

ar'sons, in California, a mining village of Calaveras co., 25 m. S. of Mokelumne Hill.

ar'son's Lake, in Utah, in the W. of the State. It receives Carson's River, but has no visible outlet. Length 15 m.

ar'son's Landing, in Mississippi, a post-office of Bolivar co.

ar'son's Valley, in Utah, a village of Utah co.

ar'sonville, in Georgia, a village of Talbot co., 80 m. W. S. W. of Milledgeville.

Cars'well's Mills, in Georgia, a village of Scriven co. **Cart, n. [W. cart, a wain; from car, something to carry things on; A. S. crut; Fr. charrette.]** A species of carriage generally used for carting or carrying from one point to another, goods, soils, manures, or produce. It has but two wheels, in which respect it differs from the ordinary wagon, which has four wheels.

—*v. a.* To carry or convey on a cart; as, to *cart* sand.

—To place or publicly expose in a cart, as a method of punishment.

"She chuckled when a bawd was *carted*."—*Prior*.

Cart'age, n. Act of carrying in a cart; as, the *cartage* of goods. Charges incurred for the same; as, to pay *cartage*.

Cartagena. See CARTHAGENA.

Cartago, or CARTHAGO, an inland town of New Granada. Prov. Popayan, on the Vieja, 105 m. N.N.E. of Popayan; Lat. 4° 45' N.; Lon. 96° 8' W. It has a good trade in cattle, charqui, fruits, cocoa, and tobacco. Estimated pop. 3,000.

Carta'go, a town, mountain, river, and bay of Central America, in Costa Rica. In 1841, the town, formerly the capital, was almost entirely destroyed by an earthquake. The mountain, once volcanic, attains a height of 11,500 feet. The river falls into the Gulf of Nicoya, 50 m. from Cartago. The bay, a large lagoon, communicates with the Caribbean Sea.

Cart'aret, n. A cot for sleeping in.

Carte, (kür't, n. Literally, a slip of paper; a card. Specifically, a bill of fare at a tavern, restaurant, &c.; as, to dine by the *carte*.

—A thrust with a sword.

Carte, THOMAS, an English historian, b. at Clifton, Warwickshire, 1686. He entered the church, but on the accession of George I. he declined to take the oath of allegiance, and therefore abandoned the priesthood. His opinions were very strong in favor of the Stuart family, and his zeal brought on him some suffering. D. 1754. So far as great labor and indefatigable research constitute an historian, C. may lay claim to that character. His principal works consist of an edition of *Thuanus*, in 7 vols., fol.; a *Life of James, Duke of Ormonde*, in 3 vols., fol.; and 4 vols., fol. of the *History of England*, bringing it down to the year 1654.

Carte-blanche, n. [Fr., white paper.] A paper containing nothing but the signature of the person who grants it, in order that the person to whom it has been delivered may insert such conditions as he chooses. This term is also used in a general sense to express an unlimited authority delegated by any one to another.

Carte-de-visite, (kür't-da-viz-ét', n. [Fr.] A visiting card.

Cartel, (kär-tel', [Fr.; It. cartello, from Lat. chartula, dim. of charta, paper.] A letter or billet containing a defiance to single combat; a challenge to fight a duel.

"Their *cartel* of defiance they prefer."—*Daniel*.

—A paper of agreement passing between belligerents to negotiate for the exchange of prisoners.

Cartel, or cartel-ship, a vessel commissioned in time of war to carry proposals of any kind between contending powers; called by the French *bâtiment parlementaire*. To such ships one gun only is allowed for the purpose of making signals.

Cart'er, n. One who drives a cart or team.

Cart'er, in Indiana, a thriving township of Spencer county.

Cart'er, in Kentucky, a N.E. county; area, 550 sq. m. It is intersected by Little Sandy River and Tygart's Creek, and bounded on the E. by Big Sandy River. — Desc. The surface is broken, and the soil, except the river-bottoms, unfit for cultivation. Min. Iron ore and stone coal. Cap. Grayson.

Cart'er, in Missouri, a S.E. county; area, 500 sq. m. It is intersected by Current River; its surface is diversified, and it is heavily timbered. Min. Copper and iron. Cap. Van Buren.

Carter, in Tennessee, a N.E. county bordering on N. Carolina; area, 350 sq. m. It is intersected by the Watauga River, a navigable branch of the Holston, and the Iron Mountain forms the S.E. boundary. — Desc. The mountains are covered with forests of good timber, and contain inexhaustible mines of iron; the soil in the valleys is fertile. Cap. Elizabethtown.

Carter Camp, in Pennsylvania, a P. O. of Potter co.

Cart'eret, PHILIP, an English navigator, who, along with Captain Wallis, in 1766, commanded an expedition to the South Seas. He discovered Queen Charlotte's Isles, Gower and Carteret Islands, &c.

Cart'eret, an island in the Pacific, Lat. 8° 50' S., Lon. 160° 48' E. It was discovered by Capt. Carteret.

Cart'eret, in N. Carolina, a S.E. county bordering on the Atlantic and Pamlico Sound; area, 450 sq. m. It is intersected by Newport River. The surface is level, and much of it is covered with swamp and forests of pitch-pine. Cap. Beaufort.

Carter, in Texas, a post-office of Parker co.

Carter Hill, in Pennsylvania, a village of Erie co.

Carter's Bridge, in Virginia, a P. O. of Albemarle co.

Carter'sburg, in Indiana, a post-village of Hendricks co., 17 m. W. S. W. of Indianapolis.

Carter's, in Tennessee, a P. O. of Carter co.

Carter's Mills, in N. Carolina, a P. O. of Moore co.

Carter'sville, in Georgia, a city, the capital of Bartow co., 47 m. N. W. of Atlanta. Gold and copper are found in the vicinity. Pop. (1857) abn. 3,500.

Carter'sville, in Mississippi, a P. O. of Tishomingo co.

Carter'sville, in Virginia, a post-village of Cumberland co., on the James river, 47 m. W. of Richmond.

Cartesian (kar-té-zhan), a. Pertaining to Descartes or to his philosophy.

—*n.* A professor or follower of the system of philosophy propounded by Descartes.

Cartesianism, CARTESIAN PHILOSOPHY, n. That system of philosophy which owes its origin to Descartes (1596-1650), who is entitled the father of modern philosophy. He endeavored to constitute philosophy a demonstrable science, founded on the principles of pure rationalism, and was to philosophy in France what Bacon was to it in England. Unable to find any firm ground in any of the prevailing systems, distracted by doubts, mistrusting the evidences of his senses or the conclusions of his understanding, he determined to reconstruct his knowledge, to believe nothing but upon the clearest evidence of reason, and to examine the premises of every conclusion. He pushed his scepticism so far that he came to doubt everything but his own existence. It appeared to him that doubts might reasonably be entertained about everything but his own existence; to doubt the existence of *that* which thinks and doubts, appeared to him to be an absurdity. Setting out, therefore, from his well-known postulatam, *Cogito, ergo sum*, (I think, therefore I am,) he resolved to admit nothing which could not be deduced from it by a chain of logical reasoning. He did not attempt, as some philosophers have held, to prove his own existence in this way; he merely regarded it as the only thing about which there could not possibly be any doubt. His next step was to lay down certain rules for the detection of truth. These were: 1. Never to accept anything as true but what is so evidently so, that there can be no reason to doubt it. 2. To divide every question into as many separate questions as possible, that, each part being more easily conceived, the whole may be more intelligible. 3. To conduct the examination with order, beginning with the most simple, and rising by little and little to the most complex; and 4. to make such exact calculations, and such circumspections as to be certain that nothing essential has been omitted. Consciousness being the ground of all certainty, everything of which we are clearly and distinctly conscious must be true, and everything which we clearly and distinctly conceive, exists, if the idea of it involves existence. To prove the existence of God was the first application of his method. "This consciousness of mine is finite and imperfect; but infinity and perfection are involved in these ideas, and innate in the mind; therefore, an infinite and perfect being must exist. The fundamental attribute of matter is extension, of mind is thought. The soul, whose nature consists in thought, is simple in its essence, or, in other words, purely immaterial, but intimately connected with the body." The *pineal gland* he supposed may be its seat. From the immateriality of the soul he deduced its immortality; but lest he should be obliged to extend the same properties to other animals, he pronounced them to be *living machines*. The soul is free because it thinks itself so, and in this very freedom consists its liability to error. He made a distinction between the passive impressions and active decisions of the soul. He constituted 3 classes of ideas: adventitious, or those which we naturally acquire; those which we create; and innate, or those which are born with us. He accounts for the communion existing between soul and body by his doctrine of *Assistance* — the assistance or co-operation of deity. All physical phenomena he endeavored to account for by his celebrated *Vertices* — motion excited by God, the source of all motion. Notwithstanding the many defects of the Cartesian philosophy, its confusion in some parts and contradictions in others, and a want of conclusiveness in many of its inferences, it awakened men to independent thought, and impelled them to investigate the fundamental principles of philosophy.

Carthage, [Gr. Karchēdōn; Lat. Carthage.] A famous maritime city, long the rival of Rome, with which she waged a lengthened, doubtful, and desperate contest for the empire of the world; situate on the N. shore of Africa, in the immediate neighborhood of Tunis. C. appears, from the best sources of information, to have been principally built along the coast of the peninsula to the N.E. of Tunis, from a little N. of the *goletta*, or entrance to the lagoon of Tunis to Cape Carthage (Lat. 36° 51' 30" N., Lon. 10° 26' 45" E.), and then round to Cape Quamart. It was defended on the land side, where it was most penetrable, by a triple line of walls of great height and thickness, flanked by towers that stretched across the peninsula from the lagoon of Tunis to the sea on the N. The harbor lay to the south of Cape Carthage, and was entered from what is now the Gulf of Tunis. At the time of its greatest splendor, C. must have been one of the richest and finest cities of the ancient world. It consisted of three principal divisions, viz., the *Byrsa*, or citadel, built on an eminence, the summit of which was occupied by a magnificent temple in honor of Esculapius; and it also contained the famous temple of the Phœnician *Ashtar*. The *Megara*, or town so called, which lay to the W. of the Byrsa, along the triple wall. The *Cothum*, or port, which consisted of two great basins, one for merchantmen, the other for ships of war. C. also possessed, among its public buildings, a famous temple in honor of its tutelary deity *Melcarthus*, or Saturn; a magnificent forum, a circus, and a theatre. The population of this city, in the acme of its prosperity, has been variously estimated at from 250,000 to 700,000. The early history of C. is involved in the densest obscurity, but the accepted belief is that it was founded by a colony of emigrants from Tyre, at the supposed date of 1259 B. C. Virgil has ascribed the foundation of the city to Queen Dido at a later period. In the zenith of its power C. possessed the greater portion of N. Africa, a large part of Spain, Sardinia, Malta, the Balearic Isles, &c. The commercial operations of the Carthaginians embraced

the whole world as then known. Of the long continued struggle between *C.* and Rome it would be useless, even if our limits permitted, to say anything. It is a favorite subject of every classical reader, and has been ably treated in many modern works; but it is much to be regretted that we have no Carthaginian history of this memorable contest, and that we are constrained to

Fig. 525. — RUINS OF CARTHAGE.

depend wholly on the one-sided, and, most probably, prejudiced accounts of the Latin historians, and the Sicilian Greeks. The last struggle of *C.* was not unworthy of her ancient reputation, and of the great men she had produced. The conduct of the Romans on this occasion was most base and treacherous. But though betrayed on all hands, deceived, without allies, and all but defenceless, *C.* made a brave defence; and all that she had that was brave and really illustrious, fell with her fall. The Romans glutted their vengeance, and quieted their fears by the total destruction of *C.* (B. C. 146.) About 30 years afterward, Cains Gracchus, by order of the senate, carried a colony thither, the first that was founded beyond the limits of Italy. Julius Caesar, on his return from Africa, settled in *C.* some of his troops, and a number of colonists gathered from the adjoining country. During the early ages of the Christian era, *C.* was regarded as the capital of Africa. In Christian history it is known for its councils, and for the spiritual labors of St. Augustine. In 439 A. D., it was taken by the Vandals under Genseric; it was retaken by Belisarius in 533; and lastly was taken and destroyed by the Saracens in 698. The ruins which are now seen on that coast belong to the Roman *C.*; there are no remains of the Tyrian city, except the large cisterns and perhaps the ruins of the great aqueduct.

Carthage, in *Alabama*, a post-village of Tuscaloosa co., 18 m. S. W. of Tuscaloosa.

Carthage, in *Illinois*, a township and village, cap. of Hancock co., 12 m. from the Mississippi River, and 13 m. E. of Keokuk.

Carthage, in *Indiana*, a flourishing post-village of Rush co., on the Blue River, 33 m. E. by S. of Indianapolis.

Carthage, in *Iowa*, a village of Johnson co., 6 m. E. of Iowa city.

Carthage, in *Kentucky*, a township of Campbell co., on the Ohio River, 24 m. from Cincinnati.

Carthage, in *Maine*, a township of Franklin co., 32 m. N. W. of Augusta.

Carthage, in *Mississippi*, a post-village, cap. of Leak co., 65 m. N. E. of Jackson.

Carthage, in *Missouri*, a city, the cap. of Jasper co., on Spring river, 220 m. S. W. of Jefferson city. This place was the scene of a battle, fought July 5, 1861, between a body of U. S. forces under Sigel, and one of Confederates under Gen. Parsons and Rains, in which the Nationals were defeated. Pop. (1897) abt. 9,500.

Carthage, in *New York*, a manuf. town of Wilna township, Jefferson co., on the right bank of Black river, 16 m. E. of Watertown. Pop. (1897) abt. 3,000.

—A village of Monroe co., on the Genesee River, 2 m. N. of Rochester.

Carthage, in *N. Carolina*, a township, cap. of Moore co., 60 m. S. W. of Raleigh.

Carthage, in *Ohio*, a thriving township of Athens county.

—A post-village of Hamilton co., 10 m. N. of Cincinnati.

Carthage, in *Tennessee*, a flourishing post-village, cap. of Smith co., on the Cumberland River, 50 m. E. of Nashville.

Carthage, in *Texas*, a post-village, cap. of Panola co., 200 m. N. by E. of Galveston.

Carthage Landing, in *New York*, a post-office of Dutchess co.

Carthage, or **Cartagena**, (*kar'ta-jai'na*.) a strongly fortified maritime city of S. America, in the U. States of Colombia, and the chief naval arsenal of that republic, cap. of prov. of same name, on a sandy peninsula of the Caribbean Sea, connected with the continent by a narrow neck of land; 410 m. N. of Bogotá; Lat. 10° 26' N., Lon. 75° 34' W. The port is one of the largest and best on the N. coast of S. America, and the harbor being land-locked, vessels lie in it as if in dock. *C.* contains a handsome cathedral, churches, convents, &c. The climate is intensely hot, the city is not seldom made acquainted with yellow fever, and is infested with

noxious and venomous insects. The importance of *C.* has declined of late years, but it has still a valuable foreign trade, and steam communication with many of the chief ports of the U. States and Europe. The city was founded in 1533, and was long considered as the great bulwark of the Spanish possessions in South and Central America. Pop. 7,800.

Carthage'na, or **CARTAGE'NA**, (anc. *Carthago Nova*.) a fortified city and sea-port of Spain, prov. Murcia, on the Mediterranean, 17 m. W. of Cape Palos, and 32 S. S. E. of Murcia. There is here a fine naval arsenal. The harbor, which is one of the best in the Mediterranean, has deep water throughout; is protected from every wind by the surrounding heights and by an islet at its entrance, and is, like the city itself, strongly fortified. The excellence of the harbor gave rise to the common saying among the Mediterranean sailors, that there are but three good ports—the months of June and July, and the harbor of Carthage'na. This has always been the grand rendezvous of the Spanish fleets in the Mediterranean.—*Manf.* Cables, cordage, and barilla. *C.* was founded or occupied by the Carthaginians, and taken by the Romans 208 B. C., at which period it was, next to Rome, one of the richest cities in the world.

Fig. 526. — CARTAGENA, (Spain.)

Carthage'na, in *Ohio*, a post-office of Mercer co.

Carthaginian, (*kar-tha-jin'e-an*.) *n.* (*Geog.*) A native or inhabitant of Carthage.

—*a.* Pertaining to Carthage; as, *Carthaginian* history.

Carthamine, *n.* (*Chem.*) A red coloring-matter obtained from the petals of the Safflower, *Carthamus tinctorius*. It was formerly much used as a dye, particularly in the form of pink saucers, for dyeing silk stockings; but its fugitiveness is a great objection to its use. *Form.* $C_{23}H_{16}O_{14}$.

Carthamus, *n.* [*L. Lat.*, from *Ar. kartam*, or *gorthom*, to paint.] (*Bot.*) A genus of plants, order *Asteraceae*. The most important species is *C. tinctorius*, the safflower, or bastard saffron. The florets of this yield a beautiful pink dye, and are sometimes used to adulterate hay saffron. The substance called cake saffron consists of safflower and mucilage. The fruits commonly called seeds yield, by expression, a useful oil, which is known in India as Kosum oil.

Carthusian, *a.* Relating, or belonging to, the order of the Carthusians.

Carthusians, (*kar-thu'zhans*.) *n. pl.* [*Fr. chartreux*.] (*Ecd. Hist.*) An order of monks, branch of the Benedictines, instituted by St. Bruno in 1084. Their first monastery was at *La Chartreuse*, near Grenoble, in France, whence their name. They are remarkable for the austerity of their rules. The members cannot leave their cells, nor speak to any one, without the permission of their superior. Their beds are of straw, with a covering of felt or coarse cloth. They wear hair-cloth shirts, white cassocks, and over these black cloaks. In their refectory they are to keep their eyes on the food, their hands on the table, their attention on the reader, and their heart fixed on God. They are not allowed animal food, must fast every Friday, except a small allowance of bread and water, and observe an almost perpetual silence. When allowed to discourse, they are to do so modestly, not in a whisper, nor yet in a loud or contentious manner. They confess to the prior every Saturday. The convents of this order are generally very beautiful.

Cartier, **JACQUES**, (*kar'te-ai*.) a French navigator and explorer, b. at St. Malo, 1494. He was employed by Francis I. in exploring the coast of N. America, and in three successive expeditions, 1534–1540, he completed the discovery of Canada.

Cartilage, (*kar'ti-lej*.) [*Fr.*, from *Lat. cartilago*.] (*Anat.*) A smooth, white, glistening substance, between the ductile elasticity of ligament and the compact solidity of bone, and is that substance popularly known as *gristle*. There are 3 kinds of *C.*: that covering the ends of all articulating bones, to protect, and admit friction without injury to the bones themselves, or *articular C.*; that variety which lies within the joints and articulations, and named *inter-articular*; and, lastly, that form which answers the purpose of bone in some respects and ligament in others, and is called *connecting C.*,—as those bands which connect the true ribs to the sternum or breast-bone, and the false to the true ribs. The *C.* which form the windpipe, organ of voice, and connect bones together or cover cavities in them, are by some authors regarded as a fourth variety. *C.* consists of coagulated albumen and a little gelatine; and in all very young animals answers the purpose of bone. As the child or animal advances in age, osseous or bony particles are deposited in layers in the interstices of the *C.*, till in time the gristle is changed into perfect bone. After maturity, and as age advances, the cartilaginous portion

of each bone is absorbed, the gelatine being removed, and an excess of albumen and earthy matter left; on this account the bones of old people are always more brittle than those of youth or mid-age.

Cartilagin'eum, *n.* (*Zoöl.*) One of the class of the CARTILAGINOUS FISHES, *q. v.*

Cartilaginifica'tion, *n.* [*Lat. cartilago*, cartilage, and *facere*, to make.] The process of forming cartilage.

Cartilaginous, **Cartilagin'eous**, (*kär-ti-laj'in-us*.) *a.* (*Anat.*) Pertaining to, or resembling, a cartilage; gristly; consisting of cartilage; as, "*Cartilaginous* bodies." — *Ray*.

Cartilaginous Fishes, *n. pl.* (*Zoöl.*) A group of fishes formed by Cuvier, including all fishes that have their skeleton essentially cartilaginous, calcareous matter being present only in small portions. They have no sutures in the cranium, and the gelatinous substance which in other fishes fills the space between the vertebrae, and only extends from one space to another by means of a small aperture, forms, in a part of this group, a long cord which traverses nearly all the vertebrae without materially varying in its diameter. *C. F.* are divided into three orders: *Sturiones*, or chondropterygians with free gills, as sturgeons; *Selachians*, or chondropterygians with fixed gills, as sharks and skates; *Cyclostomes*, or suckers, chondropterygians with skeleton very slightly developed, and the body terminated before with a circular or semi-circular lip, as lampreys.

Cart'ing, *n.* The act of conveying in a cart.

Cart-jade, *n.* A broken-down horse; a horse only fit for the shafts of a cart.

Cart'land, in *Michigan*, a growing township of Kent county.

Cartland, or **Courtland**, in *Minnesota*, a township of Nicollet co.

Cart-load, *n.* A load carried by a cart; as much as a cart can bear and carry; as, a *cart-load* of bricks.

Cartog'rapher, *n.* A chart-maker.

Cartograph'ic, **Cartograph'ical**, *a.* Belonging to, or consisting of, cartography.

Cartograph'ically, *adv.* In a cartographic manner.

Cartography, *n.* [*Gr. chartē*, a leaf of paper, and *graphein*, to write.] Art or practice of forming charts or maps.

Cart'on, *n.* [*Fr.* See **CARTOON**.] Cardboard; pasteboard. —A box made of pasteboard; as, a *carton* of raisins. (Sometimes written *cartoon*.)

Cartoon, (*kär-toon'*.) *n.* [*It. cartone*, pasteboard; an augmentative, from *Lat. charta*, paper.] (*Painting*.) A word used by artists to signify the full-sized drawings or studies made in chalks, or body-color (*tempera*, as it is called in Italy), preparatory to executing any great work either in oil-color or fresco. *C.* are also made when the design is to be copied in tapestry. The great master seldom commenced any extensive picture without first making studies or *C.* in *chiaroscuro*. Many of those by Raffaele, And. Mantegna, Domenichino, the Caracci, and others, remain to attest the laborious diligence and care with which their great works were accomplished. By this means the composition, drawing, expression, and light and shade, were all perfected before the coloring of the picture was attempted. —Also a sketchy picture or caricature, usually of larger size than the ordinary illustrations, in a periodical or a newspaper.

—*v.* To make a *C.*; to represent in a *C.*

Cartouch, (*kär-toosh'*.) *n.* [*Fr. cartouche*, from *It. cartocchio*, augmentative of *charta*.] (*Arch.*) A tablet intended to receive an inscription which resembles a scroll of paper rolled up at the ends. It is also applied to the modillion that supports the corona of a cornice used in interior decoration. In Egyptian architecture the expression denotes the oval or elliptical figures that are carved on columns and other parts of a temple to receive hieroglyphic inscriptions of different kinds.

(*Mil.*) A canvas or leather cartridge-box; a case for holding musket-balls and powder; a wooden bomb; a ticket of leave, or dismissal, given to a soldier.

Cartouche, (*kär-töosh'*.) *LOUIS DOMINIQUE*, the most famous robber of modern times, who, for years, kept the French capital in terror by the audacity of his depredations. He was at length captured and executed, 1721.

Cartridge, (*kär'trij*.) *n.* [*Fr. cartouche*; *It. cartoccio* from *Lat. charta*, paper.] A paper case containing the exact charge of a musket, rifle, or fowling-piece, including both powder and bullet. —The charge of powder for a heavy gun made up in a bag of serge. —For sporting purposes, *C.* are made up containing a quantity of small shot without powder. *C.* for pistols and most of the breech-loading fire-arms are usually copper cylinders, having at the base fulminating powder, which inflames the charge of gunpowder upon being struck by the hammer, or by means of an electrical current, in the case of heavy ordnance.

Cartridge-box, *n.* (*Mil.*) A case for cartridges.

Cartridge-paper, *n.* Thick, stout paper, of which cartridges are made.

Cartulary, *n.* [*Fr. cartulaire*, from *Lat. charta*.] The register-book of a church or monastery. — An ecclesiastical functionary acting as custodian of the record.

Cart-way, *n.* A road or way passable for a cart.

Cartwright, (*kär'trit*.) *n.* A maker of carts.

Cartwright, **PETER**, D. D., the pioneer of Methodism in the U. States, b. in Va., 1785. Shortly after his birth his parents removed to Kentucky, where, in 1802, *C.* commenced his career as a preacher. In 1813 he was ordained elder of the Green River dist. in Tenn. From that period down to the present time, his ministerial labors have been attended throughout the W. States with results of the most successful and cheering character. D. 1872.

Cartwright, **EDMUND**, an English mechanician,

1743. He early took orders in the church, and in 1784 produced his great invention of the power-loom which constituted an era in cotton-spinning. In 1809, the govt. recognized his services to manufactures, by the grant of \$50,000. D. 1823.

ar'ueage, *n.* [From Lat. *caruca*, plough.] The operation of ploughing. (*R*)

ar'uate, *n.* [L. Lat. *carucata*.] The quantity of land that can be ploughed by one team during twelve months; supposed to be about 100 acres.

ar'um, *n.* [From *Caria*, the native country of the plant, according to Pliny.] (*Bot.*) A genus of plants, order *Apiaceæ*. The species *C. carui* is the common caraway, a native of most parts of Europe. It is cultivated in the U. States for its fruit, commonly called seeds, which have a pleasant odor and a warm aromatic taste, owing to the presence of about five per cent. of volatile oil. They are much used in confectionery and for flavoring cakes. The oil obtained by distilling the fruits with water, is used as a corrective adjunct in medicine.

ar'uncle, *n.* [Lat. *caruncula*, dim. of *caro*, flesh.] (*Anat.*) A small piece of flesh, or a little fleshy excrescence; hence the *caruncula lachrymalis*, a small fleshy glandiform body, situated on the inner angle of each eye. (*Zoöl.*) The fleshy comb on the head of a fowl; a soft wart-like eminence.

(*Bot.*) A loose lateral appendage growing from the axil in some plants.

ar'uncular, **Carun'culate**, *a.* Having the form of, or pertaining to, a caruncle.

ar'unculated, *a.* Caruncular; having a fleshy protuberance.

ar'unculous, *a.* Caruncular; pertaining to caruncles.

arupa'no, a town of S. America, Venezuela, prov. Cumana, near Cariaco. *Trade*. Horses and mules. *Pop.* about 9,000.

arus, *n.* [Gr. *kara*, the head.] (*Med.*) The last degree of coma, with complete insensibility, which no stimulus can remove, even for a few instants. *Sopor*, *Coma*, *Lethargia*, and *Curus* are four degrees of the same condition.

arus, KARL GUSTAV, a distinguished German physician and naturalist. B. at Leipzig in 1789. In 1815 he was appointed to the chair of clinical midwifery at Dresden. His principal works are, *Manual of Midwifery*, (1822;) *Handbook of Gynecology*, (1828;) *Introduction to Comparative Anatomy*, (1827;) and *A System of Physiology*, (1840.) D. 1871.

arus, MARCUS AURELIUS, a Roman emperor, prefect of the prætorians under Probus, on whose death, in 282, he was elected emperor by the soldiers. He defeated the armatians in Illyria, conquered Mesopotamia, the towns of Seleucia and Ctesiphon, and D. it is said by a lightning-stroke, at the latter town, A. D. 283.

aruthersville, in Missouri, a P. O. of Pemiscot co.

arve, (*kürr*), *v. a.* [A. S. *ceorfan*; Ger. *kerben*; Dan. *aree*; Swed. *kärfva*; Lettish, *kēpu*; allied to Gr. *airo*, to cut; Heb. *kārath*, to cut, to cut off.] To cut, as wood, stone, &c., in an artistic or ornamental manner; s, to carve an effigy.

"Carved with figures strange and sweet,
All made out of the carver's brain."—Coleridge.

"to make or shape by cutting; as, to carve wood.

"We carved not a line, and we raised not a stone,
But we left him alone with his glory!"—Wolfe.

"to cut into small pieces or slices; as, to carve a round of beef.

"My mistress for the strangers carved."—Prior.

"to distribute among; to give portions to; to apportion.

"To carve out. To cut out; to plan; as, to carve out one's own destiny.

The Saxons carved out their kingdoms with the sword."—Southey.

"i. To cut up meat;—often followed by *for*; as, to carve for a company.

"While at the bottom of the board
Prince Albert carved the veal."—Bon Gaultier Ballads.

"to engrave; to sculpture; to practise the art of carving; to cut out figures.

ar'vel, *n.* A kind of small ship. — See CARAVEL.

(*Zoöl.*) See MEDUSA.

ar'ven, *a.* Carved; wrought by the chisel; as, "A green of carven ivory."—R. B. Browning.

ar'ver, *n.* One who carves or cuts wood, stone, &c., in decorative manner; a sculptor.

"The master painters and the carvers came."—Dryden.

"he person who carves meat at table; as, he is a good *trier*, but a better eater.

"he who selects and distributes at will.

"Be his own carver, and cut out his way."—Shaks.

"a large table-knife used for carving.

ar'ver, in Massachusetts, a post-township of Plymouth co., 38 m. S.E. of Boston.

ar'ver, in Minnesota, a S.E. connty: area, 375 sq. m. It is bounded on the S.E. by the Minnesota River, and drained by the S. fork of Crow River. The surface is undulating and the soil fertile; woodlands are more extensive than the prairies. *Cap.* Chaska.

"post-village of Carver co., on the left bank of the Minnesota River, 33 m. S.W. of St. Paul.

ar'versville, in Pennsylvania, a P. O. of Bucks co.

ar'vertou, in Pennsylvania, a P. O. of Luzerne co.

ar'ville, in Illinois, a village in the N.W. part of Washington co., 2 m. N.W. of Kaskaskia River.

ar'ving, *n.* Act of cutting, as meat at table.

"the art of forming any hard materials into a proposed shape or figure by means of sharp instruments. It is usually understood to refer exclusively to works in ivory or wood, to distinguish it from carving in marble or stone,

which comes under the term *sculpture*; or in metals, when it is called *chasing*. The ancients used ivory to a great extent in works of art, and its union with gold, called by the Greeks *chryselephantine* sculpture, was adopted by the greatest artists. The colossal statue of the Olympian Jupiter at Elis, by Phidias, was one of the most celebrated examples of this combination. In later times C. in ivory has been confined to smaller objects, as figures, reliefs, enrichments of flowers, fruit, and other devices on vases and cups, and such objects of general use. The instruments used for carving in ivory are very similar to those employed in working in marble, consisting of chisels of different sizes, saws, rasps, and files: the polishing is effected, as in marble, by friction. Wood of almost every description was a favorite material for carving among the ancients; and, after clay, was doubtless, from the facility of cutting it, the first substance used for imitative art. Some figures of very remote antiquity found in the tombs in Egypt are of sycamore. For a long period in modern times there was a great demand for fine wood-carving. The elaborately worked Gothic screens, choir-seats, and desks, in

Fig. 527. — CARVED STALLS, WITH TUDOR FLOWERS.
(Higham-Ferrers Church, Northamptonshire, England.)

most of our cathedrals and edifices, canopies, frames for doors and pictures, cabinets, and indeed every description of furniture, are evidence of the extent to which it was employed, and of the skill of the artists. The woods preferred by modern carvers are the pear, lime, American pine, maple, oak, and box; and the tools they employ are round hollow chisels called gouges; others, with an angular extremity, called from the shape V-tools; flat chisels of various sizes, and files. A mallet is sometimes used, but pressure, or a sharp blow from the bottom or heel of the hand is generally preferred. The surface is cleaned and polished with sand-papers of different qualities, by pumice-stone and by friction. In preparing wooden blocks for printing from, the object is engraved with instruments similar to those commonly used for engraving. This branch of the art does not therefore properly come under the term C.

Car'vist, *n.* [A corruption of *carry fist*.] (*Sports.*) In falconry, a hawk which is of proper age and training to be carried on the hand; a hawk in its first year.

Car'wheel, *n.* The wheel of a railway-carriage or goods truck, bordered with a flange.

Ca'ry, LOTT, a negro clergyman and missionary, and one of the founders of the civilized African colony of Liberia. B. a slave in Virginia in 1780. By his own exertions he purchased manumission, and as soon as the American Colonization Society commenced active operations, C. emigrated under its auspices to Sierra Leone in 1821. Thence he proceeded to Cape Mesurado, where, in 1828, he was appointed governor of the colony, and D. the same year.

Cary, in N. Carolina, a post-office of Wake co.

Cary'a, *n.* (*Bot.*) The Hickory, a genus of plants, order *Juglandaceæ*. — See HICKORY.

Caryat'id, **Caryat'id**, *a.* Of, or pertaining to a caryatid.

Caryat'id, *n.* (*Arch.*) A female figure supporting a cornice, or entablature. See CARYATIDES.

Caryophyllaceæ, CLOVE-WORTS, *n. pl.* [Gr. *karuon*, nut; *phyllon*, leaf.] (*Bot.*) An order of plants, alliance *Sileneales*. *Diag.* Symmetrical flowers, a conspicuous corolla, amphitropal ovules, and opposite leaves, without stipules. They are mostly herbaceous plants, with stems swollen at the joinings, and opposite, entire, and exstipulate leaves. The flowers are usually hermaphrodite, and the sepals, petals, and stamens exhibit a quaternary or quinary arrangement. The stamens are hypogynous, the anthers innate. The ovary is commonly 1-celled, with from two to five styles. The fruit is a 1-celled capsule, or rarely 2-5-celled, generally with central capsula, to which the seeds are attached. The plants of this order are natives chiefly of temperate and cold regions. When found in the tropics, they are generally on the slopes and summits of mountains, often reaching the limits of eternal snow. Lindley gives 59 genera and 1,055 species. They possess no important properties. Some of the plants have showy flowers, as the species of *Dianthus*, *Silene*, and *Lychnis*.

From plants of the first of these genera are derived all the beautiful cultivated varieties of the sweet-william, pink, and carnation.

Caryatides, CARYATES, (*ka-ri-at'i-dez*), *n. pl.* (*Arch.*)

A term used to signify the figures which are sometimes introduced to support a cornice instead of columns. According to the mythical account given by Vitruvius, they were so called to commemorate the disgrace of the people of Caryia, a city in Arcadia, which was attacked and taken by the confederate Greeks for joining the Persians, the men being killed and the women led into captivity. When the figures introduced to support a cornice are male, they are said to be *Persians*; this is purely a modern name founded upon the tale related to Vitruvius, and adopted by the architects of the Renaissance period.

Fig. 528. — CARYATID.

of the fruit constitute the Souari or Suwarrow nuts of commerce, the kernels of which are delicious.

Caryophyllus, *n.* (*Bot.*) A genus of plants, order *Myrtaceæ*. The most important species is *C. aromaticus*, the Clove-tree, a native of the Moluccas, but now grown also in the Isle de France, India, and the W. Indies. The cloves of commerce are the unexpanded flower-buds dried. They form a well-known spice, and are used in medicine on account of their aromatic, stimulant, and carminative properties.

Caryophyllaceous, **Caryophyllous**, *a.* (*Bot.*) Applied to a corolla in which there are 5 petals with long narrow tapering claws, as in many of the *caryophyllaceæ*.

Caryopsis, *n.* (*Bot.*) A fruit in which the seed and pericarp are so incorporated as to be inseparable, and even undistinguishable. The grain or fruit of grasses, as wheat, barley, rye, maize, &c., is a caryopsis.

Caryota, *n.* [Gr. *karyotis*, a kind of date.] (*Bot.*) A genus of trees, order *Palmaceæ*. From the species *C. urens*, sugar, or *jaggery*, is obtained and its juice, when fermented, forms a kind of toddy, or palm-wine.

Ca'ry Station, in Illinois, a post-office of McHenry co.

Ca'ryville, in Massachusetts, a post-office of Norfolk co.

Ca'ryville, in New York, a village of Genesee co.

Ca'rysville, in Ohio, a post-office of Champaign co.

Cas'alacenda, a town of S. Italy, prov. of Molise, 17 m. N.E. of Campobasso; *pop.* 6,415.

Cas'al, *a.* (*Gram.*) Relating to case.

Casale, (*ka-sa'la'i*), an inland town of N. Italy, prov. Alessandria, on the Po, 37 m. E. by N. of Turin. This place was formerly considered one of the strongest fortresses in Europe, and was the residence of the marquises of Montferrat. *Pop.* 28,009.

Casal' Maggiore, a town of N. Italy, prov. Cremona, on the Po, 21 m. S.E. of Mantua. *Manuf.* Glass, earthenware, leather, &c. *Pop.* 16,654.

Casal' Pusterlengo, a town of N. Italy, 12 m. S.E. of Lodi. Here is manufactured the best quality of Parmesan cheese. *Pop.* 6,000.

Casamas'sina, a town of S. Italy, prov. Bari, 14 m. S.E. of Bari City; *pop.* 6,000.

Casana're, a river of the U. States of Colombia, rising in the mountains of Chita; after an E. course of 180 m., it falls into the Meta in about Lat. 5° 58' N. On this river is a small town of same name, in Lat. 5° 56' N., Lon. 71° 50' W.

Casano'va de Seingalt, GIOVANNI JACOPO, a celebrated adventurer, B. in Venice, 1725. He studied for the Church, but having been expelled for sufficient reasons from a seminary of priests, he travelled to Rome, Naples, Constantinople, and successively visited every European capital in various capacities. He was at once a schoolmaster, soldier, musician, chemist, alchemist, writer, and politician; and displayed, in these various callings, a great amount of talent, accompanied, necessarily, by equal chicanery. He was imprisoned at Vienna, and ultimately died there, 1803. His celebrated memoirs, *Mémoires écrits par Lui-même* (12 vols., Leip. 1826-1838), contain many interesting notices of the manners of his times, intermixed with details of his personal adventures.

Casar'ea, *n.* (*Zoöl.*) The *Tadorna rutila*, a species of duck, called also *ruddy goose*, found in Siberia.

Ca'sas. See LAS CASAS.

Ca'sas Gran'des, [Sp., great houses.] A town of Mexico, in Chihuahua, on the Casas Grandes, or San Miguel River, 35 m. S. of Llanos, remarkable for a number of ruins, apparently relics of an aboriginal race. *Pop.* 4,000.

Casbiu, or KASBIN, a town of Persia, prov. of Irak, 90 m. from Teheran. It is very extensive, but a great part of it is now in ruins, owing to its frequent subjections to earthquakes. *Pop.* variously estimated from 30 to 50,000.

Cas'cabel, *n.* [Sp. *cascabillo*, a little bell.] (*Gun.*) That

part of a piece of ordnance which lies behind the base ring.

Cascade, (*kas-kād'*) *n.* [Fr.; *It. cascata*, from *cascare*, to fall; *Lat. cado, casus*.] A waterfall in which the water does not, as in the cataract, fall uninterruptedly from a great height, but in which it is broken at several parts during its fall, or it is a water-fall less than a cataract. It is generally applied to those artificial waterfalls that are met with in pleasure-grounds and public parks.

—*v. n.* To vomit; to spew. (Vulgar.)

Cascade, in *Iowa*, a post-village of Dubuque co., 56 m. N.E. of Iowa City.

Cascade, in *Michigan*, a post-village and township of Kent co. The village is on Thorn Apple River, 11 m. S.E. of Grand Rapids.

—A village of St. Joseph's co., 140 m. N. by E. of Detroit.

Cascade, in *Minnesota*, a post-village and township of Olmstead co., N. of Rochester.

Cascade, in *Pennsylvania*, a township of Lycoming county.

Cascade, in *Virginia*, a post-village of Pittsylvania co., 16 m. W. of Danville.

Cascade, in *Wisconsin*, a flourishing post-village of Sheboygan co., 90 m. N.E. of Madison.

Cascade, in *Wisconsin*, a village of Adams co., on White Creek, 32 m. N.W. of Portage City.

Cascade City, in *Washington*, the former capital of Skamania co., on the Columbia river, 50 m. E. by N. of Fort Vancouver.

Cascade Range, a chain of mountains in California, Oregon, and Washington, extending into British Columbia and irregularly to the borders of Alaska; running in general nearly N. and S. at a distance of from 100 to 200 m. from the Pacific. Mount St. Elias, in Alaska, is the highest of the Cascade Range—about 18,900 ft. The Northern Pacific and Great Western Railways cross this range by means of switchbacks.

Cascade Valley, in *New York*, a P. O. of Broome co.

Cascatto, (*kas-kāl'yo*) *n.* [Pg.] (*Min.*) An indurated soil of Brazil, forming the matrix of gold and of diamond in that country.

Cascarilla, *n.* [Sp., dim. of *cascara*, bark.] See *Croton*.

Cas'cavel, a town of Brazil, on Ceara River, 40 m. S.W. of the port of Ceara; *pop.* about 10,000.

Cas'co, in *Maine*, a post-township of Cumberland co., on Crooked Creek, 45 m. W.S.W. of Augusta.

Casco, in *Michigan*, a thriving township of Allegan county.

—A post-township of Saint Clair county, 33 miles N. E. of Detroit.

Cas'co, in *Wisconsin*, a post-township of Kewaunee co., 14 m. E. of the town of Green Bay.

Casco Bay, in *Maine*, Cumberland co. It lies between Cape Elizabeth and Cape Small Point, and contains upwards of 300 islands extending about 20 m. E. of Portland.

Case, *n.* [Fr. *caisse*; *It. cassa*; *Sp. cáxa*; *Lat. capsā*; *Gr. kapsa*—*kapsa*, from the root *cap* or *kap*, whence *Lat. capio*, to hold.] That which holds, encloses, or contains; a covering; a box; a sheath; a receptacle; as, a case of instruments; a cigar-case, &c.

—A box and its contents; quantity contained in a box; as, a case of merchandise.

—The shell, or outer part of a building.

"The case of the holy house is nobly designed."—*Addison*.

(*Printing*.) The receptacle for the types, from which the compositor gathers them separately, and arranges them in lines and pages. They are usually in pairs: one of which is styled the *upper-case*, and is divided into 98 boxes or recesses of equal size, in which are deposited the capitals, small capitals, accented letters, &c.; the other is called the *lower-case*, and is divided into 54 boxes or recesses of unequal size, containing the small letters, figures, spaces, &c., the letters most in use having the largest boxes assigned to them. The cases are two feet nine inches long, one foot four inches and a half broad, and an inch in depth.

—*v. a.* To cover with a case; as, to case a window-frame with glass.

"As broad and gen'ral as the casing air."—*Shaks.*

—To put in a case or box; as, to case goods.

"If thou would'st not entomb thyself alive,

And case thy reputation in a tent."—*Shaks.*

Case, *n.* [Fr. *cas*; *Lat. casus*, from *cado*, to fall.] That which falls, comes, or happens; an event; the particular state, condition, or circumstances that befall a person, or in which he is placed; predicament.

—A particular instance or example, as of disease; as, it is a case of fever.

(*Law*.) A cause or suit in court; the state of facts juridically considered; as, to get up a case.

(*Gram*.) That modification of a noun which designates the relation in which a substance is conceived to exist in regard to some other substance. This end is commonly attained in language by changes in the termination of nouns. In English there are but three cases: the *nominative*, the *genitive* or *possessive*, and the *accusative* or *objective* case; the last only in pronouns. All other varieties of relation are expressed by prepositions.

In good case, in good state of body, health, condition.

"The priest was pretty good in case,

And shew'd some humor in his face."—*Swift*.

Put the case, suppose a certain thing or event.

In case, in the event of; if it should happen; expressing a contingency; as, in case the man dies.

"In case they should have an ill day in the field."—*Bacon*.

Action on the case. (*Law*.) A form of action which lies to recover damages for injuries for which the more ancient forms of action will not lie.

Case, in *Missouri*, a post-office of Warren co.

Case'-bags, *n. pl.* (*Arch.*) The joints framed between a pair of girders in naked flooring.

Case-harden, (*case-hür'dn'*) *v. a.* To harden the surface of iron by converting it into steel.—See *CASE-HARDENING*.

Case-hardening, *n.* (*Metall.*) The process by which a surface or outer coating of steel is given to iron goods, such as grates, fenders, fire-arms, gun-locks, keys, tools, &c. It renders any article which has been so treated far more durable than it otherwise would be, and sufficiently to resist the action of a common file. It also makes it capable of receiving a high degree of polish. It consists in heating the piece of ironware to be case-hardened in contact with some substance containing carbon (such as bone-dust, yellow prussiate of potash, &c.)

Ca'seic, *a.* [From *Lat. caseus*, cheese.] Pertaining to cheese, or to the acid obtained from it.

Ca'seine, *n.* (*Chem.*) The nitrogenous principle of milk, which forms a large portion of the curd. *C.*, in the double form, appears to be preserved in solution by a small quantity of alkali contained in the milk. In the coagulated form it is readily obtained by adding dilute sulphuric acid to the milk, which precipitates in the form of a curd. The curd is well washed and dissolved in carbonate of soda, and allowed to stand for twenty-four hours, to let the oil rise to the surface. This is skimmed off and the caseine precipitated by an acid. The process is repeated a second time, and the coagulum is digested with alcohol and ether, and dried. With all these precautions the *C.* still contains some saline matter, which cannot be removed. It is also obtained by coagulating the milk with hydrochloric acid. The curd is washed with dilute hydrochloric acid, and finally with pure water; a glutinous mass is obtained, which is slowly dissolved by digestion at 110°, with a large quantity of water. The solution is filtered, coagulated with carbonate of ammonia, the coagulum washed with water, ether, and alcohol, and finally dried. Coagulated *C.* is readily dissolved by the alkalies and alkaline carbonates. *C.* also unites with earthy carbonates, and forms insoluble compounds. A very tenacious lute is made by mixing poor cheese with slaked lime. The most remarkable form of coagulation is that produced by the action of the secretion from the mucous membrane of the stomach. This substance is called rennet, and consists of the inner membrane of the fourth stomach of the calf, salted and dried. When a solution of rennet is mixed with milk, a dense coagulum is formed, leaving the whey behind, as a thin, clear, straw-colored liquid. The action of rennet in this instance remains unexplained. *C.* has not been found anywhere but in milk. The quantity varies according to the period of lactation at which the milk is examined. Its amount also varies with different animals, as will be seen from the following table:—

Human female	31 to 35 parts in 1,000.
Cow	"	30 to 41 " "
Dog	"	80 to 146 " "
Ass	"	19 to 23 " "

Case-knife, (*kāse'nīfe*) *n.* A large knife for the table;—so named from being usually kept in a case.

Case'-man, *n.* (*Printing*.) A compositor; one who works at the case, or sets type. (*n.*)

Case'mate, *n.* [Fr. *casemate*; *Sp. casamata*—*casa*, house, and *mata*—*matár*, to kill.] (*Fortif.*) A bomb-proof, arched chamber, usually constructed under the ramparts. It serves for a battery, and for cover of the men off duty, the sick and wounded, &c.

(*Arch.*) A hollow moulding, whose profile is a quadrant of a circle; principally used in cornices. Also called *cavetto*.

Case'mated, *a.* Furnished with a casemate; built in the form of a casemate.

Casement, (*kāz'ment*) *n.* [It. *casamento*, from *Lat. casa*, a house, a building, from *Lat. casa*, a cottage, a cabin.] (*Arch.*) A case or frame for a window; a vertical sash hung upon hinges; a hollow moulding. (Same as *SCOTIA*, *q. v.*)

Casemented, *a.* Having casements; furnished with casements.

Ca'seons, *a.* Resembling cheese; cheesy.

Caseous Oxide. See *LEUCINE*.

Case'-rack, *n.* A wooden frame or rack wherein to deposit printer's cases when not in use.

Ca'sern, *n.* [Fr. *caserne*.] (*Fortif.*) A hut erected on the ramparts, or between the ramparts and the houses of fortified towns, serving as temporary lodgings for the soldiers on duty; a barrack.

Caserta, a town of Italy, cap. of the prov. of same name, in a pleasant plain, 16 m. N.N.E. of Naples. It is a handsomely built place, with a magnificent palace, park, and gardens, the residence of the former kings of Naples. *Pop.* 29,451.

Case-shot, *CANISTER-SHOT*, *n.* (*Gun.*) A number of metal-balls enclosed in a metal-case or cylinder, which bursts immediately after leaving the muzzle of the gun, and the bullets radiate outwards, or scatter in all directions, like the pellets in a charge of shot fired from a fowling-piece. It is very destructive to a body of men at 250 or 300 yards distance. Case-shot are made to suit guns of different calibre. Those chiefly used in the present day are called "Shrapnel shells," as they were invented by an officer of the name of Shrapnel. The case is spherical in form, like a shot or shell, and is filled with bullets and powder. It explodes by means of a fuse, which ignites when the shell is fired, and is so regulated that the case may burst just before reaching the body of men against which it is directed.

Ca'seum, *n.* [Lat., cheese.] Same as *CASEINE*, *q. v.*

Case'-ville, in *Michigan*, a post-village of Huron co., at the mouth of Pigeon River.

Case'-ville, in *New York*, a village of Ulster co., 76 S.S.W. of Albany.

Case'-worm, *n.* A grub that makes itself a case caddice.

Ca'sey, in *Georgia*, a township of De Kalb co.

Ca'sey, in *Illinois*, a post-village of Clarke co., 100 m. of Springfield.

Casey, in *Kentucky*, a S. central county; area, 350 sq. m. It is traversed by Green River, and the Rolling Fork of Salt River; its surface is high and broken. *Cap. Liberty*.

Casey Creek, in *Kentucky*, a post-office of Adams co.

Ca'seyville, in *Illinois*, a post-village of St. Clair co., about 10 m. E. of St. Louis.

Caseyville, in *Kentucky*, a post-village of Union co., on the Ohio river, 220 m. W. by S. of Frankford.

Caseyville, in *Mississippi*, a post-office of Lincoln co.

Cash, *n.* [Fr. *caisse*, a money-chest; from *Lat. cap.*, a repository; *Gr. kapsa*, a box, chest, case.] Original money kept in a case or coffer.

(*Com.*) Coin; specie; ready money. Bills, drafts, bonds, and all immediately negotiable paper in an individual possession, may also be considered cash.

—A copper coin current in China, being the one-thousandth part of a *tael*, or about one-tenth of a cent American.

Cash, *v. a.* To turn into money; to exchange for money to pay money for; as, to cash a check.

Cash'-account, *n.* (*Book-keeping*.) An account strictly limited to cash transactions, as all receipts and disbursements.

(*Banking*.) An account of cash advances made by a banker to an individual, or firm, and for which he has personal or collateral security.

Cash'an, a city of Persia, prov. Irak, 95 m. N. by W. Ispahan; *Lat.* 33° 55' N., *Lon.* 51° 17' E. It is one of the most thriving towns of the empire, and is indebted for its prosperity to its extensive manufactures of silks, carpets, and copper wares. *Estimated pop.* 30,000.

Cash'-book, *n.* (*Com.*) A book in which are registered the particulars of all cash transactions incidental to business; receipts of money are entered on the *Dr.* or debit side, under the head of *Cash*, while disbursements, moneys expended, are placed opposite on the *Cr.* credit side, and headed *Am't*.

Cash'-credit, *n.* (*Com.*) The privilege of drawing advances of money from a bank, upon approved security. See *CASH-ACCOUNT*.

Cashel, in *Ireland*, a city and borough of Tipperary co., 49 m. N.N.E. of Cork. On the rock of Cashel, which rises boldly from a fertile plain, stand the most interesting assemblage of ruins in Ireland, consisting of a round tower, a chapel of Saxon and Norman architecture, an ancient cathedral, a castellated palace, once the residence of the kings of Munster.

Fig. 529. — CASHEL.

(From a sketch on the spot by J. S. Prout.)

dence of the kings of Munster and the ruins of abbey, all within an enclosed area. *Pop.* 5,000.

Cashel, in *Ireland*, a parish of co. Longford.

Casher's Valley, in *North Carolina*, a post-office of Macon co.

Cashew, (*ka-shōō'*) *n.* (*Bot.*) See *ANACARDIUM*.

Cash'-gar, or **Kash'-gar**, a walled city of China, Turkestan, or Tartary, of which it was formerly cap., and the farthest W. place of note in the Chin empire, 140 m. N.W. of Yarkund, and 2,250 W. by S. Pekin. *Lat.* 39° 28' N., *Lon.* 75° 55' E. *Pop.* abt. 16,000.

Cash'-ie, in *N. Carolina*, a small river, flowing in a S. direction through Bertie co., and entering Roanoke River 10 m. from its mouth. It is navigable for slo to Windsor.

Cashier, (*kash'ēr*) *n.* [Fr. *caissier*.] One who has charge of money; one who superintends the book payments, and receipts of a bank, trading concern, moneyed business; a cash-keeper.

Cash'-ier, *v. a.* [Fr. *casser*, to break, to annul; *It. cassare*, to cancel, to annul; from *Lat. cassus*, empty, priv'd of.] To deprive of office; to dismiss from an office by a cancellation of commission; as, to cash an army officer.—To discard; to reject; as, to cash an argument.

Cashier'-er, *n.* One who rejects or dismisses.

Cash'-keeper, *n.* Same as *CASHIER*, *q. v.*

Cash'-mere, (*anc. Caspura*) a prov. of N. Hindost dominions of the Maharajah of the Panjab, consisting of the upper valley of the Rhynd, chiefly between 1

° 30' and 34° 30' N., and Lon. 75° and 76° E., having E. the central chain of the Himalayas, or Hindoo mosh, which separates it from Thibet, and on all other sides by secondary ranges belonging to that chain, dividing it from the rest of Runjeet Singh's territories. Shape, somewhat oval: length, W.N.W. to E.S.E., abt. 100 m.; breadth, 50 to 60. The Himalaya chain has here an elevation of from 18,000 to 19,000 feet; the *Pir Panjal*, belonging to the opposite chain, is 15,000 ft. above the level of the sea. There are 12 passes into the neighboring countries, viz., 8 to the Punjaul, 1 to the W., and 3 to Thibet; some of these are open the whole year, and two are 13,000 feet above the sea. *C.* is copiously watered by streams and mountain torrents, and many lakes are spread over its surface. — *Min.* Iron, copper, lead, gypsum, limestone, granite, and slate are the chief mineral deposits. — *Climate.* Generally healthy. — *Bot.* European plants in a wild state are common: roses, apples, and lotus-flowers are met with in profusion. The valley of *C.* is very beautiful, and has long been renowned in song and story. Wheat, barley, rice, and iron are cultivated, and the fruits of the temperate zone flourish abundantly. The wine of *C.* resembles claret. Farm husbandry is very rude and incomplete in its details. — *Com.* The principal wealth of this region derived from its shawl manufacture. They are made the inner hair of a variety of goat, *Caprahircus*, (see p. 123), reared on the cold, dry table-land of Thibet, from 14,000 to 16,000 feet above sea-level. The great art for the shawl wool is Kilghet, about 20 days' journey N. of Cashmere, whither it is conveyed on the backs of mountain-sheep. Under the rule of the Moguls there said to have been in *C.* 40,000 shawl-looms, while in 180 there were no more than 3,000; (see ANGORA.) The chief manufactures, next to shawls, are writing-paper, gunpowder, cutlery, and sugar. *C.* is divided into 36 *gunnahs*, and contains 10 towns and 2,200 villages. The principal of the former are Cashmere, the cap, and anabud. The Cashmerians are a stout, well-formed people of Hindoo stock, although Mohammedans. Their complexions are brunette, and the women very handsome. The people are brave, active, and industrious, fond of music, literature, and art; but said to be avaricious, and cunning. Their language is a dialect of Sanskrit, but their songs are in Persian. Independent of its celebrity for romantic beauty, *C.* has always been regarded as a holy land throughout India, as such has been continually resorted to by pilgrims. Nearly all the remaining temples appear to be of Buddhist origin, like those of Ellora. Abul Fazel enumerates 150 Hindoo kings, who reigned in *C.* previously to the year 742 of the Hegira, subsequently to which the Mohammedans and Tartars successively had possession of it. In 1586 it was conquered by Akbar, and Ahmed Shah afterwards annexed it to Cabul. In 1809 the governor asserted his independence. It was overrun by the Sikhs in 1819, and from 1846 under the supremacy of Great Britain. *Pop.* est. 2,500,000 in 1897.

CASHMERE, or **SERINAGHUR**, the cap. of the above prov., on the Jhelum, 6,300 feet above sea level. Lat. 33° 23' N., Lon. 74° 47' E. It is a narrow, ill-built, dirty place, with no buildings worthy of remark. The lake of *C.*, however, that adjoins the city, is renowned for its picturesque beauty. *Pop.* est. at 132,000 in 1897.

CASHOON, Same as CATECHU, q. v.

CASH RIVER, in *Illinois*, flows through the S. extremity of the State, and enters the Ohio near its mouth.

CASH TOWN, in *Pennsylvania*, a post-village of Adams co., 9 m. W.N.W. of Gettysburg.

CASILINUM, (*Anc. Geog.*) A city of Campania, on the Liris, opposite Capua. It was in this vicinity that Hannibal was enclosed by Fabius in an upland valley, whence the Carthaginian general escaped by driving before him, up the hill-sides, oxen with blazing fagots tied to their horns, about 215 B. C.

CASIMIR I., (*kas'-meer*), king of Poland, surnamed the Pious, succeeded his father, Miecislus, in 1034. D. 1058.

CASIMIR II., surnamed the Just, younger son of Boleslaus I., B. 1117. The crown was conferred on him in 1177, when his brother Miecislus was deposed.

CASIMIR III., the Great, B. 1304, succeeded Ladislaus in 1333. He defeated John, king of Bohemia, and conquered a part of Russia. He united to his warlike qualities the powers of a great king; maintained peace, founded several churches and hospitals, and built numerous fortresses. He is said, however, to have been a man of strong passions, in which he frequently indulged to excess. D. 1370. — In his reign, privileges were bestowed on the Jews, which they have ever since continued to enjoy; these were granted at the request of a Jewess, named Esther, one of his favorites.

CASIMIR IV., grand-duke of Lithuania, ascended the throne of Poland, 1445, and d. 1492.

CASIMIR V., JOHN, son of Sigismund III., B. 1603, succeeded Ladislaus VII. The cares of government, and the loss of his wife in 1657, induced him to resign the crown, and retire to France, where he d. in 1672.

CASING, *n.* Act of putting in a case.

CASING, (*Building*.) Act or operation of plastering the timber work of a house all over on the outside with mortar, and then striking it while wet by a ruler with the corner of a trowel, or the like instrument, to make it resemble the joints of freestone.

CASING, outside covering; a case.

CASINO, (*ka-se'-no*), *n.* [It. *casino*, from *casa*, a house.] Originally, a small house; afterwards, a pleasure-house with a garden. — A public place of amusement, where music and dancing are carried on; the term is also, sometimes, applied to a theatre.

CASINO, (*Games*.) See **CASSINO**.

CASINO, See **MONTE-CASINO**.

Cask, *n.* [Fr. *câsque*; Sp. *cáscas*; Gael. *cas*, *câis*, a case.] A close, hollow wooden vessel for containing liquors. See **BARREL**; **BUTT**; **HOGSHEAD**; **PIPE**; **PENCHEON**; **KILDERKIN**, &c.

—The quantity which a cask contains; as, a cask of ale.

—*v. a.* To put into a cask; as, to cask vinegar.

Caskaid, in *Ohio*, a post-office of Putnam co.

Casket, (*kask'-et*), *n.* [Dim. of *cask*; Fr. *cassette*.] Literally, a little cask. A small chest or box for the keeping of jewels and other valuables. A coffin.

(*Naut.*) See **GASKET**.

—*v. a.* To place or keep in a casket.

"I have writ my letters, casketed my treasures." — *Shaks.*

Caskets, (*The*.) a group of rocks in the English Channel, 7 m. from Alderney. They have often been fatal to vessels, and, in 1119, Prince William, son of Henry I. and his suite, perished here. In 1744, the *Victory* ship of war, of 110 guns, also was shipwrecked upon them. On the highest there is a light-house in Lat. 49° 45' N., Lon. 2° 22' W.

Casnovia, in *Michigan*, a P. O. of Muskegon co.

Casoli, a town of S. Italy, 17 m. S. of Chieti; *pop.* 6,836.

Casoria, a town of S. Italy, 5 m. N.N.E. of Naples; *p. p.* 9,846.

Caspé, a town of Spain, prov. Saragossa, near the confluence of the Guadalupe with the Ebro, 38 m. S.E. of Saragossa; *pop.* 10,351.

Casper, JOHANN LUDWIG, an eminent German physician and Professor of Medical Jurisprudence, B. 1796. He graduated at Halle as M. D., and in 1825 became adjunct professor at Berlin University, and in 1839 full professor. His lectures on Forensic Medicine attracted students from all Germany. D. 1864. Of his writings, the most noted are: *Charakteristik der franz. Medicin*; *Die Verletzungen des Rückenmarks in Hinsicht auf ihr Lethalitätsverhältniss*; *Beiträge der Medic. Statistik und Staatsarzneikunde*, &c. &c.

Caspian Sea, (*anc. Mare Hyrcanum*.) a great salt lake of W. Asia, between 36° 35' and 47° 25' N. Lat., and 46° 15' and 55° 10' E. Lon. It is wholly enclosed, having no outlet whatever to the ocean, and is surrounded by Tartary, Persia, the Caucasian countries, and the Russian govts. of Orenburg and Astrakhan. Its greatest length from N. to S. is 760 m.; average breadth, 200. *Area*. About 120,000 sq. m. The waters of this inland sea are less salt than those of the ocean. The water has a bitter taste ascribed by some to the great quantities of sulphur with which the surrounding soil abounds, but by others to the presence of Glauber salts, among the substances held in solution. The fish are principally salmon, sturgeons, and sterlets; a kind of herring is also found, and there are porpoises and seals. The *C. S.* has no tides, but its navigation is dangerous because of violent storms, especially from the S.E., by which its waters are sometimes driven for many miles over the adjacent plains. The depth near the S. end is about 600 ft.; and in some places near the centre it attains a depth of nearly 3,000 feet; but near the coast it is very shallow, seldom reaching a depth of more than 3 ft. at 100 yards from the shore, and in many places a depth of 12 feet is not reached within several miles of the beach. On the N.E. and E. it is especially shallow. It receives the waters of a number of large rivers, of which the greatest is the Volga. The Ural, the Terek, and the Kuralso fall into it. The trade of the sea is entirely in the hands of Russia, who has steamers upon it. The *C. S.*, *Kaspian Oulassa* (Herod. Clio, 203), is the oldest name of this water. It was derived from the Caspi, a people who inhabited its banks; as the more modern term Hyrcanian Sea, *Oulassa*, *Yrkania* (Strabo, xi. 507), was similarly derived from the more important Hyrcanii, a principal branch of the great Persian family. At the present day it is called *Mare Gubanskoi*, by the Russians; *Kulsum*, by the Persians; *Bahr Kurzum*, by the Arabs; *Kulzum Denghis*, by the Turks; and *Akdinghis*, by the Tartars.

Casque, **Cask**, (*kask*.) [Fr. *casque*. See **CASK**.] (*Mil.*) A piece of defensive armor for the head; a helmet; a morion.

Cass, LEWIS, an American statesman, B. at Exeter, New Hampshire, 1782. He was educated for the law, but quitting that profession, he entered the army in 1812, and rose rapidly to the rank of general, though his merit was not very conspicuous. In the war between England and the U. States, in 1812, he made an incursion into Canada, and was taken prisoner. When peace was concluded, he was appointed governor of Michigan, and organized that vast territory, making treaties with the Indian tribes, by which three millions of acres were added to the State. Under the presidency of Gen. Jackson, in 1831, he was secretary of war, and four years afterwards he was sent to Paris as envoy-extraordinary. Here he remained seven years, and while engaged in this mission, published his *Views on the Subject of the Limitation of the Northern Frontiers of the Union*, and protested against the adhesion of M. Guizot to the doctrine of the "right of visit." The treaty concluded in 1842, between England and the U. States, not meeting his approval, he resigned, and returned to America. In the senate he voted for the Fugitive Slave Law, and in 1857 was made secretary of state under President Buchanan. D. 1866.

Cass, in *Arkansas*, a post-village of Franklin co., 115 m. N.W. of Little Rock.

Cass, (now **Bartow**.) in *Georgia*, a N.W. county; *area*, 714 sq. m., drained by the Etowah River, a branch of the Coosa. Its surface is diversified, and the soil, generally fertile, is in a high state of cultivation. *Min.* Gold, copper, iron, lead, titanium, and plumbago. *Cap.* Cartersville. *Pop.* (1897) abt. 23,500.

Cass, in *Indiana*, a N. central county; *area*, 420 sq. m. It is drained by the Wabash and El rivers. *Desc.* The

surface is mostly level; the S. portion is heavily timbered, and the N. consists chiefly of prairies. *Cap.*, Logansport. *Pop.* (1897) abt. 35,000.

—A township of Clay co.

—A township of Greene co.

—A township of La Porte co.

—A township of Ohio co.

—A township of Pulaski co.

—A township of Sullivan co.

—A township of White co.

Cass, in *Illinois*, a W. central co., bounded N.W. by a stream called Illinois, and N. by Sangamon River. *Area*, 350 sq. m. *Surface*, nearly level; soil, highly fertile; *cap.* Virginia. *Pop.* (1897) abt. 20,000.

—A post-office of Du Page co.

—A township of Fulton co.

Cass, in *Iowa*, a S.W. co.; *area*, 576 sq. m. The Nishnabotou river, an affluent of the Missouri, flows S.W. through this co. *Cap.* Atlantic. *Pop.* (1897) abt. 24,000.

—A township of Boone co.

—A township of Cass co.

—A township of Cedar co.

—A township of Clayton co.

—A township of Guthrie co.

—A township of Hamilton co.

—A township of Harrison co.

—A township of Wapello co.

Cass, in *Michigan*, a S.W. county, bordering on Indiana; *area*, 528 sq. m. It is drained by Dowagiac and Christiana rivers, and the St. Joseph's River touches the S.E. corner of the county. The surface is undulating; and the soil moderately fertile. *Cap.* Cassopolis. *Pop.* (1890) 21,034.

—A post-office of Hillsdale co.

Cass, in *Minnesota*, a N. central co.; *area*, 5,000 sq. m. *Rivers*. The Mississippi rises near its N.W. border, and forms its boundary on the N. and E. It is drained by Sauk, Crow Wing, and Long Prairie rivers, and sprinkled over with lakes, the largest of which is Leech Lake, in the northern part.

Cass, in *Missouri*, a W. county, bordering on the State of Kansas; *area*, 750 sq. m. It is intersected by the middle fork of Grand River, and by Big Creek. — *Desc.* The surface is undulating, diversified with prairies and groves, and the soil is generally good. *Cap.* Harrisonville.

Cass, in *Nebraska*, an E. county, *area*, 570 sq. m. It is bounded, partly, on the N. by Platte River, on the E. by the Missouri River; and is drained by the Saline, Weeping Water, and other creeks. The soil is calcareous and fertile. *Cap.* Plattsmouth.

Cass, in *Ohio*, a township of Hancock co., 90 m. N. by W. of Columbus.

—A township of Richland co.

—A township of Muskingum co.

Cass, in *Penn.*, a twp. of Huntingdon co.

—A township of Schuylkill co.

—A post-village of Venango co., 175 m. W.N.W. of Harrisburg.

Cass, in *Texas*, a N.E. co., b. on Louisiana and Arkansas; *area*, 1,224 sq. m. It is bounded on the S. by Big Cypress Bayou and Soda Lake, and on the N. by the Sulphur Fork of Red River. The surface is gently undulating, and the bottoms are swampy and mostly uncultivated, while the uplands have a deep red soil. Formerly called DAVIS co. *Cap.* Linden. *Pop.* (1890) 22,554.

Cassada, *n.* (*Bot.*) See **CASSAVA**.

Cassada'ga, in *New York*, a lake in Chautauqua co., 12 m. N.E. of Mayville; length 4 miles.

—A post-village on the E. side of the above lake, 50 m. S. S.W. of Buffalo.

Cassandra, according to Homeric legend, was daughter of Priam and Hecuba. She was passionately loved by Apollo, who promised to grant her whatever she might require, if she would look with favor on his suit. She demanded the power of prophecy, and as soon as she had received it, refused to perform her promise, and slighted Apollo. The god, thus disappointed, wetted her lips with his tongue, and thus no belief was ever placed in her predictions. She endeavored to prevent the entrance into Troy of the wooden horse of the Greeks, but was unsuccessful, and when that city was taken, she suffered violence at the hands of Ajax Oileus. In the division of the spoils of Troy, she fell to the share of Agamemnon, who carried her to Greece. She repeatedly foretold to him the calamities that awaited his return; but he gave no credit to her, and was assassinated by his wife Clytemnestra. Cassandra shared his fate, after seeing all her prophecies but too truly fulfilled.

Cassan'dra, a gulf and peninsula of European Turkey, in Roumelia; length of gulf, 30 m.; average breadth, 10. The peninsula is in Lat. 40° N., Lon. 23° 30' E.

Cassan'dra, in *Georgia*, a post-office of Walker co.

Cassander, the son of Antipater, took possession of the kingly power in Macedonia on the death of his father. He caused the death of Olympias, the mother of Alexander the Great, and also of his son, the younger Alexander. Joining his forces to those of Seleucus, Ptolemy, and Lysimachus, he defeated Antigonus at the battle of Ipsus, 301 B.C., the latter monarch falling on the field, and the four conquerors dividing between them Alexander's empire into the great kingdoms of Macedonia, Thrace, Egypt, and Syria.

Cassano, a town of S. Italy, prov. Cosenza, 7 m. E.S.E. of Castrovillari, and 10 from the Gulf of Tarentum. — *Manuf.* Leather, linen, silk, macaroni. *Pop.* 8,937. — There are several other places of this name in S. and N. Italy, none of them with a *p. p.* above 3,000.

Cassareep, *n.* The inspissated juice of the Cassava, which forms the basis of the West Indian dish called pepper-pot.

Cassa'tion, n. [Fr.] The act of making null or void.

Court of Cassation. (French Law.) The highest judicial tribunal in France; so termed from possessing the power to quash (*casser*) the decrees of inferior courts. It is a court of appeal in criminal as well as civil cases. The tribunal of Cassation was first introduced, as a court wholly independent of the king and his council, in 1790. This court is under a president; but the minister of justice, as keeper of the seals (*garde des sceaux*), has the right of presiding in cases where it sits on appeal from the higher courts. The 3 sections are: 1. *Des Requêtes*, which decides on the admissibility of petitions of appeal in civil cases. 2. *De Cassation Civile*; 3. *De Cassation Criminelle*. The decision of the Court of Cassation has the effect of sending back the case to the inferior courts. If, after a decision has been reversed, a second court decides the same case in the same way, and an appeal being entered again, if the Court of Cassation repeats its reversal by all the three sections, such judgment is final. The inferior judges of the three sections of the Court of Cassation are styled *counsellors*. The whole court, when presided over by the minister of justice, possesses powers not specially provided for by law; as in censuring or suspending judges, &c. This court has been of great benefit to France, maintaining a unity in the legislation, and protecting the people from arbitrary proceedings or misjudgments in the other courts. In all the changes of government and administration, this court has always preserved a high character for strict impartiality.

Cas'sava, n. See MANIHOT.

Cassay', KATHEE', or MINNEPOOR, a country of India beyond the Ganges, between Lat. 24° and 26° N., and Lon. 93° and 95° E.; having N. Assam and the Burman empire, S. a hill country inhabited by independent Khyens, and W. Cachar. Area, about 7,000 sq. m. C. consists of a central fertile valley, of comparatively small extent, surrounded on every side by a wild and mountainous country, and watered by the Minnepoor, Eril, and Thobal rivers. *Prod.* Iron, tobacco, ginger, sugar-cane, opium, and the finest pine-apples in the world. *Manuf.* Cotton, muslins, silks, and iron-ware. This territory belonged to the Burmese from 1774 to 1824. In 1826 it became independent, and in 1836 was ceded to the British.

Cass Bridge, in Michigan, a post-office of Saginaw co.

Cassel, (anc. *Castellum Cattorum*), a walled city of Germany, in Prussia, prov. Lower Hesse, of which it is the cap. It is situated on the Fulda, 72 m. S. by W. of Hanover, and 89 N.N.E. of Frankfurt-on-the-Main. C. is one of the handsomest towns in Germany, and possesses many fine public buildings. *Manf.* Cottons, silk and woollen fabrics, leather, hats, carpets, porcelain, chemicals, &c. Near it is Wilhelmshöhe, the summer palace of the former electors (sovereign princes) of Hesse-Cassel; a residence so magnificent, that it has been sometimes called the German Versailles. It was the residence assigned to Napoleon III., after his capitulation at Sedan, 1870. Since 1867, C. has belonged to Prussia. *Pop.* (1890) 72,477.

Cas'sel, a town of France, dep. Nord, 28 m. N.W. of Lille. *Manf.* Lace, thread, oil, earthenware. *Pop.*, 4,686.

Cassel, in Minnesota, a village of Wright co., on the N. Fork of Crow river, 33 m. W. by N. of Minneapolis.

Cassella, in Indiana, a village of Lake co.

Cassell Prairie, in Wisconsin, a village of Sauk co.

Cassell Yellow, n. (*Painting*.) A compound of oxide and chloride of lead; it is also known in commerce under the name of *Patent Yellow* and *Turner's Yellow*.

Cas'sen, in Africa. See KASSAN.

Cas'se-paper, n. [Fr. *papier cassé*.] Paper damaged or broken; particularly the two outside quires of a ream of paper.

Cassequiare. (*kas-se-ke-a'-ra*), a river of Venezuela, in S. America, the S. bifurcation of the Orinoco, and connecting with the Rio Negro after a S.W. course of 125 miles. It is navigable for canoes in its entire length.

Cassia. (*kash'-e-ā*), n. [From Ar. *katsa*, to tear off, the bark being stripped from the tree.] (*Bot.*) A genus of plants, order *Fabaceæ*, sub-ord. *Cesalpiniceæ*. The leaflets of several species furnish the important drug SENNA, *q. v.* Some uncertainty prevails as to the species yielding some of the commercial varieties. That kind commonly known as Alexandrian senna is generally supposed to be derived from *C. officinalis*, var. *lanceolata*, and *C. oblongata*. The common East Indian, Mecca, or Bombay senna, is supposed by Royle to be the produce of *C. officinalis*, var. *acutifolia*. Timnevelly senna, a very fine kind, is furnished by *C. officinalis*, var. *elongata*. *C. Marilandica*, the American cassia, possesses similar properties, and is often used in this country. It is a beautiful plant, frequently met with in alluvial soils in the U. States, growing in close masses, 3-5 feet high.—Another drug, called cassia pulp, or purging cassia, is obtained from a species of this genus; namely, *C. fistula*. The pulp is contained in the pods. It is of a reddish-black color, with a sweetish taste, and possesses laxative and purgative properties. The pods of *C. Braziliana* are used in veterinary medicine under the name of horse-cassia. The seeds of *C. absus*, under the names of *Chichon* and *Cismatan*, are used in Egypt in ophthalmia.

Cassia Bark, n., Cassia Buds, n. pl. See CINNAMOMUM.

Cas'sida, n. (*Zoöl.*) The Tortoise beetles, a genus of the family *Chrysomelidae*. They are broad oval, or rounded, nearly flat insects, and with the thorax projecting over the head.

Cassid'eous, a. [Lat. *cassid*, a helmet.] (*Bot.*) A term denoting when the upper petal of a flower is dilated into a broad helmet-shaped leaf, as in the genus *Aconitum*.

Cas'sidony, n. [Fr. *cassidoine*.] (*Bot.*) See GUAPHALUM, and LAVENDULA.

Cas'simere, n. [Fr. *cassimir*.] A twilled woollen cloth of thin texture, used for men's clothing, more particularly for vests or waist-coats. (Generally written *kersey-mere* in England.)

Cas'sin, JOHN, a distinguished American ornithologist, b. near Chester, Penn., 1813. His principal works are: *Birds of California and Texas. Synopsis of the Birds of N. America, Ornithology of the Japan Expedition, Ornithology of Gilliss's Astronomical Expedition to Chili, &c.* D. 1869.

Cassina. (*kas-se'e-na*), a town of N. Italy, in Piedmont, 14 m. S.S.W. of Alessandria, on the Bormida; *pop.* 4,585.

Cassine. (*kas-seen'*), n. [Fr.] A small house in the country;—particularly a solitary house where soldiers may make a stand.

Cassini, JEAN DOMINIQUE, an eminent astronomer, b. near Nice, 1635. His fame reaching France, he was invited to pay a visit to that country, where the kindness shown him by Louis XIV. and his minister Colbert, caused him to remain for the rest of his life. He was the first resident in the Royal Observatory at Paris, instituted by the great Colbert; and during forty years his services were such as to do high honor to himself, as well as to the liberal monarch by whom he was patronized. Among his numerous discoveries may be mentioned that of four satellites of Saturn. C. had a son, a grandson, and a great-grandson, who succeeded him as professors in the Royal Observatory at Paris. The last d. in 1845.

Cassino. (*kas-sé'no*), n. [It. *casino*, a gaming-house.] (*Games*.) A game at cards that may be played by two, three, or four persons. It is played thus: The dealer and partners are determined by cutting, as at Whist. The dealer gives four cards, one at a time, to each player; and either regularly, as he deals, or by one, two, three, or four at a time, lays four more, face upwards, upon the board, and, after the first cards are played, four others are to be dealt to each person, until the pack be concluded; but it is only in the first deal that any cards are to be turned up. The deal is lost, if, in the first round, before any of the cards are turned up on the table, a card is faced by the dealer; but if a card happen to be faced in the pack before any of the said four be turned up, then the deal must be begun again. Each person plays one card at a time, with which he may not only take at once every card of the same denomination upon the table, but likewise all that will combine therewith; as, for instance, a ten takes not only every ten, but also nine and ace, eight and deuce, seven and three, six and four, or two fives; and if he clear the board before the conclusion of the game, he scores a point. Whenever a player cannot pair or combine, he puts down a card. The number of tricks must not be examined or counted before all the cards are played; nor may any trick but that last won be looked at, as every mistake must be challenged immediately. After all the pack is dealt out, the player who obtains the last trick sweeps all the cards then remaining unmatched on the table. It sometimes happens that the points are not set up, and that neither player gains anything in the deal; but the smaller number is subtracted from the larger, both in cards and points, and if they both prove equal, the game is re-commenced, the deal being taken in rotation. When three persons play, the two lowest add their points together, and subtract from the highest; but if their two numbers added together amount to or exceed that of the third player, then neither scores. The following terms are used in the game: *Great Cassino*, the ten of diamonds, containing two point; *Little Cassino*, the two of spades, also reckoning one point; the cards, when a person has a greater share than his adversary, *three points*; the *spades*, when one has the majority of that suit, *one point*; the *aces*—each of which stands for *one point*; and *Lurched*—when a player's opponent has won the game before he has gained six points.

Cas'sin Pa'sha, a suburb of Constantinople, separated from Galata by burying-grounds. In it are the imperial dockyard, the naval arsenal, and the palace of the capitan-pasha.

Cassiodorus, or Cassiodorus, MAGNUS AURELIUS, a Latin writer, b. at Scylaceum, in Calabria, about 468 A.D. He was appointed by Theodoric, king of the Goths, governor of Sicily, filled afterwards some of the highest offices in Rome, and finally retired to a monastery in Calabria. He is celebrated as grammarian, chronologist, and historian. D. about 577.

Cassiope'a, or CASSIOPE, mother of ANDROMEDA, *q. v.*

Cassiopeia. (*käs-se-o-pe'e-ä*), (*Astron.*) A constellation in the northern hemisphere, near Cepheus, and not far from the N. Pole. It is marked by five stars of the 3d magnitude, forming a figure like an M. A line from Capilla to the bright star in Cygnus passes nearly through the middle of this M. C., according to Flamsteed, contains 55 stars, all of small magnitude. The figure is that of a woman sitting in a chair, with a branch in her hand. In the year 1572, there all at once appeared in C. a new star. It was first noticed by Tycho Brahe on the 11th November, when its lustre exceeded that of all the fixed stars, and nearly equalled that of Venus. The star gradually diminished in lustre, from the time of its being observed until, in March, 1574, it disappeared. Tycho Brahe supposed that it had previously appeared in 945 and 1264. It failed to reappear in 1872, as predicted by Herschel.

Cassiquiare, or CASSIQUIARE. (*kas'se-ke-a'-re*), a river of Venezuela, forming the S. bifurcation of the Orinoco, which it leaves in Lat. 3° 10' N., Lon. 66° 20' W., and after a rapid S.W. course of about 130 miles, joins the Rio Negro in Lat. 2° 5' N., Lon. 67° 40' W. About 100 yards in breadth when it issues from the Orinoco, it gradually increases until at its union with the Rio Ne-

gro it attains a width of 600 yards. By means of this singular river, water-communication is established, through the Amazon, Orinoco, and their affluents, between the interior of Brazil and Caracas in Venezuela.

Cas'sis, n. [Lat., a helmet.] (*Zoöl.*) In the system of Lamarck, a genus of Gastropodous Molluscs, separate from the Linnaean genus *Buccinum*, and including the species of which the shells are commonly called *helmet shells*. (*Bot.*) The black currant. See RIBES.

—A French liquor prepared from black currants.

Cas'sis, a sea-port town of France, dep. Bouches-du-Rhône, 10 m. S.E. of Marseilles. Only small vessels can enter the harbor. *Pop.* 2,238.

Cassit'erite, n. [Gr. *kassiteros*, tin.] (*Min.*) Native peroxide of tin; composed, when pure, of 21.62 per cent of oxygen and 78.38 tin. It occurs massive (*Tin-stone*), disseminated, fibrous (*Wood-tin*), in rolled pieces and in grains as sand (*Stream-tin*), and crystallized in quadrangular prisms terminated by four-sided pyramids, and in many complex forms; sometimes in twin crystals. The color is of all shades between light brown and black but it sometimes has a greenish tint, and is at other colorless.—See TIN.

Cas'sins, LONGINUS CAIUS, a Roman general, and one of Caesar's assassins. During the civil wars between Pompey and Caesar, he followed the fortunes of the former. He was taken prisoner by Caesar, who pardoned him. In 44 B. C., through the influence of Caesar, he was made *Prætor Peregrinus*, and was promised the governorship of Syria in the following year. But his mean and jealous spirit could not endure the burden of gratitude, and he resolved to be released by the murder of his benefactor. Having attached to himself the mysterious spirits among the subjugated aristocracy, and also won over M. Brutus, the pseudo-patriotic conspiracy was soon matured, and on the 15th of March, 44 B. C., Cæsar fell by the daggers of assassins. The result of this bloody deed was not what C. had expected. The popular feeling—as witnessed by the riots that broke out at Cæsar's funeral—was strongly against the murderers; and the military power fell into the hands of Mark Antony. C. therefore fled to the east, and made himself master of Syria. Afterwards he united his forces with those of Brutus, and having greedily plundered Asia Minor, they crossed the Hellespont in the beginning of 42 B. C., marched through Thrace, and took up a superior position near Philippi, in Macedonia. Here they were attacked by Antony and Octavius. The division commanded by C. was totally routed, although, on the other hand, Brutus succeeded in repulsing the troops of Octavius. C. supposing that all was lost, compelled his freedman, Pindarus, to put him to death, 42 B. C.

Cassius. (PURPLE OR.) See PURPLE.

Cass Lake, in Michigan, a small lake near the central part of Oakland co.

Cassock. (*kas'sok*), n. [Sp. *casaca*; Fr. *casaque*; It. *casacca*, from *casa*, a house.] (*Ecol.*) A close garment resembling a long frock-coat, worn by clergymen under the surplice or gown. In the Church of Rome, they vary in color with the dignity of the wearer; those of priests being black, bishops purple, cardinals scarlet and popes white.

Cassocked. (*kas'sokt*), a. Attired with a cassock.

Cas'solette, n. [Fr.] A small box in glass, ivory, or precious metals, containing perfumes, with a capillary hole, to allow the odor to escape.

Cassonade', n. [Fr.] Raw sugar; sugar not refined.

Cassop'olis, in Michigan, a village, cap. of Cass co. on N. shore of Stone Lake, 130 m. S.W. of Lansing.

Cas'sowary, n. [Malay, *cassuwaris*.] (*Zoöl.*) The *Casuaris galeatus* (see Fig. 415), a large bird, native of the Indian archipelago. In shape, size, and appearance this bird strongly resembles the ostrich, though not actually so large, its legs being thicker and stronger than those of that bird; its feathers have the peculiarity of looking like hair, and seem not unlike camel's hair both in length of filament and softness of texture. The cassowary is so swift, appearing to skim along the ground that the fleetest racer is distanced by its wonderful speed. Two species only are known of this bird, one common to Australia, and the other to the adjacent islands of the Indian Ocean.

Cass River, in Michigan, rises in the E. part of the State, and flowing nearly W., falls into the Saginaw above Saginaw City.

Cass'town, in Ohio, a post-village of Miami co., 6 m. E. by N. from Troy.

Cass'town, in Tennessee, a village of White co.

Cass'ville, in Arkansas, a post-office of Newton co.

Cassville, in Georgia, the former capital of Bartow co. 150 m. N.W. of Milledgeville.

Cassville, in Indiana, a village of Howard co., 5 m. E. of Kokomo.

Cassville, in Missouri, a post-village, cap. of Barry co. 200 m. S.W. from Jefferson City.

Cassville, in New Jersey, a post-office of Ocean co.

Cassville, in New York, a post-village of Oneida co. on Sanquoit Creek, 86 m. N.N.W. of Albany.

Cassville, in Ohio, a post-office of Harrison co.

Cassville, in Pennsylvania, a post-village of Huntingdon co., 90 m. W. of Harrisburg.

Cassville, in W. Va., a post-office of Monongalia co.

Cassville, in Wisconsin, a village and twp. of Grant co. on Mississippi River, 28 m. from Dubuque.

Cassville, in W. Virginia, a village of Wayne co., on the Big Sandy River, 20 m. S. of Ceredo.

Cassyta'ece, n. pl. (*Bot.*) The Dodder-Laurer, an order of plants, alliance *Daphnals*. There is only one genus, *Cassytha*, which includes nine species, natives of tropical regions, and distinguished from the *Lauraceæ*

only by their parasitical habits, their scaly, modified leaves, and by the fruit being inclosed in a succulent alux.

Cast. v. a. (pp. *cast.*) [Dan. *kasto*; Swed., Icel., and both. *kasta*, to throw.] To drive by force; to drive or compel by violence: to throw, fling, or hurl, as from the hand; as, to *cast* a stone.

"Then cast thy sword away."—Dryden.

To sow, or scatter by the hand; as, to *cast* seed.—To direct the eyes to; to throw one's sight upon; as, to *cast* a glance, a look.

"How earnestly he casts his eyes upon me!"—Shaks.

To shed or throw off; to reject; as, a serpent *casts* his skin.

"The groves their honors cast."—Dryden.

To throw, or let fall; as, to *cast* anchor.—To condemn; to convict, as a criminal.

"He made me cast you guilty, and you me."—Donne.

To throw on the ground, as in wrestling.

"I made a shift to cast him."—Shaks.

To compute; to throw together several particulars to find the sum; to calculate; as, to *cast* an account; to *cast* a horoscope.

"Here is now the smith's note for shoeing and plough-irons, let it be cast and paid."—Shaks.

To form; to model: to found in a particular shape; as, to *cast* a piece of ordnance.

"With restless rage would pull my statue down, And cast the brass anew to his renown."—Prior.

To throw, as dice, or lots; as, to *cast* a main at hazard.

"Joshua cast lots for them in Shiloh."—Josh. xviii. 10.

To put or set in a particular state.

Both chariot and horse are *cast* into a deep sleep."—Ps. lxxvi. 6.

To thrust; as, to *cast* into prison.—To throw away as worthless or useless, as a coat.

"His friends contend to embalm his body; his enemies, that they may cast it to the dogs."—Pope.

To emit, throw out, or exhale.

This fumes off and casts a sulphurous smell."—Woodward.

To make to preponderate; to throw into one scale to overbalance it: to decide by a vote that gives a superiority in numbers; as, a *casting* voice.

The freeman casting with unpurchased hand The vote that shakes the turrets of the land."—Holmes.

To build or extend by throwing up earth or a rampart; to *cast* a trench.

"And shooting in the earth, casts up a mound of clay."—Færie Queen.

To overcome in a suit at law; to defeat in any encounter skill or strength; as, he was *cast* in damages.

"Were the case referred to any competent judge, they would vitally be cast."—Decay of Piety.

To contrive; to plan out.

"The cloister . . . had, I doubt not, been cast for that purpose."—Sir W. Temple.

To discard; to cashier; to break.

"You are now but cast in his mood, a punishment more icy than in malice."—Shaks.

To fix or distribute the parts of a play among a company of actors; as, to *cast* "Othello."

Our parts in the other world will be new-cast."—Addison.

To consider in order to arrive at a judgment.

"Peace, brother, be not over-exquisite To cast the fashion of uncertain evils."—Shaks.

To shape; to form by a model:—used in a figurative sense; as, *cast* in honor's mould.

To communicate; to spread over; as, to *cast* a lustre on the nation.

"And storied windows richly dight, Casting a dim religious light."—Milton.

To cast aside. To discard, or dismiss, as useless or inconvenient.

Golden opinions . . . would be worn now in their newest gloss, Not cast aside too soon."—Shaks.

To cast away. To reject; to throw away; to lavish profusely; to shipwreck; as, to *cast away* life; to *cast away* a ship.

"Our fears cast our hopes away."—Earl of Dorset.

To cast by. To reject, or discard, as hateful or worthless.

"Have made Verona's ancient citizens Cast by their grave beseeching ornaments."—Shaks.

To cast down. To throw down; to deject; to depress the mind; as, to *cast down* hopes.

"You are much cast down, and afflicted."—Addison.

To cast anchor. (Naut.) To anchor; to let go the anchor; to moor a ship.—To cast forth. To throw out, reject; to send abroad; to emit or exhale; as, to *cast forth* a rumor. "They cast me forth into the sea." Jonah.

To cast off. To discard; to put away; to disburden; to get off; as, to *cast off* a mistress.—(Naut.) To loosen or let go; as, to *cast off* a rope.—(Sporting.) In hunting, to let loose; to free; as, to *cast off* the hounds.

He cast off his friends, as a huntsman his pack."—Goldsmith.

To cast out. To eject; to turn out of doors; to speak, give vent to; as, to *cast out* an intruder; to *cast out* reproach.

Thy brat hath been cast out, like to itself, no father owning it."—Shaks.

To cast up. To reckon; to compute; to add successively; to cast up a column of figures;—to vomit; as, to *cast up* the contents of one's stomach.

"Thy foolish error fled: Cast up the poison that infects thy mind."—Dryden.

To cast on, or upon. To refer or resign to; as, to *cast upon* him the responsibility.

"If things were cast upon this issue, . . . the best would sin and sin forever."—South.

To cast one's self on, or upon. To yield one's self to the disposal of, without reserve; as, I *cast myself upon* your generosity.—To cast young. To undergo abortion; to miscarry.—To cast in the teeth. To twit; to charge; to accuse; to upbraid.

To cast off copy (Printing.) To estimate the quantity of printed matter contained in a manuscript, by setting up a portion for trial.

Cast. v. i. To throw forward, as the thoughts; to turn or revolve in the mind; to contrive. (Sometimes followed by *about*.)

"From that day forth, I cast in careful mind, To seek her out with labor and long time."—Spenser.

—To be capable of receiving form or shape by being cast or melted.

"It will not run thin, so as to cast and mould."—Woodward.

—To warp; to twist from usual shape; to grow out of form.

"Stiff is said to cast or warp, when, by . . . accident, it alters its flatness and straightness."—Mozon.

(Naut.) To fall off or incline, so as to bring the side of a ship to the wind; applied particularly to a ship riding with her head to the wind, when her anchor is first loosened.

Cast. n. Act of casting: a throw; kind or manner of throwing.

"So far, but that the rest are measuring casts, Their emulation and their pastime lasts."—Waller.

—The thing thrown.

"Yet all these dreadful deeds, this deadly fray, A cast of dreadful dust will soon allay."—Dryden.

—The space through which a thing is thrown: distance passed by anything flung or thrown; as, "About a stone's cast."—Luke xxii. 24.

—A throw of dice; hence, a state of chance or hazard.

"I have set my life upon a cast, And I will stand the hazard of the die."—Shaks.

—A stroke; a touch.

"Another cast of their politics was that of endeavoring to impeach an innocent lady."—Swift.

—Motion of the eye; direction or glance; a squinting.

"A man shall be sure to have a cast of their eye to warn him, before they give him a cast of their nature to betray him."—South.

—Form; shape; mould; figure into which anything is cast.

"The whole would have been an heroic poem, but in another cast and figure than that had been written before."—Prior.

—A shade; a tinge; a tendency to any particular color; as, a cast of green.

—Assignment of the actors' parts in a theatrical performance; as, a strong cast.

—Exterior appearance; manner; air; mien; as, a cast of countenance.

"Sicklied o'er with the pale cast of thought."—Shaks.

—That which is cast or formed from a mould; as, a plaster cast, a bronze, &c. See CASTING.

—In falconry, a flight; a number of hawks let go at once; as, "A cast of merlins."—Sidney.

—A cylindrical piece of brass or copper, slit in two lengthwise, to form a canal or conduit, in a mould for conveying metal.

[Sp. *casta*.] Breed; race; species. See CASTE.

The last cast. The last decisive throw or venture.

Castalia, a fountain at the foot of Mount Parnassus, near the temple of Apollo, at Delphi, in Phocis; named from Castalia, the daughter of Achelous, who, being pursued by Apollo, threw herself into the fountain. It was, like the mountain, sacred to Apollo and the Muses, who were therefore called Castalides.

Castalia, in Iowa, a post-office of Winneshiek co.

Castalia, in N. Carolina, a post-office of Nash co.

Castalia, in Ohio, a post-village of Erie co., on Cold Creek, 5 m. S.W. from Sandusky City, and 105 m. N. of Columbus. Near this village is a spring 200 feet in diameter and 60 feet deep, which has the property of petrifying vegetable substances. Pop. about 1,000.

Castalian Springs, in Tennessee, a post-office of Sumner co.

Castalia, in Iowa, a post-office of Monona co.

Castanet, n. [Sp. *castañeta*, *castañuela*; Lat. *castanea*, the chestnut-tree.] (Mus.) A small musical instrument of percussion, much used by the Spaniards. It consists of two small pieces of wood or ivory resembling in shape a chestnut, tied to the fingers, and rattled by dancers in order to mark the time, &c. in dancing. The *crotalum* of the ancients was similar to the C.

"No more beneath soft Eve's consenting star Pandango twirls his jocund castanet."—Byron.

Castania Grove, in N. Carolina, a post-office of Gaston co.

Castanos, DON FRANCISCO XAVIER DE, (DUKE OF BAYLEN,) a distinguished Spanish general, b. 1756. He did brilliant service in the Peninsular war, defeating a French force under Dupont at Baylen in 1807, (whence his title,) and causing the retirement of Joseph Bonaparte from Madrid. He participated, under Wellington, in the victories of Albuera, Salamanca, and Vittoria, and com-

manded the Spanish force which, in 1815, invaded France, in conjunction with the British. In 1843 he was appointed tutor to Queen Isabella, and d. 1852.

Castanea, n. (Bot.) The Chestnut-tree, or Sweet-chestnut, a genus of plants, order *Corylaceæ*. The species *C. vesca* is a deciduous tree of considerable size, with long shining serrated sharp-pointed leaves, clusters of long

Fig. 531. — AMERICAN CHESTNUT-TREE.
(*Castanea vesca*.)

spikes of pale-greenish yellow, unisexual, minute flowers having no corolla, and fruits consisting of a roundish prickly husk or involucre, technically called a cupula, and analogous to the cup of the acorn or the beard of the filbert, in which

are contained one or more dark-brown ovate sharp-pointed nuts, each of which conceals a large single seed, and is tipped by the remains of several rigid styles. The seeds contain a large quantity of nutritive starchy matter of a sweet flavor, on which account chestnuts are extensively used as food in the countries where the tree abounds. The American variety, abundantly found in the mountainous parts of New York, Pennsylvania, Virginia, the two Carolinas, northern Georgia, &c., has smaller, but sweeter nuts than those of the European, (the Spanish Chestnut.) The timber is coarse-grained, strong, elastic, light and very durable;—hence much used for posts, &c.

Castaway, n. He or that which is thrown away; a person abandoned by God and man; a reprobate.

"To search . . . who are the heirs of the kingdom of God, who castaways."—Hooker.

—a. Useless; rejected, as of no value.

"Or only remember, at our castaway leisure, the imprisoned immortal soul."—Sir W. Raleigh.

Caste, (kast, or küst,) n. [Fr. *caste*; Sp. and Pg. *casta*; Hind. *zat*, a tribe; Sansk. *jat*.] A race or lineage; a distinct order in society; as, of aristocratic *caste*.

"The tinkers then formed an hereditary caste."—Macaulay.

—A term used to denote the hereditary classes into which the population of Hindostan is divided, according to the religious law of Brahma. The origin of these classes is detailed in the sacred book which contains the ordinances of Menu. According to this authority, the Brahman, the Kshatriya, the Vaisya, and the Sudra sprang respectively from the mouth, the arm, the thigh, and the foot of Brahma. 1. The class of *Brahmans*, or priests, are far exalted above the rest in honor and privilege, and should be devoted entirely to prayer and meditation, or at least to the more exalted concerns of life. Many *Brahmans*, however, do in fact engage in secular pursuits, not only as ministers of sovereign princes, (an office for which, according to the ordinances above cited, they are indeed peculiarly fitted, but also, in Guzerat and other parts of Western India, as merchants, or in the lower employment of messengers and porters; while many enter the British service as private soldiers. These, however, are *Brahmans* of the first and second classes (*Brachmachari* and *Grihast'ha*), youths or married men who as yet live in the world: from which the two higher classes, *Vanaprastha* and *Sannyassi*, are wholly divorced. From the latter spring the various orders of fanatics with which India swarms. 2. To the *Kshatriya*, or soldier C., belong not only the high military classes, but in some parts of Hindostan whole tribes, as the Sikhs, &c. 3. The *Vaisya*, or commercial class (*wealth*). 4. The *Sudra*, or C. of tillers of the soil (*labor*). These are deeply degraded below not only the *Brahmans*, but the other two C.; and even the reading of the *Vedas* or sacred books is forbidden them. Besides

Fig. 532. — CHESTNUT.
(Natural size.)

these 4 grand divisions, the Hindoos have many subdivisions of *C.*, and no fewer than 36 are reckoned which are all inferior to the Sudra. These descend, according to the mythological history of the Hindoos, from the *Burien Sunker*, or mixed class, proceeding from the confusion of *C.* which took place under the reign of a wicked and irreligious monarch. Finally, the Pariahs and some other races are considered as having no *C.* at all, and mere outcasts from humanity. From the intermixture of the races, innumerable mixed tribes have sprung up, who form castes among themselves. The loss of caste is one of the most serious calamities that can befall a Hindoo. This, however, results not from immoralities, for the most abandoned Brahmin retains his rank, notwithstanding his crimes; but he will entirely forfeit it, and lose all countenance in society, by touching impure food, or some such petty delinquency. Traces of the system of *C.*, which confines employments to hereditary classes, are to be found in the institutions of many countries, and in the history of many more. That the Egyptian nation was thus divided is well known; and it is supposed that similar institutions prevailed in the ancient Assyrian empires. If Plato can be relied on as an authority, the Athenians in the first ages of their commonwealth were divided into 5 classes of the same description—priests, handicraftsmen, shepherds and hunters, ploughmen, soldiers. The Cretans, it is said, were divided, according to the laws of Minos, in the same manner as the Egyptians.

Casteggio, a town of N. Italy, prov. of Voghera, 6 m. from Voghera City; pop. 4,000. Near it were fought (1800, 1859) two battles known under the name of *Montebello*, *q. v.*

Castel. [It. and O. Fr. *castle*.] The name, with various affixes, of a number of Italian and French towns and villages, for the most part unimportant.

Castelamare, a seaport town of Sicily, prov. Trapani, on a gulf of its own name, 6 m. N.W. of Alcamo; Lat. 38° 1' 51" N.; Lon. 12° 52' 43" E. *Exp.* Wine, fruits, grain, opium. Pop. 13,154.

Castel-Arquato, a town of N. Italy, prov. Parma, on the Lard, 19 m. S.E. of Piacenza; pop. 4,832.

Castellamare, or *Cas*, a city and seaport of S. Italy, prov. and on the Gulf of Naples, 15 m. W. of Salerno. *Manuf.* Linen, silk, cotton, and leather. In summer, *C.* is a favorite resort of the Neapolitans. Pop. 26,385.

Castellamonite, a town of N. Italy, in Piedmont, 10 m. S.W. of Jorica; pop. 5,550.

Castellan, *n.* [Fr. *châtelain*; Lat. *castellanus*.] The captain, governor, or constable of a castle, in the Middle Ages. It was also the title of a Polish dignitary, commanding part of a palatinate under a palatine. The *C.* were senators of the lower class, sitting in the diets, on low seats behind the palatines.

Castella'na, a town of S. Italy, prov. Bari, 27 m. S.E. of Bari city; pop. 9,645.

Castellane'ta, a town of S. Italy, prov. Otranto, 20 m. N.W. of Taranto. Cotton is grown in the neighborhood. Pop. 5,225.

Castellany, *n.* The lordship of a castle, or the extent of its domain and jurisdiction.

Castellated, *a.* Adorned with turrets and battlements like a castle; as, a *castellated* structure. —Enclosed within a building, as a fountain.

Castellazzo, (*kas-tel-at'sa*), a town of N. Italy, in Piedmont, 5 m. S.W. of Alessandria; pop. 5,759.

Castel-Leone, a town of N. Italy, 16 m. N.W. of Cremona; pop. 6,283.

Castellet, *n.* A small castle. (*R.*)

Castello de Vide, a town of Portugal, prov. Alentejo, 11 m. N. of Portalegre. *Manuf.* Woollens. Pop. 6,380.

Castellon, or *CASTELLON-DE-LA-PLANA*, (anc. *Castalia*), a town of Spain, prov. Valencia, 41 m. N.N.E. of the latter city. *Manuf.* Unimportant. Pop. 21,274.

Castellum, *n.* [Lat.] (*Arch.*) The receptacle in which the water was collected and heated for the public baths of the Romans.

Castelman, *PIERRE DE*, archdeacon of Maguelone, was sent, at the commencement of the 13th century, by Innocent III., into the S. of France as legate extraordinary, in order to search out the heretic Albigenses, and deliver them over to the secular arm. He was met by a determined resistance, and was at last slain in the territory of Raymond, Count of Toulouse. This murder led to the excommunication of Raymond, and also to the war of the Albigenses. D. 1208.

Castelman'dary, a town of France, dep. Ande, 21 m. W.N.W. of Carcassonne, celebrated for its numerous wind-mills; pop. 10,542.

Castelmandite, *n.* (*Min.*) A variety of Xenotime found in imperfect crystals and irregular grains of a grayish-white to a pale yellow color, in the diamond-sands of Bahia, in Brazil. It consists chiefly of hydrated phosphate of yttria.

Castellno'vo, a fortified sea-port of Austria, in Dalmatia, 11 m. W. of Cattaro; pop. 7,720.

Castelo-Bran'co, a city of Portugal, prov. Beira, on the Leiria, 51 m. N.E. of Abrantes; pop. 6,482.

Castel-Sarrasin, a town of France, dep. Tarn-et-Garonne, on the Songnaine, 13 m. W. of Montauban. *Manuf.* Serges, hats, leather. Pop. 7,521.

Castel-Ter'mini, a town of Sicily, 16 m. N. of Girgenti. Sulphur and rock-salt are largely produced here. Pop. about 5,000.

Castelvetra'no, a town of Sicily, prov. Trapani, 12 m. E. of Mazzara. *Prod.* Excellent wine, and olives. Pop. 18,156.

Cast'er, *n.* One who casts; as, a *caster* of stones, a *caster* of accounts.

"If with this throw the strongest *caster* vie,
Still, further still, I bid the discus fly." — *Pope*.

—A small phial or vessel for the table; as, a set of *casters*. —A stand to contain cruet for the dinner-table. —A small wheel on a swivel, placed on the legs of furniture, and by which it is rolled or moved about in any direction. —One who casts the parts of a play to the performers.

Castigate, *v. a.* [Lat. *castigo*, *castigatus*; from *castus*, chaste, pure, and *ago*, to make.] To correct; to chastise; to punish by stripes; to chasten; to check.

"If thou didst put this sour cold habit on,
To castigate thy pride, 'twere well." — *Shaks.*

Castigation, (*kas-ti-ga'shun*), *n.* Act of castigating; chastisement; punishment; correction; emendation.

Castigator, *u.* One who chastises or corrects.

Castigatory, *a.* Tending to correction; punitive; corrective; as, *castigatory* example.

—*n.* A ducking-stool. See *CUCKING-STOOL*.

Castiglione-delle-Stiviere, (*käs-tēl-yō-ne-dēl-le-stē-vē-a-rē*), a walled town of N. Italy, prov. Brescia, 22 m. N.W. of Mantua. This place is noted for a decisive victory gained by the French over the Austrians, 5th Aug., 1796, which gave the name of Duke de Castiglione to Marshal Angereau. Pop. 5,460.

Castile, (*käs-tēl'*), the central and largest division of Spain, lying between Lat. 38° 25' and 42° 50' N., and Lon. 1° 2' and 5° 37' W.; bounded N. and N.E. by Riosa, Alava, and Navarre; E. by Aragon, and Valencia; S.E. by Murcia; S. by Andalusia; and W. by Estremadura and Leon; length about 306 m. from N. to S.; mean breadth about 160. *Area*, 72,447 Eng. sq. m. *C.* is divided into two parts by a range of high mountains, called in different parts, Urbians, Carpetanos, Sierra de Guadarama, Gata, Somosierra, and de Estrella. The country to the N. of the ridge is called *Old*, while that to the S. is named *New Castile*. *Old C.* comprises the modern provs. of Burgos, Soria, Segovia, and Avila, so named after their chief towns. *New C.* comprises the provs. of Madrid, Guadalajara, Cuenca, Toledo, and La Mancha, also so called after the names of their chief towns, except La Mancha, whose cap. is Ciudad Real. The Ebro, Douro, Tagus, Guadiana, and Xucar have their sources in this prov. Besides the aforesaid chain of mountains, there are three other important ranges traversing *C.*; viz., the Sierra de Toledo, the Sierra Morena, and the Sierra Nevada. The surface of the country is accordingly, in many parts, exceedingly rugged, and the quality of the soil various. *Min.* Gold, silver, copper, quartz, marble, limestone, gypsum, and quicksilver, of which latter product the mines at Almaden alone furnish 2,000,000 lbs. annually. *Clim.* Healthy, and generally dry. The ordinary extremes of temperature at Madrid, are 90° Fahr. in summer, and 32° in winter. *Prod.* Corn, wines, fruits, oil, hemp, flax, madder, saffron. Agriculture is in a most backward state, and the roads are execrable. *Manuf.* Woollens, laces, plate-glass, leather, paper, earthenware, &c. *Inhab.* The people of this prov. are grave, honest, and sober, and their pride has passed into a proverb. The Castilian is the standard dialect of the Spanish language, becoming the language of the court on the marriage of Isabella, Queen of Castile, with Ferdinand of Aragon. *Hist.* The Castiles anciently formed parts of Cantabria, and like the rest of Spain, were successively overrun by Romans, Goths, and Saracens. After the expulsion of the last-named, the sovereignty of *C.* came by marriage to Sancho III. king of Navarre, whose son Ferdinand was made king of *C.* in 1034. He married the sister of Veremond III. king of Leon, whom he succeeded in 1037. The crowns of Castile and Leon were afterwards separated and again united several times, till, by the marriage of Isabella, who held both crowns with Ferdinand, king of Aragon, in 1479, the three kingdoms were consolidated into one.

Castile', in *Missouri*, a village of Livingston co., 115 m. N.W. of Jefferson City.

Castile, in *New York*, a post-village and township of Wyoming co., on the Genesee River, 58 m. E.S.E. of Buffalo.

Castile Creek, in *Missouri*, flows into Platte River, in the S.E. of Buchanan co.

Castile-soap, *n.* [From *Castile*, a Spanish province, whence it originally came.] A sort of hard, refined soap, made with olive oil and soda.

Castilian, (*kas-ti'l-yan*), *n.* An inhabitant, or native, of Castile, in Spain.

—The Spanish language, as spoken in Castile in its purest form.

—*a.* Pertaining, or relating to Castile; as, *Castilian* pride.

Castilian Springs, in *Mississippi*, a village of Holmes co.

Castille, CHARLES HIPOLYTE, an eminent French journalist and historian; b. 1820. His chief work is *Histoire de la Seconde République Française* (1854–5). In 1858 he published *Parallele entre César, Charlemagne, et Napoleon*; and, in 1859, *Histoire de Soixante Ans*, 1789–1850.

Castilleja, *n.* (*Bot.*) A genus of plants, order *Scrophulariaceae*, sub-order *Rhinanthida*. The Painted-cup, *C. coccinea*, found in wet meadows in Canada and U. States, is a very beautiful plant, remarkable for its large, bright scarlet bracts.

Castillon, (*kas-tēl-yawng*), a town of France, dep. Gironde, on the Dordogne, 26 m. E. of Bordeaux. It has manufactures of cotton and woollen yarns, nails, and cordage. It is celebrated as the scene of the battle between the forces of Henry VI. of England, and Charles VII. of France, July, 1453, in which the English met with a signal defeat, their leader, the Earl of Shrewsbury, and his son, being slain. Of all their possessions in France, Calais alone remained to the English after this battle, the incidents of which were seized on by

Shakspeare for the sixth scene in his play of *King Henry VI.*, Part I. In the neighborhood of this place Montaigne, the French essayist, was born and died.

Castine, in *Maine*, a port of entry, cap. of Hancock co., on the E. side of Penobscot Bay, 35 m. S. of Bangor, and 118 m. N.E. of Portland, on a tongue of land projecting from the N.E. Its harbor is accessible at all seasons, and is of sufficient depth for vessels of the largest class. Ship-building is the principal occupation.

Castine, in *Ohio*, a village of Darke co., 14 m. S. of Greenville; pop. 177.

Cast'ing, *n.* Act of casting or throwing. —The taking casts or impressions of figures, busts, medals, leaves, &c. —The act of assigning parts to players, or of contriving anything. —The process by which some animals throw off their skins, horns, &c.

(*Manuf.*) The process of pouring a metal or some other substance, in a fluid or semi-fluid state, into a mould, which is made in various ways, and of substances best suited for the material which is to be poured into it. The fluidity of the substance may be produced by heat, or some other agent; but the cast always solidifies in the mould. The process is applied to the manufacture of articles in iron, bronze, bell-metal, lead, steel, copper, porcelain, plaster, and cement of various kinds. The method of casting cannons in iron and bronze will be found elsewhere. (See *CANNON*.) The process adopted in casting statues in plaster, and making ornamental pottery and busts in Parian ware, differs materially from that which is used in forming metal castings. Each process will be found described in the notice of that branch of art to which it respectively belongs. (See *PORCELAIN*, *POTTERY*, *SCULPTURE*.) The process of forming or founding iron castings of great size, and bells and statues in bell-metal and bronze, will be found described under the head of *FOUNDING*.

(*Arch.*) A term to express the bending of the surfaces of a piece of wood from their natural state, caused either by the gravity of the material, or by its being subject to unequal temperature, or by the inequality of texture of the material. (Sometimes called *Warping*.)

(*Naut.*) The act of allowing the ship's head, previously pointing to the wind, to fall off so as to bring the wind on the vessel's side.

Casting of draperies. (*Painting*.) By this term is implied the distribution of the folds, and draperies are said to be *well cast* when the folds are distributed in such manner as to appear rather the result of mere chance than of art, study, or labor. Carlo Maratti thought that the disposition of drapery was a more difficult art than even that of drawing the human figure, and that student might be more easily taught the latter than the former. Inferior painters enter into the minute discriminations of quality in drapery; but, as Sir Joshua Reynolds has well observed in his *Fourth Discourse*, with the historical painter "the clothing is neither woollen nor linen, nor silk, satin, nor velvet; it is *drapery*; it is *nothing more*." The figures of Raffaele, in his painting are generally draped; those of Michael Angelo commonly nude.

Casting-net, *n.* A net which is cast and drawn, in contradistinction to a net that is set and left.

"Casting-nets did rivers' bottoms sweep." — *May*.

Casting off Copy. (*Printing*.) The operation of ascertaining accurately how many pages in print a given quantity of manuscript copy will take; or how many pages a given quantity of printed copy will make when the size of the book and the type are changed; also when a given quantity of manuscript copy is delivered with directions that it is to make a certain number of pages in print, to determine the size of the page and the size of the type. This is usually done by composing line or two of the copy, when, supposing a line and half of it makes a line of print, it becomes a mere arithmetical question. Supposing there are 12,000 lines of copy, it will make 8,000 lines in print, which, at 24 lines to a page, will be 333 pages, and with the title, sheets, &c., equal 14 sheets in 12mo.

Casting-voice, **Casting-vote**, *n.* The vote of a presiding officer, in an assembly or council, who decides a question, when the votes of the assembly meeting are equally divided between the affirmative and the negative. Sometimes the chairman has a casting vote in addition to his vote as an ordinary member; other times, he has only a casting-vote.

Casting-weight, *n.* A weight that turns a balance when exactly poised.

Cast-iron, (*kast'ī-rn*), *n.* (*Metal*.) Iron that has been cast into pigs or moulds; brittle iron. See *IRON*.

Castle, (*kas'l*), *n.* [Lat. *castellum*, from *castrum*, a fortified place; allied to *casa*, a hut, a house; Fr. *château*, *fort*.] The name formerly given to a strongly fortified building enclosed by walls, and intended for a place of residence, calculated to afford protection against attack of an enemy. The buildings to which this term is applied were chiefly the residences of the nobles during the Middle Ages. Their great strength, and the capacity of resistance to the imperfect artillery of day, consisting of the trebuchet, balista, mangonel, and other machines, from which stones, darts, and fire-balls were hurled at and within the walls, rendered the barrier insolent and oppressive, as they could not only defy forces which a neighboring baron might lead against them, but even those of the king himself. The characteristics of a *C.* are its *vallia* (embankments), and *fosses* (ditches), from the former of which the walls arise, and are usually crowned by battlements, and flanked by circular or polygonal bastions in the angles formed in the walls. These walls were pierced for gates, with fixed or draw

bridges and towers on each side; the gates, which were of considerable strength, were further guarded by descending gratings called *portcullises*; and all the apertures were made as small as they could be consistent with the requirements of internal lighting. The component parts of a castle were: 1. The *foss*, or moat, with its bridge. 2. The *barbican*, which was in advance of the *C.*, and was a raised mound or tower, the outer walls having terraces towards the *C.*, with bastions, as above mentioned. 3. The *gate-house*, flanked with towers and crowned with projections called *machicolations*, through which heavy missiles or molten lead were dropped on the heads of the assailants entering the gateway. 4. The *outer ballium*, or area within the *C.* by an embattled wall with a gate-house, and where the stables and other

Fig. 533. — NORMAN CASTLE.

From a drawing in "Grose's Military Antiquities."—1. The Donjon-keep. 2. Chapel. 3. Stables. 4. Inner Ballium. 5. Outer Ballium. 6. Barbican. 7. Mount, supposed to be the court-hill or tribunal, and also the place where justice was executed. 8. Soldiers' Lodgings.

offices usually stood. 5. The *inner ballium* for the residence of the owner or the governor with his retinue; his had at one corner, or in the centre, a *donjon*, or keep, which was the stronghold of the place, and usually contained the state apartment. 6. A *well*, and a *chapel*; the former usually, and the latter frequently, are found in ancient *C.*, which are complete in their arrangements.

"For a man's house is his castle."—Sir E. Coke.

(Games.) See CHESS.

Castles in the air, or *Castle in Spain*. [Fr. *châteaux en Espagne*.] Projects of a visionary nature; schemes not likely to be realized; mental phantasmagoriae.

"These were but like castles in the air, and in men's fancies vainly imagined."—Raleigh.

Castle influence, a phrase peculiar to Ireland, implying the political influence exercised by the viceroy and his court, residing at Dublin *Castle*.

a. a. and i. (Games.) In chess, to cover the king with a castle.

Castlebar, or *AG'LISH*, in Ireland, a town, cap. of Mayo co., on Castlebar River, 10 m. E.N.E. of Westport; pop. 3,066.

Castle-Bellingham, in Ireland, a town in co. Louth, 4½ m. N. of Dunleer; pop. 596.

Castle-Blakeaney, or *KIL'LASO'LAN*, in Ireland, a village in Galway co., 1½ m. S.E. of Tuam; pop. 678.

Castle-blakeney, in Ireland, a town of Monaghan co.

Castle-builder, (*kas'l-bild'er*) *n.* A visionary; one who builds castles in the air.

Castle-building, *n.* Act or practice of building castles in the air.

Castlecoomer, in Ireland, a town and parish in Kilkenny co., 10 m. N.N.E. of Kilkenny town.

Castle-Connell, or *STRADBAL'LY*, in Ireland, a town and parish of Limerick co., 6½ m. N.N.E. of Limerick City, on the Shannon; pop. of parish, 4,000.

Castle-Corner, in Ireland, a parish in Sligo co., on the river Moy, 3 m. N.N.E. of Ballina.

Castle-Craig, in Virginia, a post-office of Campbell co.

Castle Creek, in New York, a post-office of Broome co.

Castle-Dermot, in Ireland, a town of Kildare co., on the Lifford, an affluent of the Barrow, 6 m. N.N.E. of Carlow; pop. 1,500.

Castle Dome, in Arizona, a mining village of Yuma co., on the Colorado River, 150 m. S.W. of Prescott.

Castlefin, in Ireland, a town of Donegal co., on the Fin River, an affluent of the Foyle, 5 m. S.W. of Lifford; pop. 600.

Castlefin, in Pennsylvania, a post-office of York co.

Castle-Gregory, in Ireland, a town of Kerry co., ¼ m. from S. shore of Tralee Bay, and 12 W. of Tralee; pop. abt. 504.

Castle Grove, in Iowa, a post-township and v. of Jones co.

Castle-guard, CASTLEWARD, *n.* The defensive guard of a castle.

—*n.* (*O. Eng. Law.*) A feudal tenure, or knight service, which obliged the tenant to perform service within the realm, without limitation of time. See CASTLE-WARD.

Castle-Haven, in Ireland, a parish in Cork co.

Castle Hill, in Maine, a post-office of Aroostook co.

Castle-Island, in Ireland, a town and parish of Kerry co., 11 m. E.S.E. of Tralee; pop. 1,575.

Castle-Jordan, in Ireland, a parish bordering on Kings and Meath cos., 5 m. S.S.W. of Kinnegad.

Castle-Knock, in Ireland, a parish in Dublin co., on the Liffey, 4 m. W.N.W. of Dublin City.

Castle-Lyons, in Ireland, a village and parish of Cork co., 2 m. E. of Rathcormack; pop. abt. 775.

Castle-Macadam, in Ireland, a parish of Wicklow co.

Castle-Magner, in Ireland, a parish in Cork co., 7 m. W.N.W. of Mallow.

Castleman's Ferry, in Virginia, a post-office of Clark co.

Castleman's Fork, in Texas, a river flowing S.E. through Gonzales co., and entering the Guadalupe River in Dewitt co.

Castleman's River, in Pennsylvania, a small stream in the S.W. part of the State, flowing into the Youghisgheny River.

Castle Mar'tyr, in Ireland, a town of Cork co., on the river Maine; pop. 1,292.

Castle-More, in Ireland, a parish in the cos. of Roscommon and Mayo.

Castle-Pollard, in Ireland, a town of Westmeath co., 6½ m. W.N.W. of Duncree; pop. 1,280.

Castle-Rahan, in Ireland, a parish of Cavan co.

Castlereagh, LORD. See LONDONDERAT, MARQUIS DE.

Castlereagh, in Ireland, a town in Roscommon co., on the river Suck; pop. 1,200.

Castle Rock, in Minnesota, a post-township of Dakota co., 22 m. S. of St. Paul.

Castle Rock, in Missouri, a post-office of Osage co.

Castle Rock, in the State of Washington, a post-village of Cowlitz co., 13 m. N. of Monticello.

Castle Rock, in Wisconsin, a small post-village of Grant co., on Blue River, 22 m. N.W. of Mineral Point.

Castlery, (*käs'l-ry*) *n.* [*O. Fr. chastellerie*.] The government of a castle.

Castlet, (*käs'let*) *n.* A small castle. (*R.*)

Castle-Terra, in Ireland, a parish in Cavan co.

Castleton, in Indiana, a post-village of Marion co., 11 m. N.N.E. of Indianapolis.

Castleton, in Michigan, a township of Barry co., 10 m. E. of Hastings.

Castleton, in New York, a post-village of Rensselaer co., on the Hudson River, 8 m. S. of Albany.

—A township of Richmond co., on the N. end of Staten Island.

Castleton, in Vermont, a post-village and township of Rutland co., on Castleton River, 50 m. S.W. of Montpelier. It is the seat of the Castleton Medical College, founded in 1818, and connected with Middleburg College.

Castleton, in Virginia, a post-office of Rappahannock county.

Castletown, or **Castletown Berehaven**, in Ireland, a seaport town of Cork co., on the W. side of Bantry Bay, 18 m. W. of Bantry; pop. abt. 800.

Castletown, in Ireland, 2 parishes of Louth and Limerick counties.

Castletown-Ar'ra, in Ireland, a parish of Tipperary co.

Castletown-Dev'tin, in Ireland, a parish in Westmeath co., 7 m. W. of Athboy.

Castletown-Roche, in Ireland, a town and parish of Cork co., on the Aubeg, 8 m. W.N.W. of Fermoy; pop. 996.

Castletowns'end, in Ireland, a seaport town in Cork co., 4 m. E.S.E. of Skibbereen; pop. 745.

Castleville, in Iowa, a post-office of Buchanan co.

Castle-Well'an, in Ireland, a town in Down co., 5 m. S.W. of Clough; pop. 794.

Cast'ing, *n.* [See CAST.] An abortion, or abortive; as, "a casting's bladder."—Browne.

Cast-off, *a.* Laid aside; dispensed with; as, *cast-off* garments.

Castor, *n.* [*Lat.*] (*Zoöl.*) The BEAVER, *q. v.*

Castor and Pollux. (*Myth.*) Two demi-gods known by the ancients under the joint name of Dioscuri, that is, sons of Zeus or Jupiter. *C.* was celebrated as a horse-tamer; *P.* for his prowess as a boxer. Homer describes them as sons of Leda and Tyndareus, king of Lacedemon, and, therefore, brothers of Helen. Hence, too, their patronymic of Tyndaridae (sons of Tyndareus). Another fable ascribes their birth to an amour of Jupiter with Leda; whilst a third account makes Pollux and Helen only the fruit of this intercourse, and *C.* the lawful son of Tyndareus, whence it was supposed that the latter was mortal, and *P.* immortal. The brothers are described as having first distinguished themselves by the rescue of their sister Helen, who had been carried off by Theseus. They were engaged in the celebrated hunt of the Calydonian boar: were sharers in the renowned expedition of the Argonauts; and, finally, in a war against Messene, undertaken for the purpose of chastising Idas and Lynceus, sons of the king of that country. *C.* was slain by Idas, who was immediately struck dead by a thunderbolt from Jove, and Lynceus fell by the hand of Pollux. The latter, devotedly attached to his brother, besought Jupiter either to restore *C.* to life, or

to deprive him himself of his immortality. On this, according to one story, Jupiter granted them alternate life, so that each lived or died daily—a term extended by some writers to six months of alternate life and death of each. Another version makes Jupiter reward their affection by translating the two brothers into constellations, under the name of Gemini—stars which never appear together, but when one rises the other sets, and so on alternately. These demi-gods were chiefly worshipped as protectors of seamen, though they were supposed to be helpers of the brave generally. They are usually represented on medals, bas-reliefs, and gems, as youthful horsemen, with egg-shaped helmets crowned with stars, and spear in hand. The ancients very commonly swore "by Castor" (*Æcastor*) and "by Pollux" (*Ædopol*), as the English did by St. George, and the French by St. Denis.

(*Astron.*) See GEMINI.

(*Meteor.*) The name given to an electrical meteor, which sometimes appears at sea, attached to the extremities of the masts of ships, under the form of balls of fire. When one light only is seen, it is called *Helena*. The meteor is generally supposed to indicate the cessation of a storm or a future calm; but *Helena*, or one ball only, to portend bad weather.

Cast'or, *n.* A cant term for a hat, evidently derived from beaver (*q. v.*).

Cast'or Bayou, in Louisiana, rises in Jackson parish, and flowing southward, unites with the Dugdemona at the N. extremity of Rapides parish.

Castor-bean, *n.* The seed of the *Ricinus communis*. See RICINUS.

Castoreum, *n.* (*Med.*) A peculiar concrete substance found in two glandular sacs, closely connected with, but quite distinct from, the organs of reproduction in the Beaver, and at one time held in the highest repute in medicine, although now regarded as almost inert, and chiefly used by perfumers. The *C.* sacs are pear-shaped, and it appears in commerce in these sacs themselves, connected in pairs as they are taken from the animal. *C.* is produced both by the male and by the female beaver. Its odor is strong, unpleasant, and peculiar; taste bitter, subacid; and color orange-brown. *C.* was well-known to the ancients. From the time of Hippocrates, it was regarded as having a specific influence over the uterus.

Castoria, or FRENCH CAMP, in California, a village of San Joaquin co., abt. 5 m. S. of Stockton.

Castor-oil, *n.* See RICINUS.

Castor River, in Missouri, rises in Francis co., and flowing southward joins the Whitewater River, which, after receiving the outlet of Lake Pemisco, falls into Big Lake.

Castorville, in Missouri, a post-office of Stoddard co.

Castorville, in New York, a village of Lewis co., on Beaver River, 60 m. N.W. of Utica.

Castrametation, *n.* [*Lat. castrum*, a camp, and *metor*, I measure.] (*Mil.*) The art of laying out camps, whether the troops to occupy them are to be huddled, under canvas, or bivouacked.

Castrate, (*kas'trät*) *v. a.* [*Lat. castrum*, *castratus*, probably from *castus*, chaste.] To geld; to deprive of the testicles; to emasculate; to mutilate; to render impotent: as, to *castrate* a bull.

—To expurgate, or cut away the obscene parts of a book or writing. —To cut out or remove a leaf or sheet from a book, and thus impair its efficiency.

Castration, *n.* [*Fr.*; *Lat. castratio*.] (*Surg.*) The operation of removing the testicles, which renders the individual incapable of reproduction. This privation has a great influence on the development of puberty. It is practiced to procure a clear and sharper voice.

Castra'to, **Castra'tus**, *n.* [*Lat.*; *Fr. castrat*.] One who has been castrated. (In the Southern States, and elsewhere, an animal thus situated is said to be *altered*.)

Castrel, *n.* (*Zoöl.*) See KESTREL.

Castren, MATTHIAS ALEXANDER, a distinguished Finnish philologist, b. 1813; d. 1852.

Castren'sial, CASTRENSIAN, *a.* Pertaining to a camp.

Castres, a town of France, dep. Tarn, on the Agout, 23 m. S.S.E. of Alby. *Manf.* Cloth, woollens, cottons, linens, paper, leather, &c. *Pop.* 23,691.

Castro, a seaport town of Asiatic Turkey, and cap. of the island of Mitylene, 55 m. N.W. of Smyrna; pop. about 7,000.

Castro, a seaport town of S. Italy, prov. Lecce, on the Adriatic, 28 m. S.S.E. of Lecce. Harbor available for small vessels only. *Pop.* 5,830.

Castro, in Brazil, a town in the province of Sao Paulo, 85 m. N.W. of Caritiba; pop. of the district 10,000.

Castro, in Chili, on the E. coast of the island of Chiloe; pop. 4,000.

Castro, INEZ DE, a beautiful lady of Castile, secretly married to Pedro, son of Alphonso IV., and assassinated by order of the latter, 1355. Her mournful fate is the subject of several tragedies and poems.

Castro, JUAN DE, a Portuguese commander, afterwards governor of the Portuguese possessions in the E. Indies, 1500–1548.

Castro del Rio el Seal, (*anc. Castra Julia*), a town of Spain, prov. Cordova, on the Gnadajos, 16 m. S.E. of Cordova. *Manf.* Woollens and hemp. *Pop.* 9,939.

Castro-Giovan'ni, (*anc. Enna*), a town of Sicily, prov. Catania, 64 m. E.S.E. of Palermo. This city was celebrated in antiquity as the birthplace of Ceres. *Pop.* 15,121.

Castro Nuo'vo, a fortified town of Sicily, 20 m. from Palermo; pop. 6,720.

Castropetre, in Ireland, a parish in Kings co.

Castrovilla'ri, a town of S. Italy, 35 m. N. of Co-senza; pop. 8,468.

Cas'troville, in California, a P. O. of Monterey co.

Cas'troville, in Texas, a post-village, cap. of Medina co., 28 m. W. by S. of San Antonio.

Cas'tro Vireyua, (*ve-rí'na*), a town of Peru, cap. of a prov. of same name, on the W. slope of the Andes, 112 m. from Guamanga; pop. of prov. abt. 15,000.

Cas't-steel, *n.* (*Metal*.) Blistered steel melted, cast into ingots, and again rolled out into bars. See **STEEL**.

Castuera, (*cas'too-air'a*), a town of Spain, in Estremadura, 68 m. E.S.E. of Badajoz, near the right bank of the Guadalefra; pop. 6,628.

Casual, (*kazh'ū-āl*), *a.* [*Fr. casual*, from *Lat. casus* — *caso*, to fall.] Falling out; accidental; fortuitous; happening by chance; as, a casual meeting.

"The commissioners entertained themselves by the fireside in general and casual discourses." — *Clarendon*.

—**Incidental**: occasional; not regular; contingent; as, a casual expense.

"The revenue of Ireland, both certain and casual, did not rise unto ten thousand pounds." — *Davies*.

Cas'ually, *adv.* In a casual manner; without design; by chance.

"I should have acquainted my judge with one advantage, and which I now casually remember." — *Dryden*.

Cas'ualness, *n.* Quality of being casual or unpremeditated.

Cas'ualty, *n.* That which is casual, or which comes by chance or without design. Inevitable accident. Unforeseen circumstance not to be guarded against by human agency, and in which man takes no part.

(*Mil.*) Diminution of numbers on the muster-roll of an army, &c., by death, discharge, or desertion.

Casualty Ward. That ward in a hospital set apart for the treatment of injuries resulting from accident.

Casuarina, *n.* (*Bot.*) See **CASUARINACEÆ**.

Casuarina'ceæ, **BEEF-WOODS**, *n. pl.* (*Bot.*) An order of plants, alliance *Amentales*. There is but one genus, *Casuarina*, including 20 species. They are for the most part Australian trees or scrubby bushes, with slender, wiry, drooping, jointed branches, which have no evident leaves. The name beef-wood was suggested by the color of the timber resembling that of raw beef. The wood is also known under the names of Botany-Bay Oak, Forest Oak, He Oak, and She Oak.

Casuarinus, *n.* (*Zoöl.*) See **CASSOWARY**.

Casnist, (*kāz'u-ist*), *n.* [*Fr. casuiste*; *It. casuista*, from *Lat. casus*, a falling, an error, a case.] One who studies and resolves cases of conscience.

Casuistic, **Casuistic'al**, *a.* Relating to cases of conscience; as, *casuistic reasoning*.

Cas'istry, *n.* (*Ethics*.) That branch of ethical science which professes to deal with cases of conscience. It lays down rules or canons directing us how to act in all matters of moral doubt; whether and how far an obligation is binding upon us, or may be relaxed or dissolved, on account of concomitant circumstances. Its rules are drawn from revelation, reason, the Canon Law, authority of the Fathers, &c. This science was much studied in the 15th and 16th centuries, especially by the Jesuits. It has, however, been cultivated in the Protestant as well as the Roman Catholic Church, and there was, until recently, a professor of casuistry in the English Cambridge University.

Cas'us Belli, *n.* [*Lat.*, cause of war.] (*Polit.*) The reason alleged by one nation for going to war with another.

Cas'us Fortn'itus. [*Lat.*, inevitable accident.] (*Law*.) A loss happening in spite of all human effort and sagacity. It includes such perils of the sea as strokes of lightning, &c. The happening of a *C. F.* excuses ship-owners from liability for goods conveyed.

Casus Omis'sus, *n.* [*Lat.*] (*Law*.) A case which is not provided for. When such cases arise in statutes which are intended to provide for all cases of a given character which may arise, or in a contract, the common law governs.

Cas'well, in N. Carolina, a N. county, bordering on Virginia; area, 400 sq. m. It is intersected by Hycotee River and County Line Creek, affluents of Dan River. Its surface is undulating, and the soil fertile. *Cap. Yancey*. Pop. 16,081. This co. was named in honor of Richard Caswell, first governor of North Carolina, and brigadier-general in the army of the American Revolution. B. 1729; d. 1789.

Cat, *n.* [*Fr. chat*; *It. gatto*; *Lat. catus*; *Ar. kitt, kitta*, a she-cat; *Pers. chat*; *Ger. Katze*; *W. cath.*] (*Zoöl.*) The *Felis catus ferus*, a species of the gen. *FELIS*, *q. v.* The cat is originally from the European forests. In its wild state it differs from the domestic animal in having a shorter tail, a flatter and larger head, and stronger limbs. Its color is grayish-brown, with darker transverse undulations. Its manners resemble those of the lynx, living in woods, and preying on young hares, birds, and a variety of other animals, which it seizes by surprise. It is the fiercest and most destructive beast to be found in France, Germany, and England. At what period Cats became inmates of human habitations, it is scarcely possible, at this period, to determine, but there is good reason to believe that they were at first domesticated in Egypt. The Cat belongs to a genus better armed for the destruction of animal life than all other quadrupeds. The short and powerful jaws, moved by vigorous muscles, are supplied with most formidable trenchant teeth; a cunning disposition, combined with nocturnal habits and much patience in pursuit, gives them great advantages over their prey; and their keen, lacerating claws enable them to inflict a certain death-blow. All animals considerably weaker than themselves prove objects of pursuit; but the mouse is their favorite game; for which they will patiently wait for a whole day till the victim

comes within reach, when they seize it with a bound, and after playing with, put it to death. The pupil of the eye in most animals is capable of but a small degree of contraction and dilatation; it enlarges a little in the dark, and contracts when the light pours upon it too profusely; but in the eyes of Cats, this contraction and dilatation is so considerable, that the pupil, which by day appears narrow and small, by night expands over the whole surface of the eye-ball, and gives the eyes a luminous appearance. By means of this peculiar

Fig. 534. — WILD CAT, (*Felis catus ferus*.)

structure, their eyes are better adapted for vision at night than in the day-time; and they are thus fitted for discovering and surprising their prey. Cats are extremely fond of strong-smelling plants, and will roll in valerian till they seem almost mad with excitement. Personally, the *C.* is a very cleanly animal, avoiding to step in any sort of filth, concealing its excrement in the earth with great care, and preserving its fur in a very neat condition; which being generally clean and dry, readily yields electric sparks when rubbed. The Cat goes with young for 63 days, and brings forth from 3 to 6 at a litter, which remain blind for 9 days. The varieties of this animal in a domestic state are very numerous; it is either entirely black (black and white); black, fulvous, and white (called the Tortoise-shell or Spanish Cat); entirely white; fulvous and white; dun color or tawny, either plain or striped; tabby, boldly striped; slate-colored or blue-gray (called the Chartreux Cat); with very long fur, especially on the neck and tail (the Persian Cat); long hair of silvery whiteness and silky texture (called the Angora Cat); and, lastly, with pencilled or tufted ears, like a lynx, which sometimes, though rarely, takes place. Of all the above varieties, the Persian, the Angora, and the new, tall, and gray Malta variety, are the most remarkable. Although the Cat is capable of showing considerable fondness for an individual, it seems to be a pretty general opinion that she seldom, if ever, confides fully, even in the warmest demonstrations of kindness; but, being highly sensitive and fond of ease, evinces little anxiety, except for the continuance of her enjoyment. Yet, with all the prejudice that exists against the furtiveness and treachery of the species, no one can deny that, when well educated, the Cat possesses qualities which well entitle her to the regard and protection of mankind; and if she does not exhibit the vivid and animated attachment of the dog, she is still of an affectionate and gentle disposition, and grateful to her benefactors. Nor does any animal, whose habits we have the opportunity of accurately observing, exhibit a greater degree of maternal tenderness; the extreme assiduity with which she attends her young, and the fondness which she shows for them, never fail to attract attention.

(*Mil.*) In the military engineering of the Middle Ages, a kind of movable tower to cover the sappers as they advanced to a besieged place. It was also called **CAT-CASTLE**.

(*Naut.*) A single masted boat generally from 16 to 32 feet in length, and proportionately wide, carrying one sail; much used on our coasts for fishing excursions.

—A ship employed in the English coal-trade.

—A tackle by which the anchor is raised to the cathead.

—A double tripod, having six feet.

(*Games*.) A game at ball formerly played.

Cat and dog. Quarrelsome, like a cat and dog.

"I am sure we have lived a cat and dog life of it." — *Coleridge*.

To turn a cat in a pan. To make a sudden change of religion or politics, so as to be on the most powerful or popular side. — *Cat-o'-nine-tails*. A whip divided into nine strings or knots, which formed a terrible instrument for the infliction of corporal punishment in the navy and army, and, in certain cases, in the civil prisons.

"You awful cat-o'-nine-tails to the stage,
This once be just, and in our cause engage." — *Vanbrugh*.

—*v. a.* (*Naut.*) To bring up to a ship's cathead; as, to cat the anchor.

Catabasion, (*kat-a-bā'zhun*), *n.* (*Arch.*) A vault under the altar of a Greek church, in which relics are kept.

Catacaustic, *a.* Relating to a caustic curve.

Catacaustics, *n. pl.* [*Gr. kata*, and *kaiō*, I burn.] (*Geom. and Optics*.) The caustic curves formed by the reflection of the rays of light; — so called to distinguish them from the *diacaustic*, which are formed by refracted rays.

Catachresis, *n.* [*Gr.*, a misuse.] (*Rhet.*) An abuse of words: the use of a word in a sense different from its own: as, "the blood of the grape." — See **METAPHOR**.

Catachrestic, **Catachrestical**, *a.* Belonging to a catachresis; far-fetched.

"A catachrestical and far-derived similitude." — *Browne*.

Cataclasis, *n.* [*Gr.* from *kataclaso*, I break to pieces.] Distortion, or spasmodic fixation of the eyes: spasmodic occlusion of the eyelids. Also fracture of a bone.

Cataclysm, (*kat'a-klyzm*), *n.* [*Gr. kataklysmos* — *kata*, down, and *klyzō*, to wash.] A washing down or away; a deluge.

Cataclysm'al, *a.* Of, or belonging to, a cataclysm.

Catacomb, (*kat'a-kōm*), *n.* [*Gr. kata*, down, and *kumbos*, a cavity, from *kuptō*, to hide.] (*Arch.*) A general name given to excavations under-ground, used for the purpose of interment. The most celebrated are those of the ancient city of Memphis, in Egypt, which extend for miles those of Rome and Naples, where the early Christians used to meet for worship during the cruel persecutions of which they were the objects, and which are full of the most interesting memorials of these martyrs for conscience' sake; and those of Paris, which present, among other tragic memorials, the bones of those slaughtered in the Reign of Terror, built up as walls to form passages through these gloomy vaults. Generally speaking, catacombs are but the quarries out of which have been hewn the stone for building the cities under which, or near to which, they lie.

Catacoustics, *n. pl.* [*Gr. katá*, and *akonō*, I hear; *Fr. catacoustique*.] The science of reflected sounds, or that part of acoustics which treats of the properties of echoes, or, in general, of sounds which do not come to the ear directly, but after having been reflected by some substance. — See **ECHO**; **SOUND**.

Catadiop'tric, **Catadiop'trical**, *a.* Pertaining to the reflection and refraction of light; as, a *catadioptric telescope*.

Cat'adrome, *n.* [*Gr. kata-dromos*, race-course.] A race-course; a tilt-yard.

(*Mech.*) A machine like a crane for raising or lowering heavy weights.

Catafal'co, **Catafalque**, (*kāt'a-fālk*), *n.* [*Fr. catafalque*; *It. catafoleo*, a funeral canopy.] A decoration of sculpture, painting, &c., raised on a timber scaffold, to show a coffin or tomb in a funeral solemnity; a temporary structure of carpentry, representing a tomb or cenotaph.

Cataguat'ic, *n.* [*Gr. katagma*, fracture.] (*Med.*) A remedy supposed to be capable of occasioning the formation of callus.

Catagraph, (*kat'a-graf*), *n.* [*Gr. katagraphon*.] The first draught of a picture.

Catalion'la, in Louisiana, a N.E. parish; area, 1970 sq. m. It is watered by the Washita, Tensas, Black, and Little rivers. The surface is diversified and the soil generally fertile. *Cap. Harrisonburg*.

Catalionla Lake, in Louisiana, in the N.E. central part of the State, is 15 or 20 m. long, and 3 m. wide.

Cat'alan, *a.* (*Geog.*) Pertaining to the prov. of Catalonia, Spain, or to its language.

Cat'alan, *n.* (*Geog.*) A native, or inhabitant, of Catalonia.

Catalec'tic, *a.* [*Lat. catalecticus*.] (*Pros.*) Pertaining to metrical composition, or to measure; as, a *catalectic verse*.

Catala'met, or **CATHLA'MET**, in Washington and capital of Wahkiakum co., on the Columbia River, about 20 m. from its mouth.

Catalec'tic, *n.* [*Gr. katalektikos*, deficient.] (*Lit.*) In Greek and Latin poetry, a verse wanting one syllable of its proper length: *acatalectic*, a verse complete in length; *hypercatalectic*, having one syllable too many; *brachycatalectic*, wanting two syllables.

Catalecticant, *n.* (*Meth.*) A certain invariant which, together with the canonisant, presents itself in the problem of the reduction of a quant to its canonical form.

Catalepsy, **Catalepsy**, *n.* [*Gr. katalepsis* — *kata*, and *lambanō*, to take or seize.] (*Med.*) A disease in which there is sudden suspension of the action of the senses and of volition; the limbs and trunk preserving the different positions given to them. The circulation and respiration are in most cases but little affected; but occasionally they are greatly depressed, and are sometimes even imperceptible. The attack may last only for a few minutes, or it may continue for hours, and even, it is said, for days; and consciousness generally returns with the same suddenness as it left, the patient having no recollection of anything that passed during the attack. This disease bears a great resemblance to the mesmeric state, and, indeed, is so often feigned, that many have doubted whether it really had any existence. There can be little doubt, however, that it is sometimes, though not often, a real disease. The hysterical and melancholic are most disposed to it; and the paroxysm is frequently induced by some strong mental emotion, or by some disorder of the digestive or secretory organs. The treatment will necessarily vary in each particular case, according to the general condition of the patient and the probable exciting cause.

Catalept'ic, *a.* Pertaining to catalepsy; as, a *cataleptic attack*.

Catallac'tics, *n. sing.* [*Gr. katallassein*, to exchange.] The science of exchanges.

Catalogue, (*kat'a-log*), *n.* [*Gr. kata*, and *logos*, computation.] A counting over; an enrolment; a collection of names, &c., put down in order in a list; an enumeration of the names of men or things disposed in order; a list; a roll; a register.

"The bright Taygete, and the shining Bears,
With all the sailors' catalogue of stars." — *Addison*.

Catalogue raisonné, (*kat'a-log rā-zo-nā'*), [*Fr.*] (*Bibliog.*) A catalogue of books, classed under the heads of their several subjects, and with a general abstract of the contents of works where the title does not sufficiently indicate it; thus serving as a manual to direct the reader

to the sources of information on any particular topic. The want of alphabetical arrangement is supplied by an index at the end. The catalogue of the French *Bibliothèque Nationale* (10 vols. fol., 1739-53) is said to be the best work of this description, as far as it extends.

—*v. a.* To form into a catalogue; to make a list of.

Catalonia, (Sp. *Cataluña*), a prov. of Spain, occupying the N.E. portion of the kingdom, between Lat. 40° 30' and 42° 51' N., and Lon. 0° 15' and 3° 21' E. It is of a triangular shape, and has the E. Pyrenees, which separate it from France on the N.; the Mediterranean on the E.; and Aragon, and a small part of Valencia, on the W. Greatest length and breadth, 190 and 130 m.; area, about 12,150 sq. m., including Andorra. The Pyrenees are not so rugged on this as on the French side, and descend gradually toward the Mediterranean. They are mostly granitic. The mountain of Cardona, 17 m. N.W. of Montserrat, almost in the centre of the prov., is a solid mass of pure rock-salt, without crevice or fissure, between 400 and 500 feet high, and 3 m. in circuit. This prodigious mass of salt is unparalleled in Europe, and perhaps in the world. *C.* is well watered by the Ebro, the Segre, and other smaller rivers. *Min.* Iron, copper, manganese, zinc, coal, alum, nitre, marbles, and many varieties of precious stones. *Clim.* Tolerably healthy. *Soil and Prod.* Grain, hemp, flax, madder, anise, saffron, barilla, wine, and fruits. Timber is plenty, and nuts and cork are extensively exported; wool is produced annually to the quantity of 30,000 quintals. *C.*, in short, is the best cultivated, and its people the most industrious, of any of the Spanish provinces. *Manuf.* Linens, and other textile fabrics; paper, hats, cordage, leather, brandy, iron and copper goods, &c. *C.* is now divided into the 4 provinces of Barcelona, Tarragona, Lerida, and Gerona, with chief towns of the same names. The language of the Catalans is a dialect of the Romance or Provençal, but it is now a good deal mixed with Castilian. *Hist.* *C.* anciently made a part of the *Hispania Tarraconensis* of the Romans. It was afterward successively possessed by the Goths and Moors, and, in the 8th and 9th centuries, became an independent State, subject to the counts of Barcelona. In 1137 it became united with Aragon, and has since continued to form part of the hegemony of the Spanish kingdom. *Pop.* 1,731,793.

Catalpa, *n.* (Bot.) A genus of plants, order *Bignoniaceae*. The *C. bignonioides* is a fine wide-spreading tree, native in the Southern States, but cultivated in many places at the North, for ornament and shade. In favorable circumstances, it attains the height of 50 ft., with a diameter of nearly 2 ft. It exhibits a wide-spreading top, with comparatively few branches. Its leaves are beautifully heart-shaped, and smooth, resembling those of the lilac, but much larger. In color the bark is a light, shining gray. In May it puts forth blossoms in great profusion. Their form is campanulate, color white, with yellow and violet spots. Capsule cylindric, pendent, a foot in length; seed winged.

Catalpa Grove, in Indiana, a village of Benton co.

Catalpa Grove, in Tennessee, a village of Marshall co.

Catalysis, *n.* [Gr., a dissolving.] (Chem.) The power of presence, i. e., the chemical action that certain bodies exert upon others, without themselves taking part in the chemical changes resulting therefrom. Thus, yeast converts sugar into carbonic acid and alcohol, without itself entering into the composition of either of these bodies. Examples of this occur in many of the ordinary operations of the laboratory. Chlorate of potash, for instance, melts at 650° Fahr., and if the heat is raised to 700° Fahr., it is decomposed and gives off oxygen; but if mixed with one-fourth of its weight of black oxide of manganese or copper, oxygen is evolved below 450°. The term catalysis must be looked upon as merely applied to certain actions, the nature of which is imperfectly understood, and not as implying a special force. Most of these actions may be ascribed to other well-known causes. Some chemists, for instance, explain the action of certain metallic oxides on chlorate of potash by supposing that the particles of the oxide extract the oxygen contained in the salt with sufficient force to cause its liberation, although the force is not sufficient to effect their union.

atalytic, (*kat-a-lit'ik*), *a.* Relating to catalysis; as, catalytic force.

ata'ma Creek, in Alabama, of Montgomery co., enters Alabama River, 12 m. W. of Mobile.

atamaran, (*kat-a-ma-ran'*), *n.* (Naut.) A sort of raft used chiefly by the natives on the coast of Coromandel, India, for the purposes of fishing and landing goods from ships. The figure (535) shows the *C.* used at Madras for communicating between the ships in the roads and the shore.

g. 535. — INDIAN CATAMARAN.

A boat with two hulls, introduced abt. 1876 into the U. S. A scolding woman; a wife of quarrelsome temper.

A large wagon used for heavy loads of stone, &c.

atamar'ca, a W. province of Argentine Republic, in South America, between Lat. 25° and 29° S., and Lon. 66° and 90° W. *Prod.* Corn, cotton, red pepper. *Pop.* Estimated at 130,000 in 1897.

TAMARCA, cap. of above dep., 275 m. N.W. of Santiago.

Pop. (1897) about 7,200.

Catame'nia, *n.* [Gr., *cata*, according to, and *men*, a month.] (*Med.*) The periodical recurrence of the menses.

Catame'nia, *a.* Pertaining to the catamenia, or menstrual discharges in females.

Cat'amite, *n.* [Gr. *Ganymēdēs*, Ganymede.] A bardash.

Cat'amount, *n.* (*Zoöl.*) See PANTHER.

Catanad'romous, *a.* [Gr. *kata*, downwards, *ana*, upwards, and *dromos*, a race or course.] Passing once a year from salt water into fresh, as certain kind of fish.

Cat'ananche, *n.* (Bot.) A genus of plants, order *As-traceae*.

Catandua'nes, one of the Philippine Isles, 40 m. long, by 15 broad; Lat. 15° N., Lon. 124° 30' E.

Cata'nia, an ancient city and seaport of Sicily, cap. of prov. of same name, on the E. coast of the island, at the foot of Mount Etna, 31 m. N.N.W. of Syracuse. This is a fine and picturesque city, built and paved of lava. *C.* has been repeatedly destroyed by earthquakes. *Manuf.* Silks, amber, and lava curiosities. *Pop.* 84,397.

Catanza'ro, a town of S. Italy, cap. of a new prov. of same name, near the Gulf of Squillace, 29 m. S.S.E. of Coseuza. *Manuf.* Silk, velvet, cloth. Inhabitants affable and industrious, and the women the handsomest in the three Calabrias. *Pop.* of town, 24,901.

Catapel'tic, *a.* Relating to a catapult.

Catapet'alous, *a.* [Gr. *kata*, against, and *petalon*, a leaf.] (Bot.) Applied to petals united with each other at the base, and with the base of the stamens, as in the Mallow.

Cataphon'ic, *a.* That relates to cataphonics, or cata-coustics.

Cataphon'ics, *n. pl.* [Gr. *kataphoneo*, to resound.] Same as CATACUSTICS, *q. v.*

Cat'aphracted, *a.* [From *cataphrast*, the name of an ancient, heavy, defensive armor.] (*Zoöl.*) Covered with a hard callous skin, or with horny or bony plates, or scales, closely joined together.

Cataphrac'tic, *a.* Pertaining to a cataphract.

Cat'aplastm, *n.* [Gr. *kataplasma*, from *kataplassō*, to spread, or plaster over—*kata*, and *plassō*, *plaso*, to form, mould, or shape, to apply as a plaster; Fr. *cataplasme*.] (*Med.*) A plaster or poultice; any application, not being liquid, placed on the body.

Catapuli'che, in S. America, a river which rises on the E. side of the Chilian Andes, in Lat. 39° 15' S., and falls into the Rio Negro, in Lat. 40° 3' S.

Cat'apult, *n.* [Lat. *catapulta*.] (*Mil.*) An ancient engine of war of great power, used by the ancients for throwing large darts and arrows, and said to have been invented by Dionysius, the tyrant of Syracuse, about 400 B. C. It resembled a strong short bow placed in a frame of wood, securely planted in the ground. The cord was attached to a flat piece of wood, which worked on a slide projecting to the rear. The bow was bent by

Fig. 536. — CATAPULT.

the action of a small windlass at the extremity of this projection. When the cord was suddenly released from the extreme tension to which it had been subjected, the recoil of the bow returning to its original position, hurled the arrow forward with great force. See BALISTA.

Cat'aract, *n.* [Fr. *cataracte*; Lat. *cataracta*; Gr. *kataraktēs*, from *katarasso*, *kata*, and *rasso*, to shiver, shatter, dash.] A precipice in the channel of a river, caused by rocks or other obstacles stopping the course of the stream, from whence the water falls with a greater noise and impetuosity. The English language has many words that express the different degrees of rapid and sudden descent in streams of water. The term most generally used is *falls*. Many cataracts are remarkable for their picturesque sublimity. The Falls of Niagara, in America, surpass, in size and grandeur, all others in the known world.

(*Surg.*) An opacity of the crystalline lens of the eye, producing confused or indistinct vision, or total blindness, according to the less or greater extent of the thickening; it is sometimes rapid, and often very slow in its progress. It is distinguished from *gutta serena* by the visible opacity of the lens, and by the iris contracting upon exposure of the eye to light. This disease is curable either by depressing or extracting the lens, operations which are performed with wonderful dexterity by modern oculists.

(*Mech.*) A contrivance applied to engines for regulating the number of strokes per minute: it consists of a small pump fixed on a cistern; the piston is raised at each stroke of the engine by a tappet on the plug-rod, and the water rises into the cylinder of the pump; it is then forced through a cock by means of counter-weights attached to a cross-head on the pump piston-rod; when

the water has been forced back into the cistern, a series of levers, acting on a rising rod, loosen catches which allow weights to act, by means of levers, to open or shut the steam-, equilibrium-, and exhaust-valves.

(*Fort.*) A portenallis.

Cat'aract, in Indiana, a post-office of Owen co., on Mill Creek, 34 m. E. of Terre Haute.

Cataract, in Wisconsin, a post-village of Monroe co., on Big Creek, 10 m. N. of Sparta.

Cataract'ous, *a.* Partaking of the nature of a cataract in the eye.

Catarrh, (*ka-tür'h*), *n.* [Fr. *catarrhe*; Lat. *catarrhus*; Gr. *katarrhoos*, from *katarrio*, to flow down—*kata*, and *rhōo*, to flow.] (*Med.*) A common cold. A catarrh is a slight inflammatory affection of the lining membrane of the mouth, nostrils, and pharynx, sometimes extending down the gullet behind, and the larynx and wind-pipe in the front. In the latter and most important form, the disease is called *Bronchitis*; and when there is a mixture of the two, the result assumes the features of what is called *Influenza*. The symptoms of a common catarrh or cold in the head are a sense of uneasiness, heat, and stuffing in the nostrils, diminution or loss of the smell, dull, heavy pain in the forehead, inflamed eyes, and sneezing. Generally, it extends also to the throat and chest, occasioning hoarseness, cough, and difficulty in breathing. The nostrils discharge a fluid at first thin and acrid, but which afterwards becomes thicker, and often purulent. The common cause of this disease is exposure to a cold or damp atmosphere, or to draughts, especially when the surface of the body is warm or perspiring. The treatment of a common cold is usually a simple matter. Confinement to the house for a day or two, a warm foot-bath, diluent drinks, abstinence from animal food and vinous or other fermented liquors, and a dose or two of some gentle laxative, are usually sufficient to remove the disease.

Catarrhal, (*ka-tür'ral*), *a.* Pertaining to catarrh; produced by it, or attending it.

Catarrhus, (*ka-tür'rus*), *a.* Of the nature of catarrh.

Cat'as Atlas, in Brazil, a village in the province of Minas Geraes, 20 m. N.N.E. of Ouro Petro; *pop.* 3,500.

Catasau'qua, in Pennsylvania, a post-borough of Hanover township, Lehigh co., on the Lehigh River, 3 m. from Allentown, and 54 m. N. of Philadelphia. It has extensive machine-shops, rolling mills and blast furnaces. *Pop.* (1897) about 4,000.

Catastal'tic, *a.* (*Med.*) Applied to medicines which repress evacuations, as astringents and styptics.

Catasta'sis, *n.* [Gr., from *kathistemi*, to establish.] (*Rhet.*) The narrative part of an orator's speech, in which he unfolds the matter in question, and which generally forms the exordium.—(*Med.*) The constitution, state, condition, &c. of any thing. Also, the reduction of a bone.

Catastro'isms, *n.* [Gr. *kata*, downward, and *stoma*, a month.] (*Zoöl.*) A family of soft-finned fishes which have a single dorsal, the mouth beneath the snout, lips plaited, lobed, or carunculated, and suitable for sucking. It contains the well-known Suckers, of which there are many species, and the Climb-suckers, of the ponds and streams of the United States. Large numbers move together, and some of the former attain the weight of ten pounds.

Catas'trophe, *n.* [Fr.: from Gr. *katastrophē*, from *katastrophō*, to turn up and down—*kata*, and *strophō*, to turn.] A subversion; an overturning; a revolution; the change or revolution which produces the final event; a conclusion, calamity, or disaster.

"The most horrible and portentous catastrophe that nature ever yet saw." — Woodward.

(*Lit.*) The final event of a drama or romance, to which the other events are subsidiary. The *peripeteia*, or revolution indicated by Aristotle as one of the parts of the drama, was a change in the fortunes of the principal personages of the play: as the fall of Oedipus from sovereignty into extreme misery and banishment, in the *Oedipus Tyrannus*. Some such change is generally involved in the idea of a *C.*; thus, marriage is the ordinary *C.* of a comedy or a novel, as some disastrous change is that of a tragedy.

"He comes like the catastrophe of the old comedy." — Shaks.

Catastroph'ic, *a.* Pertaining to a catastrophe.

Catan'la, in Georgia, a post-office of Harris co.

Catan'la Creek, in Georgia. See MULBERRY CREEK.

Cataw'ba, or **Great Catawba**, a river in N. and S. Carolina. It has its source in Blue Ridge, in Burke co., flows eastward to the W. border of Iredell co., then southward, till it enters S. Carolina near the mouth of Little Catawba, 15 m. from Yorkville. When it arrives at Rocky Mount it takes the name of Wateree, which flows southward for 100 m., and uniting with the Congaree, they form the Santee. Length of Catawba River 250 miles.

Catawba, in Kentucky, a post-village of Pendleton co., 36 m. S.S.E. of Cincinnati.

Cataw'ba, in N. Carolina, a W. central county; area, 250 sq. m. It is drained by the S. Catawba River, and bounded N. by the Great Catawba River. Its surface is diversified, and its soil fertile. *Cap.* Newton; *pop.* in 1897, about 20,000.

Catawba, in North Carolina, a post-office of Catawba co.

Catawba, in Ohio, a post-village of Clarke co., 11 or 12 m. N. E. of Springfield.

Catawba, in Virginia, a post-office of Roanoke co.

Catawba Creek, in Virginia, flows N. E. through Roanoke co., and enters James river in Botetourt co.

Catawba Springs, in North Carolina, a township of Lincoln co., 16 m. W. by S. of Raleigh.

Catawba View, in North Carolina, a village of Caldwell co.

Catawba Wine, a light wine, both still and sparkling, produced in the U. S., notably, at first, on the banks of the Ohio River. It is made from the *Catawba grape*, first discovered in a wild condition abt. 1801, near Asheville, Buncombe co., N. Carolina, near the head-waters of the Catawba River. The vineyards where the *C.* is produced, are situated on steep and beautiful slopes, with a southern exposure, on the banks of the Ohio River, under the shelter of high hills on the north. Some of the finer kinds of *C.* rival the French champagne in delicacy and purity, and form already an important branch of exportation.

Catawis'sa, in *Missouri*, a post-village of Franklin co., 41 m. S.W. of St. Louis.

Catawis'sa, in *Pennsylvania*, a creek emptying itself into the N. branch of the Susquehanna, a few miles below Bloomsburg.

—A post-village and township of Columbia co., on the N. branch of the Susquehanna River, 75 m. N.N.E. of Harrisburg.

Catawis'sa Forge, in *Pennsylvania*, a village of Columbia co., 87 m. N.N.E. of Harrisburg.

Catawissa Mountain, in *Pennsylvania*, on the S. side of Catawissa Creek, is principally included in Columbia co.

Catbalo'gan, or **CATVALONGA**, a town of the Philippines, cap. of the island of Samar, on a small bay on the W. coast; pop. about 8,000.

Cat'-bird, *n.* (*Zoöl.*) The *Mimus felivox* of Vieillot, an American bird of the *Liottichidae* or Mocker family. It inhabits the States east of the Missouri, is less than nine inches long, the wing over three and a half inches; the general color dark plumbeous; the under tail-coverts dark brownish-chestnut. In spring its song is exceedingly varied, mellow, and sweet.

Fig. 537. — CAT-BIRD.
(*Mimus felivox*.)

It also possesses a remarkable power of imitating the notes of other birds, and has been heard to imitate perfectly a strain of "Yankee Doodle." Sometimes it mews or miauls like a cat, and in a most disagreeable manner, which greatly detracts from its proper estimation; because all do not know that at times it sends forth the sweetest music. The nest is generally built in low bushes, and composed of dry twigs and grass without, and fibrous roots within; eggs 4 to 6, glossy greenish-blue. Two broods are raised in a season.

Cat'-block, *n.* (*Naut.*) A block used for drawing up an anchor to the cat-head.

Cat-boat. See **CAT**.

Cat'-call, *n.* A squeaking instrument, used in the play-house to condemn plays.

Catch, (*kach*), *v. a.* (*pp.* **CATCHED** or **CAUGHT**.) [Probably of the same origin as *chase*; Du. *ketzen*, to chase; Fr. *chasser*; *catch* seems also allied to *clutch*, *latch*, *snatch*; Scot. *claught*; Gael. *glac*, to seize, to catch.] To pursue, overtake, and seize; to lay hold on; to take and hold fast; to seize by pursuit; as, to *catch* a ball.

"I saw him run after a gilded butterfly, and when he caught it, he let it go again." — *Shaks.*

—To ensnare; to entangle; to apprehend; as, to *catch* a thief.

"These artificial methods of reasoning are more adapted to catch and entangle the mind than to instruct and inform the understanding." — *Locke.*

—To communicate to; to fasten upon; to seize; as, the building *caught* fire.

"Spread the thin oar, and catch the driving gale." — *Pope.*

—To please; to charm; to engage the affections.

"And want the soothing arts that catch the fair,
But, caught myself, lie struggling in the snare." — *Dryden.*

—To receive by contagion, infection, or sympathy; to be seized with; as, to *catch* a disease.

"Proud to catch cold at a Venetian door." — *Pope.*

—To find; to come upon by surprise; as, to *catch* a person in a good humor.

"Catch, then, O catch the transient hour." — *Johnson.*

—To overtake; to intercept; to come up with; as, to *catch* a companion.

—*v. i.* To lay hold; to seize and hold; as, the hook *catches*.

"The catching fire might burn the golden caul." — *Dryden.*

—To spread by infecting; to be contagious; to communicate.

"'Tis time to give them physio, their diseases are grown so catching." — *Shaks.*

—*n.* Seizure; act of seizing.

"That she would fain the catch of Strephon fly." — *Sidney.*

—Anything that seizes or takes hold, as a hook.

—Posture of seizing; watching an opportunity to seize.

"Both of them lay upon the catch for a great action." — *Addison.*

—A sudden advantage taken; a snatch; a hold.

"Fate of empires, and the fall of kings,
Should turn on flying hours, and catch of moments." — *Dryden.*

—Profit; advantage; gain; that which is caught or taken.

"Hector shall have a great catch, if he knock out your brains." — *Shaks.*

—The whole quantity caught at one time; as, a great *catch* of fish.

(*Mech.*) A contrivance in machinery acting on the principle of the latch.

(*Mus.*) A species of musical composition peculiar to England, and in the canon style. The words of the *C.* are generally humorous, and intended to be sung in

social parties over a glass. The music is generally for three voices, of which there exist hundreds of specimens from the time of Purcell to the present day. As in the canon, each voice takes up the subject at a certain distance after the first has begun.

Catch, Catch, *n.* (*Com.*) The commercial name of **CATECHU**.

Catch'able, *a.* Capable of being captured or caught. (*n.*)

Catch'-drain, *n.* (*Agric.*) An open drain across a declivity to intercept surface-water. The term is sometimes also applied to under-drains across a declivity.

Catch'er, *n.* One who, or that which, catches.

Catch'-fly, *n.* (*Bot.*) See **SILENE**.

Catch'ing, *n.* Seizure; capture; arrest.

Catch'ing-bargain, *n.* (*Law.*) An agreement made with an heir expectant, for the purchase of his expectancy at an inadequate price.

Catch'-land, *n.* In England, border-land; land of uncertain appropriation.

Catch-meadow, (*kach-med'ō*), *n.* (*Agric.*) Grass land, with a very regular sloping surface, subjected to irrigation; the water as it descends the declivities being intercepted by catch-drains.

Catch'ment, *n.* A surface of ground where water may be caught and collected into a reservoir.

Catch'penny, *n.* A worthless book or pamphlet, adapted to allure popular purchasers; a thing of little value, intended to gain money in a certain market.

—*a.* Made to gain money; valueless; as, a *catch-penny* publication.

Catch'up, **Cat'snp**, *n.* [*Chinese, kiljap.*] A liquor extracted from salted mushrooms, used as a sauce.

Catch'-word, *n.* Among actors, the last word of the preceding speaker, which reminds one that he is to speak next. — A word or phrase used to give a certain effect; as, the *catch-word* of a political party.

(*Printing.*) The first word of a page printed at the bottom right-hand corner of the preceding, to assist the reader. The first edition of Tacitus, printed at Venice by Johannes de Spira about 1460, is the earliest book in which catch-words are found. The practice is now obsolete.

Catch'-work, *n.* (*Agric.*) Same as **CATCH-DRAIN**, *q. v.*

Cateau-Cambresis, (*kā-tō'-kam-brā'sis*), a town of France, dep. Nord, on the Salle, 15 m. E.S.E. of Cambrai.

Manf. Starch, soap, tobacco, leather. A famous treaty between France and Spain was concluded here in 1559.

Pop. 10,133.

Catechetic, **Catechet'ical**, (*kat-ek'et'ik*), *a.* Relating to a catechism or catechisms; relating to, or consisting in, asking questions and receiving answers.

"Socrates introduced a catechetical method of arguing." — *Addison.*

Catechet'ically, *adv.* In a catechetical manner; in the way of question and answer.

Catechet'ies, *n. sing.* The art or practice of teaching by question and answer.

Cat'chine, *n.* (*Chem.*) See **CATECHU**.

Catechisation, (*kat-ek-i-sā'shun*), *n.* The act of catechising.

Catechise, (*kat'ek-kīz*), *v. a.* [*Gr. katēchizō*, for *katēcheō* — *kata*, and *ēcheō*, to sound.] To teach by sound, or by the voice; to instruct orally, or by question and answer; especially in the doctrines of the Christian religion; as, to *catechise* a pupil.

—To question; to interrogate; to examine; to try by questioning.

"I'm stopp'd by all the fools I meet,
And catechis'd in ev'ry street." — *Swift.*

Catechiser, (*kat'ek-kīz-er*), *n.* One who catechises.

Catechism, (*kat'ek-kīz-m*), *n.* [*Fr. catéchisme*; L. Lat. *catechismus*, from L. Gr. *katēchismos*. See **CATECHISE**.] A mode of instruction by question and answer, appropriated by general usage to instruction in religious subjects, and more especially to the set forms which most churches have authorized for the instruction of children in the elements of religion.

Catechismal, (*kat'ek-kīz'mal*), *a.* Having the form of questions and answers.

Catechist, (*kat'ek-kīst*), *n.* [*Gr. katechistēs*.] One who catechises; a catechiser.

Catechist'ic, **Catechist'ical**, *a.* Pertaining to a catechist or to catechism.

Catechu, (*kat'ek-shoo*), *n.* [*Jap. kate*, a tree, *chu*, juice.] (*Chem.*) Properly, an extract prepared from the inner brown-colored wood of the *Acacia Catechu*; but now applied also to other extracts similar in appearance and properties. Some of the *C.* of commerce is prepared from the kernels of *Areca Catechu*, and a kind called *Gambir*, or *Terra japonica*, from the leaves of *Uncaria Gambir*. This substance is largely employed in the arts of dyeing and tanning, and medicinally as an astringent. It is imported in roundish balls or square pieces, varying in color from a pale whitish or light reddish-brown, to a very dark brown. The dark-colored catechu from Pegu is said to be the most powerful of all vegetable astringents. Catechu contains a large proportion of *tannin*, very similar in properties to that of galls; also a peculiar principle called *catechine*.

Catechumen, (*kāt-ek-kū'men*), *n.* [*Gr. katechoumenos*. See **CATECHISE**.] He who learns the elements of any science; one who is undergoing a course of religious instruction with a view to his admission into the Church.

The Christian society in the early ages was divided into two classes, *Fideles* and *Catechumeni*; the former being those who had been admitted by baptism into the entire privileges of the Church, the latter such as were preparing for that admission.

Catechu'menate, *n.* State or condition of a catechumen.

Catechumen'ical, *a.* Belonging to catechumens.

Catechumenist, *n.* A catechumen. (*o.*)

Categorematic, *a.* [*Gr. katēgorēma*, a predicate.] (*Logic.*) A phrase to denote when a word is capable of being employed by itself as a *term*, or predicate of a proposition.

Categor'ical, *a.* [See **CATEGORY**.] Absolute; adequate; positive; equal to the thing to be expressed.

(*Log.*) A *categorical proposition* is that which affirms or denies absolutely, without any conditions. They are of two kinds, — *pure*, such as assert simply one thing of another, as *the king reigns*; and *modal*, such as assert one thing of another under a certain mode or form, as *the king reigns justly*. See **PROPOSITION**.

Categor'ically, *adv.* Absolutely; directly; expressly positively.

Categor'icalness, *n.* The quality of being categorical.

Category, *n.* [*Fr. catégorie*; Lat., It., and Sp. *categoría*; Gr. *kategoria*, from *kategoreo*, to speak against — *kata*, and *agoreo*, to speak in the assembly, from *agora*, an assembly.] A predicate; a series or order of all the predicates or attributes contained under a genus; that which may be predicated or affirmed of anything in logic; class; rank; order.

(*Log. and Metaph.*) According to Aristotle, who enters fully into this subject in his *Organon*, all the objects of our thought are comprised in the following ten categories: — 1. *Substantia*, substance; 2. *Quantitas*, quantity; 3. *Qualitas*, quality; 4. *Relatio*, relation; 5. *Actio*, action; 6. *Passio*, passion; 7. *Ubi*, where; 8. *Quando*, when; 9. *Situs*, position; 10. *Habitus*, possession. Philosophers are much divided in opinion as to the utility of these categories, some regarding them as worthless, others of great value.

Cat'ena, *n.* [*Lat.*, a chain.] (*Ecc. Hist.*) An exposition of a portion of Scripture, formed from collections out of several authors; such as the *Catena* of the Greek fathers in the *Octateuch* by Procopius; the *Catena Aurea* of Thomas Aquinas.

Catenarian, *a.* [*Lat. catenarius*, from *catena*, a chain.] Relating to a chain; like a chain.

(*Arch.*) Applied to that form of arch which resembles the curvature a chain would assume if hung between the points of suspension, and reversed.

Catenary, *n.* (*Math.*) The curve into which a chord or flexible chain of uniform density and thickness forms itself when suspended or allowed to hang freely from two fixed points. This curve was first noticed by Galileo, who proposed it as the proper figure for an arch of equilibrium; but he imagined it to be the same as the parabola. Its true nature was first demonstrated by James Bernoulli, and its various properties soon after pointed out by John Bernoulli, Huygens, and Leibnitz. It is interesting on account of the light it throws on the theory of arches, and also by reason of its application to the construction of suspension bridges. — Consult Poisson's *Mechanics*.

Caten'ulate, *a.* Applied to a surface, when presenting a series of elevated ridges or oblong tubercles resembling a chain.

Cat'er, *v. n.* [*Fr. acheter*, to buy; It. *cattare*, to get.] To provide or procure provisions, food, entertainment, &c. — *v. a.* To cut diagonally.

Cat'er, *n.* [*Fr. quatre*, four.] (*Games.*) The four of cards and dice.

Cat'er-cornered, *a.* Diagonal. (A colloquial word.)

Cat'erer, *n.* One who caters; a provider, buyer, or purveyor of provisions.

Cat'erness, *n.* A woman who caters; a female provider of food.

Cat'erpillar, *n.* [Probably from *Fr. chaton*, a catkin, from its resemblance to a catkin, and *piller*, to plunder, to strip, to peel, from its peeling the trees or bushes on which it is bred.] (*Zoöl.*) The larvæ of lepidopterous insects — butterflies, moths, and hawk-moths. *C.* exhibit as great differences as subsist among the perfect insects into which they change, and the family, genus, and species may be determined by the characters of the *C.*, as well as of the perfect insect. Their body is generally long, nearly cylindrical, soft, and consisting of twelve rings or segments besides the head, with nine spiracles or small openings for respiration on each side. The head is much harder than the rest of the body, of a sort of almost horny substance, and has six small shining points on each side, which are regarded as simple or *stematic* eyes, and is also furnished with two very short rudimentary antennæ. The mouth is adapted for tearing, cutting, and masticating the substances on which the *C.* is destined to feed, which are very various in the different species, although in all extremely different from the food of the perfect insect; it is provided with two strong *mandibles*, or upper jaws; two *maxillæ*, or lower jaws; a *labium*, or lower lip; and four *palpi*, or feelers. In the mouth also is situated the *spinneret* of those species which, when they change into the chrysalis or pupa state, envelop themselves in silken cocoons. The first three segments of the body are each furnished with a pair of feet, which are hard and scaly, and represent the six feet of the perfect insect; some of the remaining segments are also furnished with feet, varying in all from four to ten in number, the last pair situated at the posterior extremity of the body; but these feet are soft and membranous, or fleshy, and armed at their extremity with a sort of circlet of minute hooks. All the feet or legs are very short. Those *C.* in which the *pro-legs*, as they are sometimes called, or supplementary soft feet, are pretty equally distributed along the body, move by a sort of regular crawling motion; but those which have only four such feet situated near the posterior extremity, move by alternately taking hold by what may be called their fore-feet and their hind-feet, now stretching the body out to its full length, and now bending it into an arch, whilst the hinder part

is brought forward almost into contact with the forepart. *C.* which move in this way are called *Gnometers* or *Loopers*. Some *C.* have the power of fixing themselves by the two hind-feet to a twig, and stretching

Fig. 538. — LEAF OF THE VINE ATTACKED BY THE PYRALES. 1, the male; 2, the female; 3, the caterpillar; 4, the eggs; 5 and 6, the chrysalides.

themselves out as straight as a rod, so that being in color very like a twig of the tree on the leaves of which they feed, they are not readily observed. The muscular power required for this recumbent position is very great, and Lyonnet found the number of muscles in a *C.* to be more than 4,000. The skin of some *C.* is naked, that of others is covered with hair, spines, or tubercles. Some make for themselves nests or tents of silk, under which they dwell in societies, protected from the inclemency of the weather. Many construct cases or sheaths by agglutinating various substances together, as the *C.* of the common clothes-moth. Some roll leaves together, and fix them by threads, thus forming a dwelling for themselves; and a few burrow and excavate galleries in the substance of the leaves. Numbers feed on leaves; many being limited to a particular kind of plant, or to a few nearly allied plants. Some feed on flowers, some on seeds, some on roots, and some even on the woody portions of stems; some on wool, hides, furs, and other animal substances; a few on lard, and other kinds of fat. Among the admirable arrangements which make all nature harmonious, is the adjustment of the time of each kind of *C.*'s appearance to that of the leaf or flower on which it is to feed.

Catrina, (Santa,) (*kat-ai-re'na*), a town of Sicily, 8 m. from Caltanissetta, near the bank of the Salso: pop. 6,411.

Cat'erwaul, v. n. [Probably from *cat* and *waul*, wail.] To waul, mianl, or cry, as cats in rutting-time.

Cat'erwauling, n. The cry of cats; a harsh, disagreeable noise or cry; miauling.

Cates, n. pl. [See *CATER*.] Delicious food or viands; dainties. (o.)

Cat-fish, n. (Zool.) See *SILURIDE*.

Cat-fish Creek, in South Carolina, Marion co., flows southward into the Great Pedee.

Cat-fish River, in Wisconsin, is the outlet of the "Four Lakes" of Dane co., and flows S.E. into Rock River.

Cat'gut, n. (Mus.) A string prepared from the intestines of sheep for musical instruments, bow-strings, hatters' bow-strings, clock-makers' cords, and thongs for whips and laces for boots. The intestines are first cleansed and freed from fatty matter, and the external membrane removed. They are then soaked, and the inner membrane is taken away, after which they are soaked in a solution of potash. They are next drawn through a plate perforated with holes, fumigated with sulphur, and sorted according to size. The strings known as "Roman strings" are the best for violins. They are made at Milan, and are distinguished for their strength and transparency. They are generally formed of two separate pieces twisted together; and great nicety is necessary in conducting the process of fumigation to which they are subjected, lest they become too brittle if exposed for too long a time to the action of the sulphur, or liable to be frequently out of tune if not exposed long enough. Larger strings are made by twisting several lengths of catgut together until the required thickness is obtained. The intestines of other animals have been used for making a coarse but strong cord for turning lathes and machinery; but those of the sheep only have been found suitable for the above purposes. *C.* is also much used in surgery for suturing wounds, as it will generally be absorbed and removed by the regular processes of Nature.

a'tha, n. (Bot.) A genus of plants, order *Celastraceae*. The most important species are *C. coccinea* and *spinosa*, two shrubs flourishing in Arabia. The young shoots of these plants with the leaves attached, constitute the famous drug called *kāt, khat, or kaffa*, which is chewed by the Arabs, and said to produce great hilarity of spirits, and an agreeable state of wakefulness.

atha'ri, n. pl. [Gr. *katharos*, pure.] *Ecol. Hist.* A name that has been given to several sects of Christians

who made professions of greater purity in life or doctrine than others. It was chiefly applied to the Novatians; but was given afterwards to various sects, known in France and other countries as Albigenes, Paterini, Paulicians, &c.

Catharine I., EMPRESS OF RUSSIA. This remarkable woman, who began life as the daughter of a Livonian peasant and ended it on a throne, with the sway of the largest and most absolute sceptre in Europe, was the heroine of the most singular romance to be found in the annals of private or political records. Born in 1683, she early became the wife of a Swedish officer of dragoons, who, attracted by her extreme beauty, and in gratitude for her attendance on him when left dangerously wounded on the field in the neighborhood of her father's hut, married her upon his recovery, being, as it has been alleged, killed the same day in a sudden attack of the enemy. But there is so much romance in her whole history, and truth and fiction are so intimately mixed up in her career, that it is impossible to speak with certainty of any one fact in her early history. All that is reliably known is, that, after having been the mistress of two or three persons of distinction, the last of whom was Prince Menzikoff, she was seen by Peter the Great shortly after the death of his wife, when he, struck by her intelligence and beauty, removed her from her protector, and after living with her for some time, finally made her his wife, and had her solemnly crowned as Empress of Russia. Peter with his own hands placing the diadem on her head. However her former licentiousness may expose her to reproach, there can be no question that, as Peter's wife, her conduct was worthy of all praise, for she was not only a true, faithful, and loving wife, but also an exemplary woman and an admirable sovereign; and to her love, forethought, and duty, Peter not only owed the preservation of his life and the maintenance of his crown, but the Russian empire its nationality and independence. On one occasion, when the Russian army was encompassed on every side by the Turks, on the Pruth, in 1717, and when neither stratagem nor bravery could have extricated Peter from the snare into which he had led his troops, Catharine, seeing the fate of her husband and country involved in certain ruin, took the jewels from her person and crown, and passing into the Grand Vizier's tent, purchased by this treasure the connivance of the Turkish general, and while the Ottoman troops were being concentrated to strike an overwhelming blow, Peter drew off his delivered army and escaped. On the death of her husband, 1725, she was declared sole ruler, and carried out with spirit and judgment the political measures of peace and war so ably conceived by Peter the Great. She died in 1727, and was succeeded by Peter II.

CATHARINE II., EMPRESS OF RUSSIA, one of the wisest and probably most depraved women who ever sat on a throne, was by birth a German, the daughter of the Prince of Anhalt-Zerbst, and in 1745 married the Grand-Duke Peter of Russia. In 1761, her imbecile husband ascended the throne under the title of Peter III. Having grown weary of the tyranny of his strong-minded wife, he came to the resolution of divorcing and imprisoning her, and further, to annoy her, to disinherit his own son, her child, afterwards Paul I., and solace himself with a new wife and another progeny. Catharine, however, having through her partisans heard of the scheme, won over the army to her side, and aided by the assistance of her lover, Alexis Orloff, matured her plans, and before Peter could carry out his intended arrangements, she had her husband seized, hurried off to a prison, and after compelling him to sign his own abdication and declare *C.* his heir, (for fear he might escape or afterwards be troublesome,) she gave orders for his close incarceration, a task which the favorite Orloff effected for his mistress, by strangling her husband in his dungeon. The rest of her lengthened reign was devoted to humanizing and instructing her half barbarous people; which, by wise and humane laws, by the encouragement of letters and men of learning, and the introduction of new arts into the country, she strove hard to effect. A long war with Turkey ended in the annexation of the Crimea, and the extension of the Russian frontier to the south to Bessarabia and the Dniester. The next important events of her reign were the first partition of Poland, the second, and finally, in 1795, the third and last dismemberment of that unfortunate kingdom: Austria taking Galicia, Prussia being assigned the circle of Warsaw, and Russia appropriating the entire remainder. The following year she died suddenly of an apoplexy, in the 67th year of her age, and the 35th of her reign. The life of pleasure, grossness, and immorality led by Catharine up to the closing hours of her existence, is a subject as notorious to the world as her conduct was a disgrace to the throne and to womanhood. She was succeeded by her son, Paul I.

Catharine de Medicis, li. de' Medici, daughter of Lorenzo de' Medici, duke of Urbino, and Madeleine de la Tour d'Auvergne, was b. 1519, and married to the Duke d'Orleans, afterwards Henry II., 1533. During her husband's lifetime, the political history of *C.* possesses little interest. Henry II. was mortally wounded at a tourney, 1559, and succeeded by their eldest son, Francis II., who also died the following year, 1560, when *C.* was named regent during the minority of her second son, Charles IX. She is therefore accountable for all the mismanagement, corruption, and atrocities of that calamitous reign, and, above all, for that treacherous massacre of the Protestants in August, 1572, which is known by the name of St. Bartholomew. The king of Navarre (afterwards Henry IV.) luckily escaped, and the Protestants defended themselves in several parts of the kingdom, so that the civil war raged again as fiercely as ever. Charles IX. died in 1574, leaving the state in dreadful

confusion. His brother, Henry of Valois, was crowned in 1575. Henry III. was, like his brother, a weak and corrupt prince. *C.* had brought up her sons purposely in licentiousness and effeminacy, in order that she might more easily govern them. The reign of Henry III. was distracted by the intrigues of his favorites, of the queen-mother, and of the Guises; by the civil wars between Protestants and Catholics, and by the war between France and Spain. *C.*, according to her usual policy, favored sometimes one party and sometimes the other, for fear that any one of them should become too powerful for her to manage. At last assassination was resorted to again in order to get rid of the Guises. The Duke of Guise, and the cardinal his brother, were murdered at Blois in December, 1588, by order of the king. On January 5, 1589, Catharine herself died at Blois, an object of aversion to all parties. She was one of the worst sovereigns that ruled over France since the times of the Merovingian dynasty. Even her ambition was not of an enlarged kind: it was narrow, wavering, treacherous, and undecided, and it led to no final result. It was the policy of the petty Italian States of the Middle Ages, rather than one suited to a great empire. *C.* had only one redeeming quality — her love for the arts and literature — which seems to have been hereditary in the family of Medici. She collected valuable manuscripts, encouraged artists, and began the palace of the Tuileries.

Catharine Howard, fifth wife of Henry VIII. of England, and grand-daughter of Thomas, second duke of Norfolk. On the divorce of Henry from Anne de Cleves, he married *C.* on Aug. 8, 1540, mainly through the influence of her uncle, the duke of Norfolk, and Gardiner, bishop of Winchester, the leaders of the Catholic party. Soon after being accused of immorality, it is said that she confessed her guilt to a commission appointed by parliament to examine her; though it is doubtful whether her confession extended further than the admission of licentious conduct before her marriage to the king. She was then attainted of high treason, and, along with the Lady Rochford, her accomplice, was beheaded on Tower Hill, on February 12, 1542.

Catharine of Aragon, first wife of Henry VIII. She was the youngest daughter of Ferdinand, king of Spain, and of Isabella of Castile, and was b. in 1483. Married when scarcely sixteen to Arthur, Prince of Wales, son of Henry VII., she was left a widow within a year; and in the course of a few months more a second marriage was projected for her by her father-in-law, with his second son Henry, as yet a boy of only twelve years old. The pope's dispensation enabling such near relatives to marry was obtained in 1503, and the marriage took place in June, 1509, immediately after Henry's accession to the crown as Henry VIII. For a period of nearly 20 years they lived together in the greatest harmony and apparent affection; but the want of male issue had ever been to Henry a source of great disquietude, and there is little doubt that his feeling on this point, together with an ardent passion which had suddenly sprung up in his mind for Anne Boleyn, one of Catharine's maids of honor, caused him to seek a dissolution of his marriage. He accordingly applied to the Pope for a dispensation of divorce, which was promised, but deferred from time to time on various pretexts. Ultimately, Henry took the matter into his own hands, and first of all privately married Anne Boleyn early in 1533, and then appealed for a divorce to an ecclesiastical court convened at London, where the question was publicly tried. The result was that Cranmer, then archbishop of Canterbury, pronounced, not a divorce, but a sentence, declaring the king's marriage with Catharine a nullity, because it had been contracted and consummated against the divine

Fig. 539. — CATHARINE OF ARAGON. (After Holbein.)

law; and Catharine, under the title of Dowager Princess of Wales, retired almost broken-hearted to Kimbolton Castle, in Huntingdonshire, where she died in January, 1536, in the fifty-second year of her age. Whatever opinion may be formed of the motives by which Henry was actuated in seeking a divorce, it must be conceded by every one conversant with the facts of the case, that Catharine was an attached and faithful wife, an affectionate

mother, a true Christian, and an oppressed and most unfortunate woman.

Catharine Parr, sixth and last wife of Henry VIII. of England, was the daughter of Sir Thomas Parr of Kendal. At the time of her marriage to Henry, July 12, 1543, she had been twice married, was in her 34th year, and was esteemed a very matronly, learned, discreet, and sagacious woman. After the death of Henry, *C.* married, 1547, Sir Thomas Seymour, Lord High Admiral of England—a marriage of affection on her part, but of interest on the part of Seymour. D. 1548.

Catharine (St.) There are several saints of this name. The simple designation of *St. C.*, however, is given to a virgin, said to have been of royal descent in Alexandria, who, publicly confessing the Gospel at a sacrificial feast appointed by the emperor Maximinus, was put to death in 307 A. D., after being tortured on a wheel. Hence the name of "St. Catharine's wheel." Very extraordinary legends exist as to her converting 50 philosophers sent by the emperor to convert her while in prison, besides a multitude of other persons; the conveyance of her head by the angels to Mount Sinai, &c. She is regarded as the patroness of girls' schools.—*St. C. of Siena*, one of the most famous saints of Italy, was the daughter of a dyer in Siena, and was born there in 1347, A. D.; she practised extraordinary mortifications, and was said to be favored with extraordinary tokens of favor by Christ, whose wounds were impressed upon her body, &c. She became a Dominican, and therefore, afterwards, a patron saint of the Dominicans. She wrote devotional pieces, letters, and poems, which have been more than once printed.

Catharine, or Catherine's, in *New York*, a post-village and township of Schuyler county, 16 m. N. of Elmira.

Catharine, in *Pennsylvania*, a township of Blair county.

Catharine Lake, in *North Carolina*, a post-office of Onslow co.

Catharpin, *n.* (*Naut.*) An iron leg used to confine the upper part of the rigging to the mast.—*Dana*.

Catharpins, *n. pl.* (*Naut.*) Small ropes in a ship, running in little blocks, from one side of the shroud to another, near the deck.

Catharsis, *n.* [*Gr.* from *kathairo*, to cleanse.] (*Med.*) A natural or artificial purgation of any passage—month, anus, &c.

Cathartic, *n.* [*Gr.* *kathartikos*, from *kathairo*, to purge.] (*Med.*) Purgative; cleansing by evacuation.

—*n.* A medicine that exercises a strong action on the bowels, producing large and repeated evacuations. Cathartics are divided into two kinds—the moderate and excessive, or the *purgative* and the *drastic*. Among the first are senna, jalap, aloes, scammony, castor oil, Epsom salts, Glauber salts, calomel, and broom. Among the drastics, the most important are croton oil, colocynth, tobacco, &c.

Cathartically, *adv.* Acting as a cathartic.

Catharticalness, *n.* The quality of being cathartic.

Cathartine, *n.* (*Chem.*) The active principle of senna; a powerful drastic alkaloid, obtained from the seed-pods and leaves of the *Cassia senna*.

Cathcart, a parish of Scotland, 2 m. from Glasgow, where was fought, 1568, the battle of Langside, which ended in the defeat of Queen Mary.

Cathead, *n.* (*Naut.*) A large square piece of timber, one end of which is fastened upon the fore-castle, and the other end projects beyond the bow, so as to keep the anchor clear of the ship when it is being drawn up by a tackle.

—A large variety of apple.

Cathedra, *n.* [*Gr.* and *Lat.*, a seat.] In a general sense, a chair; more particularly, a professor's chair, or a preacher's pulpit; and is also used for a bishop's seat or throne in a church. Hence, to speak *ex cathedra*, is to speak with authority, as a bishop from his throne.

Cathedral, *n.* [*Fr.* *cathédrale*; *Sp.* *catedral*.] A church in which the bishop's throne or seat (*cathedra*) is placed, and which is thus the chief or principal church in the diocese or district. It has usually, also, a dean and body of canons or prebendaries; but this is not essential to constitute a *C.* church, nor is every church that has a chapter of canons a *C.* The *C.* church is the parish church of the whole diocese, which in early times was commonly called *parochia*. Usually, no diocese has more than one *C.*, but there are numerous instances of a plurality of cathedrals even in the same city, particularly in Italy; as at Rome, Milan, &c. The normal plan of a *C.* is in the form of a Latin cross, that is, a cross whose transverse arms are less than the longitudinal limb. Generally, its several parts are sufficiently distinguished as nave, choir, and transept, with aisles, western towers, and central tower; but in more minute description, especially where ritual arrangements are concerned, these terms are not always sufficiently precise; and in order to arrive at a more exact nomenclature, it would be necessary to trace the changes in a *C.* church from the Norman period to our own.

—*a.* Relating to a cathedral, or to a bishop's see.

Cathelineau, JACQUES, (*kat-ā-lē'no*), a French general of the army of La Vendée, b. 1759, at Pin-en-Mauges, in Anjou; d. 1793, from a wound received during an attack upon Nantes. He was a man of great simplicity and honesty of character, and his piety was such that he was called the Saint of Anjou.

Catheretic, *n.* [*Gr.* *kathairetikos*, fit for putting down; *Fr.* *catherétique*.] (*Med.*) A substance applied to warts, exuberant granulations, &c., to eat them down; mild caustic.

Catherina, (*Santa*), or NOSSA SENHORA DO DETERRO, a maritime city of Brazil, prov. Sta. Catherina, 520 m. S. W. of Rio de Janeiro; Lat. 27° 36' S., Lon. 48° 40' W. It has a good harbor, and manufactures of coarse linen stuff, and earthenware. *Pop.* about 6,000.

Catherine-wheel, *n.* (*Arch.*) A circular window, or portion of a window, frequently found in cathedrals and churches built in accordance with the Gothic style of architecture. When the entire window is circular in form, it is generally found at the E. end or in the gables of the transepts. In some of the French churches, windows of this description are found of great diameter, divided into compartments by stone tracery elaborately

Fig. 540. — CATHERINE-WHEEL.
(Church of Quimper, France.)

chiselled into a variety of forms, and sometimes by shafts radiating from a circular centre. The name is taken from the instrument on which St. Catharine (*q. v.*) suffered torture.

(*Pyrotechny*.) A kind of revolving fire-work.

Catheter, *n.* [*Gr.* *katheter*, from *kathemi*, to let down.] (*Surg.*) A fistulous instrument, made of different lengths, either of silver or elastic material, and used for the purpose of drawing off the contents of the bladder when the powers of nature are unable to empty the organ, or there is some impediment in the passage.

Cathetometer, *n.* [*Gr.* *kathetos*, vertical height, and *metron*, measure.] An instrument for measuring differences of vertical heights, especially the rise and fall of liquid columns in glass tubes.

Cathetus, and CATHETA, *n.* [*Lat.*] (*Arch.*) A vertical line falling from the extremity of the under-side of the eymatium of the Ionic capital through the centre of the volute.

Cathion, *n.* [*Gr.* *kata*, from; *eio*, I go.] See ANION.

Cathode, *n.* [*Gr.* *kata*, from; *odos*, a way.] (*Phy.*) A term introduced by Faraday to designate the negative pole of any electrical arrangement for decomposing a chemical compound; the *C.*, in other words, is the surface by which the electric current leaves the body undergoing decomposition.—See ANODE; ELECTROLYSIS.

Cat-holes, *n. pl.* (*Naut.*) Two holes in the after part of a ship, through which a hawser may pass to the capstan in heaving the ship astern.

Catholic, *a.* [*Gr.* *katholikos*, universal; *Lat.* *catholicus*; *Ital.* *cattolico*; *Sp.* *católico*; *Fr.* *catholique*.] A term first applied to the Christian Church to distinguish it from the Jewish, which was confined to one nation or people. Afterwards, when sects and heresies arose, taking to themselves particular names, those who remained orthodox and adhered to the Church, called themselves Catholics, *i. e.*, members of the Church general or universal. Hence, the Roman Church now calls itself by the name of Catholic, regarding itself as the only true and orthodox church, and holding that all who have separated from her are sectarians and heretics. The seven *Catholic epistles* are those of James, Peter, Jude, and John, and are so called probably because they were not written to any particular person or Church, but to Christians generally.—See ROMAN CATHOLIC CHURCH.

—*n.* A member of the Catholic Church; a Roman Catholic.

Catholicism, *n.* [*Fr.* *catholicisme*; *It.* *cattolichismo*; *Sp.* *catholicismo*.] Quality of being catholic. Adherence to the Roman Catholic Church; the Roman Catholic religion; universality; liberality of sentiments.

Catholicity, *n.* [*Fr.* *catholicité*.] The religion of the Catholic Church; the religion of the Roman Catholics; catholicism; liberality.

Catholicize, *v. a.* To make Catholic.

Catholicly, *adv.* Generally.

Catholicness, *n.* Universality.

Catholic Mission, in *Kansas*, a village of Neosho co.

Catholicion, *n.* [*Fr.* from *Gr.* *katholikos*.] (*Med.*) In old pharmacy, a panacea, or universal remedy.

Catholicos, *n.* (*Ecl. Hist.*) A name assumed by the patriarchs of the Armenian Church.

Cat-hook, *n.* (*Naut.*) A strong hook attached to the cat-block, to receive the ring of the anchor.

Catiline, or **Catilina**, LUCIUS SERGIUS, born of a noble Roman family, squandered his fortune in debaucheries and extravagance. Being refused the consulship, he conspired, with many of the most illustrious of the Romans, to extirpate the senate and set Rome on fire. This conspiracy was timely discovered by the consul Cicero, who, in the full senate, crushed *C.* with his eloquence, and forced him to unmask himself. *C.* then retired to Gaul, where his partisans were assembling an army. Petreius, the lieutenant of Antonius, Cicero's colleague, attacked his ill-disciplined troops, and routed them, *C.* himself falling, 63 B. C.—Sallust has written an excellent account of this conspiracy.

Catinat, NICOLAS DE, a French marshal, b. at Paris, 1637. In 1690 he defeated the Duke of Savoy at the battle of Staffarde, in Piedmont, and again, in 1693, at Marseilles. Subsequently he was appointed commander of the army in Italy against Prince Eugène; but the

want of funds and provisions paralyzed his efforts; and, meeting with several disasters, he was forced to retreat. These checks brought him into disgrace, to which he submitted with great philosophy, living thenceforward in retirement. D. 1712.

Cat Island. See SAN SALVADOR.

Cat Island, in *Louisiana*, at the entrance of Lake Borgue, 5 m. W. of Ship Island. On it is a fixed light, 45 feet high.

Cat Keys, or **Cat Keys**, a group of islands off Great Bahama Bank. The largest of these islands has a light-house, with a tower 55 ft. in height; Lat. 25° 34' 30" N., Lon. 79° 18' 24" W.

Catkin, *n.* [*Du.* *kattkens*.] (*Bot.*) See AMENT.

Catlett, in *Virginia*, a post-office of Fauquier co., 11 m. S.W. of Manassas Junction.

Catlettsburg, in *Kentucky*, a township and village of Boyd's co., on the Ohio, at the mouth of Big Sandy River, 150 m. E.N.E. of Frankfort.

Catlin, in *Indiana*, a post-village of Parke co., 25 m. N. N.E. of Terre Haute.

Catlin, in *Illinois*, a post-village of Catlin township, Vermilion county, 7 m. W.S.W. of the town of Danville.

Catlin, in *New York*, a township of Chemung county.

Catling, *n.* A small cat or kitten.

(*Surg.*) An instrument formerly in use, and called the "dismembering knife;" a short, strong, double-edged sharp-pointed knife, used by the old surgeons in the 2d stage of all amputations.

Catlinite, *n.* (*Min.*) A reddish variety of clay-stone found in the W. States, and allied to agalmatolite. Named after George Catlin, an American traveller, who published in 1841 his travels among the Indians.

Catmandoo, in *Hindustan*. See KHATMANDOO.

Catmint, **Catnip**, *n.* (*Bot.*) See NEPETA.

Cato, *i. e.* the Wise, was a surname given to MARCUS PORCIUS PRISCUS. This extraordinary man, commonly called *Cato Censorius*, or *Cato Major*, to distinguish him from his descendant *Cato Uticensis*, was b. at Tuscullum, B. C. 234. At the usual military age he commenced his career as a soldier, in B. C. 217, the year in which Hannibal was laying waste the north of Italy; and served again under Fabius at the capture of Tarentum (B. C. 209), and under Claudius Nero in the memorable battle on the banks of the Metaurus (B. C. 207). His fame, however, does not rest on his military achievements alone. In the intervals of war he employed himself in cultivating his hereditary farm, adopting the simple habits and manners of the peasantry; and soon became conspicuous among them for superior intelligence, prudence, and sagacity. Having in this way attracted the notice of L. Valerius Flaccus, a young nobleman of considerable influence, by whom his military talents, eloquence, and integrity were duly appreciated, he was induced to remove to Rome; and there, aided by the support of his patron, soon began to distinguish himself in the Forum, and became a candidate for office. Passing through the subordinate offices of quaestor, ædile, and prætor, and exhibiting in these the principles which he had adopted in youth, he was elected consul in B. C. 195, along with his friend and patron Flaccus. In Hither Spain, which was assigned to him as his province, he displayed military genius of a very high order, which speedily reduced the whole country to subjection. In B. C. 191 he distinguished himself greatly in the battle of Thermopylæ, and there seems to have finished his career as a soldier. Cato henceforth appears as an active and leading citizen, taking a conspicuous part in every public measure. The great epoch in his life was his election, in B. C. 184, to the censorship, the duties of which he performed with the fearless strictness of an ancient Roman. His unshaken firmness in checking the luxurious habits of the nobles, and in assailing their crimes and vices, exposed him to great obloquy; but he pursued the course which he had prescribed to himself regardless of the consequences. With all his rusticity, Cato was a friend to literature, and was one of the patrons and admirers of the poet Ennius. He applied himself in old age to the study of Greek literature, and is represented by Cicero as an ardent admirer of the historians, philosophers, and orators of Greece. Cato died in B. C. 149, at the age of 85, leaving behind him 150 orations, which were admired for many ages; a work on rural affairs, *De Re Rustica*; and an historical work entitled *Origines*.

Cato, MARCUS PORCIUS, surnamed *Uticensis* (of Utica), the great-grandson of Cato the censor, was born B. C. 95. Even when a boy, he is said to have given indications of sturdy independence; and as he advanced towards manhood, he displayed that decision, severity, and harshness of character which marked him out from his contemporaries during the remainder of his life. Taking his great ancestor as his model, he adopted his principles and imitated his conduct; strengthening his vigorous constitution by exposure to cold and fatigue, and bearing physical infirmities with a degree of patience worthy of the Stoic philosophy to which he had attached himself. He commenced his military career in B. C. 72, as a volunteer, in the servile war of Spartacus; and afterwards earned a high reputation as a military tribune in Macedonia. After some time spent in the study of his favorite philosophy, and in diligent preparation for the duties of official life, he was elected quaestor for B. C. 65; and acting on the principles which he had prescribed to himself, corrected various abuses which had been sanctioned by his predecessors. As the supporter of Cicero, in B. C. 63, in all his measures for suppressing the Catilinarian conspiracy, he decided by his speech, on the 5th of December, the motion that the conspirators should be put to death. Along with the

senatorial party he strenuously opposed the coalition of Cæsar, Pompey, and Crassus, in B. C. 60; but the supporters of the triumvirate dexterously removed him from the scene of action by conferring upon him an appointment which called him first to Cyprus, and afterwards to Byzantium. When prætor in B. C. 54, he was exposed to the outrages of the mob, in consequence of his endeavors to put a stop to the bribery and corruption which prevailed. On the commencement of the civil war, B. C. 49, Cato joined the party of Pompey; and after the battle of Pharsalia, he retired to Africa, whither he had thought Pompey had fled, and endured, with his troops, great hardships in marching across the desert to join Scipio at Utica, with whom he had some contest about the mode of carrying on the war. Cato also gave offence to that general by sparing those inhabitants of Utica who were attached to Cæsar. When that conqueror came before the place, Cato retired to his chamber, and after reading Plato's *Phædo*, or *Dialogue on the Immortality of the Soul*, fell upon his sword, 45 B. C. When Cæsar arrived, he said, "Cato, I envy thee thy death, since thou didst envy me the glory of saving thy life."

ato, in *Kansas*, a post-office of Bourbon co.

ato, in *Michigan*, a post-township of Montcalm co., 65 m. N.W. of Lausling.

ato, in *New York*, a post-village and township of Cayuga county, on Seneca River, 12 m. N. of the city of Auburn.

ato, in *Wisconsin*, a township of Manitowish county. It contains the villages of Harrington and Lyonsville.

atoc'tin Creek, in *Maryland*, rises in Frederick co., and enters the Potomac River near the Point of Rocks.

at'odon, *n.* [Gr. *kata*, below, and *odontos*, a tooth.] (*Zoöl.*) A genus of whales, including those that have teeth in the lower jaw, as the CACHALOT, *q. v.*

at'on, in *New York*, a post-township of Steuben co., 25 m. S. of Bath.

at'onian, *a.* Like Cato the censor: grave.

at-o'-nine-tails, *n.* A whip or scourge having nine lashes or cords. See CAT.

atonsville, in *Maryland*, a post-village of Baltimore co., 8 m. W. of Baltimore.

atoo'sa, in *Georgia*, a N.W. county bordering on Tennessee; area, 175 sq. m. It is drained by Chickamauga Creek; its surface is, in general, hilly. *Cap.* Ringgold.

atop'tric, *a.* Relating to catoptrics, or vision by reflexion.

atop'trics, *n.* [Gr. *katoptikos*, from *katopteron*, a mirror; *kata*, and *optomai*, to see.] (*Optics.*) That part of the science which treats of the reflection of light from the regularly formed surfaces of such bodies as water, glass, and the metals. The name of speculum, or mirror, is generally given to those substances which have a highly polished and regularly formed surface: but, in general use, the term speculum is applied to a metal reflector; and mirror, to a reflector made of glass, and coated with an amalgam of tin and mercury or a layer of pure silver. There are four kinds of reflectors used in optics,—the plane, the convex, the concave, and the cylindrical: and when a ray of light is incident upon any of these surfaces, its reflection is always governed by the same laws. These laws, which are the result of observation and experiment, form the groundwork of catoptrics. They are as follows:—First, that the incident ray, the normal to the surface at the point of incidence, and the reflected ray, are all in one plane; second, that the angle of reflection is always equal to the angle of incidence.—See MIRROR, OPTICS, REFLECTION, SPECULUM.

atop'tromancy, *n.* [Gr. *katoptrom*, a mirror, and *manteia*, divination.] Among the ancients, a species of divination by means of a mirror.

ator'ce, a town of Mexico, 125 m. N. of San-Luis-de-Potosi. There are extensive silver-mines in the neighborhood.

atrima'ni, a river in the province of Pará, Brazil, rising in a continuation of the Sierra Carumani, lat. 2° N., and flowing in a S.E. direction, falls into the Rio Branco, near Carmo, in lat. 0° 25' N., lon. 62° 8' W.

ats, JACOB, a Dutch poet, b. at Brouwershaven, in Zeeland, 1577. He rose to high offices in the state, and was twice sent as ambassador to England. D. 1660. As a poet, he enjoyed the highest popularity. His poems are characterized by simplicity, rich fancy, clearness, and purity of style, and excellent moral tendency. The most highly prized of his productions were *Hauwelyk*, *Trouwingh* (a series of romantic stories relating to remarkable marriages), and *Spiegel van den Ouden en Nieuwen Tyjd*.

at's-cradle, *n.* A game played by children upon the fingers with a string.

at's-ear, *n.* (*Bot.*) See HYPOCHERIS.

at's-eye, *n.* (*Min.*) A beautiful variety of quartz, so named from the resemblance which the reflection of light from it, especially when cut *en cabochon*, or in a convex form, is supposed to exhibit to the light which seems to emanate from the interior of the eye of a cat. It is of various colors, and is obtained chiefly from Malabar and Ceylon.

at's-foot, *n.* (*Bot.*) See NEPETA.

ats'kill, in *New York*, the beautiful capital of Greene co., on the W. bank of the Hudson river, 34 m. below Albany, and 111 above New York. *Pop.* (1897) abt. 5,500.

atskill Creek, in the E. part of New York, Greene co., falls into the Hudson River at Catskill.

atskill Mountains, in *New York*, a group of the Appalachian chain, lying mostly in Greene co., on the W. side of the Hudson River. The geological structure

of these mountain ranges is almost a repetition of the main Alleghany ridge throughout Pennsylvania; but it differs from it in assuming more of the alpine character of peaks considerably elevated above the general summits. The chief interest of the C. M. lies in the variety and beauty of their scenery and water-falls. The loftiest points (Prof. Guyot, 1880), are Slide Mt., 4,205 ft.; Hunter, 4,038 ft.; Black Dome, 4,003 ft.; High Peak, 3,664 ft.; Utsyantha, 3,205 ft., and Overlook, 3,150 ft. above tide-water; and on a third eminence, a terrace of 2,500 feet above the same level, are large hotels, affording favorite retreats in summer.

Cat's-paw, *n.* A dupe; a tool; the instrument which another uses to accomplish his purposes; (derived from the story of the monkey which used the paw of the cat to draw the roasting chestnuts out of the fire.)

(*Naut.*) A hitch made in a rope.—A light breeze.

Cat Spring, in *Texas*, a post-village of Austin co., 90 m. E.S.E. of Austin City.

Cat's-tail, *n.* (*Bot.*) A catkin or AMENT, *q. v.*—The genus of plants *TYPHA*, *q. v.*

Cat'stick, *n.* A hat or stick used in playing ball.

Cat'sup, *n.* (*Cooking.*) A sauce prepared from mushrooms, walnuts, and other vegetable productions. Also written *catchup* and *ketchup*.

Cat'tail, in *New Jersey*, a village of Monmouth co., 28 m. E. of Trenton.

Cattaraugus, in *New York*, a W.S.W. county, bordering on Pennsylvania; area, 1,250 sq. m. It is partly bounded on the N. by Cattaraugus Creek, and drained by the Alleghany River, Ichua Creek, and other smaller streams. The surface is, in general, uneven, and the soil fertile, yielding good crops of grain, and affording excellent pasturage. Bog-iron ore, sulphur, manganese, and salt springs are found; and there are petroleum springs in the E. part of the co. *Cap.* Little Valley. *Pop.* (1897) about 63,000.

—A post-village of New Albion township, Cattaraugus co., 31 m. S.E. of Dunkirk.

Cattaraugus Creek, in *New York*, falls into Lake Erie, 15 m. E.N.E. of Dunkirk.

Catta'ro, a fortified town of the Austrian empire, cap. of circ. of same name, at the S.E. extremity of the gulf or *Bocca di C.*, 210 m. S.E. of Zara; lat. 42° 25' 26" N., lon. 15° 45' 16" E. The gulf is spacious and secure, though little frequented by shipping. This place has suffered much from earthquakes, and was long the cap. of a small republic, which, ultimately, became absorbed in that of Venice. *Pop.* 4,367.—The Gulf of C. is abt. 30 m. long, sheltered on all sides by mountains in such a manner as to make it one of the safest harbors in the Adriatic. Its depth varies from 15 to 20 fathoms.

Cat'tegat, (*The.*) KATTEGAT, a large inlet of the German Ocean, between the E. coast of Jutland, the islands of Fünen and Zealand, the W. coast of Sweden, and the Skager-rock. It is 120 m. long, and between 60 and 70 broad. See BALTIC.

Cat'termole, GEORGE, R. A., a distinguished English historical painter, b. 1800. Some of his best performances are suggested by the tragedies and comedies of Shakspeare. Monks, cavaliers, roundheads, battles, banditti, old English mansions, and enchanted forests—these are his favorite subjects, and in this walk of art he stands unrivalled. Among his finest works are: *Hadron Hall in the Olden Time*; *Storming of Basing House*; *Cavaliers and Roundheads*, &c. In 1855, he received the first class medal at the Exhibition of Pictures at Paris, and he is a member of the Royal Academies of London, Amsterdam, Dresden, &c. D. 1868.

Cat'thyme, *n.* (*Bot.*) See TETTERUM.

Cat'tish, *a.* Relating to a cat; like a cat.

Cat'tle, *n.* A collective term, denoting all animals of the bovine or ox kind. See OX.

Cat'tle-guard, *n.* A pit placed at the intersection of a railroad with a common road, to keep cattle off the road.

Cat'tle-show, *n.* An exhibition of domestic animals for prizes, or for the encouragement of stock-breeding.

Catto'lica, a town of Sicily, prov. Girgenti, 14 m. N.W. of Girgenti city; *pop.* 5,000.

Catull'us, VALERIUS, a celebrated Roman lyricist, whose productions have always been justly admired for their exquisite grace and beauty of style; though they are, in many places, grossly indecent. C. was the first Roman who imitated with success the Greek writers, and introduced their numbers among the Latins. B. at Verona, 86 B. C.; d. 46 B. C.—The effusions of this poet are said to have been lost till the beginning of the 15th century, when, in 1425, a copy was accidentally found in a granary, and transmitted to his native country.

Cauam'ba, or GAUME, a river of Brazil, province of Pará, falling into the Rio Branco, at San Isabel, lat. 2° 53' N., lon. 61° 10' W.

Caub (*koub.*) [Ger. *Kab.*] A town of North Germany, 20 miles from Wiesbaden, where, Jan. 1814, Blücher crossed the Rhine with his army. *Pop.* 1,500.

Caubul', in Asia. See CABUL.

Cauca (*kou'ka*), a river of Colombia, rising in the Andes, and after draining the provinces of Popayan, Antioquia, and Cartagena, in its course of about 600 miles from S. to N., embouches into the Magdalena, in lat. 9° 75' N. The basin of the C. is one of the richest and most fertile territories in South America.

Cauca, a former department of New Granada (now Colombia), in South America, which was subsequently divided into the four provinces of Popayan, Choco, Pasto, and Buenaventura.

Cauca'sian Race, *n.* (*Ethnol.*) The white man, one of the three more remarkable varieties of the species *Man*, the two others being the Yellow or *Mongolian*, and the Black or *Ethiopian*. The C. R. occupies all Europe,

and Western Asia as far as the Ganges, likewise Northern Africa, and the greater part of America. To it belong the more highly civilized nations. The region of the Caucasus has been supposed to have been the cradle of the race, hence its name. A fair skin, elevated forehead, small cheek-bones, hair varying in color, but always smooth or wavy, together with high intellectual qualities, characterize the race. According to some modern ethnologists, the inhabitants of the Caucasus, so long held as the type of the European variety, should be excluded from it altogether, and classed with the sallow, flat-faced Mongols, to which it is considered the nature of their language and other facts ally them more closely than the symmetry of their shape, and complexion, do to the European variety. The narrow basis upon which the theory of the C. type was first formed is thus stated by Dr. Latham: "Blumenbach had a solitary Georgian skull; and that skull was the finest in his collection—that of a Greek being the next. Hence it was taken as the type of the skull of the more organized divisions of our species. More than this, it gave its name to the type, and introduced the term *Caucasian*." This term is now little used by scientists, the white race being usually divided up into the two philological varieties of Aryan and Semitic (*q. v.*).

Caucasus, (*kau'kah-sus*, a great mountain range, almost connecting the mountains of Persia with the Carpathians, and separating the great Aralo-Caspian region from the Black Sea, extends for about 700 miles in a continuous chain, and has several offshoots, or transverse ridges, penetrating both towards Russia and into Asiatic Turkey. The chief elevations are very lofty, the highest being estimated at 15,500 feet, and another peak, at no great distance, 16,500 feet. These two culminating points occupy nearly the central portion of the main chain, which is rather narrow. The limit of snow is 11,000 feet, and the whole of the central part of the mountain group is full of glaciers. The C. connects on the east with the lofty table-lands of Asia and Asia Minor, and hence with the serrated snowy range of the Taurus and Armenia, of which Mount Ararat (17,200 feet) is the culminating point. All the mountains of the C. are split and rent by deep gorges, and the valleys afford some of the most remarkable and picturesque mountain scenery that has ever been described.

Cau'casus, a lieutenantancy of Russia, embracing the greater part of the Caucasian chain, and divided into 5 governments. It is bounded on the N. by the governments of Astrakhan and the Don Cossacks; E. by the Caspian Sea; S. by the Persian and Turkish dominions; and W. by the Sea of Azof and province of Taurida. *Desc.* An extensive flat, covered with marshes, the steppes affording excellent pasturage, and the banks of the rivers teeming with fertility. *Prod.* Corn, silk, cotton, wine, cattle, and horses. *Pop.* (1897) abt. 7,500,000.—For History, see ASIA.

Cauchy, AUGUSTIN LOUIS, (*ko'she*), a French mathematician, b. in Paris, 1789. His principal works are, *Lectures on Differential Calculus*, and *Lectures on the Application of the Infinitesimal Calculus to Geometry*. He published also some poetical works, generally presumed to have merit, but which are as absolutely unread as any other French epic poem of the age. D. 1857.

Cauc'us, *n.* [Probably a corruption of *caulk-house*, a calker's shed in Boston, where the patriots before the revolution usually held their meetings.] A word used in the U. States to denote a political meeting of a party for the purpose of agreeing upon candidates to be proposed for election to offices, to concert measures for supporting certain candidates, or determining what uniform position shall be taken in the public discussion of any new question.

Cau'da Equi'na, *n.* [Lat., horse's tail.] (*Anat.*) The roots of the terminal spinal nerves which are contained in the neural canal of the vertebræ, and surround the *filum terminale* of the medulla spinalis.

Caudal, (*kaw'dal*), *a.* [Lat. *cauda*, a tail.] Pertaining to a tail, or to something which resembles a tail.

Cau'date, CALDATED, *a.* [From Lat. *cauda*, a tail.] (*Anat.*) A term applied when the apex of a pyramidal part or organ is prolonged into a long slender point.

(*Zoöl.*) Applied to an animal provided with a tail.

(*Bot.*) Applied to a plant, when the apex of any organ is extended into a long slender point, as is especially common in Aristolochiaceæ.

Cau'debec, a sea-port town of France, dep. Seine-Inférieure, 6 m. S. of Yvetôt. *Manuf.* Cottons. Its port, though safe, is but little frequented. *Pop.* abt. 3,500. It was formerly the cap. of that part of the dep. which was called *Pays de Caux*.

Cau'déran, a suburb of Bordeaux, dep. Gironde, France.

Can'dex, *n.* [Lat., a trunk.] (*Veget. Physiol.*) The Linnæan name of what is now more generally called the *axis of vegetation*; the woody centre round which the leafy and leaf-like organs are arranged. The C. *ascendens* was the stem; the C. *descendens* the root of a plant.

Caudic'ula, *n.* [A dimin. formed from Lat. *caudex*.] (*Bot.*) A thin, elastic, semi-transparent process of the pollen matter of orchidaceous plants, by means of which the pollen is brought into contact with the stigma.

Cau'dium, (*Anc. Geog.*) A city of Samnium, on the frontiers of Campania, between Beneventum and Capua. In its neighborhood is the defile known as the "Caudine Forks," celebrated for the check which the Romans here received at the hands of the Samnites, 321 B. C. Closed up in the defile by a stratagem of the Samnite general, the whole Roman army, with the consuls Calvinus and Albinus, was obliged to surrender, and pass under the yoke.

Caudle, (*kaw'dl*), *n.* [Fr. *chaudeau*, from *chaud*, Lat. *calidus*, hot.] A soft, warm, nourishing beverage, made of ale or wine, flour or oatmeal, sugar, spices, and sometimes of spirits: given hot, and specially intended for women in childbed.

—*v. a.* To make caudle; to make warm, as caudle. *Shaks.*
Cauf, *n.* [Fr. *caffre*, a chest.] A chest with holes in the top, to keep fish alive in the water.

(*Coal-mining*.) A vessel used to raise coal from the bottom of the shaft.

Cauferis'tan. See KAFFIRISTAN.

Caughdenoy', in *New York*, a P. O. of Oswego co.

Caughnawaga, in *New York*, a village of Montgomery co., on the Mohawk River, 39 m. W.N.W. of Albany.

Caught, *imp.* and *pp.* from *CATCH*, *q. v.*

Caul, *n.* (*Min.*) See CAWK.

Caul, *n.* [A. S. *cuhle*, a cowl; Fr. *cale*, a woollen cap.] (*Anat.*) A name popularly given to the omentum, or thin skin that covers the bowels. It sometimes happens that the child, in hasty labors, is born with one of the fine uterine membranes over the head, in the form of a night-cap. This unusual appendage has been regarded with superstitious veneration by the ignorant; and from the firmly rooted belief that no person can be drowned who possesses such a talisman, infants' cauls have been long esteemed as things remarkably fortunate to the owner, and large sums have been demanded and given for such a presumed preventative to a watery grave.

(*Costume*.) A kind of net for enclosing the hair.

—*pl.* (*Corp.*) Pieces of wood put under the screws which bind parts of work that are glued.

Caulabagh', a town of Punjab, 68 m. S.E. of Peshawer.

Caul'es'cent, *a.* [Gr. *kaulos*, a stalk.] (*Bot.*) Applied to plants having evident stems.

Caul'et, *n.* [Lat. *caulis*.] Cole-wort.

Caul'icle, **Caul'icula**, **Caul'iculus**, *n.* (*Bot.*) Same as RADICLE, *q. v.*

Caul'iculus, *n.* [Lat.] (*Arch.*) The stem or twist under the flower in the Corinthian capital.

Cauliferous, *a.* That has a stalk.

Cauliflower, *n.* [Lat. *caulis*, cabbage, and *flore*, flower; W. *caul*, cabbage, and *flower*; It. *cauliflore*; Fr. *choufleur*.] (*Hort.*) An esculent vegetable consisting of the fleshy, young, undeveloped inflorescence of a variety of *Brassica oleracea*, hardly different from brocoli, except in being whiter and less hardy. It is said to have been imported from Cyprus about the middle of the 16th century. A very rich, light, warm soil is required for *C.*, which must be sown in beds, and afterwards transplanted into sheltered situations, where they can be protected when young with hand-glasses. They are sown in August for a spring crop, in February for a summer crop, and in May in order to come in at the end of autumn and beginning of winter. The *C.* is a light, easily digested, and nutritious vegetable aliment.

Cauliform, *a.* [Lat. *caulis*, a stalk.] That has the form of a stalk.

Caul'ine, *a.* [Lat. *caulis*.] Applied to anything that grows to, or springs from, the stem of a plant. Thus *C.* leaves are those which grow upon the stem: *C.* prickles, such as are borne by the same part, and so on.

Caul'is, *n.* [Lat., from Gr. *kaulos*.] (*Bot.*) The stalk or stem of herbaceous plants.

Caulk, (*kawk*), *v. a.* (*Naut.*) To stuff the seams or openings between the planks of a ship with oakum, which is rope untwisted into its original state of fibre. The oakum is forced in by a caulking chisel and mallet.

Caulk'er, *n.* One who practises caulking.

Caulk'ing, *n.* (*Naut.*) The act of driving a quantity of oakum into the seams of the planks, to keep out the water.

Caulocar'pons, *a.* [Gr. *kaulos*, a stem, and *karpos*, fruit.] (*Bot.*) A name applied by De Candolle to plants which, like trees and shrubs, annually produce flowers and fruit on their branches without perishing.

Cau'ma, *n.* [Gr. *kuma*, a burnt part.] (*Med.*) Great heat of the body, as in certain fevers.

Cau'matic, *a.* Of the nature of *cauma*.

Cau'mbe, or CAUMBE, a river of Brazil, prov. Pará, emptying into the Rio Branco at São Isabel; Lat. 2° 53' N.; Lon. 61° 10' W.

Caus, SOLOMON DE, a French engineer, b. in Normandy, towards the end of the 16th century. He first settled in England, where he was attached to the Prince of Wales, afterwards Charles I.; then in Germany, as engineer to the Elector of Bavaria. Having spent the greater part of his life with this prince, he returned to France, where he d. about 1630. "He wrote several works, in one of which, entitled *Les Raisons des Forces Mouvantes*, he speaks of the expansion and condensation of steam in a way naturally to suggest the alternate action of the piston and the principle of the steam-engine; it has therefore been suggested that the Marquis of Worcester borrowed from him the discovery of the properties of steam as a motive power."

Caus'able, *a.* [Fr.] That may be caused, produced, or effected.

Caus'al, *a.* [Fr.; Lat. *causalis*.] Relating to, or implying, a cause or causes.

"Causal propositions are, when two propositions are joined by causal particles; as, houses were not built that they might be destroyed." — *Watts*.

—*n.* (*Grammar*.) A causal particle, or a word that expresses a cause.

Causality, *n.* [Fr. *causalité*, from L. Lat. *causalitas*.] The agency of a cause; the quality of causing.

(*Phren.*) The faculty of tracing the relations of cause and effect.

Causally, *adv.* According to the order or series of causes.

Cau'salty, *n.* (*Mining*.) The light parts of ores which are carried away by washing, or separated in the stamping-mill.

Causa'tion, *n.* The act or agency of a cause in producing an effect; the act or agency by which an effect is produced.

Causative, *a.* [Fr. *causatif*.] That expresses a cause or reason; that effects a cause.

Causatively, *adv.* In a causative manner.

Causa'tor, *n.* (*Law*) A litigant; one who takes the part of the plaintiff or defendant in a suit.

Cause, (*kawz*), *n.* [Fr., from Lat. *causa*. Etymol. uncertain.] That which brings about any change in the state, condition, circumstances, &c. of things; that which produces an effect.

"Cause is a substance exerting its power into act, to make one thing begin to be." — *Locke*.

—Reason; motive to anything; incitement; origin.

"Eneas wond'ring stood: then ask'd the cause
Which to the stream the crowding people draws." — *Dryden*.

—Purpose; design; pursuit; that which a person or party espouses.

"Ere to thy cause, and thee, my heart inclin'd,
Or love to party had seduc'd my mind." — *Tickell*.

(*Law*.) A suit or action. Any question, civil or criminal, contested before a court. — In *Civil law*, the consideration or motive for making a contract.

(*Philos.*) That by which something known as the effect is produced, and without which it could not have existed. Four kinds of causes have been distinguished by logicians: the material, the efficient, the formal, and the final. The material cause of a thing is that out of which that thing is made; in other words, that which is the ground of the possibility of a thing's coming into existence: e.g. the marble out of which a statue is made. The efficient cause is that in which resides the moving power requisite in order to render the possible existence actual; as the sculptor. The formal cause is that which must supervene to the matter, in order to give the thing its precise individual existence as that thing and no other; as the shape which the sculptor communicates to the marble. This distinction is derived originally from Aristotle, with whom it is rather a metaphysical than a logical determination. The final cause of the thing is that very thing in its completeness; as the statue when made. See ARISTOTELIANISM. — The various opinions as to the nature and origin of the principle of causality in the human mind are ranged by Sir W. Hamilton into two great categories, — the one comprehending those theories which consider this principle as empirical, or *à posteriori*, — that is, as derived from experience; the other, those which view it as pure, or *à priori*, — that is, as the condition of intelligence itself. These two primary genera he subdivides into several subordinate classes. (See *Lectures on Metaphysics*, vol. ii. p. 385, *et seq.*) He attempts to explain it by what he terms "the law of the conditioned," or the law of limitation: that we are unable, on the one hand, to conceive of nothing becoming something; and, on the other hand, of something becoming nothing; that we are utterly unable to realize in thought the possibility of the complement of existence in the universe being either increased or diminished. *Ex nihilo nihil, in nihilum nil posse reverti*, expresses, according to him, "in its purest form, the whole intellectual phenomenon of causality." This explanation, however, is not generally received by philosophers. — The *Doctrine of final causes*, which, with Aristotle, was merely an inquiry into tendencies, has, by the theologians of modern times, been employed to establish the truth of a divine providence. The argument from final causes, according to Dr. Reid, when reduced to a syllogism, has these two premises: — 1. That design and intelligence in the cause may, with certainty, be inferred from marks or signs of it in the effect; and 2. that there are the clearest marks of design and wisdom in the works of nature: the conclusion being, that the works of nature are the effects of a wise and intelligent cause.

Cause, *v. a.* To produce; to occasion; to bring into existence; to effect by agency, power, or influence.

Cause'less, *a.* Having no cause; without just ground, reason, or motive.

Cause'lessly, *adv.* Without cause.

Cause'lessness, *n.* State of being causeless.

Caus'er, *n.* He or that which causes.

Causeway, **Causey**, *n.* [Fr. *chaussée*, a paved road; L. Lat. *calceata*, from *calceus*, a covering for the foot, a shoe, from *calx*, *calcei*, the heel; Port. *calçada*; Sp. *calzada*.] A carriage-road supported at a slight elevation above the surface of any marsh-lands, or water, which it may be found advisable to traverse: it differs from a viaduct, which is supported by piers and arches, whilst in a causeway the road is carried by an embankment, or by a low retaining wall.

Caus'eyed, *a.* Furnished with a causeway or causey.

Causid'ical, *a.* [Lat. *causidicus*, an advocate; *causa*, a cause, and *dicerre*, to say.] Pertaining, or relating, to an advocate, or special pleader.

Caussade', a town of France, dep. Tarn-et-Garonne, 12 m. N.E. of Montauban. *Manuf.* Woollens and linens. *Pop.* 4,436.

Caussidière, MARC, (*ko-sid'è-air*.) a French politician, b. at Lyons, 1809, of a family of humble artisans. He took an active part with the revolutionists of 1834, in Lyons and St. Etienne; was taken prisoner and sent to Mont St. Michel, where he was confined till 1837. In 1848 he was appointed prefect of police, and after the *coup d'état* he took refuge in London. There he published his memoirs, and afterwards went to New York, where he entered on a mercantile life. D. 1861.

Caus'son, *n.* (*Manege*.) See CAVEZON.

Caus'tic, **Caus'tical**, *a.* [Fr. *caustique*; Gr. *kaustikos*, from *kauo*, *kauso*, to burn.] Burning; corroding; searing. — Severe; satirical; cutting; as, a *caustic* remark.

C. Curve. (*Geom.*) When rays of light issuing from a luminous point are incident upon a surface separating two media, reflection and refraction take place according to well-known laws, viz.: 1. The plane containing the incident and reflected or refracted ray, contains the normal of the refracting surface at the point of incidence. 2. The angles of incidence and reflection are equal. 3. The sines of the angles of incidence and refraction have a constant ratio. Now the reflected as well as the refracted rays will by their mutual intersections give rise to a series of points, at which the intensity of light and heat will be in excess. The surface formed by such a series of points, that is to say, the envelope of the reflected or refracted rays, is called a *caustic* surface; the first a *caustic by reflection* or *catoptrical*, the other a *caustic by refraction* or *dioptrical*. The bright lines seen on a table upon which stand a bottle of water and a candle, are familiar examples of the two kinds of caustics, or rather of the curves in which the caustic surfaces are intersected by the plane of the table. In the construction of reflectors, lenses, &c., the consideration of caustics is of manifest importance. The caustic by reflection from a paraboloid of revolution reduces itself to a point when the incident rays are parallel to the axis, hence the importance of parabolic reflectors. In the case of reflection from a sphere this property is lost, the caustic surface does not reduce to a point, and hence the phenomenon of spherical aberration.

Caus'tic, *n.* (*Med.*) A medicine that burns or eats away the skin and flesh, making an open sore. The most important caustics are: the nitrate of silver (*lunar C.*), *C. potash* (*potassa fusa*), nitric acid (*aqua-fortis*), sulphate of copper (*blue-stone*). See CAUTERY.

Caus'tically, *adv.* In a caustic manner; severely.

Caus'ticity, **Caus'tiness**, *n.* [Fr. *causticité*.] Quality of being caustic; severity; cutting remarks.

Caus'sus, *n.* [Gr. *kausos*, heat.] (*Med.*) A highly ardent fever.

Cau'ten, or IMPERIAL, a river of Chili, has its source on the W. slope of the Andes, in Lat. 38° 44' S. and falls into the S. Pacific Ocean at Lat. 38° 48' S. Length abt. 180 m.

Cau'ter, *n.* [See CAUTERIZE.] A hot searing-iron.

Cau'terant, *n.* A cauterizing substance.

Cauterets, a French watering-place, dep. Hautes Pyrénées. It is situated 2,900 feet above the sea, and has hot sulphur springs, the temperature of which varies from 102° to 122°.

Cau'terism, *n.* The application of a cantery.

Cauteriza'tion, *n.* [Fr. *cautérisation*.] The act of cauterizing; the effect of a cantery or caustic.

Cau'terize, *v. a.* [Fr. *cauteriser*; Gr. *kauter*, a burner, a branding-iron, from *kauo*, *kauso*, to burn.] To burn or sear with caustics or a hot iron, as morbid flesh.

Cau'terizing, *n.* The act of burning with a cantery.

Cau'tery, *n.* [Gr. *kauterion*, a branding-iron; Lat. *cauterium*; Fr. *cautère*; It. and Sp. *cauterio*.] (*Med.*) Any drug, or means employed to produce a violent local inflammation, with the object, by a counter-irritation, of relieving some internal organ or part. Sometimes they are used so strong as to produce instant destruction of the cuticle and flesh, leaving a large suppurating wound. The object is much the same in this as in the other case, only more lasting and extensive, the wound being called an *issue*. There are two kinds of cauteries — the *actual* and the *potential*. The actual cantery is produced by heat, and can be obtained in three ways: first, by heating a metallic plate in boiling water, and then pressing it firmly on the body till the surface is abraded. The second method is by heating certain shaped irons till they become white, and in that incandescent state rubbing them along the back, hip, or arm, in the hope of relieving the deep-seated injury in the spine or hip-joint, or wherever the disease may be situated. The third mode of employing the actual cantery is by igniting a small flat roll of fine cotton, and while one person retains it on the affected part, another drives the heat by keeping up a steady draught of air by means of a pair of bellows. See CAUTERY, ELECTRIC, in SECTION II.

Cau'ting-iron, *n.* (*Farriery*.) An iron used for cauterizing.

Caution, (*kaw'shun*), *n.* [Fr., from Lat. *cautio*, *cautionis*, from *careo*, *cautus*, to be on one's guard, to take care or heed.] Care; provident care; wariness; heed; prudence; foresight. — Counsel; advice; warning.

—Security; guaranty; pledge; bail.

"The parliament would yet give his majesty sufficient caution that the war should be prosecuted." — *Clarendon*.

—*v. a.* To warn to be cautious; to give notice of danger; to warn; to exhort to take heed.

Cautionary, *a.* Containing caution; given as a pledge, or in security.

Cautioner, *n.* One who gives caution or advice.

(*Law*.) A surety; a bondsman. — One who binds himself in a bond with the principal for greater security.

Caution's, *a.* Using caution; careful; wary; watchful; provident; circumspect; prudent.

Caution'sly, *adv.* With caution; circumspectly.

Caution'sness, *n.* Quality of being cautious.

Can'to, a river of Cuba, near the E. extremity of the island, falls into the bay of Buena Esperanza. Length abt. 70 m.

Ca'va, a town of S. Italy, prov. Salerno, 26 m. E.S.E. of Naples. *Manuf.* Silks, cottons, woollens. *Pop.* 26,815.

Cavaignae, LOUIS EUGÈNE, (*ka-vân'yak*), a French general and dictator, b. 1802. Having chosen the military profession, he served in the Morea, and obtained his captaincy in 1829. In Algeria, to which he was commissioned

in 1832, he built up the fabric of his military reputation by ten years of active service, during which his bravery in the field, his resolute endurance of hardships, and his strategic skill, were equally conspicuous. In 1848 he was appointed governor of Algeria, with the rank of general of division. In the same year, he declined the portfolio of the War-Office, but promptly undertook the defence of the government against the disaffected and insurgent classes of the Parisian populace. A fierce struggle followed, during which the capital was declared in a state of siege, and C. invested with the powers of dictator; but, at length, after 4 days of hard fighting at the barricades, he succeeded in completely crushing the insurrection. On resigning his dictatorship, he was elected president of the council; and in the close of the year was the rival of Louis Napoleon for the presidency of the republic. At the *coup d'état* of 1851, he was arrested and imprisoned, but speedily released, and permitted to reside in France. Having refused to take the oath of adhesion to the new government, he lived in complete retirement till 1857, when he suddenly expired from a disease of the heart. His father, JEAN BAPTISTE C., was a member of the National Convention, and voted for the death of Louis XVI. — His uncle, JACQUES MARIE, VICOMTE C., rose to the rank of general under Napoleon I., and obtained his peerage from Louis XVIII. — His elder brother ELEANORE LOUIS GODEFROY C., was one of the most popular leaders of the republican party after the restoration, and during the reign of Louis Philippe. B. 1801; d. 1845.

Availon, (*ka-vā'il-yon*.) (anc. *Cabillio*.) a town of France, dep. Vaucluse, on the Durance, 13 m. S.E. of Avignon. *Manuf.* Shoes. *Pop.* 5,776.

avalecade, *n.* [Fr. from *cheval*, a horse; Lat. *caballus*.] A procession of persons on horseback.

avalecaute, a town of Brazil, prov. and 300 m. N.E. of Goyaz, on the Almas. C. is the entrepôt of the provs. of Goyaz, Matto-Grosso, and Minas-Geraes. *Pop.* 4,500.

avalier, (*ka-vā-lēr*.) *n.* [Fr.: Lat. *caballos*, a pack-horse; Sp. *caballero*. See CAVALRY.] A horse-soldier; an armed horseman; a knight.

—A gay, sprightly, military man.

"For who is he . . . that will not follow

These cull'd and choice drawn cavaliers to France?" — *Shaks.*

(*Hist.*) The name given to the supporters of King Charles I., during the Great Civil War in England, from their gay dress and demeanor, as contrasted with the austerity of the Parliamentary party, who were styled *Roundheads* (q.v.), from the mode in which the more puritanical of that body wore their hair closely cropped.

(*Fortif.*) A sort of interior bastion, several feet more elevated than the principal bastion of the fortress in which it is formed. The use of the C. is twofold: it serves either to defile the works from the fire of an enemy on an adjacent height, or to command the trenches of the besiegers. C. are sometimes constructed in the gorges, or on the middle of the curtain, and their form is the semi-circular; but when they are within the bastion they are now built with straight faces and flanks parallel to those of the work in which they are placed. French C. are works raised by besiegers on the glacis of a fortress, for the purpose of enabling them to direct a fire of musketry into the covered way.

a. Like a cavalier: gay; sprightly; generous. Brave; warlike.

"The people are naturally not valiant, and not much cavalier." *Suckling.*

Haughty; disdainful; arrogant; as, a cavalier manner. Belonging, or relating, to the adherents of King Charles I. **avalier**, JEAN, a leader of the *Camisards*, or Protestants of Cevennes, when forced into rebellion against Louis XIV., by the persecutions of the Catholics. He defeated the best generals that came against him, and compelled Marshal de Villars to make a treaty with him. He was then taken into the king's service as colonel of a regiment; but being apprehensive that some design was formed against him, he entered into the service of England, and commanded, with his usual skill, a regiment of French refugees at the battle of Almanza, in Spain. He was afterwards appointed governor of Guernsey and Jersey, where he spent the remainder of his days. B. in the Cevennes, 1679; d. 1740. — The marvelous defence of the Cevennes against the best regular troops of France has been often cited as a proof of the great deeds which may be done by bodies of riflemen voluntarily enrolled, and acting on their own soil.

avalierism, *n.* The principles or political doctrines of the Cavaliers.

avalierly, *adv.* Haughtily; arrogantly; disdainfully.

Cavalier'ness, *n.* Haughtiness; a supercilious or disdainful manner.

Cavallard, *n.* [Sp. *caballada*, a drove of horses.] A term applied in the S.W. states of America to a drove of horses or mules.

Cavalry, (*ka-vā-l-rē*.) *n.* [Fr. *cavalerie*, from *cavalier*, from *cheval*, a horse; Lat. *caballus*; Gr. *kabalios*; Gael. *capull*.] (*Mil.*) A body of horse-soldiers, or of military troops mounted.

(*Hist.*) Among the ancients, when warfare consisted in expeditions to remote places rather for plunder than conquest, a numerous C. was indispensable. In proportion, however, as the art of war improved, this class diminished in value; the strength of the Greek and Roman armies lay chiefly in the firm array of their foot-soldiers, and Folard observes that the most certain evidence of decline in the military character of a state is the existence of a numerous C. A well-disciplined C. has, however, often turned the scale of fortune in war. In the early French monarchy, and in the Anglo-Saxon kingdoms of Britain, the men of wealth and noble birth distinguished themselves in the field from those of inferior rank, by being well armed and mounted on horses. And, during several centuries in which the poverty of the nations prevented princes from maintaining standing armies, and when the foot-soldiers were men undisciplined and ill-provided, and summoned from the plough to attend the sovereign for a short time only, it is evident that a class of troops, comprehending those men who, by the tenure of their estates, were required to serve in the wars at their own expense, and to bring into the field a number of dependents mounted like themselves, and trained in the daily practice of martial exercises, must have constituted almost the only efficient arm of battle. — In France, the superior classes of these warriors bore the title of *knights-bannerets*, and the others were designated knights of the second order, or *bas-chevaliers*. In those days the infantry, for the reason before mentioned, being held in little estimation, the strength of armies was denoted by the number of banners and pennons under which the knights and their attendants fought; victories also were distinguished only by the number of men of rank who had been slain or made prisoners. But the power of the nobles becoming too great for the monarch, and their mutual jealousies constantly involving the nation in the miseries of civil war, Charles VII., in 1445, took advantage of the temporary tranquillity which reigned in France after the English had been compelled to abandon nearly the whole of that country, to reduce his military force. From that time the kings retained in constant pay fifteen companies, as they were called, each consisting of 600 horsemen, besides the young men bearing the titles of archers and pages, who also, in general, fought on horseback, but were clothed in lighter armor. The troops composing the companies appear to have been what would now be called gentlemen; and the esteem in which they held themselves is evident from the refusal of the Chevalier Bayard, on the ground of their quality, to unite them with the lansquenets (German infantry) at the siege of Padua, in an assault proposed by the Emperor Maximilian to be made on that place. More than a century before the time of Charles VII., the English C. in the pay of the state was divided by Edward III. (1324) into small bodies, commanded by officers called *constables*; and Grose observes, that the list of the army at St. Quentin (1557) is the first in which a body of C. is distinguished by the appellation of a *troop*; a name which is still given to the half of a squadron, or the tenth part of a full regiment. The respectability of the French companies above mentioned seems to have declined from about the time of Francis II., men of a lower grade being then occasionally introduced, from the difficulty, it is said, of filling with men of high birth the ranks, which were become very numerous. But the employment of artillery in the field deprived this heavy armed cavalry of all the advantages it possessed over the soldiers who fought on foot, and the latter were often enabled to maintain the combat after the horsemen were dismounted or forced to retire; hence they gradually rose in reputation, and the good discipline and conduct of the Swiss infantry in the Italian wars induced the French and Germans to augment the number of the troops of this class in their armies. From that time the C., though always an essential arm in war, may be said to have become inferior in importance to the infantry. The subdivisions of C. are numerous. See CUTRASERS, DRAGOONS, HUSSARS, LANCERS, &c.

(*Tactics.*) So far as concerns actual duties, heavy C. charge the enemy's C. and infantry, attack the guns, and cover a retreat; while the light C. make reconnaissances, carry despatches and messages, maintain outposts, supply pickets, scour the country for forage, pursue the enemy, and make rapid manœuvres. The C. usually attack in line against C., *en échelon* against artillery, and in column against infantry. When an attack is about to be made, the C. usually group into three bodies — the *attacking*, the *supporting*, and the *reserve*. Close combat and hand-to-hand struggle are the province of C.; infantry and artillery may fight at a distance, but C. can not. It is rare that two bodies of C. stand to fight each other; the weaker of the two, or the less resolute, usually turns and gallops off. The work to be done by the horse is to pursue, to overwhelm, to cut down. They cannot wait to receive an attack like infantry; they must either pursue or retreat; and on this account it has been said, "rest is incompatible with cavalry." The infantry and artillery more frequently win the victory; but the C. prepares the way for doing this, captures prisoners and trophies, pursues the flying enemy, rapidly succors a menaced point, and covers the

retreat of infantry and artillery, if retreat be necessary. C. is necessary to finish off work mainly done by others; and, without its aid, signal success is seldom obtained on the field.

Cavan, an inland county of Ireland, in the province of Ulster, bounded N. by Fermanagh, E. by Monaghan, S. by the counties of Longford, Meath, and Westmeath, and W. by Leitrim. — *Area*, 470 square miles. — *Desc.* It consists entirely of hill and dale, and is mountainous towards the S.W. In general the soil is light and poor, except along the courses of the streams. — *Rivers*, The Erne, Croghan, Annadee, and others. *Lakes*, Lough Erne, Lough Doughter, Lough Ramor, and Sheelan. — *Prod.* Oats, potatoes, turnips, and, in some districts, flax. Agriculture, however, is, in general, in a backward state. — *Minerals*, Silver, lead, and iron. Manganese is obtained; also pure sulphur, coal, and very small quantities of limestone. — *Manf.* The principal are yarn and linen.

CAVAN, the chief town of the above co., 57 m. N.W. of Dublin, on a small river of the same name; *pop.* 3,515.

Cavanas, a fortified harbor of Cuba, on the N.W. coast, 38 m. S.W. of Havana; Lat. 25° 5' N., Lon. 82° 55' W. It has a fine deep bay, with anchorage for several sail of ships.

Cavander, in Georgia, a village of Lumpkin co., 70 m. N.N.E. of Atlanta.

Cavauville, in U. Canada, a post-village of Durham co., 65 m. N.E. of Toronto.

Cavass, *Cavass*, (*ka-vass*.) *n.* [Turk.] A Turkish police-officer.

Cavatina, (*kā-vā-tē'na*.) *n.* [It.] (*Mus.*) A term now usually applied to a vocal piece for a single voice, extracted from an opera. It is frequently preceded by a recitative.

Cavazion, (*ka-vā'zhun*.) *n.* (*Arch.*) The hollow trench made for laying the foundation of a building; according to Vitruvius, it ought to be one-sixth part of the height of the whole building.

Cave, *n.* [Fr. *cave*; Lat. *cavea*, from *carus*, hollow; Ar. *kaab*, a place hollowed out, a grotto; Semitic root *na-kab*, to hollow out.] A hollow place in the earth; a cavern. — They occur more or less along the rocky shores of all free-flowing seas, and are the result of abrasion by waves laden with fragments of stone, and acting upon pre-existing fissures, or the softer portions of the exposed rocks. The most celebrated, however, occur in limestone strata, and appear to be the results partly of fissuring by subterranean disturbance, and partly of waste by the percolation and passage of carbonated waters. Some are celebrated for their great extent, others for their gorgeous stalactites and stalagmites, and many for their treasures of sub-fossil bones. Among the most celebrated may be mentioned the grotto of Antiparos, in Greece, the Adelsberg caverns in Carniola, and the Mammoth C. in Kentucky, the largest C. in the

Fig. 342. — MAMMOTH CAVE, KENTUCKY.

world. It is situated in Edmonson co., near Green River, 130 m. S.S.W. of Lexington. It is said to have been penetrated to a distance of 10 m., and through it flows a river navigable for boats, in which are found the eyeless fish, and another species of fish entirely blind, though provided with eyes. Many other remarkable C. occur in the U. S., as the Luray, in Virginia, which is unsurpassed for the beauty and variety of its stalactitic display; the Wyandotte (q.v.), in Indiana, said to rival the Mammoth C. in extent and grandeur; Weir's, in Virginia; the Big Saltpetre, in Missouri; Ball's, in New York, etc. Of sea-shore caverns the most famous and remarkable is Fingal's C., on the coast of Scotland, (Continued in SECTION II.)

Cave, *v. a.* To make hollow; to form as a den or burrow. — *v. i.* To dwell in a cave.

"Such as we
Care here, haunt here, are outlaws." — *Shaks.*

—To break down. (Used as a slang colloquialism.)

To cave in. To fall in upon, and leave a hollow place.

Cave, in *Illinois*, a post-village of Franklin co., 40 m. N.N.W. of Shawneetown.

Cave, in *Indiana*, a village of Crawford co., 4 m. N.E. of Leavenworth.

Cave, in *Tennessee*, a village of White co.

Cave, WILLIAM, an English divine, b. at Pickwell, Leicestershire, 1637, wrote a great number of works of a religious tendency, and others with a view to illustrate ecclesiastical history. He is remembered chiefly by his *Primitive Christianity, Lives of the Apostles and Martyrs*, and his *Historia Literaria*. D. at Windsor, 1713.

Cave'a, [Lat., a hollow place.] (*Antiq.*) A term applied by the Romans to the interior of an amphitheatre.

Caveat, (*kā'vĕ-at*), *n.* [Lat., from *cavea*, to take care.] (*Law*.) A notice or caution given, by a party interested, to a judge or other officer, in order to stay proceedings by him.

(*Patent Law*.) A legal notice not to issue a patent of a particular description to any other person without allowing the caveator an opportunity to establish his priority of invention.

—A hint; a warning; an intimation of caution.

"The chiefest caveat in reformation must be to keep out the Scots." — *Spenser*.

—*v. i.* To enter a caveat.

Caveat emptor. [Lat.] (*Law*.) A purchase without warranty, or at the buyer's own risk.

Caveating, *n.* (*Fencing*.) The shifting the sword from one side of an adversary's sword to the other.

Caveator, *n.* One who enters a caveat.

Cave City, in *California*, a village of Calaveras co., 12 m. E. of San Andreas.

Cave City, in *Kentucky*, a post-office of Barren co., 85 m. S. of Louisville, and 6 m. from the Mammoth Cave.

Cave Creek, in *Arkansas*, a post-office of Newton co.

Cave in Rock, in *Illinois*, a post-village of Hardin co., on the Ohio River, 400 m. below Cincinnati.

Cavendish, HENRY, an English philosopher, the younger son of Lord Charles Cavendish, b. 1731. He studied at Cambridge, and the large fortune which was bequeathed to him by an uncle enabled him to devote his life to scientific investigations. C. was the first to lay the foundation of the modern form which the science of chemistry has taken. He was the discoverer of the composition of water, and of nitric acid; and measured the density of the earth by direct comparison with balls of lead. D. 1810.

Cavendish, in *Vermont*, a post-village and township of Windsor county, 60 miles S. by E. of Montpelier.

Cavendish, (*kā'v'n-dish*), *n.* A term applied to tobacco, when pressed into cakes of square, oblong form, and sweetened with molasses, or some other ingredient.

Cavern, (*kāv'urn*), *n.* [Lat. *caverna*, from *cavus*, hollow.] A cave; a deep, hollow place in the earth; an excavation, whether natural or artificial. — See **CAVE**.

Caverned, *a.* Full of caverns; having caverns or cavities; hollow; excavated; as, "The cavern'd rock." *Pope*.

—Inhabiting a cavern.

"No cavern'd hermit rests self-satisfied." — *Pope*.

Cavernous, (*kāv'ern-us*), *a.* [Lat. *cavernosus*.] Hollow; full of caverns, or of cavities.

Cavernulous, *a.* [See **CAVERN**.] Containing many small cavities.

Cavery, a river of S. Hindostan, the most considerable and useful S. of the Krishna. It rises in Coorg, and after a course of 450 m. falls into the Indian Ocean in the dist. of Tanjore. It is not navigable for large vessels.

Cave'sa Creek, in *Texas*, flows into San Antonio River, 8 m. W. of Goliad.

Cave Spring, in *Georgia*, a flourishing post-village of Floyd co., 16 m. S.W. from Rome. There is an extensive cave and a mineral spring in the vicinity from which the name of the village is derived.

Cave Spring, in *Missouri*, a small village of Wright co.

Cave Spring, in *Tennessee*, a post-office of Carter co.

Cav'esson, **Cav'ezon**, *n.* [Fr. *caveçon* and *cavesson*; It. *cavezza*, for *capezza*, a halter, from Lat. *caput*, head.] (*Man.*) A sort of nose-band, sometimes made of iron, and at others of leather or wood; sometimes flat, and occasionally hollow or twisted; which is put upon the nose of a horse, to assist in his breaking-in.

Cave'town, in *Maryland*, a twp. and village of Washington co., 107 m. N.W. of Annapolis.

Cavetto, *n.* [It., from *cavo*, hollow.] (*Arch.*) A hollow moulding, whose profile is a quadrant of a circle; it is commonly used in cornices.

Cav'ettsville, in *Pennsylvania*, a village of Westmoreland county.

Ca'via, *n.* (*Zoöl.*) See **GUINEA-PIG**.

Cavia'na, an island of Brazil, prov. Pará, in the delta of the Amazon. On its S.E. side is the town of Roberdello.

Caviar, **Caviare**, (*kā'vĕ-ār*), *n.* [Fr. *caviar*; It. *caviare*; Sp. *cabial*; Ar. *khabyar*.] The salted roe of the sturgeon, and other large fish, much esteemed by the Russians as an article of food, and frequently used among other nations as a condiment. This article would appear to have been considered a delicacy even in the time of Shakespeare, though not a popular relish, as may be inferred from the passage in *Hamlet*:—"The play, I remember, pleased not the million; 'twas caviare to the general."

Cavicorn'ia, *n.* [Lat. *carus*, hollow, and *cornu*, a horn.] (*Zoöl.*) A tribe of ruminants which have their horns hollowed out as a sheath, and implanted on bony processes, as in the antelope.

Cav'il, *v. i.* [O. Fr. *caviller*, to wrangle; Sp. *cavilar*; Lat. *cavillor*, from *cavus*, hollow, vain, empty.] To raise captious and frivolous objections; to carp; to censure;

to wrangle; to make use of sophisms; to find fault without reason.

"But, in the way of bargain, mark ye me,
I'll cavil on the ninth part of a hair." — *Shaks.*

—*n.* False or frivolous objections; sophism; subtlety.

Cav'iller, *n.* One who cavils or carps.

Cav'illingly, *adv.* In a cavilling manner.

Cav'illions, *a.* Captious; prone to unfair or unreasonable objections. (*R.*)

Cav'illionsly, *adv.* In a cavillions manner. (*R.*)

Cav'illionsness, *n.* Captiousness; disposition to make frivolous objections. (*R.*)

Cav'in, *n.* [Fr., from Lat. *cavus*.] (*Mil.*) A hollow way or passage to cover the advance of troops to a certain place.

Cav'itary, *n.* and *a.* (*Zoöl.*) See **NEMATOID**.

Cav'ité, a town of Luzon, one of the Philippine Islands, in the Bay of Manila, 3 m. S.W. of that city, of which it is the port; Lat. 14° 34' N., Lon. 120° 48' E. It is the naval depot of all the Spanish possessions in the East, has a good harbor, and an estimated population of 5,000.

Cav'ited, (*kāv'i-tĕd*), *a.* Possessing cavities.

Cavity, *n.* [Lat. *cavitas*, from *cavus*, hollow.] A hollow place; an opening or aperture; as, the cavity of the knee-joint. — Hollowness; state of being hollow.

Cavour, CAMILLO BENSO, CONTE DI, (*kā'vor*), the most distinguished Italian statesman of modern times, and one of the foremost produced in any age or country, was b. of an ancient Piedmontese family, at Turin, in 1810. In early life he entered the Sardinian military service, which, however, he soon quitted in order to gratify his inclination to travel. Proceeding to England, he became much impressed with her institutions, and an earnest admirer and advocate of constitutional monarchy. He

Fig. 543. — COUNT CAVOUR.

returned to Italy imbued with this spirit, and, in 1847, took an active part in the economical questions, and reform doctrines, then agitating that country. C. also had a prominent share in the bringing about of King Charles Albert's grant of the constitution of 1848. Shortly afterwards he was elected to the Chamber as deputy for Turin, and, in 1851, became minister of agriculture, commerce, and marine. In this capacity he labored to introduce into his country those free-trade principles that had recently proved so beneficial in Great Britain. In 1852, C. succeeded D'Azeglio as prime-minister, and for the following 7 years became the ruling spirit of Italian politics. The great idea which animated his statesmanship was the establishment of one free and united Italy, and regardless of the antagonism of Austria, he persevered in the achievement of his object, which, with the aid of French support, was accomplished after the war of 1857, by the treaty of Villafranca. After this event he resigned office, to which he did not return till 1860, and in the following year he died after a short illness. C. was an able debater, a journalist of note, and author of several esteemed works on political economy.

Cavour, a town of N. Italy, in Piedmont, 7 m. S.S.E. of Pinerole. *Manuf.* Silk, twist, linens, leather, &c. *Pop.* 8,302.

Ca'vy, *n.* (*Zoöl.*) See **GUINEA-PIG**.

Caw, (*kā'v*), *v. i.* [A.S. *cō*; formed from the sound.] To cry like a crow, rook, or raven.

"The rook . . . his airy city builds,
And ceaseless caws." — *Thomson*.

—*n.* The caw of the rook, crow, or raven.

Cawk, **Cauk**, *n.* [See **CHALK**.] (*Min.*) A term applied by miners to a massive, earthy-looking variety of sulphate of baryta.

Cawker, *n.* See **CAULKER**.

Cawk'y, *a.* Resembling, or pertaining to, cawk.

Cawnpore, KANPUR. (*kā'v'n-por*), a dist. or collectorate of Hindostan, prov. Allahabad, pres. Bengal, between Lat. 26° and 27° N., and Lon. 79° 30' and 80° 30' E. Area, 2,650 sq. m. *Surface*, flat. *Soil*, highly productive, growing cereals, European fruits and vegetables, and the sugar-cane. *Prin. town*, Cawnpore. *Estim. pop.* 1,000,000.

CAWNPORE, the cap. town of the above dist., and chief British military station in the ceded provinces on the W. bank of the Ganges, 38 m. S.W. of Lucknow. This place bears a sad notoriety for the hideous slaughter of the British by the Sepoy rebels, without regard of age or

sex, during the Indian mutiny of 1857. The tale of this horror is perpetuated by a monument.

Caxamar'ca, a city of Peru, cap. of prov. of same name, in a valley of the Andes, 370 m. N.N.W. of Lima. Lat. 7° 8' 3" S., Lon. 78° 36' 15" W. *Manf.* Gold and silver work. *Pop.* about 7,000.

Caxatambo, in Peru, a mountainous and barren province, with a capital of same name. *Pop.* of prov. 27,000; of town, 6,000.

Cax'ins, CACHIAS, (formerly ALDEAS ALTAS,) a town of Brazil, prov. Maranhão, on the Itapicuru; *pop.* about 7,000.

Caxon, (*kāks'n*), *n.* A cant name sometimes given to a wig.

Caxon, (*kāks'ōō*), *n.* [Sp. *caxa*, from Lat. *capsa*, a chest.] A case or chest of ores prepared for refining.

Cax'ton, WILLIAM, distinguished as the introducer of the art of printing into England; was b. 1412. After serving as a mercer's apprentice in London, he went to Flanders, where he acquired a knowledge of the new typographic invention, and on his return to England, he put his first book to press, the *Recueil of the History of Troy*. This work appeared in 1471, and was succeeded by the *Game and Playe of the Chesse*, and other works. He printed in the Almonry in Westminster (Fig. 544). D. 1491. *Life of C.* by Wm. Blades (Lon., 1877), and *C. Celebration 1877* (Lon., 1877).

Fig. 544. — CAXTON'S PRINTING-OFFICE.
(Almonry, London.)

Cayam'be, or CAYAMBEURCU, a mountain in Ecuador, in the Colombian Andes, 19,535 ft. high; Lon. 78° 10' W.

Cay'cos Islands. See **CAICOS**.

Cayenne, (*kā'y'en*), in French Guiana, a river entering the Atlantic in Lat. 4° 56' N., Lon. 52° 20' W. — An islet 30 m. in circuit, at the mouth of the said river; *pop.* about 10,000.

—A fortified sea-port town, cap. of above colony, at the N.W. point of the above islet. The harbor is good, and well adapted for moderate-sized merchant-vessels. This is a French penal settlement for convicts whose sentence exceeds six years. *Pop.* 6,853. — See **GUIANA** (FRENCH).

Cayenne Pepper, *n.* See **CAPSICUM**.

Cayes, LES-CAYES, or AUX-CAYES, (*kā*), a seaport town of Hayti, 92 m. W.S.W. of Port-au-Prince; *pop.* abt. 10,000.

Cayes-de-Jacmel, a town of Hayti, on the Jacmel River, 20 m. S. of Port-au-Prince.

Caylloma, or CAILLOMA, (*kā'yo'mā*), a town and prov. of S. America, in Peru, 85 m. N.N.E. of Arequipa; *pop.* of province about 23,443.

Cay'ins, a town of France, dep. Tarn-et-Garonne, 24 m. N.E. of Montauban. It is a thriving place, with a *pop.* of 5,470.

Cay'man, *n.* (*Zoöl.*) A name variously used either as the distinctive appellation of some, or as a common name for all, of the *Crocodylidae* of S. America. — See **CROCODYLIDE**.

Cay'man Lake, in Mexico. See **MAPIMI LAKE**.

Cay'maus, three small islands in the British W. Indies in the Caribbean Sea, 130 m. N.W. of Jamaica, of which they are a dependency; *pop.* about 300.

Caymi'tes, two small islands in the W. Indies, off the western coast of Hayti, called the Grand and Little Caymites; Lat. 18° 39' N.; Lon. 73° 40' W.

Caymi'to, a river of S. America, in the United States of Colombia, enters the Bay of Panama, 10 m. W. of Chorrera.

Cayo Co'cas, a fertile island in the Caribbean Sea, belonging to Cuba. Area, 28 sq. m. It possesses valuable fisheries.

Cayo Lar'go, a fertile island in the Caribbean Sea, belonging to Cuba. Area, 32 sq. m.

Cayo Romano, (*kā'ō-rō-mā'no*), an island on the N. coast of Cuba. Area, 172 sq. m. Length 66 m.; breadth, 2½ m.

Cayote' Creek, in *California*, Calaveras co., is an affluent of the Stanislaus River.

Cayo Verde, (*kā'ō-ver'dā*), or Green Bay, an islet of the Bahama Group; Lat. 22° N.; Lon. 75° 10' W.

Cayrn, (*kā'rn*), a town of Brazil, 50 m. S.W. of Bahia; *pop.* about 800.

Cayn'ga, in *Illinois*, a post-office of Livingston co., 5 m. N.E. of Pontiac.

Cayuga, in *New York*, a central co.; area, 750 sq. m. It is drained by the Seneca River and Owasco Creek and bounded by Lake Ontario on the N. and by Cayuga Lake on the W. The surface is undulating, and the soil very productive. Water-limestone, gypsum, and lime-stone are found in abundance. *Cap.* Auburn. *Pop.* in 1897, abt. 65,500.

Cayn'ga, or **Cayuga Bridge**, in *New York*, a post-village of Cayuga co., 11 m. W. from Auburn.

yu'ga, in Ontario, a post-town, cap. of Haldimand co., on Grand River, 25 m. S. of Hamilton; pop. abt. 800.
yu'ga Lake, in New York, lying between Cayuga and Seneca cos., is 35 m. long, and from 1 to $3\frac{1}{2}$ m. wide.

yu'ta, in New York, a post-village and township of Schuyler co., 12 m. N.E. of Elmira, and drained by Cayuta Creek.

yu'taville, in New York, a post-village of Schuyler co., 150 m. W.S.W. of Albany.

zal'la de la Sier'ra, a town of Spain, prov. of Seville, 39 m. N.E. of Seville city, on the declivity of the Sierra Morena. The district around abounds in iron, liver, copper, sulphur, &c., and the inhabitants are chiefly employed in smelting metals. Pop. 8,540.

zem'be, a country in the interior of Africa, with a fortified capital town, said to be some miles in circumference. Prod. Maize, manioc, copper, iron, and ivory. Lat. of its capital, $11^{\circ} 45' S.$, Lon. $30^{\circ} 50' E.$

zeno'via, in Illinois, a township of Woodford county.

zenovia, or **Casnovia**, in Michigan, a village and township of Muskegon co., 22 m. N.N.W. of Grand Rapids.

zenovia, in New York, a village and township of Madison county, 20 miles S.E. of the city of Syracuse.

zenovia, in Wisconsin, a village of Richland co., on the Baraboo River, 40 m. W. of Portage City.

zique, **Cazic**, (*ka-zéek'*) n. See **CACIQUE**.

zor'la, a town of Spain, in Andalusia, 40 m. E.N.E. of Jaén; pop. 8,226.

zotte, **JACQUES**, a French humorous writer, b. at Dijon, 20, was a fervent adept of Illuminism and Martinism. He rested as a royalist during the revolution, he was executed Sept. 25, 1792. His best work is *Le Diable nouzeux*, a tale full of wit and originality, of which we have some good English translations.

zon, n. A name given, in some parts of England, to the dried ordure of cattle, when used as fuel.

3. The initials of a Companion of the English Order of the Bath.

E. The initials of an abridged method of writing civil Engineer.

mo'thus, n. [A name given by Theophrastus to a ring plant.] (*Bot.*) A genus of plants, order *Rhamnales*. The species *C. americanus*, the Jersey-tea or red-root, is a small shrub, with a profusion of white blossoms, found in woods and groves in the U. States. Stems 2-4 ft. high, slender, with reddish, round, smooth branches. Leaves thrice as long as broad, very downy, with soft hair beneath. Flowers minute, white, in crowded panicles from the axils of the upper leaves. Stamens enclosed in the curiously vaulted corolla. The petal, which is large and red, is sometimes used for coloring. The leaves have been used as a substitute for tea.

ra, (*sai-ar'a*), a maritime province of Brazil, stretching along the N. coast, where it is bounded by the Atlantic. On the other side it is enclosed by the Rio Grande-do-Norte, Pernambuco, and Piahy. Area, 66,387 square miles. Desc. Rather flat than mountainous, rising from the Atlantic coast towards the centre, in the form of an amphitheatre. It is fertile and well-watered, produces a great deal of timber, and abounds with minerals. Cap. Ceara. Pop. 952,000. Lat. between 2° and $7^{\circ} 25' S.$, Lon. between $37^{\circ} 40'$ and $41^{\circ} 30' W.$

se, (*sê*), v. i. [*Fr. cesser*; Lat. *cesso*, intensive, from *eo*, *cessus*, to go, to go from, to yield.] To delay; to tarry; to leave off; to give over; to desist; as, to cease work.

There is, however, a limit at which forbearance ceases to be virtue. — *Burke*.

fail; to stop; to be at an end; to abstain.

When she had passed, it seemed like the ceasing of exquisite music. — *Longfellow*.

2. To put a stop to; to put an end to.

"Cease then this impious rage." — *Milton*.

seless, (*sê'sless*) a. Without a stop or pause; incessant; continual; perpetual; without end.

se'lessly, adv. Incessantly; perpetually; without remission.

adilla, n. (*Bot.*) Same as **CEVADILLA**, q. v.

thes, a Greek philosopher, b. at Thebes, lived in the 4th century B. C., and was a disciple of Socrates. The *nanx*, or "Picture of Human Life," is generally attributed to him.

idae, n. pl. [*Gr. kêbos*, a species of monkey.] (*Zool.*) A group including all the monkeys of the American continent, which differ in several respects from those of the Old World; viz., by a partial or complete absence of the thumb upon the hands; the callosities and cheek-pouches are altogether absent; there is a very considerable space between the nostrils; the tail is usually of great length, never absent, and often prehensile. They are very numerous in those vast forests which occupy the plains between the rivers Orinoco and Amazon. They are separated into the families **SAPAJOUS**, **SAGOTES**, and **LEMURIDÆ**, q. v.

orio, n., **Cebrio'idae**, n. pl. (*Zool.*) A genus and family of small coleopterous insects, for the most part inhabiting S. Europe.

on Island. See **ZEBU**.

ous, n. (*Zool.*) A genus of Sapajous; the **WEEPERS**, q. v.

chin, (*che-keen'*) n. See **SEQUIN**.

idomy'a, n. [*Gr. kêidos*, high-leaping; *muia*, a fly.] (*Zool.*) A genus of two-winged flies, family *Tephritidae*. They are always of small size; many of them deposit their eggs upon the tender buds of various kinds of plants; others upon the young sprigs, and some upon the flowers. One species (*C. salicina*) fixes each of its

eggs on a bud of the willow, which becomes enlarged, and ultimately forms a gall in which the larva is lodged and nourished. Another (*C. tritici*), known as the Wheat-fly, may sometimes be seen, in great abundance, flying about wheat-fields in the month of June. This little fly deposits its eggs in the centre of the corolla, where the larvae are hatched; and it is probably by devouring the pollen that they are most injurious to the plant. Another species (*C. destructor*), known in America under the name of the *Hessian-fly*, (see *Fig. 269*.) attacks the lower part of the stem of the wheat.

Cecil, **WILLIAM**, **LORD BURLEIGH**, an English secretary of state under Edward VI. and Elizabeth, and prime-minister of England for forty years, b. in Lincolnshire, 1520. In 1588 parliament was assembled, and, by his advice, a plan of religious reform was laid before it. In this he had a considerable share; and he also took the leading part in the establishment of the Thirty-nine Articles of faith, which form the basis of the Reformed religion of the state. To him is also due the regulation of the coinage, which had been altered since Henry VIII.'s time. He was created *Baron Burleigh* in 1571, and in 1588 concluded an advantageous treaty with the Netherlands. D. 1598. — His son, **ROBERT C.**, minister under Elizabeth and James I., was sent to the court of Henry IV. of France, to negotiate a treaty of peace with Spain. He was greatly instrumental in the death of the Earl of Essex, was loaded with honours by James I., and created Earl of Salisbury.

Cecil, in Maryland, a N.E. co., bordering on Pennsylvania and Delaware, and bounded S.W. by Chesapeake Bay. Area, 300 sq. m. It is washed S. by the Sassafras, and N. by the Susquehanna River. The surface is slightly uneven, and the soil fertile and well cultivated. The principal products are corn, wheat, butter, cattle, and swine. Min. Granite, gneiss, slate, iron, chrome. Cap. Elkton.

Cecil, in Pennsylvania, a post-township of Washington co., 16 m. S.W. of Pittsburg.

Cecilians, n. pl. (*Zool.*) A name given to a genus of naked serpents, from their supposed blindness.

Cecilia, (*St.*) a saint of the Roman Catholic Church, and the patroness of musicians, who suffered martyrdom A. D. 230. Her heathen parents, as we are told, belonged to a noble Roman family, and betrothed their daughter, who had been converted to Christianity, to a heathen youth named Valerian. This youth and his brother Tiberius became Christian converts, and suffered martyrdom. C., when commanded to sacrifice to idols, firmly refused, and was condemned to death. Her persecutors, it is said, first threw her into a boiling bath, but on the following day they found her unhurt. The executioner next attempted to cut off her head, but found it impossible. She died three days after. As early as the 6th century, there is mention of a church dedicated to her at Rome; and in 821, by order of Pope Pascal, her bones were deposited there. St. C. is regarded as the inventor of the organ, and in the Roman Catholic Church her festival-day, November 22, is celebrated with splendid music. Chaucer, Dryden, and Pope have celebrated St. C., and the painters Raphael, Domenichino, Dolce, and others have represented her in fine pictures.

Cecil's, in Oregon, a post-office of Umatilla co.

Cecil's, in Maryland, a post-village of Cecil co., 78 m. N.E. of Annapolis.

Cecilville, in California, a mining village in Klamath co., about 20 m. S.E. of Orleans Bar.

Cecity, (*sê'se-te*), n. [*Fr. cécité*; Lat. *cæcitas*, from *cæcus*, blind.] State or condition of being blind; deprivation of sight. (R.)

Cecropia, n. [From *Cecrops*, whose legs were fabled to be like snakes.] (*Bot.*) A genus of plants, order *Artocarpaceæ*. *C. pellata*, a tree growing in the W. Indies and S. America, is remarkable for its stems being hollow, except at the nodes. Owing to this peculiarity, the small branches are often used for making wind-instruments.

Cecrops, a mythical personage, who is said by Apollodorus to have been the first king of Attica. According to some authorities he was an Egyptian, who emigrated into Attica about 1580 B. C. He is said to have instructed the semi-barbarous inhabitants in the advantages of social life, of marriage, property, justice, and civil rights. To him is also attributed the erection of the first temples in the country, the institution of the court of Areopagus, and the distribution of the inhabitants of Attica into 12 local sections.

Cecutiency, (*sê-kû'shen-sy*) n. [From Lat. *cæcus*, blind.] A tendency to blindness. (R.)

There is in them no cecity, yet more than a cecutiency. — *Browne*.

Cedar, n. [*Lat. cedrus*; *Gr. kedros*; *Fr. cèdre*; *Ger. zeder*; *It. and Sp. cedro*.] (*Bot.*) The common name of the genus **CEDRUS**, q. v.

Red Cedar. See **JUNIPERUS**. — *White Cedar*. See **CYPRESSUS**.

Cedar, in Illinois, a township of Knox co.

Cedar, in Iowa, an E. county; area, 576 sq. m. It is intersected by the Cedar and Wapsipicon rivers, and also drained by Sugar and Rock creeks. The surface is diversified; the soil fertile, and the climate healthy. Cap. Tipton.

— A township of Benton co.

— A township of Black Hawk co.

— A township of Floyd co.

— A township of Jefferson co.

— A township of Johnson co.

— A township of Lee co.

— A township of Lucas co.

— A township of Mahaska co.

— A township of Mitchell co.

— A township of Monroe co.

Cedar, in Iowa, a township of Muscatine county; pop. 421.

— A township of Van Buren co.

— A township of Washington co.

Cedar, in Missouri, a county in the W.S.W. part of the State; area, 435 sq. m. It is watered by Sac River and by Cedar and Horse creeks; the surface is uneven, and soil moderately fertile. Cap. Stockton.

Cedar, in Nebraska, a N.E. county, bordering on Dakota. It is bounded on the N. by the Missouri River, and drained by the Big Bow and other creeks; area, abt. 650 sq. m. The soil is productive and diversified. Cap. Hartington. Pop. (1890) 7,028.

Cedar, in Texas, a post-office of Fayette co.

Cedar Bayou, in Texas, flows along the boundary of Harris and Liberty counties, and empties into Galveston Bay.

Cedar-bird, n. (*Zool.*) See **AMPELIDÆ**.

Cedar Bluff, in Alabama, a post-village of Cherokee co., on the Coosa river, 28 m. below Rome in Georgia.

Cedar Bluff, in Illinois, a village of Johnson co.

Cedar Bluff, in Iowa, a post-office in Cedar co.

Cedar Bluff, in Mississippi, a P. O. of Clay co.

Cedar Bluff, in Virginia, a post-office of Tazewell co.

Cedarburg, in Wisconsin, a city and township of Ozaukee county, on Cedar creek, 19 m. N. of Milwaukee. Pop. (1890) 1,652.

Cedar City, in Utah, a post-village of Iron co., 18 m. S. W. of Parovan.

Cedar Creek, in Alabama, rises near the S. border of Lowndes co., and enters the Alabama in Dallas co. — Another, in Franklin co., flows N. W. into Bear creek.

Cedar Creek, in Georgia, on the S. line of Putnam co., enters Little river a few miles from its mouth. — Another, in Elbert co., flows eastward into the Savannah.

Cedar Creek, in Illinois, a village of Johnson co.

Cedar Creek, in Indiana, after a course of 40 miles, flows into the St. Joseph's river, in Allen co. — A township of Allen co.

— A township in Lake co.

Cedar Creek, in Iowa, in Mahaska co.; enters the Des Moines river from the S.

— A village of Greene co.

Cedar Creek, in Michigan, a post-office of Barry co.

Cedar Creek, in Maryland, a village of Dorchester co.

Cedar Creek, in Mississippi, in Lowndes co., flows into the Tombigbee River from the W.

Cedar Creek, in Missouri, in Cedar co., flows into Horse Creek.

— Another, forms the entire boundary between Boone and Callaway counties, and nearly opposite Jefferson City enters the Missouri from the N.

Cedar Creek, in New Jersey, in Ocean co., flows into Barnegat Bay, about 6 m. S. of Tom's River.

Cedar Creek, **WILLIAMSBURG**, or **ATMACKETOWN**, in New Jersey, a post-village of Dover township, in Ocean county. It is situated on a river of its own name, 2 m. from Barnegat Bay, and about 7 m. S.S.E. of Tom's River.

Cedar Creek, in South Carolina, flows S.E., and enters Black River in Georgetown district. — 2. In Richmond district, flows into the Congaree from the left. — 3. Flows into the Great Pedee River.

Cedar Creek, in Tennessee, a post-office of Greene co.

Cedar Creek, in Texas, rises in Kaufman co., and flows S. into Henderson co., entering Trinity River.

Cedar Creek, in Virginia, rises in the W. part of Shenandoah co. It enters the N. fork of the Shenandoah River about 4 m. below Strasburg. At this place, on the 19th Oct., 1864, the Federal forces were attacked before daybreak by the Confederates commanded by Early, and driven back 4 miles, with the loss of 24 guns, but were then rallied by Gen. Sheridan, who converted the defeat into a complete victory, seizing 54 guns, including those taken from the Nationals in the morning, and making from 1,500 to 2,000 prisoners.

Cedar Creek, in Virginia, a village of Frederick co.

Cedar Creek, in Wisconsin, in Washington co., flows into the Milwaukee river about 18 miles N. of Milwaukee city.

— A post-village of Washington co., about 30 m. N. W. of Milwaukee.

Cedar Cross Roads, in Iowa, a vill. of Marshall co.

Cedar Falls, in Iowa, a fine city of Black Hawk co., 99 m. W. of Dubuque. Pop. (1897) abt. 4,500.

Cedar Falls, in Wisconsin, a post-office of Dunn co.

Cedar Fork, in Michigan, a village of Menominee co.

Cedar Fork, in Missouri, a post-office of Franklin co.

Cedar Fork, in Virginia, a village of Caroline co.

Cedar Grove, in Alabama, a village of Jefferson co.

Cedar Grove, in Georgia, a post-office of Walker co.

Cedar Grove, in Indiana, a post-village of Franklin co., about 7 m. S. E. of Brookville.

Cedar Grove, in Iowa, a village of Lucas co.

Cedar Grove, in N. Carolina, a P. O. of Orange co.

Cedar Grove, in Wisconsin, a post-village of Sheboygan co., about 3 m. W. of Lake Michigan.

Cedar Grove Mills, in Virginia, a village of Rock-bridge co., 145 m. W. of Richmond.

Cedar Hill, in Georgia, a village of Dooly co., near Flint river, 70 m. S. by W. of Macon.

— A village of Laurens co., 40 m. S. E. of Milledgeville.

Cedar Hill, in New York, a post-village of Albany co., 8 m. below Albany.

Cedar Hill, in N. Carolina, a post-office of Anson co.

Cedar Hill, in Ohio, a post-office of Fairfield co.

Cedar Hill, in S. Carolina, a vill. of Spartansburg co.

Cedar Hill, in Tennessee, a P. O. of Robertson co.

Cedar Hill, in Texas, a post-office of Dallas co.

Cedar Island, in New York, at the entrance of Sag

Harbor, E. end of Long Island. It has a fixed light; Lat. $41^{\circ} 2' 15''$ N., Lon. $72^{\circ} 16' 5''$ W.

Cedar Keys, a group of small islands on the W. coast of Florida, near the entrance of Waccasassa Bay, in Levy co., from 15 to 20 m. S. of the mouth of the Swance Riv.

Cedar Lake, in *Indiana*, a post-office of Lake co.

Cedar Lake, in *Minnesota*, a post-township of Scott co., about 30 m. S.S.W. of St. Paul.

Cedar Lake, in *New York*, a P. O. of Herkimer co.

Cedar Lake, in *Wisconsin*, a P. O. of Wausau co.

Cedar Lane, in *Tennessee*, a post-office of Greene co.

Cedar Mountains, a range of Cape Colony, parallel with the Atlantic, and nearly half-way between it and the dividing ridge of the country. They form the height of land between the Oliphant River on the west, and the Great Thorn, its principal tributary, on the east, varying in altitude from 1,600 to 5,000 feet. They lie in about Lat. 32° S., and Lon. 19° E.

Cedar Mountain, in *North Carolina*, a post-office of Transylvania co.

Cedar Mountain, near Cedar Run, in *Virginia*. Here, on Aug. 9, 1862, an action was fought between the Confederates under Gens. Ewell and Jackson, and a body of National troops commanded by Gen. Banks, in which the latter was forced from his position about $1\frac{1}{2}$ miles. Next day the Confederates fell back two miles, and on the 11th retired across Robertson River. The Federal loss in killed, wounded, and missing was about 1,500 men, with several guns and a large quantity of ammunition. The Confederate casualties were also severe, including Gens. C. S. Winder and Trimble killed.

Cedarn, *a.* Cedrine; of, or belonging to, the cedar-tree. (Chiefly used in poetry.)

Cedar Rapids, in *Iowa*, a city and railroad center of Linn co., on Red Cedar river, 80 m. S. W. of Dubuque. It is the headquarters of several railroad, land, and coal companies, has valuable water power, large railroad machine shops, and extensive manufactures, including a large oatmeal and pearl-barley factory, flour mills, &c. Pork packing is a very important industry. Pop. (1890) 18,020; (1897) abt. 24,000.

Cedar Run, in *Michigan*, a P. O. of Benzie co.

Cedar Run, in *Pennsylvania*, a P. O. of Lycoming co.

Cedar Run, in *Virginia*, rises in Fauquier co., in the N. E. part of the State; flows E. and unites with Broad Run in Prince William county near Brentsville, forming the Occoquan river.

Cedar Shoals, in *Georgia*, a village of Newton co.

Cedar Springs, in *Indiana*, a village of Harrison co.

Cedar Springs, in *Penn.*, a village of Cumberland co.

Cedar Springs, in *Michigan*, a P. O. of Kent co.

Cedar Springs, in *Pennsylvania*, a P. O. of Clinton co.

Cedar Springs, in *S. Carolina*, a village of Spartanburg district, 96 m. N.W. of Columbia. It contains an asylum for the deaf and dumb.

Cedar Springs, in *Texas*, a village of Dallas co., near Trinity River.

Cedar Swamp, in *New York*, on Long Island, a village in Queens co., 173 m. S. by E. of Albany.

Cedar Town, in *Georgia*, a village of Paulding co., in Cedar Valley, 164 m. W.N.W. of Milledgeville. It is the seat of a seminary for young ladies.

—A post-vil., cap. of Polk co., abt. 22 m. S. by W. of Rome.

Cedar Valley, in *Iowa*, a P. O. of Cedar co.

Cedar Valley, in *Ohio*, a post-office of Wayne co.

Cedar Valley, in *Utah*, a post-village of Utah co., 40 m. W.N.W. of Provo.

Cedarville, in *Illinois*, a P. O. of Stephenson co.

Cedarville, in *Indiana*, a village of Allen co., about 11 m. N.E. of Fort Wayne, on the St. Joseph's River.

Cedarville, in *Iowa*, a post-office of Washington co.

Cedarville, in *Ohio*, a village of Browne co., on the E. fork of the Little Miami River.

—A township and village of Greene co., 47 m. W.S.W. of Columbus.

Cedarville, in *New Jersey*, a town in Fairfield township, Cumberland co., on Cedar Creek, 8 m. S. E. of Bridgeton.

Cedarville, in *New York*, a post-village of Herkimer co., 79 m. W. by N. of Albany.

Cedarville, in *Virginia*, a post-office of Warren co.

Cedarville, in *Washington*, a post-village of Chehalis co., abt. 30 m. S. E. of Montesano.

Cedar-wood, (Oil of.) (*Chem.*) An essential oil procured by distillation from cedar-wood at the rate of 28 ounces to the hundred-weight of shavings. It contains *cedrol*, a white crystalline solid, and *cedrene*, a liquid hydrocarbon.

Cede, (*sêd*), *v. a.* [Fr. *céder*; Lat. *cedo*, to go from somewhere.] To yield or give up; to relinquish; to surrender; to resign; as, to *cede* a territory.

Cedilla, *n.* [It. *zediglia*, dim. of Gr. *zeta*, the letter ζ ; Fr. *cedille*.] A mark placed under the letter *c* (as ζ) to denote that its sound is like *s*; as in *caçique*.

Cedrat, *n.* [From Lat. *cedrus*. See CEDAR.] (*Bot.*) A species of citron-tree, *Citrus medica*, giving by expression and distillation of the rind of its fruit, a perfume much used in the manufacture of scents, from its possessing a peculiarly refreshing lemony odor. Extract of cedrat is made by dissolving 2 ounces of the oil of citron in a pint of spirits of wine.

Cedrela, *n. pl.* (*Bot.*) The Mahogany fam. and ord. of plants, alliance *Rutales*. — *Diag.* Consolidated capsular fruit, deeply monadelphous or free stamens, and numerous winged seeds. — They are trees with alternate, pinnate, exstipulate leaves. The flowers are hypogynous and symmetrical; calyx and corolla with 4 or 5 divisions, both imbricated in æstivation; stamens double the number of petals, with united or distinct filaments, and inserted on a hypogynous disc; ovary usually 4- or 5-celled, with 4 or more ovules, and

a simple style. The plants of this order have aromatic, tonic, astringent, and febrifugal properties, and many of them are valuable timber-trees. The Mahogany and Satin-wood belong to this order, which includes 25 species in 9 genera.

Cedrine, *n.* Same as CEDARN, *q. v.*

Cedriret, *n.* (*Chem.*) An orange-red crystalline body contained in creosote.

Cedron. See KIDRON.

Cedron, in *Ohio*, a post-office of Clermont co.

Cedrone Seed. See SIMABA.

Cedrus, *n.* (*Bot.*) A gen. of trees, ord. *Pinaceæ*. The cedar of Lebanon (*C. libani*) has been celebrated from the earliest ages for its grave beauty, its longevity, and its magnitude; also for the excellence and durability of its timber. It is often alluded to in Scripture as an emblem of stability and prosperity. The grove of cedars on Mount Lebanon is about three-quarters of a mile in circumference; but of the 400 trees now standing, there are but 12 of extraordinary age. One of these is 63 feet in circumference, and has possibly been in existence for some 2,000 years. This celebrated tree is not peculiar to Mount Lebanon; it grows also upon mounts Amanus and Taurus in Asia Minor, and in other parts of the Levant, but does not elsewhere reach the size and height of those on Mount Lebanon. It has also been cultivated in the gardens of Europe; two venerable individuals of this species exist at Chiswick in England; and there is a very beautiful one in the Jardin des Plantes at Paris. The beauty of the cedar consists in the proportion and symmetry of its wide-spreading branches and cone-like top. The gum, which exudes both from the trunk and the cones or fruit, is soft like balsam; its fragrance is

Fig. 545. — CEDARS OF LEBANON.

like that of the balsam of Mecca. The Deodar, or Himalayan Cedar (*C. deodara*), is also a magnificent tree, and is held in great veneration by the Hindoos. The turpentine obtained from this species is much used in India for medical purposes, and is known by the name of *Kelon-ke-tel*.

Cedry, *a.* Possessing the properties or color of cedar.

Cefalu, a walled sea-port town of Sicily, prov. Palermo, on the Tyrrhenean Sea, 40 m. E.S.E. of Palermo; Lat. 38° N., Lon. $14^{\circ} 13' 57''$ E. Port small, and trade inconsiderable. Pop. 12,301.

Celchun, (anc. *Segisa*), a town of Spain, prov. Murcia, on the Caravaca, 40 m. W.N.W. of Murcia. *Manuf.* Paper, linens, sandals, &c. Pop. 9,581.

Ceil, (*sêl*), *v. a.* [Fr. *ciel*, the sky, a canopy; Sp. *cielo*; It. *cielo*; from Lat. *caelum*, the heavens, a vault, covering the interior surface of a vault; akin to Gr. *kóilos*, hollow.] To overlay or cover the inner roof of a building; to cover the top, or roof, of a room.

Ceiling, (*sêl'ing*), *n.* [From CEIL.] (*Arch.*) The under-covering of a roof below the surface of the vaulting in vaulted rooms and buildings; the upper side of an apartment, opposite to the floor, generally finished with plastered work. In executing *C.*, the best mode is to nail the laths to ceiling-joists or to brackets, and to add the work in a series of coats composed of lime and hair, putty or plaster, technically called *gauged stuff*; common *C.* are executed with plaster without hair, the same as the finishing coat in walls left for paper.

(*Ship-building*.) The inner planks of a ship.

Celakovsky, FRANTISEK LADISLAW, a Bohemian poet and philologist; b. 1799; d. at Prague, 1852.

Celandine, *n.* (*Bot.*) See CHELIDONIUM.

Celano, a town of S. Italy, prov. Aquila, cap. canton, near the Lake Fucino, 20 m. S.S.E. of Aquila. *Manuf.* Paper.

Celarent, *n.* (*Logic*.) A mode of syllogism in which the major proposition and conclusion are universal negatives, and the minor a universal affirmative.

Celastraceæ, (SPINDLE-TREES), *n. pl.* [Gr. *kelastrós*, an evergreen tree.] (*Bot.*) An order of plants, alliance *Rhamnales*. — *Diag.* Polypetalous flowers, and imbricated calyx. — They are shrubby plants, with simple leaves and small deciduous stipules. Flowers small, regular, and perfect, or rarely unisexual by abortion;

sepals and petals 4-5, imbricated in æstivation; stamens equal in number to, and alternate with the petals, inserted with them on a large, flat, expanded ovary superior, placentas axile; fruit superior, celled. The plants are chiefly remarkable for the presence of an acrid principle. The seeds of some contain those of *Celastrus paniculatus* yield an oil used in medicine in India. Two other species of the type genus, *C. scandens* and *senegalensis*, have purgative emetic barks. The order consists of 260 species, natives of the warmer parts of Asia, North America, Europe.

Celas/trus, *n.* (*Bot.*) See CELASTRACEÆ.

Celature, *n.* [Lat. *calatura*.] The art of engraving or cutting figures in relief.

Celbridge, a town of Ireland, co. Kildare, 15 m. of Dublin, on the Liffey; pop. 1,726.

Celèbes, a large island of the Eastern Archipelago forming the centre of the 2d division; stretching fr. Lat. 2° N. to nearly 6° S., and from Lon. 119° to 125° E.; having N. the Sea of Celebes, W. the Straits of Sunda, E. the Molucca and Pitt's Passages, and S. Flores Sea. Estimated area, 75,000 sq. m. Its shape extremely irregular; being indented by three great bays, separated by 4 peninsulas diverging N.E. and S.E. The surface of this island consists of extensive grassy plains, free from forests, and is watered by only a few rivers of any consequence, the chief of which, the Orona, is navigable for ships for some distance. Volcanoes are said to exist in the N. division of the island. The great plains afford good pasture and cover for wild hogs, horses, and game. *Chief Prod.* Rice, maize, cassava, cotton, and tobacco. The S. peninsula is the most healthy, is by far the most populous, and contains the two principal states of the island, those of Boni and Macassar. The principal tribes are the Boni (supposed to be aborigines), Bagis, and Tawa, the latter being esteemed as a commercial and enterprising people. *Manuf.* Cloth, brass, betel-nut, opium, salt. A considerable trade is carried on with China, was first visited by the Portuguese in 1512, who were expelled by the Dutch in 1660. In 1811, the possession of the latter fell to the British, by whom they were stored in 1816. The principal Dutch settlement is Macassar, which contains Fort Rotterdam, the residence of the governor. The Dutch have other settlements on the bays of Tolo and Tominie; and most of the native states are subordinate to them. *Population*, estimated at fr. 900,000 to 1,000,000 in 1897.

Celebrant, *n.* [See CELEBRATE.] One who performs a public religious ceremony; a priest who officiates at a rite of the Roman Catholic Church.

Celebrate, *v. a.* [Fr. *célébrer*; Lat. *celebro*, *celebra* from *celebro*—*creber*, thick, close, frequent.] To praise extol; to commend; as, to celebrate the Supreme Being.

"That season comes,

Wherein our Saviour's birth is celebrated." — *Shaks.* — To honor with public ceremony and solemn rites; as, to celebrate a victory.

Celebrated, *a.* Famous; renowned; illustrious; a celebrated poet.

Celebration, *n.* [Lat. *celebratio*; Fr. *célébration*.] Act of celebrating; solemn performance; as, the celebration of a birth-day.

"He laboured . . . to hasten the celebration of their marriage."

— Commemoration, or observance with appropriate ceremonies; as, the celebration of the Holy Sacrament.

— Honor, fame, or distinction bestowed; commendatory praise; as, the celebration of American Independence.

C. of marriage. A solemn act by which a man and woman take each other for husband and wife, conformably to the rules prescribed by law.

Celebrator, *n.* One who celebrates.

Celebrity, *n.* [Fr. *célébrité*; Lat. *celebritas*.] Fame; renown; distinction; eminence. — One who possesses notability, fame, or distinction; as, a literary celebrity (generally used in the plural.)

Celères, *n. pl.* (*Rom. Hist.*) A body of cavalry traditionally stated to have been introduced by Romulus. They consisted of those among the citizens who were rich enough to furnish a horse. They are said to have been 300 in number, and to have been subdivided into three centuries, under the name of *Ramnes*, *Tities*, and *Luceres*. It is said that the number of the century of the *C.* was raised to six by Tarquinius Priscus, that this was the origin of the *Equites* or knights, and in after-times formed a separate class of citizens.

Celérie, *n.* (*Bot.*) See CELERY.

Celerity, (*sêl'êr'ê-tê*), *n.* [Lat. *celeritas*, from *celer*, quick, speedy, swift.] Speed; swiftness; quickness; rapidity of motion.

Celastine, *n.* (*Min.*) A sulphate of strontia, found in beautiful rhomboidal prismatic crystals, associated with the sulphur in Sicily. It is so called from the blue of many specimens, and is the source from which *nitrate of strontia* employed in fire-work composition is derived. It is the commonest mineral of strontium. *Form.* SrO.SrO_3 .

Celery, (*sêl'ê-rê*), *n.* [Fr. *céleri*, from Ital. *celeri*; *selino*, a kind of parsley, so called perhaps from crisped leaves, from *helissô*, to turn round or about (*Hort.*) The *Apium graveolens*, a species of the genus *APIUM*, *q. v.* The *C.* is indigenous in the temperate parts of Europe. In its native station it has the character of a poisonous plant, but transplanted to a garden it becomes an agreeable and wholesome vegetable. It is in conformity with the general properties of umbelliferous plants, in which two principles, the aromatic and the narcotic, exist, and which are food or poison, as one or the other predominates. The narcotic is gener-

Benvenuto Cellini

1500-1570

abundantly in moist places, and the aromatic principally in dry situations; and hence plants that are dangerous while growing in marshes become wholesome when transferred to dry places.

This appears to be one cause of the difference between the wild and the cultivated *C.*; another is, that the latter is blanchet before it is brought to table, and thus the secretion of its deleterious principles is prevented. Of garden *C.* there are many varieties, the best of which for salad is the Turkish, and for stewing, the *Celeriac* or the turnip-rooted sort. For soups, the "seeds" may be employed with as much advantage as the stems or leaves. *C.* is raised in beds, from seed sown from the end of March to the beginning of May, and requires a light, rich, well-drained soil. When the plants in the seed-bed are about two or three inches high, they are pricked out into another bed, where they remain till they are six or seven inches high; they are then transferred to trenches, in which they are placed in a row, and finally left. As they advance in size, they are gradually and carefully earthed up, till at last the whole length of the stem underground is sometimes as much as four feet. The goodness of *C.* depends essentially upon its growing rapidly, being kept well drained from moisture, and having a solid stalk to its leaves. *Celeriac* is not earthed up, but is grown upon the surface of the ground, and kept free from weeds and preserved from the emission of strong lateral roots by frequent hoeing.

Celestial, (*se-l'est'yal*.) *n.* [Fr. *celeste*; Lat. *caelestis*, from *caelum*, heaven.] Heavenly; belonging, or relating, to heaven; dwelling in heaven; as, a celestial spirit. —Belonging to the visible heavens.

"There stay, until the twelve celestial signs Have brought about their annual reckoning." —Shaks.

—Super-excellent; divinely pure; exquisitely delightful. "Celestial rosy red, love's proper hue." —Milton.

—*n.* A dweller in heaven.

Celestialize, (*se-l'est'yal-iz*.) *v. a.* To make celestial. **Celestially**, *adv.* In a celestial or heavenly manner.

Celestine Mountains. See THIAN-SHAN.

Celestine I., or CELESTINES, a pope and saint, succeeded Boniface I. in 422. He was engaged in disputes with the Nestorians at the instigation of Cyril, bishop of Alexandria, and condemned them in a council held at Rome, 430. D. 432, and was succeeded by Sixtus III.

CELESTINE II., a Tuscan, succeeded Innocent II., and d. five months after, 1144.

CELESTINE III., succeeded Clement III. in 1191, crowned the Emperor Henry VI., excommunicated Leopold, Duke of Austria, and d. 1198.

CELESTINE IV., a Milanese, succeeded Gregory IX. in 1241, and d. about three weeks after his election.

CELESTINE V., (Pietro di Morone,) a Benedictine monk, who founded the order of the CELESTINES, *q. v.* He was elected pope in 1294, after an interregnum of 6 years. A few months after, he resigned his office and was succeeded by Boniface VIII., who confined him in the castle of Fumone, where he died, it is said, of starvation. He was canonized in 1313 by Clement V.

celestines, *n. pl.* (*Ecd. Hist.*) A religious order founded in Italy, by Pietro di Morone, afterwards Celestine V. in 1254. It was approved by Urban IV. in 1264, and called the order of the Hermits of St. Damian, or *Moronites*. Raised to the pontificate in 1294, Pietro di Morone favored the new order, who thereupon took the name of *Celestines*. They spread through Italy and France, and were suppressed in the latter country in 1778.

celiac, *a.* Pertaining, or relating, to the belly; as, the celiac arteries. See CELIAC.

celibacy, (*se-l'e-bi-ä-si*.) *n.* [Lat. *calibatus*, from *caelebs*, unmarried.] State or condition of being of single or unmarried life; bachelorship; as, the celibacy of the Roman Catholic clergy.

"They look upon celibacy as an accursed state, and generally are married before twenty." —Spectator.

This condition was subjected by the laws of the Roman emperors to a variety of penal consequences. The most remarkable of their enactments, and that on which the subsequent jurisprudence on this subject was in a great measure founded, was the *Lex Julia* or *Papia-Poppæa*, enacted under the authorization of Augustus. By these laws unmarried persons could receive nothing by will from strangers, and were subjected to many other legal disabilities; from which, however, they were successively relieved by later laws passed in the decline of the empire, and especially after the mistaken zeal of the Christian divines of that age had invested *C.* with attributes of sanctity. It was at an early period in the history of the Christian church that ministers were exhorted to *C.* by those who laid claims to a higher degree of sanctity. At the council of Nice, in A. D. 325, the proposition to enforce it as a general law was rejected. But at that of Arles, in 340, it was adopted; married persons being indeed held admissible into the church, but only on the terms of separating from their wives on ordination. It had become the common practice of the Latin church in the reign of Gregory the Great (end of the sixth cen-

tury), and was more fully enforced, after a period of relaxation, in the eleventh. In the Greek church, *C.* was ordained for bishops at the council of Trullo, A. D. 695; but clergymen below the degree of episcopacy are allowed to marry. *C.* is considered by many as the weak point of the Roman Catholic Church, and it mainly contributed to the success of the Reformation; the immorality that then prevailed in the Church causing the priesthood to be despised by the people. At the time of the Reformation the attention of the Church was directed to this subject, and it was discussed at the council of Trent (1563), whether *C.* ought still to be maintained; but the majority were in its favor. Strong reasons are urged both for and against the *C.* of clergymen, which it is not the aim of this book to discuss.

Celibate, *n.* Celibacy; condition of an unmarried man. —A bachelor; a single man.

—*a.* Pertaining to the unmarried state of life; as, a celibate existence.

Celibatist, *n.* A celibate; a bachelor; one who remains unmarried.

Celidography, *n.* [Fr. *celidographie*, from Gr. *kêlîs*, a spot, and *graphein*, to write.] A description of apparent spots on the disc of the sun, or on planets.

Celilo, in Oregon, a village of Wasco co., on the Columbia River, 14 m. E.N.E. of Dalles.

Celina, in Ohio, a village, cap. of Mercer co., near the source of Wabash River, in Franklin township, 115 m. W.N.W. of Columbus.

Celina, in Tennessee, a twp. of Jackson co.

Celine, *a.* [Gr. *koiîâ*, the belly.] Belonging to the belly.

Cell, (*sel*.) *n.* [Lat. *cella*, a cell.] A term applied to a sleeping apartment in a monastery; also, a small confined room in a prison.

"Then did religion in a lazy cell, In empty, airy contemplations dwell." —Denham.

—A small cavity or hollow place; a retreat; a cave; a hut; as, an anchorite's cell.

"The brain contains ten thousand cells." —Pope.

(Arch.) An enclosed space within the walls of an ancient temple. See CELLA.

(Physiol.) The structural unit of plants and animals, consisting of a minute mass of organic substance, possessed of a definite organization, and composing the whole structure of the lowest forms, the protozoa and protophytes, or single-celled animals and plants, while higher forms are made up of a multitude of cells, variously specialized to serve the several duties of the animal and plant economy. In animals, the least specialized of cells are the white corpuscles of the blood, which possess in a measure an independent existence, like that of the single-celled animals. In the latter, all the physiological activities are carried on by a single cell, which has the powers of independent motion, respiration, deglutition, digestion, secretion, and reproduction. The many-celled animals and plants are made up of groups of cells, called tissues, each group specialized to perform some separate function, there being thus what is known as a "physiological division of labor." A cell, minute as it is ($\frac{1}{1000}$ of an inch in diameter), is a composite structure. It is composed of a more or less defined cell-wall, a central part called the nucleus, and around this a mass of substance termed protoplasm. This protoplasm is not uniform in structure, but consists of two distinct parts, a net-work of fine fibres, which will stain with certain reagents, in whose meshes lies a more liquid, non-stainable material. The latter usually contains particles of other substance, such as oil globules, food granules, or grains of pigment. The nucleus is generally, perhaps always, present. In some cases it has not been discovered, but physiologists believe it to be essential to the activity of the cell, the nutritive process perhaps taking place within it, while it is certainly the center of the reproductive process. It is a very minute round or oval body in the interior of the *C.*, sometimes free, sometimes attached to the cell wall. The nucleus, like the outer protoplasm, is made up of two distinct substances, a fibrous nucleoplasm, or chromatin, which may be stained, and an interstitial, non-staining substance, called achromatin. Within the nucleus are frequently one or more minute globules, called nucleoli, whose function is not yet understood. Reproduction is usually effected by division of the cell into two halves, the process beginning at the nucleus, which is at this time very active. The division extends from the nucleus through the outer protoplasm of the cell, the nucleus dividing into two halves, around each of which the protoplasm gathers, two new cells being thus formed. The division of the nucleus is in some cases direct, no subsidiary changes being visible. Usually it is indirect, being preceded by a complicated and curious series of changes in the chromatin, known by the name of *karyokinesis*. In this the intricate mass of fibres arrange themselves definitely, forming a spindle-shaped figure with rayed, star-like extremities. Division takes place across the center of the spindle, the divided fibers gather round the stars, and these gradually develop into new nuclei. In plants, the tissues are composed of cells whose walls are usually in contact, these walls being composed of cellulose. In animals, other material may lie between the cells. It has, however, been ascertained that the cells are connected by fine fibrous processes. Free cells have a power of motion, through the extrusion and withdrawal of pseudopodia, or portions of their protoplasmic substance.

Cell, *v. a.* To place or confine in a cell.

Cella, *n.* [Lat.] (Arch.) In the architecture of the ancients, a term applied to the body or principal part of the interior of a temple; or in Greek, the *naos*. The

part of the temple in front of the *C.* was called the *pro-naos*; the part in the rear of it, the *posticum*.

Cellamare, ANTONIO GIUNICE, PRINCE OF, a Spanish diplomatist, b. in Naples, 1657. He was sent to France, as ambassador, in 1715. Here he joined the conspiracies planned against the Duke d'Orleans, with a view of vesting the regency of France in Philip of Spain, but the plot being discovered, and the seizure of *C.*'s despatches laying bare the whole details, he was forthwith expelled from France. D. 1733.

Cellar, *n.* [Lat. *cellarium*, from *cella*, a cell; Ger. *Keller*.] A cell; an apartment or place under-ground, where provisions, liquors, coals, &c. are deposited; as, a wine-cellar.

Cellarage, (*sel'ler-äj*.) *n.* Space for cellars; cellars taken collectively.

"Come on, you hear this fellow in the cellarage." —Shaks.

—Charge for cellar-room; as, cellarage on stores.

Cellarer, **Cellarist**, *n.* [From Lat. *cellarius*, steward.] (*Ecd.*) An officer who acts as butler in a monastery or religious house. —A functionary who has charge of the temporal matters in chapter-houses.

Cellaret, *n.* A case of cabinet-work for holding bottles of liquors.

Cellarino, (*sel-la-rè-no*.) *n.* (Arch.) That part of the capital in the Roman, Doric, and Tuscan orders which is below the annulets under the ovolo.

Cellarius, *n.* (Dancing.) A kind of valse, or waltz.

Cellarius, CHRISTOPH, (*sel-lair'e-us*.) a learned German, b. at Smalkalde, 1638. He was professor of history and rhetoric in the University of Halle, Saxony; and in this tranquil capacity he passed the greater part of his life, producing works of great merit. Among these may be noticed his *Atlas Cælestis*, and his *Notitia Orbis Antiquæ*. D. 1707.

Cellarous, *a.* Belonging to a cellar. (R.)

Celle, or ZELL, [Ger. *Zelle*.] A town of N. Germany, in Hanover, on the Aller, 23 m. N.E. of Hanover. Manuf. Linen fabrics, hosiery, soap, chicory, tobacco, wafers, and brandy. Pop. 13,248. See ZELL.

Celliferous, *a.* [Lat. *cella*, and *ferre*, to bear.] Bearing cells.

Cellini, (*chel-lè-ne*.) BENVENUTO, one of the greatest artists of his time, was b. in Florence, in 1500. In 1515, he entered upon the study of the jeweller's and goldsmith's art, and in 1524 had so advanced his reputation as to be employed by Pope Clement VII., and some of the Roman nobility. At the storming of Rome in 1527, *C.*'s is stated to have been the hand that shot the Constable de Bourbon. Owing to his quarrelsome temper and excesses, *C.* appears to have led a wild and turbulent life, and to have been more than once imprisoned. In 1537, he visited Paris, where he was presented to Francis I., into whose service he entered, in 1541, and with whom he became a great favorite. In 1554, *C.*'s name was inscribed on the list of Florentine nobles. D. at Florence, in 1570. *C.*'s labors were chiefly divided between Rome, Fontainebleau, and Florence. His productions—in particular his cups, vases, tazzas, salt-cellars (or rather what we should now term *pergnes*), his arabesques or damascened swords and poniards, his seals, medals, and exquisite carvings in ivory—are still in the greatest repute, and, when in the market, are readily purchased at high prices. Of his larger works, the bronze statue of *Perseus*, at Bologna, is one of the most celebrated; and the description of its casting, which he gives in his *Memoirs* or *Autobiography*, is almost as great a work of art in a literary way. These memoirs, interesting as a record of the history and manners of his time, have been translated into English by Roscoe, (London, 1812.)

Cellipore, **Cellipore**, *n.* (Zool.) A genus of coral-like *Briozoa*, consisting of masses of small calcareous cells crowded one upon another, and each perforated by a little hole.

Cellular, (*sel'ü-ler*.) *a.* [Lat. *cellula*, a small store-room; dim. of *cella*, a cell.] Consisting of, or containing, little cells or cavities.

Cellular Beam, *n.* (Mach.) An application of wrought iron for the purpose of girders and beams, in which wrought-iron plates are riveted with angle-irons, in the form of longitudinal cells with occasional cross struts.

Cellulares, (*sel'ü-lä-res*.) *n. pl.* (Bot.) One of the two great sub-kingdoms in De Candolle's system of classification, including plants composed of cellular tissue only.

Cellular Membrane, *n.* (Anat.) A membrane formed of cellular or areolar tissue;—often used for the tissue itself.

Cellular System, *n.* (Anat.) The whole of the cellular or areolar tissue of the human body.

Cellular Tissue, AREOLAR TISSUE, RETICULAR TISSUE, CONNECTIVE TISSUE, *n.* [Fr. *tissu cellulaire*.] (Anat.) The most common tissue of all the organic tissues. It is composed of a large number of small transparent fibrils, each about $\frac{1}{200000}$ th of an inch in diameter, crossing each other in all directions, and leaving small open spaces, or *areolæ*. It unites every part of the body, determines its shape, and by its elasticity and contractility, and by the fluid which it contains in its *areolæ*, facilitates the motion of each part on each other. It is very sparingly supplied with blood-vessels, and no nerves have been found distributed through it.

(Vegetab. Physiol.) See TISSUE, (CELLULAR AND VASCULAR.)

Cellulated, *a.* Having cells; formed with cells.

Cellule, (*sel'yul*.) *n.* [Lat. *cellula*.] (Bot.) A minute cell.

Celluliferous, *a.* [Lat. *cellula*, and *ferre*, to bear.] Bearing small cells.

Cellulose, *a.* Containing cells.

Fig. 546. — CELERY.
(*Apium graveolens*.)

Cellulose, CELLULINE, *n.* (*Vegetab. Physiol.*) The substance which forms the mass of the cell-membranes of all plants. It is one of a class of compounds intimately connected in their chemical constitution, but presenting remarkable physical differences. Without entering into chemical details, we may mention the following points of difference between it and the chemically allied substances—sugar, dextrine, and starch. Sugar and dextrine are soluble in cold water, and occur in the cell-sap in solution; starch is insoluble in cold water, but softens into a mucilage in boiling water, and is found in granules in the cell-contenta; while *C.* is insoluble in cold or boiling water, and, as far as is at present known, is very slightly soluble in the strong mineral acids, its only perfect solvent being a solution of oxide of copper in ammonia. The occurrence of *C.* in an organism was formerly regarded as a certain proof that the latter belonged to the vegetable kingdom. It has, however, been shown to be a constituent of the lower animals. Although *C.* forms a large proportion of the food of herbivorous animals, it is supposed to pass through the intestinal canal unchanged, and not to contribute directly to nutrition. (*Continued in SECTION II.*)

Celo'sia, *n.* (*Bot.*) A genus of plants, order *Amaranthaceae*. Several species have bright-colored persistent flowers, and are cultivated in our gardens. The best known is the Cock's-comb, *C. cristata*.

Cel'sius, OLAVUS, an eminent medical botanist and theologian, b. in Sweden, 1670. He became professor of theology, and of the Oriental languages, at Upsal. His most celebrated work is entitled *Hierobotanicon*, or an account of the plants mentioned in the Bible. He was one of the founders of natural science in Sweden, and also the first instructor of Linnæus, who named the genus *Celsia* after him. Besides his many botanical dissertations, *C.* was the author of many remarkable theological works. D. 1756.

Cel'sus, an Epicurean philosopher, who lived in the 2d century, A. D. He was a friend of Lucian, and supposed to be the author of the work against Christianity, entitled *Δόγας ἀληθείας*, which the reply of Origen rendered famous.

Cel'sus, AURELIUS CORNELIUS, a Latin physician and author, who flourished probably in the reigns of Augustus and Tiberius, and is supposed to have practised medicine at Rome. The only work of his that has come down to us, called *De Medicinâ*, and consisting of 8 books, is considered the most precious book of its kind which the Romans have left us. *C.* was styled the *Hippocrates of the Latins*, and is universally admired for the purity of his language. Eighty editions of his *De Medicinâ* have been published, and a good English translation by Dr. Grieve appeared in 1756.

Celt, (*selt*), *n.* [See CELTIC.] One of the Celts or CELTÆ, *q. v.* (*Archæol.*) A cutting-instrument, sometimes made of stone, and sometimes of metal, found in ancient burrows and tumuli of the stone and bronze periods.

Cel'tæ, CELTS, or KELTS, *n. pl.* (*Hist.*) A people which at one time appear to have inhabited the greater part of central and western Europe. The recent researches of philologists have shown that the Celtic language belongs to the Indo-Germanic group; but at what time they migrated westward is unknown. They appear to have been divided into two great families—the *Gauls*, who inhabited Gaul, to whom the name of Celts is more properly applied, and the *Cimbri*, or *Cimmerii*, who appear to have migrated from Asia at a later period, and spread themselves over Germany to the ocean. Herodotus, the father of history, mentions the Celts and Cynetæ as inhabiting the remotest parts of Europe towards the setting of the sun, near the sources of the Danube. A great immigration of the Gauls into Italy took place in the reign of the Roman king Tarquinius Priscus, under the leadership of Bellovesus; and at the same time another horde of them, under Segovesus, crossed the Rhine, and, advancing as far as the Hercynian forest, settled along the Danube, and in the country now called Bohemia. At a very remote period the Celts had also passed into Spain, where their descendants became afterwards known as *Celtiberians*; and they likewise crossed over into Britain. Several subsequent irruptions of the Gauls took place into Italy; and in B. C. 390 the city of Rome was taken and burned by these barbarians. About 280 B. C. a vast multitude of Celts or Gauls invaded Macedonia and Greece, spreading terror and devastation everywhere before them, and, after making immense booty, returned homeward. An invasion of barbarians from the east of the Rhone and north of the Danube, about B. C. 113, first made the Romans acquainted with the Cimbri. Some years later the Teutones and Cimbri attacked the Belgæ; and Cæsar states that the Belgæ were the only people of Gallia who prevented the Cimbri and Teutones from invading their territory. The power of the Celts in Europe was, however, on the decline long before the time of Cæsar. The Gauls of Italy had been subjugated by the Romans; and in Gaul they were pressed on one side by the Belgæ and Germans, and on the other by the Iberians. The remains of the ancient Celts are now found in Brittany, Wales, the Highlands of Scotland, the Isle of Man, and Ireland. The Celtic tongues are the Erse or Irish, the Gaelic, Manx, Welsh, and Breton. The Basque, it is now generally agreed, is not a dialect of the Celtic. We know nothing of any original Celtic alphabet, nor of any works in that language; but in Gaul they seem to have become acquainted with the Greek language from the colony of Massilia (Marseilles). The Celts were men of large size, fair complexion, blue eyes, and light-colored hair. They were of a fickle disposition, warlike, vain, boastful, and clamorous. Their government seems to

have been a kind of aristocracy, their chiefs forming a senate or supreme council. The Druids formed a powerful body among them, being the guardians and interpreters of their laws, as well as the ministers of their religion. They were also the instructors of the people in all kinds of knowledge with which they were acquainted. Their bards or poets had also great influence among them, and used to accompany their songs with instrumental music on harps and the like. The Celts had no temples nor images, but worshipped their deity in groves and forests. Their religion seems to have been originally a sort of Theism; but they afterwards adopted some of the gods of the Germans and other nations. It is undoubted that they offered human victims in their sacrifices.

Celtiberi, *n. pl.* (*Hist.*) A people of ancient Spain, supposed to have arisen from a union of the aborigines the Iberians, and their Celtic invaders. Various limits have been assigned to their country, which included probably all the N. of Spain as far S. as the sources of the Guadalquivir. Hannibal subdued the *C.*, and they afterwards passed under the Roman yoke. They revolted B. C. 181, and were subdued by Tiberius Gracchus B. C. 179. Two struggles for independence followed, called respectively the first *C.* or *Namantine*, and the second *C.* or *Sertorian* wars, in the latter of which they were finally vanquished, and, B. C. 72, do not again appear in history.

Celtiberia, (*Geog.*) See CELTIBERI.
Celtiberian, *a.* Pertaining or relating to Celtiberia, a division of the ancient Iberia, Spain.

n. One of the Celtiberians or CELTIBERI, *q. v.*
Cel'tie, *a.* [*W. cell*, a covert, shade, or shelter; *celtiad*, one who dwells in a covert, an inhabitant of the wood or forest; *Gr. Keltai*, the Celts.] Pertaining to the Celts, or to their language.

n. The language of the Celts; its remains are found, at the present day, in the Welsh, Gaelic, Erse (Irish), and Armorican, or Breton, dialects; and formerly in the Cornish, now extinct.

Celtic Architecture, a term applied to the rude attempts at building with stone, which were made by

Fig. 547. — DRUIDICAL TEMPLE,
(Stonehenge, England.)

the Celts of Gaul and Britain. They consist chiefly of Druidical remains in the form of temples and cromlechs. The temples were huge blocks of stone set up in a circle, in a vertical position, which support others placed horizontally upon them, as imposts or lintels. Some of these stones bear traces of the chisel, and the upright and transverse blocks were often fitted together with mortise-and-tenon joints. The cromlechs, which consist externally of a large block supported on three or four smaller ones, were supposed to have been altars on which the Druids sacrificed human and other victims; but they have been found to be monumental records covering cavities below the surface of the earth, in which bones of men and animals, and stone implements, have been discovered. The finest Druidical circles or temples that still remain tolerably perfect are those of Stonehenge and Avebury, in Wiltshire, England, and of Carnac, France. Cromlechs are to be found in many parts of the British isles, France, and other parts of Europe.

Celtis, *n.* (*Bot.*) A genus of trees, order *Ulmaceae*. The *C. occidentalis*, commonly known as the Sugar-berry or Nettle-tree, is a deciduous tree, 30–50 ft. high, found from Canada to Carolina, in wood and near rivers. It is very hardy and ornamental; and it possesses, as all the other *C.*, the property of keeping on all its leaves very late, and then to drop them all at once. *C. crassifolia*, the Hack-berry, found in Virginia, Kentucky, and Tennessee, 20–30 ft. high, is distinguished in woods by its straight, slender trunk, undivided to a great height, covered with an unbroken bark. The leaves are of a thick and firm texture, very large, and heart-shaped at base.

Fig. 548.
HACK-BERRY, (*Celtis crassifolia*.)
Fruit of natural size.

Flowers small, white, succeeded by a round, black drupe about the size of the whortleberry. The wood is white and close-grained, but neither strong nor durable.

Celticism, *n.* A Celtic idiom; a custom or peculiarity of the Celts.

Celtish, *a.* Celtic. (*R.*)

n. The language of the Celts. (*R.*)

Cemba'lo, *n.* [*It.*] (*Mus.*) The harpsichord or spinet. (*R.*)

Cement, *n.* [*Lat. cæmentum*, for *cædimentum*, from *cædo*, to cut, to cut off.] (*Building.*) A term applied to those building materials of a calcareous and silicious nature which, when mixed with water, set quickly. By this property they are distinguished from mortars, which require time to harden. Natural cements are obtained by calcining argillaceous limestone containing silicate of alumina. The stone being burnt, the carbonic acid is driven off, and when water is added, a hydrated silicate of lime and alumina is formed. Cements as thus made are known as *Roman cements*. Artificial cements of this character are made by calcining carbonate of lime and fine river-mud together.

—Metaphorically, bond of union; that which unites societies or persons firmly together.

“Friendship! mysterious cement of the soul.” — Blair.

(*Anat.*) The substance which joins together the plates of compound teeth, like those of the elephant, and which fills up the folds and cavities in the teeth of Ruminants and Pachyderms; and which also covers all that part of a simple tooth which is not coated with enamel. The cement is characterized, like true bone, by the presence of the Purkinjean corpuscles.

—*v. a.* To unite bodies by the use of cement, or by something interposed.

“Liquid bodies have nothing to cement them.” — Burnett.

—To unite firmly or closely; as, to cement a friendship.

—*v. i.* To unite and become solid; to unite and cohere.

“The parts (of a wound) will unite by inoculation, and cement like one branch of a tree ingrafted on another.” — Sharp.

Cemental, *n.* Pertaining to cement; consisting of cement.

Cementation, *n.* Act of cementing; cohesion.

(*Chem.*) The process of converting iron into steel by being heated, in the form of bars, for several hours with charcoal powder in a chest of refractory clay. The result of the operation is called *blistered-steel*, from the appearance of the surface. — See STEEL.

Cementatory, *a.* Having the quality or properties of cement.

Cementer, *n.* One who, or that which, cements.

“Language . . . the great instrument and cement of society.” — Locke

Cementitious, (*sem-en-tish'us*), *a.* Capable of cementing; tending to unite, cohere, or consolidate.

Cemeterial, *a.* Of, or pertaining to, a cemetery.

Cemetery, *n.* [*Gr. koimêterion*, from *koimao*, to put to sleep.] A place set apart for interment of the dead, a churchyard; a necropolis; a burying-ground. The most celebrated of the European public *C.* are the *Camp Santo* of Pisa, and the *Père la Chaise* of Paris. In the U. States, there are *C.* equal in point of arrangement to any in Europe. Among the most beautiful are Mount Auburn, near Boston; Greenwood, in Brooklyn; Laurel Hill, and Woodlands, Philadelphia; and Spring Grove near Cincinnati. — See NATIONAL CEMETERIES.

Cemetery Hill, (*Battles at*). See GETTYSBURG.

Cenatory, *a.* [*Lat. cenatorius*, from *cæna*, supper. Relating to supper.

“The Romans washed, were anointed, and wore a cenatory garment.” — Browne.

Cenchrus, *n.* (*Bot.*) A genus of plants, order *Graminaceae*. The Bur-grass, *C. tribuloides*, found in sandy soil in New Jersey, has a stem 1–2 ft. long; flowers spicate with the burr-like involucre approximate; leaves lance-linear; and glumes acuminate-nucronate.

Cenci, BEATRICE, a Roman lady of the 16th century whose memory has been preserved by her extraordinary beauty and tragical fate, was the daughter of Count

Fig. 549. — BEATRICE CENCI.
(After Guido Reni.)

Francesco di Cenci, a man notorious for his wickedness of life. She became his victim, and appealed to Pope Clement VIII., but in vain; when her mother-in-law and brother, unable to bear the cruel tyranny

the count, conspired to assassinate him. It is uncertain if Beatrice was privy to this plot. Suspicion fell upon her and others of her family, they were taken to Rome and subjected to frightful tortures. Beatrice constantly asserted her innocence, but was condemned to death, and despite the supplications made by the noblest families of Rome, she was executed (Sept. 11, 1599) along with her relations. The story of the Cenci is the subject of a powerful tragedy by Shelley. A portrait of Beatrice, attributed to Guido Reni, is in the Barbarino Palace, Rome. The legend of this portrait has long been exploded, for it is now proven that Guido was never in Rome until nine years after the execution of Beatrice, and that this picture was the portrait of a model, recognized in other paintings.

cenobite, (*sen'ô-bit*), *n.* [Gr. *koinobiotês* — *kornos*, common, and *biotês*, same as *bios*, life, from *bioô*, to live.] One of a religious order living in community; — opposed to a *hermit*, who dwells in solitude.

cenobitic, **Cenobitic**, *a.* [Fr. *cenobitique*.] Living as cenobites, or in community, as the dwellers in a monastery.

cenobitism, *n.* State or habits of cenobites.

cenotaph, (*sen'ô-taf*), *n.* [Fr. *cenotaphe*; Gr. *kenotaphion*, *kenos*, empty, and *taphos*, a tomb.] An empty tomb; a monument erected to one who is buried elsewhere, or not found for interment at all.

"A cenotaph in Westminster Abbey." — *Macaulay*.

cenozoic Time, *n.* [Gr. *kainos*, recent, and *zôê*, life.] (*Geol.*) The tertiary and later period, succeeding to the Mesozoic.

cense, (*senz*), *v. a.* [Fr. *encenser*. See INCENSE.] To perfume with incense, or with odors from burning substances.

"On the side altar, cens'd with sacred smoke." — *Dryden*.

censer, (*senz'or*), *n.* [Fr. *encensoir*, from Lat. *incensor*, one who sets fire to, from *incendo*, to set fire to. See INCENSE.] A vase or pan in which incense is burned. — A bottle with a perforated cap, used for sprinkling odors. — *C.* were much used in the Hebrew service, but their form is not accurately ascertained. Josephus tells us that King Solomon made 20,000 gold *C.* for the temple of Jerusalem to offer perfumes in, and 50,000 others to carry fire in. The *C.* used in the Roman Catholic Church at mass, vespers, and other offices, is suspended by chains, which are held in the hand, and is tossed in the air, so as to throw the smoke of the incense in all directions.

ensor, (*senz'sor*), *n.* [Lat. *ensor*, from *censeo*, to weigh or poise in order to determine the value; to value, to estimate, to tax, to assess, to enrol, to enumerate.] (*Rom. Hist.*) The title of two Roman magistrates originally appointed for the purpose of taking the *census*, or register of the number and property of the citizens. But their powers were much increased subsequently when they had the inspection of public morals entrusted to them, with authority to degrade senators and knights from their respective orders, and remove other citizens from their tribes, depriving them of all their privileges except liberty, which was termed making them *Erarii*. The *C.* had also the power of making contracts for public buildings, and the supply of victims for sacrifices. They were originally appointed for a whole lustrum; but by law of Mamerus Emilius, B. C. 443, the term of office was limited to 18 months. The magistracy was confined to patricians, until C. Marcus Rutilus, a plebeian, was elected in B. C. 351. No person might be twice invested with it; and if one of the *C.* died, another was not substituted in his room, but his surviving colleague was obliged to resign. The office of *C.* was abolished under the emperors, who, however, exercised the greater part of its functions.

One who examines or scrutinizes, as manuscripts, books, &c., to see that they come within the limit of permissible speech; as, a *censor* of the press. One who blames or censures; one who is given to censure or exprobaton; a harsh or severe critic.

"Ill-natured censors of the present age." — *Roscommon*.

ensorial, **Censorian**, *a.* Belonging to a censor; relating to the correction of public morality.

"The Star-chamber had the censorian power." — *Bacon*.

ensorious, *a.* Addicted to censure; prone to find fault; captious; severe; as, a *censorious* disposition, implying or delivering censure.

"He was rigorously . . . censorious upon all his brethren of the own." — *Swift*.

ensoriously, *adv.* In a censorious manner.

ensoriousness, *n.* Quality of being censorious; habit of censuring.

ensorship, *n.* Office or dignity of a censor.

ensual, (*senz'shu-al*), *a.* [From Lat. *census*.] Relating to, or consisting of, a census.

ensurable, (*senz'shür-a-bl*), *a.* [See CENSURE.] Worthy of censure; blamable; faulty; culpable; reprehensible; as, *ensurable* behavior.

ensurableness, *n.* Quality of being ensurable; fitness to be censured; blamableness.

ensurably, *adv.* In a manner deserving of blame.

ensure, (*senz'shür*), *n.* [Fr., from Lat. *ensura*, from *ensor* — *censor*. See CENSOR.] Act of blaming or finding fault; blame; reproof; condemnation; reprehension; reproach.

Censure is the tax a man pays to the public for being eminent." — *Swift*.

judicial sentence; condemnatory judgment; as, "The *ensures* of the Church." — *Hammond*.

a. [Fr. *censurer*.] To judge unfavorably of; to blame; to reprehend; to find fault with.

"I may be censured that nature thus gives way to loyalty." — *Shaks.*

—To condemn by a judicial sentence.

Census, *n.* [Lat. See CENSOR.] An official reckoning or enumeration of the inhabitants and wealth of a country. The practice of numbering the people appears to have prevailed in certain countries from a very early period. We are told that about 600,000 men of Israel went up out of Egypt, besides women and children, and there is reason to believe that they had borrowed the practice from the Egyptians, among whom they had been living. At a later period, David incurred the anger of Jehovah by numbering the people. Joab and the captains of the host were employed to do this work, and it occupied them nine months and twenty days, the number of valiant men in Israel being 800,000, in Judah 500,000. In these early times, the object of numbering the people was chiefly to ascertain the number of fighting-men that could be brought into the field; and hence we find that no account is taken of women and children. At a later period, among the Greeks and Romans, wealth came to be regarded as an important principle in the State, and the census was taken more for ascertaining the wealth of the people, in order to adjust the rights and duties of citizenship among the different classes. Previous to the time of Solon, a citizen's rights at Athens depended upon his ancestry; but that lawgiver substituted property for birth, and made a citizen's rights and duties dependent upon his property. Accordingly, all the citizens were divided into four classes, according to their annual income. By the laws of Servius Tullius, the Roman citizens were divided into six classes, according to the amount of their property. The Roman census was taken with great care, and was very minute and full. It indicated not only the number and respective classes of all free persons, but their domestic position as husbands and wives, fathers and mothers, sons and daughters. The census, which at first was employed to ascertain the military strength of a people, and afterwards their wealth, may now be said to have in view the much more important object of ascertaining, in its widest sense, the social condition and progress of a people, with a view also to finding out those conditions, physical and moral, upon which social progress and well-being depend. Almost all civilized countries now take a census at regular intervals; being every three years in Austria, Belgium, and Prussia; five years in France, and ten years in England. In this country, a general census is taken every ten years, in accordance with the provisions of the Constitution, the first having been taken in 1790. Independently of the Federal census, many of the States have made provisions for a similar enumeration of their populations respectively, the period between the taking of each census varying from two years, as in Iowa, to ten years, as in Massachusetts.

(Continued in SECTION II.)

Cent, *n.* [Fr.: Lat. *centum*, a hundred.] A hundred. — An American coin of copper or other metal, equivalent to 10 mills or the 100th part of a dollar. — In China, a coin of which 100 are equal to the Mexican dollar. — A game at cards, formerly played, at which 100 points scored game. — *Per cent*. A certain rate by the hundred, as five *per cent*., the 50th part of 100.

Centage, *n.* Percentage; rate by the cent or hundred.

Centaur, (*senz'tür*), *n.* [Lat. *centaurus*; Gr. *kentauros*; probably from Gr. *kentô*, to prick, urge on, and *tauros*, a bull, from his being a mounted herdsman.] (*Myth.*) A fabulous being, represented as half man, half horse. The Centaurs are mentioned as inhabiting Thessaly, and are fabled as being the fruit of Ixion's amour with a cloud, which Jupiter transformed into the shape of Juno. The renowned battle of the Centaurs and the Lapithæ, so frequently referred to by the poets, arose from a quarrel at the marriage of Pirithous with Hippodamia. Hercules, Theseus, and the rest of the Lapithæ, defeated the Centaurs with great slaughter, drove them out of Thessaly, and compelled them to seek shelter in Arcadia. It has been supposed that the fable of these monsters arose among the Lapithæ, a tribe in Thessaly, who first broke and rode the horse, and invented the bridle.

(*Astron.*) [Lat. *Centaurus*.] A southern constellation, so low down that the main part of it cannot be seen in our latitude. It is situated S. of Spica Virginis, with a mean declination of 50°. It contains 35 stars, including 2 of first magnitude, 1 of the second, and 6 of the third; the brightest of which are not visible in the U. States. See SAGITTARIUS.

Centaurize, *v. a.* To perform the acts of, or to be like a Centaur; hence, to be a man and act like a brute.

Centaury, *n.* (*Bot.*) The English name of CENTAUREA, *q. v.*

Centau'rea, *n.* (*Bot.*) A genus of plants, order *As teracea*. The species are very numerous, but not one is of any importance to man. The *C. cyanus*, the common Blue-bottle, Blue-bonnet, Blue-weed, or Bachelor's Button of corn-fields, is sometimes cultivated for the sake of its many-colored flower-heads. The *C. Americana*, native of Arkansas and Louisiana, and naturalized in Illinois, is also cultivated in gardens, and has very showy, pale-purple heads.

Fig. 551. — BLUE-BOTTLE. (*Centaurea cyanus*.)

Centaurella, *n.* (*Bot.*) A genus of plants, ord. *Gentiana-ceæ*. They are American, slender, erect herbs, with scale-like leaves and small white flowers. The *C. autumnalis*, the Screw-stem, native to wet grounds from Massachusetts to Georgia, is of a yellowish-green color, and has a small white corolla, bearing the stamen at its clefts.

Centavo, *n.* [Sp.] A coin current in Chili, of which 100 form the *Pesos*, or dollar. It is about equivalent to one cent and an eighth, American.

Centen, *n.* A piece of Javanese money, worth about half a cent, American, and of which a hundred in Java are equal to a guilder or florin.

Centena, *n.* A coin of Paraguay; 100 form the dollar of that country. The *C.* is about equal in value with the U. States cent.

Centenarian, *n.* A person one hundred years old.

a. Of, or pertaining to a hundred years of age; as, a *centenarian* inhabitant.

Centenary, (*senz'ten-a-re*), *n.* [Lat. *centenarius*, from *centum*, a hundred.] The number of a hundred; the period of a hundred years; a century.

a. Relating to a hundred; consisting of a hundred.

a. Occurring once in every hundred years.

Centenary, in Virginia, a P. O. of Buckingham co.

Centennial, *a.* [From Lat. *centum*, a hundred, and *annus*, a year.] Consisting of, or pertaining to, a hundred years, or completing that term. — Happening every hundred years.

Centennial Exposition. See SECTION II.

Center, *n.* See CENTRE.

Centering, *n.* (*Arch.*) See CENTRING.

Centerville, in Iowa, a city, capital of Appanoose co., 90 m. S. S. E. of Des Moines. It is a coal-mining center for southern Iowa, and has various manufacturing industries. Pop. (1890) 3,008.

Centesimal, *a.* [Lat. *centesimus*, from *centum*.] The hundredth; by the hundred; as, the *centesimal* part of anything.

n. The hundredth part of anything; as, the "*centesimal* of a cube." — *Arbuthnot*.

Centesimalion, *n.* [Lat. *centesimalio*.] (*Mil.*) A punishment formerly inflicted for military offences, as desertion, insubordination, &c., where one soldier out of every hundred was chosen to incur the penalty.

Centesimo, (*senz'es-ê-mo*), *n.* [Sp.] In Peru, a piece of current money, about equal in value to the American cent, of which 100 form the dollar.

Centiepitons, *a.* [Lat. *centieps*, from *centum*, and *caput*, head.] Having a hundred heads.

Centifidous, *a.* [Lat. *centifidus*.] Split or divided into a hundred parts.

Centifolious, *a.* [Lat. *centum*, and *folium*, leaf.] Possessing a hundred leaves.

Centigrade, (*senz'ti-grād*), *a.* [Fr., from Lat. *centum*, and *gradus*, a step or degree, from *gradior*, to step, to walk or go.] Having a hundred degrees; divided into a hundred degrees.

Centigrade Division, *n.* (*Phys.*) This term most frequently occurs in scientific works in reference to the division of the scale of the thermometer. The fixed points of the thermometric scale are the points at which water freezes on the one hand, and boils on the other; the space between these two points being divided into 100°, the centigrade scale is formed. In Fahrenheit's scale, which is usually applied in common life to the thermometer in this country, the same space is divided into 180°; a degree of the centigrade scale is therefore greater than a degree of Fahr. in the proportion of 180 to 100, or of 9 to 5. Any number of degrees, therefore, on the centigrade scale, being multiplied by 9 and divided by 5, will give the equivalent number of degrees of Fahr. But in comparing temperatures expressed by the two scales, it is necessary to recollect that the zero of Fahrenheit's scale is not placed at the freezing-point, but 32° below it. An example will best show how this is to be taken into account. Let it be required to express on Fahrenheit's scale the temperature corresponding to 10° centigrade. Here 10 × 9 ÷ 5 = 18; to this add 32, and we have 18 + 32 = 50; so that a temperature of 10° centigrade corresponds to one of 50° Fahrenheit.

Centigramme (*senz'te-grām*), *n.* [Fr.] A French weight, being the 100th part of a gramme, equal to 1/1433 of a grain.

Centilitre, (*son'te-lê-tr*), *n.* [Fr., from Lat. *centum*, and Fr. *litre*.] In France, a measure of capacity, being the 100th part of a litre, equal to .61028 of a cubic inch.

Centiloquy, *n.* [Lat. *centum*, and *loqui*, to speak.] A hundred-fold discourse. (*R.*)

Centime, (*sôn-teem'*), *n.* [Fr., from Lat. *centesimus*.] A French coin of the value of the 100th part of a franc; or the fifth part of the American cent.

Centimetre, (*son'te-mê-tr*), *n.* [Fr. *centimètre*, from Lat. *centum*, and Gr. *metron*, measure.] A French measure of length, the 100th part of a METRE, *q. v.*; equal to .39371 of an English inch.

Centinel, *n.* See SENTINEL.

Centipede, *n.* [Lat. *centipeda*, from *centum*, a hundred, and *pes, pedis*, a foot.] (*Zoöl.*) The genus *Scelopendra*, of Cuvier, composed of carnivorous annulosa belonging to the order *Myriapoda*. They are distinguished by having antennae of fourteen joints or upwards; a mouth composed of two mandibles; a quadrid lip; two palpi, or small feet, united at their base; and a second lip, formed by a second pair of dilated feet, joined at their origin, and terminated by a strong hook, having an opening beneath its point, through which a poisonous fluid is thrown out. The body is long, depressed, and membranous, each ring being covered by a coriaceous or cartilaginous plate, and mostly having one pair of feet; the last is usually thrown backwards, and elongated in form of a tail. These insects conceal themselves under the decayed bark of trees, the decayed timbers of buildings, and among stones, lumber, and rubbish, whence they sally forth at night in search of prey. Our species usually 2 or 3 inches long, but in the West India Islands, and throughout S. America, where they multiply rapidly and grow to a large size, they are very formidable pests. The utmost vigilance is necessary, even in cleanly houses, to prevent these creatures from finding their way into the beds; and although they endeavor to escape as soon as a light is brought into the room, and run with considerable swiftness, they are ready to stand on the defensive, and sting severely; they are accordingly very dangerous when once they have entered a bed; the sting being not only exceedingly painful at the moment, but is followed by a high degree of local inflammation, and a fever of great irritation. This truly noxious Centipede grows to the size of five or six inches in length, and is a formidable inmate of most of the houses in tropical regions.

Fig. 552.—CENTIPEDE.

Centesmo, *n.* [It.] An Italian coin, of the same value as the French centime, or one-fifth of the American cent.

Cent Jours, [Fr., a hundred days.] (*Hist.*) The name given to the second period of the reign of Napoleon I., which lasted 100 days, from his return from Elba, March 20, 1815, to the second restoration, June 28, same year.

Centner, *n.* [Ger., a hundred-weight, from Lat. *centenarius*, from *centum*.] (*Mettl.*) A weight that can be divided first into 100 parts, and then sub-divided into smaller parts.—In Austria, Prussia, the remaining States of Germany, in Sweden, and in Switzerland, a weight of quantity equivalent to 123½ lbs., 113½ lbs., 120 lbs., 112.06 lbs., and 110 lbs. avoirdupois, respectively.

Cent, (*pl.* CENTOS), *n.* [Lat., from Gr. *kentrôn*, a sharp-pointed instrument.] In its original sense, patch-work sewed together with a needle.

(*Lit.*) A word employed to designate a collection of separate verses from the works of one or more poets, arranged so as to form a distinct poem. The only classical example of a *C.* left to us is that of Ansonius, who composed a nuptial idyl out of Virgilian verses; in which, however, the words are also perverted into a new meaning. In his prologue to this piece Ansonius describes the *C.*, and gives rules for its composition.

(*Mus.*) An opera containing a medley of musical selections on a large scale.

Centonism, *n.* Compilation from various authors; act of electric composition.

Central, *a.* [Fr., from Lat. *centralis*, from *centrum*.] Relating to the center; placed in the center or middle.

Central America, **Greater Republic of**. Central America comprises the southern section of North America, between Mexico and Colombia, and embraces the five States of Nicaragua, Guatemala, Honduras, Costa Rica, and San Salvador, each of which will be found described under its appropriate heading. *C. A.* remained subject to Spain until 1823, when it gained its independence and a federal union of the five States was formed. This was dissolved in 1839. Since then there have been attempts at federation and occasional hostile relations. In 1896 Honduras, Nicaragua and San Salvador formed a federal union under the title of the Greater Republic of Central America. There is reason to believe that the two remaining States will join the union.

Central City, in *Colorado*, cap. of Gilpin co. Situated in the gold region, 8,300 feet above tide; in *Ill.*, a vill. of Marion co.; in *Iowa*, a P. O. of Linn co.; in *Kan.*, a vill. of Anderson co.; in *Nebraska*, cap. of Merrick co.

Central College, in *Ohio*, a post-office of Franklin co.

Central Falls, in *Rhode Island*, a village of Smithfield township, Providence co., on the Blackstone River, 1 mile N. of Pawtucket.

Central Forces, *n. pl.* (*Mech.*) The powers which cause a moving body to tend towards, or recede from, the centre of motion. When a body is made to revolve in a circle round some fixed point, it will have a continued

tendency to fly off in a straight line at a tangent in the circle, which tendency is called the *centrifugal force*; and the opposing power by which the body is retained in the circular path is called the *centripetal force*. The first law of motion is, that a body must continue for ever in a state of rest, or in a state of uniform and rectilinear motion, if it be not disturbed by the action of an external cause. Upon this law the doctrine of central forces is founded. It therefore considers the external forces which act upon a body in motion, when there is an alteration, either in its velocity, or direction round a central point. It also considers the law of the force by which a body moves around another in a known curve, and solves various mathematical problems. Gravity, as exemplified in the force which acts on all bodies from the centre of the earth, is the simplest and most general example of a central force. Kepler and Newton devoted much time and labor to the study of central forces.

Centralia, in *Illinois*, a city of Marion co., 252 miles S. of Chicago. Here are shops of the Illinois Central R. R. Co., coal mines, iron and steel works, etc. It lies in the famous fruit-belt of S. Illinois. *Pop.* (1890) 4,763.

Centralia, in *Missouri*, a town of Boone co., on the Wabash and Chicago and Alton railroads, 124 miles N. W. of St. Louis. *Pop.* (1890) 1,275.

Centralia, in *Wisconsin*, a city of Wood co., on Wisconsin river, opposite Grand Rapids. It has abundant water power, partly utilized for manufacture. *Pop.* (1890) 1,435.

Centralism, *n.* Quality of being central; the combination of several parts into one whole.

Central'ity, *n.* State of being central.

Centralization, *n.* [Fr. *centralisation*.] Act of centralizing; as, the centralization of trade in a certain country.

(*Politics*.) The term is frequently applied to the tendency to bring together all the departments of state administrations to one centre, and to remove all local offices to the capital.

Centralize, *v. a.* To render central; to bring to a centre, or within a small compass.

Centrally, *adv.* In a central manner.

Central Park. See SECTION II.

Central Plains, in *Virginia*, a P. O. of Fluvanna co.

Central Point, in *Minnesota*, a village of Goodhue co., on Lake Pepin, 15 m. below Red Wing.

Central Provinces of British India. See INDIA.

Central Square, in *New York*, a post-village of Oswego co., 20 m. N. of Syracuse.

Central Station, in *W. Virginia*, a village of Doddridge co.

Central Sun, *n.* (*Astron.*) The name given to the body about which the sun, and all the stars in the great cluster or nebula to which the sun belongs, is assumed to be revolving.

Central Village, or **NORTH PLAINFIELD**, in *Connecticut*, a post-village in Plainfield township, Windham co., on the Moosup River, 45 m. E. of Hartford. *Pop.* about 2,500.

Central Village, in *Massachusetts*, a P. O. of Bristol co.

Centre, (sometimes written **CENTER**), *n.* [Fr., from Lat. *centrum*; Gr. *kentrôn*—*kento*, to prick, goad, or urge on; literally, a prick, a sharp point, a point.] In its modern acceptation, the middle or central point, part, or portion of anything; as, the centre of a sphere; the centre of a field, &c.

—The central part or object of concentration; the nucleus around which anything is formed: as, the centre of attraction.

(*Arch.*) Any timber frame, or set of frames, for supporting the arch-stones of a bridge during the construction of an arch.

(*Geom.*) When applied to a curve or surface, *C.* denotes a point with respect to which all the points of the curve or surface are symmetrically situated; that is to say, every right line through the *C.* of a curve or surface will cut the latter in points, which, taken two and two, are equi-distant from that *C.*

C. of an army. (*Mil.*) That part which constitutes the main body between the wings when drawn up in line. — *C.* of a dial. (*Horol.*) That point where the gnomon or style, placed parallel to the axis of the earth, intersects the plane of the dial. — *C.* of a conic section. (*Math.*) That point of a circle which bisects any diameter, or that point in which all the diameters intersect each other. This point in an ellipse is within the figure, in the hyperbola without, and in the parabola it is at an infinite distance. — *C.* of a circle, that point in a circle which is equally distant from every point of the circumference, being that from which the circle is described. — *C.* of conversion, a mechanical term, the signification of which may be thus conceived: if a stick be laid on stagnant water, and drawn by a thread fastened to it, so that the thread makes always the same angle with it, the stick will be found to turn about a certain point, which point is called the *C.* of conversion. — *C.* of an equilibrium, is the same with respect to bodies immersed in a fluid as the *C.* of gravity is to bodies in free space; or it is a certain point on which, if a body, or system of bodies, be suspended, they will rest in any position. — *C.* of attraction. (*Phys.*) The *C.* of attraction of a body is that point into which, if all its matter were collected, its action upon any remote particle would still be the same as it is while the body retains its own proper form; or it is that point to which bodies tend by their own gravity, or about which a planet revolves as a centre, being attracted or impelled towards it by the action of gravity. The common centre of attraction of two or more bodies is used to denote that point in which, if a particle of matter were placed, the action of each

body upon it would be equal, and where it will remain in equilibrium, having no tendency to move one way rather than another. — *C.* of friction, is that point in the base of a body on which it revolves, in which, if the whole surface of the base and the mass of the body were collected and made to revolve about the centre of the base of the given body, the angular velocity destroyed by its friction would be equal to the angular velocity destroyed in the given body by its friction in the same time. — *C.* of gravity. See GRAVITY. — *C.* of gyration. (*Mech.*) That point in a body revolving on an axis, into which, if the matter of the whole body were collected, the same angular velocity would be generated by the same moving force. — *C.* of motion of a body, a fixed point about which the body is moved; and the axis of motion is the fixed axis about which it moves. — *C.* of oscillation, the point in which the whole of the matter must be collected, in order that the time of oscillation may be the same as when it is distributed. — *C.* of percussion, that point of a revolving body which would strike with the same force as if the whole of the matter were collected in it. — *C.* of position. (*Mech.*) A term denoting a point of any body, or system of bodies, so selected that the situation and motion of the body or system may be properly estimated by those points. — *C.* of pressure, or metacentre of a fluid against a plane, is that point against which a force being applied, equal and contrary to the whole pressure, it will sustain it, so as that the body pressed on will not incline to either side. — *C.* of spontaneous rotation, that point which remains at rest the instant a body is struck, or about which the body begins to revolve. If a body of any size or form, after rotatory or gyratory motions, be left entirely to itself it will always have 3 principal axes of rotation; that is all the rotary motions by which it is effected may be constantly reduced to 3, which are performed round three axes perpendicular to each other, passing through the centre of gravity, and always preserving the same position in absolute space, while the centre of gravity is at rest, or moves uniformly forward in a right line. — *C.* of a lathe. (*Turnery*.) That cone with its axis which is horizontally posited for sustaining any body while it is turned. — *C.* of a fleet. (*Naut.*) That division of a fleet placed between the van and the rear when in line of battle; and between the weather and lee divisions, in the order of sailing.

Centre, *v. t.* To be collected to a point; as, to centre one's desires upon a thing,

"Our hopes must centre on ourselves alone." — Dryden.

—To be placed in the middle or central part.

—*v. a.* To place or fix on a centre, or central point.

"One foot he centred, and the other turn'd
Round through the vast profundity obscure." — Milton.

—To collect to a point or central object.

"Thy thoughts are centred on thyself alone!" — Dryden.

Centre, in *Alabama*, a post-village, cap. of Cherokee co., 1 m. from Coosa River, and 140 N. E. of Montgomery.

Centre, in *Georgia*, a post-village of Talbot co., 37 m. N. E. of Columbus City.

Centre, in *Illinois*, a twp. of Fulton co. See PUTNAM.

—A township of McHenry co. See DORR.

—A township of Innean co.,—now merged in Wyauet twp.

—A post-office of Schuyler co.

Centre, in *Indiana*, a township of Boone co.

—A township of Dearborn co.

—A township of Greene co.

—A township of Grant co.

—A township of Hancock co.

—A township of Hendricks co.

—A township of Howard co.; contains Kokomo th county seat.

—A township of Lake co.

—A township of La Porte co.

—A township of Marion co.

—A township of Marshall co., contains Plymouth th county-seat.

—A township of Porter co.

—A township of Posey co.

—A township of Ripley co.

—A township of Rush co.

—A township of Spencer co.

—A township of Starke co.

—A township of St. Joseph's co.

—A township of Union co., including Liberty, the county seat.

—A township of Vanderburg co.

—A township of Wayne co.

Centre, in *Iowa*, a flourishing town of Allamakee county.

—A township of Appanoose co.

—A township of Cedar co.

—A township of Clinton co.

—A township of Decatur co.

—A township of Dubuque co.

—A township of Fayette co.

—A township of Guthrie co.

—A township of Henry co.

—A township of Madison co.

—A post-office of Dubuque co.

—A township of Wapello co.

Centre, in *Kansas*, a flourishing township of Atchison county.

—A township of Doniphan co.

Centre, in *Kentucky*, a post-office of Metcalfe co.

Centre, in *Michigan*, a village of Eaton co.

Centre, in *Mississippi*, a flourishing township of Newton county.

Centre, in *New Jersey*, a township of Camden county.

Cent're, in *New York*, a village of Davenport township, Delaware co., 90 m. W.S.W. of Albany.
 —A village of Green co., 35 m. S.W. of Albany.
 —A village of Herkimer co., 60 m. N.W. of Albany.
 —A village of Ontario co., 8 m. S.E. of Canandaigua.
 —A village of Otsego co., on the Otsego outlet.
Centre, in *N. Carolina*, a post-office of Guilford.
Centre, in *Ohio*, a township of Carroll co.
 —A township of Columbia co.
 —A township of Gernsey co.
 —A township of Mercer co.
 —A township of Monroe co.
 —A post-village of Montgomery co.; 70 m. W.S.W. of Columbus.
 —A township of Morgan co.
 —A township of Noble co.
 —A village in the S. of Washington co., on the Ohio River.
 —A township of Williams co.
 —A township of Wood co.
Centre, in *Pennsylvania*, a central co. (as its name denotes,) with an area of about 1,000 sq. m. It is bounded on the N.W. by the W. branch of the Susquehanna River, and by Mushannon Creek. It is drained by Bald Eagle, Penn's Beach, and Spring creeks, and traversed by the Alleghany Mountains, which here throw off several spurs. Bald Eagle Mountain also extends through the middle of this co. Soil, generally rich, and abounding in minerals. There is no finer agricultural region in the State than the valleys of this county present. Its W. side has plenty of iron-ore, coal, and lumber. When its resources shall be fully developed, its as yet hidden stores of vegetable and mineral wealth will render it one of the most flourishing in the State. The Penna. Agricultural College is situated here. Cap. Bellefonte.
 —A township of Berks co.
 —A township of Butler co.
 —A township of Columbia co.
 —A township of Greene co.
 —A township of Indiana co.
 —A post-township of Perry co., 20 m. N.W. of Harrisburg, contains the borough of Bloomfield.
 —A township of Snyder co.
Centre, in *Wisconsin*, a township of Outagamie co.; pop.
 —A village of Dodge co.
 —A township of La Fayette co.,—now called DARLINGTON.
 —A township of Rock county, 10 miles N.W. of Jaunesville.
Centre Alm'ond, in *New York*, a village of Alleghany co., 219 m. W.S.W. of Albany.
Centre Barn'stead, in *New Hampshire*, a post-village of Belknap co., 20 m. N.N.E. of Concord.
Centre Bel'pre, in *Ohio*, a post-village of Washington co., on the Ohio River, 90 m. E.S.E. of Columbus co.
Centre Bend, in *Ohio*, a post-office of Morgan co.
Centre Ber'lin, in *New York*, a post-village of Rensselaer co., 20 m. E. of Albany.
Centre-bit, *n.* (*Joinery*.) An instrument revolving on a central handle, used for boring circular holes.
Centre Bridge, in *Pennsylvania*, a post-village of Bucks co., 111 m. E. of Harrisburg.
Centre Brook, in *Connecticut*, a post-village of Middlesex co.
Centre Bruns'wick, in *New York*, a post-office of Rensselaer co.
Cent'reburg, in *Ohio*, a post-village of Knox co., 36 m. N.N.E. of Columbus.
Centre Cambridge, in *New York*, a post-office of Washington co.
Centre Caniste'o, in *New York*, a post-village of Steuben co., 195 m. W.S.W. of Albany.
Cent're-chuck, *n.* (*Turnery*.) A chuck screwed on the mandril of a lathe, having a hardened steel cone or centre fixed in it; also a projecting arm or driver.
Centre Conway, in *New Hampshire*, a post-village of Carroll co., 60 miles N.E. of Concord.
Centre Cross, in *Virginia*, a post-office of Essex co.
Cent'redale, in *Rhode Island*, a P. O. of Providence co.
Cent're-drill, *n.* (*Turnery*.) A small drill used for making a short hole in the ends of a shaft about to be turned, for the entrance of the lathe centres.
Centre El'ingham, in *New Hampshire*, a post-office of Carroll co.
Cent'refield, in *Kentucky*, a post-office of Oldham co.
Cent'refield, in *New York*, a village of Ontario co., 200 m. W. by N. of Albany.
Cent'refield, in *Ohio*, a post-village of Highland co., 73 m. E.N.E. of Cincinnati.
Centre Gro'ton, in *Connecticut*, a post-village of New London co., 48 m. S.E. of Hartford.
Centre Grove, in *N. Carolina*, a P. O. of Person co.
Centre Hall, in *Pennsylvania*, a P. O. of Centre co.
Centre Har'bor, in *New Hampshire*, a post-township of Belknap co., 33 m. N. of Concord.
Centre Hill, in *Alabama*, a P. O. of Limestone co.
Centre Hill, in *Arkansas*, a post-office of White co.
Centre Hill, in *Connecticut*, a P. O. of Hartford co.
Centre Hill, in *Pennsylvania*, a post-village of Centre co., 73 m. N.W. of Harrisburg.
Centre Leb'anon, in *Maine*, a post-village of York co., 90 m. S.W. of Augusta.
Centre Lin'colnville, in *Maine*, a post-village of Waldo co., 40 m. E. by S. of Augusta.
Centre Lisle, in *New York*, a post-office of Broome co.
Centre Lov'eil, in *Maine*, a post-office of Oxford co.
Centre Mills, in *Pennsylvania*, a P. O. of Centre co.
Centre Mont'ville, in *Maine*, a post-office of Waldo co., 40 m. E. by S. of Augusta.

Centre More'land, in *Pennsylvania*, a village of Wyoming co.
Centre Mor'iches, in *New York*, a P. O. of Suffolk co.
Centre Os'sipee, in *New Hampshire*, a post-village of Carroll co., 48 m. N.N.E. of Concord.
Centre-phon'ie, *n.* (*Acoustics*.) The place where the speaker stands in making polysyllabic and articulate echoes.
Centre-phonoeamp'tic, *n.* (*Acoustics*.) The place or object which returns the voice.
Centre Point, in *Arkansas*, a village, the cap. of Howard co. Pop. abt. 3000.
Centre Point, in *Indiana*, a post-office of Clay co.
Centre Point, in *Iowa*, a post-office of Linn co., about 45 m. N. by W. of Iowa City.
Centre Point, in *Kentucky*, a post-village of Monroe co., 130 m. S. by W. of Frankfort, on the Cumberland River.
Centre Point, in *Ohio*, a post-office of Shelby co.
Centre Port, in *New York*, a post-village of Suffolk co., 190 m. S.S.E. of Albany, on the Great Cow Harbor.
Centre Ridge, in *Arkansas*, a P. O. of Conway co.
Centre Ridge, in *Illinois*, a post-office of Mercer co.
Centre Ridge, in *Mississippi*, a village of Kemper co.
Centre Road Station, in *Pennsylvania*, a post-office of Crawford co.
Centre Rut'land, in *Vermont*, a post-village of Rutland co., 52 m. S. by W. of Montpelier.
Centre Sand'wich, in *New Hampshire*, a post-village of Carroll co., 50 m. N. by E. of Concord.
Centre Sher'man, in *New York*, a post-village of Chautauqua co., about 300 m. W. by S. of Albany.
Centre Sid'ney, in *Maine*, a post-village of Kennebec co., about 6 m. N. of Augusta.
Centre Square, in *Indiana*, a P. O. of Switzerland co.
Centre Square, in *Pennsylvania*, a post-office of Montgomery co.
Centre Star, in *Alabama*, a P. O. of Landerdale co.
Centre Strafford, in *New Hampshire*, a post-village of Strafford co., 25 m. E. of Concord.
Cent'reton, in *Indiana*, a post-village of Morgan co., about 25 m. S.W. of Indianapolis.
Cent'reton, in *New Jersey*, a post-village of Salem co., 70 m. S. by W. of Trenton.
Cent'reton, in *Ohio*, a post-village of Huron co., 110 m. N. by E. of Columbus.
Cent'retown, in *Iowa*, a village of Dubuque co., 70 m. N.E. of Iowa City.
Centre Town, in *Kentucky*, a post-office of Ohio co.
Centre Town, in *Missouri*, a post-office of Cole co.
Centretown, in *Pennsylvania*, a post-village of Mercer county.
Centre Valley, in *Indiana*, a P. O. of Hendricks co.
Centre Valley, in *Nebraska*, a post-office of Cass co.
Centre Valley, in *New York*, a P. O. of Otsego co.
Centre Valley, in *Pennsylvania*, a post-village of Lehigh co., 7 m. E. of Allentown.
Centre View, in *Missouri*, a post-office of Johnson co.
Centre View, in *Ohio*, a post-office of Monroe co.
Centre Village, in *Georgia*, a village of Camden co., 175 m. S.E. of Milledgeville.
 —A village of Jackson co., 50 m. E.N.E. of Atlanta.
 —A post-office of Charlton co.
Centre Village, in *New York*, a post-village of Broome co.
Centre Village, in *Ohio*, a post-office of Delaware co.
Cent'reville, in *Alabama*, the capital of Bibb co., on the Catawba river, at the Lower Falls, 38 m. S.E. of Tuscaloosa.
Cent'reville, in *Arkansas*, a P. O. of Yell co.
Cent'reville, in *California*, a post-village of Alameda county, about 32 miles South South East of San Francisco.
 —A post-village of El Dorado co. See PILOT HILL.
Cent'reville, in *Connecticut*, a village in Hamden township, New Haven co., 6 m. N. of New Haven.
Cent'reville, in *Delaware*, a post-village of New Castle co., about 50 m. N. by W. of Dover.
Cent'reville, in *Florida*, a post-village of Leon co.
Cent'reville, in *Georgia*, a post-village of Gwinnet county.
 —A village of Walton co., 126 m. W. of Augusta.
 —A post-village of Wilkes co., abt. 66 m. N.W. of Augusta.
Cent'reville, in *Idaho*, a mining-village of Boise co., on Grimes Creek, about 8 miles N. or N.W. of Idaho City.
Cent'reville, in *Illinois*, a village of Adams co., 80 m. W. of Springfield.
 —A post-village of Piatt co.
 —A village of Schuyler co., 70 m. W.N.W. of Springfield.
 —A village of St. Clair co., 9 m. S.W. of Belleville.
Cent'reville, in *Indiana*, a village of Allen co., 12 m. E.S.E. of Fort Wayne.
 —A village of Jennings co., about 20 m. N.W. of Madison.
 —A village of Lake co., 6 m. N. by E. of Crown Point.
 —A village of Scott co.
 —A village in the N.E. part of Sullivan co.
 —A post-village, capital of Wayne co., 63 m. E. of Indianapolis.
Cent'reville, in *Iowa*, a post-village, capital of Appanoose co., 3½ m. W. of Chariton River, and about 80 m. S.S.E. of Des Moines.
 —A village of Cedar co., 26 m. E. of Iowa City.
Cent'reville, in *Kansas*, a post-township of Linn co.; pop. 1,034.
Cent'reville, in *Kentucky*, a township of Bourbon co., 30 m. E. of Frankfort.
Cent'reville, in *Louisiana*, a post-village of St. Mary's parish, on the Teche, 5 m. below Franklin.
Cent'reville, in *Maine*, a township of Washington co.;

Cent'reville, in *Maryland*, a twp. and vill., cap. of Queen Anne co., 35 m. E. by N. of Annapolis.
Cent'reville, in *Massachusetts*, a post-village and seaport of Barnstable township, Barnstable co., on the S. side of Cape Cod, 70 m. S.E. of Boston.
Cent'reville, in *Michigan*, a township of Leelenaw county.
 —A post-village, cap. of St. Joseph's co., on Prairie River, 80 m. S.W. of Lansing.
Cent'reville, in *Minnesota*, a village of Anoka co., in Cent'reville twp., about 16 m. from St. Paul.
 —A village of Stearns co., about 17 m. S.S.W. of St. Cloud.
Cent'reville, in *Mississippi*, a post-village of Wilkinson county.
 —A village of Choctaw co.
Cent'reville, in *Missouri*, a village of Callaway co., 40 m. N.E. of Jefferson City.
 —A village in the S.E. part of Macon co., 80 m. N. by W. of Jefferson City.
 —A post-village, cap. of Reynolds co., on the W. fork of Black River, 40 m. S. by W. of Potosi.
Cent'reville, in *New Jersey*, a post-village in the E. part of Hunterdon co., 7 m. E.N.E. of Flemington.
 —A village on the boundary between Salem and Cumberland counties, 9 m. N.N.E. of Bridgeton.
 —A village of Warren co., 10 m. N.E. of Belvidere.
Cent'reville, *New York*, a post-township of Alleghany co., 45 m. S.E. of Buffalo.
 —A village of Champlain township, Clinton co., 160 m. N. by E. of Albany.
Cent'reville, in *North Carolina*, a P. O. of Franklin co.
Cent'reville, in *Ohio*, a village of Morgan co., about 20 m. N.N.W. of Marietta.
 —A village of Belmont co., about 60 m. E. of Zanesville.
 —A village of Clinton co.
 —A village of Delaware co., 15 m. N.E. of Columbus.
 —A village of Gallia co., 15 m. W.N.W. of Gallipolis.
 —A village of Lake co., on the Ridge Road from Erie in Pennsylvania, to Cleveland, 182 m. N.E. of Columbus.
 —A village of Medina co., about 40 m. S.W. of Cleveland.
 —A post-village of Montgomery co., 9 m. S. by E. of Dayton.
Cent'reville, in *Pennsylvania*, a village of Bradford co.
 —A village of Bucks co., 27 m. N. of Philadelphia.
 —A post-village of Butler co., 17 m. N.W. of the borough of Butler.
 —A post-village of Crawford co., on Oil Creek, 25 m. E.N. E. of Meadville;
 —A village of Cumberland co.
 —A village of Elk co., on Smithport turnpike.
 —A village of Greene co.
 —A village of Lancaster co.
 —A village of Northampton co., 15 m. N. of Easton.
 —A village of Somerset co., 145 m. W. by S. of Harrisburg.
 —A village of Union co.
Cent'reville, in *Rhode Island*, a post-village of Kent co., near the Pawtuxent River, 12 m. S.S.W. of Providence.
Cent'reville, in *S. Carolina*, a post-village of Lauren dist., 90 m. N.W. of Columbia.
Cent'reville, in *Tennessee*, a twp. and village, cap. of Hickman county, on Duck River, 50 m. S.W. of the city of Nashville.
 —A township of Jackson co.
Cent'reville, in *Texas*, a post-village, cap. of Leon co., about 48 m. N.N.W. of Huntsville.
Cent'reville, in *Utah*, a post-village of Davis co., 12 m. N. of Salt Lake City.
Cent'reville, in *Virginia*, a township of Fairfax co., 27 m. W. of Washington.
Cent'reville, in *W. Virginia*, a village of Monroe co., about 240 m. W. of Richmond, on Indian Creek.
 —A township of Tyler co., on Middle Island Creek, 16 m. from the Ohio River.
Cent'reville, in *Wisconsin*, a village and township of Manitowoc co., on Lake Michigan.
 —A village of St. Croix county, 15 miles S.E. of Hudson.
 —A post-village of Trempealeau co.
 —A village of Greene co., on Sugar River, 35 m. S. of Madison.
Centre White Creek, in *New York*, a post-village of Washington co., 39 m. N.E. of Albany.
Cent'ric, *Cent'rical*, *a.* Placed in the centre or middle; central.
 "Say where his centric happiness doth lie."—*Donne*.
Cent'rically, *adv.* In a central position.
Centrif'city, (*sen-tris'e-te*.) *n.* State of being centric.
Centrifugal, *a.* [Lat. *centrum*, and *fugio*, to fly.] Tending to recede from the centre; flying from the centre; as, a centrifugal machine.
 (*Bot.*) *Centrifugal* and *centripetal* designate two different kinds of inflorescence. When the flower-bud which terminates the floral axis, and is central in the inflorescence, is the first to expand—in which case the others are developed in succession from the centre outwards—the inflorescence is said to be *centrifugal*. When the outermost flowers expand first, the inflorescence is *centripetal*, as is the case in catkins, spikes, and racemes, in which the flowers nearest the base are the first to expand, and those nearest the apex the last.
C. Force, (*Phys.*) The force that urges a revolving body to fly off in a straight line instead of describing a curve. The moon is held in her orbit round the earth by *centripetal force*, and a stone flies from a sling by *centrifugal force*.—See CENTRAL FORCES.
Cent'ring, *Cent'ring*, *n.* (*Arch.*) A temporary support, principally of timber, placed and fixed under vaults and arches to sustain them while they are in course of building.
Centrip'etal, *a.* [Lat. *centrum*, and *peto*, to seek.] Seeking the centre; tending towards the centre; as,

centripetal force. — Progressing by changes from the exterior of a thing towards its centre; as, the *centripetal* petrification of a bone.

(Bot.) See CENTRIFUGAL.

C. Force. (Phys.) The force by which a body in motion is kept revolving round a central point instead of flying out at a tangent to its orbit. See CENTRIFUGAL.

Centrip'etency, *n.* Tendency or inclination towards the centre. (R.)

Centris'cus, *n.* (Zool.) A genus of Acanthopterygious fishes, principally distinguished by their having a long tubular snout; the body compressed and inclining to an oblong oval form; and the belly-fins united. The Trumpet-fish or Sea-snipe, *C. scolopax* (fig. 553), found in the Mediterranean, is the type of the genus.

Fig. 553. — TRUMPET-FISH.
(*Centriscus scolopax*.)

Centrob'ar'ie, *a.* [From Gr. *centrobārēs* — *kentron*, centre, and *báros*, weight.] Pertaining to the centre of gravity, or to the method of determining it.

Centrolin'eal, *a.* [Lat. *centrum*, and *linea*, line.] Converging to a centre. (Applied to lines.)

Centrolin'eum, *n.* An instrument for drawing lines converging towards a point, though the point be inaccessible.

Centrop'olis, in Kansas, a post-village and township of Franklin co., 40 m. S.S.W. of Lawrence; pop. abt. 900.

Centrop'omus, *n.* (Zool.) A genus of Acanthopterygious fishes. The species Sea-pike, *C. undecimalis*, sometimes weighing as much as 25 pounds, forms a considerable article of consumption in S. America. The form of its body is elongated; its color greenish-brown above, and silvery beneath.

Centum'vir, *n.* [Lat. *centum*, hundred, and *vir*, a man.] (Rom. Hist.) One of a body of judges, chosen three from each of the 35 tribes, so that properly there were 105; but they were called *centumviri* (or the hundred), from the round number. The origin and powers of this court are subjects involved in great obscurity. The principal causes that came under their cognizance appear to have been those concerning testaments and inheritances.

Centum'viral, *a.* Pertaining to the centumvir, or to the centumviri.

Centum'virate, *n.* Dignity or office of a centumvir, or of the centumviri.

Centum'enlus, *n.* (Bot.) A genus of plants, order Primulaceæ. They are very diminutive annual herbs, with alternate leaves; flowers axillary, solitary, subsessile. The Bastard Pimpernel, *C. minimus*, is found in wet places in the U. States.

Centuple, *n.* [Fr., from Lat. *centum*, and *plico*, to fold.] A hundred-fold.

Centupliate, *v. a.* [Lat. *centuplicatus*.] To make a hundred-fold; to repeat a hundred-fold. (R.)

Centu'rial, *a.* [Lat. *centuriālis*.] Relating to a century, or a hundred years; as, a *centuriā* jubilee.

Centuria'tor, **Centurist**, *n.* [Fr. *centuriateur*.] A name given to an historian who distinguishes time by centuries, after the practice of ecclesiastical history; as, "The *centuriators* of Magdeburg." — *Ayliffe*.

Centu'rior, *n.* [Lat. *centurio*, from *centum*.] (Rom. Hist.) An officer in the Roman army, who had the command of a *century* (q. v.). The word *C.* signifies the commander of 100 men; but this number was, in fact, seldom complete, as the legion generally fell far short of its full complement. One of the two *C.* of each manipulus had a precedence before the other; and the *C.* of the first century of the first manipulus of the Triarians presided over all the others, and had charge of the eagle or chief standard of the legion, which gave him the privilege of ranking with the knights. The badge of a *C.* was a vine-rod. The rank of a *C.* was parallel to that of a captain in modern times. Several *C.* are honorably mentioned in the New Testament, (*Mark* xv. 39; *Luke* viii. 1-10). — By extension, in cycling parlance, a cyclist who rides a century.

Centu'ry, *n.* [Lat. *centuria*, from *centum*.] A hundred; a hundred of anything; hence, by extension, in cycling parlance, a hundred miles' ride, more especially if covered in one day.

—The period of a hundred years; as, the nineteenth century.

"It may well wait a century for a reader, as God has waited six thousand years for an observer." — *Kepler*.

(Rom. Hist.) A division in which the people voted at the "Comitia Centuriata." According to Livy, they were instituted by Servius Tullius, for the purpose of giving to the rich a greater weight in the state. The patricians were represented by six *C.* of knights, and twelve *C.* of knights were added to these from the plebeians. The rest of the plebeians and clients were divided into 5 classes, according to the amount of their property; the lowest limits of each being respectively 100,000, 75,000, 50,000, 25,000, 12,500 asses. The first of these classes was subdivided into 80 *C.*; the next three into 20 each; and the last into 30. The *C.* of each class were again separated into two equal numbers of old and young. By this distribution the preponderance was given to property, though the rich classes were of course outnumbered by the poor. — In the Roman legion the term *C.* was applied to the half of the manipulus, or 1-30th of a legion.

Centuries of Magdeburg. (Ecc. Hist.) The publication of a history, arranged in 13 centuries, was drawn up at Magdeburg, in 1552, to show the agreement of the

Lutheran doctrine with that of the primitive Christians. Its publication was commenced in 1560, and terminated in 1574. The work was brought down to the year 1300.

Ce'os, a Greek island. See ZEA.

Cep'e'y'orons, *a.* [Lat. *cepa*, onion, and *vorare*, to devour.] Feeding on onions.

Cepha'e'tis, *n.* [Gr. *kephalē*, the head.] (Bot.) A genus of plants, order Cinchonaceæ. The *C. ipecacuanha* is the official ipecacuanha of our pharmacopœias. It is known as *true*, *annulated*, *Brazilian* or *Lisbon* ipecacuanha, and is imported from Rio Janeiro, Bahia, and Pernambuco. Its odor is faint and peculiarly bitter, sub-acid, and mucilaginous; both water and alcohol extract its vir-

Fig. 554. — IPECACUANHA.
(*Cephaelis ipecacuanha*.)

tues, which depend on a peculiar principle, called *Emetia*. When given in large doses, it acts as an emetic and as a purgative; in small doses it is expectorant and diaphoretic.

Cephalalg'ie, (*sef'al-al'jik*) *a.* [Lat. *cephalgicus*. See CEPHALIC.] Relating to head-ache.

—*n.* (Med.) A remedy for the head-ache.

Ceph'alalg'y, *n.* [Gr. *kephalgia* — *kephalē*, head, and *algos*, ache, pain.] The head-ache; pain in the head.

Cephalan'thim, *n.* [Gr. *kephalē*, and *anthos*, a flower.] (Bot.) The head or capitate inflorescence of a composite plant.

Cephalan'thus, *n.* [Gr. *kephale*, a head, and *anthos*, a flower; flowers growing in dense heads.] (Bot.) A genus of plants, order Cinchonaceæ. They are shrubs with opposite leaves and short stipules; flowers in globose heads, without an involucre. The Button-bush, *C. occidentalis*, frequenting the margins of ponds, rivers, and brooks, throughout the United States, is a handsome shrub, 6 ft. high, readily distinguished by its spherical flowers, resembling the globular inflorescence of the sycamore.

Fig. 555. — BUTTON-BUSH,
(*Cephalanthus occidentalis*.)

Cephalas'pis, *n.* [Gr. *kephale*, and *aspis*, buckler.] (Pal.) A fossil fish that has a large head formed of a sort of shield, prolonged behind into two points. It is found in the old red sandstone.

Ceph'alute, *n.* (Zool.) An animal of the class CEPHALOPODA, q. v.

Cephalat'omy, *n.* [Gr. *kephalē*, and *temnein*, to cut.] (Anat.) The dissection of the head.

Cephalic, (*sef'al'ik*) *a.* [Gr. *kephalikos*, from *kephalē*, the head.] Pertaining to the head; good for the head, or head-ache; as, a *cephalic* remedy.

Cephalic Vein. (Anat.) The great superficial vein at the outer part of the arm and fore-arm.

Cephalit'is, *n.* (Med.) Inflammation of the brain.

Ceph'alo-extract'or, *n.* (Surg.) An instrument to extract a fetus by claspings the head.

Cephalog'raphy, *n.* [Gr. *kephalē*, head, and *graphein*, to write.] (Anat.) A description of the head.

Ceph'aloid, *a.* [Gr. *kephalē*, and *eidos*, form.] Shaped like the head.

Cephalol'ogy, *n.* [Gr. *kephalē*, and *logos*, a discourse.] (Anat.) A treatise on the head.

Cephalonia, (*sef'al-ō-ne-ā*) an island in the Mediterranean, and the largest of those composing the former

Ionian Republic, now forming part of the kingdom of Greece, near the W. coast of Greece, opposite the Gulf of Patras, between Lat. 38° 3' and 38° 29' N., and Lon. 20° 21' and 20° 49' E.; 8 m. N. of Zante, 5 S. of Santa Manra, and 64 S.S.E. of Corfu. Length, N.N.W. to S.S.E., 32 m.; breadth very unequal. Area, 311 sq. m. Surface. Generally mountainous and barren. Soil, comparatively scanty and poor. Clim. Mild; but violent storms and earthquakes are frequent. Prod. Wheat, maize, pulse, currants, olive oil, wine, cotton, flax, and salt. Chief Towns. Argostoli (the cap.), and Lixuri. Pop. 75,000. — See IONIAN ISLANDS.

Cephalop'oda, CEPHALOPODS, *n. pl.* [Gr. *kephalē*, head, *pous*, foot.] (Zool.) A class of molluscous animals characterized by the possession of locomotive organs around the head, in the shape of prolonged tentacula, which project forward and more or less conceal the mouth (see Fig. 185). In the whole range of molluscous animals the *C.* are the most highly organized, presenting undoubted rudiments of an internal skeleton, and containing secretive, digestive, respiratory, and generative organs. The *C.* are marine, and are remarkable for a peculiar and intensely black fluid, which they secrete, and which, when apprehending danger, they eject into the water, thus discoloring it, and enabling the animals to conceal themselves. They are separated into the two orders DIBRANCHIATA and TETRABRANCHIATA, q. v.

Cephalopod'ie, **Cephalop'odous**, *a.* Pertaining to the cephalopods.

Ceph'alo-tho'rax, *n.* [Gr. *kephalē*, and *thōrax*, q. v.] (Zool.) The first segment of the Arachnida and Crustacea, consisting of the united head and thorax.

Cephalotribe, *n.* [Gr. *kephalē*, and *tribein*, to crush.] (Surg.) An obstetrical instrument used for facilitating delivery, by crushing the head of the child in the womb.

Ceph'alous, *a.* That has a head.

Ceph'alus. (Myth.) Son of Deionens, king of Thessaly, and husband of Procris, an Athenian princess. Aurora became enamored of him, but he remained faithful to his wife. Aurora, however, with a view of estranging his affections from Procris, wished him to prove his wife's fidelity. Disguised as a merchant, he entered his own house, and Procris's virtue was not proof against the riches he offered her. He then drove her from his door; but a reconciliation was soon effected between them. Finally, Cephalus, while hunting, accidentally pierced her with his spear; and, in despair at her death, killed himself with the same weapon.

Ce'phens. (Astron.) A northern constellation, midway between the Polar star and Cygnus. It contains 35 stars, of which the principal is Alderamin, of the third magnitude.

Cephi'sus, CEPHISSUS, a celebrated river of Greece, rising at Lilæa, in Phocis, and which, after passing to the N. of Delphi and Mount Parnassus, entered Boeotia, where it flowed into the lake Copais. The Graces loved this river, and were called the goddesses of the Cephissus. Modern travellers describe it as winding its way through olive groves in several streamlets. There was another river of the same name in Attica, and one also in Argolis.

Cep'ola, *n.* (Zool.) A genus of fishes, the BAND-FISH, q. v.

Cera'ceous, *a.* [From Lat. *cera*, wax.] Wax-like; partaking of the nature or quality of wax.

Cera'go, *n.* [Lat. *cera*, wax.] A substance serving as food for bees, derived from the pollen of flowers.

Cera'loo, in Mississippi, a post-village of Carroll co., 80 m. W. by S. of Columbus.

Ce'ram, a considerable island of the E. Archipelago (3d division), chiefly between Lat. 3° and 4° S., and Lon. 12° and 13° E.; length, E. and W., about 185 m., by 30 average breadth; area, 5,500 sq. m. A mountain-chain runs E. and W. through the centre of the island, the highest peak of which is apparently about 7,000 feet above sea-level. This island is chiefly noticeable for its large forests of sago-palm, and its fine woods for cabinet-work. The shores of *C.* abound with rare and beautiful shells; and its interior is peopled by the Horaforas tribes, whose numbers are unknown.

Ceram'byx, **Ceramby'cidae**, *n. pl.* (Zool.) The Capricorn-beetle, a genus and family of coleopterous insects, comprising beetles which have the antennæ very long, tapering, and generally curved, like the horns of a goat. When caught, they make a squealing noise by rubbing the joints of the thorax and abdomen together. In the larva state they are the most destructive of all wood-eating insects, and are known as *borers*. The Cerambycidae form a section of the *Longicornis* of Latreille.

Ceramen, *n.* (Physiol.) A waxy exudation from the ears, thrown out for the double purpose of keeping the external cavity or passage of that organ in a state favorable to healthy hearing, and to exclude insects from invading the channel by its rank and acrid taste.

Cerami'ceæ, *n. pl.* (Bot.) An order of plants, alliance *Algae*. DIAG. Cellular or tubular unsymmetrical bodies, multiplied by tetraspores. They are sea-weeds of a rose or purplish color; their cells long and tubular, sometimes arranged in a single row, sometimes disposed in several parallel rows, and of equal length, forming an articulated frond. 662 species have been described, and form 88 genera.

Ceram'ic, *a.* [Gr. *keramikós*.] Pertaining to, or having the nature of, pottery or porcelain; as, the *ceramic* art.

Ceram'ics, *n. sing.* A word used in the arts, to express all the varieties of the potter's trade, which have been burnt or roasted in a kiln. These productions are of great beauty and delicacy, and they often display the highest artistic talent. See POTTERY.

Cera'sium, *n.* (Chem.) See GUM-TRAGACANTH.

Ceras'tes, *n.* [Gr. *kerastes*, horn.] (Zool.) A genus of serpents of the *Viperulæ* family, distinguished by two small protuberances on the forehead. They are exclu-

sively African, and very numerous. The best known species is the horned viper.

Ceras'tinum, *n.* [From Gr. *keras*, a horn, from the resemblance of the capsules of some of the species.] (*Bot.*) A genus of plants, order *Caryophyllacea*. Their distinctive characters are: calyx, of 5 ovate, acute sepals; corolla of 5 bifid petals; stamens 10, sometimes 5 or 4, the alternates are shorter; styles 5; capsules superior, cylindrical; seeds numerous. The Mouse-ear Chickweed (*C. vulgatum*), Sticky Chickweed (*C. viscosum*), and Field Chickweed (*C. arvense*) are found in fields in the U. S.

Cerasus, *n.* (*Bot.*) A gen. of trees, ord. *Drupacea*. Several species or varieties of this genus produce the very well-known fruits called cherries. The varieties usually cultivated in gardens are supposed to have been derived originally from 2 wild species, *C. arum*, and *C. vulgaris*, (of which 125 varieties are published in American catalogues.) Both have white flowers in clusters or nearly sessile umbels. The timber of *C. arum* is valuable for the purposes of the cabinet-maker, turner, and musical-instrument maker; the straight small branches are used as a substitute for tea. The leaves of *C. capricida* contain so much hydrocyanic (prussic) acid as to prove poisonous to cattle that feed upon them. Most parts of the species *C. lauro-cerasus*, the Cherry-laurel, but especially the leaves and seeds, are poisonous. The poisonous effects are supposed to be owing to a volatile oil containing hydrocyanic acid. Even when bruised, the leaves evolve a vapor which is destructive to insect life: hence some gardeners make use of these leaves for killing blight. Cherry-laurel water, obtained by distilling the leaves with water, is used medicinally for similar purposes as hydrocyanic acid. The plant is common in gardens, and is popularly known as the "laurel," though it is not a member of the true laurel family. The kernels of the species *C. occidentalis*, a native of the West Indies, and others, are used for the purpose of flavoring liqueurs, such as Cherry-brandy, Kirschenwasser, Maraschino, and Noyau. The species *C. padus*, or Bird-cherry, has similar properties, though less powerful, to those of the cherry-laurel. *C. Virginiana*, the Choke-cherry, has astringent and febrifugal properties. *C. serotina*, the Wild or black cherry of our W. States, is a beautiful and useful tree. The cherries are sometimes eaten, but are not very palatable. The wood is esteemed by cabinet-makers, having a close grain, and taking a very high polish. The inner bark forms a tonic and sedative drug which has been extensively prescribed in the U. States, and begins to receive the attention of European practitioners. It is used as a tonic instead of cinchona, and as a sedative for the alleviation of general and local irritation. It is taken from any part of the tree, but preferably from the root. It has a lively cinnamon-color, and, when fresh, a characteristic odor, like that of bitter almonds. *C. Pennsylvanica* is very common in woods from Canada to Virginia. It has a red, very acid fruit, is of rapid growth, and quickly succeeds a forest-clearing if neglected.

Fig. 556. —AMERICAN BLACK-CHERRY, (*Cerasus serotina*.)

and is popularly known as the "laurel," though it is not a member of the true laurel family. The kernels of the species *C. occidentalis*, a native of the West Indies, and others, are used for the purpose of flavoring liqueurs, such as Cherry-brandy, Kirschenwasser, Maraschino, and Noyau. The species *C. padus*, or Bird-cherry, has similar properties, though less powerful, to those of the cherry-laurel. *C. Virginiana*, the Choke-cherry, has astringent and febrifugal properties. *C. serotina*, the Wild or black cherry of our W. States, is a beautiful and useful tree. The cherries are sometimes eaten, but are not very palatable. The wood is esteemed by cabinet-makers, having a close grain, and taking a very high polish. The inner bark forms a tonic and sedative drug which has been extensively prescribed in the U. States, and begins to receive the attention of European practitioners. It has a lively cinnamon-color, and, when fresh, a characteristic odor, like that of bitter almonds. *C. Pennsylvanica* is very common in woods from Canada to Virginia. It has a red, very acid fruit, is of rapid growth, and quickly succeeds a forest-clearing if neglected.

Ce'rate, *n.* [Lat. *ceratum*, wax.] (*Med.*) An ointment generally compounded of wax, and oil or spermaceti.

Ce'rated, *a.* Waxed; covered with wax.

Cerato'nia, *n.* (*Bot.*) A gen. of plants, ord. *Fabiacea*. The most important species is *C. ciliquia*, the ALGAROA BEAN, *q. v.*

Ceratophylla'cere, *n. pl.* (*Bot.*) An order of plants, alliance *Urticales*. DIAG. Solitary, suspended ovule, and horned exalbuminous embryo with a superior radicle. There is but one gen., *Ceratophyllum*, the Horn-wort, the species of which are aquatic herbs, with verticillate leaves and minute monocious flowers, natives of the northern hemisphere. Their properties and uses are unknown.

Cer'cis, *n. pl.* [Gr. *kerainós*, thunder and lightning.] That branch of physics which treats of heat and electricity.

Cer'eb'ean, *a.* Pertaining, or relating, to Cerberus.

Cer'berus, *n.* [Gr. *Kerberos*.] (*Myth.*) The three-headed dog which guards the entrance of the kingdom of Hades and Persephonê. Orpheus, when he descended into the infernal regions in search of Eurydice, lulled him to sleep with his lyre; and Hercules dragged him from the gate of Hades, when he went to redeem Alceste. The fellow-monster of *C.* was *Orthros*. The names of these dogs appear in the Vedic poems under the forms of *Sarara* and *Vitra*, the two dogs of Yama.

Cer'cis, *n.* (*Bot.*) A genus of trees, order *Fabacea*. The Judas-tree or Red-bud, *C. Canadensis*, is a handsome tree, 20-30 ft. high, chiefly found in the Western States. The flowers appear before the leaves, in small, lateral clusters. Leaves broadly ovate-ovate, acuminate, villous on the veins beneath; corolla bright purple. The wood is finely veined with black and green, and receives a fine polish. The young twigs will dye wool of a nankeen color.

Cercop'idæ, *n. pl.* (*Zoöl.*) An extensive family of Hemipterous insects. One of the best known species is the Frog-hopper, or Cuckoo-spit, *A. spumaria*, a small but singular animal. They pass all their lives on plants, on the stems of which their eggs are laid in the autumn. The following summer they are hatched, and the young immediately perforate the bark with their beaks, and begin to imbibe their sap. Of this they take such quantities, that it oozes out of their bodies continually, in the form of little bubbles, which soon completely envelop the insects. They thus remain entirely buried and concealed in large masses of foam, until they have completed their final transformation. When the pupa, which is of a beautiful green color, is about to undergo its change into the complete insect, it ceases to absorb any longer the juices of the plant, and to discharge the projecting froth. It then emerges from its concealment. The winged insect is scarcely larger than the larva; but its color is brown, with a pair of broad, irregular, pale bands across the upper wings.

Cer'dic, a Saxon chief, who, in the first year of the 6th century, invaded England, and, after an obstinate resistance from the Britons, sustaining many defeats, yet winning more victories, established, about 516, the kingdom of Wessex.

Cere, (*sér*), *n.* [Lat. *cera*, wax.] (*Zoöl.*) The naked wax-like skin that covers the base of the bill in some birds, as in those of the hawk tribe.

—*v. a.* To wax, or cover with wax.

Cere, (*St.*) (*sér*), a town of France, dep. Lot, 35 m. N. E. of Cahors; pop. 5,082.

Ce'real, *a.* [Lat. *cerealis*, from *Ceres*.] Relating to Ceres, the fabled goddess of corn; hence, pertaining to edible grain, as wheat, rye, barley, &c.

Ce'real, *n.* (*Agric.*) Any edible grain, so called from *CERES*, *q. v.*

Cereal Grasses, (*Agric.*) Grasses which produce the bread corns, such as wheat, rye, oats, barley, maize, rice, and millet. They are also called *Corn-plants*, or *Bread-plants*.

Cerea'tia, *n. pl.* The cereals, or edible grains.

—*n. sing.* (*Rom. Antiq.*) A festival celebrated at Rome in honor of Ceres, whose wanderings in search of her lost daughter Proserpine were represented by women, clothed in white, running about with lighted torches. During its continuance, games were celebrated in the Circus Maximus, the spectators of which appeared in white; but on any occasion of public mourning the games and festivals were not celebrated at all, as the matrons could not appear at them except in white. The day of the *C.* is doubtful; some think it was the ides of 13th April, others the 7th of the same month.

Cerebel'lar, **Cerebel'lous**, *a.* Pertaining to the cerebellum, or its parts.

Cerebel'lum, *n.*; *pl.* CEREBELLA. [Lat., dim. of *cerebrum*, the brain.] (*Anat.*) See BRAIN.

Cer'ebral, *a.* [From Lat. *cerebrum*.] Pertaining to the brain.

Cerebra'tion, *n.* The action or exercise of the brain.

Cere'bric, *a.* (*Chem.*) Relating to cerebrie acid.

Cerebrie Acid, *n.* (*Chem.*) A fatty acid, containing nitrogen and phosphorus, forming one of the components of brain, and formerly called Cerebrin. Its composition has not yet been thoroughly investigated.

Cerebrop'athy, *n.* [Lat. *cerebrum*, and Gr. *pathos*, suffering.] (*Med.*) An hypochondriacal condition verging upon insanity, occasionally occurring to those in whom the brain has been unduly tasked.

Cer'ebro-spi'nal, *a.* [Lat. *cerebrum*, and Eng. *spinal*.] (*Anat.*) Pertaining to the brain and spinal cord.

Cer'ebrum, *n.* [Lat.] (*Anat.*) See BRAIN.

Cere'cloth, *n.* [Lat. *cera*, wax, and *cloth*.] A cloth smeared with melted wax, or with some glutinous matter.

Cere'do, in West Virginia, a township of Wayne co., on the Ohio River, 12 miles South South East of Iron-ton, Ohio.

Cerement, (*sér'ment*), *n.* [From Lat. *cera*.] Cloths dipped in melted wax, with which dead bodies were enfolded when embalmed.

Ceremo'nial, *a.* [See CEREMONY.] Relating to ceremony, or to religious rites and observances; ritual.

"To speak the ceremonial rites of marriage." — *Shaks.*

—Formal; precise; observant of etiquette; ceremonious.

"He moves in the dull ceremonial track." — *Dryden.*

—*n.* Sacred rite or observance; outward form; a system of established rules or ceremonies, whether in religious worship, in social intercourse, or in the courts of princes.

"The gorgeous ceremonial of the Burgundian Church." — *Prescott.*

—The order for rites and forms in the Roman Catholic Church.

Ceremo'nialism, *n.* Adherence to formal observances; addictiveness to ceremony.

Ceremo'nially, *adv.* In a ceremonial or formal manner.

Ceremo'nialness, *n.* The quality of being ceremonial.

Ceremo'nious, *a.* [Fr. *cérémonieux*.] Ceremonial; consisting of outward forms, rites, or observances; as, "the ceremonious part of his worship." — *South.*

—Formally civil; full of ceremony; outwardly respectful; as, "a ceremonious manner, or phrase." — Too observant of forms; exact; precise; formal.

Ceremo'niously, *adv.* In a ceremonious manner; with due form and observance.

Ceremo'niousness, *n.* Quality of being ceremonious; great formality in manners.

Cer'emony, *n.* [Lat. *cæmonia*; probably for *curmonia*, since *cærare* was an old form of *curare*, to attend

to.] Sacred rite or observance; outward rite; settled external form in religion; as, the marriage ceremony.

—Established forms or rules for regulating social or civil intercourse; forms of propriety or civility; as, to be received with ceremony.

"The sauce to meat is ceremony." — *Shaks.*

Master of the Ceremonies, a person appointed to superintend the form of etiquette, or social rules to be observed at a public ceremony, assembly, &c.

—An officer of state attached to the household of almost all European sovereigns, to assist at the reception of ambassadors and strangers of rank. It is also his duty to attend and regulate all matters of etiquette at the drawing-room and the levée, and on all state occasions.

Cereop'sis, *n.* (*Zoöl.*) The generic name of an Australian goose, characterized by a green cere-like membrane covering the upper part of the base of the bill.

Ce'eres, *n.* [Lat.] (*Myth.*) The daughter of Saturn and Vesta, and goddess of corn, harvests, and tillage. To Jupiter she bore a daughter, Proserpine, (*q. v.*) *C.* corresponds with the *Isis* of the Egyptians, and the *Demeter* of the Greeks. She is represented with a garland of ears of corn on her head, holding in one hand a lighted torch, and in the other a poppy, which was sacred to her. The Romans instituted in her honor the festivals called *Cerealia*, (*q. v.*)

(*Astron.*) One of the 4 new or telescopic planets which revolve between the orbits of Mars and Jupiter. It was discovered by Piazzi, Jan. 1, 1801. *C.* is a very small planet, its apparent diameter, according to Schröeter, being only 3.48", which at its mean distance corresponds to about 1,600 miles; but according to Sir W. Herschel, its apparent diameter is only 0.35", or 160 m. The difficulty of distinguishing its real disc, on account of the nebulosity by which it is surrounded, accounts for the discrepancy. Its mean distance from the sun is about two and three-fourths time the distance of the sun from the earth.

Ce'eres, in New York, a p. vil. of Alleghany co., 225 m. W. S.W. of Albany. Partly transferred to Penna. in 1878, under the commission to revise the boundary between the states of Penna. and N. Y.—In Penna., a township of McKean co.—In Wis., a village of Washington co., 37 m. N.N.W. of Milwaukee.

Ceres'co, in Michigan, a post-village of Calhoun co., 112 m. W. of Detroit.

Ce'restown, in Pennsylvania, a village of McKean co., on Oswego Creek, about 200 m. N.W. of Harrisburg.

Ceret, (*sér-ai*), a town of France, dep. Pyrenees-Orientales, 16 m. S.W. of Perpignan. Pop. 4,255.

Cere'us, *n.* (*Bot.*) A genus of plants. See SECTION II.

Cerignola, (*chér-in-yò'là*), a town of S. Italy, prov. Foggia, 23 m. S.E. of that city. Near this town, in 1503, Gonsalvo de Cordova gained a decisive victory over the French commanded by the Duke de Nemours, who was killed in the action. Pop. 20,368.

Cerigo, (*chér'e-go*), (anc. *Cythera*.) The most S. of the principal Ionian Islands, now an eparchy of the kingdom of Greece, situated at the E. entrance of the Laconian gulf. Length N. to S. 20 miles; greatest breadth, 12. Area, 116 sq. m. Surface, mountainous, rocky, and mostly uncultivated. Prod. Cereals, cotton, flax, wine, and excellent olive oil, and honey. The coasts are dangerous to mariners, and the best anchorage is at St. Nicolo on the E. coast. Cap. Kapsali. *C.* was the birthplace of Helen, and sacred to Venus, who had a temple erected to her honor. It was long a naval station of the Lacedæmonians, and belonged successively to Macedon, Egypt, Rome, and Venice. Pop. abt. 15,000.

Cerigotto, (*chér'e-got-to*), the most S. of the Ionian Islands, 18 m. from Cerigo. It is 6 m. long by 1-2 broad, and was long a favorite resort of Greek pirates. Pop. 300.

Cer'ine, *n.* [From Lat. *cera*, wax.] (*Chem.*) A substance which forms 70 to 80 per cent. of bees-wax. It is soluble in boiling alcohol.

Cerinth'ians, *n. pl.* (*Ecl. Hist.*) The followers of Cerinthus, a heretic of the 1st or 2d cent., who embraced certain Gnostic views respecting the natures and relations of God the Father and Son. He conceived the supreme God to be the father or originator both of the Deity from whom proceeded the Old Testament, and of Christ; that the God of the Jews was also the creator of this world; and that his dominion over it was superseded by the mission of Christ, who was a son of the supreme Deity residing in a human body. — See GNOSTICS.

Cer'iph, *n.* (*Type-founding*.) One of the fine lines of a letter, especially of one of the fine cross-strokes at the top and bottom of letters.

Ce'rite, *n.* (*Min.*) The silicate of cerium, found as a mineral in gneiss in the copper-mine of Bastuas in Sweden.

Ce'rium, *n.* (*Chem.*) A very rare metal, existing in *allanite*, *cerite*, and *cerine*. It is only known as a gray powder, which becomes lustrous on being burnished. It forms two oxides — the *protoxide* and *peroxide*, which form a few salts of no importance or interest. They are said by Rummelsberg to be isomorphous with those of cadmium. Equivalent, 47: Sp. grav. 5.5 (?) Symbol, *Ce*.

Cer'uous, **Cer'muous**, *a.* [Lat. *cernuus*.] (*Bot.*) Pendulous; having the head bending downward.

Cerograph'ic, **Cerograph'ical**, *a.* Relating to cerography.

Cerog'raphy, *n.* [From Gr. *keras*, wax, and *graphein*, to write.] A writing or inscription on wax. — The art of engraving on wax.

Cer'olein, *n.* (*Chem.*) A grassy body found in bees-wax, to which its color, odor, and tenacity are due. It has an acid reaction, and fuses at 83°. It is soluble in ether, and is but imperfectly known. It is obtained by macerating the wax in cold alcohol, which retains it in solution.

Cero'ma, *n.* (*Anc. Arch.*) That part of the gymnasium where wrestlers were anointed with a mixture of oil and wax.

Cer'omaney, *n.* [*Gr. keros*, and *manteia*, prophesying.] The practice of divination by dropping melted wax in water.

Ceroon', *n.* (*Com.*) See **SERON**.

Ceroplast'ic, *a.* Modelled or designed in wax.

Ceroplast'ie, *n.* [*Fr. ceroplastique*; *Gr. keroplastikos*, relating to wax-modelling.] The art of modelling in wax;—one of very high antiquity. From the testimony of Pliny we learn that Lysistratus, the brother of Lysippus, was the first who used wax for modelling the human figure. He lived in the time of Alexander the Great, and was a native of Sicyon.

Cer'osine, *n.* (*Chem.*) A waxy substance which exudes from the sugar-cane.

Cer'otene, *n.* (*Chem.*) A white paraffin-like substance occurring in the distillate of Chinese wax.

Cerotic Acid, *n.* (*Chem.*) An acid contained in varying quantities in bees-wax. It is obtained by dissolving the wax in hot alcohol, and crystallizing. Genuine bees-wax contains about 22 per cent. of cerotic acid. Heated with potash, it produces cerotate of potash and ceric alcohol.

Ceroxylon, *n.* (*Bot.*) A gen. of plants, ord. *Palma-cee*. The species *C. anticola* yields wax, which is applied to many useful purposes. It is a native of South America.

Cerreto, (*cher-ra'to*), a fine town of S. Italy, prov. Benevento, on the declivity of Monte Matera, near the Cusano, 10 m. E.S.E. of Piedimonte. *Pop.* 7,674.

Cerro de Pas'co, a city of Peru, cap. of prov. Pasco, dep. Junin, 140 m. N.E. of Lima. It is situated at an elevation of 14,100 feet, near the richest silver mines in the republic. *Pop.* estimated at 8,000.

Cerro Gor'do, a mountain pass in Mexico, on the route from Vera Cruz to the capital, rendered famous by the decisive victory gained by the American forces under Gen. Scott, over the Mexicans under Santa Anna, April 18, 1847. The enemy's loss was about 1,200; and that of the Americans, 431, of whom 63 were killed.

Cerro Gordo, in *Florida*, a twp. and village, cap. of Holmes co., abt. 105 m. W.N.W. of Tallahassee.

Cerro Gordo, in *Georgia*, a post-office of Gilmer co.

Cerro Gordo, in *Illinois*, a post-village of Piatt co., 50 m. E.N.E. of Springfield.

Cerro Gordo, in *Indiana*, a P. O. of Randolph co.

Cerro Gordo, in *Iowa*, a N. county, named after the above battle in Mexico; area, 625 sq. m. It is drained by Lime Creek and its tributaries. *Cap.* Mason City. *Pop.* in 1890, 14,870.

—A post-office of Mills co.

Cerro Gordo, (formerly **WHITE'S LANDING**), in *Tennessee*, a village of Hardin co., on the Tennessee River, 120 m. S.W. of Nashville.

Certain, *a.* [*Fr. certain*, from *Lat. certus*—*cerno*, to separate, to distinguish, to determine.] Sure; undeniable; unquestionable; indubitable; existing in fact and truth; that which cannot be questioned or denied; as, a *certain* event.

"Those things are *certain* amongst men, which cannot be denied without obstinacy or folly."—*Tillotson*.

—Assured in mind; having no doubts; followed by *of* before a noun.

"To make *ber certain* of the sad event."—*Dryden*.

—Unfailing; always producing the intended effect; as, "a *certain* remedy." *Mead.*—Regular; stated; fixed; determinate; settled.

"Who calls the council, states a *certain* day."—*Pope*.

—Particular; as, a *certain* person. In the plural number, a particular part or number; some; an indefinite part, number, or quantity.

"I mourned *certain* days."—*Nehem.* i. 2, 6.

Certainly, *adv.* Without doubt or question; in truth and fact; without failure.

Certainness, *n.* Certainty.

Certainty, *n.* Quality of being certain; a fixed or real state; truth; fact; exemption from doubt or from failure; regularity; settled state.

(*Phil.*) *C.* is applied primarily to the state of a person's mind when he feels sure or convinced of anything; but it is also applied to the truths or events respecting which this conviction may be entertained. *C.* is *physical* when it is according to the laws of nature; *moral* when in accordance with the common order of things and the received opinions of mankind; and *metaphysical*, when springing from intuitive beliefs, as the first principles of natural law. According to the mode in which it is attained, *C.* is *immediate* when by sense or intuition, or *mediate* when by reason and demonstration. Some philosophers have made sense the measure and ground of certainty; others, reason; and others, as Descartes, self-consciousness.

Cer'tes, *adv.* [*Fr.*, from *Lat. certus*.] Certainly; in truth; in sooth; verily. (*o.*)

"*Certes*, our authors are to blame."—*Hudibras*.

Certhi'ade, *n. pl.* (*Zoöl.*) The Creepers, a family of birds, order *Insectores*. They mostly live on the trunks and branches of trees, feeding on insects which they find in the crevices of the bark; and many of them aid themselves by their stiff tail-feathers in retaining their position as they search for their food on the perpendicular stem. Their claws are long and sharp; the bill of many is slender and curved; others, however, have a comparatively short and straight bill. The tongue is cartilaginous at the extremity, and so fitted to aid in seizing insect prey. The plumage is usually dull and uniform; but the birds are lively and active in their

habits. The species are numerous and widely diffused; they are divided into a number of genera. All of them are small birds. The true Creepers, forming the genus *Certhia*, exhibits the type of the family. The American Creeper of North America, *Certhia Americana*, is five and a half inches long; its color above is dark-brown, each feather streaked centrally with whitish limbs, and the rump rusty; under parts, and a streak over the eye, white.

Certificate, (*ser-tif'i-cāt*), *n.* [*Fr. certificat*; *Lat. certus*, certain, and *facio*, to make.] That which makes certain, or sure; a credential or testimony to the legitimacy or truth of anything; as, a *certificate* of good conduct.

"I can bring *certificates* that I have myself soberly before company."

Addison.

—A written testimony properly authenticated; a legal voucher; as, a ship-master's *certificate*.

C. of registry. A certificate that a ship has been registered as the law requires. Under the U. States statutes, "every alteration in the property of a ship must be indorsed on the *C. of registry*, and must itself be registered." Unless this is done, the ship or vessel loses its national privileges as an American vessel.

—*v. a.* To verify by a certificate.—To furnish with a certificate.

Certification, *n.* The act of certifying.

Certifier, *n.* One who certifies or assures.

Certiorari, (*ser-she-o-rā're*), *n.* (*Law.*) A writ issued by a superior to an inferior court of record, requiring the latter to send in to the former some proceeding therein pending, or the records and proceedings in some cause already terminated in some cases where the procedure is not according to the course of the common law.

Certitude, *n.* [*L. Lat. certitudo*, from *certus*.] Certainty; freedom from doubt.

Cerulean, *Ceruleans*, *a.* [*Lat. ceruleus*, from *cæsus*, bluish-gray.] Dark blue; azure; sky-colored.

"From thee the sapphire takes . . . its hue *cerulean*."—*Thomson*.

Cerulean Springs, in *Kentucky*, a village of Trigg co., 223 m. S.W. of Frankfort.

Cerulif'ic, *a.* Having the power to produce a blue color.

"The several species of rays, as the rubif'ic, *cerulif'ic*, and others."—*Grew*.

Cerul'in, *n.* (*Chem.*) A term for indigo which has been dissolved in sulphuric acid.

Cerumen, *n.* [*L. Lat.*, from *sera*, wax.] (*Physiol.*) Same as **CERAMEN**, *q. v.*

Cer'us, **Cer'usite**, **Cerus'site**, *n.* (*Chem.*) See **LEAD**, (**CARBONATE OF**).

Cervantes-Saavedra, MIGUEL DE, the most illustrious of Spanish writers, was born in 1547, at Alcalá, in New Castile, of an ancient but poor family. His taste for literature seems to have been early developed, and to have been chiefly directed towards poetry. In his 22d year he quitted Spain for Italy, and, volunteering in the papal army, he fought bravely in 1571 against the Turks in the battle of Lepanto, receiving there a wound which lamed his left hand for life. He continued serving under several leaders, till, in 1575, sailing for the Low Countries, he was taken prisoner by an Algerine corsair. His sufferings and adventures during his three years of slavery in Algiers are said to be described in his tale, *The Captive*, inserted as an episode in *Don Quixote*. On being ransomed in 1580, he resumed military service. In 1584 appeared his first printed work, *Galatea*, a pastoral romance of mixed prose and verse. In it he represented under feigned names, himself and a lady whom he immediately afterwards married. He subsequently wrote a considerable number of plays, which have never become famous. About this time of his life his history becomes particularly obscure. He was for some time, at Seville, a purveyor of stores for the Indian fleet; and he is traditionally asserted to have collected titles in La Mancha. In 1605 he published the first part of *Don Quixote*. The appearance of this celebrated work of genius speedily made him famous, without, however, rescuing him from poverty, although it brought him some patronage from the court, which drew him to Madrid for the rest of his life. In 1613 he published the *Exemplary Novels*, a collection of twelve stories unworthy of the author of *Don Quixote*. Next year there was printed his *Journey to Parnassus*, a critical and satirical essay in verse. This piece, and the celebrity of his great romance, provoked attacks on him, of which the most bitter were introduced into a spurious continuation of *Don Quixote*. This work was at length completed by the appearance of the second part in 1615. *C.* died on the 23d of April, 1616; Shakespeare dying on the very same day, in England. The editions that have been published of that immortal book *Don Quixote* are innumerable. It has been translated into all languages, and is one of those works "that the world will not willingly let die." We may mention, in this place, the magnificent edition published by Cassell, Petter, and Galpin. (London and New York, 1868-9.) embellished with designs by the great French artist, Gustave Doré.

Cer'velas, *n.* A kind of French sausage resembling the English *saveloy*.

Cer'velat, *n.* (*Mus.*) A short wind-instrument somewhat resembling a bassoon.

Fig. 557.

AMERICAN CREEPER,
(*Certhia Americana*.)

Cerve'ra, a walled city of Spain, prov. Catalonia, 67 m. N.W. of Barcelona, and 102 E. of Saragossa. Wine, oil, fruits, grain, and cattle are produced in the neighborhood. *Pop.* 4,948.

Cervia, (*cher've-ā*), a town of central Italy, prov. Ravenna, near the Adriatic, 11½ m. S.E. of Ravenna; *pop.* 6,308.

Cerv'ieal, *a.* [*Fr.*, from *Lat. cervix*, the neck.] Belonging to the neck.

Cervicide, *n.* [*Lat. cervus*, deer, and *cedere*, to slay.] The act of deer-slaughter.

Cerv'idæ, *n. pl.* [*Lat. cervus*, a deer.] (*Zoöl.*) The Deer family, a group of Ruminantia, distinguished by the possession of bony deciduous horns, covered with soft skin, instead of with horny matter, and termed *antlers*. They are spread very extensively over the globe, each quarter having its own peculiar species, celebrated either for vigor, beauty, or speed, or for all these qualities combined. *Cervus*, the deer, is the typical genus.—See **DEER**.

Cervin, (*saïr'vā*), a mountain of the Pennine Alps, 40 m. E.N.E. of Mont Blanc. Height, 14,834 ft. The pass is at an elevation of 11,000 ft. See **MATTERHORN**.

Cerv'ine, *a.* [*Lat. cervinus*.] Pertaining to deer.

Cerv'inus, *a.* (*Bot.*) Fawn-colored.

Cerv'us, *n.* [*Lat.*] (*Zoöl.*) See **DEER**.

Ceryle, *n.* (*Zoöl.*) See **ALCEDO**.

Cesarian, *a.* Same as **CESAREAN**, *q. v.*

Cesarian Operation, *n.* (*Surg.*) See **CESAREAN OPERATION**.

Cesarot'ti, MELCHIORRE, an Italian poet, b. 1730. His free translation of *Ossian* gained him a reputation that a translation of the *Iliad* under the name of *La Morte di Ettore* did not sustain. D. 1808.

Cesena, (*che-se'na*), a town of central Italy, prov. Ferrara, on the Sario, 10 m. S.E. of Fo. li. Two Popes—Pius VI and VII—were born here. *Pop.* 35,870.

Cespe'des, PABLO DE, a Spanish artist, a successful imitator of Correggio, and one of the best colorists in Spain. B. in Cordova, 1538; d. 1608.

Cespititious, (*sēs-pe-tish'us*), *a.* [*Lat. cespiticius*.] Turfy; pertaining to turf.

Ces'pitose, *a.* [*From Lat. cæspes*, turf.] (*Bot.*) Growing in tufts, as turf; turfy; cespituous.

Ces'pitous, *a.* Pertaining to turf; consisting of turf.

Cess, *n.* [*From Eng. assess*.] A rate or tax. In Scotland, the land-tax.

—*v. a.* To rate or impose a tax. In Scotland, to fix the amount of the land-tax.

Cess'ant, *a.* Ceasing; intermittent action; as, a *cessant* state.

Cessat'ion, *n.* [*Lat. cessatio*, from *cesso*—*cedo*, *cessus*. See **CEASE**.] A discontinuing; a ceasing or desisting from; intermission; stop; rest; vacation; as, *cessation* of labor.

Cessation of arms, or hostilities. (*Mil.*) An armistice; a truce.

Cess'ford, in *Iowa*, a post-office of Cedar co.

Cessibility, *n.* Quality or practice of giving way or receding. (*R.*)

Ces'sible, *a.* Yielding; receding. (*R.*)

Ces'sio Bono'rum, *n.* [*Lat.*] (*Law.*) A yielding on the part of an insolvent of his estate and effects to creditors, under the authority of the competent court. Such an assignment discharged the debtor to the extent of the property ceded only, but exempted him from imprisonment.

Cession, (*ses'shun*), *n.* [*Lat. cessio*—*cedo*, *cessus*, to withdraw.] Act of ceding, yielding, or giving; surrender; resignation, as of rights, interests, property, &c., to another.

"Secure the best peace they can with France, by a *cession* of Flanders to that crown."—*Temple*.

(*Ecc. Law.*) A surrender, as of a benefice.

(*Civil Law.*) An assignment; the act by which one party transfers property to another, as of a debtor to his creditor.

Ces'sionary, *a.* [*Fr. cessionnaire*; *L. Lat. cessionarius*.] Giving up; yielding; surrendering up all effects; as, a *cessionary* bankrupt.

Cess'ment, *n.* An assessment; a tax. (*o.*)

Cess'na, in *Ohio*, a township of Hardin co.

Cess'pool, *n.* [*From Lat. sedeo*—*cessum*, to sit, to settle.] A cavity, or receptacle sunk in the earth, where the sediment of water conveyed in drains may settle, and be retained.

Cest, *n.* Same as **CESTUS**, *q. v.*

Cesto'idæ, **Cest'roids**, *n. pl.* (*Zoöl.*) The Tape-worm family, embracing tape-like worms, narrow towards the head and widening behind, which in their mature state live only in the intestines of vertebrate animals. 200 species of cestoids have already been described, quite a number of which inhabit man.

Cestra'eion, *n.* [*Gr. kestrakios*.] (*Zoöl.*) A genus of the *Squalida*, or Shark family. See **SQUALIDÆ**.

Cestro'trum, *n.* See **CEROSTROTUM**.

Ces'trum, *n.* [*Gr. kestron*.] (*Archæol.*) An instrument, also called *graphis* by the Greeks, used by the ancient painters of Greece and Rome, in drawing and painting; it was pointed at one end and flat at the other, and was therefore applicable to both drawing and spreading the color; it was generally made of metal. There were three kinds of painting in use among the Greeks and Romans; in two ways with the *C.*, and in a third way with the pencil. This last was used chiefly as decorative work; the color mixed with wax being burnt into the wood by applying a cauterium to the surface; most surface work was probably executed in this way. The ivory painting with the *C.* (*in eboze cestro*) was more drawing than painting, and seems to have been executed with a hot point; and though not wax painting, was

Cervantes-Saavedra

1547-1616

nevertheless encaustic. The second method with the *C.* (*cera castro*), which was that of Pausias and others, was with the wax colors, which were afterwards burnt in. The colors of the ancient painters were commonly called *cera*, as being originally, if not always, mixed with wax.

Cestus, *Cest.*, *n.* [Lat. from Gr. *kestos*, stitched, embroidered, from *kento*, to prick.] (*Antiq.*) A fine embroidered girdle worn by the Greek and Roman women close under the breasts. It was distinct from the zone, which was worn around the loins. Homer ascribes the power of attracting and conciliating love to the cestus of Venus, which was covered with alluring representations. When Juno wished to gain the love of Jupiter, she borrowed this girdle from Venus.

—A gauntlet worn by the Roman pugilists. See **CESTUS**.
Cestui que trust, *n.* [O. Fr.] (*Law.*) He for whose benefit another person is seized of lands or tenements, or is possessed of personal property. — **CESTUI QUE USE**. He for whose benefit land is held by another person. — **CESTUI QUE VIE**. He whose life is the duration of an estate.

Cetacea, *CETACEANS*, *n. pl.* [Gr. *ketos*; Lat. *ceto*, cetus, a large sea-animal.] (*Zool.*) An order of mammiferous animals, surpassing in size all others in existence, and inhabiting the sea. (See Fig. 462.) Like terrestrial quadrupeds, they are viviparous, suckle their young, have warm blood, and respire through lungs; for which purpose they must frequently come to the surface, to take in fresh supplies of air. But though in their anatomical details they are sufficiently distinguished from fishes, it will be seen that these animals have no hind limbs, that the first bones of their anterior extremities are shortened, and the succeeding ones flattened and enveloped in a tendinous membrane, which reduces them to the condition of true fins. The Cetacea are all carnivorous; but the largest species are supported chiefly by minute Mollusca and Medusæ.

Cetaceous, (*se-ti'shus*), *a.* [From Lat. *ceto*, a whale; Gr. *ketos*; root *chainō*, to gape.] Pertaining to the Cetacea, or fishes of the whale kind.

Cétic Acid, *n.* (*Chem.*) The result of the action of alkalis upon cetine.

Cetine, *n.* Spermaceti in a pure state.

Cetological, *a.* Relating, or pertaining, to cetology.

Cetologist, *n.* One skilled in cetology.

Cetology, *n.* [From Gr. *ketos*, and *logos*, discourse.] The doctrine or study of cetaceous animals.

Cetra'ria, *n.* (*Bot.*) A genus of lichens, which includes the well-known Iceland moss. This lichen, which has been named *C. Islandica*, is officinal, and is employed both as a nutritious food, and as a mild mucilaginous tonic in catarrh and consumption. Combined with cocoa, it forms the article known as *Iceland-moss cocoa*. Two kinds of starch are found in this lichen, — one called *lichen starch*, and the other *inulin*; also a peculiar bitter principle, which has been named *ctetrarin*. When used for food only, the plant should be deprived of its bitterness, either by heating it twice in water to near the boiling-point, or by digesting it in a weak alkaline solution, formed by adding half an ounce of carbonate of potash to about a gallon of cold water, and afterwards washing it with pure water. The species *C. nivalis* possesses somewhat similar properties.

Cetra'ric Acid, **Cetra'rine**, *n.* (*Chem.*) A white bitter acid contained in the lichen Iceland moss.

Cetra'ro, a town of S. Italy, prov. Cosenza, on the Mediterranean, 24 m. N.W. of Cosenza city: pop. 6,585.

Cette, (*sett*), *a.* fortified sea-port town of France, dep. Hérault, cap. cant., on a narrow neck of land advancing into the Mediterranean, 15 m. S.W. of Montpellier. The harbor is formed by two lateral moles, with a breakwater across the entrance: on the principal mole stands a light-house having a lantern 84 feet above sea-level. The harbor is a safe one, has from 16 to 19 ft. water, and can accommodate about 400 sail of ships of all sizes. *C.* is the centre of a large coasting trade, has regular steam communication with Algiers, and the chief ports on the E. coast of Spain, and exports annually about 36,000 tons of wine, and 4,000 of brandy. *Manf.* Glass, soap, salt, tobacco, liquors, and sardines. Ship-building, too, is extensively carried on. *C.* connects with the Canal du Midi on the one hand, and with the canals leading to the Rhone on the other.

Cetus, *n.* [Gr. *ketos*.] (*Astron.*) The *Whale*, the largest constellation in the heavens, occupying a space of 50° in length E. and W., with a mean breadth of 20° from N. to S. It is situated below Aries and the Triangles, with a mean declination of 12° S. It is represented as making its way to the E., with its body below, and its head elevated above the equinoctial, and is six weeks in passing the meridian. Its tail comes to the meridian on the 10th Nov., and its head leaves it on the 22d Dec. This constellation contains 97 stars: two of the 2d magnitude, ten of the 3d, and nine of the 4th.

Cetyl, *Cetyl*, *n.* (*Chem.*) A radical found in spermaceti, homologous with ethyl.

Ceuta, (*su'ta*), (*anc. Septim*, or *Sep'ta*), a fortified sea-port town of N. Africa, belonging to Spain, on the coast of Morocco, directly opposite Gibraltar, and at the S. extremity of the Straits, on a narrow peninsula, having on its S. side a capacious bay. The E. part of the peninsula is occupied by the mountain of Almina, on the highest point of which is the castle of *C.*, 14 m. S. by E. of Europa Point: Lat. 35° 54' 4" N., Lon. 5° 17' W. This mountain, which, towards the sea, is fenced round by inaccessible rocks, is the *Abyla*. Proper of the ancients, and is famous as one of the Pillars of Hercules; the rock of Gibraltar (*Mons Culpæ*) being the other. *C.* has many points of resemblance with Gibraltar, and, like it, if properly garrisoned, would be all but impregnable. *C.* was taken from the Moors by John, king of Portugal, in 1415. Since 1640 it has belonged to Spain. Pop. 8,200.

Ceva, (*che'va*), an inland town of N. Italy, prov. Cuneo, at the confluence of the Cevetta with the Tauaro, 10 m. E. by N. of Mondovì. *Manf.* Silk, iron, cheese. Pop. 4,972.

Cevadilla, *n.* (*Bot.*) See **SABADILLA**.

Cevennes, (*se'ven'*), a range of mountains in the S. of France, divided into N. and S. The district bearing this name in former times occupied a large tract of Languedoc. It was generally a wild, rugged country, and the abode of many Protestants, who here maintained themselves against the persecutions of their enemies. (See **CAVALIER**, **JEAN**.) Its highest points are Mazin, 5,794 feet, and Lozère, 4,884 feet above the level of the sea.

Ceylanite, *n.* (*Min.*) See **SPINEL**.

Ceylon, (*se-on'*) (*anc. Taprobana*), a large island, belonging to Great Britain, near the S. extremity of Hindostan, and bearing the like relation to the Indian that Sicily does to the Italian peninsula. It lies between latitude 5° 56' and 9° 50' N., and between longitude 79° 41' and 81° 54' E.; having N.W. the Gulf of Mannar, and Palk's Straits, which separate it from Hindostan; S. and S.W. the Indian Ocean, and E. the Bay of Bengal. It tapers to a point towards the N., and is shaped like the section of a pear cut lengthwise through the middle. Length, N. to S., 266 m.; greatest breadth, E. to W., 141 m.; area, 24,700 sq. m. *Desc.* The coasts of this island are on the N. and N.W. low and flat, on the S. and E. bold and rocky, and present some good harbors, the best of which are Trincomalee on the N.E., and Point de Galle on the S.; Colombo (the maritime cap.) has, since the completion of the Breakwater, at a cost of \$5,000,000, an excellent harbor. A ridge of dangerous sand-banks, called *Adam's Bridge*, crosses from *C.* to the island of Ramisseram on the main-land of Hindostan. This shoal has three channels, but is generally impracticable for navigation. An attempt is, however, in progress, to deepen the principal of these channels. The interior of *C.* consists of three distinct natural divisions — the low country, the hills, and the mountains. The centre of the island S. of Lat. 8° N. is occupied by an extensive table-land, 67 m. long by 50 wide, at an estimated elevation of from 2,000 to 3,000 ft. above sea-level. The interior of the N. and central divisions consists of ranges of mountains running mostly N.E. and S.W., and varying from 1,000 to 4,000 ft. above the sea, clothed to the summits with magnificent forests, and intersected by numerous ravines, cataracts and cascades. From these regions various conical-shaped hills rise up at intervals to an additional height of from 2,000 to 4,000 ft. The most conspicuous summit is that which is known by the name of Adam's Peak (the *Samenella* of the Cingalese, in Lat. 7° N., and Lon. 80° 49' E., 46 m. E.S.E. of Colombo, rising to an altitude of 7,352 feet. *Rivers*, &c. *C.* has numerous small rivers and perennial streams, but the only navigable one is the Mahavilly Gunga, which falls into the sea a little S. of Trincomalee after a course of about 200 m. There are no lakes of any consequence, but numerous lagoons connect with the ocean and are serviceable for traffic. *Min.* The rocks met with in this island are of primitive formation, with an upper soil generally sandy, and principally derived from this disintegration: the cinnamon soil, however, near Colombo, is perfectly white and consists of pure quartz. *C.* is rich in valuable minerals: its metallic products are, however, comparatively unknown; ores of lead, iron, tin, and manganese occur in the interior, but are made little use of; plumbago is the only article among these that has become of any commercial importance. Mines of quicksilver were formerly worked by the Dutch; gems abound, and common-salt beds are met with. *Clim.* For a tropical country, *C.* has a comparatively salubrious climate, but the low lands of the sea-board are in parts unhealthy. This island is liable to periodical and violent rain-falls, more especially those which accompany the S. W. monsoon. Along the coast, the mean annual temp. is about 80° Fahr., while in the interior it ranges from 75° to 86°. *Veget.* *C.* is rich in vegetable productions. The most important are tea, coffee, rice, cinchona bark, cinnamon (called by the natives *corundoo*), which here arrives at its greatest perfection, and has always been a chief article of export. It delights in a poor sandy soil with a moist atmosphere, and is almost exclusively confined to the S.E. part of the island. The cocoa-nut tree flourishes here in perfection, and is of prime importance to the natives, almost every part of the tree being converted into articles of food or domestic use. The Palmyra and talipot palms, and the bread-fruit, are also found in their most luxuriant growth. Cotton is cultivated, but it is not equal to that of India. Indigo, betel, tobacco, gum-lac, gamboge, and cardamoms, all of excellent quality, are produced; while the *flora* is beautiful and various. *Zool.* *C.* is particularly celebrated for its breed of elephants, which are of superior strength and docility. Bears, leopards, cheetahs, hyænas, baboons, a large variety of the monkey-tribe, armadillos, &c., are met with; all kinds of feathered game are plentiful; and serpents, alligators, and reptiles of all sorts, are found in too great abundance. The pearl-oyster fishery is an important branch of industry. *Inhab.* The population of *C.* (exclusive of colonists) may be divided into 4 classes: — 1st, the native Cingalese (Ceylonese); 2d, the Moors; 3d, the Veddahs, a race supposed to be the true aborigines, and who inhabit the mountain fastnesses in a state of utter barbarism; and 4th, the Madabars and other Hindoo tribes, who are chiefly confined to the N. and E. coasts. The Cingalese type and character are nearly allied to those of the Bengalese; and in language, religion, and traditions, they generally approach closely to the Indo-Chinese nations, and especially the Burmese. *Com.* The exportation of coffee fell from 70,000,000 lbs. in 1878 to about 7,000,000

in 1897, while that of tea increased from 3,575 lbs. in 1878 to over 100,000,000 lbs. in 1897. The cultivation of cinchona bark has also largely developed. The other principal exports are cardamoms, cinnamon, cocoanut oil, coconuts, copra and plumbago. The *Exp.* are chiefly to Gr. Britain. *Man.* *C.* is almost wholly dependent upon Europe for her supplies of manufactured goods, and from the most recent information, it appears that active agriculture is diminishing, and that the country for the most part is overrun with jungles. *C.* is famous for precious stones, especially cat's eyes and rubies, for gold, silver, and ivory. Shell-work and wood-carving are among the industries. *Relig.* The religion of the Cingalese is Buddhism, but the upper classes profess Christianity, and many have been converted to Islamism. There are numerous Buddhist temples in the island, in one of which the so-called sacred

Fig. 558.

ENTRANCE OF THE BUDDHIST TEMPLE OF DAMBOOL.
(The most celebrated in Ceylon.)

tooth of Buddha is preserved. (See **CANDY**.) *Gort.*, &c. The administration consists of a governor appointed by the British crown; an executive council of 5 members; and a legislative one of 15. *Chief towns*, Colombo (the cap.), Trincomalee, Candy, and Point de Galle. *Pop.* in 1891, 3,008,500. *Hist.* The proper name of *C.* is Singhala (whence the term *Cingalese*), but its true origin is unknown. Toijeya (perhaps of the royal house of *Sakya Singh*, of Magadha, the native country of Buddha, but evidently the same as the Sanskrit *Vijaya*) is the first king of *C.* mentioned in history. The numerous ruins of cities, tanks, aqueducts, extensive canals, temples, bridges, &c., prove that this island had been, at a remote period, a rich, populous, and comparatively civilized country. It was first settled by Europeans in 1505 by the Portuguese, who established colonies in the W. and S., but which were wrested from them early in the next cent. by the Dutch. In 1795-6 the latter were expelled by the English, and, in 1815, the whole of the island fell under their rule.

Ceylonese, *a.* and *n.* (*Geog.*) See **CINGALESE**.

Cezim'bra, a town of Portugal, prov. Estremadura, on the Atlantic, 18 m. S. of Lisbon. It is actively engaged in the fisheries, and has a pop. of 5,000. Alfonso Henriques defeated the Moors here in 1165.

Chab'asic, **Chab'asite**, **Chab'azite**, *n.* [Gr. *chabasis*, the name of a stone, mentioned in a poem inscribed to Orpheus.] (*Min.*) A zoölitic mineral. It is a hydrated silicate of alumina and lime, with small quantities of soda and magnesia, and occurs crystallized in transparent and colorless or grayish obtuse rhombohedrons, in certain basaltic and amygdaloidal rocks.

Chab'lis, a town of France, dep. Yonne, cap. cant. on the Sergy, 10 m. E. of Auxerre. This place is celebrated for its fine growth of Burgundy wine, called generally by its name, and which is much esteemed by epicures as an accompaniment to oysters. The best qualities are those of Clos Vougeot, Valmur, Vaudesir, Bouguereau, and Mont du Milieu. Pop. 2,668.

Chabrias, the last of the great Athenian generals, who, in 378, commanded the army sent by the Athenians to the aid of Thebes, and defeated the Lacedæmonians under Agesilaus. Two years afterwards he gained a great victory off Naxos over the Lacedæmonian fleet, and, later, defended Coriuth against Epaminondas. Afterwards *C.* proceeded to Egypt, where he commanded the fleet of Tachos, and after his return to Athens he assisted in the expedition against Thrace. He was killed at the siege of Chios, B. C. 357.

Chachahou'ia, in *Louisiana*, a P. O. of Terre Bonne.

Chachapo'yas, a dist. of Peru, prov. Truxillo, dep. Libertad, on the border of Ecuador, near the W. declivity of the E. Andes. It is penetrated by the central ramifications of the Andes, and watered by the river Chachapo'yas, which has its embouchure in the Marañon. *Clim.* Hot and cold, in extremes. *Prod.* Wheat, maize, sugar, cotton, tobacco, fruits. — **CHACHAPOTAS**, or **SAN JUAN DE LA FRONTERA**, cap. of above dist., 185 m. N.E. of Truxillo, and 70 E.N.E. of Caxamarca. It has a large trade in tobacco.

Chack, *v. i.* (*Mineg.*) To toss up the head frequently; to jerk the bridle; — spoken of a horse.

Cha'co, (El Gran,) in S. America. See GRAN CHACO.
Cha'cone, Ciacone, n. [Sp.] (*Music*.) A kind of dance-music resembling a saraband, of Moorish origin. The bass of it consists of four notes, which proceed in conjoint degrees, whereon the harmonies are made with the same burden.

Chad, n. (*Zoöl.*) See SHAD.

Chad'da, a river of Africa. See TCHADDA.

Chadd's Ford, in Pennsylvania, a post-village of Delaware co., on Brandywine Creek, 30 m. W. by S. of Philadelphia.

Chadophyllum, n. (*Bot.*) A genus of plants, ord. *Apiaceæ*.

Cherone'a, a city of Bœotia, in ancient Greece, near the Cephissus, on the borders of Phocis. Philip II., king of Macedon, defeated the united Bœotian and Athenian forces near this place, B. C. 338; and here, also, Sylla defeated the generals of Mithridates VI. B. C. 86. Plutarch was B. here, A. D. 46.—A few ruins of C. are still existing.

Chato'don, n., Chato'dinæ, n. pl. (*Zoöl.*) A gen. and fam. of Acanthopterygious fishes, abounding in the seas of hot climates, and remarkable for the singularity of their figure and the beauty of their colors. They are, in a general view, distinguished by the great depth and highly compressed form of the body, which in most species is beautifully variegated by transverse, oblique, or longitudinal bands, and covered with strong scales; the dorsal and anal fins being remarkably broad. The species are very numerous. One of the most magnificent, the *Imperial C.* (Fig. 559,) is a native of the seas of Japan, and is held in high esteem as an article of food.

Fig. 559.—IMPERIAL CHATO'DON.

Chafe, v. a. [*Fr. chauffer*; *Lat. calefacere*—*calidus*, hot, warm, and *facio*, to make.] To make warm by rubbing; to heat or inflame by friction; to fret and wear by friction or constant rubbing; as, to chafe a cable.

—To make angry; to cause to fret, fume, or rage.

"This chaf'd hoar: his nostrils flames expire."—*Dryden*.

—*v. i.* To be excited or heated; to rage; to fume with indignation.

—To wear or fret by rubbing or friction.

"The troubled Tiber chafing with his shores."—*Shaks.*

—To be fretted, galled, or worn by friction; as, *chafed* rigging.

—*n.* Heat or inflammation induced by friction. See CHAFING.—Irritation of the mind; fret of disposition.

"The cardinal, in a chafe, sent for him to Whitehall."—*Camden*.

Chaffer, n. One who chafes or fumes.—A dish or pan.

Chaffer, n. [*A. S. ceafer*; *Ger. Käfer*, probably from *kaefen*, to eat up eagerly, to devour.] (*Zoöl.*) A yellow beetle, called also *Cock-chaffer*, or *May-bug*.

Chafery, n. (*Metal.*) A forge in an iron mill, wherein the iron is wrought into bars.

Chafe-wax, n. In England, an officer who attends the lord-chancellor to attach the wax to writs before sealing.

Chaff, n. [*A. S. cæf*; *L. Ger. kaf*; *Ger. kaff*; probably from the root of *Lat. cavus*, hollow, empty.] The husk or withered calyx of grasses, and more especially of the bread-corns.

"Ev'n our corn shall seem as light as chaff."—*Shaks.*

(*Bot.*) The scales or bracts on the receptacle which each subtend a flower in the heads of many Compositæ, as the sunflower; also the glumes, &c. of grasses. *Gray*.

—Refuse; rubbish; worthless matter.

—Straw or hay chopped small, and used for mixing with corn, roots, or other food for horses or cattle.—This kind of C., cut in greater lengths, is also, in some parts of the continent of Europe, more particularly in Russia and Germany, used for mixing with mortar, instead of hair; and it is further used as a similar substitute in making plaster for rooms. Both stubble and cut hay were used by the ancient Egyptians in brick-making.

—Banter; badinage; light, frivolous talk by way of ridicule. (Used colloquially.)

—*v. i.* To use frivolous language in a bantering manner.

—*v. a.* To banter; to make fun of; to ridicule; as, to chaff a barge-man. (Used colloquially.)

"Morgan saw that his master was chaffing him."—*Thackeray*.

Chaff-cutter, n. (*Agric.*) A machine used for chopping hay, straw, &c. into chaff.

Chaffer, v. i. [*A. S. ceapian*; *Ger. kaufen*; *O. Ger. kaufjan*; *Goth. kaupon*, to do business. Allied to *Lat. caupo*, a chapman, *capio*, &c.] To treat about a purchase; to bargain; to cheapen; to haggle.

"To chaffer for preferments with his gold."—*Dryden*.

—To talk idly, frivolously, or incessantly.

—*v. a.* To buy; to make a purchase of.

"He chaffered chairs in which churchmen were set."—*Spenser*.

—To exchange.

"Ne (nor) chaffer words, proud courage to provoke." *Faerie Queene*.

Chafferer, n. One who chaffers, bargains, or buys.

Chaffinch, n. (*Zoöl.*) The *Fringilla coelebs* of Linnaeus, a bird of the *Fringillidæ*, or Finch fam., one of the most common and most beautiful of the European species. The plumage of the C. is as follows:—Fore part

of the head black; back part, and extending even to the nape of the neck, blue, shading off to an olive-tinted chestnut, and again to a gray-green to the stump of the tail. The tail itself is black and gray, and on each of the two outer feathers there is a peculiar wedge-shaped white spot. From the root of the lower half of the beak to the extremity of the under part of the body the color is reddish-chestnut. The C. is one of the most familiar of birds, and with the sparrows and buntings, in the winter, will come in flocks around the doors of the farm-houses. It is much esteemed in Germany as a song-bird.

Chaffing, n. Banter; use of frivolous language in a spirit of fun.

Chaffless, a. Without chaff.

"But the gods made you,

Unlike all others, chaffless."—*Shaks.*

Chaff-seed, n. (*Bot.*) See SCHWALBEA.

Chaffy, a. Like chaff; full of chaff.—Light, or without value, as chaff.

"The most slight and chaffy opinion."—*Glanville*.

(*Bot.*) Provided with, or having the texture of, chaff.

Chaf'ing, n. (*Med.*) The red excoriations which occur in consequence of the friction of parts, or between the folds of the skin, especially in fat or neglected children. Washing with cold water and dusting with hair-powder is the best preventive.

Chafing-dish, n. A dish or vessel to hold coals for heating anything set on it.

Chaf'ing-gear, n. (*Naut.*) Oakum, leather, matting, &c., placed round a vessel's spars, &c., to prevent undue chafing.

Chagreen, n. See SHAGREEN.

Chagres (*shā'grees*), a seaport of the Rep. of Colombia, prov. New Granada, at the mouth of a river of the same name, on the N. coast of the Isthmus of Panama, 8 m. N.E. of Aspinwall; Lat. 9° 18' N., Lon. 79° 59' W. It is divided into two towns, one on each side of the river, the left division being styled the *American town*, from its being peopled principally by natives of the U. States, and the other, the old *Spanish or Indian town*, with a medley population of Mexicans, Spanish, a few English, and colored persons. The harbor is poor and difficult of entry.

CHAGRES RIVER, rises 30 m. N.E. of Panama, and taking a W. and N. course, successively, through a luxuriant country, empties into the Caribbean Sea, on the N. coast of the isthmus. It is barely navigable, owing to its rapid current and many rapids.

Chagrin, (shā-grin') *n.* [*Fr.*, probably from the rough sort of leather called *chagrin*, which was used to rub off or wear down asperities on the surface of wood, so as to polish it.] Corroding care; grief; vexation; ill-humor; fretfulness.

—*v. a.* [*Fr. chagriner*.] To fret; to excite ill-humor in; to vex; to mortify; as, he looked quite *chagrined*.

Chagrine, (sha-green') in Ohio, a village of Lake co., at the mouth of Chagrine River.

Chagrine, or CHAGRIN FALLS, in Ohio, a township and village of Cuyahoga co., 17 m. E.S.E. of Cleveland, on the Chagrine River.

Chagrine River, in Ohio, rises in the N.E., and flows into Lake Erie, about 20 m. N.E. of Cleveland.

Chai'bar, or Kheib'bar, a town of Arabia, in El-Héjaz, Lat. 25° N., Lon. 39° 30' E., 150 m. N.E. of Medina; pop. said to be 50,000.

Chaillatia'ceæ, n. pl. (*Bot.*) An order of plants, alliance *Rhamnales*. *Diag.* Polypetalous flowers, a valvate calyx, stamens alternate with the petals, and pendulous seeds. There are 4 genera and 10 species, the only remarkable one being *Chaillatia toxicaria*, a tree growing in Sierra Leone, producing fruit which is called rat's-bane from its poisonous nature.

Chail'lot, a quarter (and formerly a suburb) of Paris, beyond the Champs Elysées, and between the Avenue de Neuilly and the Seine. It had formerly a famous convent, where the unfortunate Louise de la Vallière (*q. v.*) ended her days.

Chailin, PAUL B. DU, an eminent African explorer, and author, of French extraction, b. in the U. States about 1830. His father being a trading settler at Gaboon in equatorial Africa, Du C. early gained a thorough acclimatization, together with a knowledge of the wilderness surrounding him. After a temporary residence in the U. States, Du C. returned to Africa in 1855-6, and spent 4 years in exploring the interior. During these travels he killed and brought home several gorillas, or giant apes (the existence of which had scarcely been credited since the days of Herodotus). He also ascertained the existence of the Fans, a tribe of cannibals under partial civilization, and his researches tended to establish the fact that a high range of mountains runs across the centre of Africa from E. to W., nearly along the line of the equator. He published an account of his *Explorations and Adventures*, in 1861, a work which gained extensive celebrity, though some of his statements were, at the time, impugned by Dr. Gray. His collection of animals from Africa was bought for the British Museum. Du C. returned to Africa in 1863, in the hope of crossing the continent and reaching the Nile. Returning to England in 1866, he published *A Journey to Ashango Land and further Penetration into Equatorial Africa* (1867), and *My Apingi Kingdom* (1871). In 1882, *The Land of the Midnight Sun, and Journeys in Norway and Sweden*, etc., appeared.

Chain, n. [*Fr. chaîne*; *Sp. cadēna*; *Lat. catēna*; probably allied to *Gr. kathēma*, something let down or suspended—*kata*, down, and *hēmi*, to set agoing, to put in motion.] A series of links or rings connected or fitted into one another, excepting the first and the last. The link may be a ring, or a bar of any length with a ring or an eye at each end, or a bar with a hook at one end and an eye at the other; links furnished with eyes

are joined by links furnished with hooks, or by keys, pins, or wedges. Much depends upon the shape of the links in order to obtain the greatest resistance of a chain; and as long as the strain is kept in the direction of the axis, the strongest form when the sides of the chain are parallel to the line of strain. But as this is often in a direction perpendicular to the axis, it is essential to introduce a stay which should maintain the sides invariably in their position, and to resist any unequal compression of the metal in the sides. In the cables used for hoisting building-materials, it is not necessary to introduce these stays, because the effort being always one of traction, is in the direction of the axis; but in ship's cables they are always placed, and they are made of cast-iron.

—That which confines or restrains; a fetter; a bond.

"Striking the electric chain wherewith we are darkly bound." *Byron*.

—A series of things linked together, or following in succession; a range or line of things connected; as, a *chain* of circumstances; a *chain* of mountains.

(*Surveying*.) A lineal measure, consisting of a certain number of iron links (usually 100), serving to take the dimensions of fields, &c.; at every tenth link is usually fastened a small brass plate, with a figure engraved upon it, or else cut into different shapes, to show how many links it is from one end of the chain.—See GUNTER'S CHAIN.

—*pl. (Naut.)* Iron bars or plates bolted strongly through the ship's sides, and containing in their upper parts the dead-eyes through which the shrouds pass.

Chain-plates. (Naut.) Plates of iron bolted to the side of a ship, to which the chains and dead-eyes of the lower rigging are connected.—Chain-wales. See CHANNELS.

Top-chains. Slings made of chain attached to the lower yards of a ship's mast, and kept in the *tops* for use during action, to prevent the yards from being cut away by the enemy's shot.

—*v. a.* To fasten, bind, or connect with a chain; to fetter; to secure; or bind; as, to *chain* a prisoner.

"Or march'd I chain'd behind the hostile car."—*Prior*.

—To confine; to enslave; to hold in bondage.

"The monarch was ador'd, the people chain'd."—*Prior*.

—To secure with a chain, as an anchor, door, &c.

—To unite with cohesion and strength.

"And in this vow (I) do chain my soul with thine."—*Shaks.*

Chain-bolt, n. (Naut.) A large bolt in a ship's side, used to secure the dead-eyes through which the standing-rigging is rove.

Chain-bond, n. Same as BOND-TIMBER, *q. v.*

Chain-bridge, n. A suspension-bridge; a bridge suspended on chains.

Chain-eable, n. A cable composed of iron links. See CABLE.

Chain-gang, n. A gang of convicts chained together.

Chain'less, a. Without chains; free; unfettered.

Chain'let, n. A small chain.

Chain-mail, n. A kind of body-armor, constructed of interlacing rings of iron or steel, with a view to both strength and flexibility.

Chain-moulding, n. (Arch.) A moulding in imitation of chain-work.

Chain of Rocks, in Missouri, a village of Lincoln co.

Chain-pump, n. (Hydraul.) A machine for raising water. It is made of different lengths, and consists of two collateral square barrels and an endless chain of pistons of the same form, fixed at proper distances.

Chain-rule, n. (Arith.) A rule by which, when several equivalents are given, the last of which being of the same kind as the first of the next, a relation of equivalence is established between the numbers of the first and last kind mentioned; a rule of solving problems by the composition of ratios.

Chain-shot, n. (Naut.) Two cannon-balls connected together by a few links of chain, used chiefly in naval warfare. When discharged, they fly apart; and the projectile revolving necessarily on its shorter axis, mows down any object in the way of the extended chain. The effect upon masts and standing rigging is peculiarly damaging.

Chain-snake, n. (Zoöl.) See OPHIBOLUS.

Chain-stitch, n. A kind of stitch made in sewing, so as to leave spaces resembling the links of a chain.

Chain-timber, n. (Arch.) Same as BOND-TIMBER, *q. v.*

Chain-ville, in Indiana, a village of Posey co., on the Wabash River, 10 m. N.W. of Mount Vernon.

Chain-wheel, n. (Mech.) An inverted arrangement of the chain-pump.

Chain-work, n. Work of any kind having of spaces like the links of a chain; as, *timber-work*, &c.

Chair, n. [*Fr. chaire*, a pulpit, and *chaise*, a seat; *I. cathedra*; *Gr. kathedra*, from *kathēzomai*, to sit down *kata*, down, and *hezomai*, to seat one's self.] A movable seat furnished with a back, and intended for persons to sit in. The accompanying figure presents an illustration of the furniture in use at the end of the 17th century, and is also a curious relic of one of the greatest modern poets. It is in one of the rooms at the seat of L. Braybrooke, who obtained it from the descendants of a nurse who attended Pope during his illness, and whom it had been given as a keepsake.—The term was originally applied to the pulpit from which the preacher addressed the people. The place where professors regents in universities deliver their lectures is called the chair; as the professor's C., the C. of natural philosophy, &c.—The *Curule C.* was an ivory seat placed upon a car, in which the prime magistrates of ancient Rome sat, and also those to whom the honor of triumph had been decreed. The *Sedum C.* is a vehicle in which persons are carried. It is supported by two p.

(Sports.) In fox-hunting, the cry sent forth by the hounds on first scenting their game.

(Law.) An exception to jurors who are returned to serve on a trial.

C. to the array. An exception to the whole panel of jurors.

C. to the polls. An exception made separately to each juror.

Principal C. That made for a cause which, when substantiated, is of itself sufficient evidence of bias in favor of or against the party challenging.

Peremptory C. A challenge made without assigning any reason, and which the court must allow.

(Politics.) An exception tendered to a person as not being considered legally qualified to vote at an election.

—*v. a.* To call to a contest of any kind; to call to account; to defy.

"Thus form'd for speed he challenges the wind." — Dryden.

—To call, summon, or invite to a duel or personal combat.

"The Prince of Wales . . . challeng'd you to single fight." — Shaks.

—To claim as due; to demand as one's right.

"And challenge better terms." — Addison.

(Law.) To make exception to, as a juror, &c.

(Politics.) At elections of members to Congress, Parliament, &c., to object to a certain person as not being considered legally qualified to vote.

Chal'engeable, a. That which may be challenged.

Chal'lenger, n. One who challenges; one who defies or summons another to single combat.

"As if to find and dare the grisly challenger." — Dryden.

—One who claims superiority; one who demands a thing as his right.

"Earnest challenges there are of trial, by some public disputation." — Hooker.

Chal'lis, Chal'ly, n. A kind of fine woollen stuff used for ladies' dresses.

Chalmers, THOMAS, D.D., a Scottish divine, b. at Anstruther, Fifeshire, 1780. In 1803 he was appointed to the living of Kilmenny. In 1809 he became a contributor to the *Edinburgh Encyclopædia*; and in 1815 he was called to the Tron Church, Glasgow, where he officiated for 8 years. The following year he began his *Astronomical Discourses*, which created an unprecedented excitement among all who heard them. In 1823, when at the very zenith of his fame, Dr. C. resigned his charge, and accepted the chair of moral philosophy in the university of St. Andrew's. Here he remained for five years, when, in 1828, he was appointed to the divinity chair of the university of Edinburgh. He officiated here for 15 years, until, in 1843, at the head of 40 clergymen, he seceded from the church of Scotland, instituted the *Free Church*, and became principal and professor of divinity in the new college founded by its adherents. D. 1847, at Edinburgh. The writings of Dr. C. are numerous; they have been collected into 32 large 12mo. volumes, in which are discussed all the problems which, in his time, agitated the religious community. "Yet the most important results of his life are not contained in his books, but appear rather in the order and energy which, whether as preacher or teacher, he communicated to all with whom he came in contact, and in the important social and ecclesiastical reforms which he inaugurated."

Chal'mers, in Illinois, a township of McDonough co.; pop. 1,484.

Chal'mers, in Indiana, a post-village of White co., on the New Albany and Chicago R.R., 17 m. N. of Lafayette.

Chal'mers, in New York, a village of Niagara co., 7 m. N.E. of Niagara Falls.

Chalonnès-sur-Loire, a town of France, dep. Maine-et-Loire, 12 m. from Angers; pop. 5,637.

Châlons-sur-Marne, an ancient city of France, cap. dep. Marne, on the Marne, 27 m. S.E. of Rheims. It is a considerable place, with manuf. of woollens, linens, cottons, and leather. Attila was defeated here in 451, and, in 1814, it was for a while the centre of Napoleon's operations.

Châlons-sur-Saône, or CHALLON, a town of France, dep. Saône-et-Loire, on the Saône, 34 m. N. of Macon. Manuf. Unimportant. C. is very ancient, and was for some time the cap. of the kingdom of Burgundy. Abelard (*q. v.*) died here in 1142.

Chalns, (sha'loo), a town of France, dep. Haute-Vienne, 18 m. from Limoges; pop. 1,216. It is a place of great antiquity, and contains the remains of the castle of Chabrol, besieging which, in 1199, Richard Cœur de Lion was mortally wounded.

Chalybeate, (ka-tib'e-at), a. [Lat. *chalybs*; Gr. *chalybs*, *chalybos*, hardened iron or steel; from the nation of the *Chalybes* in Pontus, who were famous for the preparation of steel.] Impregnated with particles of iron; having a taste like iron; as, *chalybeate waters*.

—*n.* Any natural water in which a certain proportion of iron is held in solution, but which, by exposure to light or air, becomes slightly discolored, and throws down its mineral ingredients in the form of a red precipitate. All C. waters have a clear, transparent appearance when fresh drawn; an astringent, inkly taste; and contain either the carbonate, sulphate, or muriate of iron. Any preparation of iron is also a C., whether taken in the form of the precipitated carbonate of iron, the tincture of steel, the sulphate of iron, green vitriol, wine of iron, &c. C. act on the system as stimulants and tonics, and are particularly valuable in certain low, debilitated states of the constitution, as in the relaxation following a life of dissipation and pleasure; but are injurious when taken in a plethoric state of the body, or when the pulse is full and the muscular vitality tense.

Chalyb'eate, in Georgia, a post-village of Meriwether co., 64 m. W. of Macon.

Chal'ybes, in Connecticut, a village of Litchfield co.

Cham, (or AMÉDÉE DE NOÉ), a popular French caricaturist, son of the Comte de Noé, b. at Paris, 1819. Possessing a strong inclination for art, he entered the studio of M. Paul Delaroche, and afterwards that of M. Charlet, and, under the latter, developed his talent in grotesque drawing. His first attempts, under the pseudonym of "Cham" (the French spelling of Ham, one of the sons of Noah) were made in 1842, and soon became popular. C. largely contributed to the *Charivari*. D. 1879.

Cha'ma, n. (Zool.) A genus of lamelli-branchiate molluscs, the species of which are found in the seas of warm climates. The shell consists of two unequal valves, having two hinge-teeth in one valve, and only one in the other.

Chauade', n. [Fr., from Lat. *clamo*, *clamare*, to call.] (Mil.) A French beat of the drum, as a signal for a parley or surrender.

Chamaelancia'eere, n. pl. The Fringe-myrtle fam., an order of plants, alliance *Myrtales*. This is a small group of shrubby plants only found in Australia. They are nearly allied to *Myrtaceæ*, but may be distinguished from them by their heath-like aspect and by their more or less papose calyx.

Cham'erops, n. (Bot.) A gen. of trees, ord. *Palmaceæ*, having fan-shaped leaves, and less exclusively tropical than other palms.

Chamber, n. [Fr. *chambre*; Lat. *camara*; Gr. *kamara*, from the root *kam*, or *cam*, crooked, bent, curved.] An apartment in an upper story of a dwelling-house; any retired room; any private apartment; as, a bed-chamber.

"Or at their chamber-door I'll beat the drum." — Shaks.

—A vault; a cavity or hollow place; as, the chamber of a furnace. — A hall of justice or legislation; a legislative body; as, the Chamber of Deputies, the Imperial Chamber.

(Anat.) In descriptive anatomy, the ball of the eye, divided into two chambers, — the *anterior*, containing the aqueous humor; and the *posterior*, consisting of the vitreous humor; — the iris hanging like a curtain between the two, and the lens being situated at the back of it, and in front of the first chamber.

—*pl. (Law.)* An apartment or place where a judge sits to transact business or determine cases in private.

(Mech.) The hollow part of any mechanism; as the powder receptacle at the breech of a cannon; a lubricating cavity in an axle-box, or cartridge cavity in a revolver; the space between the gates of a canal lock; the "breast" or "room" in mining, &c., &c.

—A short piece of cannon, without a carriage, formerly used to fire salutes at public rejoicings.

Chamber of Commerce. A board of individuals, associated to watch, serve and protect the interests of the general commercial and trading bodies of a mercantile town. Many are incorporated. — *To sit in chambers.* (Law.) to transact business, or hear cases, &c., in apartments, not open court rooms.

—*v. i.* To reside in a chamber; to occupy, as a chamber.

—*v. a.* To provide with a chamber; as, a gun, axle-box, or other mechanism. To shut up, as in a chamber.

Cham'ber-coun'cil, n. A council held secretly or in private.

Cham'ber-coun'sel, Cham'ber-coun'sellor, n. (Law.) A counsel who gives his opinion in private, but does not practise in open court.

Cham'bered, a. (Conch.) Having chambers or compartments; as, a chambered shell.

Cham'ber-fel'low, n. One who sleeps in the same chamber.

"It is my fortune to have a chamber-fellow." — Spectator.

Cham'ber-hang'ings, n. pl. Hangings, arras, or tapestry for a chamber.

Cham'berlain, n. [Fr. *chambellan*; It. *camerlingo*. See CHAMBER.] One who has the charge of the private apartments of a monarch or nobleman; an officer of state; as, a lord-chamberlain. The emblem of office appropriated to the C. in European courts is a gold key, generally suspended from two gold buttons.

—A person who has charge of the chambers, as in a hotel. — In England, a city officer who keeps the accounts of a corporation; a treasurer or receiver of public money; as, the Chamberlain of the city of London.

The Lord Chamberlain of England is one of the three great officers of the sovereign's household. He has the control of all the officers above stairs, except the precinct of the royal bed-chamber, which is under the govt. of the Groom of the Stole. Under him are the Vice-chamberlain, lords of the bed-chamber, &c.; the chaplains, officers of the wardrobe, physicians, tradesmen, artisans, &c., and others retained in the sovereign's service, are in his department, and are sworn into office by him. He is commonly one of the highest nobility in the kingdom; and in virtue of his office, precedes dukes. The L. C. has also the censorship of the public theatres and the licensing of plays, &c. under his control.

Cham'berlain, in Indiana, a post-office of Allen co.

Cham'berlainship, n. The office of a chamberlain.

Cham'ber-lye, n. Urine.

Cham'ber-maid, n. A female servant who has the care of chambers or sleeping-rooms.

Cham'ber-pot, n. A bed-room utensil.

Cham'ber-prac'tice, n. (Law.) The practice of those counsellors at law, who deliver their opinions in private, but do not appear to plead in open court.

Cham'bers, EPHRAIM, F.R.S., an English man of letters, b. about the close of the 17th century. The first edition of his *Cyclopædia of Science* appeared in 1728, a second in 1738, and such was its popularity that it reached a

fifth in 1746. D. 1740. After his death the "Cyclopæd" formed the basis of the one edited by Dr. Rees, sufficient well known.

Cham'bers, WILLIAM and ROBERT, two eminent Eng. editors and publishers, b. 1800 and 1802, respectively. Architects of their own fortunes, they have conferred estimable benefit in popularizing useful literature the comparatively uneducated class in English-speaking countries. Among the works produced by them are *Gazetteer of Scotland* (1832); *Chambers' Edinburgh Journal* (established in the same year, and also a serial of first order); *Information for the People* (1834); *Editorial Course, Cyclopædia of English Literature, &c.* 1837. C. is the author of the *Domestic Annals of Scotland* and the *History of Lebbleshire*. Their latest contribution to good and useful literature is *Chambers' Popular Cyclopædia*. In 1865, Robert C. was elected Lord Provost of Edinburgh, and D. in 1871. William D. 1883.

Cham'bers, in Alabama, an E. county, bordering Georgia; area, 775 sq. m. The Tallapoosa River fl through the co., and the Chattahoochee forms part of E. boundary. The surface is uneven, and the soil fer. Cap. Lafayette. Pop. (1890) 26,400.

Chambers, in Texas, a southeast county, is intersected by Trinity River, and borders on the Gulf of Mexico and Galveston Bay.

Cham'bersburg, in Illinois, a post-township of 1 county, on the Illinois River, about 56 m. W. of Springfield.

Chambersburg, in Indiana, a P. O. of Orange co.

—A village of Fountain co., on Coal Creek, 8 m. E. ofington.

—A post-vil. of Orange co., 38 m. W.N.W. of New Alb

Chambersburg, in Missouri, a post-village of Cla co., 150 m. N. by E. of Jefferson City.

Chambersburg, in Ohio, a village of Columb co., 140 m. N.E. of Columbus.

—A p.-v. of Montgomery co., 8 m. N. of Dayton.

Chambersburg, or CHAMBERSVILLE, in Pennsylvania, a post-village of Indiana co., about 7 m. N. of India

Chambersburg, in Pennsylvania, a borough, of Franklin co., situated on Conococheague Creek, 4 S.W. of Harrisburg and 150 W. of Philadelphia. situation is healthy, and the surrounding country and highly cultivated. The town is composed of large streets, intersecting each other at right angles, and having a public square in the center. Pop. (1870) 7,683. C. was burned by the Confederates, July 30, 1863.

Chambers Court-House, now LAFAYETTE, in Alabama, a post-village, capital of Chambers co., 16 E. by S. of Tuscaloosa.

Chambers Creek, in Texas, flows through Ellis and unites with the Waxahachie in Navarro co.

—A village of Ellis co.

Chamber'sia, in Texas, a village of Liberty co., at the N. end of Galveston Bay.

Chambers Island, in Wisconsin, a vill. of Door co.

Chamber's Mills, in Virginia, a village of Buchanan co.

Chamber's Valley, in Virginia, a vill. of Carroll co.

Cham'bersville, in Arkansas, a P. O. of Calhoun co.

Chamber'tin, a famous vineyard of France, dep. d'Or, a few miles N.E. of Beaune. It produces annually upon an average from 130 to 150 pipes of Burgundy. It was the favorite wine of Louis XIV. and of Napoleon I.

Chambery, (sham'ber-e), a city of France, dep. Saône, on the Aise, in an elevated and fertile valley, 11 m. W.N.W. of Turin, and 43 S.S.W. of Geneva. A Silk gizes. Pop. 18,279.

Cham'blissburg, in Virginia, a township of Bedford co., 150 m. W. by S. of Richmond.

Cham'bly, in prov. of Quebec, a S. co., on the bank of the St. Lawrence, opposite the island of Montreal; area, 211 sq. m.; cap. Chambly.

—A parish and village in the above county, on the side of Richelieu River, and connected by canal with St. John's.

Cham'bord, a village of France, dep. Loire-et-Cher, the Cosson, 10 m. E. of Blois. This place is noted for its famous and magnificent castle, commenced by Francis I., and finally completed by Louis XIV. The former monarch entertained his great rival Charles V., in 1540.

Chambord, (COMTE DE.) See BORDEAUX, (DUC DE).

Cham'braule, (sham-brân'l), n. [Fr.] (Arch.) the casing of a chimney, door, &c.

Cham'bre Ardente, n. (Hist.) The name given in France to a court of law, hung with black and lighted torches, instituted by Francis I. for the purpose of trying and burning heretics; and also to the extraordinary commissions established under Louis XIV. for the examination of poisoners, and under the regent du Orleans for the punishment of public officers charged with certain offences against the revenues, as also of those who were guilty of fraud in the matter of Law's business.

Cham'bre des Comptes, n. [Fr., Chamber of accounts.] (Hist.) A great court established in France prior to the revolution, for various purposes; as for the registration of edicts, ordinances, letters-patent, treaties of peace, &c. The sovereign Chambre des Comptes held at Paris; there were also inferior courts in provincial cities.

Cham'brel, n. The joint or bending at the middle of a horse's hind-leg; the gambrel.

Chameleon, Chameleon, (ka-mê'le-on), n. [Lat. *chamaeleon*; Gr. *chamaileōn* — *chamai*, on the ground, and *leōn*, a lion.] (Zool.) A genus of Saurian reptiles inhabiting the warmest parts of Africa and India. It comprises lizards which have the body compressed, roughened, tail round and prehensile, feet five-toed, and the back surmounted by a sharp ridge, whence pe

the name *C.* (chamel-lion). The tongue is cylindrical, fleshy, and extremely extensible; teeth trilobate, and eyes large, but covered with skin except a small hole opposite the pupil, and possessing the faculty of moving independently of each other. Their lungs are so enormous, that, when inflated, their body seems to be transparent, — a circumstance which led the ancients to believe that these animals fed on air. They live upon trees,

Fig. 562. — CHAMELEON.
(*Chameleo Africanus*.)

re excessively slow in their movements, and often remain motionless upon a branch for hours. The great size of their lungs is probably the source of the power of the *C.* to change their color, which takes place according to their feelings, and not in conformity with the hues of the bodies on which they rest, or near which they pass. The very extensible tongue has the extremity covered with a viscid secretion; and when the animal has marked an insect, it darts forth this organ, and quicker than a glance of the eye secures the prize for food.

(Astron.) A constellation near the south pole; so named by Bayer. It contains 9 stars.

Chame'leonize, *v. a.* To change into various colors.

Chame'leon Mineral, *n.* (*Chem.*) Manganate of potash was so called from the changes of color apparent in an alkaline solution of the salt. It is made by fusing dioxide of manganese with carbonate of potash in an open crucible.

Cham'fer, *v. a.* [Corrupted from Fr. *échanfrer*, from *Fr. chancre*, a canker, a cancer.] (*Carp.*) To hollow; to channel; to cut into furrows, grooves, or channels; to flute.

To cut into a sloping form or bevel.

Cham'fer, *Cham'fret*, *n.* [Fr. *chanfrein*.] (*Carp.*) A small gutter, channel, groove, or furrow. — The edge of anything originally right-angled cut aslope or on the level, so that the plane then formed shall be inclined at less than a right angle to the other planes which it intersects.

Cham'fering, *n.* (*Carp.*) Process of cutting the edge of the end of anything bevel or aslope.

Cham'fort, SEBASTIEN ROCH NICOLAS, a French literary, B. 1741. His best-known works are *La Jeune Vierge*, *Mustapha et Zeangir*, and his imitations of the tales of La Fontaine. He was the friend of Sieyès and Mirabeau, and D. 1794.

Cham'frain, **Cham'fron**, *n.* [N. Fr.] (*Mil.*) In late armor, plates of steel or pieces of leather, to protect the face of a horse.

Chamilly, NOËL BOUTON, COMTE DE, (*sha'me-ya*), a marshal of France, B. 1636. He served with the highest military distinction in Portugal, Italy, and Holland; and in 1675 covered himself with honor by his gallant defence of Grave, which he held out for 93 days against William, Prince of Orange, who lost in the siege 16,000 men. D. 1715.

Chamisso, ADELBERT VON, a German naturalist and poet, of French extraction, B. 1781. He was of noble descent and accompanied his family to Prussia at the commencement of the French revolution. He gave his early attention to the study of botany, and in 1818 joined a scientific expedition around the world, giving the fruits of his researches, on his return, to the University of Berlin. He was the author of the well-known romance *Peter Schlemihl*, or *the Man without a Shadow*, and of many poetical and botanical works. D. 1838.

Chamisso Island, of Alaska, near the head of the bay of Good Hope, in Kotzebue's Sound, Lat. 66° 13' 12" N., Lon. 161° 46' W.

Cham'let, *n.* See CAMLET.

Chamois, in Missouri, a post-village of Osage co., on the Missouri River, 100 m. W. of St. Louis.

Chamois, (*sha'mwa*), *n.* [Fr.; Sp. *gamúza*, from *gamo*, buck; Gr. *kemas*, a young deer.] (*Zool.*) A genus of the sub-family *Antelope*, inhabiting the middle regions of the high mountains of W. Europe. It is about the size of a goat, of a deep brown color, and its horns towards the summit are bent abruptly backward like a hook. The *C.* is exceedingly shy, and on the slightest alarm bounds away with a speed that is truly wonderful, over rocks, glaciers, along the brinks of dizzy heights, and up and down precipices where it would seem that no animal could get a foothold, — often leaping upon a shelf of rock of scarcely more than a hand's

breadth, or just large enough to receive its fore-feet placed close together.

Fig. 563. — CHAMOIS.
(*Antelopa rupicapra*.)

—A kind of soft leather, made from the dressed skin of the chamois. (Sometimes, and popularly, called *shammy*.)

Chamoisite, *n.* (*Min.*) A mixture of magnetic iron and a hydrous silicate of alumina, found at Chamoisin, Valais.

Cham'omile, CAMOMILE, *n.* [Gr. *chamaimelon*, earth-apple; from *chamoi*, on the ground, and *melon*, apple; Fr. *camomille*.] (*Bot.*) See ANTHEMIS.

Cham'ond, (*St.*) a town of France, dep. Loire, 8 m. N.E. of St. Etienne. *Manuf.* Ribbons, laces, iron, nails. &c. *Pop.* 17,762.

Chamouni, **Chamounix**, or **Chamouny**, (*shā-mō-nī'*), a celebrated valley of the Alps, dep. Haute-Savoie, France, immediately N.W. of Mont Blanc, by which and others of the Pennine Alps it is bounded on its S. and E. sides, and on the W. and N. by Mont Breven and the *Aiguilles Ranges*. Its length, N.E. to S.W., from the base of the mountains, is about 12 m., and its breadth at the bottom in most parts exceeds a mile; but including the mountain slopes and sides, it is as much as 9 m. broad, and may be reckoned 22 m. long from its head at the Col de Balme to its outlet at the torrent of the Dioza near Servoz. The average height of this valley above the sea is about 3,400 ft.; and the Arve flows through its entire length. It contains the villages of Prién (or Chamouni), Argentière, Les Boissons, &c. Climate, generally rigorous; but corn, hemp, and some fruits are grown, and the honey is of excellent quality. *Pop.* about 4,500. — See BLANC, (MONT.)

Champ, *v. a.* [Icel. *kampa*, to chew, from *kiammi*, a jaw; *kiamt*, a motion or moving of the jaws, from the root of *chaw*.] To bite the bit, as a horse; to bite with repeated action of the teeth.

"And champ betwixt their teeth the foaming gold." — Dryden.

—To bite into small pieces; as, to *champ* up the pieces of a tobacco-pipe.

—*v. i.* To masticate; to chew; to bite repeatedly, and with violence.

Champ, *n.* (*Building*.) The flat surface of a wall.

Champ de Mars, **Champ de Mai**, (*shawng*)-*de-mar*.) in early French Hist., denoted certain public assemblies of the Franks, which were instituted as early as their conquest of Gaul in the 5th century. At first, these were held annually in the month of March, and were hence called the *March-fields* (*Champ de Mars*); but in the 5th century, King Pepin transferred the time of meeting to the month of May; whence they were termed *May-fields*. The first descendants of Capet departed from this usage; but Philip IV. (1285-1314) restored the third estate by calling together delegates from the cities. — **CHAMP DE MARS**, a celebrated area 3,250 feet long by 1,640 wide, situated in Paris, between the Ecole Militaire and the Seine, used by the garrison of the French capital for military exercises. It was the scene of many historical events. Here was celebrated, July 14, 1790, the first feast of the French Revolution, the *fête de la fédération*, which, on the second anniversary, July 14, 1791, was the scene of the dreadful massacre ordered by the leaders of the constitutional party. Here, in 1867, in 1878, and in 1889, were erected in whole or in part the buildings for the French International Expositions of those years.

Champagne, PHILIPPE DE, an eminent painter of the Flemish school, B. at Brussels, 1602. He was a co-worker with Nicolas Poussin for Queen Marie de Medicis, and is especially known by his merits as a portrait-painter. His portraits of Colbert, Richelieu, and Louis XIII., praying to the Virgin, bear testimony to his powers. D. 1674.

Champagne, the name of an old prov. of France, adjoining the Comté and Lorraine, now distributed among the depts. of the Ardennes, Marne, Haute-Marne, Aube, Yonne, and Seine-et-Marne. In the Middle Ages, *C.* had its own dukes, who were vassals of the French kings. It was incorporated with the French crown by Philippe VI., at the beginning of the 14th century.

Champagne Wine, is produced from the grapes grown in the above province. This favorite wine is divided into two classes — white and pink champagne. The former is made either sparkling or still. Sparkling champagne (*mousseux*) is produced by treating the wine in a particular manner during fermentation. The wine is racked off in December, and after being fined with isinglass, is bottled and securely corked. Carbonic acid is generated in the wine on account of the incomplete nature of the fermentation, and its effervescing qualities depend upon the quantity of that gas dissolved by the fluid. After the sediment which is deposited has been removed, a liquor, composed of a solution of sugar-candy,

in Cognac, is added, and each bottle is tightly re-corked. Still *C.* is first racked off in the March after the vintage. The white *C.* of Rheims and Sillery are considered the best. Those of Sillery are pale, amber-colored, dry, spirituous, and possess a superior bouquet; those of Ay and Mareuil are more sparkling, and less spirituous. There are several varieties of first-class pink *C.* On account of the profitable nature of the manufacture and the popularity of *C.* wine, it is much adulterated with the juice of pears, gooseberries, &c. Very little of the wine sold as *C.* is really genuine. It generally consists of some cheap light wine charged with carbonic acid gas. Even in France a very large part of what is sold as champagne wine is of this character. As a light, temporary, and diffusible stimulant, sparkling *C.* is often an article of great benefit to the invalid, as it produces all the benefits of exhilaration of spirits and cheerfulness of mind, without unduly exciting the pulse or leaving behind the reactionary torpidity produced by common stimulants. It is only when taken in excess, and after repeated use, that those severe headaches, with nausea, and lethargic *ennui*, are experienced, which have been so unjustly attributed to this wine. It should be borne in mind that the exquisite flavor — the great characteristic of *C.* — can never be appreciated if the wine is drunk while effervescing; and unless taken for the sake of the stimulus of the carbonic acid, it should not be drunk till the gas has escaped. Good *C.* will not be injured by being exposed for hours in a glass; for though it may lose its carbonic acid, its body and flavor will be unimpaired. — *C.* wine contains 11.5 per cent. alcohol.

Champagnolle, (*sham-pān-yōl'*), in Arkansas, a post-village of Union co., on the Washita River, about 130 m. S. by W. of Little Rock.

Champagnolle Creek, in Arkansas, flows through Calhoun co., into the Washita River.

Champagny, (*sham-pān'yē*), JEAN BAPTISTE NOMPÈRE DE, DUC DE CADORE, a French statesman, B. 1736. In 1801 he was sent as ambassador to Vienna; in 1804 appointed minister of the interior; and in 1807 succeeded Talleyrand at the Foreign Office. He accompanied Napoleon throughout the campaign of 1809, and assisted in framing the treaty of Vienna, and in bringing about the marriage of the emperor to the Arch-duchess Maria Louisa. He lost Napoleon's favor, and on the restoration of the Bourbons retired into private life. D. 1834.

Champaign, (*sham-pān'*), *a.* [From Lat. *campus*.] Open; level; plain; as, a *champaign* country.

—*n.* A flat, open, fertile country.

"Territory meeting on an open champaign." — Raleigh.

Champaign', in Illinois, an E. county; *area*, abt. 1,000 sq. m. The North Fork of the Sangamon River passes through its N.W. part, and it is also drained by the head streams of the Kaskaskia, Embarras, and Vermilion rivers. The surface is level, and the soil deep and fertile. *Cap. Urbana*. *Pop.* (1890) 42,160.

—A city of Champaign co., 83 m. N. E. of Springfield. Here is the University of Illinois. *Pop.* 5,839.

Champaign, in Ohio, a county in the central part of the State; *area*, about 390 sq. m. It is drained by Mad river, and Buck and other creeks. The surface is diversified, the soil very fertile, and the county is rich in agricultural products and grazing stock. *Cap. Urbana*. *Pop.* (1890) 27,000.

Champaign', *a.* (*Her.*) See POINT-CHAMPAIGN.

Champe, *n.* (*Arch.*) The field or ground on which carving is raised.

Cham'per, *n.* One who champs or bites.

Cham'perton, *n.* (*Law*.) One who is guilty of *cham'perty*, *q. v.*

Cham'perty, *n.* [Fr. *champ-parti*, from L. Lat. *campus partitus*, a divided field.] (*Law*.) A species of maintenance; being a bargain with the plaintiff or defendant in a suit for the "campi partitio," or division of the land or thing in dispute between the parties, if the opponent prevails at law, and the cham'perton, on the latter's bearing the expense of the suit. It is a punishable offence both by common law and by statute.

Champignon, (*sham-piñ-yun*), *n.* [Fr.] (*Bot.*) The mushroom. See AGARICUS.

Cham'pion, *n.* [Fr. *champion*; It. *campione*; L. Lat. *campiones*, persons who descend into the arena to contend in fight; from Lat. *campus*, a plain, a field; A. S. *camp*; Dan. and Swed. *kamp*; Ger. *kampf*, a contest.] One who combats or fights; specifically, in the Middle Ages, a person who took up the cause and fought in the place of another, who, from age, infirmity, or other cause, might be thus represented. Single combat was one of the ways frequently adopted to decide the right of a cause; and women, children, or aged persons were allowed to appear by a representative. At one time the champions formed a particular class, were compelled to wear a particular dress, and were looked upon as disreputable, being ready, for hire, to take up any quarrel. At a later period, however, during the ages of chivalry, the champion was a knight, who entered the lists on behalf of an injured lady, a child, or one incapable of self-defence. The office of Champion of the Crown of England is of great antiquity. He appeared at Westminster Hall at the coronation, between the courses of the royal banquet, in complete armor; his challenge was proclaimed by the herald three times, waging battle with any person who should deny or gainsay the title of the king; and the champion threw down his gauntlet. This office was performed at the coronation of George IV., in 1821. — See WAGER BY BATTLE. — One who earns, or claims, the pre-eminence in feats of physical prowess, or skill, as in prize-fighting, wrestling, rowing, &c.; one bold in contest; as, the *champion* of the prize-ring.

—*v. a.* To attend as champion; to furnish with a champion; as, to *champion* a good cause.

Champion, in *New York*, a post-township of Jefferson county, on Black River, 25 m. E. of Sackett's Harbor.

Champion, in *Ohio*, a township in the W. central part of Trumbull co.

Champion, in *Pennsylvania*, a P. O. of Fayette co.

Champion Hills, in *Mississippi*, a locality near Baker's Creek, in Hinds co., a few miles W. of Jackson. Here, May 16th, 1863, a severe action took place between the National forces, under the command of Gen. Grant, and the Confederates, under Gen. Pemberton, in which, after a contest of several hours, the latter were defeated with considerable loss, leaving about 2,000 prisoners, and 18 guns, in the hands of the victors. The entire National loss was reported at 2,457 men.

Championness, *n.* A female champion.

Championship, *n.* State of being a champion; as, to fight for the *championship*.

Champlain, SAMUEL DE, founder of Quebec, and governor of Canada, b. in France, 1585. In 1608, he established a French settlement at Quebec, explored the Ottawa, and thence as far as the W. shore of Lake Huron. Lake Champlain was named after him. D. 1635.

Champlain, in *New York*, a post-village and township at the N. end of Lake Champlain, in Clinton co., on Chazy River, about 164 miles N. by E. of the city of Albany.

Champlain, in pr. Quebec, a N.W. co., on the left bank of the St. Lawrence, intersected by the St. Maurice River, and including several small lakes; area, 6,250 sq. m.; pop. 22,052.

Champlain, (Lake,) a long and narrow lake of N. America, principally in the U. States, between the States of Vermont and New York, and having its N. extremity in Lower Canada. This lake occupies a considerable part of what has been called the "Great Glen of North America," that is, the remarkable hollow or chasm stretching N. from New York to the St. Lawrence, a distance of about 390 m. The glen is occupied from New York to Glen's Falls, 190 m., by the Hudson; thence for 21 or 22 m. to lake C. by a table-land, which, in its highest part, is only 140 ft. above the level of the tides in the Hudson. The lake extends N. and S. 110 m., with a varying breadth of from $\frac{1}{4}$ to 14 m.; but it is, in general, very narrow; the distance, 67 to 70 m., from the upper end of the lake to the St. Lawrence, is traversed by the Champlain Canal and Sorel River, by which free navigation has been opened both to the Lakes and the Atlantic Ocean. Navigation commences about the 1st of April, and closes about December. In the summer, five daily steamers run from Whitehall, N. Y., to St. Alban's, Vt. The depth of this lake varies from 50 to 280 ft.; and it receives, besides the above, many smaller rivers. Several islands variegates its surface, and it generally presents a succession of most picturesque scenery. Its waters are prolific of fish.

Champlin, in *Minnesota*, a post-village of Hennepin co., on the Mississippi River, nearly opposite Anoka, and about 18 m. above St. Anthony.

Champfemé, MARIE DESMAREZ DE, a French actress, b. at Rouen, 1644. She received lessons in elocution from Racine, who wrote for her some of his tragic parts. She is enthusiastically praised by Madame de Sévigné, La Fontaine, and Boileau. Her husband was an actor and comic author of some merit. She d. at Auteuil, 1698.

Champoeg, in *Oregon*, a post-village and township of Marion co.; the former is on the Willamette River, 25 m. N. by E. of Salem.

Champollion, JEAN FRANÇOIS, an eminent French Orientalist, b. 1791. His labors in the study of the Semitic, Coptic, and ancient Egyptian languages and remains, gave him during his life-time a world-wide reputation. Among his great philological and archaeological works are the *Egyptian Grammar*, and *Dictionary of Hieroglyphics*. D. 1832.—His elder brother, JEAN JACQUES CHAMPOLLION-FRÉGAC, b. 1778, although less celebrated, was also a distinguished archaeologist. D. 1867.

Chan'cay, a prov. of N. Peru, with a seaport of its own name as its capital, dep. Lima, at the mouth of the Chan'cay River, on the Pacific, 40 m. N.N.W. of Lima. Pop. of prov. estimated at 27,000.

Chance, (*chans*), *n.* [Fr., from L. *cadentia*, a falling, from *cado*, to fall; It. *cadenza*.] That which falls out, occurs, or happens; a fortuitous event; anything that happens without any assigned cause; as "Most disastrous chances."—*Shaks.*

—Fortuity; casualty; fortune; absence of any defined cause or direction.

"A fool must now and then be right by chance."—*Cooper.*

—Possibility of an occurrence; probability; opportunity.

"A chance, but chance may lead where I may meet
Some wandering spirit of heaven."—*Shaks.*

Theory, or Doctrine of Chances. (*Math.*) See PROBABILITY, (THEORY OF.)

—*v. i.* To fall out; to happen; to come or arrive without design or expectation.

"Think what a chance thou chancest on."—*Shaks.*

Chance, *a.* Happening by chance; casual; as, a *chance* opportunity.

Chance, *adv.* By chance; perchance.

Chance'ably, *adv.* Casually; by chance.

Chance'comer, *n.* One who comes by chance, or unexpectedly.

Chance'ford, in *Pennsylvania*, a village and township of York co., on the Susquehanna, 35 m. S.E. of Harrisburg.

Chan'cel, *n.* [Fr. *chancel*, *cancel*, or *canceau*; Lat. *cancelli*, dim. of *cancer*, a lattice; Gr. *king-kliis*.] That part

of a church where the altar or communion-table is placed; formerly enclosed with lattices, or cross-bars. It is sometimes separated from the nave, and other portions in which the congregation assembles, by a screen.

Chan'cellor, *n.* [Fr. *chancelier*; Lat. *cancellarius*—from *cancelli*, lattice.] A high judicial officer, who presides over a court of chancery or other court; a president; a chief judge. The *cancellarius* under the Roman emperors is supposed to have been a notary or scribe, and his title to have been derived from the *cancelli*, or railing behind which he sat. From the Roman empire, this office was introduced into ecclesiastical matters. In the Anglican Church, every bishop had (and continues to have) his *C.*, who is the principal judge of his consistory; this office is synonymous with that of *chancellor of a diocese*. *Chancellor of a university*, is the chief officer of a collegiate body: his office, however, is, in most cases, purely honorary, the duties being discharged by the vice-chancellor.—*Chancellor of the Exchequer*, in England, that member of the cabinet of ministers who controls the national finances.—*Chancellor of a consulate*, that person in the office of a foreign consul, who has charge of the public documents, or archives.—*Lord High Chancellor of England*, the presiding judge of the Court of Chan-

Fig. 564.—LORD HIGH-CHANCELLOR IN HIS STATE ROBES.

cery, and chief adviser of the sovereign in matters of law or conscience. He is by prescription, speaker, or president, of the House of Lords, and takes precedence, *ex officio*, over all the peers, the Archbishop of Canterbury alone excepted.—The *Chancelier de France* was one of the highest officers of the old monarchy, and the office was closely analogous to that of England. It is connected with the illustrious names of Duprât, De l'Hôpital, Maupeou, Malesherbes, &c. Abolished in 1790; revived for a short time under Napoleon I., and afterwards, under the Restoration, it was finally abolished in 1830.—*Chancellor of a cathedral*. (*Ecc.*) A dignitary who superintends the performance of religious services.

Chan'cellor, RICHARD, a celebrated English voyager, who was sent out in 1553, by a company established by Sebastian Cabot, to find a N.E. passage to China and India. The greater part of the expedition perished, but C. succeeded in reaching Archangel, and thence proceeded to Moscow, where he was cordially welcomed by the Czar Ivan IV. On his return home, in 1554, C. formed the "Muscovy Company," and next year went again to Archangel; but on his voyage home, in 1556, he was shipwrecked and perished.

Chan'cellorship, *n.* The office of a chancellor; the time during which one is a chancellor.

Chan'cellorsville, in *Virginia*, a post-village of Spottsylvania co., 76 m. N. by W. of Richmond. This place was the scene of a succession of sanguinary engagements, during the civil war. Gen. Hooker having crossed with the Union army of the Potomac from the N. to the S. bank of the Rappahannock, April 29, 1863, took up a strong position at C. on the next day. Here he received a furious flank attack from Gen. "Stonewall" Jackson, commanding a Confederate force of about 25,000 men, which put Gen. Schurz's division to flight, and spread consternation through the National ranks. Gen. Lee renewed the battle on Sunday, May 3d, and compelled Gen. Hooker to retreat. Gen. Sedgwick having meanwhile occupied the heights above Fredericksburg with 30,000 men, was dislodged, on the 4th, by Lee, and, with Hooker, compelled to recross the river, the passage of which was completed on the 6th. The National loss was reported as 17,197, including about 5,000 prisoners. They left behind their dead and wounded, 13 guns, about 20,000 small arms, 17 regimental colors, and a large quantity of ammunition. Among their dead were Gens. Berry and Whipple. The Confederate loss was, on the other hand, reported at 12,277, including about 2,000 prisoners. The Confederate victory was dearly purchased with the loss of Gen. "Stonewall" Jackson, who, by mistake, was fired at by his own men, while returning from the battle of May 2d. After undergoing amputation of the left arm, he d. on the 10th.

Chan'cel-medley, *n.* [Fr. *chance*, and *medley*, from *mêler*, for *mêler*, to mix; probably a corruption of *chaude mêlée*.] (*Law*.) In its original sense, a casual affray or riot, accompanied with violence, but without deliberation or preconceived malice; but it is now applied to a particular class of homicide, viz., the killing of another in self-defence in a sudden encounter, without malice *prépense*; or to any homicide by misadventure.

Chance Prai'rie, in *Texas*, a P. O. of Burleson co.

Chan'cery, *n.* [Fr. *chancellerie*. See CHANCELLOR (*Law*.) In England, the highest court of justice, (next to the Parliament,) presided over by the lord chancellor. Its jurisdiction is principally exercised in cases of equity.—In the U. States, a court of general equity jurisdiction.—See COURT OF CHANCERY.

Chance'ville, in *New Jersey*, a small post-village of Monmouth co.

Chancre, (*shänk'r*), *n.* [Fr.] (*Surg.*) An ulcerous venereal sore.

Chancreous, (*shänk'r-us*), *a.* Having the qualities of chancre.

Chan'da, an inland town of Hindostan, prov. Gunwanah, cap. of dist. of same name, 62 m. S. of Nagpoo. Lat. 20° 4' N., Lon. 79° 22' E. It was taken by the British in 1818.

Chan'daller, in *Iowa*, a post-village of Keokuk co. abt. 28 m. S.W. of Iowa City.

Chande'leur Islands, lie E. of Chandeleur Bay, on the S.E. coast of Louisiana. A fixed light, 55 ft. high is on the N. or smaller island.

Chandelier, (*shan-dê-lêr'*) *n.* [Fr., from *chandelle*, Lat. *candela*, a candle.] A frame with branches to hold a number of candles or lamps.

(*Port.*) A kind of movable parapet.

Chander'nagore, a maritime town of Hindostan, prov. Bengal, belonging to the French, on the W. bank of the Hooghly River, 16 m. N.N.W. of Calcutta; Lat. 22° 49' N., Lon. 88° 26' E. It has a trade in opium, and manufactures of cotton cloths. Pop. about 35,000.

Chand'ler, *n.* [Fr. *chandelier*, from *chandelle*, candle.] A maker and seller of candles; as, a tallow-chandler. A dealer in certain commodities; as, a ship-chandler, a corn-chandler.

Chandler's Springs, in *Alabama*, a post-office of Talladega co.

Chandler's Valley, in *Penna.*, a P. O. of Warren co.

Chand'lersville, in *Ohio*, a post-village of Muskingum co., 10 m. S.E. of Zanesville, the county seat, and 64 m. E. of Columbus.

Chand'lerville, in *Illinois*, a small village of Cass co.

Chand'lery, *n.* The goods or articles sold by a chandler.

Chand'oo, *n.* An aqueous extract of opium, used by the Chinese for smoking.

Chandore, a fortified town of Hindostan, prov. Candesh, presid. Bombay, 68 m. W.N.W. of Aurungabad. Lat. 20° 19' N., Lon. 74° 19' E. It was taken by the British in 1804, and again in 1818.

Chan'dos, SIR JOHN, a famous English knight, who contributed greatly to the success of Edward III. against the Black Prince, in their wars with France. He was mainly instrumental in gaining the victory of Poitiers. C. was appointed Constable of Guienne, and regent of all the English possessions in France. His courage and skill decided the battle of Auray in 1364, which gave the duchy of Brittany to the house of Montfort. He was as generous as he was brave, and when his great antagonist Bertrand du Guesclin was taken prisoner, the battle of Navarette in 1367, Sir John solicited and obtained his liberty, and himself became security for his ransom. This valiant knight was subsequently mortally wounded in a skirmish near Poitiers, 1369.

Chan'frin, *n.* [Fr. *chanfrein*.] The fore-part of horse's head.

Changarnier, NICOLAS ANNE THEODULE, (*shan-gar' ai*), a French general, b. 1793. He entered the army when young, and distinguished himself in the campaign in Algeria, of which prov. he was, in 1848, made governor-general. He subsequently took part in the suppression of the insurrection in Paris, in Jan., 1848, and, upon Louis Napoleon becoming President of the Republic, was appointed commander-in-chief of the capital. In this capacity he crushed the attempted insurrection of June, in the same year. He was arrested on the day of the *Coup d'État* (Dec. 2, 1851), and afterwards exiled. In 1871, he came to offer his services against the German invasion, served at Metz under Marshal Bazaine, and surrendered himself a prisoner to the Prussians, agreeably to the capitulation signed by his commander. In 1871 he was elected to the National Assembly. D. 1887.

Chang'choo-foo, a walled city of China, prov. Kien, 36 m. S.W. of its port Amoy; Lat. 24° 35' N., L. 117° 50' E. This is the centre of the silk manufacture of the prov., and a place of active trade and busy industry. Besides silk, sugar and tiles are extensively fabricated. Pop. Estimated at 1,000,000.

Change, (*chanj*), *v. a.* [Fr. *changer*; It. *cangiare*, *ca biare*; L. Lat. *cambire*, to exchange, to barter.] To alter; to vary; to cause to turn or pass from one state to another; as, to *change* color.—To put one thing in place of another: to exchange; to substitute for another; as, to *change* one's linen.—To give one kind of money for another; as, to *change* notes for gold.—To become acid or tainted: to become deteriorated from a natural state of sweetness; as, milk *changes* with the weather.

To *change* a horse, or to *change* hand. To turn or to change the horse's head from one hand to the other, from left to the right, or from the right to the left.

—*v. i.* To be altered; to undergo variation.

"They change for better, and we change for worse."—*Dryden*.

—To vary in phase; to pass by transition from one state to another, as the moon.

—*n.* Any variation or alteration in form, state, quality or essence; a mutation from one state or form to another; as, a *change* of dynasty.—A substitution of one thing in the place of another; vicissitude; revolution.

"The sky is changed! and such a change!"—*Byron*.

—Transition; a passing from one phase to another; a

change of moon. — Permutation; alteration in the order of a series of things.

"And ring other changes on the same bells." — *Norris*.

That which makes or gives variety, or which may be used for another of the same kind; as, a *change* of dress. Exchange of money for money; small money given for larger pieces: as, *change* for a guinea.

A bourse: a building devoted to mercantile business and monetary transactions. (Used in colloquy for *exchange*.)

Change of seed. (Agric.) The practice of procuring seed produced in a different soil and climate from that in which it is to be grown as a crop; and which is found to be sometimes beneficial, and sometimes injurious, according as the new seed may have been matured in a better or worse climate and soil than those in which it is to be grown.

changeability, *n.* Changeableness.

changeable, *a.* That may change or be changed; subject to alteration; mutable; inconstant; fickle; variable; wavering; unstable; uncertain; as, a *changeable* manner. — Having the quality of showing changes of outward appearance, under different circumstances, as of light.

"Now the tailor make thy doublet of *changeable* taffeta; for thy mind is a very opal." — *Shaks.*

changeableness, *n.* Quality of being changeable.

changeably, *adv.* Inconstantly; in a changeable manner.

change'ful, *a.* Full of change; inconstant; mutable; fickle; uncertain.

"And fickle as a *change'ful* dream." — *Scott*.

change'fully, *adv.* In a change'ful manner.

change'fulness, *n.* Quality of being change'ful.

change'less, *a.* Constant; undeviating; impervious to alteration.

change'ling, *n.* [*Change*, and *ling*, offspring, progeny.] A child left or taken in the place of another. It was at one time a common superstition that young children were liable to be stolen or changed by fairies before being baptized; and hence they were carefully watched till that ceremony was over. It was thought that the fairies were always anxious to change their own starveling elves for the more robust children of men. The children so left were called changelings, and were known by their greater backwardness in growth or learning; hence, stunted or idiotic children were regarded as changelings.

One who is apt to change; an inconstant person; a rover.

"And as they *changelings* liv'd, they died." — *Hudibras*.

Changed; taken or left in place of another; as, "A *changeling* boy." — *Shaks.*

chan'ger, *n.* One who changes or alters the form of anything. — One who discounts or exchanges money; as, money-changer. — One devoted to novelty or change.

chan'ge'water, in *New Jersey*, a village of Warren co., 12 m. S.E. of Belvidere.

chan'ge-wheel, *n.* (Mech.) One of a set of wheels of different sizes and number of teeth, that may be changed or substituted for other wheels in machinery, to produce a different but definite rate of angular velocity in an axis, as in cutting screws, gear, &c.

chan'g-Mai, a city of S.E. Asia, in Laos, on the Meo-ong River, Lat. 20° 16' N., Lon. 99° 2' E.; pop. estimated at 30,000.

chan'has'sen, or CHANHASSAN, in *Minnesota*, a post-village and township of Carver co., about 28 m. N. by E. of Saint Paul.

chan'k, Chan'k-shell, *n.* (Zool.) See *DOLITUM*.

chan'nahatch'ee, in *Alabama*, a post-office of Elmore co.

chan'nahon, in *Illinois*, a post-village of Will co., about 45 m. S.W. of Chicago, on the Illinois and Michigan Canal.

chan'nel, *n.* [Fr. *canal*, from Lat. *canalis*, from *canna*, pipe or reed.] A pipe or spout for the conveyance of water. — The hollow bed of running waters; the deeper part of a stream, bay, or harbor, where the main stream flows; as, the *channel* of a river.

(Geog.) A strait or narrow sea; as, the *Bahama chan'el*.

Means of passing, conveying, or transmitting; as, a *channel* of communication.

(Arch.) A perpendicular furrow, cut along the shaft of a column or pilaster.

(Naut.) Projecting wooden platforms jutting out from the ship's sides opposite to the masts. They serve to keep the chains and shrouds distant from the ship's side, thereby preventing chafing against the gunwale, and enabling the shrouds to impart a firmer support to the masts.

a. To form into a channel: to cut channels in; to groove.

Roll down the lofty mountain's *channel'd* sides." — *Blackmore*.

chan'nel, (English), that arm of the Atlantic Ocean which divides England from France, gradually narrowing the Strait of Dover, often called simply the "Chan'nel." It was the *Mare Britannicum* of the ancients. — The *Channel Islands* are a group of small islands, lying off the N.W. coast of France, and belonging to Great Britain. The principal are *Jersey*, *Guernsey*, *Alderney*, &c. *Sark*, *q. v.* Total area, 48,000 a.

chan'nel-leaved, *a.* (Bot.) Having leaves folded together in a channelled form.

chan'ning, WILLIAM ELLERY, D.D., an eloquent American preacher, essayist, and philanthropist, b. at New-rt, Rhode Island, 1780. He graduated at Harvard University in 1798, with the highest honors of his class. In 1803 he was ordained pastor of the "Religious Society's Church" in Federal Street, Boston. Here he

acquired a brilliant reputation. Week after week a large and intelligent congregation attended his place of worship; where he discoursed on such subjects as charity, war, and peace — the Bible Society missions, benevolent institutions, the anti-slavery cause — and all public measures that tended to promote the advancement of liberty, the progress of social improvements, the dissemination, and the final triumph of Christianity; and to the illustration of these themes he brought all the charms of beautiful diction and a poetical imagination. Dr. C. was universally acknowledged as the first pulpit orator of his time in the U. States. In 1815 he took an active part in the Unitarian controversy which at that time waged with such fierceness throughout the country. D. 1842. As an author, Dr. C. is known by his brilliant essays on Milton, Napoleon, and Fénelon (1826-29). **Chan'ningville**, in *Iowa*, a post-village of Dubuque co., 80 m. N.E. of Iowa City.

Chan'son, (shan'son,) *n.* [Fr.: It. *canzone*, from Lat. *cantio*, from *canere*, to sing.] A song.

Chant, *v. a.* [Fr. *chanter*; Lat. *canto*, from *cano*, to sing.] To sing; to utter with a melodious voice.

"The cheerful birds . . . do *chant* sweet music." — *Fairie Queene*.

— To celebrate by song.

"The poets *chant* it in the theatres." — *Bramhall*.

(Mus.) To sing after the manner of a chant; as, to *chant* a requiem.

— *v. i.* To sing; to make melody with the voice.

"And wing'd his flight, to *chant* aloft in air." — *Dryden*.

— *n.* [Lat. *cantus*, from *cano*.] Song; melody.

"A pleasant grove
With *chant* of tuneful birds resounding loud." — *Milton*.

(Mus.) A peculiar kind of sacred music or ecclesiastical song, usually adapted to the psalms and litanies of church-service. There have been several sorts, of which the principal are the AMBROSIAN and the GREGORIAN, *q. v.* The last, somewhat modernized, is still in use in the Roman Catholic Church. Chants are, properly, of three kinds: the *monody*, sung by one voice; the *antiphony*, sung by two alternately; and the *choral*, by all voices.

Chan'tal, JEANNE FRANÇOISE FREMIOT DE, a saint of the Roman Catholic Church, b. at Dijon, 1572; d. at Moulins, 1641; canonized by Clement XII., 1767. See VISITATION (ORDER OF THE).

Chan'tant, *n.* [From Fr. *chanter*, to sing.] (Mus.) Instrumental music composed in a smooth, melodious, modulated style.

Chan'ter, *n.* One who chants; a singer.

"The chanter's soul and raptur'd song inspire." — *Pope*.

— The chief singer in a chantry. — (Mus.) The tenor of a bagpipe.

Chan'tibun, (shan-te-boon,) a large inland town of the kingdom of Siam, cap. of a rich dist. of the same name, at the foot of the mountain-chain separating it from Cambodia, 18 m. E. of the Gulf of Siam, and 150 S.E. of Bangkok; Lat. 12° 45' N., Lon. 102° 18' E. It is a place of considerable trade, exporting pepper; it also trades largely in rose- and dye-woods, spices, horns, ivory, lac, benzoin, &c. Near the town are mines of precious stones.

Chan'ticleer, *n.* [*Chant* and *clear*; Fr. *clair*.] The bird that sings or crows early; specifically, a cock. (Used poetically.)

"Hark, hark, I hear
The strain of strutting *chanticleer*." — *Shaks.*

Chantilly, (shan-té-ye,) a neat town of France, dep. Oise, on the Nonette, 24 m. N. of Paris. *Manf.* laces and porcelain. C. owes its celebrity to its having been, since 1632, the seat of the Princes de Condé, whose castle was one of the largest and finest structures in France, situated with its magnificent park and gardens in the midst of an extensive forest. Here, the "great Condé" lived in regal splendor, and the entertainments given by him to Louis XIV. were so sumptuous as to excite the jealousy of that monarch. At C., also, Racine, Molière, and Boileau were wont to recite their *chefs d'œuvre*, amid the applauses of all that was beautiful and chivalrous in France. The *Grand Château*, rebuilt in 1779, was destroyed during the revolution, and all that now remains is the *Petit Château*, the *Château d'Enghien*, and the stables; the latter, constructed between 1719 and 1735, are celebrated. The domain of C., 6,125 acres was given to France by the Duc d'Aumale (*q. v.*). The remains of Admiral de Coligni, butchered at the massacre of St. Bartholomew, are interred at C. Pop. 4,000.

Chantilly, in *Mo.*, a p. v. of Lincoln co.

Chantilly, in *Virginia*, a post-village near Fairfax Court-House, about 20 m. W. of Washington. Near it, on Sept. 1, 1862, a sharp action took place between a National force under Gen. Pope, and a Confederate corps commanded by Gens. Ewell and Hill, in which the former were defeated with considerable loss, among their dead being Gens. Phil. Kearney and Stevens.

Chan'tate, *n.* (Building.) A piece of wood fastened to the ends of the rafters, and projecting beyond the wall, to support two or three rows of tiles, so placed as to prevent the rain-water from trickling down the sides of the walls.

Chan'tor, *n.* Same as CHANTER, *q. v.*

Chan'tress, *n.* A female chanter or singer.

Chan'trey, SIR FRANCIS, R.A., an eminent artist, b. in England, 1782, excelled chiefly as a portrait sculptor. His principal works are the statues of William Pitt, and Canning, and the bust of Walter Scott. A statue of Washington from his chisel is in the State-House, at Boston. D. 1841.

Chan'try, *n.* [Fr. *chantrerie*, from *chant*.] (Ecol.) An endowed chapel where priests daily chant or say mass for the souls of the donors, or others whom they appoint.

Chao'logy, *n.* [From Gr. *chaos*, and *logos*, discourse.] A treatise on chaos. (R.)

Chaos, (kă'os,) *n.* [Lat. *chaos*; Gr. *chaos*, from the ancient *chaō*, to gape, to open wide, from the root *cha*.] A vast chasm; an empty unmeasurable space. — A huge confused mass: a vast shapeless heap; confusion; disorder.

"The anarchy of thought, and *chaos* of the mind." — *Dryden*. — The confused, unorganized state of matter before the Creator reduced it to form and order.

"Lo! thy dread empire, *chaos*, is restored." — *Pope*.

Chao's, or BIRD ISLANDS, several rocky islets off the coast of S. Africa, abt. 40 m. from Port Elizabeth.

Chaot'ie, *a.* Relating to, or resembling, chaos; confused.

Chao'tehon, in China. See SHAO-CHOO.

Chao'tehon, in China. See TCHAO-CHOO-FOO.

Chap, (chop,) *v. a.* [A. S. *gypan*, pp. *gyppd*. See CHOP and GAPE.] To gape; to cleave, split, crack, or open longitudinally.

"Crack the dry hill, and *chap* the russet plain." — *Blackmore*.

— *v. i.* To crack; to open in long slits; as, *chapped* hands. — *n.* An opening; a longitudinal cleft, gap, or chink, as in the surface of the ground.

Chap, (chop,) *n.* [A. S. *ceaplas*; Icel. *kiaftir*; Scot. *chaft*.] The jaw; that part of the mouth used in clawing or chewing; used properly with reference to animals, but also sometimes vulgarly to man; and, generally, in the plural.

"Froth fills his *chaps*, he sends a grunting sound." — *Dryden*.

Chap, *n.* [A contraction of *chapman*; but used in a more general sense.] A familiar colloquialism for a man or boy; as, a good-natured *chap*.

Chapa'tla, a lake in Mexico, in Lat. 20° 20' N., Lon. 102° to 103° W. It contains many islands, is traversed by the Río Grande de Lerma, and has an area of about 1,300 sq. m.

Chap'aral, *Chapp'aral*, *n.* [Sp., from *chaparra*, an evergreen oak.] A covert or thicket of stunted evergreen oaks. — Bush; scrub: a small thicket of low shrubs and thorny brush; a brake; as, he was lost in the *chap'aral*.

Chap'-book, *n.* A small book hawked about for sale by a chapman; hence, a primer or toy-book.

Chape, (châp,) *n.* [Fr. *chape*; from Lat. *capere*, to receive, contain; probably allied to Gr. *skēpē*, a covering.] The catch or hook attaching to anything, as the catch of a buckle, the hook of a scabbard, &c.

— The metal tip or case at the end of a scabbard.

"The whole theory of the war . . . in the *chape* of his dagger." — *Shaks.*

Chapean, (shâp'ō,) *n.* *pl.* CHAPEAUX, (shâp'ōz,) [Fr., a hat.] A hat; as, a *chapeau* bras.

(Her.) A cap, or head-covering.

Chapeau Bras, (shâp'ō brâ,) *n.* (Mil.) A hat which can be flattened and carried under the arm.

Chap'el, *n.* [Fr. *chapelle*; L. Lat. *capella*, dim. of *capra*, a kind of robe, formerly *caracalla*. The robe of a saint gave its name, *capella*, to the place it was kept in.] A place of worship, formerly distinguished from a church by the publicity of the worship to be performed; churches being for general use, and chapels (or little churches) for the special use of private individuals or particular households. From these the use of the term in Europe has been extended so as to include all religious edifices not of the established faith. There are also, in the Protestant, as in the Roman Catholic churches, chapels of ease to parish churches, built for the accommodation of worshippers in populous or extensive parishes. In Roman Catholic churches, portions of the main building, dedicated to particular saints, in honor of whom a service is there performed, are called chapels.

(Print.) An association of workmen in a printing-office for the purpose of promoting and enforcing order among themselves. (o.)

Chap'el, *v. a.* (Naut.) To wear a ship round, when taken aback, without bracing the head-yards.

Chap'el, in *Missouri*, a post-office of Howell co.

Chap'elain, JEAN, a French poet, and one of the earliest members of the French academy, b. at Paris, 1595. He was a courtier of Cardinal Richelieu, and the author of *La Pucelle* (the Maid of Orleans), an epic poem, the first cantos of which passed through 6 editions in 15 months, but soon fell under the criticism of Boileau, Voiture, and other men of taste. D. 1674.

Chape'less, *a.* Wanting a chape.

"An old rusty sword . . . and *chapeless*." — *Shaks.*

Chap'el Hill, in *Missouri*, a post-village of Lafayette co., 25 m. S.S.W. of Lexington.

Chapel Hill, in *New Jersey*, a P. O. of Monmouth co.

Chapel Hill, in *North Carolina*, a town of Orange co., 28 m. W. N. W. of Raleigh, on New Hope river. Here is the University of North Carolina. Population, in 1897, about 1,150.

Chapel Hill, in *Tennessee*, a post-village of Marshall co., 42 m. S. of Nashville.

Chapel Hill, in *Texas*, a post-village and township of Washington co., 3 m. W. of Brazos River, and 120 m. E. of Austin.

Chapel Hill, in *Virginia*, a P. O. of Fluvanna co.

Chap'ellany, *n.* A chapel built within the precincts of a church, to which it is subordinate.

Chap'ellet, (sometimes written CHAPLET,) *n.* [Fr. *chapelet*.] (Saddlery.) A pair of stirrup leathers furnished with stirrups, adjusted to the saddle.

Chap'elling, *n.* (Naut.) The act of wearing a ship round, when taken aback, without bracing the head-yards.

Chap'elry, *n.* [O. Fr. *capelerie*.] The bounds or jurisdiction of a chapel.

Chaperon, (*shāp'e-rōn*), *n.* [Fr., from *chape*.] A hood or cap.

—A decoration attached to the head of horses which drew the hearse in state funerals.

—One who attends on a lady to public places, as a guide or protector.

—In England, a hood or cap of state worn by the Knights of the Garter, when in full dress.

—*v. a.* To attend on a lady to public places.

Chapfallen, (*chāp'fawln*), *a.* Having the lower part of the month depressed: hence, dispirited, discouraged, dejected; as, a *chapfallen* look.

Chapin, EDWIN HUBBELL, D.D., an American clergyman, and one of the most powerful and effective pulpit orators of the U. States, b. in Union Village, Washington co., N. Y. In 1848 he took charge of the 4th Universalist Church in New York city, and received in 1856 the degree of D.D. from Harvard University. In 1850, he went to the Peace Convention at Frankfort-on-the-Main, and his speech before that assembly is perhaps the most celebrated of all his successes in popular oratory. D. Dec. 27, 1880.

Chapin, in Ill. a p.-o. of Morgan co. In Iowa, a p.-v. of Franklin co., about 100 m. N. by E. of Des Moines.

Chapinville, in Connecticut, a post-village of Litchfield co., 45 m. W. of Hartford.

Chapinville, or CHAPINSVILLE, in New York, a post-village of Ontario co., about 4 m. N.E. of Canandaigua.

Chap'iter, *n.* [Fr. *capiteau*; Lat. *capitulum*, from *caput*, head.] (Arch.) An obsolete word for the head or capital of a column. — See CAPITAL.

Chaplain, (*chap'lān*), *n.* [Fr. *chapelain*, from L. Lat. *capellanus*, from *capella*.] An ecclesiastic who has a chapel, or performs service in a chapel. — A clergyman who belongs to a ship of war, to a regiment of land forces, &c.; as, an army *chaplain*. — A divine retained to perform divine service in a family; as, a *chaplain* in ordinary.

Chap'lain, in Kentucky, a village of Nelson co., 15 m. E. of Bardstown.

Chap'laincy, *n.* Office or station of a chaplain.

Chap'lainship, *n.* The office or business of a chaplain. — The possession or revenue of a chapel.

Chap'less, *a.* Without any flesh about the mouth.

"Reeky shauks, and yellow chapless bones." — Shaks.

Chap'let, *n.* [Fr. *chapelet*, dim. of *chapel*, old form of *chaprau*, a hat, from Lat. *caput*, head.] A garland or wreath to be worn on the head.

"An od'rous chaplet of sweet summer's buds." — Shaks.

(Eccl.) A string of beads used by Roman Catholics for the recital of certain prayers. See BEAD and ROSARY. — A tuft of feathers on a peacock's head. — A small chapel or shrine. — (Saddlery.) A chapellet, (*q. v.*) — (Arch.) A moulding carved into beads, olives, and other ornamental devices.

Chap'tin, in Connecticut, a post-township of Windham co., on Natchaug River, 30 m. E. of Hartford.

Chap'tin, in Kentucky, a twp. of Nelson co.

Chap'tinton, in Kentucky, a village of Barren co., on Big Barren River, about 130 m. S.W. of Frankfort.

Chap'man, *n.*; *pl.* CHAPMEN. [A. S. *ceapman* — *ceap*, salable commodities, and *man*.] One who buys or sells; a vender or seller; a merchant; a cheapener; one who offers to buy.

"Fair Diomedes, you do as chapmen do,
Dispraise the thing that you intend to buy." — Shaks.

Chap'man, in Pennsylvania, a township of Clinton co.

—A post-township of Snyder co., on the Susquehanna River, 33 m. N. of Harrisburg.

Chap'man Quarries, in Pennsylvania, a post-office of Northampton co.

Chap'manville, in W. Virginia, a P. O. of Logan co.

Chap'paqua, in New York, a post-village of West Chester co., about 40 m. N.N.E. of New York city.

Chap'paral, in California, a village of Butte co., about 140 m. N. of Oroville.

Chap'pell's Bridge, in South Carolina, a post-office of Newberry district.

Chap'py, *a.* Gaping; open; full of clefts or fissures.

Chaps, *n. pl.* The two planes or flat parts of a vice or pair of tongs or pliers, for holding anything fast, and which are generally roughed with teeth. See CHAP.

Chap'tal, JEAN ANTOINE, COMTE DE CHANTELoup, a celebrated French chemist, b. 1756. In 1781, the States of Languedoc founded for him a chair of chemistry in the school of medicine. Having succeeded to the fortune of a rich uncle, C. instituted several establishments for the manufacture of chemical products. He improved the processes for the production of mineral acids, alum, soda, white lead, &c.; discovered a new method for dyeing Turkey red, and also naturalized barilla in the S. of France. He was afterwards appointed professor of chemistry in the school of medicine at Paris, and named by Napoleon minister of the interior. Under his administration chambers of commerce were founded, special encouragements granted to the industrial arts and manufactures, the culture of beet-root extended, and schools of trades established. On the return of Napoleon from Elba, C. accepted the direction of commerce and manufactures; and for his devotion to the imperial cause, his name was erased by Louis XVIII. from the list of peers. In 1816 he was elected member of the Institute; his declining years were marked by cruel reverses of fortune, and he d. in 1832. C. was a voluminous writer on science and political economy, and his *Chimie appliquée aux Arts* may still be consulted with advantage.

Chap'ter, *n.* [Fr. *chapitre*; Lat. *capitulum*, dim. of

caput, the head.] A division of a book or treatise; as, a *chapter* of the Bible.

(Eccl.) A society or community of clergymen belonging to a cathedral, collegiate church, or abbey. See CHAPTER-HOUSE.

—A decretal epistle.

—An organized branch of some society or fraternity; as, a *chapter* of Royal Arch Masons.

—The assembly of a certain organized society.

—A place of correction for offenders.

Chapter-house, *n.* The apartments attached to a collegiate church; a cathedral, or abbey, in which the heads of a chapter meet to transact business; they are usually of a very ornamental character as regards architecture. They generally either open into the church, or are entered by a passage. C. H. were also often used as places of sepulture. In Fig. 565 we present our readers with an illustration of the holding of the chapter of an

Fig. 565. — HOLDING OF A MONASTIC CHAPTER. (15th cent.)

abbey in the 15th century, taken from a MS. of that time, in the Bibliothèque Royale, Paris. When monks had been guilty of slight breaches of discipline, they confessed them, kneeling upon the low stool in the middle of the room, and upon a bow from the abbot, intimating his remission of the breach, they resumed their seats. If one had a complaint to make against any brother, it was here made and adjudged.

Chap'trel, *n.* (Arch.) The capital of a pillar or pilaster which supports an arch. (Sometimes called *impost*.)

Chapul'tepece, a strong castle crowning a height situated at 2 m. S.W. of the city of Mexico: it was stormed, by the Americans under Gen. Scott, Sept. 13, 1847. See MEXICO.

Chapultepee, in Alabama, a village of Blount co.

Char, (*chär*), *n.* [A. S. *cyran*, to turn, because the fish turns itself quickly in the water.] (Zool.) A name sometimes given to the *Salmo fontinalis*, or Brook-trout. See SALMON.

Char, (*chär*), *v. i.* [A. S. *cyrr*, *cerran*, to turn.] To do little turns or jobs; to work by the day.

—*n.* A single job or task; a turn of work by the day. (Called in the U. States, CHORE, *q. v.*)

"The maid that milks,
And does the meanest chars." — Shaks.

—*v. a.* To perform; to do.

Char, (*chär*), *v. a.* [From Lat. *carbo*, a coal.] To reduce to coal or carbon by burning: to burn partially; as, to *char* a piece of wood. — To work or hew, as stone.

Cha'ra, *n.* (Bot.) A genus of plants, order CHARACEÆ, *q. v.*

Chara'ceæ, *n. pl.* (Bot.) An order of plants, alliance *Algae*. They are water-plants, with distinct stems branching in a whorled manner, sometimes transparent, and sometimes coated with carbonate of lime. They occur in stagnant, fresh, or salt water in all parts of the globe, but most abundantly in temperate climates. When in a state of decay, they give off a very fetid odor, which is considered to be most injurious to animal life. *Chara* is the typical genus.

C. vulgaris, the Feather-bed, is a slender, flexible plant, of a dull green color, very common in our ponds and stagnant ditches.

Character, (*kar'ak-ter*), *n.* [Fr. *caractère*; Lat. *character*; Gr. *charakter*, from *charassō*, *charaxō*, to scrape, to cut, or engrave.] A distinctive mark; a seal, stamp, or impression; a letter, figure, or sign.

"He cut our roots in characters." — Shaks.

—Form or manner of writing; peculiar form of letters used by a particular person, class, or nation; as, an inscription in the Runic *character*.

"I found the letter. You know the *character* to be your brother's." — Shaks.

—Properties or qualities by which a person or thing is separated from another or others; as, a person of doubtful *character*.

—Reputation, or the credit of possessing good qualities; as, a man of *character* — *e. g.* good *character*.

"I leave my *character* behind me." — Sheridan.

—The person with his assemblage of qualities.

"He must outshine the rest of all the *characters*." — Dryden.

—The assemblage of qualities simply; as, a person of decided *character*.

"'Tis from high life high *characters* are drawn." — Pope.

—Quality; capacity: that moral attribute which attaches to a person as the holder of a prominent position or office.

"The chief honor of the magistrate consists in maintaining the dignity of his *character* by suitable actions." — Addison.

—One who possesses or assumes a specific character; as, a *character* in a play, a literary *character*, &c.

—Description; account; relation of anything, whether good or bad.

"This passage is much mended, since Seneca gave so bad a *character* of it." — Addison.

(Music.) The conventional form in musical writing and printing, used for signs of clefs, notes, rests, &c.

(Fine Arts.) The art of giving to the different objects in a picture their appropriate and distinguishing appearance or characteristic.

(Law.) The opinion generally entertained of a person, derived from the common report of the people who are acquainted with him. The moral C. and conduct of a person in society may be used in proof before a jury, to afford a presumption that a particular party has not been guilty of a criminal act; and to impeach or confirm the veracity of a witness.

(Bot.) A list of the points by which any particular variety, species, genus, sub-order, order, sub-class, or class, is distinguished from another. There are two kinds of characters, called respectively *essential* and *natural*. By an essential character is understood an enumeration of those points only by which any division of plants may be distinguished from others of the same nature, to which, in the present work, we give, after Lindley, the name of *Diagnosis*. A natural character on the other hand, is a complete description of a given species, genus, order, or class, including an account of every organ, from the root upwards, through the stem, leaves, flowers, fruit, and seed.

Char'acter, *v. a.* To inscribe; to engrave.

"Show me one scar *character'd* on thy skin." — Shaks.

—To describe; to characterize, as by particular or specific traits or configurations.

"Unmoulding reason's mintage
Character'd in the face." — Milton.

Characteristic, **Characteris'tical**, *a.* [Gr. *charakteristikos*.] That constitutes the character; that marks the peculiar distinctive qualities of a person or thing; appropriate; as, a *characteristic* trait.

—*n.* That which constitutes character; that which distinguishes a person or thing from another; distinctive feature or quality.

"The great and peculiar *characteristic* which distinguish him from all others." — Pope.

(Math.) In Logarithms, the positive or negative integer to which a positive decimal, the mantissa, must be added in order to obtain the logarithm itself. — See LOGARITHMS.

Characteris'tically, *adv.* In a manner that distinguishes character.

Characteris'ticalness, *n.* State or quality of being characteristic; distinctive mark of character.

Characterization, *n.* Act of characterizing.

Char'acterize, *v. a.* [Gr. *charakterizō*, from *chara*, impress or stamp, mark.] To distinguish with a special stamp, mark, or figure.

"Grecian faces are *characterized*." — Arbutnot.

—To give a character to; to describe or exhibit a man's personal qualities or characteristics.

"We have avoided publicly to *characterize* any person." — Sw.

—To distinguish, designate, mark, or express the character of; to compose the peculiar features or qualities of; as, a black skin *characterizes* the negro.

Char'acterless, *a.* Without any distinctive character.

Charad'ride, *n. pl.* (Zool.) The Plovers, a family of birds, order *Grallatores*. They are in many respects allied to the Wader tribes, but generally partake of the nature of land-birds, and should therefore be more properly

classed with them. Many breed upon the loftiest mountains, and though they are sometimes seen feeding upon the sea-shores, yet they are no more water-birds, on that account, than many of our small birds which repair thither for the same purpose. They are gregarious, and are generally seen in meadows or on the sea-shore, in search of food, which they procure by stirring the earth or mud with their feet, and thus inviting worms and aquatic insects to the surface. They are generically distinguished by a large full eye; the bill is straight, sharp, and rather swollen towards the tip; the head and legs naked above the knee; and most of the species without the hind toe. The Golden Plover, *Charadrius*

Fig. 566. — GOLDEN PLOVER
(From Tenny's Zoology.)

virginicus, type of the genus *Charadrius*, is a bird of both hemispheres. Its length is about 10 inches. On all the upper parts of the plumage the feathers are indented on the edge with bright yellow spots upon a dark brown ground; the front of the neck and the breast are the same, but much paler; the belly is almost white; the quills are dusky; the tail is marked with dusky and yellow indentings and bars; the legs are black; and the bill is dusky.

harade, (*sha-rād'*) *n.* [Fr., from the name of the inventor.] A species of enigma, or riddle, the subject of which is a name or word that is proposed for solution from an enigmatical description of its several syllables taken separately as so many individual words, and then from a similar description of the whole name or word. A charade can only be called complete when the different enigmas which it contains are brought into a proper relation to each other, and, as a whole, unite in an epigrammatic point. The following is a good example, from the French:—"My first makes use of my second to eat my whole;" the first being *chien*, a dog; the second *dent*, a tooth; and the whole *chiendent*, dog's-grass.

har'bon, *n.* [Fr.] (*Farriery*.) A small, black spot or mark remaining after the large spot in the cavity of the corner-tooth of a horse is gone.

har'coal, *n.* (*Chem.*) A form of carbon under a great number of aspects; such as gas-carbon, coke, wood-charcoal, lamp-black, and ivory-black. *Gas-carbon* is a very pure kind of charcoal gradually deposited in the insides of gas-retorts. *Coke* is dense charcoal, made by burning coal in a retort or coke-oven from which the air is excluded. It is much used in Europe as a fuel for locomotives, from giving out no smoke, and from being much lighter than coal. *Wood-charcoal*, although but little used as a fuel, is a very important element in the manufacture of gunpowder. The most perfect charcoal is, of course, that which is used in this manufacture. (See *GUNPOWDER*.) Thoroughly-burnt charcoal is bluish-black, and varies in density according to the porosity of the wood from which it was made. Charcoal possesses the property of absorbing gases in large quantities. (See *CARBON*.) *Lamp-black* is carbon deposited by any combustible burnt without sufficient air. (See *LAMP-BLACK*.) *Ivory-black*, *bone-black*, or *animal charcoal*, will be found described under the head of *IVORY-BLACK*. Gas-charcoal and coke are employed as elements in galvanic batteries, and to form the carbon-points for the electric lamp. For the latter purpose, a mixture of nigar and tar is sometimes burnt in moulds, by which means a very pure kind of charcoal is made to any desired shape. Charcoal is a conductor of electricity, and is thence used to surround the earth-terminals of lighting-conductors. Charcoal is one of the most indestructible substances in nature. Being perfectly non-volatile, and possessing no affinity for any other element at ordinary temperatures, it forms the most lasting ink possible; and papyri penned with carbon ink are as legible and perfect as on the first day they were written.

ard, *n.* [Fr. *chardon*; Sp. *cardo*; Lat. *carduus*, a thistle or artichoke.] A term used for the footstalks and midrib of artichokes and cardoons when they are lanced and made palatable by exclusion of the light;—a name applied also to the white beet.

ard, a parish and town of Somersetshire, England, 2 m. from Taunton; *pop.* of parish abt. 6,000. Here the royalists were defeated in the civil war of the time of Charles I.

ardin, SIR JOHN, (*shar'dū*), a French traveller and merchant, b. in Paris, 1643. He twice visited Persia, remaining several years each time, between 1664 and 1677. On his return, being a Protestant by birth, he was compelled to seek refuge in England, where he settled as a writer to the court and nobility, and was knighted by Charles II. In 1683 appeared a folio volume of his travels, which has been verified by subsequent travellers, and translated into many foreign languages. D. 1713.

ard'ón, in *Ohio*, a town, cap. of Geauga co., 30 m. N. of Cleveland. In a rich farming and dairying district. *Pop.* (1897) about 1,250.

are, *n.* A name for a short, narrow street; used in some parts of England.)

arente, (*sha-ront*), a large river of France, rising in the d-p. Haute-Vienne, 12 m. from Chalus, and, after a course of 200 m., falling into the Atlantic, opposite the land of Oléron.

arente, an inland dep. of France, dist. of the W., formed principally out of the ancient prov. of Angoumois, takes its name from the Charente by which it is traversed; and has N. the Deux-Sèvres and Vienne, E. the Haute-Vienne, S. Dordogne, and W. the Charente-Inférieure. *Area*, 3,270 sq. m. *Surface*. Diversified. *Soil*. Various. *Prod.* Cereals, and braudry. The vineyards cover the major part of the lands, and yield the finest brandy (Cognac) in the world. Hemp, flax, and truffles are also extensively raised. *Manuf.* Iron, paper, linen, cloth, pottery, &c. The dep. is divided into 5 arrond. *Chief towns*. Angoulême, Cognac, Ruffec, and Confolens. *Pop.* 378,218.

arente-Inférieure, a maritime dep. of France, on the W. coast, deriving, like the foregoing, its name from the Charente, by which it is intersected; having N. the Vendée, N.E. Deux-Sèvres, E. Charente, S. the Gironde, and W. the Atlantic Ocean. *Area*, (including the islands of Oléron, Ré, and Aix.) 3,763 sq. m. *Surface*. Partly marshy. *Soil*. Mixed. *Prod.* Cereals, by rotation of crops. Vineyards cover a large spread of territory, and their produce is chiefly converted into brandy. It is largely obtained, and the sardine and oyster fisheries are extensively carried on. *Manuf.* Sugar, cotton, earthenware, woollens, &c. The dep. is divided

into 6 arrond. *Prin. towns*. La Rochelle, Rochefort, Saintes, and St. Jean d'Angely. *Pop.* 479,529.

Charenton, in *Louisiana*, a post-village of St. Mary's par., on the Tche River, 80 m. from the Gulf of Mexico.

Charenton-le-Pont, a town of France, dep. Seine, on the Marne, 4 m. S.E. of Paris, now forming a portion of the fortifications of Paris; *pop.* 6,000.

Charette' de la Contrie, FRANÇOIS ATHANASE, a French royalist, and one of the heroes of the Vendean war, b. 1763. When the outbreak of the Breton royalists took place in 1793, C. was elected their leader, and gained three signal victories over the republicans. In March, 1796, C., after being attacked by an overwhelming force, was taken prisoner to Nantes, tried by a military commission, and summarily executed. The death of this able soldier put an end to the war in La Vendée.

Char'fron, *n.* (*Mil.*) Same as *CHAMFRON*, *q. v.*

Charge, (*zhärj*) *v. a.* [Fr. *charger*; It. *caricare*, from car, *lit. carrus*. See *CARGO*.] To load or burden; to place a load or burden upon; to impose that which oppresses; as, to *charge* the stomach with an over-quantity of food.—To impose, lay on, or fill without oppressing; as, to *charge* one's memory with maxims.—To intrust to; to commission for a specific purpose; followed by *with*; as, to *charge* an envoy with instructions. To set or lay on; to impose as a tax; as, the land is *charged* with a mortgage.—To set, lay on, or impose as a task, trust, or duty, (preceding *with*.)

"The Gospel *chargeth* us with piety towards God."—Tillotson.

—To put or lay on, in the sense of a superfluity; as, to *charge* a building with ornaments.—To lay on in words; to impute to; followed by *on* before the person; as, to *charge* an offence on a criminal.—To set to, or impute, as a debt; to place to the debit side of an account; as, to *charge* for goods sold.—To load or lay on, with the imputation of wrong-doing; as, to *charge* a man with theft.—To censure; to accuse.

—To load, as a cannon or musket; to thrust in powder and ball, or shot; as, to *charge* a gun carefully.

—To enjoin; to exhort; to give or communicate, as an order, command, or earnest request.

"I *charge* thee answer to what I shall require."—Dryden.

—To instruct authoritatively; to give directions to; to address; as, to *charge* a jury.

—To communicate electric matter to; as, to *charge* a coated vial.

—To rush; to fall on; to attack; as, to *charge* with a bayonet.

—*v. i.* To make a charge or onset on an enemy.

"Charge, Chester, *charge!* on, Stanley, on!"—Sir W. Scott.

—*n.* [Fr. *charge*.] The person or thing committed to another's custody, care, or management; as, a minister's *charge*.

—An order, injunction, mandate, or command; as, a judge's *charge*.

"The king gave *charge* concerning Absalom."—2 Sam. xxiv.

—Trust; commission; office; duty; employment.

"True to his *charge*, a loyal swain and kind."—Pope.

—Imputation in a bad sense; accusation.

"We need not lay new matter to his *charge*."—Shaks.

—That which constitutes a debt in commercial transactions: an entry of money on the debit side of an account.—Cost; expense (commonly in the plural); as, the *charges* of the war.

—Imposition on land or estate, as rent, tax, &c., or whatever constitutes a burden or duty; as, a rent-*charge*.—An assault, onset, or attack; a rush on an enemy; as, a cavalry *charge*.—A signal to attack; as, to sound the *charge*.—Posture of a weapon fitted for attack or combat; as, to bring a bayonet to the *charge*.

"Their armed staves in *charge*, their bearers down."—Shaks.

(*Farriery*.) A preparation of thick unguent matter, used as a remedy for sprains and inflammations.

(*Arm.*) A term signifying the various bearings, *i. e.* ordinaries, and figures depicted on the escutcheon. A shield is said to be *charged* with the bearings depicted on it; and so is an ordinary or other charge, when it bears another device upon it. See *HERALDRY*.

(*Electricity*.) The accumulation of the electric matter on one surface of an electric, as a pane of glass, Leyden jar, &c., whilst an equal quantity passes off from the opposite surface.

(*Mining*.) Any quantity of ore put at one time into a furnace to fuse is called a *charge*; letting it out is called *tapping*.

(*Gun.*) The quantity of powder which is necessary to fire a ball, shell, or bullet from any kind of cannon or fire-arm. The charge for different kinds of artillery, and for different purposes, varies from one-twelfth to one-half the weight of the projectile. Smooth cannon require a smaller charge than those with rifled bores; and in firing against a vessel, or a body of troops at a short range, a smaller charge is needed for the same gun than would be required for breaching the walls of a fortress.

(*Painting*.) An exaggeration of character in form, color, or expression. (Sometimes called *overcharge*.)

Chargeable, *a.* That may be charged; that may be set, laid, or imposed; liable to be charged; as, a commodity *chargeable* with duty.—Imputable as a crime, fault, or debt; subject to be charged or accused; as, a man *chargeable* with arson; land *chargeable* with a debt. Expensive; costly; serving to cause expense; as, "the *chargeable* methods of their education."—Atterbury.

Chargeableness, *n.* Cost; expense; burden.

Chargeably, *adv.* Expensively; at great cost.

Chargé d'affaires, (*shär-zhä'däf-fär'*), *n.* [Fr.] A diplomatic representative at a foreign court of the lowest class, according to the regulations adopted at the Congress of Vienna. He is accredited not to the sov-

eign, but only to the individual who, for the time being, holds the office of principal secretary of state or minister for foreign affairs. Sometimes he is only empowered to act during the absence of the ambassador; at other times, he is independent of any ambassador.

Chargeless, *a.* Free of charge or expense.

Charg'er, *n.* Formerly, a large dish to hold a heavy charge or quantity.

"Give me here John the Baptist's head in a *charger*."—Matt. xiv. 3.

—A horse on which the rider charges the enemy; a horse used in battle; as, an officer's *charger*.

Charge'ship, *n.* Office or function of a charge d'affaires.

Char'ily, *adv.* Carefully; warily; frugally.

"What paper do you take up so *charily*?"—Shaks.

Char'iness, *n.* Quality of being chary; caution; care; nicety; scrupulousness; frugality.

Char'iot, *n.* [Fr., dim. of *char*, a car.] (*Antiq.*) A car or vehicle employed in ancient times in war or for pleasure. We read of them as early as the time of Pharaoh, and they were frequently armed with scythes, as seen in Fig. 567. The ancient chariots had only two wheels, which revolved upon an axle, and were usually drawn by two horses. Among the Romans, however, there

Fig. 567. — ROMAN WAR-CHARIOT.

were also three- and four-horse chariots. The triumphal chariots of the Romans were often most splendidly adorned.—See *BIG A*.

—A half-coach; a carriage with four wheels, used for convenience and pleasure.

—*r. a.* To carry or convey in a chariot. (*r.*)

Chariotee', *n.* A kind of four-wheeled pleasure-carriage.

Charioteer', *n.* The person who drives or conducts a chariot.

"Show us the youthful handsome *charioteer*."—Prior.

Char'iot-man, *n.* The driver of a chariot.

Charism, (*ka'rizm*), *n.* [Gr. *charisma*, gift.] (*Ecol.*) A term frequently employed in the early Church to denote the extraordinary endowments conferred on the primitive Christians; as the gifts of tongues. It was also applied sometimes to baptism.

Char'itable, *a.* [Fr., from L. Lat. *charitabilis*.] Full of charity; benevolent and kind; indulgent.

"Be thy intents wicked or *charitable*!"—Shaks.

—Liberal to the poor; bountiful; beneficent.

"What his hard heart denies,
His *charitable* vanity supplies."—Pope.

—Pertaining to, or partaking of, charity; intended for charity; springing from charity; as, a *charitable* institution.

—Kind and favorable in judging of others; lenient; disposed to tenderness; as, a *charitable* view of a case.

"By a *charitable* construction it may be a sermon."—Bacon.

Char'itableness, *n.* Quality of being charitable.

Char'itably, *adv.* In a charitable manner; kindly; liberally; benevolently; with a disposition to help the poor; favorably.

"And *charitably* let the dull be vain."—Pope.

Charité, (*La*), a town of France, dep. Nièvre, on the Loire, well known for its coarse jewelry; *pop.* 5,826.

Char'ites, *n. pl.* [Gr.] (*Myth.*) The Greek name of the GRACES, *q. v.*

Char'iton, or GRAND CHARITON RIVER, rises in Iowa, and falls into the Missouri River near the S. extremity of Chariton co., Mo. It is about 250 m. long, and is navigable for 50 miles.

Char'iton, in Iowa, a thriving city, cap. of Lucas co., about 50 m. S.S.W. of Des Moines. *Pop.* (1897) abt. 4,000.

Chariton, in Missouri, a N. county; *area*, 740 sq. m. It is bounded on the S.W. by the Missouri river, on the W. by Grand river, and is intersected by the Chariton. The soil is fertile, and the surface gently undulating. *Cap.* Keytesville. *Pop.* (1890) 26,260.

—A township of the above co., near the Missouri River, about 62 m. N.W. of Jefferson City.

Chariton Mills, in Missouri, a small vill. of Adair co.

—A township of Schuyler co.

Char'ity, *n.* [Fr. *charité*; Lat. *charitas*, *caritas*—*carus*, dear, costly; Gr. *agape*, love.] One of the three great theological virtues, consisting of love to God and our neighbors, or the habit and disposition of loving God with all our heart and our neighbor as ourselves. In a narrower sense, it signifies kindness, good-will, and forbearance towards mankind in general, and in a still lower sense, the giving of alms and the alms itself. This love to our neighbors, which is one of the greatest and noblest of Christian virtues, is not of a blind, indiscriminating character. True charity attempts not to shut our eyes to the distinction between good and bad men,

nor to warm our hearts equally to those who befriend and those who injure us; it teaches us to slight and despise no man, and inspires us with forgiveness and humanity towards our enemies, with respect and esteem for good men, and with candor and complacency towards our friends.

—A charitable institution or society; as, a Ladies' *Charity*. (*Sisters of*.) See SISTERS OF CHARITY.

Charity-school, *n.* A school voluntarily maintained by charitable subscriptions.

Charivari, (*shîr'ra-ree'*) *n.* [Fr.; etymology uncertain.] Properly, a loud, discordant noise, produced by the beating of kettles, pans, and other domestic utensils, mingled with shouts, groans, and hisses. In this way, popular dislike was frequently manifested towards a person in France, in the Middle Ages; and widows contracting second marriages, or persons of disproportionate ages marrying, were, and are still now, often annoyed in this way in certain parts of the country. Hence, the term came to be applied to political squibs and satires against public men; and in this sense it was adopted as the title of a work published in Paris with much success. It may be mentioned that the name of a German periodical of the same kind, *Kladderadatsch*, published in Berlin, also implies a loud, discordant noise, such as is occasioned by the beating of kettles and pans.

Charkoff, in Russia in Europe. See KHARKOFF.

Charlatan, (*shîr'la-tan*), *n.* [Fr.; It. *ciarlatano*, from *ciarlare*, akin to Sp. *chiarlar*, to prate; L. Lat. *correre*, *tanus*, from *Corretum*, a town of Spoletum.] An itinerant vender of medicines; a quack; an empiric; a mountebank; one who makes unwarrantable pretensions to anything.

"Saltimbancoes, quacksalvers, and charlatans." — Browne.

Charlatanical, *a.* Quackish; making undue pretensions to skill; empirical; ignorant; as, a "Charlatanical doctor." — Cowley.

Charlatanically, *adv.* After the manner of a charlatan.

Charlatanism, Charlatanism, Charlatany, *n.* Humbug; quackery; empiricism. — Undue pretensions to skill; quackery; deception by fair words. *C.* is to be found among all classes of society, and manifests itself in various ways, according to the object and character of the person. In literature, in science, in politics, and even in religion, there are to be found many who pretend to greater knowledge, or power, or virtue, than they possess.

Charlemagne, (*shîr'l-mân*), [Fr.; Ger. *Karl der Grosse*, Lat. *Carolus Magnus*, Charles the Great,] king of France, and emperor of the West, B. April 2, 742. This illustrious prince, the restorer of order and obedience in a state of society when only the most commanding talents and heroic steadfastness of purpose could have availed him in a struggle against anarchy and ignorance in their worst forms, was the grandson of Charles-Martel, king of the Franks, and lived 742-814, master of an empire which embraced all France, a part of Spain, more than half of Italy, and nearly all Germany. To feel his greatness adequately, it must be remembered that all the ancient landmarks of social order had been overthrown with the colossal Roman power, and that the whole civilized world was covered with its ruins and infested with its crimes. The ancient seat of empire was divided among a score of petty tyrants; the Saracens had overrun Spain and threatened the farther west; the northern kingdoms were only known as the cradle of adventurous armies, whose leaders in after years organized the feudal governments of Europe; Russia did not even exist; and England was just emerging from the confusion of the Heptarchy. Some two centuries before, 507-511, Clovis had founded the Frankish monarchy and established himself at Paris, but his power was that of an absolute military chief, and he was succeeded by a line of phantom kings, whose action is scarcely distinguishable from that of the barbarous fermentation going on around them. At length Pepin Heristal and his son Charles Martel slowly paved the way for a new authority, the former by familiarizing men's minds with justice and goodness in the sovereign; and the latter by his heroic resistance to the Saracens, and the promise of an irresistible power in the government. The successes of *C.* were the natural issue of these circumstances,

the principal events and dates is all that we can give in the space to which we are limited. In 768 *C.* succeeded to the government conjointly with his brother Carloman; and on the death of the latter, in 771, became sole master of France by wisely refusing to divide the authority with his nephews. In 770 he subdued the revolt of Aquitaine. In 772 he marched against the still idolatrous Saxons, and commenced a conflict which he maintained for upwards of 30 years. In 773 he crossed the Alps, and was shortly crowned king of Lombardy, and acknowledged suzerain of Italy by the pope, with the right of confirming the papal elections. In 778 he carried his arms into Spain, and pursued his victorious career as far as the Ebro, but was surprised on his return in the pass of Roncesvalles, where many of his knights perished, and among the rest Orlando, or Roland, his nephew, the hero of Ariosto. In 780 Louis le Débonnaire, his youngest son, was crowned by the pope king of Aquitaine, and Pepin, his 2d son, king of Lombardy, both at Rome. Between 780 and 782 he visited a terrible retribution upon the Saxons, and compelled their chief to accept Christian baptism. Towards 790 we find him establishing seminaries of learning, and doing all in his power to elevate the character of the clergy, the most of whom had hitherto known little but the Lord's Prayer; besides engaging in projects for the acceleration of commerce, the general improvement of the people, and the promotion of science. Before the end of the century he had invaded Pannonia, and extended his dominions in this direction to the mountains of Bohemia, and the Raab. In 800 he was crowned at Rome emperor of the west; and in 803 was negotiating a union with Irene in order to consolidate the eastern and western empires, when the empress was dethroned and exiled by Nicephorus. From this period to his death, which took place at Aix-la-Chapelle, in the 71st year of his age, and the 47th (Jan. 28, 814) of his reign, he was engaged in fortifying the coasts of France against the Northmen, and various matters relating to the security and the prosperity of the empire, including the settlement of the succession. In person and manners *C.* was the perfection of simplicity, modesty, frugality, and, in a word, of true greatness; and though he was too much given to the society of women, he had the reputation of a good father, a tender husband, and a generous friend. He was indefatigable in all the duties of government, and whether in the camp or the court, had fixed hours for study, in which he took care to engage his courtiers by forming them into an academy. "For shame!" he exclaimed, to one who came before him attired more elegantly than the occasion demanded, — "dress yourself like a man; and if you would be distinguished, let it be by your merits, not by your garments." His nearest friend and companion was the illustrious Alcin, and his fame was so widely spread that the only man, perhaps, of kindred genius in that age, the great Caliph Haroun-al-Raschid, courted his good will and complimented him by an embassy bearing presents. Before his death, *C.* confirmed the succession of his son Louis, by an august ceremony. Placing the imperial crown upon the altar, he ordered Louis to take it with his own hands, that he might understand he wore it in his own right, under no authority but that of God. See Vétault's Life of *C.*

Charle'mont, JAMES CAULFIELD, 1ST EARL OF, a distinguished Irish patriot; B. 1728. In 1783, this popular noble was selected to command the great national body of Irish Volunteers, 80,000 strong, of all ranks and classes, politics and creeds, organized to resist the encroachments of the British Tory government of that day. Lord Charle'mont D. in 1799.

Charle'mont, a town of Ireland, co. Armagh, on the Blackwater, 8 m. from Armagh; pop. 600.

Charle'mont, a French fortress standing opposite Givet, near the Belgian frontier.

Charle'mont, in Massachusetts, a post-township of Franklin co., about 50 m. N.E. of Springfield, on Deerfield River, and on the line of Hoosick Tunnel Railroad; pop. 1,005.

Charle'mont, in Virginia, a post-office of Bedford co. **Charleroi**, a fortified and important manufacturing town of Belgium, prov. Hainault, on the navigable river Sambre, 33 m. S. of Brussels. The town is the centre of the large coal-basin of Charleroi. *Manf.* Iron, glass, fire-arms, cutlery, slates, woollens, leather, tobacco, sugar, soap, rope, &c. The fortress of *C.* was built in 1666, and named after Charles II. of Spain. *C.* has sustained several memorable sieges, and been successively possessed by the Spaniards, Austrians, and French. Pop. 13,300.

Charles, the name of a number of eminent European sovereigns and princes, whom we notice in the alphabetical order of their respective countries, viz.:

BADEN.

CHARLES FREDERICK, MARGRAVE, and GRAND-DUKE OF BADEN. B. at Carlsruhe, 1728. At the period of the first French revolution he lost his possessions in Lorraine and Alsace, and so anxious was he to retain friendly relations with France, that in 1804 he issued a decree of exclusion against all emigrants, and every individual attached to the army of Condé. He was faithful to the fortunes of Napoleon, owing to whose influence he had considerably extended his dominions. In 1803, Napoleon conferred upon him the title of Grand-Duke. D. 1811.

CHARLES LOUIS FREDERICK, GRAND-DUKE OF BADEN, grandson of the preceding, B. 1786. In 1804, he assisted at the coronation of Napoleon, and, in 1806, married his adopted daughter Stéphanie Tascher de la Pagerie to Eugene de Beauharnais, (q. v.) He subsequently distinguished himself at the battle of Jena, and at the siege of Dantzic. He was among the last to abandon the French alliance,

but succeeded in preserving his dominions intact, and D. 1818.

BURGUNDY.

C. DUKE OF BURGUNDY, and COUNT DE CHAROLAIS, surname THE BOLD, was the son of Duke Philip the "Good," and was B. in 1433. The mild and free government of Philip had raised the duchy to a degree of prosperity unparalleled at any former period. During the greater part of his reign, *C.* was at enmity with his feudal superior Louis XI. of France. In his father's lifetime, he headed a conspiracy of the principal French nobility, and marched with a powerful army towards Paris in 1455. A battle took place at Montlhéry, where, after an obstinate struggle, *C.* remained master of the field. In 1467 he succeeded his father on the throne of Burgundy, and next year entered into a league against his suzerain, along with the Duke of Brittany, and Edward IV. of England. Louis, to detach *C.* from this combination against him, invited him to a conference at Peronne, fortified town of Picardy belonging to the duke. Unfortunately for the success of his schemes, however, the city of Liege, instigated by the gold of Louis, revolted against *C.* and massacred many of his followers. In retaliation for this outrage, *C.* made the French monarch a prisoner, and it was only by great payments of money and other concessions that Louis succeeded in obtaining his liberty. *C.* then punished with great severity his rebellious Flemish cities, invaded France, captured several important towns, and wasted that country with fire and sword, along with Alsace and the duchy of Lorraine. He was compelled, however, to raise the siege of Nancy, the possession of which would have made him master of the Rhine, and felt deeply mortified by the failure of his attempt to obtain the kingly dignity when apparently on the eve of success. Afterwards becoming involved in a war with the Swiss, *C.* was ignominiously routed by them at Grandson, in 1472. He again essayed the project of conquering Switzerland, and attacked the combined Swiss and German forces at Morat, near Fribourg, when he was a second time defeated, with the loss of 18,000 men. This second disaster was followed by the defection of most of his allies, and the loss of the city of Nancy, and the greater part of Lorraine. Still resolved to conquer, *C.*, despite the advice of his ablest officers, laid siege to Nancy, and upon the Duke of Lorraine advancing to its relief at the head of a powerful force, met him with fewer, and dispirited numbers, gave battle, and after a desperate engagement, was defeated and killed, being pierced by six mortal wounds, 1477. He was intrepid beyond most men, but rash and over-ambitious; which latter quality, along with his violent and headstrong temper, brought him to ruin. After his death, Burgundy was seized by the crafty Louis, and annexed to the French crown; *C.*'s Flemish possessions devolving to his daughter, the celebrated MARY OF BURGUNDY, q. v. — An excellent *History of Charles the Bold* by J. P. Kirk, was published in London, 1866.

ENGLAND.

CHARLES I., the 2d son of James I. of England, and VI. of Scotland, B. 1600. The death of his elder brother Henry, Prince of Wales, in 1612, opened for him the succession to the throne. He received an excellent education, and was of a gentle and serious, but weak and obstinate disposition. In 1623, he, accompanied by a friend and favorite, the Duke of Buckingham, (q. v.) undertook a journey incognito to Madrid, in quest of the hand of a Spanish princess. This match being broken off through the artifices of Buckingham, *C.*, in 1625, espoused Henrietta Maria, daughter of Henry of France, and the same year he succeeded his father to the throne. *C.* was a man thoroughly inoculated with the dictum of the "divine right of kings," and speedily brought himself into collision with the growing intelligence of the age he lived in. Under the advice of bad ministers, as Strafford, Laud, and Buckingham,

Fig. 569. — CHARLES I. (After Vandyke.)

adopted tyrannous measures for the support of the authority against the progressing power of the people, represented by the lower house of Parliament, levying of unjust taxes, and the adoption of ill-

Fig. 568. — CHARLEMAGNE.
(Golden coin, Cabinet of Medals, Paris.)

under the command of his ambition and vast genius, favored by the compliance of the popes, who were willing to encourage a Christian protectorate in the West as a counterpoise to the eastern empire of Irene, and the dreaded power of Haroun-al-Raschid. A catalogue of

modes of raising money supplies, soon precipitated the inevitable collision between the crown and the constitution. After dissolving two parliaments, *C.* summoned a third in 1628, which voted the king £280,000, but refused to pass this vote into law, until the king gave his solemn assent to the *Petition of Rights*—the 2d charter of English liberties, as it has been termed,—by which he bound himself to abstain from forced loans and other illegal taxes, and from arbitrary imprisonments, and the billeting of soldiers upon the people. *C.*, after subscribing to this covenant, violated his promise, and finding that the Commons were determined to vindicate their rights, dissolved parliament on the 10th of March, and committed five of its members to prison for contumacy. *C.* now resolved to govern alone by calling no more parliaments; and ship-money was for the first time levied from the inland counties. At length, the king and his advisers provoked an open revolt in Scotland, by forcing a liturgy (a thing Presbyterians abhorred) upon her people; whereupon they abolished episcopacy, kept up a determined front, and *C.* in vain determined to coerce them. Under these circumstances, he, in 1640, assembled a new parliament, the members of which were moderate men, but still, men who were indisposed to countenance his arbitrary proceedings. He accordingly dissolved that body, and was compelled to come to a truce with the Scots, who had entered the N. of England in force. The houses met again in the same year, brought in a bill of attainder against Strafford, *q. v.*, and had him executed; imprisoned Laud, abolished the Star Chamber and High Court of Commission, and curbed the royal prerogative in other important matters. Things now went on from bad to worse, and both parties had become so thoroughly embittered and disgusted, that no other course was left but a final arbitrament by the sword. The king raised the royal standard at Nottingham in Aug., 1642, and to it flocked the majority of the nobility, gentry, and yeomanry of the land; the parliament troops, on the other hand, being composed of the citizens of towns and the artisans of London. Our limits will not permit us to enter into the details of this great civil war. The battle of Marston Moor was the first signal blow inflicted on the royal cause. The hotly disputed battle fought at Naseby, in Yorkshire, June 4, 1645, was that which decided the fate of *C.* Six months after this decisive defeat, *C.*, tempted by his evil genius, withdrew to Scotland, a country in which his name was held in odium, owing to the persecutions of Laud; where, throwing himself upon the more than doubtful fidelity of Lord Leven, the Scottish general, and his army, he was basely delivered up by the Scots to the English parliament upon payment (blood-money!) of £400,000. The fallen monarch was first confined by the Parliamentary commissioners in Holmby House, Northamptonshire. Here he was seized by the army, (which had now dissevered itself from the Parliament,) or, in other words, by Cromwell, and removed to Hampton Court, whence, after a futile attempt at escape, he was taken to Carisbrooke Castle, in the Isle of Wight. Here he carried on negotiations with the Parliament, who were willing to restore him under certain conditions, in order thus to overrule and break down the ascendant military power. But Cromwell, anticipating them, again seized the king's person, had him conveyed to Hurst Castle, near Lympington, Hampshire; and then, clearing out and crushing Parliament by "Pride's purge," prepared for the closing act of the great drama by having the captive sovereign brought to London, and put upon his trial before a High Court of Justice appointed for the occasion, on the previously unheard-of charge that it was treason in a king to levy war against his parliament. This extraordinary trial commenced on the 20th of January, 1649, and lasted during four sittings. *C.*, when called upon, spoke in his own defence, with calm, sustained dignity, and unadorned eloquence. Sentence of death was pronounced upon him. His demeanor and bearing throughout his trial, and to the mournful end, have commanded the admiration, respect, and sympathy of historians and of posterity. He was allowed 3 days to prepare for his decapitation, and was permitted to see all who remained of his family in England,—the Princess Elizabeth and the Duke of Gloucester, a child of about 3 years old,—the accounts given of his interviews with whom are most touching. On the fatal morning he rose early, bade his attendants dress him with unusual care, for, as he said, so great a solemnity; and having performed his devotions, walked to the scaffold, which had been erected in front of Whitehall, with a steady step, and since he could not expect to be heard by the vast assemblage collected to witness the solemn scene, addressed himself to the few persons who stood around him. His brief but pregnant words, coupled with his noble demeanor, and above all his contrite acknowledgment of his guilt in having deserted Strafford, and the unaffected piety with which he breathed forgiveness of his enemies, are stated to have made a profound impression in his favor upon his hearers. Taking off his cloak, he delivered his "George" (or jewel of the Order of the Garter) to Bishop Juxon, who was at hand to support his princely master at the last trying moment, saying emphatically, "Remember!" bowed himself upon the block, and the next moment lay a headless corpse. *C.* was executed January 30, 1649, in the 49th year of his age, and the 24th of his reign. His remains were interred at Windsor. — A medal given by Charles I., when on the scaffold, to Bishop Juxon, was sold at auction in London, in Aug., 1869, and brought the large sum of \$1,725 (gold). His son,

CHARLES II., B. 1630, was called to the throne by a people sickened of civil broils and wild to be free from the curb of Puritanism, and entered London May 29, 1660, (which was also his birthday,) amid universal rejoicing. "It

must have been my own fault surely," he joyously exclaimed, "that I did not return long before to such loyal and loving subjects!" Nor, notwithstanding that his reign was one of the most inglorious in English annals, did he ever wholly forfeit this misplaced affection. Savagery of manners was his tower of strength. He might suffer his coats to be insulted by England's then maritime rival the Dutch; might descend to be a pensioner of the French king; might allow the scaffold to be stained by the blood of patriots, whose names are among the brightest ornaments of English history; might inaugurate an era of heartless predilection and open licentiousness;—but he never treated ungraciously the meanest subject who approached him; had a pleasantry or witticism for all; fed his wild fowl and played with his spaniels in the park, talking with whomsoever chanced to be present, ready for whatever whim, fun, or sport might turn up; and while better men and rulers have been handed down to posterity as fools or tyrants—perhaps as both—he is known, and will continue to be known as the *Merry Monarch*. The trial, condemnation, and execution of the "regicides," as they were called, or of so many then living as had been most active in the death of his father, was one of the first of the many mournful features of his reign. Next, the Act of Conformity ejected about 2,000 conscientious clergymen from their cures. The Dutch war followed, which began gloriously, but ended by their fleet, under De Ruyter, appearing in the Thames, sailing up the Medway, taking Sheerness, burning several ships, and insulting Harwich. A ministry known as the CABAL, *q. v.*, which urged the king to repeat the errors of his father by exalting his prerogative above the privileges of parliament and the laws of the land, brought the country into thorough contempt in the eyes of Europe. The charters of the great towns were confiscated, Russell and Sidney (whose only faults lay in their true patriotism) were brought to the block, and the Scottish Covenanters persecuted without mercy. In short, his reign was one of the most corrupt and licentious of modern times, and can only compare in history with that of Louis XV. of France. Charles D. in 1685, in the 55th year of his age, and the 25th of his reign. He left no issue by his neglected queen, Catharine of Braganza, but a whole brood of illegitimate children, among whom was the unfortunate Duke of Monmouth, *q. v.*

CHARLES EDWARD, (PRINCE.) See STUART.

FRANCE.

CHARLES MARTEL, mayor of the palace under Chilperic II. and Thierry IV., kings of France. He was the natural son of Pepin d'Heristal, duke of Austrasia, of which he was himself proclaimed duke in 715. As mayor of the palace, he possessed the whole regal power, which he administered with great success, and gained many victories, the principal of which was over the Saracens, between Tours and Poitiers, in 732. It was in consequence of this victory that he was called *Martel*, or the "hammer." On the death of Thierry, in 735, no successor was appointed, and Charles conducted the government as duke of the Franks. D. at Crécy, 741, dividing his kingdom between his sons Carloman and Pepin.—The latter became the first king of France of the Carolingian race, which name was taken from Charles Martel.

CHARLES I., called *Le Chauve* (the Bald), B. 823, is generally placed by French writers as their first king, although Charlemagne is unquestionably entitled to that eminence; were this given to him, however, an irreconcilable discrepancy would take place in the numerical priority of the reigns of their sovereigns: consequently, Charles the Bald is called the first. He was crowned in 840, and elected emperor of the West by the people of Rome in 855. It is supposed he died of poison, at Brioumont, on Mont Cenis, in the Alps 877.

CHARLES II. of France, (known as CHARLES III. OF GERMANY,) surnamed *Le Gros* (the Gross or Fat), was the nephew of the preceding monarch. He seized the crown of France in 884, at the death of Carloman II., and retained it until 887, when the government was assumed by Eudes, or Hugh, Count of Paris.

CHARLES III., (*the Simple*), B. 879, was crowned at Rheims in 893, and on the death of Louis IV., emperor of Germany, sought to fill the vacant throne. His power was reduced by the usurpations of his nobles and the inroads of the Normans. His minister and favorite, Haganon, gave such offence to the nobles, that they revolted and drove *C.* from his kingdom, which was seized by Robert, duke of France, who was crowned by the archbishop of Rheims in 922. The same year a battle was fought between the two monarchs, in which Robert was slain; but his son, Hugh the Great, defeated Charles, who fled for refuge to the count of Vermandois. His wife, a sister of Athelstan, king of England, took shelter with her son Louis in that country, and *C.* remained a prisoner during the remainder of his days. D. 929.

CHARLES IV., *le Bel* (the Handsome), the youngest son of Philip the Fair, and the last of the elder branch of the Capetian family, succeeded his brother, Philip V., in 1322. Independent of a war with England, the chief internal events of the kingdom during the few years of this king's reign were the cruel persecution, established into a kind of judicial right, of the Jews. D. 1328.

CHARLES V., *le Sage* (the Wise), was the eldest son of John II., and the first prince who bore the title of *dauphin* (*q. v.*). His father was the king who, in 1356, was taken prisoner by Edward the Black Prince at the battle of Poitiers. He succeeded to the crown on the death of his father in 1364. By his prudence and valor he restored the commerce and agriculture of his country, and reconquered all his kingdom, excepting Calais, from the English. Bertrand Du Guesclin and Olivier de Clisson were among

his most famous generals. D. 1380.—The Royal Library of Paris was founded by this prince, and the Bastille was erected by him.

CHARLES VI., *le Bien-aimé* ("the Well-beloved"), B. 1368. During the early years of his reign, France was a prey to internal discord occasioned by the factious spirit of the great nobles, and of his uncles the dukes of Anjou, Berry, Bourgogne, and Bourbon. In 1385, *C.* married the notorious Isabel of Bavaria, and, owing to the revelations of her scandalous mode of life, the disturbed state of his kingdom, and a fright he received at a masquerade, he gradually lost his reason to a certain degree. It would be difficult to find in the annals of any country a period more replete with disaster and disgrace, than the 30 years of French history succeeding the first outbreak of the king's distemper. Henry V. of England took advantage of the disturbed state of the kingdom to invade it. His victory at Agincourt gave him possession of Normandy, and allying himself with the Burgundian party, he disinherited the dauphin and married Catharine, the daughter of the French king, Charles D. 1422, being succeeded by his son

CHARLES VII., called *le Victorieux* (the Victorious); B. 1403. *C.*, despising his baby rival, Henry VI. of England, who had been crowned king of France at six years old, collected his friends from all parts of the kingdom, and immediately gave battle to the English; but all his attempts were baffled, and his hopes of regaining the crown at their lowest ebb, when Providence sent him a champion in the person of *La Pucelle*, the "Maid of Orleans," commonly known as Jeanne d'Arc. (see JOAN OF ARC.) The French believing that heaven was directly aiding them by an inspired champion, regained their courage, and flocking everywhere to their standards, fought with such bravery that the tide of war soon changed the aspect of affairs; and, the English being beaten at all points, Jeanne was enabled to fulfil her promise, and crown *C.* at Rheims in 1429. Having ultimately expelled the English from the whole of France excepting Calais, *C.* turned his attention to the internal welfare of the harassed country; and, as a check on the feudal power of the nobles, as well as for a protection to the state in sudden cases of danger, established a standing army, which was supported by a tax on property called the *taille*. He also established courts of justice over the country, and encouraged the manufacture of woollen cloths and hosiery, which speedily became sources of great wealth. *C.* was an amorous monarch, and the beautiful and talented Agnes Sorel was for many years his mistress. His last days were embittered by the ambition of his son, the cruel Louis XI., and, fearing to be poisoned by him, he is believed to have starved himself to death. 1461.

CHARLES VIII., surnamed *le Affable*, was the son of Louis XI., and succeeded his father, 1483; but in consequence of his minority he was left under the regency of his elder sister Anne, the Lady of Beaujeu, whose wisdom and prudence in all matters of home and foreign policy proved the justice of the old king's forethought. *C.* married Anne, heiress of Brittany, and thus became possessed through his wife of the sovereignty of the entire province, being the first monarch who had ever ruled over the whole of France. He conquered Naples after a short war of five months, but lost that kingdom as quickly as he had won it. In 1495, at about ten miles from Piacenza, on his return to France, he obtained a great victory over the Italians, 40,000 strong, though his own army numbered but 9,000 men. D. 1498.

CHARLES IX., B. 1550, succeeded his brother Francis II. in 1560. During his minority the govt. was conducted by his mother Catharine de Medici (*q. v.*). In 1561, on an edict being issued to prevent the preaching of the reformed religion, the Huguenots took up arms, and a war ensued, followed by a peace in 1563. In 1567, the Protestant leaders, Condé and Coligni, attempting to seize the king's person, a second religious war began, and in the battle of Jarnac, in 1569, the Huguenots were defeated with the loss of their general the Prince de Condé. Overtures of reconciliation were then made by the court party, and on the occasion of the marriage of *C.*'s sister, Marguerite, to Henry, king of Navarre, (afterwards Henry IV. of France,) the Protestant leaders were invited to Paris, and while there, treacherously assassinated on St. Bartholomew's Day, 1572. (See BARTHLOMEW (ST.), MASSACRE OF.) This deed of infamy is said to have tortured *C.*'s after-days, and he D. in 1574.—See CATHARINE DE MEDICI, COLIGNI, &c.

CHARLES X. was the grandson of Louis XV., and brother of Louis XVI.; B. 1757. During his youth, being then known as the *Count d'Artois*, he passed his time in frivolity and dissipation. After the revolution broke out, he undertook a journey to Russia in 1792, in the hope of obtaining assistance from the Empress Catharine. Failing in his object, he sought a home in England. He succeeded to the throne on the death of Louis XVIII. in 1824. His reign was marked by concessions to the Jesuits, the abolition of the liberty of the press, and other measures of a reactionary and obnoxious character; which aroused the people to take up arms. On July 27, 1830, the first encounter took place between the people and the soldiery. On the following day the fighting became general, and on the next, Marshal Marmont, who was at the head of the Guards, evacuated Paris. On the 30th, the Duke of Orleans was proclaimed lieutenant-general of the kingdom, and on the 2d of August, *C.* abdicated in favor of the Duke of Bordeaux, and set out for Cherbourg. The claims of the duke, however, were not recognized by the chambers, and the Duke of Orleans (Louis Philippe) was chosen to reign in his stead. *C.* sailed for England, and eventually took up his abode at Holyrood Palace, in Edinburgh, where, 20 years before, he had sought and found an asylum. He subsequently

removed to Prague, in Bohemia; thence to Goritz, in Styria; and there, in the château of Grafeuberg, he was soon afterwards attacked by cholera, which carried him off. D. 1836.

GERMANY.

CHARLES I. See CHARLEMAGNE.

CHARLES II. See CHARLES I. of France.

CHARLES III., surnamed LE GROS. See CHARLES II. of France.

CHARLES IV., son of John of Luxembourg, king of Bohemia, was elected emperor of Germany at the death of Louis of Bavaria in 1346. He resided at Prague, and the most important event of his reign was the issuing of the "golden bull" in 1355, which defined the respective rights of the electors and the emperor, and is still looked to as a basis of the Germanic constitution. D. 1378.

CHARLES V., EMPEROR OF GERMANY, and KING OF SPAIN, b. at Ghent, 1500. He was the son of Philip "the Handsome," archduke of Austria, by Joanna, 2d daughter of Ferdinand and Isabella of Castile and Aragon, and grandson of the Emperor Maximilian and Mary of Burgundy. His early years were passed in Flanders, where he was also educated. On the death of his grandsire Maximilian, a keen contest for the imperial throne occurred between C. and Francis I. of France: when the former was elected emperor at Frankfurt in 1519, and crowned at Aix-la-Chapelle in the year following. The first act of his administration was to convoke a special diet of the empire, at Worms, Jan. 6, 1521, for the purpose of checking those religious opinions which, under the influence of Luther, were becoming rapidly diffused over Germany. The great reformer himself was summoned before the diet, and a letter of safe-conduct was at the same time sent him, which C. afterwards regretted that he did not violate. Luther was permitted to depart in safety; but, a few days after he had left Worms, an edict was published in the emperor's name, condemning his doctrines, and placing him under the ban of the empire. A rupture with Francis I., shortly afterwards, becoming imminent, C. entered into a secret alliance with Leo X., for the purpose of expelling the French out of the Milanese. In the meantime hostilities had broken out in Navarre, which kingdom C. unjustly withheld from the children of Jean d'Albret, in violation of the treaty of Noyon. An army of the partisans of the latter family, with the connivance of Francis, overran that country, but met with a disastrous defeat. About the same time Robert de la Marck, a petty prince of Alsace, declared war against C. and ravaged Luxembourg. C. thereupon sent an army into France, and besieged Metz, which city, defended by the illustrious Bayard (q. v.), compelled his troops to retire in disgrace. The mediation of England between the two contending powers was now attempted, but with no good result; the war went on, and eventually the whole of the Milanese was lost to France. An insurrection, which broke out in his Spanish dominions about this time, C. promptly suppressed, and abolished the rights of the Cortes. C. had now a powerful ally in the person of the great Constable de Bourbon (q. v.); the French army in the Mi-

where he took Goletta, vanquished Barbarossa, entered Tunis, and re-established Muley-Hassan on the throne. Soon after this, he recommenced hostilities against France, and ravaged Champagne and Picardy; but was, at length, obliged to retire, and peace was restored in 1538. In 1539 the revolt in Ghent led him into Flanders, where, in the following year, he caused twenty-six of the citizens of the revolted town to be executed, and otherwise treated its inhabitants with great severity. In 1541 he attempted the conquest of Algiers; but his fleet was dispersed by a hurricane, and the emperor was obliged to return unsuccessful. He again entered into a league with England against France; but he was unfortunate in this war, and was glad to conclude a treaty, at Crespi, in 1545. In the following year the Protestant princes of Germany confederated against him, and, after some fighting, and a new war with Henry II. of France, he was forced to sign the treaty of Passau, in August, 1552, by which the Protestants obtained the right to freely exercise their religion in the dominions of the confederated princes. In 1555 he resigned the crown to his son Philip, in the presence of a magnificent assemblage of Spanish and Flemish nobles, in the hall of the palace of Brussels. He then retired to the monastery of St. Just, in Estremadura, where it was long supposed he employed the remainder of his days in religious exercises, mechanical pursuits, and gardening. This view of the case seems, however, to have been quite erroneous; for we learn that he was engaged as much with diplomatic notes and despatches in his monkish apartments, as if he had been in his palace at Madrid. The reader is referred to Mr. Motley's *History of the Rise of the Dutch Republic*, for further knowledge of the close of this emperor's life. After having his own funeral obsequies performed in the chapel of the convent in which he had spent the last two or three years of his life, C. expired, Sept. 21, 1558, in the 59th year of his age, leaving behind him the reputation of having been the greatest monarch, one of the ablest military commanders, and perhaps the wisest, but yet most bigoted, statesman, of his time. Of his many natural children, the most celebrated was Don John of Austria, (q. v.)

CHARLES VI., b. in 1685, was 2d son of Leopold I., and was destined by his father to the crown of Spain. On the death of Charles II. in that country, his testamentary heir, the Duke d'Anjou, assumed the sovereignty under the title of Philip V.; and C., aided by England, Holland, and Portugal, was engaged in a protracted and fluctuating struggle with that prince (known in history as the *War of the Spanish Succession*), when the death of his brother Joseph I. called him to the imperial throne, in 1711, to which he added the crown of Hungary in the following year. The peace of Utrecht, in 1713, secured to his rival in Spain the rule of that country, and left C. to employ his famous general, Prince Eugene (q. v.), for the defence of Venice against the Turks. Subsequent wars, consequent on the disputed succession in Poland, involved the loss of considerable territory, and, at the peace of Belgrade, in 1739, C. was compelled to cede Servia and Wallachia to Turkey. D. 1740.

CHARLES VII., b. 1697, was the eldest son of Maximilian Emanuel, Elector of Bavaria, and was crowned emperor of Germany in 1742. During the three succeeding years, that country was the scene of one hot and continuous contest, known in history as the *War of the Austrian Succession*, in which C., who owed his crown to the intrigues and influence of his allies, France and Prussia, had to defend its possession against the legitimate claim of Maria Theresa (q. v.), Queen of Hungary. D. 1745.

CHARLES LOUIS, (ARCHDUKE OF AUSTRIA,) 3d son of the Emperor Leopold II., and one of the first generals of his time, was b. in 1771. Appointed to an important military command, he, in 1796, defeated the French generals Jourdan and Moreau, and in 1799 again defeated Jourdan in Suabia, and Marshal Massena at Zurich, and again, in 1805, at Caldiero. In 1809 he defeated the French under Napoleon at the bloody battle of Aspern and Esslingen (Mar. 21-22), but was himself defeated at the decisive battle of Wagram (July 5-6). D. 1847.

HUNGARY.

CHARLES I., or CHARLES CHAROBERT, was the son of Charles, king of Naples, and ascended the throne of Hungary in the year 1312, succeeding the powerful Otho of Bavaria to the crown of the Magyars, and after a stormy and turbulent reign of 32 years, died in 1342.

CHARLES II. See CHARLES VI., (EMPEROR OF GERMANY.)

LORRAINE.

Five dukes of this name have held the fiefdom of the province of Lorraine, under the crown of France. CHARLES, (1st DUKE,) b. 953, early succeeded to his paternal inheritance. No sooner, however, was he invested with sovereign power, than he laid claim to the crown of France, on the death of Louis V., and immediately endeavored to sustain his claim by force of arms; but in the first battle fought between the two powers, C. was made prisoner, his army entirely defeated, and himself cast into a dungeon in the gloomy castle of Orleans, where he died a prisoner, 994. — Of the other dukes of this house, the only one of special interest is CHARLES V., who, having been deprived of his ancestral rights by the will of his uncle, who had bequeathed his province to Louis XIV., and being foiled in an attempt to recover it by arms, took service with Austria, married the emperor's sister, and rose to be one of the most distinguished captains of the age, and the first general in the imperial service. D. 1690, aged 47.

NAPLES.

CHARLES I., (D'ANJOU,) the son of Louis VIII. of France, waged war on King Manfred of Sicily, and having defeated him, seized on the Neapolitan crown in 1266. His cruelty and exacting rule raised such a spirit of anarchy,

and induced such a detestation of the French name, that the Sicilians, headed by John de Procida, rose in arms on the eve before Easter-day, 1282, and slaughtered all the French in the town and neighborhood of Palermo, the signal for rising being the tolling of the vesper-bell; this tragedy is hence recorded in history as the "Sicilian Vespers." By this act the French were entirely expelled from the island, and Sicily lost to C's crown, who only lived three years after the fatal event, dying 1285.

CHARLES II., the son of Charles I., b. 1248, succeeded his father, and after many fruitless attempts to recover Sicily, died 1309.

CHARLES III., (OF DURAZZO,) the grandson of the latter king, ascended the throne in 1382, and fell in battle against the Hungarians, 1386.

CHARLES IV. See CHARLES V., (EMPEROR OF GERMANY.)

NAVARRRE.

Three kings of this name have reigned in Navarre, viz.:

CHARLES I. See CHARLES IV. of France.

CHARLES II., or THE BAD, (Count of Evran,) b. 1332, succeeded his mother in 1350. Having gratified his personal hatred by the murder of Charles de la Corda, he was arrested by Charles V. of France, and thrown into one of the state prisons, but having found means to bribe his jailers, contrived to escape; when, burning with indignation at his treatment, he collected all the forces of his kingdom, entered France, and ravaged his enemy's country; but after a long and harassing struggle, failing in all his attempts to obtain the throne of France, he was at last compelled to sue for peace, and make terms with his powerful rival. The annoyance of his frequent defeats developed the latent seeds of leprosy, with which his blood was infected; and having, as a remedy for this dreadful malady, wrapped himself up in sheets and bed-clothes saturated with brandy and sulphur — the whole being bound around his naked body, the better to produce absorption — one of his gentlemen or pages, being called in the night by the king to slacken one of the strings that bound the sheets to his person, in his haste accidentally dropped the taper he held to light him, upon the inflammable clothes; when, in an instant, the entire mass, bed and curtains, were wrapped in one sheet of flame, and like a mummy in its cerements, the miserable king, bound and powerless, was horribly consumed; thus perishing in 1387, in the 55th year of his age, and 37th of his reign.

CHARLES III., or THE NOBLE, succeeded his father in 1387, and after a reign of 36 years, d. in 1425.

SAVOY AND SARDINIA.

Five dukes of the name of Charles have worn the ducal coronet of Savoy, exclusive of the father of the present king of Italy.

CHARLES I. succeeded to the hereditary honors in 1472, was educated in France, and d. in 1489. Of the remaining members of this house, bearing the same name, it is only necessary to mention

CHARLES EMANUEL, 4th DUKE OF SAVOY and 1st KING OF SARDINIA, who, in 1580, commenced his political career impressed with a gigantic ambition, which, compared with his limited power and influence, made him appear ridiculous. He conquered Saluzzo, and extended his dominions S. and W.; when, inflated with these trivial successes, he aspired to the sovereignty of Cyprus, Macedonia, and finally to the imperial Germanic diadem; but failing to gratify his intense ambition, he d. of disappointment, 1630. Three other Charleses followed Emanuel, and preceded

CHARLES ALBERT, b. 1798, ascended the throne of Sardinia 1831, on the death of Charles Felix. Till the memorable year 1848 he had devoted himself to the internal economy of his kingdom, and welfare of his subjects, but in that year of revolution he at once declared for liberal principles, and heading the Italian movement, led his army into Lombardy to support the Venetians, Lombards, Modenese, and other States who had thrown off the Austrian tyranny. At first, fortune favored his arms, and C. A. was successful in several encounters; but suffering a signal defeat at the hands of Marshal Radetzky (q. v.), his power rapidly declined, the battle of Novara deciding his political influence; and, after about a year of further hostilities, C. A. bowed to the pressure of the times, abdicated in favor of the present monarch, his son, Victor Emanuel, and retiring to Portugal, died there in 1849.

SPAIN.

CHARLES I. See CHARLES V., (EMPEROR OF GERMANY.)

CHARLES II., succeeded his father, Philip IV., in 1665. In this reign, Spain, which for nearly 3 centuries had held the foremost rank in Europe as a great military nation, reached the highest point of its greatness, and began rapidly to decline both in influence and glory; but such was the prestige attached to its name and past history, that it had long become powerless before it ceased to be respected. Charles d. in 1700, bequeathing his throne to the Duke d'Anjou, grandson of Louis XIV. of France, — an act which led to the long and calamitous "War of the Spanish Succession."

CHARLES III. This prince, who was king of Naples, on the death of his brother Ferdinand exchanged his Sicilian throne for that of Spain, 1759. He sustained against England a war disastrous to the commerce of his country, and d. 1788.

CHARLES IV., b. at Naples, 1748. He succeeded his father, Charles III., in 1788, and was governed by Manuel Godoy, Prince of Peace, the lover of his wife Maria Louisa of Parma, and an instrument of Napoleon I. In 1808 he abdicated in favor of his son Ferdinand, but Napoleon having both father and son in his power at Bayonne, obliged Ferdinand to resore the crown to his father, who was, in his turn, persuaded to relinquish it to Napoleon. C. died at Rome, 1819

Fig. 570. — CHARLES V.

lanese was defeated by the imperial general Colonna, and in 1524 was entirely driven out of Italy. In 1525, however, Francis again invaded that country, and was utterly routed at the battle of Pavia, with the loss of 10,000 men, and was himself taken prisoner, (see FRANCIS I.) After his release, peace was entered into by the treaty of Cambray, 1529. In the following year, C. was solemnly crowned, by the Pope at Bologna, *king of Lombardy and emperor of the Romans*. C. next turned his attention to Germany, where the Reformation was gaining ground, and at diets of the empire, held at Spire and Augsburg (q. v.) respectively, vigorous measures were adopted for the suppression of Protestant doctrines. The Protestant princes, however, concluded a league of mutual defence, and so formidable was the front presented by this confederacy, that C. judged it prudent to make concessions, which were entered into at the pacification of Nuremberg. The Protestants, out of gratitude, raised a powerful body of troops to repel an invasion of Hungary by the Turks, and C. taking the field at the head of a large and well-disciplined army, forced the Moslems back to their own doors. In 1535, he turned his arms against Africa,

SWEDEN.

Though 15 sovereigns of this name have swayed the Scandinavian sceptre of Sweden, the history of the first nine is so lost in the mists of age, so disguised in the ignorant traditions of the time, and disfigured, when legible, by records of treachery, murder, social and domestic vice, and treason, that to exhume them from the mass of violence and crime in which they are buried would neither be useful nor instructive. The ninth *C.* is only memorable as having been the father of one of the greatest and best—if not the greatest and best—king who ever sat on the Swedish throne, and the most illustrious prince of his era—Gustavus Adolphus. (*q. v.*)

CHARLES X. succeeded his cousin, the learned Christina, in 1654, and by his prudence and valor considerably extended his dominions, wresting Livonia from the Poles, and several provinces from the crown of Denmark. After a short reign of six years, in which he was constantly engaged in war—sometimes meeting with severe reverses, but, on the whole, a considerable gainer—he was attacked with an epidemic disease then raging among his troops, which carried him off in 1660.

CHARLES XI., his son, succeeded him, and immediately commenced a system of tyrannous exaction and arbitrary oppression, by which he in a short time made himself absolute. Having once become independent of the States, he studied to appease the people by ruling with justice and impartiality. In war he was unsuccessful, and lost much of his father's territorial acquisitions. He died in 1697; his son, a lad of only fifteen—

CHARLES XII., succeeded him. The rulers of Russia, Poland, and Denmark, despising him as a helpless boy, formed a league for humbling the Swedish power, and appropriating some of its best provinces. In this crisis, *C.* showed a degree of energy and courage that astonished both friends and foes. He put himself at the head of his army, invaded Denmark, and besieged Copenhagen. This bold stroke forced the Danish sovereign to beg for peace, and abandon the anti-Swedish confederacy. Charles then turned against his other enemies. On Nov. 30, 1700, with 8,000 Swedes, he attacked and entirely routed the Russian army of 40,000 men at Narva. He then marched across Livonia and Courland into Poland, gained repeated victories over the allies of his enemy Augustus (elector of Saxony and king of Poland), took Cracow, Warsaw, Dantzic, and other important cities; and in 1704 compelled the Poles to depose Augustus, and choose Stanislaus Leczinski as their king. *C.* then advanced into Saxony, which he occupied with his victorious troops, and forced the elector to beg a peace, the terms of which *C.* dictated. (1707.) *C.* lingered for some time in Saxony at the head of his army, which numbered 30,000 veterans. The eyes of all Europe were now fixed on him. His numerous victories, his daring and resolute spirit, the bearing and discipline of his troops,—filled sovereigns, generals, and statesmen with admiration and anxiety. Louis XIV. asked his assistance against the arms of Marlborough and Eugene; and Marlborough himself undertook a special embassy to the Swedish camp in order to battle the attempts of the French to win over the hero of the North to their alliance. *C.* himself cherished the most ambitious projects. He was bent, in the first instance, on deposing his enemy, Peter, from the throne of Russia, as he had deposed his other enemy, Augustus, from the Polish throne. One year, he thought, would suffice for the conquest of Russia. He next designed to attack the pope; and he had dispatched officers privately into Asia and Egypt, to survey the towns and military resources of those countries, with the intention of entering on a career of Oriental conquest, so soon as he had subdued his European foes. He marched out of Saxony in the autumn of 1707, and entered the Russian territory in 1708. He crossed the Beresina in June, defeated a Russian army that was intrenched near that river, and advanced as far as Smolensko, where he gained another victory. (Sept. 28, 1708.) Instead of marching forward against Moscow, *C.* now turned to the Ukraine, trusting to the promises of the old Cossack chief Mazepa, who boasted that he would bring the whole Cossack nation over to the cause of *C.*, but who was only able to persuade 7,000 men to join the invaders. *C.* wintered in the Ukraine; but he moved forward upon Moscow in the spring of 1709, and besieged the city of Pultowa, where the Russians had collected large military stores. His army had been fearfully reduced by famine, fatigue, and the fatal frosts of Russia, as well as by the numerous skirmishes and actions in which it had been engaged. He had not more than 25,000 men under him at Pultowa, and at least half of them were Cossack and Wallachian recruits. The Russian czar, Peter the Great, advanced to relieve Pultowa with a well-equipped army, 60,000 strong. The decisive battle of Pultowa, fought July 8, 1709, between the rival sovereigns, ended in the total defeat of the Swedes. *C.* made his escape from the field with difficulty, and sought refuge in Turkey, where he was hospitably received and sheltered. He remained there 5 years, during which time his enemies were conquering the best Swedish possessions in Germany and on the E. of the Baltic. At length *C.* suddenly left Turkey, and joined the scanty Swedish bands that were struggling against the forces of Russia, Prussia, Saxony, and Denmark. After several checkered, though generally unsuccessful, campaigns, *C.* met his death before the fortress of Frederickshall, in Norway, in the winter of 1718. He was leaning, at night, on a breastwork, watching the operations of the siege by moonlight, when the fire of one of the enemy's batteries, which a shot struck him on the head, and he died instantly, in the 37th year of his life, and the 21st of his reign.

CHARLES XIII., 2d son of Adolphus Frederick, b. 1748, suc-

ceeded his nephew Gustavus IV. in 1809, and was himself succeeded, in 1818, by the adopted heir of the Swedish nation:—

CHARLES XIV. See BERNADOTTE.

CHARLES XV., grandson of the preceding, b. 1826, succeeded his father Oscar, as king of Sweden and Norway, in 1859. He is known as a patriotic monarch, and as a man of literary talents. *C.* wrote a volume of poems. D. 1872. Succeeded by his brother, Oscar II.

Charles, in *Maryland*, a S.W. county, bordering on the Potomac, which separates it from Virginia; *area*, about 450 sq. m. It is drained by the Wicomico River. *Surface*, nearly level; *soil*, moderately fertile. *Cap.* Port Tobacco.

Charles City, in *Iowa*, a town of Floyd co.

Charles City, in *Virginia*, a S.E. county; *area*, 184 sq. m. It is bounded on the S. by the James River, and by the Chickahominy on the N. and E. It was one of the eight original shires into which Virginia was divided in 1634. *Cap.* Charles City Court-House.

Charles City Court-House, in *Virginia*, a village, *cap.* of Charles City co., 30 m. S.S.E. of Richmond.

Charles Island, in Hudson Strait, British N. America. Extent, 35 m. long by 25 broad. Lat. 62° 40' N.; Lon. 75° W.—Also, one of the Galapagos, in the Pacific, on which the government of Ecuador established a colony.

Charles River, in *Massachusetts*, rises in Worcester co., and passes through Norfolk and Middlesex counties, flowing into Boston Harbor.

Charles River, in *Rhode Island*, Washington co., a stream which unites with Wood River to form the Pawcatuck.

Charles River Village, in *Massachusetts*, a post-village of Norfolk co., 15 m. S.W. of Boston.

Charles's Wain, *n.* (*Astron.*) A name sometimes given to the remarkable cluster of 7 bright stars (forming what is familiarly termed the *Dipper* or *Ladle*) in the constellation of *Ursa Major* or the "Great Bear." The name is derived from its fanciful resemblance to a wagon (or wain) drawn by three horses in a line. Sometimes it is called the *Plough*.

Charles'ton, in *Arkansas*, a village of Franklin co.

Charleston, in *California*, a village of Yolo co.

Charleston, in *Illinois*, a city, the *cap.* of Coles co., 46 m. W. of Terre Haute. *Pop.* (1890) 4,135.

Charleston, in *Indiana*, a village of Hancock co., 25 m. E.N.E. of Indianapolis.

Charleston, in *Iowa*, a post-village and township of Lee co., about 8 m. W. of the Mississippi river, and 18 N.N.W. of Keokuk.

Charleston, in *Kentucky*, a twp. of Hopkins co.

Charleston, in *Maine*, a post-township of Penobscot co., 65 m. N.E. of Augusta.

Charleston, in *Michigan*, a village of Cass co., 174 m. W. of Detroit.

—A post-township in the eastern part of Kalamazoo county.

Charleston, in *Mississippi*, a post-village, *cap.* of Talahatchee co., abt. 125 m. N. of Jackson.

Charleston, in *Missouri*, a village of Adair co., 110 m. N. by W. of Jefferson City.

—A post-vill., *cap.* of Mississippi co., abt. 6 m. S.W. of the Mississippi, and 260 E.S.E. of Jefferson City.

Charleston, in *New Jersey*, a village of Hunterdon co., 10 m. W. of Flemington.

Charleston, in *New York*, a post-township of Montgomery co., 36 m. W.N.W. of Albany, near the Schoharie River.

Charleston, in *Pennsylvania*, a post-township and vil. of Hoga co., 3 m. E. of Wellsborough.

Charleston, in *S. Carolina*, a district bordering on the Atlantic; *area*, 1,906 sq. m. It is bounded on the N.N.E. by Santee River, and drained by Ashley, Cooper, and Edisto rivers. The coast is broken by several bays, and protected by a stretch of sandy islands. The soil embraces every variety, from the richest alluvial mould to the most sterile sand. The famous Sea Island cotton is grown along the rivers and coasts; the olive, orange, and lemon have been found to mature in the open air; and the palmetto and pine are among the indigenous forest trees. *Cap.* Charleston. *Pop.* (1897) about 60,000.

CHARLES'TON, in *S. Carolina*, a city and sea-port, *cap.* of the above district, and the largest town in the State, is situated on a low point of land at the confluence of the Ashley and Cooper rivers, 6 m. W. by N. of the nearest point of the Atlantic, 118 m. N.E. of Savannah, and 599 S.S.W. of Baltimore; Lat. 37° 46' N., Lon. 79° 49' W. *C.* stands on an elevated surface of 8 or 9 ft. above high-water mark, is regularly built, and extends about 2 m. in length, with a breadth of 1½. The streets are broad, and shaded, for the greater part, by the Pride of India and other handsome trees; and intersecting one another at right angles, they present a varied succession of fine public buildings and private residences, many of the latter being adorned with piazzas, and embowered in luxuriant foliage. This city possesses, among her more noticeable public edifices, the Medical College of the State, a noble institution, (established in 1755, and re-organized in 1824,) about 30 churches, a theatre, several first-class hotels, and numerous literary, scholastic, and scientific institutions, with such kindred charitable establishments as hospitals, almshouses, and a richly endowed orphan asylum. Its municipal and commercial buildings exhibit a fine city-hall, custom-house, two arsenals, and several banks, besides numerous handsome blocks of mercantile stores; more or less damaged during the bombardment of the town, &c. The harbor is large and convenient, and is defended by forts Pinckney and Johnson, and by Fort Moultrie on Sullivan's Island. It is, however, rather difficult of access, in consequence of its

entrance being obstructed by a range of sand-banks. Through these there are only two channels suitable for ships of large burden. In the principal or S. channel the depth of water in the shallowest part, 8 m. S.E. from the town, at ebb tide is only about 12 ft., and at flood tide from 17 to 18. A light-house, 80 feet high, with a revolving light, has been erected on a small island bearing 2½ m. N.W. from the bar, at the entrance to the S. channel. After crossing the bar, there is deep water up to the city, where vessels lie moored alongside the wharves and quays. Before the late civil war, *C.* was a place of very extensive trade, exporting great quantities of cotton and rice; it being the port where more than three-fourths of the whole foreign trade of S. Carolina was carried on. Its trade has, however, since the re-ad-

Fig. 571. — CHARLESTON CUSTOM-HOUSE.

mission of the State to the Union, again become considerable, the principal exports being cotton, rice, turpentine-casks, rosin, phosphates, etc. The export of cotton in 1891-92 was \$17,370,840. The assessed valuation of property in 1890 was \$21,386,539, and the municipal debt \$3,972,113. In 1890, by the census returns, *C.* had 566 manufactories, employing 5,283 persons, and producing goods valued at \$8,822,890. The chief industries are cotton-compression and cooage, and the manufacture of fertilizers, flour, grist, and men's clothing. The discovery of the rich phosphate beds of the Ashley river, and the manufacture therefrom of fertilizers, have added largely to the wealth of the city.—*Hist.* *C.* was founded by English settlers in 1680, and underwent various vicissitudes until 1783, when it was incorporated as a city. In 1787 the seat of State govt. was removed thence to Columbia. In 1838 a calamitous fire destroyed a great portion of the city. On April 12, 1861, the civil war was inaugurated here, in the bombardment of Fort Sumter (*q. v.*), by the Confederate general Beauregard, which key of the city was surrendered on the 14th. Later in the year *C.* was strictly blockaded by a Union naval squadron, which sank 17 vessels laden with stores at the entrance of the harbor, Dec. 14th. An engagement between the National and Confederate fleets, Jan. 31, 1863, resulted in the retirement of the former. Beauregard then declared the blockade raised: a statement denied by Admiral Dupont. Another attack on Fort Sumter, April 7-12, failing, operations, both by sea and land, were afterwards commenced by the Union general Gillmore, who, on July 3, occupied Folly Island, and seized the S. part of Morris Island on the 10th. Repulsed in an attack on Fort Wagner, next day, he unsuccessfully renewed the attack, with the assistance of the fleet, on the 18th, losing 1,530 killed and wounded. A demand for the surrender of Sumter being rejected, on the 21st, Gen. Gillmore commenced on the following day to shell the city. Morris Island, on which were Fort Wagner and Battery Gregg, was evacuated on Sept. 7. The siege of *C.* continued till Feb. 17, 1865, when it was evacuated by the Confederate Gen. Hardee, and next day occupied by the Union forces. On the evening of Aug. 31st, 1886, *C.* was visited by an earthquake. Several shocks were felt, the most severe destroyed a large part of the city, damaging it to the amt. of several millions of dollars, with a loss of about forty lives. It was the most destructive on record in this country. *Pop.* (1890) 54,995.

Charleston, in *Tenn.*, a p. v. of Bradley co.—In *Tex.* a p. v. of Hopkins co.—In *Vt.*, a twp. of Orleans co.

Charleston, in *W. Va.*, a thriving city, *cap.* of the State (since 1885) of Kanawha co.; on Kanawha river at its junction with the Elk; 66 m. S. of Parkersburg. Bituminous coal and salt abound near by, also iron. *Pop.* (1890) 6,742; (1897) abt. 8,200.

Charleston Four Corners, in *New York*, a post-office of Montgomery co.

Charles'town, in *Arkansas*, a village of Franklin co., on the Arkansas River, 110 m. W.N.W. of Little Rock.

Charlestown, in *Indiana*, a township and post-village, *cap.* of Clarke co., 2½ m. from the Ohio River, and 12 N.N.E. of Louisville, Kentucky.

Charlestown, in *Maryland*, a post-village of Cecil co., abt. 44 m. E.N.E. of Baltimore.

Charlestown, in *Massachusetts*, a city and seaport of Middlesex co., (forming a portion of Boston,) situate on a neck of land due N. of Boston, with which city it connects by the Charles River and Warren bridges, is 111 m. S.S.W. of Portland, and 200 E. by S. of Albany. In Lat. 42° 2' N., Lon. 71° 3' 33" W. This is altogether a prosperous and well-built town, with wide and generally well-shaded streets, opening out into several spacious avenues. It contains handsome churches, a state prison,

and other noticeable public buildings, besides schools, and literary institutions. The principal objects of interest here, however, are the famous battle-ground of Bunker Hill (with its monument, *q. v.*), and the U. S. Navy Yard, situated at its foot. This establishment, founded in 1798, occupies an area of from 70 to 80 acres, and is inclosed landward by a high stone wall. Its dry-dock, costing \$670,000, was opened for use in 1833. Its dimensions are 341 ft. in length, 80 in width, and having a depth of 69. Its first occupant was the U. S. frigate *Constitution*. Here are large foundries for the casting of ordnance, and all iron-work needed for the construction of ships of war; besides store-houses, building-yards, &c. — *C.* has manufactures of machinery, leather, furniture, iron and steel-ware, &c., and was incorporated a city in 1847. It suffered severely during the Revolutionary war, and in June, 1775, was burned by the British, during the battle of Bunker Hill. This act has been often spoken of as if it were one of pure wantonness, but the English officers defended their conduct on the ground of military necessity.

Charles-town, in New Hampshire, a town and township of Sullivan co., on the Connecticut river, 50 m. W. of Concord. Pop. (1890) 1,466.

Charlestown, in Ohio, a village of Clark co., 40 m. W. S. W. of Columbus.

—A post-township of Portage co.

—A village of Portage co., 7 m. E. of Ravenna.

Charlestown, in Pennsylvania, a village and township of Chester co., on Pickering creek, 12 m. N. of West Chester.

—A former post-office of Luzerne co.

Charlestown, in Rhode Island, a post-village and township of Washington county, 15 miles S. W. of Newport.

Charlestown, in W. Virginia, a town, cap. of Jefferson co., 10 m. S. W. of Harper's Ferry. Pop. (1897) abt. 2,500.

Charlestown, in Wisconsin, a village of Calumet co.

Charlesville, in Pennsylvania, a P. O. of Bedford co.

Charlet, NICOLAS TOUSSAINT, (*shür'tay*), a French painter and caricaturist, b. in Paris, 1792. After studying a while under Gros, he gradually formed for himself a style in which he had no rival. Especially successful in his sketches of soldiers and children, *C.* has been called the *Béranger* of caricature. His designs are free from exaggeration, while full of spirit, interest, and naïveté; and his titles, or mottoes, were often so witty and suggestive, that dramatic writers have founded pieces upon them. D. 1845.

Charleville, a fine town of France, dep. Ardennes, on the Meuse, near Mézières. *Manuf.* Arms, copper-ware, leather, soap, &c. Pop. 12,112.

Charleville, a town of Ireland, co. Cork, 22 m. from Liuerick; pop. 3,000.

Charlevoix, PIERRE FRANÇOIS XAVIER DE, (*shür'le-vwah*), a French Jesuit, b. 1682. He is chiefly remembered for his extensive explorations in N. America, and researches among the Indian tribes, detailed in his work *A History of New France* (or Canada), London, 1769. D. 1761.

Charlevoix, in Michigan, a county bordering on Lake Michigan, and intersected by Green R.; area, 500 sq. m. Cap. Charlevoix.

Charlie Hope, in Virginia, a P. O. of Brunswick co.

Charlien, (*shür'yô*), a town of France, dep. Loire, 40 m. from Montbrison. *Manf.* Linen and cotton fabrics. Pop. 4,516.

Charlock, *n.* [*A. S. cedeleac*.] (*Bot.*) The *Sinapis arvensis*, a wild species of Mustard.

Charloe, in Ohio, a post-village of Paulding co., on the Auglaize River, 137 m. N. W. of Columbus.

Charlotte, in Iowa, a post-office of Clinton co.

Charlotte, in Maine, a post-township of Washington co., 20 m. N. E. of Machias.

Charlotte, in Michigan, a city, cap. of Eaton co., about 20 m. S. W. of Lansing. Pop. (1897) about 4,200.

Charlotte, or PORT GENESEE, in New York, a post-village of Monroe county, at the mouth of the Genesee river, 7 m. N. of Rochester.

—A township of Chautauque co., about 15 m. N. E. of Mayville.

Charlotte, in North Carolina, a city, cap. of Mecklenburg co., on Sugar Creek. A branch mint was established here in 1838, for coining the gold produced from the mines in the vicinity. Pop. (1897) about 15,000.

Charlotte, in Tennessee, a township and village, cap. of Dickson co., 38 m. W. of Nashville.

Charlotte, in Vermont, a post-village and township of Chittenden co., on the E. side of Lake Champlain, 11 m. W. of Montpelier.

Charlotte, in Virginia, a S. S. E. county; area, 550 sq. m. It is bounded on the S. W. by Staunton river; the soil is partially fertile, and the surface uneven. Cap. Charlotte C. H. (P. O. Smithville). Pop. (1897) 15,150.

Charlotte, in Wisconsin, a post-office of Grant co.

Char'lote Amalie, or ST. THOMAS, cap. of the island of St. Thomas. See THOMAS (ST.).

Char'lote Centre, in New York, a post-office of Chautauque county.

Charlottesville House, in Virginia, a village, cap. of Charlotte co. P. O. name, Smithville.

Char'lote Hall, in Maryland, a post-village of St. Mary's co., about 45 m. S. S. W. of Annapolis.

Charlotte Harbor, or BOCA GRANDE, an inlet of the W. coast of Florida, about 25 m. long, 8 to 10 wide, and only 10 to 12 feet deep, sheltered from the sea by several islands, and producing the finest oysters on the coast. Its entrance lies between Boca Grande Key and Gasperi Bay.

Charlotte Islands. See QUEEN CHARLOTTE ISLANDS.

Charlot'tenburg, a town of Prussia, prov. Branden-

burg, on the Spree, 5 m. W. of Berlin. It is principally remarkable for its magnificent palace and gardens, belonging to the Prussian monarchs, and erected by Frederick the Great. The gardens, which are finely laid out, are always open to the public, and are much visited by Sunday pleasure-seekers from the capital.

Char'lote River, in New York, forms part of the boundary between Otsego, Schoharie, and Delaware cos. It is an affluent of the E. branch of the Susquehanna.

Charlotte-Russe, *n.* [*Fr. charlotte*, a dish of apple marmalade, sprinkled over with toasted bread-crumbs; and *Russe*, Russian.] (*Cookery*.) In pastry, a dish composed of cream, isinglass, milk, vanilla, yolk of eggs, and sugar, mixed together like a syllabub, and served with a lining of sponge-cake.

Char'lottesvile, in New York, a post-village of Schoharie co., about 30 m. from Albany. It has a large seminary of 1,000 pupils.

Charlottesville, in Virginia, a city, cap. of Albemarle co., on Moore's creek, 2 m. above its entrance into Rivanna river, and 81 m. N. W. of Richmond. It is the seat of the University of Virginia, founded in 1819, and has a museum. Near by is Monticello, the former residence of Thomas Jefferson. Pop. about 6,000.

Char'lottesvile, in Indiana, a post-village of Hancock co., about 30 m. E. of Indianapolis.

Char'lote Town, the cap. of Prince Edward Island, in the Gulf of St. Lawrence; Lat. 45° 15' N., Lon. 63° 7' W. It stands on the S. E. coast, at the bottom of Hillsborough Bay, and at the confluence of 3 rivers, which each admit the largest vessels for several miles, so as to secure them from bad weather. Pop. 6,000.

Charlton, in Massachusetts, a post-township of Worcester co., abt. 12 m. S. W. of Worcester.

Charlton, in New York, a post-township of Saratoga co., 25 m. N. N. W. of Albany.

Charlton City, in Massachusetts, a post-office of Worcester co.

Charlton Depot, in Massachusetts, a post-office of Worcester co.

Charm, *n.* [*Fr. charme*, from Lat. *carmen*, a song, a form of incantation, from *canto*, to sing; allied to W. *can*, a song, and probably to Heb. *kana*, to found, to create, like Gr. *poiëma*, a poem, a song, from *poiëō*, to make.] A magic spell, incantation, or enchantment; a combination of characters supposed to be invested with supernatural powers. — See INCANTATION, MAGIC. "Names as a charm against the waves and wind." — Dryden.

—Anything worn, as a talisman, &c., for its supposed occult virtues in averting evil from, or attracting good fortune to, the wearer.

—Fascination; that which has power to subdue opposition, to please irresistibly, and to gain affection and good-will; that which gives exquisite pleasure; as, the charm of a well-bred manner; the charm of a woman's beauty.

"The tender charm of poetry and love." — Wordsworth.

—*v. a.* To act upon by charms, spells, or incantations; to govern by supernatural influence.

"I bear a charmed life." — Shaks.

—To subdue, enthrall, or control by some secret influence; to bewitch by some pleasing power.

"Music the fiercest grief can charm." — Pope.

—To delight; to yield exquisite pleasure to; to fascinate; to enrapture; to enchant; to captivate; to attract irresistibly.

"Awed without sense, and without beauty charmed." — Pope.

—*v. i.* To act as a charm; to produce the effect of a charm.

Charm'er, *n.* One who charms; one who uses or has the gift of enchantment.

"She was a charmer, and could almost read The thoughts of other people." — Shaks.

—One who delights, or attracts the affections.

"How happy could I be with either, Were I other dear charmer away." — Gay.

Charm'ers, *n.* An enchantress.

Charm'ing, *p. a.* Pleasing in the highest degree; enchanting; bewitching; captivating; fascinating; delightful; as, a charming girl.

"How charming is divine philosophy." — Milton.

Charm'ingly, *adv.* In a charming or attractive manner.

Charm'ingness, *n.* Power or quality to charm, or please.

Charm'less, *a.* Without the power of pleasing; destitute of charms.

Char'neco, *n.* A description of sweet wine.

Char'nel, *a.* [*Fr. charnel*; Lat. *carnalis*, fleshly, carnal, from *carno*, *carnis*, flesh.] Containing dead flesh or carcasses; as, a charnel vault.

—*n.* A charnel-house.

Charnel-house, *n.* A place under or near a church where the bones of the dead are deposited; a seat of corruption or rotteness.

Char'olais, in France, one of the four counties of the ancient duchy of Burgundy, now included in the dep. of Saône-et-Loire.

Char'on, *n.* (*Myth.*) The ferry-man who conducted the souls of the departed in a boat across the Stygian lake to receive judgment from Hecens, Radamanthus, and Minos, the judges of the infernal regions. He received an obolus from every passenger, for which reason that piece of money was placed in the mouths of the dead. He was said to be the son of Erebus and Night.

Charpie, (*shür'pē*), *n.* [From Lat. *carpia*; *Fr. charpie*.] (*Surg.*) Lint used for dressing wounds, &c.

Charqui, (*shür'kē*), *n.* [*Sp.*] A term applied in S. America to long strips of beef, dried in the sun for use

as a portable article of provision; — hence the phrase *jerked-beef*.

Charr, *n.* (*Zoöl.*) See CHAR.

Char'ras, JEAN BAPTISTE ADOLPHE, a French republican, statesman, and author, b. at Puy-de-Dôme, 1808. He took part in the revolution of 1830; served in Algeria as a lieutenant, and after the revolution of 1848, was one of the most zealous members of the National Assembly, and one of the chief pillars of the republican government. Detained at Ham after the *coup d'état* of Dec. 2, 1851, he was afterwards exiled, and afterward lived at Brussels. His principal work is *Histoire de la Campagne de 1815*. D. 1865.

Charre, *a.* [*L. Lat. charrus*.] An old weight of lead. See CHARGE.

Char'ron, PIERRE, a French author, b. in Paris, 1531. He studied law; but after some years' practice, he took holy orders, and became chaplain to Queen Margaret of Navarre. He was a friend of Montaigne. In his celebrated *Traité de la Sagesse*, *C.* manifests much of the sceptical humor of his illustrious friend, and almost equals him in the eloquence with which he delineates the miseries of human life. D. 1603.

Char'ry, *a.* [See CHAR.] Pertaining to charcoal; resembling charcoal, or partaking of its qualities.

Chart, *n.* [*Lat. charta*, paper.] A card; a paper written upon or inscribed; a statement drawn up in a tabular form; as, a genealogical chart.

(*Hydrog.*) A hydrographic map for the use of navigators, being a projection of some part of the sea or coast on a plane surface. *C.*, as well as ordinary maps, may be constructed on any of the principles by which a spherical surface is represented on a plane. Mercator's Projection (*q. v.*), however, is the one most generally used. — *Topographical chart*, a draught or map of any particular section of country, or surface of the earth. — *Globular chart*, a chart formed on a globular projection. *Plane chart*. See PLANE.

—*v. a.* To map or lay down in a chart; as, to chart a river.

Charta, (*kür'ta*), *n.* [*Lat. charta*; *Gr. chartēs*.] (*Law*.) Paper; the material on which documents, &c. are written. — A charter or deed in writing; any signal or token by which an estate was held. — *Charta chyrographata*, an indenture. — *Charta partita*, a charter-party. — *Charta de una parte*, a deed-poll; a deed of one part. — See MAGNA CHARTA.

Charta'ceous, *a.* [*Lat.*] Papery; indicating a paper-like texture and substance of most leaves.

Charte, (*shür't*), *n.* [See CHART.] (*French Hist.*) A term originally used to indicate the rights and privileges granted by the French kings to various towns and communities; but applied at present to the fundamental law of the French monarchy, as established on the restoration of Louis XVIII, in 1814. As is well known, it was the violation of an article of the *Charte* by the ministers of Charles X. that led to the revolution of 1830, the expulsion of that monarch from the throne, and the accession of Louis Philippe, who, on August 29, 1830, swore to a new charter, sensibly modifying that of 1814 in a liberal sense. After 18 years' sway, Louis Philippe was himself expelled from France, February 24, 1848, and therewith the *charte* which he was called in to support fell to the ground.

Char'ter, *n.* [*Fr. chartre*, from L. Lat. *chartarium*, the place where documents were deposited, from Lat. *charta*, paper.] A writing conferring or bestowing powers, rights, or privileges.

"Upon your charter and your city's freedom." — Shaks.

—A special privilege, immunity, or exemption.

"As large a charter as the wind." — Shaks.

(*Law*.) A writing given as evidence of a grant, contract, &c.; a deed of conveyance.

(*Com. and Naut.*) The letting or hiring of a vessel for a certain purpose, and by special contract; as, a ship is advertised for charter.

—*v. a.* To establish by charter; as, to charter a public company.

(*Naut.*) To hire or let by charter, as a ship.

Chartered, *a.* Privileged by charter; granted by charter; enjoying a privilege or license.

"The air, a charter'd libertine, is still." — Shaks.

—Hired by charter, as a ship.

Char'terer, *n.* (*Com.*) A person who hires a ship for a specific voyage, paying for the use of the same generally in a stated, or lump sum.

Char'terist, *n.* An advocate of Chartism. — See CHARTIST.

Char'ter-land, *n.* (*Eng. Law*.) Same as BOCLAND, *q. v.*

Char'ter-party, *n.* [*Fr. charte-partie*, a divided charter, from the old practice of cutting the instrument in two, and giving one part to each contractor.] (*Mar. Law*.) A contract by which the owner, or master, of a ship lets the whole or principal part of it to a freighter for the conveyance of goods, under certain specified conditions, for a determined voyage to one or more places. A *C.* is generally under seal; but a printed or written instrument signed by the parties, called a *memorandum of charter-party*, is binding if no charter-party be executed. A voyage may be performed in part under a *C.* and in part under a parol agreement; but the terms of the *C.* cannot be altered by parol evidence, although they may be explained by mercantile usage. The instrument expresses the freight to be paid, and generally, but not necessarily, the burden of the ship; together with some usual covenants, and others at the discretion of the parties interested. — See FREIGHT.

Char'tier, ALAIN, a French author, b. at Bayeux, about the end of the 14th century. He was attached in various capacities to the kings Charles VI. and VII. *C.* bore the reputation of being the ablest, and also one of the

Salmon P. Chase

1808-1873

ugliest, men of his day. He wrote earnestly on subjects of Church discipline; but is best known as a poet, and by his eminently national and patriotic songs. He contributed to the creation or diffusion of a sound public opinion. D. about 1455.

Chartiers, in *Pennsylvania*, a township of Alleghany co.

—A township of Washington county, 22 m. S.W. of Pittsburgh.

Chartier's Creek, in *Pennsylvania*, rises in Washington co., and flows into the Ohio River, 4 m. below Pittsburgh.

Chartism, *n.* (*Eng. Hist.*) The political doctrines of a CHARTIST, *q. v.*

Chartist, *n.* [From CHARTER.] (*Eng. Hist.*) One of a defunct political party in England, composed chiefly of the working classes, who embodied their principles in a document called the *People's Charter*, the six leading points of which were: 1. Universal Suffrage; 2. Vote by Ballot; 3. Annual Parliaments; 4. Electoral Districts; 5. Abolition of Property Qualification; and 6. Payment of Members of Parliament.

Chartless, *a.* Wanting a chart; unspecified on paper.

Chartography, *n.* Same as CARTOGRAPHY, *q. v.*

Chartometer, *n.* [Gr. *chartes*, and *metron*, measure.] An instrument adapted for the admeasurement of charts or maps.

Chartres, a town of France, dep. Eure-et-Loire (of which it is the cap.), on the Eure, 48 m. S.W. of Paris. The cathedral is reckoned one of the finest Gothic buildings in France. C. has one of the most important cornmarkets in the empire, and manufactures of hosiery, hats, and leather. This is a very ancient city, being accounted, before the Roman conquest, as the cap. of Celtic Gaul. Henry IV. was crowned here in 1594. Pop. 21,484.

Chartres, ROBERT PHILIPPE LOUIS EUGÈNE FERDINAND D'ORLÉANS, (DUC DE) younger son of the late Duke d'Orléans, and grandson of Louis Philippe, King of the French, B. at Paris, Nov. 9, 1840. When only two years old he lost his father, and six years later the Revolution drove him, along with his family, into exile. The young duke was brought up in England, and joined the Union army in the first campaign of the civil war in 1862. He married, June 11, 1863, Françoise Marie Amélie d'Orléans, eldest daughter of the Prince de Joinville.

Chartreuse, (*La Grande*), a famous monastery of France, dep. Isère, 14 m. N. of Grenoble, among lofty mountains, at an elevation of 3,281 ft. above sea-level. The access to it is very difficult. It was built in 1084, but having been several times pillaged and burnt down, the present building was erected after 1676. It is of vast extent, and cost an immense sum. During the revolution, the monks were driven out, and their property, including a valuable library, confiscated and sold. But, in 1826, the building, which had escaped the revolutionary tempest, was restored to its original destination, and C. is still the chief monastery of the Carthusians. The inmates, about 30 in number, derive their principal subsistence from the sale of the celebrated liqueur, which they manufacture under the name of *Chartreuse*, and in the composition of which enter many aromatic herbs. This liqueur has never been successfully compounded elsewhere. Every bottle of the genuine cordial (which is highly tonic) bears the signature of Father Garnier, a superscription that is constantly and fraudulently imitated by manufacturers of a spurious article.

Chartreux, (*shär-tröö'*) *n.* [Fr.] A monk of the Carthusian order. — See CARTHUSIANS.

Chartulary, *n.* Same as CARTULARY, *q. v.*

Chir'-woman, *n.* [From *char*, a turn.] A woman hired for chores or odd work, or for single days. See CHAR.

Chary, (*chä're*) *a.* [A. S. *cearig*, from *cearian*, to care.] Careful; wary; cautious; circumspect; frugal;—generally preceding *of*.

"The *chariest* maid is prodigal enough
If she unmask her beauty to the moon." — *Shaks.*

Charyb'dis. (*Myth.*) See SCYLLA.

Chas'able, *a.* Fit for the chase; that which may be chased.

Chase, *v. a.* [Fr. *chasser*; It. *cacciare*; L. Lat. *caciare*, from *cacia*, a place where wild beasts are kept for being hunted; probably from Lat. *capto*—*capio*, to take.] To pursue, as an enemy or as game; to pursue; to hunt; to follow with eagerness or desire; as, to chase a stag. — To drive, urge, or press forward upon with vehemence; to drive away; (often followed by *off* or *away*); as, to chase a person from place to place.

—*v. a.* [See ENCHASE.] (*Engraving*) To emboss with figures; to engrave, as a salver, &c.

—*n.* Vehement pursuit of anything; a hunting or hunt; a race; as, the pleasures of the chase.

—Game hunted; anything which is hunted or pursued.

"Honour's the noblest chase; pursue that game." — *Granville*

—Ground where game is preserved or hunted; as, Enfield Chase.

"Upon the north side of this pleasant chase." — *Shaks.*

(*Naut.*) The vessel which is pursued by another; as, to overhaul the chase.

—Earnest seeking, or pursuit of something desirable.

"This mad chase of fame." — *Dryden.*

[Fr. *chassis*, a case, a shrine.] A wide groove.

(*Printing*.) A square, iron frame for confining types when set up in pages.

(*Gunnery*.) The part of a gun in front of the trunnions. In smooth-bored cast-iron guns it is the part between the second re-inforce ring and the neck of the piece.—The whole bore or length of a piece of ordnance, taken inside.

(*Games*.) In Tennis, the spot where a ball falls, and beyond which the adversary must strike his ball in order to gain a point.

Chase, SALMON PORTLAND, an American statesman, B. in Cornish, N. H., Jan. 13, 1808, is descended from Aquila Chase, who emigrated from England in 1618. His father, whom he lost while young, was Chief Justice D. Chase, of Vermont. After studying at the College of Cincinnati, he graduated with honors at Dartmouth College in 1826. He was admitted to the bar in 1830, practised at Cincinnati, and between 1832-35 published an edition of the *Statutes of Ohio*. In 1840, C. took a more active part in politics, separating from the Democratic party with which he had been connected, on account of its pro-slavery attitude, and supported Gen. Harrison for President; after whose death he took part in the organization of the Liberal party in Ohio. In 1849 he was returned to the United States Senate by the Legislature of that State. In 1855 he gained much popularity by his persevering opposition to the Nebraska bill, and in the following year was elected governor of the State of Ohio, a post he held till 1860. In 1861, C. was made Secretary of the Treasury by President Lincoln, and is the originator of the treasury notes called *Greenbacks*, and of the *Postal Currency*. During the civil war, his financial operations were on a gigantic scale, and were generally received with favor. In July, 1864, he resigned his post, and was soon after appointed by President Lincoln, *Chief Justice of the Supreme Court of the United States*, an office he held until his D. May, 1873.

Chase, SAMUEL, one of the signers of the Declaration of Independence, and a judge of the U. States Supreme Court, B. in Somerset co., Maryland; d. 1811.

Chase, in *Kansas*, a central co.; area, 576 sq. m. Rivers, Cottonwood and Neosho. Surface undulating; soil, fertile. Cap. Cottonwood.

Chase ford, in *New Jersey*, a post-office of Ocean co.

Chase-gun, *n.* (*Naut.*) A long gun, generally a carronade, placed at the bow or stern of a vessel in chasing an enemy. See BOW-CHASER.

Chase Mills, in *New York*, a P.O. of St. Lawrence co.

Chase-port, *n.* (*Naut.*) The gun-port through which one of the chase-guns is run out, when chasing a ship.

Chaser, *n.* One who, or that which, chases; a hunter.

"At once the *chaser* and at once the prey!" — *Pope.*

(*Naut.*) Same as CHASE, CHASE-GUN, and BOW-CHASER. (*q. v.*)

—An enchanter.

Chase-ring, *n.* (*Gunnery*.) A band at the end of the chase of a piece of ordnance.

Chaseville, in *New York*, a post-office of Otsego co.

Chaseville, in *Tennessee*, a post-village of Benton co., on Birdsong Creek, 50 m. W. of Nashville.

Chasing, or ENCHASING, *n.* (*Fine Arts*.) The art of embossing or making bassi-relievi in metals. The work is punched out from the back, and then cut on steel blocks or punchcons, and cleared with small chisels and gravers. Much C. is done by filling the vessel to be chased with a composition of pitch, and then hammering with a point and chisel on the outside.

Chas'ka, in *Minnesota*, a post-village of Carver co.

Chasles, MICHEL, (*shal*), a distinguished French geometer, who, by his power of generalization, greatly simplified and extended the most important theories. B. at Epemont, 1793, he was in 1841 appointed professor of astronomy and of applied mechanics in the Polytechnic school, and in 1846 was called to the chair of higher geometry, which was instituted in the Faculty of Sciences. In 1851 he was elected a member of the Academy of Sciences, and in 1854 was chosen a member of the Royal Society of London. D. Dec. 1880.

Chasles, VICTOR EUPHEMION PHILARETE, a French littérateur, B. at Mainvilliers, near Chartres, 1799. In his 15th year he was apprenticed to a printer, and at the time of the Restoration was imprisoned for two months, on account of his master being suspected as a plotter against the security of the State. Chasles was set at liberty through the intercession of Châteaubriand, when he came to England, where for seven years he directed the printing department of the establishment of Mr. Valpy. Soon after this, he returned to Paris, and entered upon a literary career marked by considerable originality and success. His fecundity in authorship has been so great, that it would occupy a considerable space even to enumerate his works. Besides writing for the "Revue des Deux Mondes," the "Revue de Paris," and other publications, he has composed a number of volumes, embracing a wide range of subjects, under the title of *Studies*, and is the author of several works on England and its literature. He is also a professor of languages and European literature in the modern College of France. D. 1873.

Chasm, (*kazm*), *n.* [Gr. *chasma*, from *chaiuō*, to yawn, gape, or open wide.] A gap or wide opening; a fissure; a cleft; an opening made by disruption.

"Chasms and watery depths." — *Coleridge.*

—A void; an unfilled place; a vacuity.

"In story chasms, in epochas mistakes." — *Dryden.*

Chasmed, *a.* Having gaps or a chasm.

Chasmy, *a.* Full of chasms; containing chasms.

"They cross the chasmy torrent's bed." — *Wordsworth.*

Chas'selas, a sort of grape grown near Fontainebleau, France, and much esteemed by gourmets for the extraordinary delicacy of its flavor.

Chas'seloup-Laubat, JUSTIN NAPOLEON SAMUEL PROSPER, COMTE DE, a French statesman, B. in 1805, at Alexandria, Piedmont, studied at the Lycée Louis le Grand, Paris, and entered the council of state in 1828. In 1830 he was sent with M. Baude to Algeria; left

that country for Tunis in 1836, and took part in the siege of Constantine. The following year he was elected deputy, and, in 1838, was appointed a councillor of state; he was elected to the legislative assembly for Charente Inférieure in 1849, and made minister of marine during 1851. After the *coup d'état* he entered the Corps Legislatif as a supporter of the govt., and was reelected in 1857. He was a member of the Council of Colonization under the ministry for Algeria and the Colonies (created in 1858), was appointed to succeed Prince Napoleon as minister, March 24, 1859, and visited Algeria, to the prosperity of which colony his administration has greatly contributed. In 1861, C. pointed out the necessity for an increase in the *personnel* of the staff of the French navy, and in 1862 established an institution under the title of *L'Etablissement des Pupilles de la Marine*, for the education, &c. of the orphans of sailors in the imperial navy. He was appointed a senator in 1862. He contributed many articles to the *Revue des Deux Mondes*. Died March 29, 1874.

Chassepot (*shas'pō*) Rifle, *n.* (*Gun*.) This rifle, the weapon of the French army, is a needle-gun, differing from the Prussian arm in two particulars. 1. The escape of gas is not prevented, as in the Prussian needle-gun, by the perfect mechanical fit of the needle-bolt and the barrel. 2. The fulminate is not in front, but in the rear of the charge, and is contained in an ordinary copper cap. The chief feature of the invention, however, consists in the contrivance adopted for preventing the escape of gas breechward. The hermetic closing of the breech parts is obtained by the instantaneous compression, under the action of the explosion, of a vulcanized caoutchouc washer interposed between the front face of the breech-bolt and a flange, or shoulder, upon the needle-guide. The needle-guide being movable, and the front face of the bolt being fixed, the india-rubber washer is nipped between them. The washer and the flange or shoulder are of a little less diameter than the breech in which they are fitted, so as to facilitate their play therein, but the diameter of the front face of the breech-bolt is, as nearly as possible, equal to the inner diameter of the breech. When the explosion takes place, the pressure transmitted by the movable needle-guide to the washer is such, that the latter is compressed sufficiently to hermetically close the rear end of the barrel and thereby prevent all gas-escape. After the charge is fired, and the pressure removed, the washer, by virtue of its elasticity, returns to its natural position. The ring or washer is composed of three layers of different degrees of hardness, the two outward layers being of much harder substance than the centre one, so that, on being pressed, the intermediate layer, which is perfectly elastic, expands. A reference to fig. 572 will sufficiently ex-

Fig. 572. — CHASSEPOT RIFLE.

plain the nature of this breech-closing arrangement. The India-rubber ring *a*, is compressed by the needle-guide *C*, between the washers *g*, *b*, where the charge is ignited, and is therefore forced to fill the barrel in which, in its normal state, it loosely fits. Messrs. C. B. Norton and W. J. Valentine, in their report to the govt. of the U. States on the munitions of war exhibited at the Paris Universal Exposition in 1867, give the following account of the comparative experiment of the C. R., and the needle-gun as made in Prussia. "The Prussian gunmaker Specht has received from Paris a Chassepot gun similar to those adopted by the French army, and experiments have been made with it which have furnished important results. The C. is certainly superior to the Prussian needle-gun. Competitive essays have been made with the two. More than 50 officers of all arms witnessed them. The C. was in the hands of M. Specht; the needle-gun in that of one of the best marksmen in the garrison. The arrangement was to fire with each weapon per minute. The needle-gun was the first; it fired 8 rounds and struck the target 8 times. The C. fired 10 shots and was loaded the 11th time within the minute; it also reached the target 8 times. The two guns were afterwards fired together during half a minute; the needle-gun discharged 3 shots, the C. 5." The particulars of the C. R. are as follows: Weight 8 lbs. 14 oz. 13 dr.; calibre, .433 inch.; range, 1,094 yards; weight of cartridge, 57.84 grains; weight of ball, 370.4 grains; weight of charge, 84.8 grains; number of grooves, 4.—A very reliable and long-known medical journal, the *Lancet* (Sept. 26, 1868), gives the following interesting account of the effect produced by the C. bullet at the battle of Mentana: "The projectiles used by both combatants in that engagement were principally the round ball, two sizes of the Minié, and the C. ball. The lightness of the C. firelock and its loading at the breech caused a far greater proportion of wounds in the upper part of the body than was the case of those wounds of balls from the muzzle-loaders. The entrance made by the C. ball was very small, the exit not much larger. We have the authority of Dr. Gason of Rome for positively asserting that among the cases brought into the hospitals in Rome there was not one where the wound produced by the C. bullet bore any proportion to that mentioned in the report from the camp at Lyons—that

'the exit was as largo as a person's two fists.' There was much less effusion of blood beneath the skin than in wounds caused by the round ball or Minié. The long bones were more frequently split. The immediate effects of the *C.* were more fatal; but the ulterior effects less severe and fatal in wounds produced by the *C.* than those of the round ball or Minié. The external hemorrhage was greater in wounds produced by the *C.* ball than by any other form of projectile, and in those places where the Italians fell when struck by it there were large pools of blood. This form of rifle is no longer in extensive use, having been almost entirely superseded by weapons of later and much more effective construction.

Chasseur, (*chäs'sür*), *n.* [Fr., a huntsman.] A male attendant upon persons of distinction, attired in a military dress, and wearing a sword.

—*pl.* (*Mil.*) A name given by the French to bodies of light infantry which act as skirmishers and sharpshooters. The name was originally given to some troops raised in 1815, in imitation of the *Jägers* of the Austrian army, who were chiefly Tyrolean chamois-hunters, and murrer marksmen. The French *C.* are of two kinds, light cavalry and infantry. Every battalion of infantry has a company of chasseurs, but the term is more particularly applied to that body of men called the *Chasseurs de Vincennes*, who were enrolled and armed with rifles in 1833, and quartered at Vincennes. The *C.* of the Italian army are called *Bersaglieri*, (*q. v.*) Garibaldi's *C.* that took a prominent part in the Italian war of 1859, and in the campaign against Francis II. of Naples, in 1860, were known as *Cacciatori dei Alpi*, or Alpine hunters.

Chassie, *n.* [Fr.] (*Med.*) A sebaceous humor, secreted mainly by the follicles of Meibonius, which sometimes glues the eyelids together.

Chaste, (*chäst*), *a.* [Fr. *chaste*; Lat. *castus*, probably allied to Gr. *katharos*, clean, spotless, unsoiled; Sansk. *cuth*, to be clean.] Unspotted; undefiled; unspoiled; virtuous; free from impure desires, illicit commerce, or sexual intercourse; as, a *chaste* woman.

"Diana chaste, and Hebe fair." — *Prior*.

—Free from obscenity; unpolluted by barbarisms; pure in taste and style.

"For his *chaste* Muse employed her heaven-taught lyre." — *Lord Lyttelton*.

Chastelard, (*shüs'te-lür*), (or CHASTELET,) PIERRE DE BOSCOSEL, a French poet, nephew of the Chevalier Bayard, b. about 1540. He was one of the French gentlemen who accompanied Mary Stuart on her return to her native country. The young and handsome poet fell in love with the beautiful queen, and in his madness, believing that his addresses were encouraged, he invaded the bed-room of Mary, was discovered, and ordered to quit the court. *C.*, however, again concealed himself, Feb. 14, 1563, within a recess in the bed-room of Mary, at Burgh Island; and, while her women were undressing her, he rushed out before them all, and attempted to plead for pardon. For this offence, he was brought publicly to trial at St. Andrew's, sentenced to death, and hanged; the queen remaining inaccessible to all appeals for mercy on his behalf. As he was about to die, he cried aloud: "Adieu, most lovely and cruel of princesses!"

Chastellux, FRANÇOIS JEAN, MARQUIS DE, (*shäs'tel-lüs*), a French military officer and man of letters, b. in Paris, 1734. In 1780 he served with distinction in America, where his amiable character gained him the friendship of Washington. In 1772 he published his essay *De la Félicité publique*, which was much praised at the time, and led to the author's becoming a member of the Academy. In 1786 appeared his *Travels in America*. D. 1788.

Chastely, *adv.* In a chaste manner; purely.

Chasten, (*chäs'n*), *v. a.* [Fr. *chätier*, for *chastier*; Lat. *castigare*, from *castus*, pure.] To cleanse; to purify; to free from spot, blame, blemish, or error.

"They *chasten* and enlarge the mind." — *Layard*.

—To correct; to punish; to afflict in order to subdue or reclaim.

"For whom the Lord loveth he *chasteneth*." — *Heb. xii. 6.*

Chastened, *a.* Modest; pure; purified; cleansed; as, a *chastened* style of writing.

Chastener, *n.* One who chastens or corrects.

Chasteness, *n.* Quality of being chaste; chastity; purity.

Chaste-tree, *n.* See AGNUS CASTUS.

Chastisable, (*chäs-tis'a-bl*), *a.* Deserving of chastisement.

Chastise, *v. a.* [Fr. *chätier*, for *chastier*. See CHASTEN.] To correct; to punish; to castigate; to inflict corporeal pain upon, by way of punishment.

"I will *chastise* this high-minded strumpet." — *Shaks.*

—To reduce to order or obedience; to repress; to liberate from faults or excesses.

"And *chastise* with the valor of thy tongue,
All that impedes thee." — *Shaks.*

Chastisement, *n.* [Fr. *châtiment*.] Act of chastising; correction; punishment.

"He receives a fit of sickness as the kind *chastisement* of his heavenly Father." — *Bentley*.

Chastiser, *n.* One who chastises; a corrector.

Chastity, *n.* [Lat. *castitas*, from *castus*, pure.] Purity of the body; state or quality of being chaste; freedom from all unlawful sexual commerce; as, female *chastity*.

"That *chastity* of honour which felt a stain like a wound." — *Burke*.

—Freedom from obscenity; purity of language or style, or of the mind.

"There is not *chastity* enough in language." — *Shaks.*

Chasuble, *n.* [Fr. *chasuble*; L. Lat. *casubula*.] (*Ecol.*)

The outer dress worn at the altar by the Roman Catholic priests. It is a circular piece of cloth, often richly embroidered in gold, with a hole in the centre to admit the head; and falling down so as to completely cover the body of the wearer. It often appears in the older sculptures and brasses. (See Fig. 573.)

Chat, *v. i.* [O. Ger. *chelan*, or *quedan*; Goth. *quithan*; Sansk. *kath*, to speak.] To talk idly; to converse in a familiar manner, or without form or ceremony; to talk at ease.

"The shepherds on the lawn
Sat simply *chatting* in a rustic row." — *Milton*.

—*n.* Free, familiar conversation; idle talk.

"And shorten'd the delay by
pleasing *chat*." — *Dryden*.

(*Zool.*) The popular name of the genus of birds *ICTERIA*, *q. v.*

—[A. S. *cith*.] A twig or small stick.

Chata'wa, in *Mississippi*, a post-office of Pike co.

Château, (*shü-tö'*), *n.*; *pl.* (From a tomb in Westminster Abbey.)

Châteaux, *n.* [Fr., a castle. See CASTLE.] In France, a castle.

—A country-seat or residence; a manorial house; as, the *Château de Chenonceaux*.

Château en Espagne. See CASTLES IN THE AIR.

Chateaubriand, **Chateaubriant**, (*shat-o-brä-ang*), a town of France, dept. Loire-Inférieure, on the Cher, 26 miles W.N.W. of Angers. The old castle here is noted as being the place where the beautiful Françoise de Foix, Countess de *C.*, mistress of Francis I., breathed her last. *Manuf.* Woollens, &c. *Pop.* 5,099.

Chateaubriand, FRANÇOIS AUGUSTE, VICOMTE DE, a celebrated French statesman, poet, and historian, b. at St. Malo, 1768. He was in youth intended for the navy, but availing a disinclination for the profession of arms, he, in 1791, set out for America, inspired with the idea of discovering the N.W. passage. Becoming acquainted with Gen. Washington, the latter dissuaded him from his project; and the outbreak of the French Revolution happening at the same time, induced *C.* to return to France. During the Reign of Terror he escaped to London, where he employed himself in a scholastic capacity, and occasionally lived in great poverty. In 1798 appeared his great work, *Génie du Christianisme*, which produced a profound effect upon the world at large. In 1800 he returned to France, and advanced his literary fame still further by the production of the fine poems *Atala* and *Réné*. In 1803 he was appointed French minister to Switzerland, and in 1806 made a pilgrimage to Jerusalem. Afterwards, having successively represented his country at Berlin and London, *C.* was sent to the Congress of Verona, and subsequently ambassador to Rome. On the accession of Louis Philippe, *C.* refused to take the oath of allegiance, resigned even his pension as a peer, and occupied himself thenceforth with literary labors. These were now necessary for his support, his whole property having been spent. Most of his writings during this period of declining age, such as his *Sketches of English Literature*, are of small value. His chief employment was the composition or completion of his voluminous *Memoirs from beyond the Tomb* (*Mémoires d'Outre Tombe*); and the right of publishing them after his death was sold by him for a large life annuity. They exhibit an amount of vanity and egotism almost unparalleled; but are full of interesting details, and have

Fig. 574. — TOMB OF CHATEAUBRIAND, (near St. Malo.)

very much of his peculiar kind of eloquence. *C.* died at Paris in the summer of 1848, when he had almost completed his eightieth year. He rests in the tomb carved for him, according to his wishes, some ten years previously, on a romantic rock near St. Malo, twice a day encircled by the sea. (See Fig. 574.) *C.* and Victor Hugo are unquestionably the two greatest figures in the French literature of the 19th century; and, as in genius, so they seemed to be rivals in childish vanity — the one with his tomb carved, while living, on the summit of the desert rock of St. Malo; the other, a voluntary exile, liv-

ing not far from his rival's grave, on another rock called Jersey — two pedestals! — Besides the above-mentioned works, *C.* is the author of *Natchez*; *Historical Studies*; or *Fall of the Roman Empire*; *The Congress of Verona*; A translation of *Paradise Lost* in blank verse; *Itinerary from Paris to Jerusalem*; *The Martyrs*; *Travels in America*, &c.

Chateaubriant, FRANÇOISE DE FOIX, COMTESSE DE, mistress of Francis I., b. 1475. She was cousin to Gast de Foix, nephew of Louis XII.; appeared at the court in the time of Anne of Brittany, and accepted the hand of the Comte de Chateaubriant. Her great beauty and accomplishments made her a favorite with Francis I., but she afterwards found a successful rival in the Duchess d'Étampes. D. 1537.

Chateaudun, a town of France, dep. Eure-et-Loire on the Loire, 26 m. S.S.W. of Chartres. *Manuf.* Woollens, and leather. On the rock commanding the town are the remains of the old castle of the counts of Blois, in the chapel of which is the tomb of the famous general of Charles VII. *Pop.* 7,390.

Châteauguay, a S.W. co. of prov. Quebec, bordering on the St. Lawrence, and bounded W. by a river of its own name. *Pop.* 16,166. Its cap., Châteauguay, 24 m. E. of Montreal, has a *pop.* of abt. 800.

Châteaugay, in *New York*, a river rising in the E. part of Franklin co., and passing through a lake of the same name, empties into the St. Lawrence River.

—A post-township of Franklin co., 12 m. N.E. of Malone.

Chateaugay Lake, in *New York*, in Clinton co.; from 3 to 4 m. long.

—A post-office of Franklin co.

Château-Gontier, a town of France, dep. Mayenne on the Mayenne, 18 m. S. of Laval. Extensive manufactures of linens and linen thread flourish here. *Pop.* 7,935.

Château-Haut-Brion, a hamlet of France, de Gironde, arrond. Libourne. The vineyards here yield one of the choicest growths of Bordeaux wine.

Château-Lafitte, a hamlet of France, dep. Gironde arrond. Lesparre, producing one of the four finest kinds of claret, or Bordeaux wine.

Château-Latour, two vineyards of France, ne Pauillac, dep. Gironde, celebrated for their excellent brands of Bordeaux wine.

Château-Margaux, (*shä-tö-mar-gö'*) a famous French vineyard, on the Gironde, in dep. Gironde, 14 m. N.W. of Bordeaux. One of the principal growths of claret is made here.

Château-Ponsat, a town of France, dep. Haut Vienne, on the Gartampe, 9 m. N.E. of Bellac; *pop.* 4,200.

Châteauroux, a town of France, dep. Indre (of which it is the cap.), on the Indre. *Manuf.* Cloth, hosiery, hats, leather.

Château-Thierry, a town of France, dep. Aisne, the Marne, 25 m. S. of Soissons. *Manuf.* Cottons and leather. La Fontaine, the poet, was b. here in 1661. *Pop.* 6,517.

Châtel, FERDINAND FRANÇOIS, a French theologian, a founder of the so-called French Catholic Church, b. 1772. He was ordained to the priesthood, and, 1823-30, became a popular preacher in Paris. After the revolution of 1830, he seceded from the tenets of the Roman Catholic Church, and opened a church for the dissemination of his own newly formed views, which ignored the divinity of Christ, and were altogether materialistic. His doctrines met with no success. In 1848 he became advocate of woman's rights, and D. in obscurity in 1858.

Châtelain, **Châtelaine**, (*shät'e-län*), *n.* The name formerly given in France, the first to the male, and second to the female owner of a château, or castle. Hence, the word *châtelaine* has been applied to an ornament worn by ladies, as a girdle or collar-chain, which are attached their watches, keys, trinkets, &c.

Chât'elot, *n.* [Fr.] A small castle. The word is almost exclusively applied in France to two ancient courts of justice and prisons in Paris: *Le grand Chât'el*, and *Le petit Chât'el*.

Châtelet-Lomont, GABRIELLE EMILIE, MARQUISE, a learned French lady, and the intimate friend of Voltaire, b. 1706. She was early distinguished by her beautiful classical erudition, and conversational powers. At her marriage, she became the *amie de cœur* of Voltaire, who resided with her at the chateau of Cirey, in Lorraine. Among her writings are a treatise on the philosophy of Leibnitz, and a translation of Newton's *Principia* into French. D. 1749.

Châtellany, *n.* [Fr. *châtellenie*. See CASTELLAN.] The jurisdiction of a castellan; the lordship belonging to a castle.

"About twenty forts . . . with their *châtellanies*." — *Dryden*.

Châtellerauld, a fine town of France, dep. Vienne on the Vienne, 20 m. N.N.E. of Poitiers. *Manuf.* Firearms, excellent cutlery, and watches, clocks, and leather. *Pop.* 15,651.

Chatenay, a village of France, dep. Seine, 5 m. S.S. of Paris, celebrated as the birthplace of Voltaire.

Chât'enois, a town of France, dep. Haute-Rhin, 25 S.S.W. of Strasbourg; *pop.* 4,447.

Chatfield, in *Minnesota*, a post-office of Fillmore co.

Chatfield, in *Ohio*, a post-office of Crawford co.

Chatfield, in *Texas*, a post-office of Navarro co.

Chat'hau, WILLIAM PITT, EARL OF, an eminent English statesman, b. 1708. After completing his education at Oxford, he entered the lower House of Parliament, where his commanding eloquence soon brought him to the front rank of orators, and he ultimately became a ruling senator of his country. Pure, public-spirited and patriotic, he upheld the authority and independence of the representative body of the people, against

Geoffrey Chaucer

1325-1400

very order to which he himself by birth belonged; and his proudest title he deemed to be that given him by his fellow-countrymen—THE GREAT COMMONER. In 1756, he became Secretary of State, and, in 1766, Prime Minister: in which capacity he governed the affairs of the country with a vigor and courage it had for years been unaccustomed to. He energetically carried on the war against France and Spain, and infused into his subordinates something of the spirit he himself possessed. In 1766, he was created *Earl of Chatham*. Becoming a martyr to ill-health, he resigned office, but until his death occasionally took part in important discussions in the House of Parliament to which he belonged. At the outbreak of the war of American Independence, C. energetically espoused in parliament the cause of the colonists, and in one of his speeches, delivered in 1777, he used the memorable words:—"If I were an American, as I am an Englishman, while a foreign troop was landed in my country, I never would lay down my arms, never—never—never!" But, finding his remonstrances unavailing, and the nation committed to the prosecution of this war, C.'s patriotic spirit brought him round to a resolute advocacy of the measures adopted by the govt. for the retention of the American states by the British crown. On April 8, 1778, he was, by his own desire, muffled in blankets, carried from his sick-bed to his place in the House of Lords, and there, supported in the arms of friends, delivered his last brilliant speech, urging the govt. to vigorously continue the war until the rebellious States should be again brought into subjection to the mother country. During its delivery, C. was seized with convulsions, and was borne home to die, which event occurred on the 11th of the following month. He was buried with public honors in Westminster Abbey; his second son William Pitt (q. v.) succeeding in after-days to his father's dignities of "Great Commoner," and Prime-Minister of England.

hat'ham, a borough, naval arsenal, and sea-port of England, co. Kent, on the Medway, 28 m. E.S.E. of London. C. is almost wholly dependent on the great military and naval establishments of the surrounding neighborhood. The dock-yard, including the arsenal, is about 1 m. in length, and is strongly fortified. It has 5 large tide docks, capable of receiving first-rate men-of-war, and 6 building-slips for vessels of the largest dimensions; rope, sail, and store-houses, and, in short, every accessory to the construction of naval architecture. The marine hospital, ordnance-foundries, military barracks, &c., occupy a vast extent of ground, in connection with the various lines of fortifications. *Pop.* 48,385.

hat'ham, in *Connecticut*, a village and township of Middlesex co., on the Connecticut River, 17 m. S. by E. of Hartford.

hatham, in *Georgia*, an E. county, bordering on the sea, area, 358 sq. m. It is bounded on the N.E. by the Savannah River, and on the S.W. by the Ogeechee. The surface is even, and partly covered by swamps. The soil near the streams is fertile; the rest sterile. *Cap.* Savannah.

hatham, in *Illinois*, a township of Sangamon co., on the Alton and Springfield R.R., 10 m. S.S.W. of Springfield.

hatham, in *Massachusetts*, a post-village and township of Barnstable co., 80 m. S.E. of Boston, on a fine harbor inside of Chatham Beach, at the S.E. extremity of Cape Cod.

hatham, in *Minnesota*, a P. O. of Wright co.

hatham, in *New Hampshire*, a township of Carroll co., 70 m. N.E. of Concord.

hatham, in *New Jersey*, a beautiful post-village and township of Morris co., on the Morris and Essex R.R. and the Passaic River, 16 m. W. of Newark.

hatham, in *New York*, a post-village and township of Columbia co., 18 m. S. by E. of Albany. It is traversed by the Western R.R.

hatham, in *N. Carolina*, a central county; area, abt. 700 sq. m. It is intersected by the Haw and Deep rivers, (which unite in the S.E. part of the co., and form the Cape Fear,) and drained by the New Hope and Rocky rivers. The surface is varied, and soil generally fertile. Extensive beds of anthracite coal have been opened near Deep River, which is navigable up to the mines. *Cap.* Pittsborough.

hatham, in *Ohio*, a post-village of Medina co.

A township of Medina co.

hatham, in *Pennsylvania*, a post-village of Chester co., about 68 m. E. of Harrisburg.

A township of Tioga co.

hatham, in prov. of Quebec, a post-village and township of Two Mountains co., on the Ottawa River, 52 m. W. of Montreal.

hatham, in prov. of Ontario, a post-town of Kent co., on the Thames, 69 m. S.W. of London; *pop.* 5,873.

hatham, a thriving town of New Brunswick, Northumberland co., on the Miramichi River, 12 m. from its mouth, and 135 N.N.E. of St. John. The river here is navigable for the largest-sized ships. *Pop.* 4,203.

hatham Centre, in *Ohio*, a P. O. of Medina co.

hatham Centre, in *New York*, a post-village of Chatham township, Columbia co., 18 m. S.S.E. of Albany.

hatham Four Corners, in *New York*, a post-village of Chatham township, Columbia co., 23 m. S.S.E. of Albany.

hatham Harbor, in *Massachusetts*, at the E. extremity of Cape Cod. It has 20 feet of water at low tide, and is well protected from the sea. The Chatham lights are inside the harbor on James's Head, near the S.E. end of Cape Cod: Lat. 41° 40' 20" N., Lon. 69° 57' 12" W.

hatham Hill, in *Virginia*, a P. O. of Smyth co.

Chat'ham Islands, a small group belonging to Great Britain, and lying in the Pacific Ocean, in Lat. 43° 38' to 44° 40' S., Lon. 177° to 179° W., about 400 m. E. of New Zealand. The climate and soil of this archipelago are generally good, but the surface is untimbered. *Prod.* Wheat. A whaling station was established at Oünga (one of the group), in 1840.

Chatham Islands, a group in the N. Pacific Ocean, Lat. 9° N., Lon. 179° 50' E.

Chat'hamite, *n.* (*Min.*) A variety of Cloanthite, found in mica-slate at Chatham, Connecticut. It is chiefly an arsenide of nickel and iron, containing 1.3 per cent. of cobalt.

Chat'ham Port, in *Massachusetts*, a post-office of Barnstable co.

Chatham Run, in *Pennsylvania*, a post-office of Clinton co.

Chatham Sound, in *Alaska*, separates George III. and Prince of Wales archipelagoes: Lat. 56° 30' N., Lon. 133° W.

Chatham Valley, in *Pennsylvania*, a P. O. of Tioga co. **Châtillon-sur-Indre**, (*shâ-teé'yon*.) a town of France, dep. Indre, on the river Indre, 27 m. W.N.W. of Châteauroux; *pop.* 4,317.

Châtillon-sur-Seine, a neat town of France, dep. Côte-d'Or, on the Seine, 28 m. N.N.E. of Semur-en-Auxois. *Manf.* Cloths, hats, glass, iron-plates, beet-root sugar, &c. *Pop.* 5,319.

Chat Moss, an extensive morass in England, co. Lancaster, covering 6,000 acres, most part of which is now reclaimed and under tillage. Geo. Stephenson, the celebrated engineer, first utilized this swamp by carrying the Liverpool and Manchester Railway across it, in 1830.

Chatonuy, a town of France, dep. Isère, 15 m. E.S.E. of Vienne; *pop.* 4,364.

Chatonillement, (*shat-weel'mong*.) a French noun, denoting the action of tickling or titillation: sometimes found in this sense in books on medicine.

Chatoy'ant, *a.* [Fr., from *chat*, cat, and *œil*, an eye; alluding to the shining and mutable colors in the eyes of a cat.] (*Min.*) Applied to minerals, as the precious opal, which, when turned, successively exhibits different prismatic colors.

—*n.* A mineral which, when cut smooth, has a chatoyant surface.

Chatoy'ment, *n.* [Fr. *chatoiement*.] Changeability, or play of colors.

Chat Potatoes, *n. pl.* Small or refuse potatoes given to swine, cattle, &c. as food.

Chatsk, a town of European Russia, govt. Tamboff, on the Chatcha, 95 m. N. of Tamboff; trades in corn, cattle, tallow, hemp, and iron. Estimated *pop.* 8,000.

Chatsworth, in England. See *BAKEWELL*.

Chats'worth, in *Illinois*, a post-office of Livingston co.

Chat'tahoo'chee, in *Florida*, a post-village of Gadsden co., 42 m. N.W. of Tallahassee, at the junction of the Flint and Chattahoochee rivers. During the civil war, the U. States arsenal here was captured by the Confederates, Jan. 6, 1861: who thus possessed themselves of large quantities of ammunition.

Chattahoo'chee, in *Georgia*, a large river-branch of the Apalachicola, rises in the Blue Ridge Mountains, in Habersham co., in the N.E. part of the State, and flowing S.W. through the gold regions of Upper Georgia to West Point, thence S., forms the W. boundary of Geo., navigable for steamers to Columbus, 350 m. from the Gulf. Total abt. 550 miles;—A county in the above State.

Chattanooga, in *Georgia*, a creek rising in Walker co., and emptying into the Tennessee near Chattanooga.

Chattanooga, in *Tennessee*, a city, *cap.* of Hamilton co., on the left bank of the Tennessee river, near the Georgia line. This place was the scene of some of the most hotly-contested battles of the civil war. Since the close of the war it has progressed until to-day it is one of the most active manufacturing cities of the South. Coal and iron exist abundantly in the surrounding hills, and in the city are six great iron and steel manufacturing, employing 2,500 hands. The lumber industry is very large, and one of the largest tanneries in the world is here located. In addition there are cotton-factories, rolling mills, etc. *Pop.* (1897) about 34,000.

Chat'tel, *n.* [Flem. *kateyl*, movable property, a beast of burden: O. Fr. *chapitel*, a beast let out for hire; from Lat. *capitale*, dim. of *caput*, the head. See *CATTLE*.] (*Law.*) Any article of movable goods. C. now comprehends all goods, movable or immovable, except such as have the nature of freehold.

Chat'telism, *n.* The holding of chattels.

Chat'ter, *v. i.* [Swed. and Goth. *qruttra*, to chirp: Du. *kwetteren*, to prate, to prattle: Goth. *vrithan*, to speak: Swed. Goth. *qrada*, to speak, Sansk. *rad*, to cry out; *kath*, to speak.] To make a noise like a bird; to speak with an indistinct utterance: as "The pie still *chat-tereth*."—*Sidney*.

—To make a noise by collision of the teeth; to sound like the teeth when one shivers, as, to *chatter* with cold.

"With *chattering* teeth and bristling hair upright."—*Dryden*.

—To talk idly, carelessly, or rapidly, to jabber.

"To . . . charm her *chattering* tongue."—*Shaks.*

—*n.* Sounds like those made by a magpie or monkey; idle, frothy talk.

"The mimic ape began his *chatter*."—*Swift*.

Chattera'tion, *n.* Act of chattering, or talking idly or carelessly.

—A colloquialism for loquacity, or habit of incessant talking.

Chat'ter-box, *n.* A colloquialism for one who talks incessantly.

Chat'terer, *n.* One who chatters; an idle talker, a prattler.

(*Zoöl.*) The popular name of the family of birds *Ampe-lide*, q. v.

Chat'tering, *n.* Rapid, indistinct sounds, as made by birds: idle, careless talk; rapid and clashing motion of the teeth.

Chat'terton, THOMAS, an English poet, b. at Bristol, 1752, was the son of a poor schoolmaster. After having spent some years at a charity school, he was articled to an attorney in his 15th year. He was not quite 16 when he published in a Bristol newspaper the first of his extraordinary forgeries; being an account of an ancient procession, which, on being questioned, he alleged to have been found in the charter-room of the church of St. Mary Redcliffe. He next exhibited specimens of old poetry, which he asserted were written in the 15th century, by a priest named Thomas Rowley. At the same time, pieces, both in prose and verse, which were avowedly his own, appeared in London magazines; and these, by their singular force and originality, showed him to be quite capable of having concocted the supposed antiques. Indeed, wonderful as was, under the circumstances, the antiquarian and other knowledge which he wasted on his impostures, their spuriousness was at once evident to the few who were competently familiar with Old English language and history. The poet Gray, and his friend Mason, unhesitatingly denounced the imposition, when some of the poems were sent to them by Horace Walpole. The best imitation of the antique is, perhaps, the minstrel's song inserted in the tragedy of *Ella*; but everywhere there is evidence of genius, which, if it had been guided by good intention, and fostered by mature study, would certainly have given birth to poetical masterpieces. But perversity of principle was manifest alike in the unhappy boy's writings, and in his conduct. He extorted a release from his master before he had served him for three years; and immediately sought and found literary employment in London, busying himself chiefly with political and satirical writings. A very few months of toil, ill remunerated, and disappointments in his expectation of patronage from the great, drove his undisciplined mind to despair. He became indigent to the verge of starvation, and poisoned himself in August, 1770, when he wanted some weeks of completing his 18th year.

Chat'terton, in *Virginia*, a P. O. of King George co.

Chattooga, in *Georgia*, a N.W. county bordering on Alabama; area, 360 sq. m. It is traversed by the Chattooga River (whence its name), and is drained by the Eukalanaqua, Amuchee, and Snake creeks. The surface is divided between mountains and fertile valleys. The county contains excellent mineral springs, limestone, marble, and iron and lead ores. *Cap.* Summerville. *Pop.* in 1890, 11,800.

Chattooga, a river which, rising in Walker co., near the N.W. frontier of Georgia, flows S.W. and enters the Coosa in Cherokee co., Alabama.

Chattooga, in *N. Carolina*, one of the branches of the Savannah River, rises in the S. part of the State, and flows S.W.; forming the boundary between S. Carolina and Georgia.

Chattoogaville, in *Georgia*, a post-village of Chattooga co., on Chattooga River, 200 m. from Milledgeville.

Chat'ty, *a.* Given to free and unrestrained conversation, talkative, as, a *chatty* individual.

Chat'wood, *n.* [From *chat*, a small stick, and *wood*.] Small sticks and sprays, only fit for fuel.

Chau'cer, GEOFFREY, the father of English poetry, was b. in 1328, in London, and studied law. In 1359 the poet served, and was taken prisoner, during the king's invasion of France; and, besides discharging other foreign missions, he was sent to Genoa in 1373, a journey which is supposed to have given him an interview with Petrarch. He received a house in the royal demesne of Woodstock; and there most of his works were written. D. 1400, and was buried in Westminster Abbey. C.'s *Canterbury Pilgrims*, his chief poem, is replete with a deep insight into the springs and working of human character, intense love of nature, pure and lofty feeling, abundant humor, piercing wit, and that genial temperament which lights up all around with the sunshine of a fine mind and generous disposition.

Chaufontaine, (*sho-fön-tän'*) in Belgium, a village charmingly situated in the valley of the Vesdre, a few miles from Liège, and celebrated for a spring which supplies water for hot baths.

Chaudière, (*shü-de-air'*) a lake of Lower Canada, 55 m. N.N.W. of Johnstown.

Chaudière, a river of Lower Canada, connecting with the St. Lawrence, 7 m. above Quebec, after a N.N.W. course of 90 m. The celebrated *Falls of Chaudière*, about 100 ft. in height, are about 3 m. from the outlet of the river, which is not navigable.

Chaud'medley, *n.* [From Fr. *chaud*, hot, and *mêlée*, a broil.] (*Law.*) The killing of a person in the heat of an affray; distinguished by Blackstone from *chance-medley*, an accidental homicide,—a distinction that is said to be of no great importance.

Chau'fer, *n.* [Fr. *chauffer*.] A small table furnace.

Francis.

Chau'ffers, (*shüf-fair'*) the name of a body of brigands who, during the first year of the French revolution, infested many parts of France. They wore a black veil over their faces, and tortured their victims, burning (*chuffer*, to make hot) their feet to make them disgorge their treasures. It was not till 1803 that measures adopted under the Consulate put a stop to their depredations.

Chauliac, GUI DE, (*shül'yac*.) a French surgeon who flourished in the 14th cent., and laid the foundations of

the modern principles and practice of surgical science, was employed by popes Clement VI., Innocent VI., and Urban V., and wrote a remarkable treatise on surgery, entitled *Inventarium, sive Collectorium Partis Chirurgicæ Medicinæ*, published at Lyons, 1592, 8vo. This work, for 2 centuries, was considered throughout Europe a standard authority on that branch of science.

Chaulien, GUILLAUME DE, (*shō-loo'*) a French poet, b. 1639. By his contemporaries he was designated the French *Anacron*, and by Voltaire the chief of neglected poets. The best edition of C.'s poetical works was published in 1774, in 2 vols. 8vo.; and in 1850, his *Lettres inédites* were given to the world. D. 1720.

Chaumette, PIERRE GASPARD, (*shō-mēt'*) a French demagogue, and one of the scum of society thrown up by the revolution, b. 1763. Introduced by Camille Desmoulins to the Cordeliers' Club, he speedily earned popularity among the *sans-culottes*, and became one of the high-priests of the "worship of reason." He acted his part in the blood-thirsty proceedings of that epoch; but over-doing it at last, he excited the disgust of Robespierre himself, who brought him to the guillotine, 1794.

Chanmonot, PIERRE MARIE JOSEPH, (*shō-mō-nōt'*) a French Jesuit, b. 1611. Becoming a missionary to the N. American Indians, he resided among the Hurons and other tribes, and did much to civilize them. D. at Quebec, 1693. C. wrote an excellent grammar of the Huron language (published at Quebec, 1835), and other works.

Chaumont, (*shō-mōng'*) a town of France, dep. Haute-Marne, 18 m. N.N.W. of Langres. *Manuf.* Woollens, hosiery, gloves, iron, and cutlery. *Pop.* 7,854.

Chaumont', in New York, a post-village of Jefferson co., on Chaumont Bay of Lake Ontario, 14 m. N.W. of Watertown.

Chann'cey, ISAAC, an American naval officer, b. at Black Rock, Conn., in 1772. Entering the U. States Navy in 1799, he took part in the operations before Tripoli in 1804, and in 1812 was appointed to the command on the great Lakes. Here he was actively engaged in annoying the British flotilla, and, in 1813, captured York (now Toronto) in Upper Canada; and in the same year participated in the capture of Fort George, an event which obliged the enemy to evacuate the Niagara frontier. In 1814 C. blockaded Kingston. D. 1840.

Chann'cy, CHARLES, an American divine, b. in England, 1592. After an education at Westminster School, and Cambridge, he was appointed Greek professor at the latter university, where becoming obnoxious to the authorities on account of the stern Puritanism of his religious views, he emigrated to New England in 1638, and in 1654 was appointed 2d President of Harvard Coll. Here again he was remarkable for the Calvinistic bent of his character. D. 1672. He is said to be the ancestor of all who bear the name of Chauncey (or Chann'cey) in the U. States.

Chauney, in Ohio, a post-village of Athens co., on the Hocking River and Canal, 65 m. S.E. of Columbus. Coal mines and salt-works are in the neighborhood.

Chauneyville, in Wisconsin, a post-office of Manitowish co.

Chaunt, *n.* and *v.* Same as CHANT, *q. v.*

Chaunter, *n.* A cant term for one who disposes of a spurious article; as, a horse-chaunter.

Chauny, (*shō-ne'*) a town of France, dep. Aisne, on the Oise, 18 m. W. of Laon. Cider is made here in large quantities. *Pop.* 8,979.

Chaussee, (*shō-sai'*) *n.* [Fr.] A causeway; as, the *Chaussée d'Antin*, a street in Paris, formerly raised above the adjacent ground.

Chaussey, (*shō-sai'*) a group of rocky islands in the English Channel, 8 m. from Granville, on the French coast. Extensive blocks of granite are imported thence to Paris.

Chautauqua, in New York, the most western county of the State; *area*, abt. 1,000 sq. m. Lake Erie forms the N.W. boundary, and Pennsylvania the S. and W. It is drained by Conewango Creek, with its branches, and by other small streams. The surface is diversified, the Chautauqua Mountains passing through fertile valleys. The soil is especially rich along the lake-shore and streams. *Cap.* Mayville. *Pop.* (1890) 75,200.

—A township of above county, on Chautauqua lake, noted for its *Chautauqua Assembly* (*q. v.*) and summer school of literature, &c.; a very popular resort of recent years.

Chautauqua Lake, in New York, a beautiful sheet of water in the central part of Chautauqua co., 18 m. long, and abt. 4 m. wide. It is 1290 feet above the sea, and is said to be the most elevated body of water upon the American continent navigated by steamers; being 726 feet above Lake Erie, and only 6 m. therefrom. Three steamers ply between Mayville and Jamestown during the season of navigation.

Chautauqua Valley, in New York, a post-office of Alleghany co.

Chauveau-Lagarde, CLAUDE FRANÇOIS, (*shō-vō la-gär')* a French lawyer, b. 1756. He distinguished himself as the advocate of Miranda, Brissot, Charlotte Corday, Queen Marie Antoinette, and Madame Elizabeth of France, and was appointed advocate to the council of state under Napoleon. D. 1841.

Chaux-de-Fond, (*La*), (*shō-deh-fong'*) a town of Switzerland, 9 m. N.W. of Neuchâtel, in a gorge of the Jura Mountains. This place is noted for the manufacture of watches, great numbers of which are exported. *Pop.* 9,329.

Chav'ender, *n.* [Fr. *chevesne*.] (*Zoöl.*) The Chub, *Cyprinus cephalus*. See CYPRINUS.

Chaves, a fortified frontier town of Portugal, prov. Tras-os-Montes, on the Tamega, 40 m. W. of Braganza. Mineral waters are found here. *Pop.* 7,392.

Chaves, or VILLA DO ECUADOR, a maritime town of

Brazil, prov. Pará, on the N. side of the island of Marajo, in the delta of the Amazons. Lat. 0° 20' S., Lon. 49° 40' W.

Chavien, (*tshāv'e-kā')* *n.* (*Bot.*) A genus of plants, order *Piperaceæ*. The dried unripe spikes of *C. Roxburghii* and *C. officinarum* constitute the long pepper of commerce, which is imported from the E. Indies. Long pepper contains an acrid resin, a volatile oil, and a peculiar crystalline alkaloid called *Piperine*. It resembles black pepper (see PEPPER) in its effects, and is used for similar purposes. Dried slices of the root and stem are employed medicinally in India under the name of *Pippula Moola*. The leaves of *C. betel*, betel-pepper, and *C. siri-bou*, are chewed by the Malays and other Eastern races with slices of the betel-nut and lime.—See BETEL.

Chaw, *v. a.* [A. S. *ceowan*; Du. *kaauwen*; Ger. *kauen*. See JAW.] To compress or crush with the jaws; to clamp; to chew; to masticate, as food, &c. (Now used as a vulgar example of *chew*.)

"Chawing the foaming bit, there fiercely stood."—*Earl of Surrey*.

—To ruminate, as in thought; to turn over in the mind.

—*n.* A cud; a chew; a quid; a mouthful of anything; as, a *chaw* of tobacco. (Vulgar.)

Chayan'ta, a town of S. America, in Bolivia, dep. Potosi, 55 m. N. of Potosi.

Chayenpoor', a town and dist. of Nepaul, in N. Hindostan. The town is 130 m. E. by S. of Khatmandoo. The dist. is altogether mountainous, and has an extensive trade with Tibet.

Chay-fang, in China. See TCHÉ-FANG.

Chay'-root, **Cho'ya**, or **Say'au**, *n.* (*Bot.*) See OLDENLANDRIA.

Chazy, in New York, a river of Clinton co., enters Lake Champlain.

—A post-village and township of Clinton co., on Chazy River, abt. 128 m. N. by E. of Albany; *pop.* of township 3,206.

Chazy Lake, in New York, a source of the Chazy River, in Clinton co., is about 4 m. long.

Cheadle, (*cheed'l*) a market-town of England, co. Stafford, 180 m. N.W. of London. *Manuf.* Copper, iron, and tin-ware, tapes, leather, flax, nails, &c. *Pop.* about 4,000.

Cheap, *a.* [A. S. *ceap*, cattle, salable commodities, bargain, price, business; Ger. *kauf*, a bargain; Icel. *kaup*. Our *cheap* is an ellipsis for *good-cheap*, that is a good bargain.] To be had at a low rate; at a low price or rate; being a good bargain; bearing a low price; as, a *cheap* article of sale.

—Being of little value; common; not respected.

"O God, that bread should be so dear,
And flesh and blood so cheap!"—*Hood*.

Cheapen, (*chēp'n*) *v. a.* [A. S. *ceapian*, to bargain; Icel. *kenpa*, or *kaupi*, to buy, to trade; Ger. *kaufen*, to buy; O. Ger. *kauffian*, to trade, to buy; Goth. *kaupon*, to buy, to do business; allied to Lat. *capere*; Gr. *kapōōn*. Scot. *coup*, and Eng. *chop*.] To buy or bargain for advantageously; to attempt to buy; to ask the price of a commodity; to buy at a low price; to chaffer for.

"Pretend to cheapen goods, but nothing buy."—*Swift*.

—To beat down, depreciate, or lower in price; to haggle.

"I find my proffer'd love has cheapen'd me."—*Dryden*.

Cheap'ener, *n.* One who cheapens; a bargainer; a haggler.

Cheaply, *adv.* At a small price; at a low rate.

"So great a day as this cheaply bought."—*Shaks.*

Cheap'ness, *n.* State or quality of being cheap; lowness in price by comparison with intrinsic value, or customary rate of cost.

Cheap'side, in New Jersey, a village of Essex co., 10 m. W. of Newark.

Chear, *n.* and *adv.* Old spelling of CHEER, *q. v.*

Cheat, *v. a.* [From ESCHEAT, *q. v.*] To practise extortion and fraud; to defraud; to impose upon; to effect or obtain by trick, artifice, or low cunning; to deceive; to outwit; to beguile.

"Doubtless the pleasure is as great
Of being cheated as to cheat."—*Hudibras*.

—*n.* A deceitful, dishonest act; a fraud; deception; trick; imposition; imposture.

"When I consider life, 't is all a cheat."—*Dryden*.

—A person who cheats or is guilty of fraud; a deceiver.

(*Law*.) The offence of fraudulently obtaining the property of another by any deceitful or illegal practice short of felony, but in such a way as that the public interest may possibly be affected. In order to constitute C., the fraud must be of such a kind as that it could not be guarded against by common prudence. C., in this sense, is an offence at common law, and indictable, which is not the case with imposition in a private transaction.

Cheat, or **Cheat-bread**, *n.* A kind of wheaten bread.

Cheat'ableness, *n.* Capacity for being cheated.

Cheat'er, *n.* One who cheats or practises fraud or deception; a cheat.

"Disguised cheaters, . . . and many such like libertines of sin."—*Shaks.*

—An escheator. See ESCHEATOR.

Cheat'ham, in Tennessee, a N.W. county; *area*, 350 sq. m. It is traversed by the Cumberland River and drained by Harpeth River. Its surface is uneven. *Cap.* Ashland City.

Cheat'ingly, *adv.* In a cheating manner.

Cheat River, in Virginia, the largest branch of the Monongahela, is formed by the junction of the Laurel, Glade, Shavers, and Dry forks, which rise near the N. border of Pocahontas co., among the Alleghany Mountains. Flowing thence N. and N.W. through Preston and Monongahela counties, it enters the Monongahela

at the S.W. part of Fayette co., in Pennsylvania. It is navigable for 40 m. above Rowlesburg.

Chebaco', *n.* [From *Chebacco*, Mass., U. S.] (*Naut.*) A kind of sailing-craft, employed in the Newfoundland fisheries;—called also *pinkstern*.

Che'baue, or **She'bauee**, in Illinois, a vill. and twp. of Iroquois co., 64 m. S. by W. of Chicago.

Cheboy'gan, in Michigan. See SHEBOYGAN RIVER.

—A county, forming the lower part of the peninsula bordering on the Straits of Mackinaw and Lake Huron; *area*, about 800 sq. m. It has several lakes, and is drained by Black and Sheboygan rivers. *Cap.* Cheboygan. *Pop.* (1895) 13,896.

—A thriving city, cap. of above co., on Lake Huron, 35 m. N. E. of Petoskey. In a lumbering and farming district. *Pop.* (1897) abt. 7,300.

Check, *v. a.* [Fr. *échequer*, from Pers. *shāh*, a king. A term applied in the game of chess, when the king is attacked or forced to retire and cover himself.] To stop; to restrain; to hinder or repress; to curb; to control; to moderate.—To chide or reprove; to rebuke.

"The good king his master will check him for it."—*Shaks.*

—To compare or examine with corresponding evidence to verify; as, to *check* an account.

—To control by a counter-register or reckoning; to make a mark against; as, to *check* a list of voters.

—*v. i.* To stop; to make a stop; preceding *at*.

"With what wing the stangel checks at it."—*Shaks.*

—To clash or interfere.

"If love check with business, it troubleth men's fortunes."—*Bacon*.

—*n.* A stop; hindrance; rebuff; restraint; curb; control; obstruction; he or that which stops or restrains.

"Free from rhyme or reason, rule or check."—*Pope*.

—The correspondent cipher of a draft or order for money (*Com.*) An order for money payable at sight; a draft as, a banker's *check*. (Sometimes written *cheque*.)

—Checked cloth; as plaid, &c.

—A token given for identification of anything; as, a *check* for baggage.—A mark of verification placed against an item, amount, &c., of a list or account.

(*Law*.) A written order, addressed to some person generally a banker, directing him to pay the same specified in the check to the person named in it, or bearer or order, on demand. The chief differences between check and bill of exchange are: 1, that a check is not due until presented, and, consequently, can be negotiated any time before presentment, and yet not subject to holder to any equities existing between the previous parties; 2, that the drawer of a check is not discharge for want of immediate presentment with due diligence while the drawer of a bill of exchange is; 3, that the death of the drawer of a check rescinds the authority of the banker to pay it; while the death of the drawer of a bill of exchange does not alter the relation of the parties.—A check ought to be drawn within the State where the bank is situated, because if not so drawn it becomes a foreign bill of exchange, subject to mercantile law; requiring that it be protested, and that due diligence be used in presenting it, in order to hold the drawer and indorsers. A check being payable on demand, is not to be accepted. There is a practice, however, of making checks *good*, by the banker, which fixes his responsibility to pay that particular check when presented; and amounts, in fact, to an acceptance. Such marking is called *certifying*, and a check so marked called a *certified check*.

(*Sports*.) In Falconry, a term applied to the action of a hawk when forsaking its proper game to pursue other birds.

(*Games*.) In Chess, a term to denote the situation when a player obliges his adversary either to move or guard his king.

Check-book, *n.* A book containing blank checks for drawing upon a bank.

Check'er, **Check'er-work**, *n.* Work varied alternately as in its colors and materials; work consisting of cross-lines.

Check'er, *n.* One who checks or restrains; as, a *check* of vice.

(*Games*.) A Chess-board; a draught-board.—A pie in the game of draughts or checkers. (Sometimes written *chequer*.)

Check'er-berry, *n.* (*Bot.*) See GAULTHERIA.

Check'er-board, *n.* A board whereon draughts or checkers is played. (Sometimes written *chequer-board*.)

Check'ered, (*chek'erd*) *a.* Diversified; variegated; as a *check'ered* existence.

Check'ers, **Chequ'ers**, *n. pl.* (Often called DRAUGHT (*Games*.) A game played by two persons on a board similar to that used in playing chess. Each player has set of 12 pieces, consisting of small, round, flat disks made of wood or ivory; one set being *black* and the other *white*. The pieces must all be placed on the squares of the board, in alternate fours in the first two rows before each player. The pieces must move on one square at a time, diagonally and forwards. If opponent's piece stands in the way, there is no retreat; the player must either advance or take his adversary's piece. A piece can only be taken, however, when there is a vacant space directly behind it; the attacking piece is lifted over and placed on this vacant square, where the piece leaped over is removed from the board. The object is either to take all the adversary's pieces, or to hold them in so that he cannot play. The game increases interest towards the close, as those pieces that reach a vacant square on the adversary's king row become *kings* (as some style them, *queens*), that is, their power is doubled, and they can move backward or forward to all parts of the board. The game of C. does not require so much

science as chess, but it is a favorite recreation with a great number of people. In France, it is called *Les Dames*, probably on account of its always having been very popular with ladies.

heek'less, *a.* Incapable of being checked or kept back.

heek'mate, *n.* [Ar. *shūhmāt*, the Shah is dead; Hind. *shūhmāt* — *shah*, or *shuh*, king, and *māt*, akin to Heb. *muth*, to die, and so in all the Semitic languages. Hence, in a literal sense, the king is dead or confounded. A defeat, overthrow, or complete check.

"Love they him call'd, that gave me the *cheek-mate*." — *Spenser*.
(*Games*.) In Chess, the term given to the movement when the king is attacked and cannot come out of check, so that the game is then finished.

v. a. To arrest, check, or defeat completely; as, to *check-mate* a demand.

(*Games*.) In Chess, to make a movement which stops further action on the part of an adversary, and ends the game.

heek'-rail, *n.* (*Civil Engineering*.) A contrivance used on a double line of railroad, at the crossing from one line of rails to another, or at a siding-place; to allow the trains of cars to run on, or to move into the other line or siding, as it may be adjusted.

heek'-string, *n.* A string or cord attached to a carriage by which an occupant can communicate with the driver.

heek'y, *n.* (*Her.*) See *CHEQUY*.

nedabno't Bay, in Nova Scotia, on the N.E. coast, at the S. end of the Gut of Canso.

ned'dar Cheese, *n.* A rich and fine-flavored cheese made at Cheddar, a village of Somerset co., England.

nedor-la'omer, king of Elam, in Persia, in the time of Abraham. He made the cities in the region of the Dead Sea his tributaries; and on their rebelling, he came with four allied kings and overran the whole country south and east of the Jordan. Lot was among his captives, but was rescued by Abraham, who promptly raised a force from his own dependents and his neighbors, pursued the enemy, and surprised and defeated them.

nedu ba, an island in the Bay of Bengal, about 10 m. S.W. of Ramru, coast of Aracan, to which prov. it belongs. It lies between Lat. 1° 36' and 1° 46' N., and Lon. 93° 28' and 93° 44' E. Area, 400 sq. m. Soil, rich; producing sugar-cane, hemp, tobacco, cotton, and rice, in luxuriant perfection.

neek, *n.* [A. S. *chece*, *ceac*, *ceact*; Du. *kark*, the jaw; Swed. *kek*, a jaw; W. *ceg*, the mouth; Heb. *cek*, the palate, the inside mouth, the jaws; from *chanak*, to make narrow, strait, close.] Either side of the mouth covering the jaws; the side of the face below the eyes on each side.

pl. (*Mech.*) Those pieces of a machine, or other implement or instrument which form corresponding sides, or which are double and alike; as, the *cheeks* of a windlass.

(*Mech.*) The shears or bed of a lathe as made with two pieces for conducting the puppets.

(*Joinery*.) Two upright, equal and similar parts of any piece of timber-work, as the sides of a dormer-window.

Cheeks of a mortise, are the two solid parts upon the sides of the mortise. The thickness of each cheek should not be less than the thickness of the mortise, unless mouldings on the stiles require it to be otherwise.

Cheeks of a mast or block, the projection on each side of a mast, upon which the trestle-trees rest; the sides of the sheet of a block.

Cheek by joule, close to each other; in direct contact, or immediate proximity.

neek'-bone, *n.* The bone of the cheek.

neek'-tooth, *n.* The hinder tooth or tusk.

"He hath the *cheek-teeth* of a great lion." — *Joel*.

neep, *v. i.* To chirp, as a small bird.

neer, *n.* [Fr. *chère*, everything which respects meats, their quantity, quality, and mode of preparation; from *in chair*, to rejoice, because the sight of good viands makes the countenance glad.] That which gladdens, vivens, or exhilarates; good fare; entertainment; provisions for a feast.

"The table was loaded with good *cheer*." — *Irving*.

invitation to gaiety, enjoyment, or good spirits.

"At Christmas play, and make good *cheer*." — *Tusser*.

A shout of joy; expression of applause; acclamation; as, his speech was received with *cheers*.

air or expression of the countenance; that which affects the countenance with gladness or cheerfulness.

"Pale at the sudden sight, she changed her *cheer*." — *Dryden*.

lirth; gaiety; jollity, as at a feast.

I have not that . . . *cheer* of mind that I was wont to have."

state of gladness, joy, or animation.

"Be of good *cheer*; it is I; be not afraid." — *Matt.* xiv. 27.

a. [O. Eng. *cheare*.] To cause to rejoice; to gladden; to brighten the countenance of; to exhilarate.

"Hark! a glad voice the lonely desert *cheers*." — *Pope*.

to encourage; to inspire; to animate; to comfort or brace; to console; as, to *cheer* drooping spirits.

"The cups that *cheer* but not inebriate." — *Couper*.

to salute with shouts or tokens of joy; to applaud; to receive with acclamation; as, to *cheer* a victorious army, to *cheer* a ship, to *cheer* hounds on.

i. To become glad, blithe, or joyous; to grow cheerful or animated.

"At sight of thee my gloomy soul *cheers* up." — *Philips*.

neer'er, *n.* One who cheers; he who, or that which, makes glad.

"Thou *cheerer* of our days." — *Sir H. Wotton*.

Cheer'ful, *a.* Having good spirits; moderately joyful; lively.

"Travel on life's common way in *cheerful* godliness." — *Wordsworth*.

—Causing joy, animated spirits, or cheerfulness.

"From May-time and the *cheerful* Dawn." — *Wordsworth*.

—Having an appearance of gaiety; gay; sprightly; animated.

"From the *cheerful* ways of men cut off." — *Milton*.

Cheer'fully, *adv.* In a cheerful manner; with alacrity; willingly.

Cheer'fulness, *n.* State of being cheerful; liveliness; animation; good spirits; a state of moderate joy or gaiety.

Cheer'ily, *adv.* With cheerfulness, spirit, or alacrity.

Cheer'iness, *n.* Cheerfulness; comfort.

Cheer'ingly, *adv.* In a cheering or encouraging manner.

Cheer'less, *a.* Without joy, gladness, cheer, or comfort; gloomy; dejected; sad; dreary; as, a *cheerless* home.

"My cheerful day is turned to *cheerless* night." — *Fairie Queen*.

Cheer'ly, *a.* Cheerful; gay; not gloomy or dejected.

—*adv.* Heartily; cheerfully; briskly; with a will.

"*Cheerly* rouse the slumbering morn." — *Milton*.

Cheer'up, *v. a.* To make cheerful; to enliven; to console.

Cheer'y, *a.* Cheerful; gay; sprightly; blithesome; as, a *cheery* face. — Having power to make gay or cheerful.

"Come, let us quaff a *cheery* bowl." — *Gay*.

Cheese, (*chēz*), *n.* [A. S. *cyse*, *cese*; Du. *kas*; Ger. *käse*; O. Ger. *kas*, *kasi*; W. *caves*; Gael. *caise*, probably from Ar. *kauzah*, or *khees*, milk; Lat. *caseus*, probably from *coactus*—*co*, ago, to drive together, to coagulate.] The curd of milk salted, pressed, and dried. In the preparation of cheese, the milk is coagulated by means of *rennet*, which is prepared from the lining membrane of a calf's stomach. This is left in contact with the warm milk for some hours, until the coagulation is completed. This action of rennet upon milk has not yet received any satisfactory explanation. The curd is collected and pressed into cheeses, which are allowed to ripen in a cool place, where they are occasionally sprinkled with salt. The peculiar flavor which the cheese thus acquires is due to the decomposition of the fatty matter under the influence of the caseine, giving rise to the production of certain volatile acids, such as butyric, valerianic, and caproic, which have very powerful and characteristic odors. If this ripening be allowed to proceed very far, ammonia is developed by the putrefaction of the caseine, and in some cases the ethers of the above-mentioned acids are produced, at the expense probably of a little sugar of milk left in the cheese, conferring the peculiar aroma perceptible in some varieties of it. The different kinds of cheese are dependent upon the kind of milk used in their preparation, the richer cheese being, of course, obtained from milk containing a large proportion of cream; such cheese fuses at a moderate heat, and makes good toasted cheese, whilst that which contains little butter never fuses completely, but dries and shrivels like leather. The principal descriptions of *C.* made in Great Britain, most of which are successfully imitated and in some cases improved upon in this country, are the *Cheddar*, *Ceshire*, *Derbyshire*, *Dunlop*, *Gloucester* (single and double), *Lincolnshire*, *Norfolk*, and *Wiltshire*. The *Silton*, the richest and dearest of all English *C.*, is not manufactured elsewhere with any degree of success. It is nearly double the price of all other English *C.*—The great bulk of American *C.* is made in cooperative factories, not in private dairies, as in Europe. The annual export from this country is over 100,000,000 lbs. Canada exports about an equal amount. New York is the greatest cheese-producing State. For foreign *C.* see their names, as *Farmesan*, chiefly made in Parma, Italy; *Gruyere*, in Switzerland and the French department of Jura; *Dutch*, in Holland. The *Roquefort*, *Neufchâtel*, and *Brie* are the best known of the French cheeses; all of these have a very large sale in the United States.

(*Med.*) Cheese, which, in a state of health and vigorous appetite, may be eaten in large quantities, and with comparative impunity, is a substance that in no form should be given to, or partaken of, by an invalid, or one with weak digestion. A very erroneous idea is entertained by many people, that a certain amount of cheese taken after dinner promotes the digestion of the other articles eaten to make up the repast. Cheese in any form is extremely indigestible, and, when toasted, becomes little better than so much dried leather. Any benefit, therefore, that accrues from eating cheese as a dessert must arise simply from the salt contained in it acting as a stimulant.

Cheese'-cake, *n.* A kind of cake made of soft curds, sugar, and butter.

"With softening mead and *cheese-cake* ends the strife." — *King*.

Cheese'-lep, *n.* A bag used for holding the rennet used in the making of cheese.

Cheese'-mite, *n.* (*Zoöl.*) The mite in cheese, a species of the genus *ACARUS*, *q. v.*

Cheese'-monger, *n.* A dealer in, or vender of, cheese.

Cheese'-paring, *n.* The rind or paring of cheese.

"Like a man made after supper of a *cheese-paring*." — *Shaks.*

Cheese'-press, *n.* A press or engine used for pressing curds in the making of cheese.

Cheese'-rennet, *n.* (*Bot.*) See *GALUUM*.

Cheese'-vat, *n.* The wooden vat or case used for confining curds before they are pressed into cheese.

Chees'y, *adj.* Having the nature, qualities, taste, or form of cheese; as, a *cheesy* substance.

Cheet, *v. i.* To chatter or chirrup, as a bird.

Cheer'tah, *Chetah*, *n.* (*Zoöl.*) See *LEOPARD*.

Cheer'ver, GEORGE BARRELL, D. D., an eminent American divine, and man of letters, born at Hallowell, Maine, in 1807, graduated at Bowdoin College, in 1825, and settled at Salem, Mass., in 1832. His early contributions to the *Biblical Repository*, *North American Review*, &c., were remarkably popular. He was an earnest advocate of the temperance cause, and, in 1835, published an allegory called *Deacon Gales's Distillery*, which brought upon him an action for libel, and a month's imprisonment. In 1839, Dr. C. removed to New York, where he was the pastor of a large and influential congregation. His doctrine was that of orthodox Congregationalism. Among his principal works were: *The Windings of the River*, *The Water of Life*, *Lectures on Bunyan and the Pilgrim's Progress*, *Wanderings of a Pilgrim*, and *Lectures on the Life, Sanctity, and Genius of Cooper*. Died Oct. 1, 1860.

Chéf, *n.* [Fr.] The chief or head person; as, *chef de bataillon*, chief, or commander of a battalion.)

—, (or *CHEF DE CUISINE*, chief cook.) The head cook of the kitchen of a large establishment; as, the *chef* of a club-house.

Chef-d'œuvre, (*shā-dōv'er*), *n.*; *pl.* *CHEFS-D'ŒUVRE*. [Fr.] A masterpiece; a capital or principal work in belles-lettres, the fine arts, &c.

Che'fonte, or *CHIFONTE*, in Louisiana, a small river flowing S. into Lake Pontchartrain.

Che'gre, *Che'goe*, *n.* (*Zoöl.*) See *PULEX*.

Che'halis, in Washington, cap. of Lewis co., about 30 m. S. of Olympia.

—A river rising in Lewis co., on the E. side of the Coast Range, and flowing through Chehalis co., N.N.W., falls into Gray's Harbor, after a course of about 125 m.

—A county bordering on the Pacific. Area, about 1,550 sq. m. Cap. Montesano. Pop. about 450.

Chehalis Reservation, in Washington Ter., a vill. of Chehalis co., on the Pacific.

Che'haws, in South Carolina, a small river emptying into St. Helena Sound.

Cheiran'thus, *n.* (*Bot.*) A genus of plants, order *Brassicaceae*. The Wall-flower, *C. cheiri*, is a popular garden-flower, admired for its agreeable odor and its handsome corymbose clusters of orange or yellow flowers. It is 1-2 feet high; stem somewhat shrubby and decumbent at base; leaves entire and slightly dentate, lanceolate, acute, smooth; petiole obovate.

Cheiro'gus, *n.* (*Zoöl.*) See *AYE-AYE*.

Cheiro'ptera, *n. pl.* [Gr. *cheir*, the hand, and *pteron*, a wing.] (*Zoöl.*) An order of *Mammalia* characterized by having the anterior extremities, and especially the hands, so modified as to serve the office of wings, the fingers being extremely lengthened and connected together by a thin membrane. Of this order the common Bat (*Vespertilio* *pulex*) may be regarded as the type. — See *BAT*.

Cheiro'pterus, *a.* Belonging, or relating, to the *Cheiroptera*.

Cheiro'temon, *n.* (*Bot.*) A genus of trees, ord. *Stroculiaceae*. The species *C. platyoides* is the Hand-piant of Mexico, which derives its common name from the remarkable appearance of its flowers; the anthers and style being so arranged as to resemble a hand furnished with long claws.

Che-kiang, in China. See *TCHÉ-KIANG*.

Che'koa, *n.* The clay used in the manufacture of Chinese porcelain.

Che'le, *n. pl.* [Gr. *chela*, a claw.] (*Zoöl.*) The first pair of forcipated extremities of the crab, lobster, and other crustaceans.

Che'lidon, *n.* [Gr.] (*Anat.*) The hollow at the flexure of the arm.

Che'lido'nium, *n.* (*Bot.*) The Celandine, a gen. of plants, ord. *Papaveraceae*. The species *C. majus* is found in waste places and on old walls, and may be recognized by its small yellow flowers, and the orange-colored juice which exudes from its stem when plucked. This juice is poisonous, and is a popular application for the cure of warts. It has been used with success in the treatment of opacities of the cornea, and has also been administered internally as a stimulant.

Che'liferous, (*kel-i-fer-us*), *a.* [Gr. *chela*, claw, and Lat. *ferre*, to bear.] Possessing cheliform adjuncts.

Che'liform, (*kel-i-fōrm*), *a.* [Gr. *chela*, and Lat. *forma*, form.] Having a movable finger like the claw of a crab, or pincer-like form.

Che'lins, MAXIMILIAN JOSEPH, a distinguished German surgeon, b. 1794. He graduated at Heidelberg in 1812, became hospital surgeon in Ingolstadt in 1813, and accompanied as regimental surgeon the Baden troops to France. At the close of the war, C. went to Vienna, and in 1815 joined the second expedition against France. In 1819 he was made full professor at Heidelberg; in 1821 court counsellor; and in 1826 privy counsellor. D. 1866. His works upon surgery have been so much esteemed that they have been translated into nearly all the languages of Europe.

Chelms'ford, an ancient town of England, co. Essex, on the Chelmer, 28 m. N.E. by E. of London. It is the centre of a fine agricultural country. Pop. 6,064.

Chelms'ford, in Massachusetts, a post-village and township of Middlesex co., on the Merrimac River, 23 m. N.W. of Boston.

Chelo'nia, *n. pl.* [Gr. *chelone*, a tortoise.] (*Zoöl.*) An order of Reptiles, including the Tortoises and Turtles, characterized by the body being enclosed between a double shield or shell, from which the head, tail, and limbs are protruded. The animals composing this order vary considerably in those details of their structure which adapt them to different habits of life; some of them being adapted to reside exclusively upon the solid ground, and others to dwell amidst marshes, the muddy

banks of rivers, &c. The LAND TORTOISES (*Testudinidae*) have a bulged carapace, sustained by a bony skeleton wholly solid, and ankylosed for the greater part to the lateral edges of the breast-plate; their legs are truncated, with very short toes connected almost to the nails, and are capable, together with the head, of being completely withdrawn into the armor. In the MARSH

Fig. 575.—HAWK-BILL TURTLE.
(*Chelonia imbricata*.)

and RIVER TORTOISES (*Emydoidea*) the toes are divided and webbed, so as to increase the extent of surface; and in the TURTLES (*Chelonidae*) they are extended into large undivided paddles, by which they can propel themselves rapidly through the water.—See TORTOISE and TURTLE.

Chelonian, *a.* Pertaining or relating to, or treating of, animals of the tortoise kind.

—*n.* One of the *Chelonia*.

Chel'sea, a borough and par. of England, forming one of the W. suburbs of London. This is an ancient and picturesque place, famous for its fine Royal Hospital erected as a retreat for invalided veteran soldiers. *Pop.* of parish, (1881) 88,101.

Chel'sea, in Illinois, a post-village of Will co., 117 m. N.E. of Springfield.

Chel'sea, in Iowa, a post-office of Tama co.

Chelsea, in Kansas, a post-village, cap. of Butler co., on Walnut Creek, 48 m. S.W. of Emporia.

Chelsea, in Massachusetts, a city of Suffolk co., which may be considered a suburb of Boston. It is a handsomely built and flourishing place, possessing eleven churches; banks, and other fine public edifices. It connects with Boston by the Winnisimmit ferry (the oldest in the U. S., dating from 1631), and by the E. railroad; and with Charleston by a bridge, 3,300 feet in length, over the Mystic River. *Manf.* Oils, paints, hollow-ware, upholstery, brushes, implements, &c. Ship-building is a prominent feature. *Pop.* (1895) 31,264.

Chelsea, in Michigan, a prosperous post-village of Washtenaw co., 60 m. W. of Detroit.

Chelsea, in Pennsylvania, a post-office of Delaware co.

Chel'sea, in New York, a village of Cattaraugus co., 50 m. E. of Dunkirk.

Chelsea, in Vermont, a post-village and capital of Orange co., 20 m. S. by E. of Montpelier.

Cheltenham (*cheltum*), a town, borough, and fashionable watering place of England, co. Gloucester, on the Chelt, at the base of the Cotswold Hills, 9 m. N. E. of Gloucester, and 97 W. N. W. of London. This is one of the handsomest built, and most resorted to of the English spas. The water is a saline, acidulous chalybeate. *C.* is situated in the centre of a country teeming with exquisite scenery and fine antiquarian remains. *Pop.* (1891) 44,500.

Cheltenham, in Missouri, a post-village of St. Louis co., 6 m. W. of St. Louis.

Cheltenham, in Pennsylvania, a post-township of Montgomery county.

Chel'va, a town of Spain, prov. Valencia, on a river of the same name, 39 m. N. W. of Valencia; *pop.* 4,948.

Chem'ic, **Chem'ical** (*kem'ik, kem'ik-al*), *a.* Pertaining, or relating, to chemistry.

—Resulting from the operation of the principles of bodies by decomposition, &c.; as, *chemical analysis*.

Chemical Analysis. (*Chem.*) For theoretical information on this subject, see ANALYSIS. Practically, *C. A.* is divided into the following principal branches:—*Dialysis*, which is the separation of constituents of solutions by means of the intervention of an absorbing diaphragm; *Inorganic analysis*, the detection and separation of the constituents of products which are of mineral nature; *Organic analysis*, which is the resolution of carbon compounds into their component parts; *Spectrum analysis*, which is the recognition of elementary substances by means of certain lines in the prismatic spectrum when their compounds are vaporized, for which purpose a spectroscopic is generally used; *Qualitative analysis*, which is the detection of the components of a substance without reference to their proportions; *Quantitative analysis*, the exact determination of the constituents of a compound; and *Volumetric analysis*, the quantitative estimation of the component parts by means of measured test solutions of a uniform strength.—See, chiefly, BLOWPIPE, DIALYSIS, ORGANIC and INORGANIC CHEMISTRY, RE-AGENT, SPECTRUM ANALYSIS, &c.

Chemical Attraction. See AFFINITY.

Chemical Formula. (*Chem.*) The alchemists employed the signs of the planets to represent the metals; thus, silver was the moon, hence the term *lunar caustic* for silver nitrate. Modern chemists have given to every element one or two letters called *symbols*,

which are used, in conjunction with figures and algebraic signs, to express the composition of the compound. (For the symbols of the different elements, see ATOMIC THEORY). The principle upon which the modern chemical notation is founded, is that each symbol indicates one or more atoms of the elements it represents: thus C_2 , C_{27} , indicate respectively, one, two, and twenty-seven atoms of carbon. Two symbols, placed side by side, signify that they are in close chemical union; thus, AgO signifies a compound containing an atom of silver united to an atom of oxygen. The sign *plus* (+) signifies a union in which the combination is usually less stable; thus, $AgNO_3 + H_2O$ means silver nitrate united to an atom of water, H_2O . Sometimes a period is used to express this condition, thus, $CuSO_4 \cdot 7H_2O$ —i. e., copper sulphate in combination with 7 molecules of water. A number placed on the left of a group of symbols signifies that the whole group, as far as the next comma or *plus*, is to be multiplied by it; thus, $2K_2CrO_4$ signifies two molecules of potassium chromate. Sometimes the group to be multiplied is enclosed in parentheses: $3(HgCN_2) + 2(K_2SO_4)$ means that three equivalents of mercuric cyanide are united to two of potassium sulphate. Formulae may be *empirical* or *structural*—the former giving merely the constituents of a compound; the latter indicating the manner in which they are grouped. It is evident, therefore, that a compound can only have one empirical formula, while its rational formulae are as numerous as the theories of its composition. Alcohol, for instance, is represented empirically by the formula C_2H_6O ; rationally, it may be represented as ethyl hydrate $C_2H_5.HO$; methyl ethylic, C_3H_8O , either as a compound of methyl, oxygen, and ethyl, $CH_3.O.C_2H_5$, and so on. Brackets are used to denote substitution compounds; that is, compounds in which one element, or group of elements, has been substituted for another, without materially affecting the character of the compound.

$\begin{matrix} NH \\ | \\ H \end{matrix}$ } represents ammonia.

$\begin{matrix} NH \\ | \\ H \end{matrix}$ } is the formula of ethylamine, or ammonia with an atom of hydrogen, replaced by an atom of ethyl.

Dashes are sometimes used to denote the atomic power of the element; also, a line through a symbol signifies that its atomic number has been doubled. Bi''' means that bismuth has a valency of three in forming a substitution compound; thus,

$\begin{matrix} N_3H_3 \\ | \\ H_3 \end{matrix}$ } is an ammonia compound in which three

equivalents of hydrogen are replaced by one of bismuth, that metal having a combining power of three. The formulas in organic chemistry are much more complex and typical. Among them is Kekule's benzene ring. The hydrocarbon benzene has the formula C_6H_6 , and for convenience the arrangement shown in Fig. 1 is accepted as the way in which the atoms of carbon and hydrogen arrange themselves. Each atom of hydrogen is replaceable by an organic radical; thus toluene, $C_6H_5.CH_3$, is represented by Fig. 2.

When adjacent hydrogen atoms in the benzene ring are replaced by other radicals, the product is called an *ortho*-compound. When alternate hydrogen atoms are replaced the product is a *meta*-compound, and when opposite hydrogen atoms are replaced, the product is a *para*-compound. The composition of organic compounds is explained by similar formulas, many of which are exceeding complex, and they are also known as *structural formulas*.

Chemical Nomenclature. (*Chem.*) The present system of chemical nomenclature is due to Lavoisier, and a monument to his marvellous powers of systematic classification. It is based on the principle that the name of a compound should, as far as possible, express its composition and properties. The names of many of the elements have been handed down from the alchemists, and were formed on no definite plan. Those elements which have been since discovered have been named either from some characteristic property possessed by them, or from some word indicating their source. Gallium, Scandium, and Germanium testify to the patriotic spirit of their discoverers. Metals, as a rule, terminate in *ium*, as *potassium*, *thallium*, &c.; certain non-metallic elements in *on*, as *boron*, *silicon*, &c.; certain other closely allied non-metallic elements in *ine*, or *gen*, as *chlorine* and *hydrogen*. In some instances, theory grounded on insufficient facts has been allowed to influence the name of an element; for example, oxygen was named from *oxus*, acid, and *gemma*, to generate; the Lavoisierian theory being that no acid could exist without oxygen. Subsequently, however, it was found that oxygen was present in all bases, and

that many acids existed that contained hydrogen. The Lavoisierian nomenclature is founded on the fact, that when a compound of two elements is submitted to the action of the voltaic current, these elements separate, one (the electro-positive body) being attracted by the negative pole, and the other (electro-negative body) going to the positive pole. As a rule, it was found that the metalloids were electro-negative, and the metals electro-positive. The simplest combinations of two elements are termed binary compounds, and fall naturally into two divisions—bases and acids. Bases always end in *ide*, and are compounds of different proportions of a metal with an acid. The proportion of the acid radicle is indicated by the addition of a Greek or Latin numerical particle: thus we have the *monoxide*, *sesquioxide*, *dioxide*, and *trioxide* of various metals, indicating that these compounds contain one, one and a half, two, and three atoms of oxygen to one of metal. Formerly the prefixes *sub* and *per* were used to indicate the excess of base over acid, and *vice versa*, but now the termination *ous* and *ic* added to the base are preferred, as mercurous oxide and mercuric oxide. The termination *ide* is used in some cases, such as *sulphide*, *phosphide*, &c. The compounds of the non-metals with each other are named on the same principle. When the amount of oxygen is large, the compound is generally possessed of acid properties; thus we have Cr_2O_3 , chromium sesquioxide, which is a base; but by increasing the oxygen, we obtain CrO_3 , which is an acid capable of forming salts with bases. The amount of oxygen contained in acids is also indicated by the termination *ic* or *ous*. A few examples of bases and acids will illustrate this:

Pb_2OLead suboxide.
 CuOCopper monoxide, or cupric oxide.
 Fe_2O_3Iron sesquioxide.
 MnO_2Manganese dioxide.
 Au_2O_3Gold trioxide, or auric oxide.
 PCl_5Phosphorus pentachloride.
 P_2S_5Phosphorus pentasulphide.

Certain non-metals, as sulphur and hydrogen, combine with other non-metals to form acids; as:

HClHydrochloric acid.
 HBrHydrobromic acid.
 H_2SHydrosulphuric acid.

The compounds of acids with bases are always indicated by the termination or prefix of the word giving the name of the acid. Acids ending in *ous* and *ic* form salts ending in *ite* and *ate*, the prefix being, of course, preserved. A few examples of this will suffice;

Iron sulphate=Sulphuric acid+iron oxide.
Sodium sulphite=Sulphurous acid+sodium oxide.
Copper nitrate=Nitric acid+copper oxide.

Potassium nitrate=Nitrous acid+potassium oxide.

When the oxide with which the acid is united is a suboxide or peroxide, the prefixes *sub* and *per* are added; for instance the pernitrate and subnitrate are the nitrates of the suboxide and peroxide of the metal. When the proportion of acid is greater or less than the base, the prefixes *mon*, *sesqui*, *di*, are used; as the sodium *monocarbonate*, *dicarbonate*, and *sesquicarbonate*. In double salts, the name of the base only is repeated; as the *potassium sodium tartrate*. There are a few instances of acids and salts which have similar composition, but different properties. They are distinguished from the ordinary kind by the prefix *ortho*, *meta* and *pyro*; thus we have *ortho*-, *pyro*-, and *meta*-phosphoric acids, which differ one from the other simply according to the amount of water with which the oxide is combined; thus, the *ortho*-phosphoric acid contains three molecules of water, the *pyro*-phosphoric acid two, and the *ortho*-phosphoric acid one. Such acids combine with bases and form *ortho*-phosphates, *pyro*-phosphates and *meta*-phosphates. Organic chemistry, although originally treating of all compounds other than those of mineral origin, is now defined as the chemistry of carbon compounds, for the reason that that element enters into the composition of all its compounds. Its nomenclature is complex and depends chiefly upon the presence of certain so-called *organic radicals* in given compounds. These radicals are hydroxyl, HO ; carbonyl, CO_2H ; carbonyl, CO ; cyanogen, CN ; nitro, NO_2 ; sulphonyl, SO_2OH ; amidogen, NH_2 ; methyl, CH_3 ; ethyl, C_2H_5 ; amyl, C_5H_{11} ; phenyl, C_6H_5 ; tolyl, C_6H_4 ; acetyl, C_2H_3O ; and benzoyl, C_7H_5O . These radicals in turn, according as they are present in compounds, give origin to the name of the compound and its class, as is shown in the following divisions into which organic chemistry may be divided: 1. *Hydrocarbons*, composed of carbon and hydrogen only, in various modes of grouping, as *ethyl hydride* C_2H_6 . 2. *Alcohols*, composed of carbon, hydrogen, and oxygen and containing one or more hydroxyl radicals; as *ethyl alcohol* $C_2H_5.HO$. 3. *Aldehyds*, or dehydrogenated alcohols; products of the partial oxidation of the alcohols, containing the radical $CO.H$, as *ethyl aldehyd* $CH_3.CO.H$. 4. *Organic acids*, the products of the further oxidation of the alcohols and containing one or more carboxyl radicals CO_2H ; as *acetic acid* $CH_3.CO_2H$. 5. *Ketones*, which are formed from acids by the substitution of a hydrocarbon radical for the hydroxyl (OH) in the carboxyl, as *acetic ketone* $CH_3.CO.CH_3$ called also *acetone*. 6. *Ethers*, which are formed from alcohols by substituting a compound radical for the H in the hydroxyl, as *ethyl ether* $C_2H_5.O.C_2H_5$. 7. *Haloid compounds*, which are formed from any of the foregoing classes of compounds by the substitution of a halogen radical for hydrogen or hydroxyl, as *chloroform* $CHCl_3$. 8. *Etheral Salts*, which are formed from the acids by the substitution of a compound radical for the hydrogen in the carboxyl radical, as *ethyl acetate* $CH_3.CO.OC_2H_5$. 9. *Ammonia-derivatives*, which are formed upon the type of ammonia NH_3 , by the substi-

Fig. 1.

Fig. 2.

tution of a compound radical for hydrogen, as *ethylamine* $\text{NH}_2\text{C}_2\text{H}_5$. 10. *Cyanogen Compounds*, containing the group CN, as *hydrocyanic acid* HCN . 11. *Phenols*, which are analogous to the alcohols in composition, by containing the hydroxyl radical, but resemble the acids in certain of their properties, and do not yield aldehyds when partially oxidized, as *phenol* $\text{C}_6\text{H}_5\text{OH}$. 12. *Quinones*, which are formed from hydrocarbons by the substitution of a group of two oxygen atoms for two hydrogen atoms, as *quinone* $\text{C}_6\text{H}_4(\text{O})_2$, from benzene C_6H_6 . 13. *Organo-mineral Compounds*, which are formed on the type of the chlorides of metals or non-metals by the substitution of organic radicals for chlorine, as *zinc ethide*, $\text{Zn}(\text{C}_2\text{H}_5)_2$. 14. *Carbohydrates*, or compounds containing six, or some multiple of six, atoms of carbon together with some multiple of the groups H_2O ; as sugar $\text{C}_{12}\text{H}_{22}\text{O}_{11}$ —i. e., $2\text{C}_6\text{H}_{12}\text{O}_6$. 15. *Glucosides*, which are compounds that yield glucose as one of their products of decomposition, as *sativine* $\text{C}_{13}\text{H}_{18}\text{O}_7$. 16. *Albuminoids* and *Gelatinoids*, which are compounds that contain carbon, hydrogen, nitrogen and oxygen, often with small quantities of sulphur and sometimes of phosphorus and are characterized by a tendency to putrefy when moist, as *casein*.

hem'ically, *adv.* According to the principal or laws of chemistry; by chemical process or operation.

hem'icals, *n. pl.* Substances used for producing chemical combinations and effects; articles or substances produced by chemical process.

hemiglyphic (*hem-i-glif'ik*), *a.* [From *chemi-chemical*, and *Gr. glyphein*, to engrave.] Engraved by galvanic process.

hem'in de Runde, *n.* [Fr.] (*Fort.*) A passage left between the top of the revetment of the escarp and the parapet itself, so constructed that the defenders, themselves protected, can fire from it into the ditch.

hemise (*she-miz'*), *n.* [Fr. *chemise*; Sp. *camisa*; It. *camicia*, from L. *Lat. camisia*, a linen night-gown; from *Lat. camus*, a kind of collar for the neck, *Gr. kemos*, a muzzle; *Ar. kannis*, a shirt.] A shift or undergarment worn by females.

(*Fort.*) A wall lining the face of an earth-work.

hemisette (*shé-mé-zet'*), *n.* [Fr. dim. of *CHEMISE*, *q. v.*] An under-chemise, worn by females.

hemist (*kem'ist*), *n.* (formerly written *CHYMIST*. [See *CHEMISTRY*].) A person versed in chemistry; a professor of chemistry; a vender of chemicals.

"The starving *chymist*, in his golden views supremely blest."
Pope.

hem'istry (formerly *CHYMISTRY*), *n.* [Fr. *chimie*; Sp. *chimia*; It. *chimica*; supposed to be derived from the Arabic word *chema*, to hide; hence, the occult or hidden science, the black art.] The science which relates to the peculiar properties of matter; the properties of elementary substances, the proportions in which they unite, the means of their separation, and the laws which govern and effect these agencies.

(*Hist.*) There is perhaps no science the gradual progress of which is so easily traced from one step to another as the science of chemistry. The empirical mixing of two substances, possessing different properties, to form a third, differing from either, must have begun with the first peopling of the earth. The fact was transmitted to others who improved on it, and experimented on other similar bodies; and thus a mass of practical information was obtained, which gradually developed into chemical manufactures. The origin of *C.* may be traced to Tubal Cain, the father of workers of metal, between whom and Hermes Trismegistus lies a period of obscurity of which we know nothing. Hermes, who was the Egyptian god of arts and sciences, is said to have been the inventor of alchemy. Egypt, which is said to have been colonized by his son Mizraim, was the foremost chemical nation of the East; their glass, pottery, colors, and methods of embalming the dead, bear strong testimony to the fact of their being acquainted with chemical processes wrought to a great state of perfection. The practical art of the science existed previous to the theoretical; but by degrees, as men began to think, they began also to observe and theorize. Thinking men saw that a gross earthy matter, such as iron ore, became changed by fire into a hard metallic substance like iron. What more rational than for them to suppose that gold could be formed in a similar way? The change of earth into metal was to them less wonderful in theory than the change of lead into gold. Thus alchemy was developed, at its origin is lost in obscurity. Philology points out at common chemical words such as *alcohol*, *alkali*, *lambic*, and others, have an Arabian origin, which indicates that the Arabians were among its earliest followers. As the principles and practice of pharmacy became more general, the fact that certain salts and liquors of a metallic nature assuaged pain and restored drooping vitality became known. It was but a step further to discover a compound that would prolong life indefinitely. Accompanying this was the search for the universal solvent, or kahest. The first followers of alchemy were, no doubt, honest, serious men; but as time wore on, impostors arose who found ready dupes in avaricious people, who were ever ready to buy the secret of unbounded riches. In this way there was formed a mass of almost unintelligible knowledge, carefully concealed from the vulgar by secret symbols, and curious nomenclature, through this accumulation there ran some golden veins; and it must not be forgotten that, while alchemy had its philosopher's stone and universal solvent, it also gave us a hundred salts and preparations daily used in our modern laboratories. Toward the end of the 17th century chemistry fell into disfavor and philosophers and scientists turned their attention to the discovery of the principles that governed the formation and composition

of bodies already in their hands, rather than to the pursuit of chemical chimeras. Paracelsus, though imbued with the fanciful doctrines of astrology and demonology, must always be regarded with reverence. He and his followers constitute a connecting link between the alchemists and chemists. He was the first to offer a true chemical explanation of the action of mercury, iron, and lead in the human system. He distinguished alum from copperas, showing that the former contained an earth, the latter a metal. He admitted the existence of other elastic fluids besides air. He was aware that animals could not live, and inflammable matters could not burn, without air. To him succeeded Van Helmont, who was the first to distinguish between aerial fluids, or gases, as he called them. After Van Helmont came Boyle, one of the most acute investigators that ever lived. His numerous experiments are marvels of accuracy, bearing even the test of our present knowledge. He and his contemporary, Hooke, made great improvements in the air-pump, the invention of Otto Guericke, and paved the way to further discoveries. At the beginning of the 18th century came the names and discoveries of Becher and Stahl, the founders of the phlogistic theory. They found that by heating charcoal with metallic oxides or calces, they were reduced to a metallic state. They further noticed, that when charcoal was burnt it was entirely dissipated. Upon these facts they founded the theory that a principle called *phlogiston*, united with the calx to form the metal. This theory appeared to be further sustained by the fact that metals, when heated, are converted into calces; the explanation of which was, that the phlogiston was consumed by the heat. This theory, which was the first general principle applied to the whole range of chemical phenomena, maintained its ground for some time, until the discoveries of Priestley tended to overthrow it, by proving that the calx, or oxide, as mercury oxide, instead of gaining something by being heated, lost something, and that that something was oxygen. About this time Cavendish discovered hydrogen, and Rutherford nitrogen, experiment being heaped on experiment, and discovery on discovery, until the phlogistic theory of Stahl gave way. It was succeeded by that of Lavoisier, the father of modern chemical science, who classified and arranged the known chemical facts into a system unparalleled for its precision, extent of view, and logical accuracy. His discoveries were few, but he reasoned on the discoveries of others with wonderful astuteness. From this moment *C.* marched onward with giant strides. It would be impossible to enumerate the many discoveries that have taken place since the beginning of the present century; a few will suffice to show how wonderfully science has progressed even in our own time. The application of the voltaic current to the decomposition of the alkalies, by Davy, resulted in the discovery of potassium, sodium and other new metals. The atomic theory of Dalton threw great light upon the composition of salts and acids. The invention of the present symbolic notation by Berzelius, and the determination of the elementary equivalents, followed. In 1811 Davy overthrew the theory of Lavoisier, that acids could not exist without oxygen, by proving that hydrochloric acid consisted only of chlorine and hydrogen. In 1812 Courtois discovered iodine; Balard followed some time after with bromine. Element succeeded element until they reached in 1897, the number of seventy. All this time organic *C.* was making great progress. The vegetable alkalis began to attract great attention; their analyses were made, and new theories founded on them. The early laborers, Wöhler, Leibig and Berzelius, threw great light on this branch of the science, which is still very attractive to many famous chemists. The development of the theory of organic radicals has gone on increasing, fostered by the labors of Faraday, Laurent, Gerhardt, Hofmann, and others, until it has assumed a mathematical precision unknown to any other branch of physical science. The researches of Graham upon the diffusion of salts in solution and in dialysis, or the separation of crystallizable and non-crystallizable substances in solution by means of an intervening diaphragm, are among the most brilliant discoveries of the age. The researches of Schönbein, Schetter, Brodie, and others, on the allotropic states of bodies, seem to indicate the compound character of certain of the present elementary bodies. A most important discovery was *spectrum analysis*, which has resulted in the addition of many new elements. In 1868 the periodic law of Mendeleeff was announced and the dependence of the properties of the elements upon their atomic weights is now an accepted fact. The gaps in his series have resulted in the discovery of several missing elements. The application of electricity to chemistry has resulted in the separation of elements by this method in electro-chemical analysis and in a larger way in electro-metallurgy. (See also *CHEMICAL FORMULÆ*.)—*Theoretical C.* Modern science regards matter as divisible into *masses*, *molecules*, and *atoms*. A *mass* of matter is any portion recognizable by the senses. A *molecule* is the smallest quantity of any substance which can exist by itself, and which can enter into or leave a chemical change. An *atom* is the smallest particle of matter which can exist in combination. A molecule is made up of atoms, a mass is made up of molecules. These divisions of matter are held together by attractions called *mass*, *molecular* and *atomic* attraction. Mass attraction is called gravitation; molecular attraction, cohesion; and atomic attraction is called chemism. *C.* is then the science of atoms; it takes cognizance only of those facts which depend upon differences of atomic constitution.

Literature.—The literature of *C.* is so extensive that our space will not permit even the mention of the more

important works. Moreover, the science is advancing so rapidly that nothing short of constant perusal of the leading technical journals will suffice to keep one fully informed as to the important discoveries that now occur almost daily.

Chemnitz, a manufacturing town of Saxony, on the Chemnitz, 37 m. W.S.W. of Dresden. *Manuf.* Cottons, cotton hosiery, mitts, &c. *Pop.* (1845) abt. 90,000.

Chemosh', the national god of the Moabites and of the Ammonites, worshipped also in the reign of Solomon at Jerusalem.

Chemung', in *Illinois*, a p.-v. and twp. of McHenry co., 70 m. W.N.W. of Chicago.

Chemung', in *New York*, a S.W. county, bordering on Pennsylvania. *Area*, abt. 513 sq. m. It is traversed by the Chemung river, and drained by Cayuta, Catharine's, and Winkoop's creek. *Surface*. Very irregular. *Soil*. Generally fertile. *Cap.* Elmira. *Pop.* (1897) abt. 54,000. —A post-village and township of Chemung co., 270 m. from New York city.

Chemung' Centre, in *New York*, a post-office of Chemung co.

Chemung' River, in *New York*, is formed by the junction of Tioga and Conchocton rivers, in Steuben co., takes an E.S.E. course through Chemung co., and empties into the Susquehanna.

Chenango, in *New York*, a S. E. central county, partly bounded on the E. by Unadilla River, and watered by the Chenango and the E. branch of the Susquehanna. *Surface*. Diversified. *Soil*. Generally fertile. The Chenango Canal, connecting Utica and Binghamton, passes through the co. *Cap.* Norwich. *Pop.* (1897) abt. 42,000. —A township of Broome county.

Chenango, in *Pennsylvania*, a village of Beaver co.

—A post-office of Lawrence county.

Chenango Forks, in *New York*, a post-village of Broome co., on the Chenango River and Canal, 11 m. N. E. of Binghamton.

Chenango River, in *New York*, rising in Oneida co., flows S.S.W., through Madison and Chenango counties, and empties into the Susquehanna. Length abt. 90 m.

Chenab', CHENAB, or CHINAB, a river of the Punjab, estimated at 760 m. long. It is increased in its course by several tributaries, and finally joins the Ghara in Lat. 29° 21' N., Lon. 71° 4' E.

Chene (*shain*), in *Louisiana*, a bayou in the N. W. part of Terre Bonne Parish, connected with bayons Shaver and Black. It is navigable throughout.

Chengwata'na, in *Minnesota*, the former capital of Pine county, on Snake River, about 70 miles N. of St. Paul.

Chen'ica, *n.* A weight of quantity in Persia, of which $6\frac{1}{4}$ form 1 *Collothum* = 1809 imp. gallon.

Chénier, (*shā-ne-ā'*) ANDRÉ MARIE DE, a very eminent French poet, b. 1762. After finishing his education he was attached to the French embassy at London, but yielding to his over-riding love of letters, he devoted himself to the study of Shakspeare and Milton. Soon after the outburst of the Revolution he returned to France, became the friend of Condorcet, and sieyes, and boldly satirized the Jacobins in his caustic verse. He at last became a suspected person, and was sent to prison, where he wrote his exquisite production *La Jeune Captive*, inspired by the youth and beauty of his companion in misfortune, Mdle. de Coigny. *C.* was guillotined, with 44 others, July 25, 1794. Twenty-six years afterwards, his poems appeared for the first time in a collected shape, and were received with a burst of admiration, and there can be no doubt that his influence on modern French poetry has been very decided.

CHÉNIER, MARIE JOSEPH DE, a French poet, brother of the preceding, b. 1764, at Constantinople, where his father was attached to the French embassy. His principal works are, the two dramas *Charles IX.*, and *Henri VIII.*, and his *Tableau historique de l'état et des progrès de la littérature Française depuis 1789*, published in 1808. He is also the author of the *Chant du Départ*, which, next to the *Marseillaise*, is the most celebrated lyric of the revolutionary period. D. 1811.

Chenille, (*she-nél'*), *n.* [Fr., a caterpillar.] Silk or worsted cord woven in tufts, and used as a trimming for ladies' dresses.

Ché'noa, in *Illinois*, a post-village and township of McLean co., 49 m. E. of Peoria. *Pop.* 2,351.

Chenonceaux, (*shay-non-sō'*), in France. See BLERÉ.

Chenook', or CHINOOK CITY, in *Washington*, a post-village of Waukiakum co., on Columbia river, 35 m. E. by S. of Pacific City.

Chenop'odales, *n. pl.* (*Bot.*) The Chenopodial alliance, consisting generally of species with inconspicuous flowers, and often with scarcely more floral organs than are absolutely necessary to secure the perpetuation of the race. *DIAG.* Hypogynous exogens, with monochlamydeous flowers; free central placentæ; an external embryo, either curved round or applied to the surface of a little mealy or horny albumen; solitary carpels, or, if more than one, distinct. This alliance is divided into the four orders *Nyctaginaceæ*, *Phytolaccaceæ*, *Amaranthaceæ*, and *Chenopodiaceæ*, *q. v.*

Chenopodia'ceæ, *n. pl.* [Gr. *chen*, a goose, *pous*, a foot.] The Goose-foot or Spinach family, an order of plants, alliance *Chenopodales*. *DIAG.* Separate flat sepals opposite the stamens, two-celled anthers, a single one-seeded ovary, and herbaceous naked flowers. There are 72 genera, which include 510 known species, distributed over all parts of the globe, but most abundant in extra-tropical regions.—herbs or under-shrubs, with leaves without stipules, alternate, or, rarely, opposite; flowers minute, greenish, without bracts, perfect, polygamous or diclinous; calyx persistent, usually divided, nearly to the base imbricated; stamens usually equal in number

to the lobes of the calyx, and opposite to them; ovary superior, or partly inferior, and a style usually 2-4 divisions, rarely simple. Fruit achenium, or utricle, or sometimes baccate. Several plants of this order inhabit salt-marshes, and yield by combustion the soda-ash called *barilla*, q. v. Many are esculent: as beet and mangold-wurzel (see BETA), spinach (*Spinacia oleracea*), and garden orach (*Altriplex hortensis*). The seeds of others are nutritious. Several contain volatile oil which renders them anthelmintic, antispasmodic, aromatic, carminative, and stimulant. The typical genus is *CHENOPODIUM*, q. v.

Chenopo'dium, *n.* (Bot.) The Goose-foot, a genus of plants, order *Chenopiacae*. The seeds of *C. quinoa* contain starch granules, which are remarkable for being the smallest hitherto noticed. They are known under the name of *petty rice*, and form a common article of food in Peru. The seeds of *C. anthelminticum* (worm-seed) are largely employed for their anthelmintic and antispasmodic properties. *C. ambrosioides* is employed in Mexico and Colombia as tea: hence it is commonly known as Mexican tea. The Oak of Jerusalem, *C. botrys*, found in sandy fields from New England to Illinois, is sometimes cultivated both on account of its fragrance, and the remarkable appearance of its compound clusters of innumerable flowers. Plant 1-3 feet high, viscid-pubescent. Leaves petiolate, the sinuses deep, giving them some resemblance to oak-leaves. The branches put forth numerous leaves and short axillary clusters on every side, forming long, leafy, cylindric, green, compound racemes, of which the central one is much the tallest.

Chemps, (*ke'ops*), an ancient king of Egypt, who, according to Herodotus, was a wicked and iniquitous prince. He closed the temples and robbed his people of their labor. The first and largest of the pyramids is supposed to have been built by him. 100,000 men were engaged upon it for 20 years, at dates ranging from B. C. 3230 to B. C. 2120.

Chepachet, (*she-pack'et*), in *Rhode Island*, a manufacturing post-village of Gloucester township, Providence co., on Chepachet River, 10 m. N.W. of Providence; pop. about 1,200.

Chepil'lo, in the Pacific Ocean, an island in a bay near the S. coast of Panama; Lat. 8° 57' N., Lon. 79° 9' W.

Che'po, in S. America, a town and river in the dept. of Panama, U. States of Colombia. The river empties into the Pacific 18 m. E. of Panama; and not far above is the small town.

Chepstow, a sea-port town of England, co. Monmouth, on the Wye, 110 m. W. of London. It is situated amid some of the finest scenery in England, and has a magnificent old Norman castle. Ship-building is largely engaged in. Pop. 3,700.

Chepul'tepe, in *Alabama*, a post-office of Blount co.

Cheque, *n.* Same as CHECK, q. v.

Chequer, *n.* and *v.* See CHECKER.

Che'quest, or CHEQUISH, in *Iowa*, a township of Van Buren co.

—A post-office of Davis co.

Cher'quy, (sometimes written CHECKY), *n.* (Her.) A border that has more than two rows of chequers (or checkers); or when the *bordure*, or shield, is checkered like a chess-board.

Cher, a river of France, which rises in the dept. Creuse, and after a course of 195 m. joins the Loire immediately below Tours. For the last 50 m. it is navigable.

CHER, an inland dep. of France, formed of part of the old provs. of Berri and Bourbonnais; having N. the dep. Loiret, E. Nièvre, S. Allier and Creuse, and W. Indre and Loire-et-Cher. Area, 2,853 sq. m. It takes its name from the river Cher, by which it is intersected, and is included in the basin of the Loire, which, with the Allier, forms its E. boundary. Surface, generally flat. Soil, various. Agric. Backward. Prod. Wheat, maslin, rye, barley, oats, hemp. Cattle, sheep, hogs, and goats are bred and pastured here on a large scale. Forests, and vineyards (yielding good wine), abound. Manf. Iron-ware, cutlery, pottery, cloth and linen fabrics, and leather. The dep. is divided into 3 arrond. Prin. towns, Bourges, St. Amand, Vierzon, and Sancerre. Pop. 336,613.

Cheras'eo, a walled inland town of N. Italy, prov. Cuneo, near the confluence of the Stura and Tanaro, 31 m. S.S.E. of Turin. Manf. Wine, and silk. Pop. 9,807.

Cheraw', in *S. Carolina*, a post-village of Chesterfield district, on Great Pedee River, 93 m. E.N.E. of Columbia: pop. 2,258.

Cher'bourg, a fortified sea-port town, and one of the principal naval depôts of France, dep. Manche, at the bottom of a bay formed by Cape Levi on the E. and Cape La Hogue on the W., at the mouth of the Divette, 41 m. N.W. of St. Lo, and 185 W.N.W. of Paris. C. is, generally speaking, a well-built town. Its principal interest, however, is derived from its arsenal and fortifications. From its advanced position in the English channel, it has long been a favorite object with the French govt. to render C. a great naval stronghold, and a secure asylum for ships of war; and, to accomplish this, vast sums have been expended upon it. The harbors for merchantmen and vessels of war are quite distinct from each other. The latter, which was constructed by Napoleon I., is a magnificent work, excavated out of the solid rock: is 328 yards long by 250 wide, and capable of accommodating 50 sail of the line, which may enter at will, there being 25 ft. of water at low ebb. There are, besides, 4 superb graving docks, and a basin. Near the naval port is the great and extensive dock-yard, &c. The roadstead of C. is one of the best in the channel, and capable of containing 400 sail. It is defended on all sides by batteries, and further protected

from N. winds and heavy seas, by a massive break-water, commenced in 1784, and finally completed by Napoleon III. in 1864. Its length is 4,120 yards; breadth at base, 262 ft., and at its summit 101 ft. On its central part a battery is erected. — C. was long in possession of the English, and was the last place they retained in Normandy. Pop. 37,215.

Cher'bury, in *Georgia*, a village of De Kalb co., 4 m. S. of Atlanta.

Cher'ibon, a fortified sea-port town of Java, at the head of a wide bay on the N. coast of the island, 128 m. S.E. by E. of Batavia; Lat. 6° 48' S., Lon. 108° 39' E. It is the residence of a Dutch governor, and enjoys a considerable trade, exporting indigo, coffee, and teak-timber.

Cher'iff, *Cher'iff*, *n.* See SHERIFF.

Cherimoyer, (*ker-e-moi'er*), *n.* The name commonly given to the fruit of the *Annona cherimolia*. It has been described as the finest of all fruits, and is generally eaten for dessert by the wealthy inhabitants of Peru and Brazil. It is sometimes called the *cherimolla*. — See ANONA.

Cher'ino, in *Texas*, a post-office of Nacogdoches co.

Cher'ish, *v. a.* [Fr. *cherir*, from *chère*. See CHEER.] To treat with affection and tenderness; to nourish; to foster; to nurse; to nurture.

"Something the heart must have to cherish." — Longfellow.

—To encourage, comfort, or support; as, to cherish an antipathy.

"Saturn doth cherish her, and still augments her might." Davies.

Cher'isher, *n.* One who, or that which, cherishes or supports.

"Maintainers and cherishers of a regular devotion." — Sprat.

Cher'ishingly, *adv.* In a cherishing, or encouraging manner.

Cher'mes, *n.* See KERMES.

Cheroot, (*she-root'*), *n.* A description of cigar of peculiar make, the best kinds of which are manufactured at Manila, in the Philippine Islands.

Cherokee' Indians, a tribe of the Appalachian family of N. American aborigines, which occupied for centuries the country E. and S. of the Alleghanies. After the colonization of the N. American continent by the whites, a series of wars broke out at periods ranging from 1759 to 1793; when, by a treaty entered into with the United States, they ceded their territory in the S.E. States, in consideration of a certain cash payment, and an annual subsidy being continued to them. In 1805, they made further concessions of their lands, and, in 1812, fought bravely on the American side. In 1817-19 new treaties were made, which resulted in the C. being forced to a reservation of territory afforded them W. of the Mississippi. In 1838, they settled in their new location, N. and E. of the Indian Territory, where they have since remained, and become civilized and prosperous. In 1897 they had \$3,000,000 invested in U. S. securities, and nearly 100,000 acres under cultivation, using the most improved machinery. They have 75 schools, 2 seminaries and an orphan asylum. They number about 30,000.

Cherokee, in *Alabama*, an E. N. E. county, bordering on Georgia. Area, about 700 sq. m.; intersected by the Coosa and Chattooga rivers; surface, varied; soil, sandy, but fertile. Cap. Centre. Pop. (1890) 20,459.

Cherokee, or PATTERSON, in *California*, a mining village of Nevada co., near the Middle Yuba river.

—A pt. vill. of Butte co., on the N. fork of Feather river.

Cherokee, in *Georgia*, a N.W. county. Area, 500 sq. m. It is traversed by the Etowah river and drained by Little river, Shoal, Alaculsa and Long Swamp creeks. Surface, variegated; soil, sandy and productive. It contains several gold mines, and copper, iron and titanium are also found. Cap. Canton. Pop. (1890) 15,412.

Cherokee, in *Iowa*, a W. N. W. county. Area, 625 sq. m. It is watered by the Little Sioux river and smaller streams and by a tributary of Floyd's river, emptying into the Mississippi. Pop. (1890) 15,659.

—A town, capital of Cherokee co., on Little Sioux river, 50 m. E. N. E. of Sioux City. Pop. (1897) abt. 4,000.

Cherokee, in *Kansas*, a S. E. county, bounded E. by Missouri and watered by branches of the Neosho river. Area, 604 sq. m. Cap. Columbus. Pop. (1890) 30,651.

Cherokee, in *N. Carolina*, a W. county, bordering on Tennessee and Georgia. Area, 950 sq. m. It is drained by the Hiwassee and Valley rivers. The Blue Ridge mountains stretch along its S. E. frontier and the Unaka or Smoky mountains extend along the N.W. Soil, fertile. Cap. Murphy. Pop. (1890) 9,976.

Cherokee, in *Ohio*, a village of Logan co., abt. 3 m. W. of Mad River.

Cherokee, in *Texas*, an E. county. Area, 1,215 sq. m. It is bounded by the Neches river on the W. and by the Angelina on the E. Surface, prairie and timbered tracts; soil, partially fertile. Cap. Rusk. Pop. (1890) 22,975.

Cherokee Bay, in *Arkansas*, a village of Randolph co.

Cherokee City, in *Kansas*, a village of Cherokee co.

Cherokee Corner, in *Georgia*, a village of Oglethorpe co.

Cherokee Iron Works, in *S. Carolina*, a village of York co., 104 m. N. of Columbia.

Cherone'a. See CHERONEA.

Cher'ry, *n.* [Fr. *cerise*; Lat. *cerasus*; Gr. *kerasos*, from *Cerasus*, a city in Pontus.] (Bot.) See CERASUS.

—A kind of cordial, manufactured from cherry-juice and sweetened and diluted with sugar.

—*a.* Like a red cherry in color; red; ruddy; blooming.

"A cherry lip, a passing, pleasing tongue." — Shaks.

Cher'ry, in *Pennsylvania*, a village and township of Butler co., 40 m. W. of Pittsburgh.

—A township of Sullivan co.

Cherry Bottom, in *Tennessee*, a vill. of Campbell co.

Cher'ry-bounce, *n.* Cherry-brandy sweetened with sugar.

Cherry Box, in *Missouri*, a post-office of Shelby co.

Cher'ry-brandy, *n.* Brandy in which cherries are steeped.

Cherry Camp, in *W. Virginia*, a P. O. of Harrison co.

Cher'ry-checked, *a.* Having ruddy cheeks.

"I warrant them cherry-checked country girls." — Congreve.

Cherry Creek, in *Mississippi*, a post-village of Con-totoc co.

Cherry Creek, in *New York*, a post-village and town-ship of Chautauqua co., 20 m. E. of Mayville.

Cher'ryfield, in *Maine*, a township of Washington co., 120 m. E. by N. of Augusta.

Cherryfield, in *N. Carolina*, a post-office of Transyl-vania co.

Cher'ry Flats, in *Pennsylvania*, a post-village of Tioga co., 110 N. by W. of Harrisburg.

Cher'ry Fork, in *Ohio*, a post-office of Adams co.

Cher'ry Grove, in *Arkansas*, a post-office of Grant co.

Cherry Grove, in *Illinois*, a village and township of Carroll co., 25 m. E. by N. from Savannah.

Cherry Grove, in *Minnesota*, a P. O. of Fillmore co.

—A township of Goodhue co.

Cherry Grove, in *Missouri*, a village of Schuyler co.

Cherry Grove, in *Ohio*, a post-office of Hamilton co.

Cherry Grove, in *Pennsylvania*, a post-office of War-ren co.

—A township of Warren co., 10 m. S. of Warren.

Cherry Grove, in *Tennessee*, a post-office of Mont-gomery co.

Cherry Grove, in *Virginia*, a post-office of Rocking-ham co.

Cherry Hill, in *Maryland*, a post-office of Cecil co.

Cherry Hill, in *Michigan*, a village of Wayne co.

Cherry Hill, in *Pennsylvania*, a township of Indiana co.

—A post-office of Erie co.

Cherry Hill, in *West Virginia*, a village of Ashe co.

Cherry Hill, in *Wisconsin*, a village of Dodge co., 31 m. N.W. of Milwaukee.

Cherry Laurel, *n.* (Bot.) See CERASUS.

Cherry-pepper, *n.* (Bot.) See CAPSICUM.

Cherry-pit, *n.* A child's play, wherein cherry-stones are flung into a hole. — The seed of a cherry.

Cherry Point, in *Illinois*, a post-office of Edgar co.

Cherry Ridge, in *Pennsylvania*, a post-township of Wayne co., about 3 m. S. of Honesdale.

Cherry-run, *n.* Run in which cherries are steeped.

Cherry Run, in *West Virginia*, a post-office of Mon-tan co.

Cherry Spring, in *Texas*, a P. O. of Gillespie co.

Cherry Stone, in *Virginia*, a post-village of North-ampton co.

Cherry Tree, in *Pennsylvania*, a post-township of Venaugo co., 12 m. N.N.E. of Franklin.

Cherry Valley, in *Illinois*, a township of Winnebago co., on Kishwaukee River, about 200 m. N.E. of Spring-field.

Cherry Valley, in *Massachusetts*, a post-office of Worcester co.

Cherry Valley, in *New York*, a post-village and tow-ship of Otsego county, 55 m. W. of Albany.

Cherry Valley, in *Ohio*, a post-township of Ashl-land co.

Cherry Valley, in *Pennsylvania*, a post-village of Washington co., 95 m. E.N.E. of Harrisburg.

Cherry Valley, in *Tennessee*, a village of Wilson co., 41 m. E. of Nashville.

Cher'ryville, in *Missouri*, a P. O. of Crawford co.

Cherryville, in *New Jersey*, a post-village of Hunt-don co., 40 m. N. by W. of Trenton.

Cherryville, in *North Carolina*, a post-office of G-ton county.

Cherryville, in *Pennsylvania*, a post-village of Nor-ampton co., about 20 m. W. of Easton.

—A village of Sullivan county, 119 miles N.N.E. of H-risburg.

Cherryville, in *Tennessee*, a village of Haywood co., 175 m. W. by S. of Nashville, on the Forked Deer Riv-

Cher'siphron, the architect who designed the famo-temple of Diana at Ephesus, and who, with his s-Metagenes, is said to have determined the proportio-of the Ionic order. Flourished about 600 B. C.

Cher'so, and **Ose'ro**, two contiguous, long and narr-islands of the Adriatic, Austria, govt. Trieste, betwe-Lat. 44° 30' and 45° 20' N., and Lon. 14° 15' and 14°-E., separated from Istria by the Gulf of Quarnero; ar-95 sq. m. Pop. of Cherso, 17,500; of Osero, 4,254.

Cher'son, in European Russia. See KHERSON.

Cher'sonese, *n.* (Anc. Geog.) [Gr. *chersos*, land, a-nesos, island.] A peninsula, united by an isthmus to-main-land. There were many C., of which the m-celebrated are the Peloponnesus; the Thracian, at-S. of Thrace and W. of the Hellespont, where Miltia-led a colony of Athenians; the Taurica, now the Crim-situate near the Palus Mæotis; the fourth called C-brica, now Jütland, in the northern part of Germai-and the fifth, surnamed Anrea, now Malacca, in Ind-beyond the Ganges.

Chert, *n.* (Min.) An impure variety of quartz, alw-massive, and having a kind of granular appearance-structure.

Chert'y, *a.* Resembling, or containing, chert.

Cher'ub, *n.*; *pl.* CHERUBS, CHERUBIM, and (wrong-CHERUBINS. [Heb. *pl. cherubim*, mighty ones; It. *che-bino*; Fr. *cherubin*.] (Script) The name of a p-ticular order of angelic beings frequently mentio-in Scripture. They were placed with flaming swo-to guard the garden of Eden when Adam and-were driven out of it; and when Moses was c-manded to make the ark of the covenant, he wa-

place a cherub on each end of it so as to cover the Mercy-seat with their wings. What the form was under which the cherub was here represented we have no certain account, and various conjectures have been thrown out on the subject. Many are of opinion that, as in Ezekiel's vision, it was composed of parts of a man, lion, ox, and eagle. In art, cherubs are commonly represented by a child's head with wings; or as a human figure with wings at the shoulders, and wings also in place of the lower extremities.

A beautiful child; as, a perfect *cherub*.

cherubic, Cherubical, *a.* Pertaining, or consisting of cherubs; angelic; as, "*Cherubic songs*," Milton.

her'ubim, *n.* The Hebrew plural of *cherub*.
herubini, LUIGI ZENOBIO SALVATORE, founder of the French Conservatory and instructor of hundreds of eminent musicians, was b. at Florence in 1790. In his 13th year, by his early compositions—a mass and an intermezzo—he attracted the attention of Sarti, who received him as a pupil. In the interval from 1780 to 1788, he composed eleven Italian operas, including *Ifigenia in Aulide*, the most successful of the series. In 1784 he visited London. After 1786, C. resided chiefly in Paris, whence his fame rapidly extended over Europe. Besides the *Ifigenia*, his chief pieces are *Dionysos* (1788), *Lodoiska* (1791), *Elisa* (1794), *Melie* (1797), the *Portuguese Inn* (1798), *Les Deux Journées*, and *Andreon*. C. also composed church-music, chamber-music, &c., of singular beauty, with success. D. 1842.

her'up, *v. t.* [See CHIRP.] To chirp; to utter a short, shrill sound, as a bird.

"Frame to thy song their cheerful *cheruping*."—Spenser.

r. a. To press forward or urge on by making a short, sharp, shrill sound.

"He *cherups* brisk his ear-erecting steel."—Couper.

n. A short, sharp, quick sound or utterance.

herns'ci, *Hist.*, a German tribe, chiefly memorable in connection with their great leader Arminius, or Her-mann, who, having formed an alliance with other German tribes, attacked and annihilated the Roman legions under Varus, in the forest of Teutoburg, 9 A. D. They are last mentioned by Claudian towards the close of the 4th century.

her'vil, *n.* [A. S. *cerfille*; Lat. *cherophyllum*; Gr. *cheiraphyllum*—*cheira*, to rejoice, and *phyllon*, a leaf.]
Bot. A garden pot-herb, *Anthriscus cerefolium*.

hesaniug', or CHISANING, in Michigan, a post-village and township of Saginaw co., on the Shiawassee River, about 45 m. N. E. of Lansing.

hes'apeake, in Missouri, a post-village of Lawrence co., 145 m. S. W. of Jefferson City.

hes'apeake Bay, the largest inlet on the Atlantic coast of the U. States, being 200 m. long, and from 4 to 40 broad. Its entrance, 12 m. wide, has, on the N., Cape Charles, in Lat. 37° 3' N., and Lon. 76° 2' W.; and on the S., Cape Henry, in Lat. 36° 56' N., and Lon. 76° 4' W.; both promontories being in Virginia. C. B. has numerous arms, which receive many navigable rivers, such as the Susquehanna and the Patuxent on the N., through Maryland; the James on the S. W., from Virginia; and the Potomac on the W., between these two States. Unlike the shallow sounds towards the S., see CAROLINA, this network of gulfs and estuaries—to say nothing of its chief feeders—affords depth of water for ships of any burden, virtually carrying the ocean up to the wharves of Baltimore and the arsenals of Washington.

hesapeake City, in Maryland, a post-village and township of Cecil co., near the mouth of Elk River, 84 m. N. E. of Annapolis.

hesh'ire, or CHESTER, a maritime co. of England, having N. the Irish Sea, the estuary of the Mersey, Lancashire, and a portion of Yorkshire; E. the counties of Derby and Stafford; S. Salop, and a portion of Flint; and W. Wales, and the estuary of the Dee. Area, 653,280 acres. Surface, generally level; watered by the Don, Mersey, Weaver, and other rivers. This county possesses mines of coal, copper, lead and salt, and an inexhaustible supply of the finest rock-salt. Soil, extremely rich; C. being one of the finest grazing districts in the kingdom, and famous for the excellence of the cheese it produces. So fertile and productive is this country, that it has been called for ages the *Vile Royal of England*. Manuf. Cheese, salt, cottons, and silk. C. is a county palatine, from the sovereign power in it being formerly exercised by the earls of Chester, as fully as by the king. This title is now merged in the Crown, and borne by the heir-apparent. Cap. Chester. Pop. (1851), 730,000.

hesh'ire, in Connecticut, a post-village and township of New Haven co., 15 m. N. of New Haven.

hesh'ire, in Massachusetts, a post-village and township of Berkshire co., 120 m. W. by N. of Boston.

hesh'ire, in Michigan, a post-township of Allegan co., 21 m. W. N. W. of Kalamazoo.

hesh'ire, in New Hampshire, a S. W. county; area, 70 sq. m. It is traversed by the Connecticut River, which is navigable by boats throughout the county. At Lowell's Falls are several locks. The surface is hilly and beautifully diversified by a number of lakes and ponds; and there are some mountains of considerable elevation. The principal of which are Grand Monadnock and Ashmole. The soil is good, and very fertile, especially at the river-bottoms. Cap. Keene.

hesh'ire, in New York, a post-village of Ontario co., 90 m. N. of Albany.

hesh'ire, in Ohio, a post-village and township of Gal-ah co., about 12 m. from Gallipolis.

esh'ible, *n.* Same as CHASTLE, *q. v.*

es'tip, *n.* A small vermin found under stones or

Chess, *n.* [Fr. *échec*; Sp. *jaque*; from the cry of *check*, when the king is hind, and Pers. *sháh*] is put in a condition of being taken.] (*Games*.) An ingenious and highly scientific game played by two parties, each having at command 16 pieces, made of wood, bone, or ivory, upon a board divided into 64 squares, 8 on each of the four sides.

Fig. 576. — CHESS-BOARD.

These squares are colored red and white, or black and white, alternately, and the pieces of each player are of different colors. On either side there are 8 superior and 8 inferior pieces. The former consist of a king, a queen, 2 bishops, 2 knights, and 2 rooks or castles; the latter consist of 8 pawns, or foot-soldiers. On commencing a game, the king and queen occupy the centre squares of the first or royal line, and are supported in regular succession by a bishop, a knight, and a rook, while before each piece stands a pawn. In placing the board, it is the custom to place a white square at the player's right-hand corner; and, in arranging the pieces, the queen is always placed on a square of her own color. The pieces on the king's side are called the king's,—as king's bishop, king's knight; while those on the queen's side are similarly styled queen's bishop, &c. The pawns take their names from the pieces before which they stand; as, the king's pawn, king's rook's pawn, queen's pawn, &c. The pawn moves straight forward on its own files; but captures its adversary obliquely or diagonally. The knight moves by leaping obliquely over an adjoining square to one of the next squares, of a different color from that which it leaves. The bishop moves diagonally forward or backward, over any number of squares at one time, if the course be open. The castle or rook moves straight forward, or backward, or sideways any number of squares at a time, provided these are unoccupied by other men. The queen can move either like a castle or a bishop, while the king moves only 1 square at a time, in any direction. The queen is the most powerful piece on the board, while the king, from the nature of the game, which does not admit of his exchange or capture, is the most important piece: the game depending upon his safety. The approximate value of the pieces has been given by a competent authority, as,—queen, 9-94; rook, 5-48; bishop, 3-50; knight, 3-05; pawn, 1-00. Towards the conclusion of a game, however, the pawn rises in value. When the king is directly attacked by any piece or pawn, he is said to be in *check*. If he is unable to place himself out of check, to interpose a piece to parry the check, or to capture the checking piece, he is said to be *checkmated*, and the game is lost. When neither player can give a checkmate, the game is said to be *drawn*. When one player has his king so situated that, not being then in check, he cannot play him without placing him in check,—and at the same time has no other piece or pawn to move instead,—he is said to be *stale-mated*, and the game is considered drawn.—The game of chess is very ancient, and there is considerable dispute as to its origin. It seems to have been known immemorially in Hindostan by the name *Chaturanga*, or the four members of an army; namely: elephants, horsemen, chariots, and foot-soldiers. Since that time the game has undergone many alterations. It passed into Persia from Hindostan, and then into Arabia, where it was called *Shatrang*, or the king's distress. In the 8th century the Arabs introduced the game into Spain, and from thence it passed into the rest of Europe. Chess is the noblest of games. Monarchs like Haroun-al-Raschid, Tamerlane, Charles-magne, Charles XII., Frederick the Great, and Napoleon I., and philosophers as Voltaire, Leibnitz, Rousseau and Franklin, have found delight in its study and pleasure in its practice. Alone among games its use has been sanctioned by the priesthood of all beliefs—Catholic, Protestant, Buddhist and Muslim. It is now cultivated by all civilized nations and is the object of a large and growing literature. Celebrity in chess was formerly confined to authors on the game and to composers of chess problems. The latter began with the work of Philip Stamma, a native of Aleppo, Syria, who in 1737 published a collection of 100 artificial end positions. There are now chess libraries embracing several thousand volumes, many of which contain collections of games played by masters, or the results of chess tournaments or public matches. These are highly instructive and entertaining to amateurs. There are few records

of public trials of skill before the nineteenth century, though we hear of games played blindfold more than three centuries ago. The remarkable power of playing a number of games blindfold has been frequently exhibited, the number of games thus played at one time ranging from 8 by Murphy and others to the extraordinary number of sixteen by Zukertort. The French champion, Staunton, who died in 1795, was the greatest chess player of the eighteenth century. In the first international tournament, organized by the English champion, Staunton, in connection with the London World's Fair of 1851, Anderssen, of Breslau, was the chief victor. Soon after appeared Paul Murphy, the most precocious genius ever known in the world of chess. He defeated all competitors so completely as to win the title of champion of the world. Steinitz, an Austrian, was the next to win this title, which he defended in a series of great matches until 1884, when he was beaten by Lasker, whose record ranks him as the greatest master of the day. Dr. Tarrasch, of Nuremberg, also has made a remarkable record of success, winning in succession the tournaments of Breslau in 1888, Manchester in 1890 and Dresden in 1892.

Bot. The *Bromus scaberrimus*, a species of handsome grass, 3 ft. high, found in fields, often among wheat. — See BROMUS.

Chess-apple, *n.* (*B. t.*) See CRATEGEUS.

Chess-board, *n.* The checkered board used in the game of chess.

"and cards are dealt and chess-boards brought."—Prior.

Ches'sel, *n.* A wooden vat in which cheese is pressed.

Ches'sex, *n.* [Fr. (*Mil.*)] The boards used for the flooring of a temporary military bridge.

Chess-man, *n.* A piece used in the game of chess.

Ches'som, *n.* Mellow earth.

"The tender *chessom* and mellow earth."—Bacon.

Chess-player, *n.* One who plays chess, or is skilled in that game.

Chess-trees, *n. pl.* (*Naut.*) Pieces of wood fitted to the sides of a vessel, abaft the fore-chains, with a sheave in them, to board the main-tack to.

Chest, *n.* [A. S. *cist*, or *cyst*; Ger. *kiste*; Lat. *cista*; Gr. *kiste*, from the root of *case*.] A case or coffer; a large, close box of wood or other material; as, a money-chest. — The THORAX, *q. v.*

Com. A case for the transportation of a certain commodity;—hence the quantity therein contained; as, a chest of tea.

Chest of drawers, an article of household furniture, containing loose boxes called *drawers*.

r. a. To deposit in a chest; to hoard.

Chest, in Penna., a p. twp. of Clearfield co.

Ches'ter, an English county. See CHESHIRE.

Ches'ter, a city and sea-port, cap. of Cheshire, (or the county palatine of Chester), on the Dee, 17 m. S. by E. of Liverpool, and 164 N. W. of London. This city, one of the most venerable in England, is enclosed within

Fig. 577. — PHENIX TOWER, WALLS OF CHESTER.

(From which Charles I. viewed the battle of Rowton Heath.)

an oblong quadrangle by walls of great antiquity, the foundations of which were built by the Romans. These walls are kept in perfect repair, and form a promenade for the citizens. It is almost impossible to attempt in a few words any realistic account of the antique features that characterize this city: it forms still, though much modernized, a tableau of the architectural aspect of the Middle Ages. The Cathedral is a fine Gothic pile built in 1094, and in a crypt in St. John's Church, erected in 1098, lies the body of Harold the "Last of the Saxon Kings." C. was formerly a port of considerable importance, but since the rise of Liverpool it has retrograded. Manuf. Lead, iron-ware, chemicals, &c. C. is of Roman origin, and was for centuries regarded as one of the chief bulwarks of the kingdom against the turbulent Welsh. It stood a memorable siege in the Civil War, 1645. Pop. (1891) 37,110.

Ches'ter, in *Connecticut*, a post-village and township of Middlesex co., on Connecticut River, 20 m. N.E. by E. of New Haven.

Chester, in *Georgia*, a village of Gwinnett co.

Chester, in *Illinois*, a flourishing city, cap. of Randolph co., on the Mississippi, 149 m. S. of Springfield. *Pop.* (1897) abt. 3,500.

Chester, in *Indiana*, a township of Wabash co.

—A post-office of Wayne co.

—A township of Wells co.

Chester, in *Iowa*, a village and township of Howard co.

Chester, in *Maine*, a township of Penobscot co., on the Penobscot River, 100 m. N.E. of Augusta.

Chester, in *Massachusetts*, a post-village and township of Hampden co., 119 m. W. by S. of Boston.

Chester, in *Michigan*, a post-township of Eaton co., 20 m. W.S.W. of Lansing.

—A township of Ottawa co.

Chester, in *Minnesota*, a post-office of Olmstead co.

—A township of Wabashaw co.

Chester, in *New Hampshire*, a post-village and township of Rockingham co., 25 m. S.E. of the city of Concord.

Chester, in *New Jersey*, a township of Burlington county.

—A post-village and township of Morris co., 12 m. W. by S. of Morristown.

Chester, in *New York*, a post-village and township of Orange county, 55 miles N.N.W. of New York city.

—A township of Warren co.

Chester, in *Nova Scotia*, a maritime village, about 23 m. W. of Halifax.

Chester, in *Ohio*, a village of Butler co., 16 m. N. by E. of Cincinnati.

—A township of Clinton co.

—A township of Geauga co.

—A post-village and township of Meigs co., about 100 m. S.E. of Columbus.

—A township of Morrow co.

—A township of Wayne county, 7 miles E. by N. of Wooster.

Chester, in *Pennsylvania*, a co. bounded S. and S.E. by Maryland and Delaware, N.E. by the Schuylkill River, W. by Octorara Creek, and drained by French and Elk creeks. The surface is much diversified, the soil generally good, and agriculture is carried to great perfection. *Mtn.* Chromate of iron, porcelain clay, gneiss, sandstone, red shale, copper, and abundance of lead and iron. *Cap.* West Chester. *Pop.* (1890) 89,380.

—A city of Delaware county, 15 m. S. W. of Philadelphia, on the Delaware river. *C.* is the oldest place in the State, having been settled in 1643. It has large shipyards, steel-works, and manufactories of cotton and woolen goods. There are several important educational institutions in the vicinity. *Pop.* (1897) abt. 25,200.

—A post village of Wayne co., on the Delaware.

Chester, in *South Carolina*, a county in the N. part of the State; *area*, 570 sq. m. The Catawba river forms its E. and the Broad its W. boundary. It is drained by Fishing, Rocky, and Sandy creeks. The surface is varied, and the soil fertile. *Cap.* Chester Court-House. *Pop.* (1890) 26,660.

Chester, in *Vermont*, a post-village and township of Windsor co., 80 m. S. of Montpelier.

Chester, in *Virginia*, a twp. of Chesterfield co.

Chester, in *Wisconsin*, a village and township of Dodge county, on Lake Monona, 60 m. N. W. of the city of Milwaukee.

Ches'ter Centre, in *Massachusetts*, a post-office of Hampden county.

Ches'ter Court-House, in *South Carolina*, the capital of Chester county.

Chester Creek, in *Pennsylvania*, in the S. E. part of the State, flows through Delaware co., and empties into the Delaware near the city of Chester.

Ches'ter Cross Roads, in *Ohio*, a post-village of Geauga county, 160 m. N. E. of Columbus.

Ches'ter Factory, in *Massachusetts*, a village of Hampden county, 126 m. W. by S. of Boston.

Ches'terfield, a market-town of England, co. Derby, 20 m. N. of Derby, and 130 N. W. by W. of London. Its trade is mainly agricultural. *Pop.* (1895) 15,000.

Ches'terfield, PHILIP DORMER STANHOPE, 4th Earl of, an English statesman and litterateur, born 1694. After studying in his youth with a zeal of which he afterwards thought proper to be ashamed, he learned on the Continent of Europe his polished smoothness of manners, his love of gaming, and his loose code of morality. He entered public life in 1715, and took an active part in the petty intrigues and party squabbles which make up the parliamentary and court history of the reign of George II. His diplomatic skill was made useful in two foreign embassies; and his lord-vicegerancy in Ireland in 1745, though lasting only a few months, has always been mentioned with distinguished praise, which is more than can be said of his conduct toward Dr. Johnson, the lexicographer. After a sickly and melancholy period of old age, he died in 1773. The only writings of this accomplished person that are at all remembered are his *Letters* to his natural son, remarkable for their ease of style and their knowledge of society, but notoriously reprehensible for the principles of conduct which they inculcate.

Ches'terfield, in *Connecticut*, a post-village of New London co., abt. 6 m. N.N.W. of New London.

Chesterfield, in *Illinois*, a post-village of Maconpin co., 50 m. S.W. of Springfield.

Chesterfield, in *Indiana*, a post-village of Madison co., on White River, 41 m. N.E. of Indianapolis.

—A village of Greene co., 80 m. S.W. of Indianapolis.

—, (or WEST UNION,) in *Indiana*, a village of Madison co., 40 m. N. E. of Indianapolis, on White River.

Chesterfield, in *Louisiana*, a village of Madison parish, on Bayou Macon, 150 m. N. of Baton Rouge.

Chesterfield, in *Massachusetts*, a post-township of Hampshire co., 90 m. W. of Boston.

Chesterfield, in *Michigan*, a township of Macomb county.

Chesterfield, in *Missouri*, a village of St. Louis co., 25 m. W. of St. Louis.

Chesterfield, in *New Hampshire*, a post-village and township of Cheshire co., on the Connecticut River, opposite Brattleborough, 65 miles S.W. of the city of Concord.

Chesterfield, in *New Jersey*, a township of Burlington co.

Chesterfield in *New York*, a township of Essex co., on Lake Champlain.

Chesterfield in *Ohio*, a post-township of Fulton co., about 35 m. by N. of Toledo.

—A village of Morgan co.

Chesterfield, in *South Carolina*, a N.E. district, bordering on N. Carolina; *area*, 568 sq. m. The Great Pee-dee River bounds it on the N.E., and Lynch's Creek on the S.W., and it is drained by Cedar and Black creeks. The surface is varied, and soil sandy, but fertile in the river-bottoms. *Cap.* Chesterfield. *Pop.* (1890) 18,470.

—A post-village, cap. of the above dist., on Thompson's Creek, 105 m. N.E. of Columbia.

Chesterfield, in *Virginia*, a S.E. county; *area*, 300 sq. m. It is bounded on the S. by the Appomattox, and N.E. by the James River, separating it from the city of Richmond and Henrico co. The surface is irregular, and soil partially good. It has extensive coal-mines. *Cap.* Chesterfield Court-House.

Chesterfield Court-House, in *Virginia*, a post-village, cap. of the above co., about 12 m. S.S.W. of Richmond.

Chesterfield, in *New Hampshire*, a post-office of Cheshire county.

Chesterfield Inlet, in *British America*, a narrow inlet running N. from Hudson's Bay. Length 250 m.; width about 20 m.; Lat. 63° 30' N., Lon. 90° 40' W.

Ches'terhill, in *Ohio*, a post-office of Morgan co.

Ches'ter-le-Street, a town of England, co. Durham, and 5 m. N. of that city, on the Wear. *Manf.* Nails, ropes, tiles. It lies in the midst of a great coal-field. *Pop.* 3,314.

Ches'ter River, rises in Kent co., Del., flows W. to Chesterton, Md., and thence running S.W. forms a bay which connects with the Chesapeake, between Kent and Queen Anne counties.

Chester's District, in *Georgia*, a village of Burke co., 80 m. E. of Milledgeville.

Chester Springs, in *Pennsylvania*, (also called YELLOW SPRINGS,) a post-village and watering-place of Pike-land township, Chester co., 72 m. E.S.E. of Harrisburg.

Chester Station, in *Wisconsin*, a post-office of Chester township, Dodge co.

Ches'tertown, in *Maryland*, a sea-port and cap. of Kent co., 54 m. N.E. of Annapolis, on Chester River, abt. 30 m. from its mouth in Chesapeake Bay. Washington College is located here.

Chestertown, in *New York*, a post-village of Warren co., 80 m. N. of Albany.

Chester Valley, in *Pennsylvania*, a post-office of Chester co.

Chester Village, in *Massachusetts*, a post-village of Hampden co., 119 m. W. by S. of Boston.

Chesterville, in *Maine*, a post-township of Franklin co., 25 m. N.W. of Augusta.

Chesterville, in *Maryland*, a P. O. of Kent co.

Chesterville, in *Mississippi*, a post-office of Pontotoc county.

Chesterville, in *Ohio*, a post-village of Morrow co., about 40 m. N.N.E. of Columbus.

Chesterville, in *Pennsylvania*, a village of Potter co., about 180 m. N.W. of Harrisburg, near the head of the Genesee River.

Chesterville, in *South Carolina*, the former name of Chester Court-House (*q. v.*).

Chest'-founder, *n.* (*Farriery*.) A disease in horses, in the form of a rheumatic affection of the muscles.

Chestnut, (*chestnut*.) *n.* [O. Fr. *chastaigne*; Fr. *châtaigne*; Lat. *castanea*; Gr. *kastanon*, from *kastania*, a city of Pontus; O. Eng. *chesteine-nut*.] (*Bot.*) See CASTANEA.

—*a.* Being of the color of a chestnut; of a brown color; as, a chestnut horse.

“Merab's long hair was glossy chestnut-brown.”—Cowley.

Chest'nut Hill, in *Pennsylvania*, a township of Monroe co., 24 m. N.W. from Easton.

—A beautiful suburb of Philadelphia, N.W. of Germantown, and within the chartered limits of Philadelphia, 12 m. N.N.W. of the City Hall. It is delightfully situated on the summit of a hill, and surrounded by elegant country-seats.

Chest'nut Ridge, in *Pennsylvania*, a mountain range extending S.W. through Westmoreland and Fayette counties. — See LAUREL RIDGE.

Chest'ton, *n.* [O. Eng. *chesteine*.] A kind of rich-flavored plum.

Chesum'cook Lake, in *Maine*, in Piscataquis co., is 25 m. long, and between 2 and 4 wide. It is regarded as an expansion of the Penobscot River, which is supposed to flow through it.

Cheta'chee Creek, in *Alabama*, empties into the Alabama River from the N.W., about 18 m. below Cahawba.

Chet'ah, *n.* (*Zoöl.*) Same as CHEETAH, *q. v.*

Chet'co, CHETCOE, in *Oregon*, a post-village of Curry co., on Chetco River, 1 m. from the ocean, and 40 S. of Ellensburg.

Chetmach'es Lake, or GRAND LAKE, in *Louisiana* in the S. part of the State, between the River Tech. and Atchafalaya Bayou, formed by the overflowing of the latter. It is 40 m. long and 10 wide, but not navigable.

Chet'opa, in *Kansas*, a city of Labette co. *Pop.* 2,300.

Chet'vert, Chet'wert, *n.* [Russ.] A Russian grain measure, equal to 5.77 imperial bushels, or seven-tenths of an imp. quarter.

Chen'can, *n.* (*Zoöl.*) The Barking-bird, *Pteroptochus rubecula*, a curious bird frequenting the most gloom and retired spots within the damp forests of the island forming the Chonos archipelago. It is held in superstitious fear by the Chilots, on account of its strange and varied cries.

Cheval, *n.*; pl. CHEVAUX, (*shêv'-ô*.) [Fr.] A horse.

(*Building*.) A frame work or support.

Cheval-de-frise, *n.*; pl. CHEVAUX-DE-FRISE, (*shêv'-de-frîz*.) [Fr., from *cheval*, and *Frise*, Friesland.] (*Mil.*) A square or octagonal beam of wood, from 6 to 9 ft. l.

length, and pierced by iron rods or wooden pickets 6 ft. long, which are pointed at each end, and shod with iron; the pickets are placed 6 inches asunder, and pass through two opposite faces of the beam, in directions alternately at right angles to each other, the cheval resting on the ground at the lower extremity of the pickets. They are usually intended to resist cavalry. (It is sometimes called a *turnpike*, or *tournequet*.)

Fig. 578. — CHEVAL-DE-FRISE.

Cheval-glass, *n.* A dressing-glass; a large, oblong mirror, constructed to swing in a frame.

Chevalier, (*shêv'-a-lee'*.) *n.* [Fr., from *cheval*, a horse; literally, a horseman.] A knight; a cavalier; a gallant young man; as, the Chevalier Bayard. — See CHIVALRY.

“Renowned Talbot, . . . the noble chevalier.”—Shaks.

—A member of certain knightly orders; as, a chevalier of the order of St. John of Jerusalem.

(*Zoöl.*) See TOTANUS.

Chevalier, MICHEL, an eminent French political economist, b. at Limoges, 1806. After brilliant study at the Polytechnic School, he was first publicly employed in 1825 as an engineer in the dep. Nord. About this time he became an ardent St. Simonian. He joined in the schism of the Père Enfantin, was one of the preachers at Mémil-montant, and took part in editing the *Livre Nouveau*, the future gospel of the doctrines of the sect. For his share in these proceedings he was condemned to year's imprisonment, as being guilty of an outrage on public morals. After 6 months' confinement, one half the sentence having been remitted, he retracted in the *Globe* all he had written against the Christian religion, marriage, and social institutions, and obtained from the Emperor a special mission to the U. States to study the system of railroad and water communication in that country. The letters which during his journey he addressed to the *Journal des Débats* attracted much attention, served to remove many French prejudices on industrial subjects, and were published separately in 1838 under the title of *Lettres sur l'Amerique du Nord*. The brilliant work led to his being intrusted with a mission to England at the time of the great commercial panic of 1837. On his return from London, in 1838, he published *Des Intérêts Matériels en France*. This book, often printed, contains a programme of industrial improvements. In 1840 he was made Professor of Political Economy in the College of France. The revolution of 1848 causing him to lose his various appointments, he threw himself into the ranks of the anti-revolutionists and replied to the attacks of the Socialists on the doctrines of political economy, and to those of his former co-religionists, in his *Lettres sur l'Organisation du Travail et Question des Travailleurs*, published in 1848. In 1851 he was elected into the section of Political Economy in the Academy of Moral and Political Sciences. After the *coup d'état* he was restored to his professorship in the College of France, and promoted to the rank of engineer-in-chief. He was created a senator in 1860, and is grand officer of the Légion d'Honneur. Mons. C. is the author of many works on political economy. In addition to those already referred to, may be noticed as his principal work *Cours d'Économie Politique* (1842-50); *Essais de Politique Industrielle* (1843); and *De la Baisse Probable de l'Or* in 1859, which was translated into English by M. Cobden, under the title *On the Probable Fall of Gold*. C. published a pamphlet, *L'Expedition du Mexique* in 1862, and *Le Mexique Ancien et Moderne*, in 1863. The latter, and several of his other works, have been translated into English and German. D. 1879.

Cheven, *n.* [Fr. *chevanne*.] (*Zoöl.*) A river-fish; the chub. — See CYPRINUS.

Cheveril, *n.* [Fr. *cheveril*, kid.] Soft kid-leather; kid skin.

“A sentence is but as a cheveril glove to a good wit.”—Shaks.

—A soft, timid, pliable disposition or manner; as, “A w of cheveril.”—Shaks.

—*a.* Possessing pliability, or the nature of yielding.

“Which gifts . . . your soft cheveril conscience would receive, If you might please to stretch it.”—Shaks.

Chev'erilize, *v. a.* To make soft and pliable as kid-leather.

Chev'et, *n.* (*Arch.*) The termination of a church behind the high altar, when of a semi-circular or polygonal form.

Chev'iot, in *Ohio*, a post-village of Hamilton co.

Chev'iot Hills, or **THE CHEVIDOTS**, a ridge of hills on the border between England and Scotland, lying partly in both countries. Their highest summit, *Cheviot*, in Northumberland, is 2,658 feet in height. The *C. H.* are mostly covered with a close greusward, and are pastured by the valuable and peculiar breed of sheep, called the "Cheviots," now widely diffused over the kingdom.

Chevrette, (*shér-rét'*) *n.* [*Fr.*, from *chèvre*.] (*Mil.*) A machine or engine employed in the raising and depositing of heavy ordnance upon their carriages.

Chev'reul, MITCHEL EUGÈNE, an eminent French chemist, b. 1786. In 1824, he was appointed director of the dyeing dep. in the govt. manufactory of the Gobelins, and in that capacity made many important discoveries in the chemical nature of colors, the results of which he published for the Academy of Sciences. In 1826, he was made a member of the Academy, and, in 1864 director of the Museum of National History. In 1875, at the age of 88, he was still actively engaged lecturing on chemistry. D. 1889.

Chev'reuse, MARIE DE ROHAN-MONTBAZON, DUCHESSE DE, a French lady celebrated for her wit, beauty, and political and amatory intrigues, b. 1600. At 17, she married Charles d'Albret, Duc de Luynes and Grand Constable of France. She, after his death, became the wife of Claude de Lorraine, Duc de Chevreuse, and as the friend and confidante of the queen, Anne of Austria, incurred the enmity of Cardinal Richelieu, who exiled her from the country. On the accession of Anne to the regency, the duchess returned to France, when her old spirit of intrigue again broke out, involving her again in disgrace and a second exile. After a desultory after-life of plotting and mischief-making, she d. in 1679.

Chevron, *n.* [*Fr.*] (*Mil.*) The distinguishing marks worn by non-commissioned army officers on the sleeves of their coat, as *two* for a corporal, *three* for a sergeant, and *three* with an *arc* for a sergeant-major.

(*Arch.*) A moulding consisting of a zigzag character, of the Norman style particularly, but sometimes to be found with the pointed arch.

(*Her.*) An ordinary, representing the couples or rafters of a house, (*Fig. 578*.) generally betokening the foundation of his own family by the bearer. *Chevronel* is half the size of the *C.* *Per chevron*, or *party per chevron*, is where the shield is divided by a line in the form of the *C.*

Fig. 579. — CHEVRON Moulding.

Fig. 580.

chevroned, (*chèv-rond'*) *a.* Having a chevron or zigzag ornament.

"Cloth of silver chevroned all over with lace." — *Ben Jonson*.

hev'ronel, *n.* A small chevron.

hev'rotain', *n.* (*Zoöl.*) See MOSCHUS.

hev'y, **Chiv'y**, *v. a.* To force about with a shivering or convulsive motion.

hev'y Chase. See OTTERBURN.

hew, (*chō*) *v. a.* [*A. S. cēwan*. See CHAW.] To chew; to crush and grind with the jaws and teeth; to masticate; to bite; to champ; as, to *hew* the cud.

To meditate; to turn over in the mind; to revolve in one's thoughts; to ruminate.

"Chewing the food of sweet and bitter fancy." — *Shaks.*

n. That which undergoes the operation of chewing; a morsel; a quid; as, a *hew* of tobacco.

hew'la, in *Tennessee*, a post-village of McNairy co. **hew'ink**, *n.* (*Zoöl.*) The Ground-robin or TOWNEE, *q. v.*

hew's Landing, in *New Jersey*, a post-village of Camden co., 9 m. S. by E. of Camden.

hew'sville, in *Maryland*, a post-village of Washington co., 105 m. N.W. of Annapolis.

hew'town, in *Pennsylvania*, a village of Lawrence co., abt. 10 m. S.E. of Newcastle, on Beaver River.

hey'enne, in *Wyoming*, a town of Laramie co., cap. of the Territory, on Cow Creek, 516 m. W. of Omaha city, 5,921 ft. above the sea. It is one of the principal stations on the Union Pacific R.R. during the construction of which it attained its present size. Since the completion of the railroad its population has rapidly increased.

heyenne Indians, (*sh'én*) a savage and turbulent Indian tribe inhabiting a portion of the territory lying E. and S.E. of the Rocky Mountains, and principally settled in the N.W. part of Kansas.

hiaca'lacca, *n.* (*Zoöl.*) See PENELOPIDE.

hi'an, *n.* [*From Chios*.] Pertaining, or relating, to Chios, an island of the Greek archipelago; as, *Chian* wine.

hiant'la, in Central America, a river of Guatemala, rises in a volcanic range, and after taking a N.W. direction, joins the Usumasinta, in Lat. 17° 10' N., Lon. 91° 55' W. — On it is a town of the same name, abt. 128 m. S.W. of Guatemala.

Chiapa, (or **LAS CHIAPAS**), a state of the republic of Mexico, in the S. of that country, lying between Tabasco and Guatemala, and drained by the Usumasinta and Tabasco rivers. *Area*, 18,679 sq. m. *Prod.* Cereals, vanilla, hemp, cocoa, pimento, indigo, sugar, and logwood. *Cap.* Ciudad Real, (or San Cristoval.) *Pop.* 193,987.

Chiapa dos Indios, a considerable inland town of Mexico, in the above state, near the Tabasco, 30 m. N.N.W. of Ciudad de Las Casas. It is chiefly inhabited by Indians (whence its name), and exports a good deal of logwood. *P. p.* Unknown.

Chi'aramonte, a thriving town of Sicily, prov. Syracuse, 12 m. N.N.W. of Modica. It has an extensive trade in wine. *Pop.* 9,894.

Chi'ari, a town of N. Italy, prov. Brescia, on the Oglio, 15 m. W. by S. of Brescia. *Manuf.* silk and leather. *Pop.* 10,373.

Chiar-osenro, CHIAR-OSCURO, (*ke-ar'o os'ku-ro*) *n.* [*It. chiaro*, light; *oscuro*, dark.] (*Paint.*) That branch of painting which has for its object the combination and arrangement of the light and shadow of a picture to the best advantage. Relief and depth, and what is generally called the *effect* of a picture, are produced by *C.* Leonardo da Vinci was the first who reduced the art of *C.* to a system. Correggio afterwards improved it practically; and it is said to have reached its perfection under Titian.

Chias'tolite, *n.* [*Gr. chistos*, marked with a cross, and *lithos*, a stone.] (*Min.*) A variety of ANDALUCITE, *q. v.*

Chiavari, (*ke'a-và're*), a maritime town of N. Italy, in the district of same name, prov. Genoa, at the head of the Bay of Rapallo, 22 m. E.S.E. of Genoa. It is handsome and flourishing, with a large trade in lace, silk, marble, and anchovies. *Pop.* 11,551.

Chiavenna, (*ke-a-ven'na*), a walled town of N. Italy, in Lombardy, on the Maira, 20 m. W.N.W. of Sondrio. *Manuf.* Paper, cloth, pottery, silk, wine. *C.* is an entrepôt for a considerable traffic with Switzerland. *Pop.* abt. 4,000.

Chib'bal, **Chibbol**, *n.* [*Fr. ciboule*.] (*Bot.*) A small species of ONION, *q. v.*

Chibouque, **Chibouk**, (*chi-bōōk'*) *n.* [*Turk.*] A tobacco-pipe, used in Oriental countries, composed generally of a bowl of meerschaum or baked clay, a tube of cherry-stick or other aromatic wood, and a mouth-piece of amber, sometimes mounted with gold and jewels. "Resign'd his gem-adorned chibouque." — *Byron*.

Chica, (*chē'kā*), *n.* A red coloring substance, used by some of the North American Indian tribes to stain their skins. It is extracted from the *bignonia chica*, by boiling its leaves in water, decanting the decoction, and allowing it to settle and cool, when a red matter is precipitated, which is formed into cakes and dried. See BIGNONIACEÆ.

—Maize-beer. See ZEA.

Chic'aeole, a town of British India, in the Madras presidency, 107 miles from Ganjam, near the Bay of Bengal. It has a barrack, and some mosques. *Manf.* Muslins, which have long been held in high estimation. *Pop.* 15,000.

Chicago (*She-kare'go*), in *Illinois*, cap. of Cook co., and the second in size and largest interior city in the U. S., situated on the S.W. coast of Lake Michigan at the mouth of Chicago river, a small stream that divides into two branches about $\frac{3}{4}$ m. from the lake, and separates the city into three sections, of which the business section lies on the S. side of the main stream. Lat. 41° 53' 6" N., Lon. 87° 36' W. *C.* is the natural entrepôt for the trade between the States of the N.W. and the region watered by the Great Lakes. It has water communication via the lakes and the St. Lawrence with the Atlantic, and via the Erie Canal with New York, while the Illinois and Michigan Canal—now superseded by the great recently constructed ship-canal (see CANAL, SECTION 11)—has given it direct communication, via the Illinois and Mississippi rivers, with New Orleans and

Fig. 581. — CHICAGO IN 1830.

the Gulf of Mexico. *C.* with respect to its unexampled growth, is one of the most remarkable cities in the world. Previous to 1831 the site on which it stands was occupied by a frontier fort and a few huts, containing about a dozen families. It was organized as a

town Aug. 10, 1833, and chartered March 4, 1837, when it had a population of 4,470. In 1850 the population was 28,269; in 1860, 110,973; in 1870, 298,977; in 1880, 503,394; and in 1890, 1,099,850, having more than doubled in ten years. A school census taken in 1894 gave an estimated population of 1,567,657. The population is very largely of foreign birth, the number of foreign-born in 1890 being 809,850. The area of the original town was 2.55 sq. miles. In 1847 it was increased to 14.03, in 1864 to 35.76, in 1887 to 43.91, and in 1895 to 186.72 sq. miles.—*Side*. The site of *C.* was originally a narrow ridge of sand along the lake and a low flat prairie, about 3 feet above the river level, and extending indefinitely westward. The site has now been raised to a grade of 10 feet above the lake, an elevation necessary for proper drainage. The city extends 24 m. along the lake, its S. E. limit touching the State line of Indiana. Its width varies from 6 to 11 miles. The streets of *C.* average 66 feet in width, and are, as a general rule, laid out at right angles; those parallel with the lake border running N. and S., those opposite, E. and W. There are in all 2,500 miles of streets. Water

Fig. 582. — DOUGLAS MONUMENT.

is obtained from Lake Michigan, being drawn in at "cribs" located 2 to 4 miles from the shore, and thence conveyed through five tunnels under the lake. It is distributed by pumping works with a capacity of 250,000,000 gallons daily. The business center occupies only a small section of the municipal area—that comprised between the lake on the E. and the river on the N. and W. Many of the manufactories are situated on Canal and Clinton streets, W. of the river, while the great live-stock and meat industry is carried on at the Union Stock-yards, in the geographical centre of the city. Most of the great railway stations are in the business center, and here are the post-office, court-house, Art Institute, Auditorium, the principal stores, banks, hotels and theatres, and the lofty office structures which formed the pioneers in the prevailing system of "sky scraping" edifices. This system of building began in 1883, and its most striking example is the Masonic Temple, twenty stories in height. It has desk room for 5,000 people. The Auditorium building, with a total frontage of 710 feet, and ten stories in height, contains an opera house with a seating capacity for 4,000 people, which can be extended to accommodate 7,000, a hotel, stores, offices, &c.—*Parks and Boulevards*. The park and boulevard system includes an area of 2,005 acres, extending around the city from the lake on the N. to the lake on the S. The largest of these pleasure grounds, Jackson Park, in which the World's Columbian Exposition was held, contains 533 acres, and Washington Park, connected with the former by the celebrated Midway Plaisance, 371 acres. Of the many buildings erected for the World's Fair, only one, the Art Building, which has been converted into the Field Columbian Museum, will permanently remain. On the north side is Lincoln Park, a beautiful place of resort, with artificial lakes and lagoons, a magnificent statue of Abraham Lincoln, and various other works of statuary. This system of parks is connected by a chain of boulevards, 100 to 200 feet wide, which, with the lake shore drive, forms a circle of handsome driveways around the city, having a total length of 65 miles. Besides large parks, there are various smaller ones, distributed throughout the city. Fifty-four swinging bridges cross the Chicago River, and three tunnels, used by cable-cars and pedestrians, pass under it. The public buildings include the U. S. Government building, erected at a cost of nearly \$6,000,000, and so badly constructed that it will have to be taken down and rebuilt; the Board of Trade building;

the Exchange Hall, the largest in the country; the Court-House and City Hall, a very handsome structure, erected at a cost of over \$4,000,000.—*Communication.* C. is practically the greatest railroad center in the world, all the great trunk lines of the U. S. and Canada leading to it. There are 21 of these roads, whose contributing lines are over 100,000 miles in length. They have a trackage of about 1,450 miles in the city. In addition to its railroad and canal service, C. has a very large merchant marine service, more than 10,000 vessels, of 5,500,000 tonnage, entering its port yearly. These include many passenger steamers. There are over 600 miles of street railway, of which 19 miles are elevated. In addition to the lake front, a vast shipping business is done along the river and canal, the former having a frontage, including docks, of 41 miles. The great drainage canal, now practically completed, is intended for a ship canal as well, and will offer free communication for vessels of large draught from the lakes to the Miss-
(Continued in SECTION II.)

Chica'go, in Kentucky, a post-village of Marion co.

Chica'go, in Nebraska, a p.-v. of Douglas co.

Chicago River, in Illinois, a small stream flowing into Lake Michigan, at Chicago.

Chicane, (*she-kān'*), *n.* [Fr. *chicane*; A.S. *swic*; Dan. *sriger*, deceit.] An artifice or stratagem; a shift; turn; trick; subterfuge; an act of cavil or sophistry.

"His attorneys have hardly one trick left: they are at the end of all their *chicanes*."—*Arbutnot*.

v. i. [A.S. *swican*; Ger. *zwicken*, to nip, pinch, cheat take in; Icel. *srikiá*, to deceive; O. Ger. *suihan*, to deceive.] To invent or make use of shifts, subterfuges, cavils, or artifices.

Chican'er, *n.* [O. Fr. *sicaneur*, related to Tent. *swic*, deceit; Fr. *chicaner*.] One who uses chicane or chicanery.

"To distinguish . . . a logical *chicaner* from a man of reason."—*Locke*.

Chican'ery, *n.* [Fr. *chicanerie*.] Mean or unfair artifices of wrangling; trick; sophistry; quibble; stratagem; as, the *chicanery* of the law.

Chieh, *n.*; *pl.* CHICHES. [Fr. *chiche*.] (*Bot.*) A chick-pea.

Chichen', a village of Central America, in Yucatan, abt. 18 m. S.W. of Valladolid, on the site of an ancient Indian city, once very important if we judge by its existing ruins, among which are a temple 450 feet long, a pyramid 550 feet square at the base, and an edifice called the *House of the Cuciques*, surmounted by a dome, and covered with elaborate sculptures.

Chich'ester, a city of England, co. Sussex, 55 m. S.W. by S. of London; it has a fine cathedral of the 13th century; *pop.* 8,864.

Chich'ester, in Michigan, a village of Muskegon co., abt. 12 m. E. of Muskegon.

Chich'ester, in New Hampshire, a post-township of Merrimack co., 6 m. N.E. of Concord.

Chich'ing, *Chich'ing-vetch*, *n.* (*Bot.*) See LATHYRUS.

Chich'on, *n.* See CASSIA.

Chick, *v. i.* [O. Eng. *chyken*.] To germinate, sprout, or vegetate, as a seed.

n. The same, in a literal and figurative sense, as CHICKEN, *q. v.*

Chick'abiddy, *n.* A childish term for a chicken. — (*U. States*.)

Chick'adee, *n.* (*Zoöl.*) See PARUS.

Chickahom'iny River, in Virginia, rises in Hanover co., and enters James River abt. 8 m. above Jamestown. It separates Henrico and Charles City counties from Hanover on the right, and New Kent and James City cos. on the left.—On the banks of this river, at Fair Oaks, about 7 m. from Richmond, the advance guard of the National army, under Gen. Casey, was attacked by the Confederates under the command of Gen. Lee, May 31, 1862, and defeated with the loss of 19 guns and all their baggage and camp-equipment. The Union commander, however, pushing forward fresh bodies of troops, compelled the Confederates to take shelter in their intrenchments before Richmond, June 1.—A second series of battles, sometimes styled the "Seven Days of Richmond," and fought near this river a month later, are also called the *battles of the Chickahominy*. They commenced June 25, 1862, when the National army's left wing, under Gen. Hooker ("Fighting Joe"), attacked the Confederates at White Oak Swamp, and encountered a vigorous resistance. Gen. "Stonewall" Jackson, on the day following, attacked, in his turn, the Union right wing at Mechanicsville, driving them across the river to Powhite Swamp. Gens. Hill and Longstreet crossed the river on the 27th, and being joined by Lee and Jackson, took up a position at Gaines' Mill, where a desperate engagement took place, which resulted in the defeat and further retreat of Gen. McClellan, the National commander-in-chief. Gen. Lee occupied the Union headquarters, at White House, June 28, and McClellan commenced a retrograde movement towards the James River. He was, however, again attacked, on the 29th, by the Confederate general Hill, at Savage's Station; and another severe conflict took place on the James River, on the following day. On July 1, the next action, known as the *battle of Malvern Hill*, terminated the series of hostile encounters; McClellan having taken up a position at Harrison's Bar, or Turkey Bend, where he was supported by the Union gun-boats. The total National loss in this chain of engagements was estimated at 20,000 men.

Chickama'ga Creek, rises in Walker co., Georgia, and taking a N.E. course, empties into the Tennessee River, near Chattanooga. Here, Sept. 19–20, 1863, the Union troops sustained a defeat at the hands of the Confederates commanded by Gen. Bragg, losing 8,000

prisoners, 15,000 stand of small arms, and 51 guns, besides a serious addition of killed and wounded. Gen. Bragg estimated his loss at two-fifths of his entire force, including several generals killed.

Chick'aming, in Michigan, a post-township of Berrien co., on Lake Michigan, abt. 15 m. N.E. of Michigan City; *pop.* abt. 500.

Chick'aree, *n.* (*Zoöl.*) See SCURIDÆ.

Chick'asaw, in Alabama, a village of Franklin co., on the Tennessee River, 140 m. N. by W. of Tuscaloosa.

Chick'asaw, in Georgia, a small stream of Baker co., flowing S. into the Ichawaynochaway River.

Chick'asaw, in Iowa, a N.E. county; *area*, 676 sq. m. It is traversed by the Wapsipicon and Middle Fork of Turkey River. *Cap.* New Hampton.

—A township of Chickasaw co.;

Chick'asaw, in Mississippi, a N.E. county; *area*, 990 sq. m. It is drained by the Loosascoona, Oktibbeha and Yallobusha rivers, the latter rising within it. The surface is quite level, and the soil fertile. *Cap.* Hous-
ton.

Chick'asaw Bayou, in Mississippi, a creek flowing from the Yazoo River, below Haines Bluff, and emptying into the Mississippi. Here, on Dec. 28, 1862, the Union forces under Gen. Sherman attacked the batteries and rifle-pits of the Confederates, defended by Gen. Pemberton; when, after a severe action, the Nationals were forced to retire with the loss of nearly 2,000 men; the Confederate loss being only 207.

Chick'asaw Creek, in Alabama, Merengo co., enters Mobile River 6 m. from its mouth.

Chick'asaw Indians, a N. American tribe of the once great Appalachian nation, formerly occupying the territory between the Ohio and the Tennessee rivers. They for a long time waged war against the early French settlers on the Mississippi. In 1818, they ceded to the U. States part of their lands W. of the Mississippi, and S. of the Tennessee river; and, in 1833, gave up the remainder for a money indemnity, and a special grant of land for their location E. of the Mississippi. In their new territory they became allied with the Choctaws, and have since made considerable advances towards a superior state of civilization, by pursuing habits of agricultural industry, and methodical frugality. They are believed to number about 5,000, and to be one of the richest, and generally one of the best conducted, of the Indian peoples.

Chickasaw'ba River, in Mississippi, rises in the E. part of the State, and flows S., uniting with Leaf River, in Greene co., to form the Pascagoula.

Chick'elis, CHICKEELIS, or CHICKAILIS, a tribe of Indians, north of the mouth of Columbia River.

Chick'en, *n.* [A.S. *ciccn*; formed from the sound.] The young of various birds, especially of the domestic hen.

Chick'en-hearted, *a.* Timid; timorous; fearful; cowardly.

"'Tis agreed by bullies, *chicken-hearted*."—*Dryden*.

Chick'en-pox, *n.* (*Med.*) An eruptive disease, usually of a mild nature, and bearing some resemblance to small-pox. Some are of opinion that it is only a mild form of small-pox, but it is generally regarded as a distinct disease. It is mostly confined to children, and is of a contagious nature. The premonitory fever is very slight, and the vesicles are filled with a watery fluid, rarely with yellow matter or pus, and pass away in the course of four or five days; leaving only slight crusts or scales, which fall off without leaving any permanent mark. The disease is rarely attended with danger, and, generally, all that is necessary is to put the patient upon spare diet, and to administer a dose or two of some mild aperient.

Chick'ies, in Pennsylvania, a *q. v.* of Lancaster co.

Chick'ling, *n.* A small chick or chicken.

Chick'-pea, *n.* [See CHICK.] (*Bot.*) See CICER.

Chick's Springs, in S. Carolina, a post-village of Greenville dist., 10 m. N. of Greenville. Here is a much resorted to chalybeate spring.

Chick'-weed, *n.* (*Bot.*) See STELLARIA.

Chic'tana, a town of Spain, in Andalusia, prov. Cadiz, 12 m. S.E. of the latter city. It is much resorted to as a pleasure-spot by the citizens of Cadiz. The battle of Barossa was fought near this place, in 1811, between the Anglo-Spanish army under Lord Lynedoch, and the French under Marshal Victor, in which the latter were defeated. *Pop.* 10,000.

Chi'co, in California, a post-village and township of Butte co., on Chico Creek, 6 m. E. of the Sacramento River, and 25 N.W. of Oroville.

Chi'co, in Patagonia, a river supposed to rise in an interior lake. It empties into the estuary of Santa Cruz.

Chic'opee, in Massachusetts, an important manufacturing center, in Chicopee township, Hampden co., on the Connecticut river at its junction with the Chicopee river. An abundance of water power has developed immense industrial interests at this point, with a rapid increase of population. Here are several bicycle manufactories, two large cotton mills, and many other important industries. The location is healthful, and the church and school accommodations are liberal. The aggregate population of the township was estimated at about 17,000 in 1897.

Chi'cory, *n.* (*Bot.*) See CICHORIUM.

Chic'oot, in Arkansas, a S.E. county, bordering on Louisiana, has an area of 820 sq. m. It is bounded on the E. by the Mississippi, and drained by Bayou Boeuf. The surface is low; the soil generally good. *Cap.*, Lake Village. *Pop.* (1890) 11,500.

Chieso'i, in Guatemala, a river flowing into the Usun-
masinta. It rises abt. 40 m. N. of the city of Guatemala, flows N.W. a distance of 150 m., and enters the state of Chiapa, Mex., where it assumes the name of Chicintimi,

Chide, *v. a.* (*imp.* CHID; *pp.* CHIDDEN, CHID.) [A.S. *cidan*; Finn. *kidata*, to make a harsh, shrill sound, to rattle, to complain; Swed. and Goth. *kifwa*, to scold, to altercate.] To rebuke in a sharp, shrill tone of voice; to censure; to reproach; to reprove; to scold; to quarrel with; as, to *chide* a servant.

"Chide him for faults, and do it reverently."—*Shaks.*

v. i. To utter words in anger, or by way of disapprobation; to contend in angry words; to find fault with.

"What had he to do to *chide* at me?"—*Shaks.*

—To make a loud, clamorous noise.

"As does a rock against a *chiding* flood."—*Shaks.*

—*n.* A gentle, murmurous noise. (*R.*)

Chid'er, *n.* One who chides, rebukes, or clamors.

"I love no *chiders*, sir."—*Shaks.*

Chid'ingly, *adv.* In a chiding or rebuking manner.

Chief, *a.* [Fr. *chef*; It. *capo*; Lat. *caput*; Goth. *hau-
bith*; Gr. *kepha-lē*; Sansk. *kapāla*, the head.] Highest in office, rank, or position; principal; as, a *chief* secretary.

—Most eminent; first; supreme; leading or commanding in any quality or action; having most influence; most distinguished; most important; as, the *chief* consideration.

"Your country, *chief* in arms, abroad defend."—*Pope*.

—First in affection; most dear and familiar; as, *chief* friends.—*Prov.* xvi.

n. A leader; a commander; one who heads an army or body of men; as, a *chief* of the staff.

"Hail to the *Chief* who in triumph advances!"—*Scott*.

—Principal part, person, or thing; the most or largest portion of anything; as, the *chief* of our troubles.

(*Her.*) The head or upper part of an escutcheon from side to side, cut off horizontally by a plane, or any of the lines used in heraldry; it should contain a third part of the dimensions of the escutcheon. In blazoning arms, the C. is generally last mentioned and described.

In *chief*. At the head; with supreme command or influence; as, a commander-in-*chief*.—(*Her.*) A term denoting an object to be borne on the *chief*; as, a lozenge in *chief*.—(*Eng. Law.*) Held direct from the sovereign; as, a tenant in *chief*.

Chief, *adv.* Chiefly. (*R.*)

Chief'-baron, *n.* (*Eng. Law.*) The presiding or principal judge of one of the high courts of law; as, the Lord *Chief-Baron* of the Exchequer.

Chief'ess, *n.* A female chief. (*R.*)

Chief'-justice, *n.* The presiding or chief judge of a court of law; as, the *Chief Justice* of the Supreme Court of the U. States.

Chief'-justiceship, *n.* The office of chief-justice.

Chiefless, *a.* Without a chief, leader, or commander.

"And *chiefless* armies dozed out the campaign."—*Pope*.

Chiefly, *adv.* In the first place; principally; mainly; especially; above all.

"But *chiefly* where those two fair creatures lodge."—*Milton*.

—Mostly; for the most part.

"Those parts . . . where the estates of the dissenters *chiefly* lay."—*Swift*.

Chieftain, (*chēf'tān*), *n.* [From *chief*. See CAPTAIN.] A captain, leader, or commander; a chief; the head of a troop, army, or clan. The chieftains of the Highland clans of Scotland were the patriarchal and feudal heads of their respective clans. — See CLAN.

Chieftaincy, *Chieftainship*, *n.* Headship; captaincy; the government over a clan.

Chieftainry, *n.* Chieftainship; as, the *chieftainry* of a clan.

Chie'ri, (anc. *Carrera Potentia*), an inland town of N. Italy, prov. Turin, 8 m. S.E. of Turin. *Manf.* Cotton and linen thread, and woollen cloths. *Pop.* 12,877.

Chie'ti, a city of S. Italy, cap. of a prov. of same name, on the Pescara, 10 m. W. of the Adriatic. *Manf.* Woollens and silk. This is a very ancient place. *Pop.* 23,602.

Chiffonier, (*shif'-fō-nēr'*), *n.* [Fr. *chiffonier*, a rag-picker. Originally, a receptacle for rags, shreds, and odds-and-ends.] A movable cupboard or receptacle; a piece of household furniture.

—In France, one who collects rags and bones; a rag-picker.

Chig'oe, *Chig're*, *n.* [Fr. *chique*; Sp. *chico*.] (*Zoöl.*) See APHANIPTERA.

Chih, *n.* A Chinese measure of length, equivalent to $14\frac{1}{10}$ inches.

Chih-le, or PE-CHEE-LE, an important N. province of China, containing Peking, the cap. of the empire, and the centre of the imperial govt. *Area*, 58,949 sq. m. *Prod.* Coal and salt. *Pop.* about 30,000,000.

CHIH-LE, or PE-CHEE-LE, (GULF OF), an inlet of the Yellow Sea, in China, between Lat. 37° 10' and 39° 20' N., and Lon. 118° and 121° E. Length and breadth, about 1.0 m. each. The rivers Pei-ho on the W., and the Chan-toro on the N., find their outlet here.

Chihuahua, (*she-uah'-wah*), a N. prov. of Mexico, lying between Lat. 25° 53' 56" and 31° 47' N., and Lon. 103° and 107° W. It is divided into 12 depts., and has an area of 107,500 sq. m. It is bounded E. by Texas and Coahuila; N. by Arizona; W. by Sinaloa and Sonora; and S. by Durango. *Surface*, generally table-land, with here and there sterile plains, and detached mountain sierras. *Soil*. For the most part fertile. *Prod.* Chiefly mineral, embracing iron, lead, copper, bismuth, cobalt, arsenic, sulphur, and salt. Its rich silver mines are among the most prolific in yield of any in Mexico. C. is much depredated at times by the Comanches,

Apaches, and the other Indian tribes on its confines. *Pop.* 179,971.

CHIHUAHUA, a city, cap. of the above state, 740 m. N.W. of Mexico city, 490 E. of Guaymas, and 500 from the mouth of the Rio Grande del Norte; *Lat.* 28° 47' N., *lon.* 107° 30' W. It is situated in an arid plain, and is generally well built, and supplied with water. The town is chiefly supported by supplying necessities to the surrounding mining districts; and from being a *épôt* for goods to and from Guaymas. The country around about the city is occupied by extensive *haciendas*, or farms, on which large herds of cattle, sheep, and aules are pastured. *Pop.* 12,000.

CHILA, in Peru, a river, which, rising in the Andes, pursues a W. course, and empties into the Pacific, about 5 m. S.E. of Arequipa.

CHILBLAIN, *n.* [From *chill*, and *blain*.] (*Med.*) An inflammatory affection of the skin, occasioned by exposure to sudden alternations of heat and cold, and usually affecting the hands or feet. Young persons are more subject to it than adults, and females than males. The part affected is red and swollen, and is attended with heat and a great sense of itching. Chilblains are generally produced in persons holding their hands or feet to the fire immediately after they have been exposed to great cold. This is to be carefully guarded against; and a uniform temperature, as far as possible, maintained by the use of warm socks and gloves. The itching is best removed by frequently rubbing the part with some stimulating application, as camphorated spirits of wine. One of the best means of removing chilblains on the hands we have found to be washing them lightly before going to bed with warm water, which always the heat and promotes the general circulation. If the parts should ulcerate, it is often very difficult to heal them; but the best application is spermaceti ointment.

v. a. To produce chilblains; to trouble with chilblains. **CHILD**, *n.* *pl.* CHILDREN. [A. S. *child*, from *cearnan*, part. *ceannide*, to bring forth, *pp.* CERNED, brought forth; Dan. *kull*, progeny; Ger. *kind*, allied to Gr. *gennao*, to beget, to bring forth; *Lat.* *gigno*; Goth. *keiwin*, to generate; Sansk. *gaye*, to be born, from *ganye*.] An infant; a son or daughter; the descendant of parents in the first degree; the direct progeny of parents of the human kind.

"The child is father of the man." — Wordsworth.

One who exhibits the qualities of a child or very young person, whether male or female; as, a *child* in knowledge of the world.

"In wit a man, simplicity a child." — Pope.

One chosen and adopted by God; one whose principles and morals are the product of another; as, a *child* of God, a *child* of sin.

"The child of misery, baptized in tears." — Langhorne.

Descendants, whether near or remote; the inhabitants of a country; — used principally in the plural; as the *children* of Israel.

"Souls made of fire, and children of the sun." — Young.

(*Law.*) *Illegitimate* or *natural children* are bastards. *Legitimate children* are those born in lawful wedlock. *Posthumous children* are those born after the death of the father. Children born in lawful wedlock, or within a competent time afterwards, are presumed to be the issue of the father, and follow his condition. Those born out of lawful wedlock follow the condition of the mother. The father is bound to maintain his children, to educate them, and to protect them from injury. Children are not liable at common law for the support of infirm and indigent parents; but generally they are bound by statutory provisions to maintain their parents if in want, when they have sufficient ability to do so.

To be with child. To be pregnant.

"Let wives with child

Pray that their burthen may not fall this day." — Shaks.

CHILD-BEARING, *n.* The act of bringing forth children; parturition.

"The timorous Sylvia has demurred, till she is past child-bearing." — Addison.

CHILD-BED, *n.* The state of a woman in labor.

CHILD-BIRTH, *n.* The act of bringing forth a child; parturition; travail; labor.

"In the whole sex of women, God hath decreed the sharpest pains of child-birth." — Jeremy Taylor.

CHILDE, (*child*), *n.* Formerly a noble youth; — a cognomen prefixed to the family name by the eldest son; as, *Childe Harold*.

"The *Childe* departed from his father's hall." — Byron.

CHILDEBERT, the name of three kings of France. — C. I., one of the sons of Clovis I., obtained at his father's death the central part of the divided territory, with Paris for his capital; d. 558. — C. II., son of Sigebert of Austrasia and grandson of Clothaire II., was a child when his father was assassinated by the partisans of Fredegonde, in 575; d. 596. — C. III., son of Theodore III., king of Neustria, succeeded his brother Clovis III. in 695, reigned nominally under Pepin de Herstal, mayor of the palace, who was the real monarch; d. 711.

CHILDERIC, the name of three kings of France. — C. I., son of Merovee, or Merovig, who gave his name to the Merovingian dynasty, succeeded his father in 458, and was the father of the celebrated Clovis I.; d. 481. — C. II., son of Clovis II., reigned at first in Austrasia from 656; and afterwards in Neustria, after the death of his brother Clothaire III., in 679; d. 673. — C. III., the last of the degenerate Merovingians, was placed on the throne in 742 by Carloman and Pepin, the sons of Charles Martel, and consigned to a monastery in 752, when Pepin the Short assumed the title as well as the authority of king.

CHILDERMAS-DAY, HOLY INNOCENTS' DAY, *n.* [From *child*, mass, and *day*.] The pl. of A. S. *child* is sometimes *cildru*.] (*Eccles.*) An anniversary of the Roman Catholic Church, held on the 28th Dec., in commemoration of the children of Bethlehem slain by Herod. — C. is also a holiday of the Church of England.

CHILDHOOD, *n.* [A. S. *cildhad*.] The state of a child, or the time in which persons are children, including the time from birth to puberty.

"Where once my careless childhood strayed." — Gray.

CHILDISH, *a.* Belonging to, or like, a child or children; juvenile; trifling; foolish; silly; weak; unformed.

"It was a childish ignorance." — Hood.

CHILDISHLY, *adv.* In a childish, trifling, weak, or foolish manner.

CHILDISHNESS, *n.* Quality or state of being childish; weakness of intellect; simplicity.

"Second childishness, and mere oblivion." — Shaks.

CHILDLESS, *a.* Destitute of children or offspring; as, a *childless* wife.

"Childless thou art, childless remain!" — Milton.

CHILDLESSNESS, *n.* State of being without children.

CHILD-LIKE, *a.* Like a child; becoming a child; docile; innocent; dutiful; without art or guile; as, *child-like* play.

CHILDREN, *n. pl.* of CHILD. *q. v.*

CHILDSBURG, in Kentucky, a village of Fayette co., 32 m. E. of Frankfort.

CHILDSVILLE, in N. Carolina, a vill. of Mitchell co.

CHILHOWEE, in Tenn., a mountain ridge of Blount co., about 30 m. S. of Knoxville; — A. p. v. of Blount co., on little Tennessee River.

CHILI, in Cal., a p. v. of Calaveras co. — In Ill., a p. v. and twp. of Hancock co. — In Ind., a p. v. of Miami co., on Eel River.

CHILI, in New York, a post-village and township of Monroe county, 10 miles S. W. of Genesee, on the Genesee River.

CHILI, in Ohio, a post-village of Coshocton co., 42 m. N. E. of Columbus.

CHILI, in Wisconsin, a township of Fond du Lac co.

CHILI, or CHILE, a republic of S. America, in the S. W. part of the continent, consisting of a long and narrow strip of country between the Andes and the ocean, extending from lat. 16° 31' to 56° S., and from the Pacific ocean to the summit of the Andes Mountains. It is bounded on the N. by Peru, E. by Bolivia and the Argentine Republic, S. and W. by the Pacific ocean. Length, N. to S., about 2,500 miles; breadth varying from 40 to 200 miles, and averaging between 110 and 120 miles; area, previous to Oct. 1881, 217,620 sq. miles, but increased by more recent acquisitions to 293,970 sq. miles. By a treaty with the Argentine Republic the disputed claims of these two nations were settled by C. taking all territory and islands S. of the 52 parallel and W. of 68° 30' W. This includes nearly all of Tierra del Fuego, the Strait of Magellan being considered neutral. After the war with Peru and Bolivia (1879-1881) C. acquired the coast region of Bolivia and the Peruvian province of Tarapaca. C. is divided in 22 provinces and the territory of Magallanes, and owns Juan Fernandez and other islands in the Pacific. — *Desc.* This country rises by successive gradients from the coast to the Great Cordillera of the Andes, which here attains a mean elevation of 13,000 to 14,000 ft. above sea-level, but it presents many of a considerable greater height, the majority of which are of volcanic origin. The principal summit is that of Aconcagua, about Lat. 32° 10'; 23,910 ft. high. N. of 33° 30' the Cordillera is divided into two separate ranges, enclosing the immense valley of Uspallata, so celebrated for its mineral riches. The principal road across the Andes—from Santiago and the Val d'Aconcagua to Mendoza—crosses Uspallata; several other passes from Chili into the La Plata territories exist further S. Between the ramifications of the mountain chains and the sea, some small plains line the coast. The shores are mostly high, steep, and rocky; as in general along the whole of the W. coast of S. America. They have almost everywhere, however, deep water near them, and there are many tolerable harbors, the best being those of Valparaiso, Valdivia, Concepcion, and Coquimbo; though some are safe only during certain seasons of the year. The rivers of the middle and S. provs. are sufficiently numerous, but they are all small, and generally unfit for the purposes of trade. Some lakes, or rather lagoons, are pretty numerous in the S. provs., and a few of them are 60 or 70 m. in circumference. *Clim.* The climate of C. is equal and healthy, and epidemic diseases are rare. The interior is hotter than the coast-line. Winter begins in June, and the rainy season lasts, at intervals, from April till August. In the prov. of Coquimbo no rain whatever falls, the want of it being occasionally supplied by heavy dews. The N. provinces being at a distance from the volcanoes of the Cordillera, which apparently act as safety-valves, are especially subject to earthquakes. Shocks are felt in some parts almost daily, and the country is continually desolated by them. The last great convulsion occurred Aug. 13, 1868, and was severely felt at Talcahuano. *Geol. and Min.* The high chain of the Andes is chiefly composed of argillaceous schist; while the lower chains and mountain groups are principally granite. Sienitiz, basaltic, and felspar porphyries, serpentines of various colors, quartz, hornblende, puding-stone, and gypsum, abound in the Cordillera, and fine statuary marble is said to abound in the dep. of Copiapo. C. is extremely rich in metals; silver is found there at a greater elevation than any other metal; gold is most frequently found in the "bowls" or valleys of the lower ranges, and perhaps few of the latter through-

out C. are without it. The copper mines form one of the chief sources of national wealth; lead and iron are found in abundance, but neither is much sought after. Zinc, antimony, manganese, arsenic, tin, sulphur, (so pure as not to need refining,) alum, salt, and nitre, are plentiful. Coal-mines have been opened, and this mineral has

already become

a considerable

article of trade

at Valparaiso.

Soil and Veget.

The soil of the

N. provinces is

sandy and sal-

ine, but it be-

comes progres-

sively more stiff

and loamy, and

hence of increa-

sing fertility,

as we proceed

S. Extensive

forests cover

Araucania and the

S. provinces, and

the flanks of the

Andes exhibit

a profuse vege-

tation. The

mimosa and al-

garoba trees,

laurels, myr-

ties, cypresses,

and other ever-

greens, grow to

such a size as to

be highly use-

ful for their

timber. C. pro-

duces many

hard woods, which, in a great measure, supersede the

use of iron in the country. Most European fruits flourish,

but tropical plants are few. *Zoöl.* The cougar,

jaguar, llama, guanaco and monkeys, &c. inhabit C. A

variety of beaver frequents the rivers, and the chinchilla

abounds in the desert country of the N.; both are hunted

for their fur, which is much prized. The great condor,

several kinds of vultures, pelicans, and many other

water-fowl, flocks of parrots, parroquets, &c., are among

the birds; and whales, dolphins, cod, pilchards, &c., are

caught around the coasts. The skunk, so noted for the

intolerable odor it emits when pursued, is a native of C.;

but in other respects this country enjoys a singular

freedom from savage quadrupeds, noxious insects, and

venomous reptiles. — *Prod.* Wheat is the staple cereal

grown in C.; barley is grown in the S.; buckwheat and

oats are but little raised, and rye is unknown. All kinds

of pulse are common, and potatoes (of but poor flavor,

however) are extensively cultivated. Hemp of good

quality flourishes here. The sugar-cane has been tried,

but does not succeed. Vines and olives grow well; the

grapes are fine-flavored, and the oil yielded by the olive

is good, but ruined by a bad mode of treatment, and

rendered unfit for foreign consumption. In the middle

provs. the *haciendas*, or farms, feed immense herds of

cattle, ranging from 10,000 to as many as 20,000 head.

Coal and copper are largely mined in C., on the English

system, and principally by English workmen. — *Com. and*

Manuf. The Chileños are good potters, and make light

and strong earthenware jars, which ring like metal.

Hempen cloths, indifferent hemp, cordage, soap, leather,

charcoal, and brandy, are among the chief articles man-

ufactured. C. is supposed to be the only American state,

formerly subject to Spain, whose commerce has increased

since the separation from the mother country. Valpa-

raiso is the chief port, and center of the foreign trade,

which is mainly carried on with Great Britain. C. pos-

sesses an active commerce, largely with Great Britain;

Germany and France coming next in importance. The

exports are very largely made up of mineral products,

including copper, silver, gold and manganese, also

nitrites, hides, wool, wheat and barley. The imports

embrace cotton and woolen goods, iron, hardware,

machinery, timber, earthen-ware, rice, sugar, &c. Until

recent years little accommodation existed for internal

commerce, the large towns—Valparaiso, Coquimbo,

Concepcion, Valdivia—being all near the sea and widely

separated, while the only good roads were those between

Santiago, the capital, and the cities of Valparaiso and

Talca. This difficulty has been overcome by the con-

struction of railroads, of which C. has now a well-

developed system. A government broad-gauge line

runs from Valparaiso to Santiago, crossing the coast

range of the Andes, and thence extends southward

through the central valley to Concepcion, and through

Araucania, being about 1,500 miles long. A branch

from the Valparaiso and Santiago line runs to Santa

Rosa, at the foot of the Andes, over which it has been

extended to connect with the Argentine railway system,

so that there is now through communication over the

Andes from the Atlantic to the Pacific ocean, the line

being about 880 miles long. — *Govt. &c.* The constitution

of 1833 established three authorities in the State—the

legislative, the executive, and the judicial. The first is

vested in two assemblies, called the *Senate* and the

Chamber of Deputies. These are elected by direct vote of

the people, the senators for six, the deputies for three

years. There is one senator for each three deputies,

and one deputy for each 30,000 people. The executive

Fig. 584. — WATER-CARRIER. (Chili.)

is exercised by a president, elected for a term of five years. He is assisted by a Council of State, and a ministry divided into the four departments of Interior and Foreign Affairs; Finance; Justice and Ecclesiastical Affairs; and lastly, War and Marine. The public debt on January 1, 1890, was \$124,667,512.—*Army and Navy.* In 1879, on the outbreak of hostilities with Bolivia and Peru, the regular army of 3,500 was raised to 12,000, but a larger number could now be placed in the field at short notice. The navy consists of about a dozen steamers, including a few modern ironclads; and in 1897 the govt. placed contracts for the construction of several first-class steel cruisers of the very latest model. *Relig.* The national religion is the Roman Catholic; other religions are tolerated; but the exercise of their public worship is not allowed. *Inhab.* The people of C. are mostly of Spanish and Indian descent, but there are some negroes and mulattoes. The Chileños have fewer vices than most other Creoles, and possess many traits of character in common with the Chinese, which people they somewhat physiognomically resemble. Education has hitherto made but little progress. *Hist.* Previously to the Spanish conquest, C. belonged to the Peruvian Incas. In 1535, Pizarro sent Almagro to invade the country, and in 1540, Valdivia; the latter of whom subjugated most of the country excepting Araucania (*q. v.*). The revolution which separated the colony from Spain broke out in 1810, and in 1817 the victory of Maypú, gained by General San Martín, permanently secured the independence of C. In 1865 C. joined Peru in a war against Spain, in which Valparaíso was bombarded and suffered great loss. Peace was obtained through the mediation of the U. S. in 1869. (For the war with Peru and Bolivia, see *PERU*.) In 1891 a revolution broke out, during which U. S. soldiers were maltreated. Naval vessels were sent from this country to Valparaíso, and C. was forced to apologize and to compensate the injured men and the families of the killed.

Chil'agon, n. [*Gr. chiliagónos.*] (*Geom.*) A plane figure of a thousand angles and sides.

Chiliahedron, n. [*Gr. chilíon, and hedra, seat.*] (*Geom.*) A solid figure of a thousand sides and faces.

"A man, who speaks of a *chiliahedron*, or a body of a thousand sides."—*Locke.*

Chiliarch (*kil'e-ärk*), *n.* *Gr. chilíon*, a thousand and *archos*, chief.] The military commander or chief of a thousand men.

Chiliarchy, n. A body consisting of a thousand men.

Chiliasm (*kil'i-azm*), *n.* [*Gr. chilíasmos.*] The doctrine of the reappearance of Christ upon earth during the millennium period.

Chil'last, n. A believer in chiliasm; a millenarian.

Chilias'tic, a. Relating to, or concerning, the millennium.

Chilifac'tive, a. Same as *CHYLIFACTIVE* (*q. v.*).

Chiliol'itre, n. See *KILOLITRE*.

Chiliomet're, n. Same as *KILOMETRE* (*q. v.*).

Chil'keah, an inland town of Hindostan, prov. Delhi, on the borders of the Kumaon district, 110 m. N. E. of Delhi; Lat. 29° 24' N., Lon. 79° 5' E. It is a chief mart of trade for the W. provinces, with Kumaon, Thibet, and Tartary; but is abandoned on the approach of the unhealthy season, when dangerous malaria prevails.

Chill, a. [*A. S. cele, cýl*, a very great coldness; *Dn., kil*; *Fris. kielde*, cold; applied to *Fr. geler*, Lat. *gelo*, to freeze, *gelidus*, icy cold.] Cool; moderately cold; tending to cause shivering; as, a *chill* atmosphere.

—Distant; formal; not warm or cordial; as a *chill* reception.

—Affected by cold; having the sensation of cold.

—Depressed; dejected; discouraged; dispirited.

—*n.* A cold fit; a sensation of cold, or that which produces it; a rigor; a shivering with cold; as, to catch a *chill*.

—That which checks, damps, discourages, or disheartens; as, a *chill* came over our enthusiasm.

—*v. a.* To make cold or cool; to cause to shiver; to affect with cold.

"But winter lingering *chills* the lap of May."—*Goldsmith.*

—To check motion, life, or action; to damp enthusiasm; to depress, deject, or discourage; as, to *chill* one's hopes.

(*Metal.*) To produce a hardness in fused cast-iron by sudden cooling.

Chillambaram', a maritime town of S. Hindostan, prov. Carnatic, 34 m. S. of Pondicherry; Lat. 11° 28' N., Lon. 79° 49' E. In its vicinity are celebrated Hindoo temples of great antiquity.

Chilled (*chill'd*), *a.* That which has passed through the process of hardening by sudden cooling; as, *chilled* iron. (*Painting.*) Possessing a clouded coolness of light, as seen in certain pictures.

Chil'li, n. [*Sp. chili, chile.*] The pod of the cayenne-pepper.

Chillioth'e, in *Illinois*, a thriving city of Peoria co., at the head of Peoria lake, on the Illinois river, 20 m. above Peoria city. *Pop.* (1897) about 2,000.

Chillioth'e, in *Iowa*, a post-village of Wapello co., on the Des Moines river, 72 m. S. W. of Iowa City.

Chillioth'e, in *Ohio*, a city, cap. of Ross co., on the Scioto river, 96 m. N. E. of Cincinnati. It is a fine and wealthy town, and the trading centre of the rich farming country bordering on the Scioto. *Pop.* (1897) 15,000.

Chillioth'e, in *Missouri*, a city, the cap. of Livingston co., about 3 m. N. E. of Grand river, 76 m. E. of St. Joseph. Has extensive manufactures. *Pop.* (1897) about 7,000.

Chill'iness, n. State of being chilly; a sensation of shivering; a rigor; a moderate degree of coldness.

—A sensation of coolness; lack of enthusiasm or warmth.

Chill'ingly, adv. In a chilling manner.

Chil'lingworth, WILLIAM, an English divine, b. 1602, who went to Douay for the purpose of embracing the

Catholic faith; but the letters of Bishop Land, his godfather, caused him, in 1631, to return to England and the Protestant communion. The Romanists, after this, attacked him with great severity, and he replied in a work entitled, *The Religion of Protestants a Safe Way to Salvation*, printed in 1638. The same year he was made prebendary of Salisbury, and afterwards master of Wigston's Hospital, in Leicestershire. In the civil war he adhered to the royal cause, and, in 1643, served at the siege of Gloucester as an engineer. In the same year he was taken prisoner in Arundel Castle, Sussex, and conveyed to Chichester, where he died at the bishop's palace in 1644.

Chillisqua'que, in *Pennsylvania*, a creek which enters the Susquehanna, a few miles above Sunbury.

—A post-township of Northumberland co., on the Susquehanna, abt. 7 m. N. of Sunbury.

Chill'ness, n. State of being chill; a shivering; coolness; coldness; want of warmth.

"A generous *chillness* seizes ev'ry part."—*Dryden.*

Chillon. (CASTLE OF,) (*shil'lawng*), a fortress of Switzerland, in the canton Vaud, 6 m. S. E. of Vevey. It stands on an isolated rock at the E. end of the Lake of Geneva, the waters of which are, according to Byron,—

"A thousand feet in depth below."

It was built in 1238, by Amadeus IV. of Savoy, and was long used as a state prison. In 1559 it was occupied as an arsenal. Near this castle Rousseau fixed the catastrophe of his *Heloise*; and in it, Bonivard, Byron's *Prisoner of Chillon*, was confined for several years. See *BONNIVARD*.

Chill'y, a. Moderately chill; cold in a certain degree; cool.

"A *chilly* sweat bedews my shuddering limbs."—*Philips.*

Chil'mark, in *Massachusetts*, a post-township of Dukes county, on Martha's Vineyard, 95 miles S. E. by S. of Boston.

Chil'marry, (*Chalamari*), a town of Hindostan, prov. Bengal, dist. Rungpoor, on the Brahmapootra, 35 m. S. E. of Rungpoor. A festival is annually held here, which is usually attended by 60,000, and, sometimes, by 100,000 Hindoo pilgrims, and others.

Chil'o, in *Ohio*, a post-village of Clermont co., 40 m. above Cincinnati, on the Ohio River.

Chiloe, (ISLAND AND ARCHIPELAGO OF,) (*cheel'way*), a prov. of Chili, consisting of a large island in the S. Pacific, near the S. coast of Chili, and the N. W. coast of Patagonia, between Lat. 40° 48' and 43° 50' S.; and having on its E. side 63 small islands, 35 of which are inhabited. The group, including the town of Maulin, on the main-land of the continent, forms the most S. prov. of Chili. Shape of the island of C., oblong; length, N. to S., 120 m.; average breadth, 40. *Area*, 4,800 sq. m. The island is mountainous and wooded, chiefly with a bastard cedar, very durable, and exported in great quantities to Peru and Chili. There are several good harbors; in those of San Carlos (the cap., in the N. E. part of the island), and Castro, vessels ride quite landlocked close to the shore, in good holding ground. *Clm.* Healthy, but damp, having an almost constant rain-fall. *Prod.* Wheat, potatoes, and apples, which latter yield a large quantity of cider. Domestic animals are largely reared. Sheep are reared solely for their wool, and never used for food. The island swarms with hogs, and the hams of C. are celebrated in S. America. Poultry and fish are very abundant. *Com.* The principal exports are planks, hams, brooms, hides, and woollen cloths. The archipelago possesses about 1,500 coasting vessels. Money is here nearly unknown, and traffic is conducted by barter, or payment in indigo, tea, salt, or cayenne pepper. The archipelago sends one member to the Chilean congress. *Prin. towns.* San Carlos (fortified), Castro, and Maulin. The inhabitants are passionately fond of music and dancing, and in 1897 their numbers amounted to 65,200. C. was the last possession held by Spain in the Pacific.

Chil'ognatha, n. (*Zoöl.*) See *MYRIAPODA*.

Chil'ogram, n. See *KILOGRAMME*.

Chil'opod, n. (*Zoöl.*) See *MYRIAPODA*.

Chilperic I., king of France, one of the 4 sons of Clothaire I., attempted, at his father's death, to get possession of the undivided sovereignty, but was compelled to content himself with the Kingdom of Soissons, or *Neustria*, in 561. Having divorced his first wife and caused his second to be strangled, he raised to their place his former mistress, the infamous Fredegonde, and her influence, in conjunction with his own ambition, plunged him into a series of wars and crimes which only terminated with his assassination in 584, while engaged in an attempt to dispossess his brother Guntram of Burgundy.

CHILPERIC II., a reputed son of Childeric II., who was placed upon the throne of Neustria at the death of Dagobert III. in 715, was a tool in the hands of Charles Martel. D. 720.

Chiltepec', in Mexico, a river, tributary to the Tabasco. It leaves the main stream at San Juan Bautista, and taking a N. course of abt. 70 m. empties into the Gulf of Mexico, 30 m. W. S. W. of La Frontera.

Chil'tern Hills, or *CHILTERNs*, in England, is part of a ridge of low hills, hardly exceeding 900 feet above the level of the sea, running obliquely E. and W. through Buckinghamshire. This, once a place dangerously infested by freebooters, had, like the N. and W. Marches, an officer, or steward, to guard and watch over the welfare of the neighborhood. The function of the office is now, however, obsolete; and it is merely retained to give a member of parliament a legal opportunity for resigning his seat (which he cannot do unless in some way disqualified), it being regarded as a place

of honor and trust under the Crown. The office is resigned immediately afterwards, and is termed, the *CHILTERN HUNDREDS*.

Chil'ton, in *Wisconsin*, a township in Calumet co. —A city, cap. of Calumet co., in the above township, on the Manitowoc river, about 20 m. E. of Oshkosh, and 24 N. E. of Fond du Lac. *Pop.* (1897) about 2,000.

Chil'ton's Mills, in *Alabama*, a village of Walker co., 125 m. N. W. of Montgomery.

Chil'tonsville, in *Missouri*, a village, cap. of Shannon co., about 60 m. S. W. of Ironton.

Chil'tonville, in *Massachusetts*, a post-office of Plymouth co.

Chimæ'ra. See *CHIMERA*.

Chimæ'ridæ, n. pl. [From the fabulous monster *CHIMERA, q. v.*] (*Zoöl.*) A family of cartilaginous fishes, distinguished by having the head furnished with appendages, and the tail terminating in a point.

Chimá'nas, a cluster of islands in the Caribbean Sea, off the coast of Venezuela; Lat. 10° 19' N., Lon. 64° 51' W.

Chimaphi'la, n. [*Gr. cheima*, winter, and *philos*, to love.] (*Bot.*) A gen. of plants, order *Pyrolaceæ*. The Prince's pine or Pipsissiva, *C. umbellata*, and the spotted Winter-green, *C. maculata*, readily distinguished from the preceding by its variegated leaves, are common and beautiful evergreens, with purple flowers on nodding pedicels, found from Canada to Carolina in sandy woods. Both have tonic and diuretic properties.

Chimay, (*she'ma*), a principality in Belgium, prov. of Hainault, with a cap. of same name, arrond. of Charleroi, on the river Blanche; *pop.* 3,500. Anciently the property of the lords of Croye, since the beginning of this century it has belonged to the noble French family, Riquet de Caraman.

Chimay, (PRINCESS DE.) See *TALLIEN*.

Chimb, n. [*Dn. kim*, border; *Gr. kimme*, allied to *Fr. cime*, top, ridge; *L. Lat. cima*; *Gr. kuma*, for *kuema*, anything swollen, from *kuo*, to hold, contain.] The edge or brim of a cask, or tub; formed by the ends of the staves. (Written also *CHIME*.)

Chimbarou'go, in Chili, a river in the prov. of Colchagua, rises in the Andes, abt. Lat. 34° 55' S., and flowing N. W., Lat. 34° 25', joins the Tinguiririca, and the two united meet the Rapel.

Chim'bo, a town of Ecuador, at the foot of Chimborazo, 50 m. N. E. of Guayaquil.

Chimborazo, *Chimborá'co*, a conical peak of the Andes, in Ecuador, Lat. 1° 30' S., and Lon. 79° W.; height 21,420 feet above the sea, but only about 12,000 above the level of its own table-land. Humboldt ascended within 2,135 feet of the top, but the summit was only reached in 1880 by Wympel. See *ANDES*.

Chime, n. [From Chaucer, *chimbe*; from *cimbal* or *cimble* of bells. See *CYMBAL*.] A consonance of musical sounds; correspondence of sound; correspondence of proportion and relation of sound.

"And all the way, to guide their *chime*,
With falling oars they kept the time."—*A. Marvell.*

—The sound of bells or of other musical instruments, in harmonious concert.

"We have heard the *chimes* at midnight."—*Shaks.*

—A set of bells harmoniously tuned to each other, placed in a church-tower, and rung by hammers which are moved by clock-work, or by hand. In the latter case they are commonly termed *carillons*; a name generally applied indiscriminately by the French to the tune played, and to the series of bells, whether sounded by machinery or by hand. Among the finest sets of chimes are those of Copenhagen, Westminster, Ghent, and Amsterdam in Europe, and Chicago in Amer.—C. is used also in the same sense as *CHIME, q. v.* C. *ELECTRIC*.

—*v. i.* To sound in consonance or harmony, as bells.

"To make the rough recital aptly *chime*."—*Prior.*

—To harmonize; to correspond or agree; to coincide with. (Often preceding *in*.)

"He often *chimed* in with the discourse."—*Arbuthnot.*

—To jingle; to clatter; to make rough consonance of sounds.

"But with the meaner tribes I'm forced to *chime*."—*Smith.*

—*v. a.* To cause to sound in harmony; to strike or cause to sound, as a set of bells.

"And *chime* their sounding hammers in a row."—*Dryden.*

Chimépanipetick, in L. Canada, a river which enters the Gulf of St. Lawrence, about 20 m. S. W. of Seven Island Bay.

Chim'er, n. One who, or that which, chimes.

Chimera, Chimera, (*kí-mé'ra*), *n.* [*Lat. chimæra*; *Gr. chimaira*, a she-goat, a monstrous beast.] (*Myth.*) A fabulous monster sprung from Echidna and Typhon. It had three heads, a lion's, goat's, and dragon's, and continually vomited flames. The fore part of its body was that of a lion, the middle a goat, and the hinder a dragon. Its usual abode was Lycia, and in the reign of Jobates it was conquered by Bellerophon, mounted on the horse Pegasus. This fabulous tradition is explained by the account given of a burning mountain in Lycia, whose top was a desolate wilderness, the resort of lions; the middle, being fruitful, was frequented by goats; and, at the bottom, the marshy ground abounded with serpents. Bellerophon is said to have conquered the C., because he first made his habitation on that mountain. Pintarch says that by it is meant a pirate captain, who adorned his ship with the images of a lion, a goat, and a dragon.

—A vain or idle fancy; a visionary scheme; any wild stretch of imagination.

"Chimeras all, and more absurd, or less."—*Dryden.*

(*Zoöl.*) See *STURIONIDÆ*.

Chimere', n. See *SIMAR*.

Chimer'ical, *a.* Partaking of the nature of a chimera; wildly or vainly conceived; imaginary; fanciful; unfounded; as, a *chimer'ical* project.

Chimer'ically, *adv.* Fancifully; fantastically; vainly; wildly.

Chim'nage, *n.* [From Fr. *chemin*, a way.] (*Law*.) A toll exacted for right of way through a forest. (*v.*)

Chim'ney, *n.* : *pl.* CHIMNEYS [sometimes wrongly written *chimnies*.] [Fr. *cheminée*; Lat. *caminus*; Gr. *kamin*, s. an oven, furnace, probably from *kaiō*—*kaisō*, to burn.] The gullet, funnel, or passage, through which smoke is conveyed to the open air; a flue. That part of the opening which faces the room is, properly, the *fireplace*, the stone or marble under which is called the *hearth*, that on a level with the hearth the *slab*; the vertical sides of the opening are the *jimbs*; the head of the fireplace is the *mantel*; and the cavity, or hollow, from the fireplace to the outlet, is called the *funnel*. The part of the funnel which contracts as it ascends is termed the *gathering*, or by some it is called the *gathering of the wings*. The tube or cavity, usually of a parallelogrammatic form in plan, from the point where the gathering ceases up to the top of the chimney, is specifically called the *flue*, and the part between the gathering and the flue is called the *throat*. The part of the wall facing the room, and forming one side of the funnel parallel thereto, or the part of the wall forming the sides of the funnel, where there is more than one, is the *breast*. In external walls the side of the funnels opposite the breast is called the *back*. When there is more than one *C.* in the same wall, the solid parts that divide them are called *withes*; and when several of such chimneys are collected into one mass, it is called a *stack of chimneys*. The part which rises above the roof for discharging the smoke into the air, is called a *chimney-shaft*, whose horizontal upper surface, affixed to prevent smoking, is called the *chimney-top*.

A glass tube or funnel for a lamp; as, a lamp-*chimney*. (*or* *SMOKE-STACK*.) (*Seam-Engineering*.) A lofty *C.* regulated in size for each boiler so as to act in unison with the blast-pipe to produce a proper blast on the fire. This is done by each exhaust of steam from the cylinders creating a partial vacuum in the *C.*; hence a rush of air takes place through the fire and tubes to fill this vacuum; and these successive rushes of air blow the fire. This vacuum ranges from 2 to 8 inches of a water-gauge.

Chim'ney-board, *n.* A fire-board; a board used to close up a fireplace.

Chim'ney-corner, *n.* The corner of a fire-place; the fireside; the side at each end of the fire-grate.

"Yet some old men...

Tell stories of you in their chimney-corner."—Denham.

Chim'ney-hook, *n.* A hook to hold pots and kettles over a fire.

Chim'ney-money, *n.* In England, hearth-money; a tax formerly levied on each chimney in a house.

Chim'ney-piece, *n.* A shelf of wood or stone erected over a fireplace; a mantel, or mantelpiece.

Chim'ney Point, in Vermont, a post-village of Shoreham township, Addison co., on Lake Champlain, 50 m. N.W. of Montpelier.

Chim'ney-swallow, *n.* (*Zool.*) See HIRUNDINÆ.

Chim'ney-sweeper, *Chim'ney-sweep*, *n.* One who cleans chimneys; a person who cleanses chimneys of accumulated soot.

Chimoman'thus, *n.* (*Bot.*) See CALYCANTHACEÆ.

Chimpan'zee, *n.* (*Zool.*) A species of the *Simia*,

genus *Troglodytes*; the monkey which, after the gorilla, approximates more nearly in its general conformation to the human race. This animal is an inhabitant of Africa, and especially of the coasts of Congo and Angola, where they live in society in the woods, constructing huts of the leaves and branches of trees, walking upright, and arming themselves with clubs, to resist effectually the attacks of the largest and most powerful beasts. The *C.* attains a height exceeding four feet when in an erect position. Its body is covered with long black hair on the head, shoulders, and back, but much thinner on the breast and belly; the arms and legs are not so disproportionate as those of the Orang-Outang, the fore-fingers not quite touching the knees when the animal stands upright. The upper part of the head is very flat, with a retiring forehead, and a prominent bony ridge over the eye-brows; the mouth is wide, the ears large, the nose flat, and the face of a blackish-brown color. The great toe of the *C.* is shorter than the other toes, and opposed to them as a thumb. In a state of confinement it exhibits, at least when young, considerable gentleness and docility, and readily learns to imitate human actions, as in eating with a spoon, drinking out of a glass, &c.; and its habits and deportment are of peculiar interest, from the high degree in which inquisitiveness, perception, memory, and docility are manifested. Its natural food consists chiefly of fruit and other vegetable substances; in confinement it exhibits a great fondness for sweetmeats, and for wine. The differences, more or less important, that separate it from man, are minutely examined under the general name TROGLODITES.

Chin, *n.* [A.S. *cyn*; Dn. *kin*; Ger. and Icel. *kinn*; Swed. and Goth. *kind*; Goth. *kinnaus*; Sansk. *gamla*, the cheek, *gambha*, the chin; *cam*=*gam*, to eat; allied to Lat. *gena*, originally the lower part of the face; Gr. *gencion*, the upper jaw, the part covered by the beard.] The lower extremity of the face under the month, which, descending by the motion of the lower jaw, causes the mouth to open, for the purposes of speaking and of eating; the point of the lower jaw.

Ch'ina, (EMPIRE OF,) or, as it is sometimes termed, the CELESTIAL EMPIRE, a vast country of S.E. Asia, between Lat. 20° and 50° N., and Lon. 70° and 140° E.; in form nearly square, being bounded on the E. and S.E. by those arms of the Pacific Ocean known as the Gulf of Tartary, the Sea of Japan, the Yellow Sea, the Strait of Formosa, the Chinese Sea, and the Gulf of Tonquin; S. by Tonquin, Laos, Burmah, and Hindostan; W. by Turkestan; and N. by Siberia, its land boundaries now principally belonging to Russia, Great Britain, and France. Its extent from the borders of Khokan and Budukshan to the Sea of Okhotsk is 3,350 m., and its greatest width from the frontiers of Daouria N. to Tonquin S., is 2,100 m.; inclosing altogether a space of about 4,153,000 sq. m. Thus the Chinese empire includes all the table-land of E. Asia—about a third part of the whole continent—or a little less than a tenth part of the habitable globe; and contains, within its enormous area, the largest amount of population and of wealth united under one government in the world. The coast-line has an extent of above 3,350 m., and the total circumference of the empire is about 12,550 m. In this article we shall limit ourselves to treating of China proper; referring our readers, for particulars of the outlying portions of the empire, to their mention under the heads of MANTCHOURIA, MONGOLIA, THIBET, HAINAN, TCHUSAN, and LOOCHOO. According to the latest published statistics, the topographical distribution of the the various provinces forming China proper is as follows:

DIVISIONS AND POPULATION.

Provinces.	Area. Eng. sq. m.	Estimated Pop.	Capitals.
CHINA PROPER:			
<i>N. Provinces.</i>			
Chih-li	55,949	18,000,000	Pao-Ting-foo.
Shan-tung	65,104	36,000,000	Tai-queen-foo.
Shan-se	55,268	12,000,000	Si-uan-foo.
Shen-se	67,400	8,000,000	Tsi-nan-foo.
Kan-su	86,603	9,000,000	Lan-chow-foo.
<i>Central Provs.</i>			
Ho-nan	65,104	22,000,000	Kai-fong-foo.
Kiang-soo	44,500	21,000,000	Nankin.
Gau-hway	48,461	20,000,000	Nzan-king-foo.
Hoo-pih	70,450	33,000,000	Woo-chang-foo.

GEN. DESC. *Northern provs.* The surface of these provs. is, on the whole, mountainous, and they have the Great Wall of *C.* intervening between them and Mongolia. The valleys are fertile, producing millet, wheat, and pulse; and are watered by the considerable rivers Pei-ho, Hei-ho, and Han-kiang. *Central provs.* Ho-nan is one of the most fertile provs. of the great plain, and is called the *garden of China*. It is intersected by the great Hoang-ho (Yellow River). KIANG-SE is surrounded on three sides (W. S. and E.) by the Nan-ling range of mountains, but possesses many cultivated valleys, yield-

ing rice, cotton, indigo, and sugar. This prov. is famous for its extensive manufacture of china-ware. HOONAN and HUSAN are extremely fertile, being watered by the Yang-tse-kiang. They produce a superior growth of tea, and largely fabricate bamboo-paper. These provs. are both within the limits of the great plain. KWEICHOW has been called the Switzerland of *C.*, being occupied by the highest portion of the Nan-ling mountains. It is peopled by wild, intractable tribes, who preserve a sort of *quasi*-independence, even though in the centre of the empire. *Mar. and S. provs.* SHAN-TUNG—lying partly in the great plain, and partly consisting of a promontory jutting into the Yellow Sea—is a poor, bleak country, possessing, however, some valuable coal-mines, which supply the whole empire with that article. KIANG-SOO and GAN-HWAY are crossed by the great rivers Hoang-ho and Yang-tse-kiang, and owing to their agricultural resources, great manufactures, thorough water-communications, and commercial position, may be esteemed jointly the best territory of the empire. The staple products raised are grain, cotton, green teas, silk, and rice. Nankin, the S. capital of the empire, on the Yang-tse-kiang, is the chief city of this prosperous region. TCHU-KIANG is situated low, produces much tea, and carries on an active trade with Japan. FO-KIEN grows tea and the China orange to perfection; its maritime commerce is extensive, and its merchants monopolize the bulk of the Chinese shipping-trade. KWANG-TUNG extends along the whole S. coast of the empire, is formed of many wide, fertile valleys, and is the only prov. where foreigners are allowed to trade. It contains 13 commercial emporiums, of which Canton (*Kwang-chow-foo*) is the greatest. KWANG-SE is divided from Hunan on the N. by the Nan-ling range, while its S. borders on the Cochinchinese prov. of Tonquin; this prov. is very mountainous, and is said to contain gold and other metals, while the lowlands and valleys produce rice, silk, and timber. Both the language and manners differ from those of the Chinese generally. YUN-NAN, the most W. of the S. provs., is continuous on the S. with Cochinchina and the Burmese empire; and towards the W. with Thibet. Its remarkably high and bold mountains furnish the copper which supplies the Chinese currency. A high-road, running parallel with the Yang-tse-kiang through this prov., affords a line of direct communication between the heart of this empire and that of Burmah. *The W. province, SZE-CHUEN*, is the largest in *C.* Plains, the Yun-ling mountains, and extensive deserts are its principal components. It is divided throughout its whole extent by the Yang-tse-kiang and its constituents; and its inhabitants are to a certain degree independent, and keep up a chronic state of rebellion.—*Climate.* The climate of *C.* varies between the extremes of heat and cold. The former prevails in the southern provinces, which experience a higher temperature than Bengal; while the vicinity of Peking is colder than countries under the same latitude in Europe. In the S., typhoons or hurricanes of wind are frequent, devastating the island of Hainan, but not extending far to the N. of Canton. Although they usually last only 24 hours, and seldom longer than 48, their effects are terrific.—*Zool.* The universal cultivation of *C.* proper, and the density of its pop. have long ago expelled most of the wild animals which infest the surrounding countries; there are also fewer domestic ones than inhabit most civilized regions. Beasts of burden are, in a great degree, superseded by the means of transit so copiously afforded by the canal system, and by the coolie, or porter, element of the population. Add to this the deficiency of pasture land, the comparatively little animal diet indulged in by the Chinese, together with their singular aversion to butter and milk,—and the paucity of cattle is at once accounted for. The Chinese horse, ass, and buffalo, are poor, spiritless animals. Wild cats are caught, and cooked as a *bonne bouche*. Dromedaries are much used for the carrying on of traffic with Tartary; and pigs, sheep, and goats are largely and carefully reared. Dogs, rats, and monkeys are more numerous than is found agreeable. Of birds, *C.* presents the eagle in mountainous districts; the *haet-sin*, a kind of falcon considered imperial property; and the magpie, also esteemed sacred to "the powers that be." The cornucopia is here trained to catch fish, and crickets and quails are found in great plenty; the latter bird being trained for fighting, as cocks are in other countries. Larks, gold and silver pheasants, mandarin ducks, and the white Siamese rice-bird, are also among the feathered denizens of this country. Fish of various kinds are abundantly obtained from the sea and rivers, and oysters are successfully bred and fattened. Venomous serpents are comparatively unknown; among insects, the locust is the greatest scourge of this country, while the silk-worm, on the other hand, is its chief blessing, affording employment and riches to an immense quota of the population. Scorpions, centipedes, mosquitoes, spiders and ants, are unpleasantly common.—*Veget.*, &c. Arborescent vegetation does not flourish in *C.*, and large timber is, consequently, scarce. The fir, some kinds of the palm family, the laurel, cassia, and cuper trees, form the principal woods. The tallow-tree is indigenous, exuding an unctuous substance which the natives convert into candles. The *so*, or varnish-tree, supplies a valuable oil, and the camphor-laurel furnishes a large quantity of that drug. The *ko-chow*, again, a species of sycamore, yields a rind which is convertible into paper. Mulberry trees, as food for the silk-worm, are necessarily much cared for. We now come to the shrub which has brought *C.* into closer contact with foreign nations than anything else;—this, the tea-plant (called by the Chinese *cha*), forms the principal element of the external commercial prosperity of this country, and nearly

Fig. 585. — CHIMPANZEE.

200 varieties are said by native writers to exist on this soil, though but two, *black tea* and *green tea*, are known to the outside world. Tobacco, the cotton-plant, and sugar-cane, are also profitably and very considerably cultivated. Vast quantities of edible vegetables (of which food the people are very fond) are raised, and there is scarcely any sort of grain but may be found in one or other part of this country; though rice, as a farinaceous product, is considered the ruling staple, and is brought to greater perfection than in, perhaps, any other land on the globe. Among the medical roots which thrive with peculiar vigor in *C.* are the ginseng, *ti-twang*, galangal, rhubarb, ginger, and poppy, the expressed juice of which is made a substitute for opium, and is largely cultivated despite all government prohibition. *Min.* Respecting the mineral development of *C.*, but little is authentically known. The gold-mines worked by the govt. have their whereabouts kept a profound secret, though they are surmised to be located among, or near, the Kedai-choo and Yun-nan mountains. Gold-dust is found in the Yang-tse-kiang during its course through Sze-chuen. Iron is produced generally, and several descriptions of copper are found in abundance, more particularly the *pe-hing*, or white copper obtained in Yun-nan. Mercury, arsenic, cobalt, and orpiment are common, and coal is mined in various parts of the empire. Lapis-lazuli is met with in the W. provs., as also several varieties of gems, marble, porphyry, and jasper, and excellent granite and quartz. Salt is an article of trade largely manipulated, and is collected from immense mounds, chiefly on the banks of the Pei-ho. — *Trade and Com.* The Chinese are pre-eminent for their indefatigable industry. Of the immense territory peopled by them there is scarcely a rood of arable ground that is not assiduously cultivated; and such importance do they attach to agriculture, that once a year the sovereign of the Celestial Empire—so seldom seen in public—exhibits himself holding a plough.

Fig. 586.—VISIT OF CEREMONY.

Unfortunately, however, their husbandry is, to a great extent, nullified by the rude and ill-adapted implements employed therefor, and also by the smallness of the farms. Hence, agriculture, as scientifically considered, is but little advanced, although the Chinese system of land-irrigation is superior to that of any other people. As a manufacturing nation, the Chinese are highly distinguished; porcelain originated entirely with them, and the art of spinning silk they also gave to the Westerns. The lacquered ware produced in China, though very beautiful, must be considered inferior to that of Japan; but in the more minute arts of carving (see fig. 49) and inlaying, this people has no superior. Their ivory and mother-of-pearl artistry is too well known to need description. Gunpowder, though a Chinese invention, is little manufactured, and that little of but indifferent quality. Paper is ingeniously fabricated of various materials; it is, in general, thin, silky, and highly absorbent of ink. Chinese trade has the peculiarity of being for the most part internal, the country supplying most articles of subsistence or luxury; and it is carried on by means of canal and river navigation. The primitive expedient of barter is still resorted to in *C.*, on account, perhaps, of the inadaptability of the circulating medium. Salt may therefore be designated the standard of currency, it being the most extended of any article of commerce. Silver is not customarily employed as a circulating medium, but rather as an object of traffic. Gold is also seldom used as currency; but when it is, comes into the market beaten into thin leaves. Credit is little known, except at Canton; consequently paper-money has a very limited circulation. There are, however, banks in some of the large commercial towns which issue paper. The foreign trade of *C.* is chiefly in the hands of the English and Americans. In 1834, the exclusive trade of the English East India Company with *C.* terminated, and the country was thrown open to general traders. The opening thus made was followed by a commercial treaty, in 1842, between the British and Chinese govts., by the terms of which 5 ports of the empire were opened to foreign trade, viz., Canton, Amoy, Foo-choo-foo, Ningpo, and Shanghai. To these 5 ports were subsequently added 8 others,—namely, Swatow, Tient-sin, Che-foo, Hankow, Kin-kiang, Chin-kiang, Formosa, and New-chwang. — *Exp.* Tea, porcelain, raw and spun silk, sugar, rhubarb, embroidery, lacquered wares, and carved articles of domestic ornament. — *Imp.* Cotton and woollen goods, opium, raw cotton, furs, and edible birds-nests, which form an expensive article of luxury, and are held in great esteem. The total value of

commodities exported from *C.* in 1891, consisting mostly of tea and silk, reached the value of \$106,000,000. The imports were valued at \$140,000,000. These comprised cotton goods, \$57,000,000; opium, \$29,600,000; metals, \$7,400,000; woollens, \$6,000,000; sundries, \$40,000,000. Of articles of export, tea ranks much the highest, raw silk coming next, while the production of cotton has considerably decreased. The vessels entered and cleared at the various treaty ports numbered about 30,000, half of these being British. There were among them over 6,000 of foreign build, but owned by Chinamen and flying the Chinese flag, and 2,000 junks sailing under special licenses issued by the custom superintendents of Shang-hai and Ning-poo. *Govt., &c.* The form of govt. of the Chinese empire is strictly patriarchal. The emperor, who bears the various euphuistic titles of the "Brother of the Sun and Moon;" *Tsin-tsy*, or the "Son of Heaven;" *Ta-hwang-li*, or the "Great Emperor;" and *Wansay-yay*, or the "Lord of a Myriad Years," is regarded as the father of his people, and has unlimited power over all his subjects. The fundamental laws of the empire are laid down in the first of the "Four Books" of Confucius, which prescribe the govt. of the state to be based upon the govt. of the family. The emperor is spiritual as well as temporal sovereign, and, as high-priest of the empire, can alone, with his immediate representatives and ministers, perform the great religious ceremonies. No ecclesiastical hierarchy is maintained at the public expense, nor any priesthood attached to the Confucian or State religion. The administration of the empire is under the supreme direction of the "Interior Council Chamber," comprising 4 members,—2 of Tartar, and 2 of Chinese origin,—besides 2 assistants from the *Han-lin*, or Great College, who have to see that nothing is done contrary to the fundamental laws of the empire, contained in the sacred books of Confucius. These members are denominated *Ta-hyo-si*, or Ministers of State. Under their control are the *He-poo*, or 6 boards of government. They are:—1. The board of civil appointments, which takes cognizance of the conduct and administration of all civil offices; 2. The board of revenues, regulating all financial business; 3. The board of rites and ceremonies, which enforces the laws and customs to be observed by the people; 4. The military board, superintending the administration of the army; 5. The board of public works; and 6. The high tribunal of judicial jurisdiction. Independent of the govt., and theoretically above the central administration, is the *Tu-che-yuen*, or board of public censors. It consists of from 40 to 50 members, under 2 presidents; the one of Tartar and the other of Chinese birth. By the ancient custom of the empire, all the members of this board are privileged to present any remonstrance to the sovereign. One censor is to be present at the meetings of each of the 6 government boards, without taking any part in the deliberations, and others have to travel through the various provs. of the empire to inspect and superintend the administration of the chief public functionaries. The bamboo, as the chief instrument of govt., is applied, without distinction, to the highest and the lowest Chinese. Yet this govt., amidst the excess of its despotism,

Fig. 587.—A CIVIL OFFICER.

presents, in many respects, a mild and moderate aspect quite unknown to the other absolute monarchies of Asia.—*Mandarins.* These are divided into 19 orders. The lowest is intrusted with the collection of the revenue. Others are governors of cities, on the magnitude of which their consequence depends; others are over-

seers, visitors, or inspectors; and the highest class are governors of provinces, or viceroys. Each mandarin exercises over those under him an authority equally absolute with that of the monarch. Besides ruling, he also preaches to the people; and strict instructions are transmitted from the imperial court as to the matter of his sermons. The penal code of *C.* is severe, and many offences are punished with death.—*Revenue.* The estimates of the public revenue of *C.* vary greatly, and widely differing figures have been given. It probably amounts to about 80,000,000 hai-kwan taels, a sum equivalent to about \$85,000,000. It is mainly derived from 3 sources, viz., customs, duties, licenses, and a tax upon land. The customs duties fall more upon exports than imports; their total product at the 13 treaty-ports open to foreign commerce amounted in 1892 to \$25,000,000; native duties \$7,000,000. A large portion of the land-tax is paid in kind, and the amount is chiefly discharged in rice, wheat, and pulse, which is kept by the govt. in immense granaries in the suburbs of Pekin and Tung-choo.—*Mil. &c.* The standing military force of *C.* consists nominally of 4 divisions—the Manchus, in 678 companies of 100 men each, the Mongols, in 210 companies, and 106,000 Chinese (all cavalry), and 500,000 native infantry; besides 125,000 irregular troops or militia; in all, 829,000 men. Very recent reports state the Chinese army to be composed of about 800,000 men, besides 200,000 Tartars. A standing army in the European or American sense of the word, is not in existence. The soldiers do not live in barracks, but in their own domicils, pursuing as their chief business some civil occupation, frequently that of day-laborers, and are summoned to muster only on certain special occasions. The navy comprises several modern iron-clads, but most of these were lost in the war with Japan.—*Public Works.* For these *C.* is remarkable. No nation

Fig. 588.—THE GREAT WALL OF CHINA.

can produce a parallel to the Great Canal, which, actual length, is nearly 700 m. Like the other Chinese canals, it is not constructed on the same artificial as scientific principles as those of Europe and the U. States nor composed, like them, of standing water, fed by reservoirs elevated and lowered by locks. The want of local obliques the Chinese to conduct the canal, by a windmill, around the different elevations which are encountered in its course. The fertility of the soil, resulting from the internal irrigation supplied by the Great Canal and its branches, renders the country through which it is cut the most populous spot on the face of the globe. In different parts of the empire, also, there occur bridges, (see Fig. 418,) remarkable for their magnitude and for the difficulties overcome in their construction. The great roads are likewise magnificent works; but the most stupendous of all the public undertakings of *C.* that known by the name of the Great Wall. This mighty rampart has been drawn along the whole of the W. frontier, over a vast chain of mountains, the sinuosities of which it follows throughout its course of about 1,400 m. On the plain it is 30 ft. high, but when carried over rocks, 15 or 20 ft. are found sufficient height. The thickness of the whole wall the base is 25 ft., diminishing 20 and 15 at the platform. It is defended by towers, placed at given distances, 40 square at the base, and nearly the same in height. This immense work was built about two hundred years before the Christian era, as a defence against the wandering tribes of Tartars who have inhabited the country beyond it from time immemorial. It is constructed of earth or rubbish, cased on each side with stone or brick-work. *C.* is traversed in all directions by 20,000 imperial roads, most of which, however, badly kept. There is, nevertheless, a postal service but of a very rude kind. The couriers who are patched by the local officials are allowed to carry private letters for a small remuneration. Letters from Peking reach Shanghai in 15–20 days, and Canton in 40–50, sometimes 60 days. The postage of a letter from Peking to Shanghai (say 800 miles) is about 12 cents. Couriers change horses every 20 m.—*Inhabitants.* Chinese, in their physiognomy and general appearance, exhibit unequivocal proofs of Mongol origin, along with some features peculiar to themselves. The face is square and flat, the nose small, but broad at the root, the elongated and oblique, and the color a pale yellow.

Their long black hair is plaited into a tail, reaching from the crown of the head to the waist, and sometimes to the calf of the leg, the rest of the scalp being closely shaven. The people in general are well clothed, the higher ranks in silks and satins, and the lower in cotton. Some of the boatmen, however, who ply on the shores of the Yellow Sea, are destitute even of such clothing as decency requires. They are extremely dirty in their persons, and seem to have a rooted aversion to old water, either for drinking or ablution. — *Manners and Customs.* The national character seems to partake of a large share of that kind of watchful jealousy which might be supposed to be cherished under the eye of a constant though not a violent despotism. Every indication of energetic or vehement action is studiously discouraged; and the whole system of life seems reduced to an endless routine of parade and ceremony, legally regulated to its minutest parts, by the application of the bamboo rod. To speak but seldom, and only on great occasions, is considered highly becoming; whilst certain gravity sits upon the countenance, wholly at variance with European ideas of gaiety. They are, however, very fond of theatrical entertainments, their plays being often of extraordinary length, lasting a whole day or being continued over several days. They are largely domestic in character, are full of incident, but marked by exaggerated sentiment and lack of psychological interest. There are no fairs, no balls, routs or concerts. The Tartars delight in hunting, but this taste has never been communicated to the Chinese. Their feasts, which are conducted in as grave and ceremonious a manner as can well be imagined. Public intoxication through strong liquors is of very rare occurrence, though they habitually indulge in the inebriating practice of smoking opium. Their greatest and best good quality is a steady and unremitting industry. — *Religion.* Yü, the doctrine of Confucius, or KUNG-FU-TSE, *q. v.*, is the only religion recognized by the State. But there are two other sects: *Fo*, or Buddhism, and *Tauou*, or a Chinese form of "Rationalism," (see *Fo* and *Tauou*.) Religion, however, of whatever kind, has always been reckoned a matter of secondary importance in *C.* Many endeavors have been made to introduce Christianity into the empire, but with scant success. The Mohammedan, Jewish, and other religions are to be found here, but in languishing condition. A semi-political, semi-religious movement, which broke out in this empire about 1850, and which, it is believed, threatened for a time the subversion of the actual govt., was long attributed to the teaching of Christian missionaries. But this belief was scarcely founded on fact. The insurgents, commonly called *Tae-pings*, whatever their religious faith, were certainly not Christians, for the many atrocious acts — acts excusable by the direct necessities of warfare — showed them entirely unacquainted with the divine precepts of Christ's gospel. This, too, was the conviction of the civilized world at large, and by British and American help, the *Tae-pings* were overthrown in 1866. — *Education.* The pursuit and cultivation of learning is more encouraged and favored in *C.* than in almost any other country; and such is the estimation in which it is held, that all state employments are given by competition as rewards to the best scholars. Schools are abundant in every part of the empire; and education is so general, and so cost so reasonable, that reading and writing may be most said to be universal. Every literary honor conferred upon its recipient the title of mandarin. — *Hist.* The early history of *C.* is involved in obscurity. It is certain, however, that at an early period it attained to a great degree of civilization. The most memorable modern conquest was that of Genghis Khan, who in the 13th cent. entered *C.* in all the array of a barbarous conqueror. His successors, however, sought to improve by policy what they had acquired by arms, and diligently applied themselves to repair the ravages made by their first conquest. Their dynasty gradually lost its energy, and was supplanted by one of native Chinese princes, called the dynasty of *Ming*. In 1294, the first Catholic missionaries appeared at Peking. In the beginning of the 16th cent., this dynasty was overthrown in an irruption of the Manchou Tartars, who have ever since continued to hold the sovereignty of the empire. In 1607, the first Protestant missionary, Mr. Morrison, came to Canton, and translated the Bible into Chinese. From the 17th cent., Great Britain obtained a firm foothold in China; but the persistency with which the British endeavored to flood the country with opium from India disgusted the Chinese govt., that an embassy under Lord Amherst sent to Peking in 1816 was not admitted to the presence of the Emperor. Earnestly desiring to put an end to this pernicious traffic, the Chinese govt. made the use of opium a capital crime, (1838); and in 1839 compelled the British merchants to deliver up their stock of opium, worth \$20,000,000. The irritated British commenced hostilities against China in 1840, which war, known as the "Opium War," led to the treaty of Aug. 1842, by which commercial intercourse with Great Britain was restored, 5 ports opened to all nations, the island of Hong-Kong ceded, and an indemnification of 1,000,000 accorded to the British merchants. By a supplementary treaty, Oct. 9, 1843, British merchants were allowed to lease real-estate at the above ports, to travel within certain limits, &c. Other nations followed the steps of Great Britain. The U. States, in a treaty concluded July 4, 1844, obtained even greater advantages than England; and France, in a treaty ratified Aug. 1845, stipulated for the toleration of Christianity in 5 ports. In 1851 the great *Tae-ping* rebellion broke out in the empire, and many of the most important towns on the banks of the Yellow River, called by the Chinese the "Girdle of China," fell into the hands of the

insurgents. In the following year they took Nankin and Amoy, which, however, were soon retaken by the imperial troops. In 1853, Shanghai, the next commercial city in importance to Canton, was captured, and success after success seemed to follow their arms in their progress towards Peking. Here, however, their triumphs for the time ended. In 1856 a misunderstanding between *C.* and Great Britain arose on account of the Chinese boarding a vessel lying in the Canton River, with a British colonial register. This led to a new war, in which France took sides immediately with her British ally. Canton was bombarded, and a strong demonstration of the English and French against Peking compelled the Chinese govt. to sign the treaty of June 26, 1858, by which many new advantages were obtained, the greatest being: 1. The opening of new ports to commerce; 2. The toleration of Christianity and protection of civil converts; and 3. The residence at Peking of foreign official representatives. The same month (June 18), a treaty of commerce and friendship was concluded between the Chinese plenipotentiaries and Mr. Reed, acting for the U. States, which obtained the signature of the Emperor on July 3d. This treaty contained the provision that all favors accorded to other nations shall, *ipso facto*, extend to the U. States, and by Art. 1. China claims the good offices of the U. States in any future case of collision with foreign nations. In 1859 an attempt was made to nullify the treaty of June 26; and the British envoy was stopped in the Pei-ho on his way to Peking. This led to the occupation of that city by the allied British and French forces in 1860; and in Oct. of the same year the treaty was ratified. In 1861, a fresh *Tae-ping* rebellion broke out against the imperial govt., which was suppressed in 1864, only to burst out anew in the year following, and continue with fluctuating success until 1868, when the insurgents were comparatively put down. In 1866, Mr. Anson Burlingame was accredited by the U. S. govt. as its minister. He did much to promote friendly relations. In 1867, after resigning as Am. Minister, Mr. Burlingame was appointed by *C.* their envoy-extraordinary, and chief of a special mission to the U. S. and the courts of Europe — the first ambassador ever sent by *C.* to any W. govt. July 4, 1868, a treaty was signed at Washington, by Mr. Burlingame and Mr. Seward, representing China and the U. S. respectively, by the terms of which Am. citizens were permitted to enjoy in *C.* the same rights conceded to natives of *C.* in the U. S. This treaty was approved by the American senate; but Mr. Burlingame did not live to see the provisions of his diplomacy carried into effect. — The first railroad in *C.*, Shanghai to Woosung, 11 m., was built in 1876, but subsequently taken up by the *C.* govt.; the first electric telegraph opened July, 1877. — In 1876, the rebellion, which existed for ten years in Sinciang, was completely subdued, and the forces of the empire employed against (see *Boulger's Life of*, Lond., 1878) Yacoub or Yakub Beg in Kashgar, or East Turkistan, a Mohammedan empire of Cent. Asia (area abt. 374,000 sq. m.; pop. abt. 1,000,000). Yacoub Beg was a soldier of fortune, native of Khokan, and first distinguished himself in the defence of that State against the Russians. In 1863, allying himself with Buzurg Khan, of the family who formerly ruled Kashgar, and had been exiled by *C.*, they succeeded in raising a rebellion in this province against *C.* Yacoub Beg, or Yacoub Khan, as he afterwards called himself, forsook his former ally, and until his death, in May, 1876, headed this formidable insurrection. The war upon the part of China was carried on with great cruelty. Complications between the govt. of *C.* and Russia arose, growing out of the Kashgar rebellion. *C.*, seemingly unable to maintain her authority in Kashgar, a portion of it was occupied by Russian troops, whom *C.* desired should vacate. In 1878-9, an embassy was sent to St. Petersburg, with a view to the settlement of this difficulty. Late in 1879 the rebellion was finally crushed. In January, 1878, a fire broke out in Tientsin, whereby nearly 3,000 lives were reported lost.

(Continued in SECTION II.)

China, Chi'na-ware, n. A species of fine porcelain, originally made in China; china-ware. See PORCELAIN.

Chi'na-aster, n. (Bot.) See ASTER.

Chi'na-clay, n. See KAOLIN.

Chi'na Ink, n. A finely divided carbon, probably lamp-black of some kind, mixed with gelatine, and formed into cakes or sticks. It is sometimes stated to be the desiccated ink of the cuttle-fish. (Frequently called INDIAN INK.)

Chi'na-orange, n. The sweet orange; — brought originally from China.

Chi'na-pink, n. (Bot.) See DIANTHUS.

Chi'na-root, n. (Bot.) See EMLACEE.

Chi'na-rose, n. (Bot.) See HIBISCUS.

Chi'na Sea, that portion of the Pacific Ocean which has China and Siam on the W., the island of Formosa on the N., the Philippines on the E., and Borneo on the S.; and which forms the great gulfs of Tonquin and Siam.

Chinaub' (anc. Acesines,) in Hindostan, the largest river of the Punjab. Rising in the Himalayas, in abt. Lat. 32° 10' N., Lon. 37° 50' E., it takes at first a N.W. and afterwards a S.W. course between the Ravce (*Hedraotes*), and Jhylum (*Hydaspes*), uniting with the latter river below Ilung, and with the Indus (*Hyphaxis*) near Ooch; after which it joins the Sutlej in Lat. 29°, Lon. 70° 30'.

Chine'apiu, or CHINQUAPIN, n. (Bot.) The Dwarf chestnut, *Castanea pumila*, a small nut-bearing tree, growing in sterile places from New Jersey and Pennsylvania to Georgia and Tennessee. See CASTANEA.

Chin'cha, a small sea-port of Peru, dep. of Lima, 115 m. S.S.E. of Lima.

Chin'cha Islands, a group of 3 small islands, off the coast of, and belonging to, Peru, in the S. Pacific Ocean, about 14 m. from the main-land; Lat. 13° 38' S., Lon. 76° 28' W. These islands are famous for their vast deposits of *guano*, or ordure of the countless flocks of seabirds that haunt them. They are leased to an English company, which has a large establishment here; the operation of loading the many vessels that resort hither for this article of commerce, is almost exclusively carried on by Chinese laborers.

Chinch-bug, n. (Zool.) See COREIDÆ.

Chinchilla, n. (Zool.) A rodentia of the *Histricidae* family. This little Rodent animal, so highly valued on account of its fur, is a native of Chili and Peru, inhabiting the valleys in the high mountain districts, where the cold is often very severe. The color of the *C.* is clear gray above, passing into white on the under parts. It associates in numbers, and excavates burrows, in which it resides, feeding chiefly upon roots. In size and general form it much resembles the rabbit, with the exception of the tail, which turns up after the manner of a squirrel's. The fur is of remarkably close and fine texture; and is, accordingly, much used for muffis, tippets, linings to cloaks, trimmings, &c.

Fig. 589. — CHINCHILLA.

Chinchoor', a town of Hindostan, prov. Aunungabad, 10 m. N.N.W. of Poonah; chiefly noted for containing the residence of the *Chintamun* or *Narrain Deo*, whose honors are hereditary, and whom the Maharrattas believe to be an incarnation of the deity *Goonputty*. Pop. 5,000.

Chinchorro', (El.) in South America, a reef near the coast of Yucatan, 110 m. S. of the Cozume Islands. Length 23 m.; greatest width, 9 m.

Chin'cough, n. A convulsive cough; the whooping-cough.

Chine, n. [Fr. *échine*; It. *schiena*; probably from Lat. *spina*, a thorn, and the backbone from its pointed processes.] The backbone or ridge of the back.

"She strake him . . . a blow upon his *chine*." — Sidney.

—A piece of the backbone of an animal, with the adjoining parts, cut for cooking.

"Cut out the burly-boned clown in *chines* of beef ere thou sleep." — Shaks.

—The chime of a cask. See CHIME.

—*v. a.* To cut through or divide the backbone, or cut it into chine pieces, as an ox.

Chined, (chind,) *a.* Pertaining to the back or backbone. (Used chiefly in poetry.)

Chinese, (sh'nee,) *a.* Relating, or pertaining, to China; as, the Chinese empire.

—*n. sing. and pl.* A native or inhabitant of China.

—The language spoken in China.

Chinese' Architecture, n. It differs entirely in form and ornamentation from that of any other Eastern nation. The materials that are used in building consist chiefly of marble, stone, wood, brick, bamboo, and tiles of porcelain, which are glazed and colored. The erection of all buildings in China, whether for public or private purposes, is carried on under the supervision of a surveyor; and the rank of the person who is to inhabit it has much to do with the form and size of the private dwelling-house. These consist principally of a ground-floor and first-floor; but houses of many floors are not uncommon. A great quantity of wood is used in building, which is richly colored and relieved with gilding, so that the house presents a gay and picturesque appearance. The walls of the apartments on the ground-floor are of tolerable solidity, and generally pierced with square or long and narrow windows, which are often

Fig. 590. — CHINESE HOUSE.

filled with elaborate trellis-work. On these walls wooden columns are erected to support the roof, which is formed of bamboo, and for the most part turned up at the edges. The roof is sometimes made in two parts, resembling one roof rising out of another. The walls are plastered and decorated with panels containing paintings and inscriptions in the Chinese symbolic characters. Balconies are generally formed in front of the

apartments on the first-floor, the front of which consists of trellis-work. The imperial palaces are of great extent; consisting of a series of courts, with galleries and halls of audience, beautifully painted. The temples differ greatly in form and size, but, in many points of architectural construction and decoration, they resemble the dwelling-houses of a higher class. The ordinary temples, or *joss-houses*, consist each of one chamber containing an idol. The Buddhist temples are larger and more elaborate, consisting of a vestibule, which leads to courts containing temples, sometimes two stories in height, in which are seated colossal images of Buddha. The pagodas, which form a conspicuous feature in Chinese scenery, are either monumental records, or are intended for the reception of some relic of Buddha. They are generally octagonal in form, and nine stories in height, and surmounted by a conical roof, from which an ornamental pole rises. Each story is less in size than the one below it, and is surrounded by a balcony, from which a sort of penthouse projects, ornamented with bells at the corners. These pagodas are built of brick, and the exterior of some of them is coated with porcelain tiles. The walls of their cities are high, and broad at the top, with square towers at intervals. Their castles are also square in form, being contracted in size towards the top, and surmounted, like the walls, with battlements.

Chinese' Camp, in *California*, a township of Tuolumne co., 10 m. S. of Sonora.

Chinese' Grass, *n.* See *BERBERIS*.

Chinese Language and Literature. The Chinese language belongs to that class of tongues in Eastern Asia that are commonly termed "monosyllabic," *i. e.* in which each word is pronounced by a single movement of the organs of speech, and each expresses a complete idea or object. The words all terminate either in a vowel or diphthong, or a nasal sound. Of such words or roots there are about 450 in the language. Many of these words, however, are differently pronounced or accentuated, some of them in 4 or 5 different ways, and having as many different meanings. There are, besides, many words that, with the same pronunciation, express very different things. The words undergo no changes of form, and the want of conjugation or declension is made up by particles, or by the position of the words in a sentence. There are numerous dialects of the Chinese; but it is said to be spoken most purely and correctly at Nankin. The best grammars and dictionaries of the Chinese language are those of Morrison and Medhurst. In Chinese the alphabet is not composed of letters, but each word has a certain character peculiar to itself; and hence the number of characters corresponds with the number of words in the language. As the same words differently pronounced express different objects, the number of written characters must necessarily correspond; and hence it is said that the number of characters in the language exceeds 40,000. In its origin the Chinese language is hieroglyphic or pictorial, and to the original characters a number of symbolical, and conventional signs, have been added; by the union of which hieroglyphics and symbols, with an imperfect indication of the sound, the greater number of the Chinese characters are composed. Native grammarians divide their characters into six classes: the *first* comprising simple representations of sensible objects, as the sun, moon, mountain, tree, &c., and including 608 characters. The *second* class includes such as are formed by the union of two or more simple hieroglyphs, which give a more or less clear idea of the meaning intended to be conveyed; as the sun and moon combined give the idea of light; mouth and bird, that of song. Of this class there are 740 characters. The *third* class is composed of such as indicate a certain relation of place, as above, below, the numerals, &c., of which there are 107. The *fourth* class comprises such characters as, by being inverted, convey a contrary meaning; as, right, left, standing, lying; and contains 372. The characters of the *fifth* class are termed *borrowed characters*, as expressing abstract ideas or mental acts by means of representations of sensible objects; as a heart signifying the spirit, a room a woman; of these there are 598. The *sixth* class comprises those that are composed of a hieroglyph and a mark representing the sound. Almost all the names of animals, trees, plants, and many other objects which it would be too difficult to represent hieroglyphically are indicated in this way; their number is given at 21,810. These, however, are merely repetitions of those of the other five classes; so that the entire number of Chinese characters may be reduced to 2,425; and if one has learned these, he may be said to know all. Of the great number of characters that are to be found in Chinese dictionaries, amounting to about 40,000, not more than a tenth part are in common use. In the arrangement of their dictionaries, the Chinese select a certain number of characters, usually about 214, which serve as a sort of key, and answer the same purpose as the letters of our alphabet. — The *CHINESE LITERATURE* is undoubtedly the richest, and, in a geographical, historical, and ethnographical point of view, it is the most important of the whole of Asia. The printed catalogue of the library of the emperor Kein-long consisted of 122 vols.; and a selection of the Chinese classics, with commentaries and scholia, begun by command of the same monarch, is said to comprise 180,000 volumes. In the five canonical or classical books called the *King*, are contained the oldest specimens of Chinese poetry, history, philosophy, and jurisprudence; some portions of which are probably among the oldest written monuments of the human race. They were collected from various sources by Confucius in the 6th century before Christ; and in this collection they have been handed down to us with apparent fidelity. The five "Kings" are:—1. The *F-king*,

or "Book of Changes," (a Latin translation of which was published by Mohl, Stuttgart, 1832); 2. The *Sch-king*, or "Book of Annals," which is imperfect, comprising fragments of the early history of the people, (Chinese and English, by Medhurst, Shanghai, 1846); 3. *Sch-king*, "The Book of Songs," (in German, by Rückert, Altona, 1833); 4. *Tschün-thsieu*, "The History of certain Kingdoms, from 770 B.C. to the time of Confucius"; 5. *Li-ki*, or "Book of Ceremonies," which contains a series of laws and directions extending down even to the minutest details of life. The *Tschou-li*, which has been translated into French by Biot (Paris, 1851), is a kind of official handbook of the old Chinese empire. Next to the "Kings" in value and importance are the *Sseschu*, or the four books which were written by Confucius and his disciples, and are to be regarded as the most certain sources for information regarding that important school of philosophy which has in so marked a manner affected the whole intellectual and political condition of the Chinese. These four books are generally known as the works of Confucius, and have been translated into various languages—into English by Collie (Malacca, 1828). Almost contemporary with Confucius was Lao-tse, also the founder of a wide-spread school of philosophy. In mythology they have *The Book of the Mountains and Seas*, and the *History of the Gods and Spirits*. In jurisprudence, worthy of special notice is the general collection of laws, and the criminal code of the present ruling dynasty. Chinese literature is also very rich in medical works, and works on natural history, astronomy, uranography, geometry, agriculture, war, music, and all branches of technology and mechanics. (See *Résumé des Principaux Traités Chinois sur la Culture des Mœurs et l'Éducation des Vers à Soie*, by Julien; Paris, 1837.) In philology, the first rank is due to their dictionaries, which have been prepared with great diligence, and examples collected out of the whole treasury of Chinese literature. The greatest work of this kind is the dictionary of the emperor Kang-hi, which is now regarded as the highest authority for the form, pronunciation, and signification of the characters. Equally rich and valuable is the encyclopædic literature of the Chinese; among which is the work of Ma-tuan-lin (A. D. 1300), entitled *Wen-hien-thong-khao*, — *i. e.*, an accurate examination of the ancient documents, with rich supplements, — presenting an inexhaustible mine of the best materials for a thorough knowledge of the Chinese and the neighboring races, from the oldest to the most recent times, in every department of life. But the most valuable department of Chinese literature is undoubtedly the historical and geographical, which are absolutely indispensable to a thorough knowledge of Upper Asia. Sse-ma-thsian (B. C. 100) compiled his *Sse-ki*, or "Historical Memorials," from every available source, and gives the history of China from B. C. 2637 to the commencement of the dynasty of Hau, in the second century before the Christian era. This work has been continued by the different dynasties, and forms a complete collection of the annals of the empire down to the end of the last dynasty of Ming, A. D. 1643. The entire collection of the official annals from 2698 B. C. to A. D. 1645, a period of 4,343 years, and comprising 3,705 books, is to be found perfect in the library of Munich. Amongst their other labors, the Chinese have by no means neglected poetry, of which there are voluminous collections that have yet to be made known to us. As lyric poets, the names of Tu-su and Li-thai-pe, who flourished about the 8th century, are specially famous. Of their numerous poems little is as yet known. — The romances of the Chinese are not characterized by any great flights of the imagination, but are valuable as giving an insight into the domestic life, and the modes of thinking, feeling, and acting of the people. Their dramatic poetry follows peculiar rules, and approaches partly the romantic plays of the Germans, partly the *commedie delle arti* of the Italians. They have also a kind of dialogue novels, which form a subordinate species of drama. The best-known collection of dramas is *Yuen-tschin-pe-tschong*, — *i. e.* the "Hundred Dramas from the Mongolian dynasty" (1260-1341), out of which all the dramas that are yet known to us have been taken; as the *Lao-seng-urh*, or an "Heir in his Old Age," by Davis (London, 1817). The richest collections of Chinese books in Europe are at Paris, London, Berlin, Munich, and St. Petersburg. We possess as yet no history of Chinese literature. The Chinese themselves have numerous works of this class; but they are very meagre, and are almost entirely confined to bibliographical and critical sketches.

Chinese' Tallow, *n.* (*Bot.*) See *STILLINGIA*.

Chinese' Wax, *n.* (*Chem.*) The produce of an insect of the cochineal tribe, analogous in its chemical constitution to spermaceti. When saponified by fusion with hydrate of potash, it yields *cerotine* or *cerylic alcohol* ($C_{41}H_{82}O_2$), corresponding to ethyl; and *cerotic acid* ($HO.C_{41}H_{79}O_2$), corresponding to palmitic acid.

Chinese Yellow, *n.* (*Painting*.) A color obtained from a very bright sulphuret of arsenic brought from China.

Chingleput, (*ching-le-pu'*) a district of Hindostan, prov. Carnatic, between 12° and 14° N. Lat., and intersected by Lon. 80° E., with the Bay of Bengal on the E.; area, 2,250 sq. m. The country is not fertile, lying generally low, with here and there some hills. Its chief town, of the same name, is on the river Palar, 35 m. from Madras. Pop. 580,000. C. was annexed by the British in 1780.

Chin-India, that part of Asia lying between China and Hindostan, and comprising the Burman empire, Cochinchina, Laos, Siam, and the peninsula of Malacca, — called also the *Peninsula beyond the Ganges*.

Chink, (*chingk*), *n.* [A. S. *cina* or *cinn*, a fissure; *cino* to gape; *gynium*, to yawn; probably allied to Gr. *chai* to gape.] A gap; a fissure; a cleft; a rent; a crack. "Pyramus and Thisbe did talk through the chink of a wall." *Shaksp.*

—*v. i.* [A. S. *cinan*.] To gape; to chap; to open; crack; to part and form a fissure.

—*v. a.* To open and form a fissure in. — To close the chinks of; as, to *chink* a floor.

Chink, *n.* [Formed from the sound.] A short, acute metallic sound; as, the *chink* of money.

—A vulgarism for cash; money; as, plenty of *chink*.

—*v. a.* [From the root of *jingle*, or formed from the sound.] To jingle; to cause to sound by shaking coins or small pieces of metal.

"He *chinks* his purse, and takes his seat of state." — *Pope*.

—*v. i.* To make a short, sharp sound, as by the collision of little pieces of money, or other sonorous bodies.

Chinky, *adj.* Full of chinks or fissures.

Chinned, *a.* Having a chin; generally in a compound word, as *double-chinned*, *long-chinned*.

Chinon, (*shē-nong'*) a town of France, dep. Indre-et-Loire, on the Vienne, 26 m. S.W. of Tours. *Manf.* Lin and woolen stuffs. Near it Rabelais was born. Pop. 7,531.

Chinondegn, (*NEW*, and *OLD*.) 2 contiguous towns in Nicaragua; pop. respectively 10,000 and 4,000.

Chinook, or **Chinook City**. See *CHENOOK CITY*.

Chinquapin, *n.* (*Bot.*) See *CHINCAPIN*.

Chinse, *v. a.* (*Naut.*) To thrust oakum into a ship's seams with a small iron adapted to the purpose.

Chintz, (*chints*), *n.* [Hind. *cheet*; Ar. *chit*; Pers. *chit* spotted, stained.] (*Manf.*) A peculiar pattern upon printed calicoes, in which flowers and other devices are printed in 5 or 6 different colors, upon white and color grounds.

Chioenes, *n.* [Gr. *chion*, snow; *genos*, offspring, — allusion to its evergreen habit.] (*Bot.*) A gen. of plant order *Ericaceæ*. The Mountain Boxberry, *C. hispida*, is a delicate, woody creeper, found in old shady wood from N. Eng. to Newfoundland. Its leaves and white berries have an agreeable spicy flavor.

Chioggia, (*ke-od'y'e-a*), an old fortified town of N. Italy on an island of the same name in the Adriatic, 15 S. of Venice. Pop. of the town, 26,732.

Chionanthus, *n.* [Gr. *chion*, snow, and *anthos*, flower.] (*Bot.*) A genus of plants, order *Oleaceæ*. The Virginian Fringe-tree, *C. Virginica*, is an ornamental shrub or small tree, 8 to 25 feet high, found on mountains from Pennsylvania to Tennessee. Leaves carinate, smooth; flowers in rather dense, pendulous panicles.

Chione, (*ki'o-ne*), (*Myth.*) a daughter of Dædalion, whom Apollo and Mercury became enamoured. Conceiving herself more beautiful than Juno, that goddess killed her, and changed her into a hawk.

Chioppine, (*chop-peen'*), a high-heeled shoe formerly worn by ladies, and come again into fashion of late years.

Chios, (*ki'os*.) See *SCIO*.

Chip, *v. a.* [See *CHOP*.] [Fr. *couper*, to cut.] To cut; to cut into small pieces or chips; to diminish by cutting away a little at a time.

"Taught him to *chip* the wood, and hew the stone." — *Thomson*.

—*v. i.* To break, crack, or fly off in small pieces.

—*n.* A small piece of wood, stone, or other substance cut or broken off from the body.

—A material obtained from the leaves of the palm called *Thrinax argentea*, and used for plaiting into hats and other articles of utility or ornament.

Chip-axe, *n.* An axe used for chipping, or chopping wood.

Chip-bonnet, **Chip-hat**, *n.* A head-covering made of thin chips of wood or straw.

Chip-munk, *n.* (*Zool.*) The striped squirrel. See *STRIPED SQUIRREL*.

Chippendale, THOMAS, a designer and wood-work of Worcestershire, England, who flourished in the 18th century. His style was often heavy and even clumsy, but his name is frequently applied to a light and graceful style of cabinet work of that period.

Chippenharn, (*chip'nam*), a town of England, Wiltshire, on the Avon, 13 m. from Bath; pop. 5,000.

Chip-per, *v. i.* A common provincialism, having the same meaning as to chirp or chirrup (*q. v.*)

—*a.* Pleasant; cheerful; affable; talkative.

Chip-pewa, in *Delaware*, a P. O. of New Castle co.

Chip-pewa, in *Illinois*, a village of Madison co., on the Mississippi, 60 m. W. by S. of Vandalia.

Chip-pewa, in *Indiana*, a village of Fulton co., on the Tippecanoe River, 30 m. N. by E. of Logansport.

Chip-pewa, in *Ohio*, a river in Medina co., rises in small lake of its own name, and unites with the Tusrawas, abt. 12 m. N.N.W. of Massillon.

—A post-village and township of Wayne county, miles N.E. of the city of Columbus, on the Chippe River.

Chip-pewa, in *Michigan*, a small river entering the River, in Midland co.

—A county in the E. extremity of the upper Peninsula bordering on lakes Superior and Huron, and separated from Canada West by the river St. Mary. It is drained by the Tequamenon and Monistic rivers. The surface is uneven. The underlying rocks are limestone and Potsdam sandstone. *Cap.* Sault St. Marie.

—A township of Isabella co.

Chip-pewa, in *Minnesota*, a village of Chisago co., about 55 m. N. by E. of St. Paul.

Chip-pewa, in *Mississippi*, a village of Pontotoc co.

Chip-pewa, in *Pennsylvania*, a village and township of Beaver co.

Chip-pewa, in prov. of Ontario, a village and port of entry, co. of Welland, at the junction of the Chippe

river with the Niagara, above the Falls, and abt. 50 m. E. of Toronto. Here a battle was fought, July 3, 1814, between a portion of the American army under Gen. Brown, and the British forces under Gen. Riall, in which the latter were defeated, with a loss of 138 killed, and 65 wounded.

Chippewa, in *Wisconsin*, a river which rises near the part of the State, and flowing S.W. through Chippewa co., empties into the Mississippi at the foot of Lake Superior, abt. 85 m. below St. Paul, Minnesota. Its length abt. 200 m.

N.W. county: *area*, abt. 4,300 sq. m. It is intersected by the Chippewa River and drained by many large affluents of the same. The surface is irregular and partly covered with forests. Sandstone is most abundant at Chippewa Falls. *Pop.* (1895) 28,727.

Chippewa City, in *Wisconsin*, a post-village of Chippewa co., on the Chippewa river, about 90 m. N. of Crosville.

Chippewa Falls, in *Wisconsin*, a thriving city, cap. of Chippewa co., on Chippewa river. Has extensive miller and other manuf. interests. *Pop.* (1895) 9,196.

Chippewa Lake, in *Minnesota*, a post-office of Douglas co.

Chippewas, or OJIBBEWAYS, a tribe of North American Indians, the type of the Algonquin stock, and the river occupants of the basin of Lake Superior, N. and W. The C. are a tall, well developed, and good-looking race, and are distinguished for their proud bearing and by manners. They were the most sincere allies of the French, and the implacable enemies of the Sioux. By treaties signed in 1854 and 1855, they ceded to the U. S. nearly all of the land owned by them in Wisconsin, Minnesota, and the N. peninsula of Michigan. They are now dispersed over a vast territory, N. of Minnesota, and their number is estimated at abt. 8,000.

Chippewayan Fort, in Chippewayan Territory, British America, a commercial post, at the W. end of Lake Macabasca, Lat. 58° 40' N., Lon. 112° 20' W.

Chipping, *n.* A chip or fragment cut off. — (*Pottery*). The breaking off short of small pieces from the edges of earthenware or porcelain.

Chipping-bird, *n.* (*Zoöl.*) See ZONOTRICHIA.

Chippy, *a.* Having many chips.

Chippawic, in *Indiana*, a creek in Fulton co., flows to the Tippecanoe River.

Chimula, (ISTHMUS OP.) in Central America, to S.E. of the peninsula of Yucatan, in Lon. 89° W. Breadth from the Caribbean Sea to the Pacific is abt. 150 miles — the greatest elevation not exceeding 20 feet.

Chimula de la Sierra, a town of Guatemala, cap. of a dep., about 85 m. E.N.E. of Guatemala city: *pop.* 7,000.

Chimutos, (*che-ke'toso*) a territory of Bolivia, dep. of La Cruz, extending N. and S. of the eastern base of the Andes. The country is generally uncultivated, and is partially inhabited. Lat. between 15° and 17° S. **Chiragra**, *n.* [Lat.; Gr. *cheiragra*.] (*Med.*) Gout in hands.

Chiragical, *a.* Pertaining to the gout in the hands. **Chiriqui**, (*che-re'ke*) in Central America, State of Costa Rica, a river, lagoon, and archipelago. The river rises N. and enters the lagoon, which is separated from the Caribbean Sea by the archipelago. The Chiriqui has three entrances, and is capable of holding the largest ships: it extends 90 miles along the coast, about 50 m. inland. Lat. 90° N., Lon. 82° 30' W.

Chirk, *a.* [From *CHIRP*, *q. v.*] Lively; buoyant; in spirits. (Local. U. States.) To put into good spirits; to enliven.

Chirograph, (*ki-ro-graf*) *n.* [Gr. *cheir*, the hand, *grapho*, to write, to engrave.] (*O. Law.*) A deed or public instrument in writing, used in conveying, as similar to that instrument which is now called a *deed*. — The last part of a fine of land. — In Scotland, an instrument written out and sealed by certain parties. — In Scots law, a written order for a debt.

Chirographer, *n.* One who practises or professes art of writing; a penman.

Chirographic, **Chirographical**, *a.* Relating, pertaining, to chirography.

Chirographist, (*ki-ro-gra-fist*) *n.* A chirographer. A chiromancer; one who foretells by examination of hands.

Let the chirographist behold his palm. — *Arbutnot.*

Chirography, *n.* Handwriting; the art of writing; penmanship.

Chirogymnast, *n.* [Gr. *cheir*, the hand, and *gymnast*, a gymnast.] (*Mus.*) A mechanical apparatus for exercising of a pianist's fingers.

Chirological, *a.* Belonging, or relating, to chirology. **Chirologist**, *n.* One who speaks by signs made with hands and fingers.

Chirology, *n.* [Gr. *cheir*, and *logos*, speech.] The art of communicating dumb speech, *i. e.* by means of hands and fingers; speech rendered by signs, used in a course with the deaf and dumb; dactylology.

Chiromancer, *n.* One who foretells future events by inspection and examination of the palm of the hand.

"To chiromancer's cheaper art repair." — *Dryden.*

Chiromancy, (*ki-ro-man-se*) *n.* [Gr. *cheir*, hand, and *manēia*, gift of divination.] The imaginary art of divination by the lines of the hand. According to the doctrine of C., the lines on the palm of the hand are divided into principal and inferior: the former are five — line of life; the line of the liver or natural mean; line of the brain; the thorax line, or line of fortune; the line of the tail, or discriminant line, between the hand

and the arm. Various other modes of divination were practised by the observation of the hand and its parts: *onychomancy* [from *onyx*, a nail], *dactylomancy* [from the fingers], &c. C. was practised throughout antiquity, and was regarded by Aristotle as a certain science. During the late middle ages it was chiefly in the hands of gypsies, and was studied, like alchemy and astrology, by such philosophers as Albertus Magnus, Cardan, Roger Bacon, and Paracelsus. It may be said that all passions, thoughts, and actions leave their traces on the body, and that from the conformation of the hand, its furrows, folds, colors, veins, hardness or softness, an experienced and skilful eye can determine the person's habits, social position, and the strange tendencies of his character. In this century the French Mlle. Lenormand has acquired great reputation as a chiromancer, and was incontestably very remarkable for her penetration of mind.

Chiromantist, **Chiromantist**, *n.* A chiromancer.

Chiroman'ic, **Chiroman'tical**, *a.* Pertaining to chiromancy.

Chiron, (*ki'ron*) *Myth.* A centaur, half man and half horse, son of Philyrus and Saturn, was famous for his knowledge of music, medicine, and shooting. He taught mankind the use of plants and medicinal herbs, and he instructed, in all the polite arts, the greatest heroes of his age, such as Achilles, Esculapius, Hercules, &c. Having received from Hercules an incurable wound in the knee, he begged Jupiter to deprive him of immortality. His prayers were heard, and he was placed by the god among the constellations, under the name of Sagittarius. In the ancient works of art, the features of C., instead of expressing mere savage and sensual strength, as those of the Centaurs generally do, are marked by a mild wisdom in harmony with its character.

Chironectes, *n.* (*Zoöl.*) The Haud-fishes, a genus of the Lophiidae or Angler family. The species belong mostly to the warm seas, and are distinguished by having a compressed head and body, vertically cleft mouth, and fins suited to creeping. The smooth C. or Mouse-fish (*C. laevigatus* of Cuvier) of the Atlantic coast of the U. States is from 2 to 4 inches long.

Chironia, *n.* (*Bot.*) See SABBATIA.

Chironomic, *a.* Relating, or pertaining, to chironomy.

Chironomy, (*ki-rôn-o-me*) *n.* [Gr. *cheironomia* — *cheir*, and *nomos*, rule.] (*Rhet.*) The art of pantomimic movement or gesticulation of the hands.

Chiroplast, *n.* [From Gr. *cheir*, and *plassein*, to shape or mould.] (*Mus.*) Same as CHIROGYMNAST.

Chiropod, *n.* [Gr. *cheir*, and *podos*, foot.] (*Zoöl.*) A mammiferous animal possessing hands.

Chiropodist, *n.* [Gr. *cheir*, and *pous* — *podos*, the foot.] One who extracts corns, or removes bunions, from the feet.

Chirosofist, *n.* [Gr. *cheir*, and *sophistēs*, clever. See *SOPHIST*.] A diviner; a fortune-teller.

Chirotes, *n.* (*Zoöl.*) A genus of reptiles, fam. AMPHIBENIDÆ, *q. v.*

Chirp, *v. i.* [Gr. *zirpen*; probably formed from the sound.] To make the lively, cheerful noise of certain small birds, or of certain insects.

"No chirping lark the welkin sheen invokes." — *Gay.*

— *v. a.* To make cheerful; to enliven; to exhilarate. — *n.* A particular intonation of voice in certain birds or insects; a short, sharp, shrill note.

"And chirp went the grasshopper under our feet." — *Spectator.*

Chirp'er, *n.* One that chirps or is cheerful; a chirping bird.

Chirp'ingly, *adv.* In a chirping manner.

Chirrup, *v. a.* To chirrup; to exhilarate by chirping. — *v. i.* To chirp.

"The sound made by chirping; act of chirping."

"The sparrows chirrup on the roof." — *Tennyson.*

Chirurgy, *n.* [Gr. *cheir*, a hand, and *ergon*, a work; Fr. *chirurgie*.] A term sometimes used in place of surgery, from surgical operations being performed by the hand. See *SURGERY*.

Chisago, in *Minnesota*, an E. county, bordering on Wisconsin: *area*, abt. 420 sq. m. It is bounded E. by St. Croix, drained by Sun Rise Creek, and contains several small lakes. The surface is irregular, and covered partly by forests. *Cap.* Center City. *Pop.* (1895) 13,118. — A post-village of Chisago co., on a small lake, 33 m. N.N.E. of St. Paul.

Chisago Lake, in *Minnesota*, a post-township of Chisago co., abt. 24 m. N. of Stillwater, and 5 W. of Taylor's Falls.

Chisel, (*chiz'l*) *n.* [Fr. *ciseau*, a graver; L. Lat. *cisellus*, *cizellus*, a pair of tongs, pincers, from Lat. *cædo*, *cæsus*, to cut.] The name given to some kinds of tools; having a cutting edge at the base of a metal blade, and bearing an upper portion adapted to receive an impulse either from the hand or a hammer. They are used in wood-work, masonry, sculpture, &c.

— *v. a.* To cut, gauge, or engrave with a chisel; as, to *chisel* marble.

— To cheat; to get the better of in a bargain, &c. (Used in a cant sense.)

Chislen, *n.* [Heb. *kislu*; Gr. *chaseleu*; Ar. *kasila*.] (*Heb. Chron.*) The ninth month of the Jews, beginning with the new moon of December.

Chisley, *a.* [A. S. *ceasel*, sand.] Containing a large quantity of gravel or sandy particles; as, a *chisley* soil.

Chiswell's Island, in *Alaska*, a group of desert islands on the S. coast: Lat. 59° 30' N., Lon. 149° 2' W.

Chiswick, (*chiz'wik*) a par. and village of England, co. Middlesex, on the Thames, 4½ m. from London. This place is chiefly notable for the superb mansion (and gardens) of the Dukes of Devonshire, built by the Earl of

Burlington, (*q. v.*) Here the great statesmen Fox and Canning breathed their last. *P. p.* of par. 8,221.

Chit, *n.* [A. S. *cith*, a young twig or shoot. Etymology uncertain.] The shoot or sprout of a budding plant; as, the *chit* of barley. — A little baby; a lively, forward child; as, a pert *chit*.

Chit-chat, *n.* Small talk; prattle; familiar or trifling conversation.

"I am a member of a female society, who call our-selves the *chit-chat* club." — *Spectator.*

Chitine, *n.* (*Chem.*) The hard insoluble matter forming the shells and elytra of insects.

Chitinous, *a.* Of the nature of, or resembling, chitine.

Chiton, (*ki'ton*) *n.* (*Zoöl.*) A genus of gastropodous molluscs, which have a series of testaceous symmetrical pieces implanted in the back part of the mouth.

Chitore, a city and strong fortress of Hindostan, prov. Rajpootana, and formerly the cap. of the rajahship of Odeypoor, 64 m. E.N.E. of that city. This is an ancient and picturesque place.

Chittagong, (*Chaturgrama*, a dist. of India beyond the Ganges and Brahmaputra, but included in the prov. of Bengal. It forms the S. E. extremity, lying chiefly between Lat. 21° and 23° N., and Lon. 91° 30' and 95° E., having N. Tipperah, E. the country of the independent Khyers; S. Aracan, and W. the Bay of Bengal. Length, N. to S., abt. 165 m.; breadth uncertain. *Surface*, on the coast, low and flat; in the interior, hilly, and much overgrown with jungle. Soil, very fertile, producing sugar, cotton, indigo, tobacco, ginger, &c. The elephants of this region are particularly celebrated both for size and excellence. C. is thinly inhabited in proportion to its size. In the 16th cent. it was successively possessed by the Afghan kings of Bengal and the rajahs of Aracan, and in 1760 it was finally ceded to the British. *P. p.* Estimated at 800,000.

CHITTAGONG, or ISLAMABAD, a city of Farther India, and cap. of above prov., on the Kurramfali, Lat. 22° 20' N., Lon. 91° 54' E. Trade unimportant. C. was captured by Aurungzebe, at the close of the 17th cent.; and became possessed by the British in 1764.

Chitteldroog, an inland town and fortress of Hindostan, prov. and dom. of Mysore, but occupied by a British garrison, 110 m. N.N.E. of Seringapatam, and 280 W.N.W. of Madras: Lat. 14° 4' N., Lon. 76° 30' E.

Chittenango, in *New York*, a post-village, pleasantly situated in Sullivan township, Madison co., 14 m. E. of Syracuse.

Chittenango Creek, in *New York*, rises in Madison co., flows N.N.W., and empties into Oneida Lake, on the boundary between Madison and Onondago counties.

Chittenango Falls, in *New York*, a post-office of Madison co.

Chittenden, in *Vermont*, a N.W. county, *area* 517 sq. m. Lake Champlain bounds it on the W., and it is drained by Lamouille and Onion rivers. The surface is generally level, and the soil productive. *Cap.* Burlington.

— A township of Rutland county, 40 miles S. by E. of Montpelier.

Chitterlings, *n. pl.* (*Cookery*) Intestinal parts of swine and other animals, used for food; as, fried *chitterlings*.

Chittim, or KITTIM. (*Scrip.*) The descendants of Javan, son of Japheth; and the land selected by them. (Gen. x. 4.) C. seems to denote primarily the island Cyprus, and also to be employed in a wider sense, to designate other islands and countries adjacent to the Mediterranean; as, for instance, Macedonia (Dan. xi. 30) and Rome (Num. xxiv. 24).

Chitto Bayou, rising in Miss., flows S.E. into La., and enters Pearl River at the S.E. extremity of Washington parish.

Chitty, *a.* Sprouting; germinating chits.

Chinn, an idol worshipped by the Israelites in the desert (Amos v. 26; Acts vii. 43). It was most probably the planet Saturn, worshipped by eastern nations as an evil spirit to be propitiated by sacrifices.

Chin'sa, a town of N. Italy, prov. Coni, on the Pesio, 7 m. S.E. of Coni. *Manf.* Silk goods, wine, and mirrors. *Pop.* 6,945.

Chinsa, (LA) a mountain-pass of N. Italy, 10 m. N.W. of Verona. The river Adige, and one of the great routes to Switzerland, occupy this defile.

Chinsa, (LA) (*ke-oo'sa*) a village of N. Italy, 18 m. N.W. of Turin, on the Dora Riparia, with an hospice for travellers, which for some time has been the place of sepulture for the royal family of Sardinia.

Chin'sa, (LA) a town of Sicily, prov. and 30 m. S.S.W. of Palermo; *pop.* 4,319.

Chivalric, (*shiv'al-rik*) *a.* Partaking of the character of chivalry; chivalrous; as, a *chivalric* knight.

Chivalrons, (*shiv'al-rus*) *a.* Pertaining to chivalry; warlike; bold; gallant; as, a *chivalrous* exploit.

"In brave pursuit of chivalrous emprise." — *Spenser.*

Chivalrously, *adv.* In a chivalrous manner or spirit.

Chivalry, *n.* [Fr. *chevalerie*, from *chevalier*, a knight, from *cheral*, a horse; Spanish *caballeria*.] The uses and customs pertaining to the order of knighthood. The general system of manners and tone of sentiments which the institution of knighthood, strictly pursued, was calculated to produce, and did in part produce, during the Middle Ages in Europe, is comprehended in ordinary language under the term of *chivalry*.

(*Hist.*) The origin of chivalry has often been traced to the German tribes; nor has its spirit ever penetrated very deeply into the usages of any country in which these tribes have not either produced the ancestors of the great body of the nation, or at least the conquering and governing class, which transfused its habits and sentiments into that body. Thus Germany, France,

and England, whose gentry derive their origin from both, have been the countries most distinguished for the prevalence of this institution. The martial spirit of the Spaniards was indeed partly animated by it; but in their country it always bore something of the character of a foreign importation, modified by the circumstances of their juxtaposition with the Arab race. In Italy, it existed only among those classes which imitated the manners of France and Germany, and never entered into the general character of the natives, notwithstanding the popularity of the poetical romances of chivalry. Among the Slavonic nations it has never prevailed extensively; although the feudal constitution of Polish society derived a certain tincture from it, it never penetrated into Russia. It has been often remarked, that it is only within the last two or three generations that the nobility of that country, by their intercourse with the nations of Western Europe, have derived something of the spirit of the chivalrous code, so far as it still exists in civilized countries. The point of honor, and its peculiar concomitant, the usage of the duel, were scarcely known in Russia before the present century. Chivalry originated in the feudal attachment of warriors to the person of their king or chief, which has been so often described as characteristic of the ancient Germans. Hence the English word *knight*, which, when the Norman "chevaliers" were first known in England, was spontaneously used as the translation of their title, signified originally a servant or attendant. At what precise time the devotional character was added to the original martial impress of national usages, and the compound system of chivalry thus produced, it is not easy to ascertain. It has been said that the investiture of the knight was purely military until the reign of Charlemagne; and it may be supposed that the wars of the Franks against the Saracens first blended the ardor of war and religion together, and that the Crusades completed the union. At the latter period were instituted the two celebrated military orders of monks, the *TEMPLARS* and *HOSPITALIERS* (which see), the code of whose government combined monastic and knightly usages. After valor and devotion, the third characteristic feature of chivalry was gallantry to the fair sex; and the source of this sentiment also has been traced to the habits and feelings of the Northern tribes, among whom woman was looked on with a much more exalted sense of her dignity than in the most civilized countries of antiquity. If the Crusades communicated to chivalry its devotional character, it is in the poetry of the Troubadours about the same period, in the 12th and 13th centuries, that we find its peculiarity of devotion to the female sex first developed. But in their verses it does not appear clothed with the romantic purity with which it was afterwards invested by the writers of the heroic tales of chivalry, and still less in those of the contemporary French writers of the *Fabliaux*, from whose compositions we draw the most authentic monuments which we possess in this curious branch of antiquarian research. The knight, or even the esquire, was bound to follow a single lady and dedicate himself to her service; but little delicacy is either intimated or enjoined in the relations which subsisted between them, and his devotion to her was considered as entitling him to every recompense love could bestow. The fourteenth century was the brilliant period of chivalry, when its usages, originally formed in the manners of the people, had become fixed and embellished by the fictions of the writers of romances; and when princes and chieftains, forming their idea of the institution rather from the descriptions contained in them than from real life, sought to bring back their courts and camps to the likeness of those ideal models of perfection. There can be little doubt

Fig. 591.—KNIGHT'S COSTUME (1272).
(From the Library of MSS. at Paris.)

that the peculiar ceremonies which in the fourteenth and fifteenth centuries accompanied the creation of a knight—the vow of chivalry, the watching, prayer, fasting, &c.—were borrowed by romantic imaginations from such fabulous recitals, which were read and related in every courtly company. Before that period, the manners of the knights and dames had exhibited but little of that polish and refinement, their sentiments but little of that generosity, which were the subjects of so much imaginary description; and, in later times, chivalry gradually decayed. Its usages were maintained with even more of magnificence than before; its various rites, titles, and distinctions existed for a long period in most European countries, and partly remain to this day; but the spirit of feudal devotedness was quenched by the multiplication of mercenary troops; adherence to a feudal lord was superseded by the more general feelings of national patriotism (which was almost wholly omitted in the chivalric code), and the extravagances into which the imaginary point of honor had led its votaries fell into discredit and ridicule. It is, therefore, to the 14th century, and especially to that part of its chronicles preserved by the true annalist of chivalry, Froissart, that we must look for the period when the line between real society and that represented in romances was most nearly broken down. When the usages of chivalry were most flourishing, all men of noble birth (except the highest) were supposed to pass through three orders or gradations. They first lived as pages in the train of nobles and chiefs of high rank; next, as *esquires*, they attached themselves to the person of some individual knight, to whom they were bound by a strict law of obedience, and for whom they were bound to incur every danger, and, if necessary, sacrifice their lives; and thirdly, they were promoted to the rank of *knighthood*. (See KNIGHT.) It is sufficient to observe here, that, however great the distinction might be between knights in point of rank and wealth, custom established a species of equality among all of the same order, which may be said to exist among gentlemen of the present day. They formed all over Europe a common corporation, as it were, possessing certain rights, and owing each other certain mutual duties and forbearances. They were united, not by the ties of country, but by those of feudal obedience, which attached every knight to the banner of his liege lord, from whom he held his fee; but little or rather no dishonor attached to knights who were under no such feudal tie, if they chose their own chieftain wherever they thought fit: they were free adventurers, whose order was a passport in every service; and, in the actual conflict, the hostility of knights was moderated by usage. Thus, it was dishonorable in any knight to take a knight's life if disarmed, and not to set him free when a prisoner on receiving a fitting ransom. In peace, also, knights of all countries were welcome visitors at the courts of chivalric sovereigns; and all enjoyed the privilege of presenting themselves at the tournament, and contending for the prize. Chivalrous honor was chiefly supported in two ways: first, by the single combat or duel, whether on account of serious provocation, or by way of trial of strength; secondly, by the performance of vows, often of the most frivolous and extravagant nature. These were generally undertaken for the honor of the ladies. Many historical instances of these absurd yet daring follies are recorded by Froissart. But the vows related not only to martial achievements, but to others of a more extravagant and grotesque character. We need only refer to Monstrelet's narrative of the company called "Galois" of knights and ladies, who bound themselves, for love of each other, to follow a particular code of usages; of which a part consisted in wearing thick clothes in summer and thin in winter, to show that the power of their love rendered them insensible to the differences of seasons,—a vow which was maintained with such perseverance, that the greater part of the devoted company actually died of cold. The commencement of such extravagances, however, betokened the decline of the true spirit of chivalry. It decayed with the progress of mercenary armies and the decline of feudal institutions through the 15th century; in the 16th, it was a little more than a lively recollection of past ages, which knights such as Bayard, and sovereigns such as Francis I. and Henry VIII., strove to revive; and, finally, it became extinguished amid religious discords, leaving as its only relic the code of honor, which was still considered as governing the conduct of the gentleman.—The accompanying engraving (fig. 591) represents the costume of a count Hohenchwangen, of the family of Welf, who died in 1272, and depicts the wearer in a long, sleeveless, dark blue surcoat, with his armorial device: a white swan on a red field with a light red border. Under his coat he wears a *cap-ar-pie* suit of mail. The helmet is original, very like the Greek, with the furred mantle as we see it in the seal of Richard, King of England, of the date of 1498. This helmet does not appear to be a tilting helmet, which usually rests upon the shoulders; but one which would be fastened, like the visor with the mailed hood, by an iron throat-brace, and a leather thong. Upon the covered helmet he wears the swan as a crest. The sword-hilt is of gold, the sheath black, the girdle white, the furred mantle is red, lined with white. See also fig. 192, representing a knight of the 15th century, armed at all points.

Chivas'so, a town of N. Italy, prov. Turin, on the Po, 13 m. N.E. of Turin; pop. 9,607.

Chives, or **Cives**, *n.* (*Hort.*) See ONION.

Chladni, ERNST FLORENS FRIEDRICH, a German philosopher, and the founder of acoustic science, b. 1756. He became professor of jurisprudence at Leipzig, but resigned his chair in order to apply himself to natural

philosophy. *C.* made some ingenious discoveries, the result of manifold experiments, on the nature and properties of sound. His principal works are, *Discoveries concerning the Theory of Sound* (1787); *Acoustics* (1802); *Contributions to Practical Acoustics, with Remarks on the making of Instruments* (1822). D. 1827.

Chlamydera, *n.* (*Zoöl.*) A genus of birds, fam. *Struthionidae*, including the *Bower-bird* of Australia, remarkable for its habit of making bower-like selections, and for adorning them with gay feathers, rags, bones, shells, and such other white or brightly colored objects as they can pick up. These bowers are not used as nests, and their use is not well understood.

Chlamydosaurus, *n.* (*Zoöl.*) A genus of lizard. See LACERTIDÆ.

Chlamyphorus, *n.* (*Zoöl.*) An edentate quadruped family *Effodientia*, found in South America, in which several characters of different tribes are remarkably blended. Like the Armadillo, it has a tessellated shield, the consistence of which is between horn and leather, but instead of being firmly attached by its whole under

Fig. 592.—CHLAMYPHORUS TRUNCATUS.

surface to the integuments beneath, it is connected with the back only by a ridge of skin along the spine, and with the skull by two bony prominences from the forehead. In the form of its feet, its imperfect eyes, the conical shape of its snout, and its general habits, it resembles the mole. It is a native of Chili, but is so rare even there as to be regarded by the natives as a curiosity. It is interesting from the analogy of its skeleton to that of mail to those of the gigantic extinct *Megatherium*. It is very small, being only 5 to 6 inches long.

Chlamys, *n.* [*Gr.*, a scarf.] (*Antiq.*) An ornament of the ancient Greek costume, closely resembling the Roman *PALUDAMENTUM*, *q. v.*

Chlapowski, DEZYDERYUSZ, a Polish general, b. 1788. He early entered the French army and distinguished himself in the German and Russian campaigns of Napoleon I. On the rising of the Poles in 1830, *C.* commanded a division of the patriot army, fought at Grochow, and did good service against the Russians. After an unsuccessful invasion of Lithuania, *C.* retired into private life.

Chlopicki, (*klo-pits'ke*), JOSEPH, a Polish general, b. 1787. He served under Kosciuszko, during the first revolt of the Poles (1794), and then engaged in Napoleon's service under whom he took part in the battles of Eylau, Friedland, Smolensk, and Moskowa. After the fall of Paris in 1814, *C.* conducted back to Poland the *débris* of the Polish-French contingent, and was created general division by the Czar. On the outbreak of the Polish revolution of 1830, *C.* was elected Dictator, but soon resigned that office, fought at Grochow and Wawre, after the cessation of hostilities, retired into private life. D. 1854.

Chloera, *n.* (*Bot.*) The yellow-wort, a genus of plant order *Gentianaceæ*, which yield a yellow dye.

Chloracetic Acid, *n.* (*Chem.*) A crystalline acid obtained by the action of the solar rays upon a mixture of chlorine with the vapor of acetic acid. *Form.* HC_2ClO_3 .

Chloral, *n.* (*Chem.*) A liquid composed of chlorine, carbon, hydrogen, and oxygen, obtained by the action of chlorine upon absolute alcohol.

Chloranile, PERCHLOROKINOLE, *n.* (*Chem.*) When kirk is acted on with hydrochloric acid and chlorate of potash, it is converted into a yellow crystalline substance known as chloranile. Potash dissolves it when heated, giving a purple solution.

Chlorantha'ceæ, *n. pl.* (*Bot.*) An order of plant alliance *Piperales*. *DIAG.* A solitary carpel, a suspensor, a naked embryo, and opposite leaves with intermediate stipules. They are herbs or under-shrubs, with jointed stems, and spiked achlamydeous flowers, with scaly bracts. The typical genus *Chloranthus* includes some useful species. The roots of *C. officinalis* and *Chystachys* have been employed in Java in malignant fevers. The leaves of *C. inconspicuus* are used in China to perfume tea. Aromatic, stimulant properties common to all the plants of this order, which consist of 15 species arranged in 3 genera.

Chlorastrolite, *n.* (*Min.*) A pale bluish-green mineral found on the shores of Isle Royale, Lake Superior in small rounded water-worn pebbles, which have been derived from trap-rock. It is finely radiated or stellate in structure, with a pearly lustre, and is chatoyant on the rounded sides. It is a hydrated silicate of aluminum, lime, and soda.

Chlorate, *n.* (*Chem.*) A combination of chlorine with a base. Chlorates resemble the nitrates in their oxidizing power, but generally act at lower temperatures in consequence of the greatest facility with which they part with their oxygen. The best known is the chlorate of potash. — See POTASH (CHLORATE OF.)

hloret'ic, *a.* Resembling or containing chlorite.

hlorhydric Acid, *n.* (*Chem.*) See HYDROCHLORIC ACID.

hlorhydrine, *n.* (*Chem.*) An oily liquid derived from glycerine by the action of hydrochloric acid. *Form.* $C_3H_5O_3Cl$.

hloric Acid, *n.* (*Chem.*) This acid has never been obtained in an isolated condition, it being as yet impossible to separate from it the last equivalent of water. *Form.* ClO_3 . Its only compound which possesses any great practical importance will be seen at POTASH (CHLORATE OF).

hloride, *n.* (*Chem.*) Chlorine enters into combination with the metals and the non-metallic elements, forming compounds of great importance. These will be treated of particularly under the heads of their respective bases. They all, however, possess some common properties which it will be well to consider in this place. They are generally soluble in water. In many of their properties they closely resemble the oxides; and it is generally found that a metal will enter into as many combinations with chlorine as it does with oxygen. They are all fusible at ordinary temperatures, and melt and dissolve with greater readiness than their corresponding acids; most of the metallic chlorides are decomposed when heated in a current of hydrogen, hydrochloric acid and the pure metal being the result. This is taken advantage of in the formation of pure iron and several other metals. The chlorides of the nobler metals are generally decomposed by simple ignition, the metals remaining behind in an uncombined form. When heated with black oxide of manganese and sulphuric acid, they eliminate chlorine.

hlorid'ic, *a.* Pertaining to a chloride.

hlorimeter, *n.* An instrument similar to an alkalimeter, used in some of the processes of chlorimetry.

hlorimetry, *n.* [*Chlorine*, and *Gr. metron*, measure.] (*Chem.*) The method of ascertaining the amount of available chlorine in the chlorine of lime of commerce. There are several ways of effecting this. One of the simplest and most generally employed is founded on the property possessed by acetic acid of turning a solution of persalt of iron to a deep red. Known quantities of acetic acid, perchloride of iron, and bleach-liquors are mixed together, and the color produced is compared with those of twelve vials ranged in a frame containing similar ingredients, submitted to known but varying properties of chlorine. In this instance the color indicates the exact amount of chlorine contained in the measured quantity of black liquid; from which data the percentage is easily calculated. The *C.* is an hourly operation with sileo-bleachers, it being important to know the exact strength of the steeping-liquor at each immersion of cloth.

Chlorine, *DEPHLOGISTICATED MARINE ACID*, OXYMURIC ACID, *n.* [*Gr. chloros*, green.] (*Chem.*) A non-metallic element discovered by Scheele in 1774, while examining a ore of manganese. It was thought at first to be a compound gas; but Gay-Lussac and Thenard supposed, and Sir Humphrey Davy proved, that it was an elementary body. It was the latter philosopher that bestowed upon it the name of chlorine, from *chloros*, green (Greek), in account of its color. It occurs in nature in great abundance, in combination with many mineral substances, such as rock-salt; also in sea-water and sea-lants, as the chlorides of potassium and sodium. It may be prepared in two ways,—either by heating black oxide of manganese with hydrochloric acid, or by heating a mixture of black oxide of manganese, chloride of sodium, and dilute sulphuric acid. It is a transparent gas of a greenish-yellow color and a powerfully suffocating odor, which, even largely diluted with air, produces great irritation of the air-passages. One hundred cubic inches weigh between 77 and 78 grains. It is, therefore, about two and a half times heavier than atmospheric air. Water absorbs about twice its volume; can, therefore, be only collected by displacement over warm water. Under a pressure of four atmospheres condenses into a yellow limpid liquid, rather heavier than water, and remains fluid and unfrozen at a temperature of 220° Fahr. With water, chlorine forms a finite hydrate, which, when subjected to a cold of 32° Fahr., solidifies in the form of large yellow crystals. Chlorine is not combustible, but supports combustion to certain degree. A wax taper burns in it with a redish smoky flame, the hydrogen of the wax combining with the chlorine to form hydrochloric acid, and the carbon being set free. Chlorine, in common with several other elementary bodies, has the property of replacing hydrogen in its organic compounds. It is in this manner that chlorine bleaches textile fabrics. The whiteness of the fabric is due to some brown organic substance, which, when submitted to the action of chlorine, parts with its hydrogen and assumes a colorless form, containing chlorine. This fact is proved on a large scale by the action of chlorine on indigo. Another property of chlorine is that of destroying noxious vapors and miasmata. For the same reason, it is used as a disinfectant, the action being the same as that mentioned above. For laboratory use, chlorine is best made as follows:—Oil of vitriol and water, of each seven parts. Allow the mixture to cool, and add four parts of chloride of sodium, mixed alternately with three parts of peroxide of manganese. The gas comes off slowly at first until the application of a gentle heat, when it immediately rushes forth in large quantities. The manufacture of chlorine for bleaching purposes is described under BLEACHING-POWDER. Chlorine is possessed of powerful affinities, and unites with all the metalloids and metals. With oxygen it forms five compounds,—hydrochlorous acid, ClO ; chlorous acid, ClO_2 ; peroxide of

chlorine, or hypochloric acid, ClO_3 ; chloric acid, ClO_4 ; perchloric acid, ClO_7 ; all of which are described under their respective heads. With hydrogen it forms hydrochloric acid, and with nitrogen a fearfully explosive substance—perchloride of nitrogen. With carbon it forms several chlorides. (See CARBON.) In many of its properties it bears a very strong analogy to its congeners bromine and iodine (*q. v.*)—Equivalent, 35.4; sp. grav., 2.44; symbol *Cl*.

Chlorinated, *a.* Containing a certain proportion of chlorine.

Chlorinized, *a.* Compound with chlorine.

Chlorine-water, *n.* (*Chem.*) Water at 60° absorbs two volumes of chlorine. When freshly made, this solution possesses all the properties of the gas. It gradually becomes decomposed, liberating oxygen and forming hydrochloric acid.

Chloris, *n.* [*Gr. chloros*, green.] The GREENFINCH, *q. v.* (*Myth.*) The goddess of flowers, who married Zephyrus. The same as Flora.

Chlorite, *n.* (*Min.*) A soft mineral of a green color, often found in cavities and veins in trap-rocks. It is a hydrated silicate of alumina and magnesia.

Chloritic, *a.* Pertaining to, or containing chlorite.

Chlorocarbonic Acid, *n.* (*Chem.*) It is formed by exposing a mixture of chlorine and carbonic oxide to the action of light. *Form.* CO_2Cl_2 .

Chlorochromic Acid, OXICHLORIDE OF CHROMIUM, *n.* (*Chem.*) A remarkable brown-red liquid, obtained by distilling 10 parts of common salt and 17 of bi-chromate of potash, previously fused together and broken into fragments, with 40 parts of oil of vitriol. It much resembles bromine in appearance, and fuses very strongly in air, the moisture of which decomposes its red vapor, forming chromic and hydrochloric acids. It is a very powerful oxidizing agent, and inflames ammonia and alcohol when brought in contact with them. *Form.* CrO_2Cl .

Chloroform, *n.* [*Gr. chloros*, green, and *formyl*.] (*Chem.*) A highly interesting compound, which is produced by a variety of reactions. The most usual way of preparing it is by acting upon dilute alcohol with chloride of lime. Six parts of chloride of lime are mixed with twenty-four parts of water, and one part of alcohol is added to the mixture; the whole is transferred to a capacious still, and the heat is quickly raised until it reaches 180°. The products, which consist of chloroform and water, collect in two layers, the lower of which is chloroform. It is separated from the water by means of a pipette, agitated with sulphuric acid, and once more distilled. Chloroform is a colorless, volatile, mobile, highly refracting liquid, of specific gravity 1.497, and boiling at 142° Fahr. It has an ethereal odor, and a sweetish penetrating taste. It is readily soluble in ether and alcohol, but sparingly so in water. Concentrated sulphuric acid has but little action on it, and potassium does not decompose it. It yields, however, to the action of light, and should be tested for alcohol and other products of decomposition before it is used for anæsthetic purposes. Pure chloroform, when dropped into water, should fall to the bottom without becoming milky. Alcohol is detected in it by its turning green on the addition of bichromate of potash and sulphuric acid. It should remain colorless when oil of vitriol is agitated with it, and the liquid itself should be perfectly colorless, and free from any chlorous odor. The vapor of chloroform has the remarkable property of rendering a person breathing it temporarily insensible to pain. (See ANÆSTHETICS.) Chloroform is an excellent solvent for sulphur, phosphorus, and iodine. It also readily dissolves fatty and resinous bodies. It is a perfect solvent of caoutchouc, which is left unaltered on evaporation. Chemists are at variance as to the real composition of chloroform, some regarding it as a derivative of methyl, others as a terchloride of formyl.

Chlorometry, *n.* The same as CHLORIMETRY, *q. v.*

Chloronitric Gas, *n.* (*Chem.*) Peroxide of nitrogen in which two equivalents of oxygen are replaced by two of chlorine. Yellowish red fumes are evolved when nitrohydrochloric acid is gently heated.

Chloronitrons Gas, *n.* (*Chem.*) Nitrons acid in which an equivalent of oxygen is replaced by one of chlorine. Evolved when nitrohydrochloric acid is boiled.

Chlorophane, *n.* [*Gr. chloros*, green, and *phaino*, to shine.] (*Min.*) A violet variety of fluor-spar, which emits, when heated, a bright, emerald-green light.

Chlorophyl, *n.* (*Chem.*) The green coloring-matter of plants. It is a resinous substance containing carbon, hydrogen, nitrogen, and oxygen, which cannot be crystallized or distilled, and has therefore never been obtained in so pure a condition that its composition could be accurately determined. When green leaves are boiled with alcohol, the latter acquires a fine green color, and, when evaporated, deposits its chlorophyl.

Chlorophyllite, *n.* [*Gr. chloros*, green, *phyllon*, a leaf, and *lithos*, a stone.] (*Min.*) An altered variety of Iolite. It occurs at Hadham, in Connecticut, in large prisms, or in foliated masses, of a grayish or brownish-green color—usually associated with Iolite in granite. The name has reference to the color and structure of the mineral.

Chlorosis, *n.* [*Gr. chloros*, green.] (*Med.*) A disease to which young females are subject, and which is characterized by a peculiar sallow or greenish-yellow hue of the countenance, and hence known as the green sickness. It is usually attended with great debility, palpitations of the heart, difficulty of breathing, pains in the back and loins, and other distressing symptoms. The principal means to be employed in the cure of this disease are gentle exercise in the open air, with nutritious

and rather stimulating diet, tonics, sea-bathing, and agreeable society.

(*Bot.*) See SECTION II.

Chlorot'ic, *a.* Pertaining to, or affected by, chlorosis.

Chlorous Acid, *n.* (*Chem.*) One of the oxides of chlorine. It is a dark greenish-yellow gas, possessing a pungent odor and bleaching properties. If heated to 135° Fahr. it explodes, being resolved into chlorine and oxygen; it also explodes when placed in contact with combustible substances. By intense cold and pressure it may be reduced to the form of a red liquid. Water dissolves about six times its volume of the gas, the solution varying in color from green to yellow, according to the degree of saturation. *C. A.* has powerful bleaching properties, and combines with bases to form chlorites, many of which are crystallizable. It is expelled from its combinations by carbonic acid. It is prepared by heating nitric acid, chlorate of potash, and arsenious acid. The gas must be collected by displacement, as it acts both on mercury and water. *Form.* ClO_2 .

Chloroxylon, *n.* (*Bot.*) A gen. of trees, ord. *Cedrelacæ*. All the species have dotted leaves, which yield by distillation an essential oil. *C. Swietenia*, a native of East India, furnishes the yellow, fragrant, close-grained, heavy and durable satin-wood much estimated by cabinet-makers.

Chmielnicki, *kme-el-nits'ke*, BOGDAN, a Cossack chief, b. 1593. In 1648, he put himself at the head of a formidable combination of Cossacks and Tartar tribes, and carrying on a short but sanguinary war against the Polish monarchs Ladislans IV. and John Casimir, made himself master of the Ukraine, and handed over the Cossack people to the Russian czars. D. 1657.

Choak, *v. a.* and *n.* An old spelling of CHOK, *q. v.*

Choanites, *n. pl.* (*Pal.*) A genus of extinct Zoöphytes, so called on account of their fossil skeleton or polypary, presenting in general a funnel-shaped figure. They appear to have been common in the upper beds of the chalk.

Choate, RUFUS, an eminent American advocate and jurist, b. at Essex, Mass., 1799. Admitted to the bar in 1824, he commenced the practice of law at Danvers; passed some time at Salem, and removed to Boston in 1834, having previously occupied a seat in the Statesenate and in the house of representatives as a member of Congress. In 1841 he succeeded Mr. Webster in the U. States senate, resigning in 1845, and with these exceptions he has been exclusively engaged in the profession of the law. His claims to literary notice rest upon his speeches in congress and several addresses on public occasions, which have been printed. Of his speeches, the most noted ones are those on the tariff, the Oregon question, and the annexation of Texas. But it is less to his literary labors than to his forensic performances as a lawyer that Mr. C. owes his celebrity. Rapid and impetuous, self-possessed and remarkable for consummate judgment and unerring tact in the management of causes, the neatness of his statements, the grace and acumen of his language, the quaint humor with which he contrives to decorate the driest and seemingly the most hopeless subject, the charm of a brilliant and persuasive rhetoric, always commanded the admiration of his hearers and the sympathies of the jury in cases where the law and the facts forbade him to win the assent of their understanding. As a lawyer, Mr. C. stood for many years at the head of the bar in New England, and as an advocate, especially, no man perhaps in the whole country enjoyed so high and wide a reputation. D. 1858.

Choban'do, or SEBANDO, a town and Chinese frontier-post of Thibet, 230 m. E.N.E. of Lassa; Lat. 30° 17' N., Lon. 95° 40' E.

Chochn'ma, in *Mississippi*, a village near Yallobusha River, in the S.E. part of Tallahatchie co.

Chock, *n.* [See CHOK.] (*Naut.*) A wedge to secure anything with, or for anything to rest upon; thus, the long-boat rests upon 2 large chocks when it is stowed.—A collision; an encounter. See SHOCK.

Chocks of the rudder. Pieces of timber used to stop the motion of the rudder, in cases of accident, &c.

—*v. a.* To fasten as with a wedge, &c.; as, to chock a block.

—*v. i.* To fill up, as any hollow place.

Chock-full, *a.* Filled to an inconvenient or superfluous extent. (Properly written CHOCK-FULL, *q. v.*)

Cho'co, a bay and prov. of the U. States of Colombia, S. America.—The bay, forming part of the Gulf of Darien, receives the Atrato, *q. v.* a stream of note in connection with inter-oceanic communication. Its Lat. and Lon. are about 3° 30' N., and 77° 30' W.—2. The province forms the W. portion of the department of Cauca.

Chocolate, (*chok'o-lat*), *n.* [Sp.: *Fr. chocolat*; *It. cioccolata*.] This well-known article, used so extensively as a beverage, is manufactured from the roasted beans of the *Theobroma cacao*, and afterwards made into a paste by long trituration in a heated mortar, with sugar, vanilla, and cinnamon; it is then poured into moulds, and left to dry or harden. *C.* is said to possess a peculiar, nitrogenized principle, partaking of the active alkaloid of both tea and coffee—theine and *caffine*; and on this account, and from the presence of sugar, it is, to a certain extent, nutritious, as well as being a grateful and stomachic beverage. From the addition of vanilla, and an astringent property in itself, chocolate acts in that manner on the system, and in weak, relaxed constitutions makes a most suitable beverage, by its binding effects on the bowels.—This name is applied both to the pasty substance, and to the liquor or beverage made by dissolving it in boiling water.

—*a.* Like chocolate; having the color of chocolate.

Chocolate-house, *n.* A public house where chocolate is drunk.

Choc'olate Lead, *n.* (*Painting*.) A pigment prepared

by calcining oxide of lead with about one-third of that of copper, and reducing the compound to a uniform tint by levigation.

Choc'olate-nut, *n.* (*Bot.*) See THEOBROMA.

Chocolo'chee, or **Chocolo'co Creek**, in *Alabama*, rises in Benton co., and empties into Coosa River about 10 m. N.W. of Talladega.

Choc'onut, in *Pennsylvania*, a post-village and township of Susquehanna co., about 14 m. S.W. of Binghamton.

Choctaw, in *Alabama*, a W. county bordering on the Mississippi; *area*, about 800 sq. m. The Tombigbee River bounds it on the E. The surface is irregular; and soil partly fertile. *Cap.* Butler.

Choctaw, in *Mississippi*, a N. central county; *area*, 990 sq. m. It is traversed by the Big Black River. The soil is fertile, and the surface hilly, partly covered by forests. *Cap.* Chester. *Pop.* (1890) 10,817.

Choctaw, in *Mississippi*, a post-office of Bolivar co.

Choctaw, in *Arkansas*, a post-office of Van Buren co.

Choctaw, in *Texas*, a village of Grayson county. *Population*, about 100 in 1897.

Choctaw Bayou, in *Texas*, Grayson co., enters the Red River in the N.E. part of the co.

Choctaw Bluff, in *Alabama*, a P. O. of Clark co.

Choctaw Indians, a N. American tribe, formerly peopling the central part of Mississippi near the Yazoo River, and the W. portion of Alabama. They are now settled on their reservation in the Indian Territory on the banks of the Arkansas River. The Choctaws live there in a comparatively civilized state, devoting themselves to farm-tillage and mechanical pursuits. They are closely allied with the Chickasaws, (*q. v.*) and have a general council in common.

Choctawhat'chee River, rises in Barbour co., Alabama, and flows S. to the boundary, thence S. through Florida, and falls into Choctawhatchee Bay.

Chode, the old preterite of CHIDE, *q. v.*

Cherilus, (*ker-i-lus*), a tragic poet of Athens, who wrote 150 tragedies, of which 13 obtained the prize. — An historian of Samos. — The name of two other poets, one of whom was very intimate with Herodotus, and wrote a poem on the victory which the Athenians had obtained over Xerxes. On account of the excellence of the composition, he received a piece of gold for each verse from the Athenians, and was publicly ranked with Homer as a poet. — The other was one of Alexander's flatterers. It is said that that prince promised him as many pieces of gold as there should be good verses in his poetry, and as many slaps on the forehead as there were bad. On examination, six of his verses were found entitled to the coins, while the rest were rewarded with castigation.

Choice, (*chois*), *n.* [From CHOOSE, *q. v.*] Act of choosing; selection; voluntary action of the mind in making a preference of one thing to another; election.

"There's small choice in rotten apples." — *Shaks.*

—Power of choosing; option; preference; as, to toss for choice.

"The soldier's virtue makes rather choice of loss." — *Shaks.*

—Care in choosing or selecting; skill in making nice distinction; apt discrimination.

"They were collected with judgment and choice." — *Bacon.*

—The thing chosen or selected; the thing taken or approved in preference to others; object of choice.

"Your choice is not so rich in birth as beauty." — *Shaks.*

—The best or most preferable part of anything; that which is more properly the object of choice.

"The choice and master-spirits of this age." — *Shaks.*

To make choice of. To choose; to select; to take from several things proposed to one's option.

"Wisdom of what herself approves makes choice." — *Denham.*

—a. Worthy of being chosen; select; rare; precious.

"My choicest hours of life are lost." — *Swift.*

—Keeping or maintaining with care, as valuable; frugal; chary; as, to be choice of money.

"He that is choice of his time, will also be choice of his company, and choice of his actions." — *Taylor.*

—Selected with care; chosen with judgment and discrimination.

"Choice words and measured phrase." — *Wordsworth.*

Choice-drawn, *a.* Chosen or selected with special care.

Choice'ful, *a.* Unstable; changeable.

Choice'less, *a.* Without the power of choosing; wanting the right of choice; as, "that dead choiceless creature." — *Hammond.*

Choice'ly, *a.* With nice discrimination; with apt regard to preference; with exact choice.

"A hand of men,
Collected choicely from each county some." — *Shaks.*

—Excellent; in a choice or preferable manner.

"Old-fashioned poetry, but choicely good." — *Walton.*

Choice'ness, *n.* Quality of being choice or preferable; nicety; particular value; intrinsic worth.

Choir, (*kwir*), *n.* [O. Fr. *choeur*; Lat. *chorus*; Gr. *choros*, a dance in a ring. Originally, a company of singers and dancers arranged in a ring.] That part of a church or cathedral where the singers or chorists chant or sing divine service. It is also applied to those whose special duty it is to perform the service to music. Every choir is divided into two parts, stationed on each side of the choir, in order to sing alternately, one side answering to the other. — It is also used to signify a band of singers in parts, or even the chorus itself.

Choiseul, (*shuwaw-zool'*) the patronymic of a noble French family, distinguished in history; of its more remarkable members were the following:

C., CESAR, DUC DE, and SEIGNEUR DU PLESSIS-PRASLIN, B.

1598. He was a distinguished soldier and diplomatist; instructed Louis XIV. in the art of war, and aided Cardinal Richelieu in his diplomatic successes. D. 1675.

C., ETIENNE FRANÇOIS, DUC DE, a French statesman, b. 1719. As *Count de Stainville*, he, in 1753, was appointed French ambassador at Rome, and afterwards at Vienna. In 1758 he succeeded Cardinal de Bernis as Minister of Foreign Affairs, subsequently received the portfolios of war and marine, was created duke and peer of France, obtained high favor with Madame de Pompadour, and, consequently, that of Louis XV. In 1761, C. concluded the famous "Family Compact," or league of the Bourbon monarchs of France, Spain, Parma, and Naples, and, in 1764, effected the expulsion of the Jesuits from France. His control of the war and marine depts. was characterized by great vigor and economy; and he developed and fostered the rising commerce of his country with India. C.'s influence was felt and acknowledged at every court of continental Europe. On the advent of Madame du Barry, (*q. v.*) he lost the favor of the king, and retired into private life. D. 1785.

C., GOUFFIER, MARIE GABRIEL FLORENT, (COMTE DE,) b. 1752. He was French ambassador at Constantinople (1792), and the accomplished author of *Voyage Pittoresque en Grèce*. Proscribed during the revolution, he resided in Russia until the Restoration, when he returned to France, and was made a minister of state. D. 1817.

Choiseul, an island in the S. Pacific Ocean, belonging to the Solomon group, Lat. 7° 29' S., Lon. 157° 55' E.

Choke, *v. a.* [A. S. *accocan*; Icel. *groka*, to swallow, from *grok*, the throat; W. *cegiaw*, to choke, from *ceg*, the throat.] To throttle; to suffocate; to strangle by compressing the throat and so stopping the breath.

"When to my good lord I prove untrue, I'll choke myself." — *Shaks.*

—To obstruct, hinder, or check; to clog; to block up; as, to choke a sewer.

"And crowds of mourners choke their sovereign's way." — *Tickell.*

—To smother; to stifle; to extinguish; to overpower.

"But oats and darnel choke the rising corn." — *Dryden.*

—To take exception to; to cause umbrage or offence.

—*v. i.* To be suffocated; to have the windpipe stopped.

—To be obstructed or blocked up.

—To be brought to a check, as if by a choking sensation.

"The words choked in his throat."

Sir W. Scott.

Choke, *n.* A cant phrase for the internal part of an article.

Choke, *n.* (*Mining*.) An adit is said to be choked when any earth or stone falls in and obstructs the current of water through it; the place or part so filled is called the choke.

Choke'-cherry, *n.* (*Bot.*) The *Prunus borealis*, an astringent species of cherry.

Choke'-damp, *n.* Noxious suffocating gas or vapor generated in wells, coal-mines, and other subterranean excavations.

Chokeedar, (*chō-kee-dar'*) *n.* [Hind. *chauk-dar*.] In Hindostan, the name applied to a public watchman, and also to a kind of custom-house officer.

Choke'-full, *a.* Full to the verge of choking; full to superfluity. See (Village watchman, Hindostan.)

Choke'-pear, *n.* A kind of rough, harsh-flavored, unpalatable pear. — An aspersion or sarcasm used to silence another person. (*Vulgar*.) *Johnson.*

"Pardon me for going so low as to talk of giving choke-pears." — *Richardson.*

Chok'er, *n.* The person who, or thing which, chokes or checks.

—Any incisive remark that is unanswerable; as, his reply was a *choker*.

—A vulgarism for a cravat or neck-cloth; as, to wear a white *choker*.

Chok'ing, *n.* (*Med.*) An obstruction of the gullet, or of the passage leading to it, by morsels of food imperfectly chewed, or other substances accidentally swallowed. The consequences are sometimes serious, and will be considered in connection with the part principally concerned. — See PHARYNX.

Chok'y, *a.* That tends to or has power to choke or suffocate.

Chok'y, *n.* A slang phrase for a prison or place of duration; as, he was taken to *choky*.

Chole'doch, *n.* [Gr. *chole*, bile, and *dochos*, receiving.] (*Anat.*) The duct formed by the union of the hepatic and cystic ducts, which pours the hepatic and cystic bile into the duodenum.

Choledog'raphy, *n.* [Gr. *chole*, and *graphein*, to describe.] (*Med.*) A description of what relates to the bile and biliary organs.

Choledology, *n.* [Gr. *chole*, and *logos*, a discourse.] (*Med.*) A treatise on the bile and biliary organs.

Cholee'chel, an island of S. America, in the Argentine Confederation, 220 m. from Carmen. It is formed by the Rio Negro.

Choler, (*kol'er*), *n.* The bile. — Irascibility; ill-humor; anger; irritation of the passions; — formerly supposed to proceed from excess or acrimony of bile.

"It engenders choler, planteth anger." — *Shaks.*

Cholera, (*kol'e-ra*), *n.* [Gr., from *cholē*, bile, and *rheō*,

to flow.] (*Med.*) The Cholera-morbus, or sporadic C. is a disease accompanied by vomiting and purging, with great pain and debility. It generally commences with a sense of pain about the bowels, fever, thirst, an irregular pulse, and severe vomiting and purging of bilious matter; in favorable cases these symptoms subside in a few days with the aid of proper remedies, but in severe cases great exhaustion ensues, attended by depression, anxiety, hurried respiration, cold sweats, hiccup, low and fluttering pulse, &c., and patients rapidly sink. — C. ASIATIC. The term *Asiatic* or *Spasmodic C.* has been applied to a most appalling form of pestilential disease, which seems to have been but indistinctly known prior to the year 1817. It made its appearance in Aug. that year at Jessore, after having previously raged to a formidable extent in the south of Bengal, and thence it spread over a great part of Asia, carrying off millions of human beings. In 1823 it broke out at Astrakhan, but did not at that time extend farther into Russia; in 1828, however, it appeared at Orenburg, and during the autumn of that year and spring of 1829 it spread over a considerable part of the Russian dominions. It raged at Moscow in Sept., 1830; and having been apparently carried by the Russian army into Poland, it propagated itself through different parts of Europe in 1832, and first appeared on this side of the Atlantic at Quebec, June 2, 1832, and in New York, June 21, rapidly reaching most of the U. States. In 1834, 1849, 1850, and 1854, it revisited this country, since which time it cannot be said to have reigned epidemically here, though it reappeared frequently in Europe. It usually begins with sickness and purging; the discharge in this case not being bilious, but a thin colorless fluid like rice-water, accompanied with great prostration of strength and cold clammy sweats. In a short time dreadful cramps assail the extremities and afterwards the abdomen, and other parts of the body; the body becomes bent, the limbs twisted, the countenance cadaverous, the pulse almost imperceptible, the eyes sunken and surrounded by a dark circle, the patient sinks into a state of apathy, and, unless a favorable change speedily takes place, he soon expires. With reaction, the pulse and natural warmth gradually return, and the spasms cease. Frequently the reaction is accompanied by fever, closely resembling typhus, and which is often fatal in from 4 to 8 days. C. is a form of blood poisoning, it derives its deadly quality from the swift process by which it devitalizes the blood: when the disease runs its full course the blood becomes deprived of serum, without that, it clots, decomposes, and death ensues. C. is a disease of the bowels in so far as the lost serum reaches that part of the body, producing certain local symptoms, but its true seat is in the blood. In 1885 Dr. Koch, a German chemist, conducted a series of experiments resulting in the discovery of a microbe, or minute organism, to whose presence in the tissues he attributed the disease, which he succeeded in producing by inoculation with this germ. Within recent years, as in the cholera outbreak in Europe in the summers of 1893 and 1894, quarantine has prevented its spread, and this once dreaded scourge seems now under control, particularly as its germs seem to be conveyed by water, and infection can be avoided by the use of purified water only, as was proved during the recent severe outbreak at Hamburg.

Cholera-morbus, *n.* (*Med.*) See CHOLERA.

Choleric, (*kol'er-ik*), *a.* Abounding with choler, or bile

"Our two great poets being . . . the one choleric and sanguine the other phlegmatic and melancholic." — *Dryden.*

—Irascible; easily irritated; prone to anger.

"Bull was an honest fellow, choleric, and of a very unconstant temper." — *Arbuthnot.*

—Angry; petulant; peevish; as, a choleric speech.

Cholester'ie, *a.* [Fr. *cholesterique*.] Pertaining to, or composed of, cholesterine.

Choles'terine, *n.* (*Chem.*) A crystalline substance, somewhat resembling fat, and often deposited in large quantity in the form of biliary calculi. It is a characteristic ingredient of bile; and is found also in peat, wheat, &c.

Cholet, or **Chollet**, a town of France, dep. Maine-et-Loire, on the Maine, 12 m. S.S.E. of Beaupréau. *Manf.* Cottons, woollens, linens, &c., are extensively carried on. *Pop.* 13,360.

Cho'tiamb, **Choliamb'bie**, *n.* [Fr. *choliambique* Lat. *choliambus*.] (*Pros.*) In ancient poetry, an iambic verse whose last foot, instead of an iambus, is a spondee or a trochee.

Chol'try, *n.* In Hindostan, an inn or caravanserai.

Cholu'la, an inland town of Mexico, state of La Puebla in a fertile plain S. of the Cordillera of the Malinche, m. W.N.W. of Puebla, and 64 S.E. of Mexico; Lat. 18° 2' 6" N., Lon. 98° 13' 15" W. C. was compared by Cortez in the 16th century, with the most populous cities of Spain; but it declined with the rise of Puebla. It is still however, a considerable place, and possesses some fine Aztec antiquities, the principal of which is a huge pyramid or *teocalli*, occupying an area almost double the base of the great Egyptian pyramid of Cheops, though its height is only 164 ft. Humboldt and other authorities regard it as bearing a remarkable analogy to the temple of Belus, and other ancient structures of the Oriental world. *Pop.* Estimated at 14,000.

Chou'el, AUGUSTE FRANÇOIS, an eminent French physician, b. 1788; d. 1858.

Chou'er, *n.* See HOMER.

Choup, *v. i.* To chaup; to munch greedily; to masticate coarsely. (Used in some parts of England, and in U. S.)

Chon'da, a town of Hindostan, prov. Gwalior, and m. N.W. of the latter city; Lat. 26° 27' N., Lon. 78° The British, under Lord Gough, won a great victory here over the Mahrattas, in 1843.

Fig. 593.

A CHOEEDAR.
(Village watchman,
Hindostan.)

Chondrine, *n.* (*Chem.*) That form of gelatine which is obtained from cartilage, and which differs from ordinary gelatine in being precipitable by acetic and the mineral acids, and by sulphate of alumina and potash, and sulphate of iron, and acetate of lead.

Chondrodite, *n.* [*Gr. chondros*, a grain.] (*Min.*) A silicate of magnesia, with part of the oxygen replaced by fluorine and part of the magnesia by protoxide of iron. The largest and most crystalline masses are found near Sparta in New Jersey, and near Edenville in New York. It is found also in Finland, Sweden, Saxony, and the Ural. — See **HUMITE**.

Chondroid, *n.* [*Gr. chondros*, cartilage, and *eidōs*, form.] Resembling or partaking of the nature of cartilage.

Chondrology, *n.* [*From Gr. chondros*, and *logos*, speech.] (*Med.*) A treatise on cartilages.

Chondrometer, *n.* [*Gr. chondros*, grain, and *metron*, measure.] A kind of steelyard used in the weighing of rain.

Chondropterygians, *n. pl.* [*Gr. chondros*, cartilage, and *pteryx*, a wing.] (*Zoöl.*) The name of Cuvier's 1st order of fishes, characterized by the gristly nature of all the spines which support the fins. The whole internal skeleton in this order is cartilaginous.

Chondrus, *n.* (*Bot.*) A gen. of plants, ord. *Ceramiaceæ*. The most important species is *C. crispus*, commonly called Carrageen or Irish moss, which is used medicinally for its nutritive, emollient, and demulcent properties, being administered in the form of a decoction or jelly.

Chonos Archipelago, a group of barren islands lying off the W. coast of Patagonia: Lat. between 44° and 46° S., Lon. between 74° and 75° W.

Chontales, a district of Nicaragua, N.E. of the lakes Nicaragua and Managua, separated from Honduras by the district of Segovra.

Chose, (*chöz*), (*pret.* CHOSE, *pp.* CHOSEN,) *v. a.* [*A. S. cōsen*; *Ger. kiesen*; *O. Ger. kiusan*; *Icel. kiesa*; *Goth. kisan*; *Swed. and Goth. kesa*; all signifying to test, to prove, and by consequence, to select; *Sansk. kus*, to try, taste.] To take one thing in preference to another, others; to prefer; to select; to elect; to adopt.

"Choose an author as you choose a friend." — *Roscommon*.

i. To prefer; to make a choice or selection.

"The world was all before them, where to choose Their place of rest." — *Milton*.

to possess the power of choice; to exercise the opportunity of selection.

For all her haste, she could not choose but stay." — *Dryden*.

Chooser, *n.* One who chooses, or has the power of election.

"Each one may here a chooser be." — *Drayton*.

Chosingly, *adv.* By choice; in the way of choice.

Chop, *v. a.* [*Ger. and Du. kuppen*; *L. Lat. cōppare*, from *to kōpō*, to strike, second aorist *kōpein*, from root *kēp*.] To cut into small pieces; to mince; — usually preceding *up*; as, to chop up meat.

to cut off or separate by striking or cleaving: to divide, generally with off.

Within these three days his head is to be chopt off." — *Shaks*.

to devour or eat greedily; with up.

You are for chopping up your entertainment like an hungry man." — *Dryden*.

to open or break into chinks; to chap off. — See **CHAP**.

to do anything with a quick and sudden movement; to strike unexpectedly.

"Chops at the shadow, and loses the substance." — *L'Estrange*.

to break up another person's conversation or discourse; to intervene without ceremony.

(*Naut.*) To turn, vary, or shift suddenly; as, a chopping wind.

Chop, *v. a.* [*A. S. ceapian*, *cypan*; *Ger. kaufen*; *Goth. upon*, to transact business; allied to *cheapen*; *Scot. ap*, to exchange, to buy and sell, and to overturn.] To buy; to barter, truck, change, or exchange; to put a thing in the place of another; as, to chop a bargain. *bandy; to change about; to give and take; as, to chop logic.*

"We go on chopping and changing our friends, as well as our senses." — *L'Estrange*.

to wrangle; to altercation; to bandy words.

Let not the counsel at the bar chop with the judge." — *Bacon*.

A stroke; act of cleaving or chopping.

"Believe them at the first chop, whatsoever they say." — *Tyndall*.

a piece chopped; a small piece of meat; as, a chop from a tender loin.

"Old Cross condemns all persons to be fops, that can't regale themselves with mutton-chops." — *King*.

to crack or cleft in anything. See **CHAP**.

to chap; the jaw. See **CHAP**.

Chop, *n.* [*Chinese.*] (*Com.*) Quality; kind; brand; as, of the first chop. — A custom-house permit.

Chop of tea, a parcel of chests of tea of the same leaf make. — *Grand chop*, a ship's clearance certificate.

Chop-boat, *n.* [*Chin. chop*, quality.] (*Naut.*) A lighter used by the Chinese govt. to carry goods in transit from the *hongs* (warehouses) to vessels lying in harbor.

Chop-church, *n.* A slang term for one who exchanges one benefice for another.

Chopra, a river of Russia, which after a course of 260 joins the Don near the village of Ust-Chopersk.

Chop-fallen, (*chop-fawln*), *a.* Having the lower chop depressed; — hence, dejected; discouraged; downcast; spiritless. — See **CHAP-FALLEN**.

Chop-house, *n.* A house where provisions ready dressed are sold; a luncheon-place; a restaurant.

I lost my place at the chop-house, where every man eats in a mess of broth, or chop of meat, in silence." — *Spectator*.

(*Com.*) In China, a custom-house where certain transit duties are levied.

Chop'in, *n.* [*Fr. chopine*; *Ger. schoppen*.] A liquid measure used in France, of nearly an English pint, Winchester measure. — In Scotland, a quart (Eng. wine measure), nearly half a Scottish pint, or 52-1017 cubic inches. — A high-heeled shoe worn by ladies. See **CHIOPPINE**.

Chopin (*shō-pāng'*), **FREDERIC FRANÇOIS**, a distinguished pianist and composer, b. at Zelazowawola, near Warsaw, Poland, in 1810. His compositions, confined to piano-forte music, include nocturnes, polonaises, mazurkas, valses, with a few concertos and sonatas. They are marked by a highly poetic fancy and abound in subtle ideas and graceful harmonic efforts. The so-called polonaises, &c., are not dance music, but dreamy compositions which suggest the rhythm and character of these dances. The celebrated Nocturnes of C. afford an opportunity for the exercise of the highest musical genius. D. 1849.

Chop'ness, *n.* A kind of spade.

Chop'per, *n.* The person who, or thing which, chops; as, a meat-chopper.

Chopping, *a.* Chubby; stout; plump; lusty.

"Both would own the fair and chopping child." — *Fenton*.

— Changing or veering about suddenly and without anticipation; as, a chopping sea.

— a. A chopin or chioppine. — A cutting or mincing.

Chopping-block, *n.* A block or log of wood on which anything is laid to be chopped.

Chopping-knife, *n.* A knife for chopping or mincing meat.

"Here comes Dormetus, with . . . a chopping-knife under his girdle." — *Sidney*.

Chop'py, *a.* Chappy; full of clefts, crevices, or cracks; as, a "choppy finger." — *Shaks*.

Chops, *n. pl.* See **CHOP**.

Chop'stick, *n.* A Chinese instrument of wood or ivory, used in place of a fork or spoon, for conveying food to the mouth.

Chop'tank River. It rises in Kent co., Del., flows S.W. into Md., and empties into the Chesapeake.

Choragic, *a.* Pertaining to the ancient chorus, or choragus.

Choragic Monument, in ancient Greece, a monument erected in honor of one who had gained a prize as "choragus," or organizer of the play and choros. The remains of two very fine monuments of this sort are still to be seen at Athens, viz.: those of Thrasyllus and of Lysicrates, the last popularly called the *Lantern of Demosthenes*. (Fig. 594.)

Choragus, *n.* [*Lat.*, from *Gr. choregos*; *choros*, a chorus, and *ago*, to lead.] The person who, among the ancient Athenians, superintended, or paid the expenses of, a chorus.

Choral, (*ko'ral*), *a.* [*From CHORUS, q. v.*] Belonging to, or composing, a choir or concert; as, "Choral symphonies." — *Milton*.

Choral, **Chorale**, *n.* (*Mus.*) A sacred melody, of a simple and uniform character, corresponding to the ordinary psalm-tunes.

Choralist, *n.* A member of a choir; a musician.

Chorally, *adv.* In the manner of a chorus or choir.

Chorazin, one of the cities in which Christ's mighty works were done, but named only in his denunciation (*Matt. xi. 21; Luke x. 13*). It was known to St. Jerome, who describes it as on the shore of the lake, 2 m. from Capernaum. Robinson locates it at the modern Tell-hün, 3 m. N.E. of Capernaum, but without good authority.

Chord, (*kōrd*), *n.* [*Lat. chorda*; *Gr. chor-de*, originally, a gut or intestinal cord.] The string of a musical instrument.

(*Mus.*) The harmonious combination of three or more musical sounds heard together. Before the introduction of simultaneous sounds, the word C. was solely applicable to a distended sonorous string; but after the discovery of *counterpoint*, and the formation and establishment of various combinations, a general term became necessary to express those combinations, and that which before applied only to a single string was now borrowed, and the sense extended to a union of the sounds of sev-

eral strings, pipes, or voices. In practical music there are several kinds of chords; i. e., the *fundamental chord*, consisting of the third, fifth, and eighth of the fundamental bass, or their inverses; — the *accidental chord*, which may result from either of two causes, viz., *anticipation* or *retardation*; — by *anticipation*, when their construction assumes some note or notes of a succeeding chord (a chord not yet struck); by *retardation*, when one or more notes are, by *suspension*, carried in to the composition of the succeeding chord; — the *anomalous* or *equivocal chord*, in which some interval or intervals are greater or lesser than those of the fundamental chord; — and the *transient chord*, in which some intermediate notes are introduced to smoothen the transition from one chord to another, but which do not form any component parts of the fundamental, and cannot be justly called either anticipations or suspensions.

(*Geom.*) The straight line which joins the two extremities of the arc of a curve; so called from the resemblance which the arc and chord together have to a bow and its string, the chord representing the string. In Fig. 177, the line DD is the chord of the arc IHD. The chord of a circular arc is obtained by multiplying the radius by twice the sine of half the angle which the arc subtends at the centre. Tables of chords are given in some of the older works on trigonometry; but they have been superseded by the tables of sines, which are much more convenient for trigonometrical calculations.

— v. a. To string, or provide with resonant chords.

"When Jubal struck the chorded shell." — *Dryden*.

Chordee, *n.* [*Fr. corde*.] (*Med.*) A painful affection of the penis, attending gonorrhœa.

Chore, *n.* [*Same as Eng. CHOR, q. v.*] A small job of work done about a house. (A familiar, colloquial word in the U. States.)

Chorea, *n.* [*Lat.*; from *Gr. choreia*, advancing.] (*Med.*) The disease commonly called *St. Vitus's Dance*. It shows itself by convulsive motions of the limbs, face, head, and trunk, varying extremely in extent and violence: the speech is often more or less affected, and frequently the mental energies become grievously impaired. It is most common in early life, as from the age of ten or twelve to puberty; and makes its approach gradually in persons chiefly of debilitated constitutions; the appetite is generally ravenous at first, and the bowels costive; various convulsive motions then ensue, and only cease during sleep, which, however, is seldom sound. This is one of those diseases which require special attention in their early stages. It usually disappears under judicious treatment, or as the patient grows up; but occasionally it terminates in epilepsy, paralysis, or idiocy. The proper mode of treatment is to restore the tone of the system by tonics, a nourishing diet, and frequent exercise in the open air.

Choregraphic, **Choregraphical**, (*kō-re-grāf'ik*), *a.* Relating, or pertaining, to choregraphy.

Choregraphy, *n.* [*Gr. choreia*, and *graphein*, to depict.] The art of representing dancing by signs, as singing is represented by notes.

Chorepiscopate, *a.* [*Gr. choreos*, place, and *episkopos*, bishop.] Pertaining to the power of a local bishop or suffragan.

Chorepiscopus, *n.* [*Lat.*; from *Gr. choros*, place, and *episkopos*, a bishop.] (*Eccl.*) A country bishop: a person appointed by a bishop in the early periods of Christianity to superintend the rural districts which appertained to his diocese, but which were at an inconvenient distance from the city in which he himself abode.

Choreus, **Choree**, *n.* [*Lat. choreus*; *Gr. choreiūs*.] (*Anc. Poet.*) A foot of two syllables, the first long and the second short; a trochee. — Also a foot consisting of three short syllables; a tritach.

Choriamb, **Choriambus**, **Choriamble**, *n.* [*Gr. choreiōs*, a trochee, and *iambos*, iambus.] (*Anc. Poet.*) A foot consisting of four syllables, of which the first and last are long, and the others short; that is, a choreus and trochee, and an iambus united.

Choriamble, *a.* [*Lat. choriambleus*.] Belonging to a choriamb.

Choric, *a.* Consisting of, or pertaining to, a chorus; as, a *choric ode*.

Chorillos, in Peru, a village and watering-place, 10 m. S. of Lima. It is much resorted to by the inhabitants of Lima. There are many ruins of Peruvian edifices.

Chorion, *n.* [*Gr., skin*.] (*Anat.*) The external membrane which envelops the *fetus in utero*, between which and the amnion there is a gelatinous fluid. Its interior surface is smooth, but externally it is shaggy and vascular.

(*Bot.*) The external membrane of the seeds of plants.

Chorist, *n.* [*Fr. choriste*; *L. Lat. chorista*, same as *chorialis*, from *Lat. chorus*.] A singer in a choir or concert.

Chorister, (*kor'is-ter*), *n.* A chorist; the leader of a choir.

Choristic, *a.* Choral; pertaining to a choir. (*R.*)

Chorley, a town of England, in Lancashire, 9 m. from Preston. *Manuf.* Chiefly cotton goods and yarns. *Pop.* 15,015.

Chorographer, *n.* [See **CHOROGRAPHY**.] One who practises the art of chorography.

Chorographic, **Chorographical**, *a.* Relating to, or consisting of, chorography.

"I have added a chorographical description of this terrestrial paradise." — *Raleigh*.

Chorographically, *adv.* In a chorographical manner.

Chorography, (*kō-rogr'a-fe*), *n.* [*Gr. choreos*, place, and *graphein*, to describe.] The description of a district,

Fig. 594. — MONUMENT OF LYSICRATES. (ATHENS.)

in contradistinction to geography (the description of the earth or of countries), and topography (the description of particular spots).

Choroid, *a.* [Gr. *chorion*, the chorion, and *eidos*, form.] (*Anat.*) A name given to several parts of the body, resembling the chorion in the multitude of their vessels.

Choroid Membrane of the Eye. The second tunic of the eye lying under the sclerotic, with which it has a vascular connection; it commences at the optic nerve, and passes forward with the sclerotic to the beginning of the transparent cornea, where it firmly adheres to the sclerotic by a cellular membrane, forming a white fringe called the *ciliary circle*; it then recedes from the sclerotic and cornea, forming a round colored disc called the *iris*, and its posterior surface is termed *urea*. It is very vascular, and its external stellated vessels are called *vasa verticosa*. Its internal surface is covered by a black pigment.

Choron, ALEXANDRE ETIENNE, a French musical composer, b. at Caen, 1771. He founded in 1817 a musical school for children, which afterwards took the name of *Institution Royale de Musique Religieuse*. His principal work is his *Principes de Composition des écoles d'Italie*. D. 1834.

Cho'ros Islands, 3 islands off the coast of Chili. The largest is in Lat. 29° 15' S., Lon. 71° 36' W.

Chorus, (*kō'rus*), *n.* [Lat. *chorus*; Gr. *choros*; W. *cor*, a round, a circle; Fr. *chœur*.] (*Ant.*) Among the Greeks, it denoted a number of singers and dancers employed on festive occasions, and also in the performance of plays. During the most flourishing periods of Attic tragedy, the *C.* consisted of a group of male and female personages, who remained on the stage as bystanders or spectators, and, during the intervals of the acting, chanted songs relating to the subject of the play. They sometimes even took part in the performance, by advice, comfort, consolation, or dissuasion. In early times it consisted of a great number of persons, sometimes as many as 50; but it was afterwards limited to 15. The leader of the *C.* was called *coryphæus*, and sometimes the *C.* was divided into 2 parts, which sang alternately. With the decline of ancient tragedy, the *C.* also fell into disuse. In recent times some attempts have been made to restore the ancient *C.*, as in Schiller's *Bride of Messina*.

(*Mus.*) A composition of 2, 3, 4, or more parts, each of which is intended to be sung by a plurality of voices. Also, the performers who sing those parts, and form what is called a *chorus*, or choral part of an orchestra.

Chose, *imp.* and *pp.* of *choose*, *q. v.*

Chose, (*shōz*), *n.* [Fr., Sp., and It. *cosa*; from Lat. *causa*, a cause.] (*Law.*) Personal property; a thing. — *Chose in possession.* A personal thing in possession. — *Chose in action.* A personal property whereof the owner has not possession (in the technical sense), but only a right of action to recover it; as a debt on bond or covenant.

Chosen, (*choz'n*), *pp.* of *choose*, (*q. v.*)

Chos'roes I., or KHOSROU the Great, king of Persia, succeeded Cabades, A. D. 531. He was fierce and cruel, but possessed many good qualities, and encouraged the arts and sciences. He concluded a peace with the Romans, but afterwards invaded their territories, and was repulsed by Belisarius. In the reign of Justinian II., he attacked the Romans again, but was defeated by Tiberius. D. of vexation, 579.

CHOSROES II., ascended the throne in 590, on the deposition of his father Hormidas, and is accused of having murdered him. His nobility conspired against him on account of his cruelties, and obliged him to fly to the Romans, who replaced him on the throne. He afterwards carried his army into Judea, Syria, and Egypt, and made himself master of Carthage, but was defeated by the Emperor Heraclius, and thrown into prison by his son, where he d. 627.

Chō'ta, a town of Peru, cap. of a prov. of same name, in the dep. Libertad, on a tributary of the Marañon, abt. 130 m. N. of Truxillo; *pop.* of prov. about 70,000.

Chō'ta Nagpoor, in Hindostan. See NAGPOOR.

Chonans, (*shō'a*), *n. pl.* (*Hist.*) The name popularly given, during the Vendean civil war in France, to the peasants of Brittany and Lower Maine. This name was gradually extended to all the Vendéans, and was originally derived from the cry of the screech-owl, (*chat-huant*), an imitation of which was a signal used during their nightly meetings. See VENDÉE.

Chough, (*tshuff*), *n.* [A. S. *ceogh*.] (*Zoöl.*) The *Pyrrhonorax graculus*, a bird of the fam. *Corvidæ*, somewhat larger and taller than the Jackdaw, whose habits it in many respects resembles.

Choule, *n.* Same as JOWL, *q. v.*

Choul'try, *n.* See CHOLTRY.

Cho'us, or Chœ'us, *n.* (*Antiq.*) A Greek measure of liquids, corresponding to the Roman *congius* and containing about six English pints.

Chouse, *v. a.* [Said to be from a Turkish word, *chiaus*, signifying an interpreter or envoy. A *chiaus*, who was sent by the Grand Signior to London in 1609, committed a gross fraud on the Turkish and Persian merchants residing in London, which obtained much notoriety. Hence, to *chiaus* came to signify to defraud, to cheat.] To cheat; to trick; to impose upon; to defraud. Generally preceding *of* or *out of*; as, to be *choused out of* money.

"Freedom and zeal have choused you o'er and o'er." — Dryden.

n. One easily cheated or imposed upon; a tool; a gull; a simpleton; as, "A sottish *chouse*." — Hudibras.

—A trick, sham, or imposition.

Chout, *n.* (*Com.*) In India, a fourth part of the clear revenue.

Chouteau, AUGUSTE and PIERRE, 2 brothers, founders of the city of St. Louis, Mo., *q. v.*, 1,764.

Chow'an, in N. Carolina, a N.E. co., bordering on Albemarle Sound, and bounded W. by the Chowan River; *area*, about 240 sq. m. Its surface is nearly level. Its name is derived from the Chowanokes, a tribe of Indians who inhabited that country. *Cap.* Edenton. *Pop.* in 1890, 9,170.

Chowent, (sometimes called *ATHERTON*), a thriving town of England, co. Lancaster, 10 m. W.N.W. of Manchester, and 6 S.E. of Wigan. *Manf.* Machinery and mills. *Pop.* 8,117.

Chow'-chow, *a.* Mixed; mingled together; as, *chow'-chow* pickles.

—*n.* A kind of mixed pickles, originally brought from China.

Chow'-chow'-chop. In China, the last lighter-load of goods sent on board a ship to complete her lading.

Chow'der, *n.* [Sp. *chode*.] (*Cookery.*) In the United States, a dish of fish boiled with biscuit, onions, &c. — In Spain, a paste made of milk, eggs, sugar, and flour, (called *chode*.)

—In some parts of England, a vender of fish.

—*v. a.* To make a chowder.

Chow'der-beer, *n.* A beverage made in the W. of England, by boiling black spruce in water, and mixing molasses with it.

Chow'ry, *n.* [Hind. *chamri*.] A fly-flapper; a brush, or whisk used in India, to keep off flies.

Choy'-root, *n.* Same as CHAY-ROOT, *q. v.*

Chrematistics, *n. sing.* [Gr. *chrēmata*, wealth.] A name given by French economists to the science of wealth, considered as a branch of the science of political economy.

Chreotechnics, *n. sing.* [Gr. *chreios*, useful, and *technē*, art.] The science of the useful arts, as commerce, agriculture, mechanics, and manufactures.

Chrestomathy, *n.* [Gr. *chrestos*, useful, and *mathein*, to learn.] Literally, that which is useful to learn. The Greeks frequently formed commonplace books by collecting the various passages to which, in the course of reading, they had affixed the mark *χ* (*chrestos*). Hence the name sometimes applied to a collection of useful pieces out of the best authors.

Chris'm, (*kriz'm*), *n.* [Gr. *chrisma*, from *chrīō*, *chrizō*, to anoint.] (*Eccl.*) The name given in the Roman Catholic and Greek churches to a mixture of oil and aromatic balsams consecrated with great formality by the bishop on Holy Thursday, and used in baptism, confirmation, and ordination. That used in extreme unction, likewise consecrated, is merely pure oil.

Chris'mal, *a.* Pertaining to chris'm.

Chris'mation, *n.* Act of bestowing chris'm.

Chris'matory, *n.* A vessel to hold the oil for chris'm.

Christ, [Gr. *Christos*, anointed, answering to *Messiah* in Heb.] The name given as a title of eminence to Jesus our Saviour, whom, in the words of St. Peter (Acts x. 38), "God anointed," as king, priest, and prophet, "with the Holy Ghost and with power."

Christ-church, a town of England, in Hampshire, situated in the New Forest, 99 m. S.W. of London. *Manf.* Ale, and clock-work springs.

Christ-cross-row, *n.* The alphabet; still sometimes so called from a former practice of writing it in the form of a cross, or from the cross often set before it.

Christen, (*kris'n*), *v. a.* [A. S. *Cristman*, from Gr. *Christos*, Christ.] To initiate into the Christian Church by naming and baptizing.

—To name; to give a name to; to denominate; as, to *christen* a ship.

Christendom, *n.* [A. S. *Cristendom*—*Cristen*, Christian, and *dom*, rule, power, jurisdiction.] A word sometimes employed in such a sense as to comprehend all nations in which Christianity prevails; more commonly all realms governed under Christian sovereigns and institutions. Thus European Turkey, although three-fourths of its inhabitants are Christians, is not in ordinary language included within the term *Christendom*. The number of Christians inhabiting Europe and America, and scattered in the other parts of the globe, was made up as follows in 1892:—

Roman Catholic Church.....	230,866,600
Protestant Church of all denominations.....	143,237,700
Greek and other Oriental Churches.....	102,976,000

477,080,300

—Countries or regions inhabited by Christians.

"An older and a better soldier, none that *Christendom* gives out." — Shaks.

—The whole body of Christians.

Christian, (*kris'tyan*), *n.* [Gr. *Christianos*, from *Christos*, Christ; Lat. *Christianus*.] A professed follower or disciple of Christ; a believer in the religion of Christ; one united to Christ.

"A Christian is God Almighty's gentleman." — Hare.

—In an extended sense, an inhabitant of Christendom; one born of Christian parents, in a Christian country.

—*a.* Relating to Christ or Christianity; pertaining to, taught by, or received from Christ; as, the *Christian* religion. — Professing the religion of Christ; as, a *Christian* people.

—Ecclesiastical: pertaining to the Church of Christ; as, a *Christian* court.

Christian name, the name given in baptism, as distinguished from the gentililious or surname.

Christ, (Order of.) *n.* (*Hist.*) On the abolition of the Templars by Clement V., in 1312, King Dionysius of Portugal preserved the order in his dominions, but changed its title in 1317 to that of *The Knights of Christ*, or *The Order of Our Lord Jesus Christ*. This arrangement was sanctioned by Pope John XXI. or XXII., in 1319. The seat of the order was transferred from

Castro-Marino to Thomar in 1366. The new order afterwards attained such power that King John III. was obliged to obtain an edict from Pope Hadrian VI., 1522, by which the grand-mastership of the order became vested in the kings of Portugal.

Christ, (Order of.) *n.* (*Hist.*)

A papal order of merit, created (as a branch of the Portuguese order of same name) by Pope John XXII. It consists of only one class, who wear a star and decoration, as represented in Fig. 595.

Christian I., [Dan. *Christiern*.] king of Denmark and Norway from 1448 to 1481.

CHRISTIAN II., the Cruel, succeeded his father John, 1513. His cruelties and exactions caused his name to be universally execrated. The nation rallied round Gustavus Vasa, and C. was compelled to sign his own abdication, 1523. He began wandering over Europe in the hope of enlisting partisans to his cause, but was at last taken prisoner, and thrown into confinement, where he d. 1559.

CHRISTIAN III., succeeded his father Frederick I., and d. 1559.

CHRISTIAN IV., succeeded his father Frederick II. in 1588; spent his life in the German wars, and d. 1648.

CHRISTIAN V., succeeded Frederick III. in 1670, and d. 1699 after a long and fruitless war against Sweden.

CHRISTIAN VI., succeeded his father Frederick IV., 1733 and d. 1746.

CHRISTIAN VII., succeeded his father Frederick V. in 1772 and in the same year married Caroline Matilda, sist. of George III. of England. The dissipation of his early life had enfeebled his energies, and rendered him unfit for government. The management of the state was, consequence, seized by Count Bernstorff, who had possessed the entire confidence of the king's father. Bernstorff, however, was soon forced to retreat before Stenensee, who exercised unbounded influence over the king and his imprudent young queen. But innovations of despotic tendency soon drew upon this minister the hatred of the nation. The queen-dowager seeing that made it an occasion for satisfying her ambitious nature by attaching herself to the malcontents; and in 1772 she succeeded in persuading the vacillating king to draw up an order of arrest for Struensee and the young queen. Bernstorff was recalled from Hamburg. In 1784, being incapacitated by mental disease, his son Frederick VI. came to the head of the government, as joint regent with the queen-mother. C. died 1808.

CHRISTIAN VIII., Duke of Schleswig-Holstein and Louburg, succeeded Frederick VI. in 1839, as king of Denmark only, and d. 1848, after an unimportant reign of 9 years.

CHRISTIAN IX. (of SCHLESWIG-HOLSTEIN-SONDERBURG-GLÜCKSBURG), b. 1818, succeeded Frederick VII. as king of Denmark, in 1863. His 2d son was, in 1863, elected king of Greece, and his two eldest daughters are married to the heirs-apparent of the crowns of Great Britain and Russia. His grandson, Prince Karl, was married to Princess Maud, of Wales, in 1896.

Christ'ian, in Arkansas, a township of Independence co.

Christ'ian, in Illinois, a S. central co.: *area*, 675 m. It is bounded on the N. by the Sangamon River; its surface is nearly level, and the soil fertile. C. Taylorsville.

Christ'ian, in Kentucky, a S.W. co., bordering on Tennessee; *area*, 700 sq. m. It is drained by a number of small streams. The surface is undulating. The soil the level parts is fertile; and the hills contain rich iron mines. The rock underlying the county is cavernous limestone. There are here also several terranean channels. *Cap.* Hopkinsville.

Christ'ian, in Missouri, a S. W. county; *area*, abt. 500 sq. m. It is drained by James River, Swan Creek, and smaller streams. The surface is hilly; the soil is generally well timbered, and fertile in the valleys. Iron, copper, and lead are found. *Cap.* Ozark.

Christia'na, a river which rises in Cass co., Mich., flows into the St. Joseph's River at Elkhart in Indiana.

Christia'na, in Delaware, a hundred of New Castle co.

—, or CHRISTIANA BRIDGE, a post-village of New Castle on Christiana Creek, about 10 m. S.W. of Wilmington; *pop.* 443.

Christia'na, in Minnesota, a post-village of Dakota co., 30 m. S. of Minneapolis, and 22 N. of Faribault.

Christiana, in Pennsylvania, a post-village of Lancaster co., about 20 m. E. by S. of Lancaster.

Christiana, in Wisconsin, a post-village and town of Dane co., on Koshkonong Creek, 20 m. S.E. of Madison.

—a township of Vernon county, 8 miles North of roqua.

Christiana Creek, in Delaware, New Castle formed about 6 m. W. of Wilmington by the union of 3 small creeks; it flows E., unites with the Brandywine at Wilmington, and enters Delaware Bay 2 m. below.

Christ'ian Era, *n.* (*Chron.*) Same as ANNO DOMINI, *q. v.*

Christian Connection, *n.* (*Eccl. Hist.*) This nomination was originated in the early years of

Fig. 595.

BADGE OF THE PAPAL ORDER OF CHRIST.

present century, by the union of three secessions from other churches—the "O'Kelly" secession from the Methodist Church in 1793; a secession from the Baptist Church in Vermont in 1800; and a secession from the Presbyterian Church in Kentucky and Tennessee, which took place in 1801, and formed the Springfield Presbytery. The General Conference meets every four years. At one of these meetings, where fifty conferences were represented, the following resolution was reiterated: "That the name Christian is the only name of distinction which we take, and by which we, as a denomination, desire to be known, and the Bible our only rule of faith and practice." The government of the convention is congregational. The leading doctrines of the evangelical churches, with baptism by immersion, are generally recognized. They have two colleges—Christian Union College, at Merom, Ind., and Graham College, in North Carolina; academies at Wolfborough, N. H., and Starkey, N. Y., and several periodicals. There were in 1895 1,300 churches and 94,870 communicants, with church property valued at \$1,037,202.

Christiania, a sea-port town, and cap. of the kingdom of Norway, on the Agger, at the head of a very deep gulf or *fjord*, to which it gives name; 162 m. E.S.E. of Bergen, 242 S. by E. of Drontheim, and 255 W. by N. of Stockholm. The town is well laid out, lies in a picturesque situation, and has some fine public buildings. It is the residence of the Norwegian viceroy, and the seat of the Diet. The Gulf of C. unites with the furthest N. point of the Skager-rack; though in parts narrow, and difficult of navigation, it has deep water throughout, there being 6 to 9 fathoms close to its quays. C. is the seat of a noble university, and has many scientific, educational, and literary institutions. *Manf.* Woollens, glass, tobacco, hardware, soap, leather, corlage. *Prin. Exp.* Timber, deals, iron and nails, bones, bark, and salted fish. The deals shipped hence have always been held in the highest estimation, in consequence of the sap being carefully cut away. This city was built by Christian IV. of Denmark, in 1624. *Pop.* (1891) 150,450.

Christianism, *n.* [Fr. *christianisme*.] The Christian doctrine; Christianity.

Christianity, *n.* [L. Lat. *Christianitas*; Gr. *Christianismos*, from *Christos*, the anointed one; It. *Christianità*; Fr. *Chrétienté*; Sp. *Christiandad*.] The religion instituted by Jesus Christ. From the period when the disciples were called Christians first in Antioch, (Acts xi. 26,) down to the present day, the main doctrines of the gospel, and the great moral principles which it reveals and confirms, have been preserved without interruption in the Church. But notwithstanding this substantial unity, it cannot be denied that the character of the religion has been very materially colored throughout all its history by the circumstances and genius of different nations and ages. The first marked forms of opinions which acquired consistency among the general body of Christians tended in two very different directions. The *Judaizing* Christians clung to the ordinances of the elder religion; but although, under the names of Nazarenes, &c., they existed as late as the 4th century, they ceased after the 1st to exercise any very extensive influence on the Church. The *Speculative* Christians placed figurative interpretations both on the external facts and mysteries of the religion; or sought to connect it with the philosophical and theological systems of the ancient world. Apollon of Alexandria was the first teacher, it is commonly said, who introduced this speculative tendency into Christianity; and St. Paul, while he does not condemn Apollon, dwells on the evils produced by those who from his teaching deduced as it were a separate body of doctrine. (1 Cor. iii.) In this way arose: 1. The early heretics, the *Nicodaitans* and followers of Cerinthus, and the *Gnostics*, professors of the "knowledge falsely so called" (*ἐνδύματα γνῶσεως*) of St. Paul. 2. At a later period, the *Manichæans*, who imported into Christianity the notion of the rival principles of good and evil, which continued for many ages to possess adherents. 3. Within the Church itself, the *Alexandrian School of Theology*, which has exercised a more permanent influence. This school, in the 2d and 3d centuries, became partially tinged with the sentiments of Platonic philosophy; and was characterized by the acute and refining spirit of the East. Like the Gnostics, its chief doctors encouraged the notion of a mystical or second meaning in the revelations of the faith, of which the key was in the possession of the learned only, (Clemens, Origen, &c.) In the meantime, the main body of believers, comparatively unaffected by the influence of science and speculation, was gradually acquiring new views of a different and more positive character. During the first 3 centuries after the apostolical times, the opinions respecting the authority of the priesthood, the attachment to forms and ordinances, the honor paid to individual purity of life, (and especially to constancy under persecution,) gradually and steadily increased and strengthened. In the West, and particularly in Africa, these tendencies became peculiarly strong. The *Montanists*, *Donatists*, and *Novatians* separated successively from the Church, on the score of its detection from an imaginary standard of personal purity; and when Africa began to have a school of theology of her own (Tertullian, Cyprian, and others to Augustine), this was the direction of its labors. In that theology all is dogmatical, nothing speculative. Everything is taken in its most literal and naked sense: God himself is not personal only, but invested almost with the attributes of a human agent. But doctrines and ordinances are as definite as possible, and the utmost rigor of practice enjoined. The history of the African Church affords a momentary commentary on these strainings after imaginary perfection. After 2 centuries of discord and decay from the time of

Augustine, it was not only subdued but obliterated by the first assault of the Mohammedans. The early heretics had entertained theoretical notions respecting the inferiority of Christ to the Father; but the *Arians*, in the last half of the 3d century, were the first to preach it as the doctrine of the Church, and to seek to confirm it by appeal to antiquity. The Council of Nice (A. D. 325) condemned this opinion; but the Arians and other sects differing from the Church by various shades of opinion on the same subject, continued to exist until the 6th century; during which these controversies partly died away in the West, amidst the misery and barbarism of the age, and partly were extinguished by the authority of the Church. It was thus that the governors of the Church were first driven to protect its fundamental doctrines by reducing them to formal propositions embodied in creeds and the canons of councils (especially the 6th Ecumenical or general, which were held from A. D. 381 to 680). From this period, the history of Christianity embraces that of the separation of the Eastern and Western Churches, A. D. 716 to the 11th century; that of the Western Reformation, which may be said to commence with the sectaries of the 13th century, and end with the establishment of Protestantism in the 16th; that of the struggle with Mohammedanism; of foreign missions; and of internal developments,—all too voluminous for anything more than reference. All that concerns the dogmas or principles, and history, of the different Christian creeds, will be found under their proper heads.

Christianization, *n.* Act or operation of converting to Christianity.

Christianize, *v. a.* To convert to Christianity; to make Christian; as, to *Christianize* the heathen.—To impregnate or imbue with Christian principles.

"The principles of Platonic philosophy, as it is now *Christianized*."—Dryden.

Christian-like, *a.* Becoming a Christian; as, a *Christian-like* mode of life.

Christianly, *adv.* Like a Christian; in a Christian manner.

Christiansand, a fortified sea-port town of Norway, near its S. extremity, dist. Mandal, on the Skager-rack, at the head of a deep fiord, 160 m. S.W. of Christiania; Lat. 58° 8' N., Lon. 8° 3' E. The harbor is very secure and well-sheltered. *Exp.* Timber, and immense quantities of fish and lobsters. *Manf.* Sail-cloth; ship-building is also an important branch of industry. C. ranks as the 4th town in Norway, and is the seat of a governor. It was founded in 1641 by Christian IV. of Denmark, who intended to make it the chief naval port of his dominions. *Pop.* 10,876.

Christiansburg, in Kentucky, a post-village of Shelby co., 38 m. E. from Louisville.

Christiansburg, in Ohio, a village of Champaign co., about 55 m. W. of Columbus.

Christiansburg, in Virginia, a post-village, cap. of Montgomery co.

Christiansoe, (*kre'ste-an-soo*), a group of islands in the Baltic, 12 m. from Bornholm; Lat. of light-house, 55° 19' N., Lon. 15° 12' E.

Christiansstad, a town of Sweden, 57 m. from Carlscrona. *Manf.* Gloves, and linen and woollen fabrics. *Pop.* 6,599.—Also, a district of which the town is the cap.; area, 2,400 sq. m. It is generally fertile, and contains the valley of Helge. *Prod.* Hemp, flax, corn, and hops. *Pop.* 180,000.

Christiansted, in the Danish West Indies, a town on the S.E. coast of the island of St. Croix. It is the seat of the Danish governor-general, and chief commercial town in the Danish islands; its port is of the first order, and well defended. *Pop.* 5,700.

Christiansville, in Virginia, a post-village of Mecklenburg co., about 75 m. S.W. of Richmond.

Christiansville, in L. Canada, a village of Rouville, 28 m. S.E. of Montreal; *pop.* about 1,300.

Christicolist, *n.* [Lat. *Christicola*; *Christos*, and *colo*, to worship.] A worshipper of Christ.

Christiern, kings of Denmark. See CHRISTIAN.

Christina, QUEEN OF SWEDEN, b. 1626. She was the daughter of the great Gustavus Adolphus, and on her father's death, in 1632, was crowned queen, being then only six years of age, with the five principal ministers of state appointed by parliament her guardians. C. was educated under the eye of the celebrated Swedish chancellor Oxenstiern, and early showed great avidity for learning, as well as a considerable share of moral eccentricity. She was fond of wearing men's apparel, and of following masculine habits and pursuits; hence she acquired quite an Amazonian reputation. On the termination of her minority, in 1644, C. entered upon administrative business with a zeal and an ability which astonished her people. She put an end to the war with Denmark, begun that year; and in 1645, by the treaty of Brömsebro, obtained some new provinces. She next turned her attention to the promotion of the interests of commerce, education, and learning. She was herself, perhaps, the most accomplished woman of that age, understanding no fewer than six languages, and maintaining an autograph correspondence with the most learned men of foreign nations. Gassendi sent her his mathematical works; Descartes, Grotius, Salmasius, Bochart, Vossius, Meibom, and other learned men, sought her court, and were received with the most flattering distinction. Descartes ended his days at Stockholm; and Salmasius, under her patronage, entered the lists against the republicanism of Milton. C. studied chemistry, astronomy, and even alchemy and astrology, with the most celebrated professors. Having, in 1649, settled the regal succession in favor of her cousin Prince Carl Gustav of Pfalz-Zweibrücken, she for some time conducted

her government in a manner that promised the surmounting of the temporary difficulties of the realm; but, having resolved to abandon Protestantism, she, in 1654, in an assembly of the states at Upsala, abdicated her crown, reserving to herself an annual income of 200,000 dollars. She forthwith left Sweden, and travelled in male attire to Brussels, where she made a secret profession of the Roman Catholic faith. At Innsbruck, she made a more formal and public avowal of it. She next rode to Rome, where the reception accorded to her was an ovation. There she did homage to Pope Alexander VII., and received the honor of his name, in addition to her own, being thenceforward styled Christina Alexandra. In 1656 she went to France, where she lived principally at Fontainebleau, Compiègne, and Paris. During the year following, she excited universal horror and disgust by the cruel assassination of her master of the horse, the Marquis de Ménégeschi, who had brought this fate upon himself by betraying the queen's secrets. In 1660 her successor on the Swedish throne died, and C. thereupon repaired to Sweden to claim it for herself; but her conversion to the Roman Catholic Church proved a bar to her resumption of the crown, and she was compelled to return to Rome in 1668, where she died in 1689.

Christina, MARTA, daughter of Francis I., king of the Two Sicilies, and mother of Isabella II., the deposed queen of Spain, was b. 1816. She was married to Ferdinand VII. in 1829, and took an active part in the affairs of Spain from 1830 to 1854. As queen-regent she governed arbitrarily, and in 1854 was obliged to abdicate. D. 1878.

Christine de Pisan, a French poetess of Italian descent, b. at Venice, 1363. She wrote a great number of works, of which the principal, her *Acts and Manners of Charles V. of France*, has been published in the collections of Petitot and Michaud. D. 1431.

Christinos, (*kris-tē'noz*), *n. pl.* [Hist.] See CARLISTS.

Christless, *a.* Without the knowledge of Christ; having no faith in the Redeemer.

Christmas, (*kris'mas*), *n.* [*Christ* and *mass*.] (*Chron.*) The festival of Christ's nativity, observed annually on the 25th day of December.—Christmas day, or the season of Christmas; as, *Christmas* holidays.

"At Christmas play, and make good cheer,
For Christmas comes but once a year."—Tusser.

Christmas-box, *n.* A box in which little presents are deposited at Christmas; the presents themselves.

"When time comes round, a Christmas-box they bear,
And one day makes them rich for all the year."—Gay.

Christmas-day, *n.* The 25th day of December; the day on which the festival of Christmas is celebrated.

Christmas-flower, **Christmas-rose**, *n.* (*Bot.*) The black hellebore, *Hell. b. niger*.

Christmas Island, in the Pacific Ocean, was discovered by Capt. Cook, Dec. 24, 1777; Lat. 0° at the N. end, Lon. 157° 30' W.

Christmas Sound, at the S. extremity of S. America, 120 m. N.W. of Cape Horn, was discovered by Cook, 1774.

Christmasville, in Tennessee, a village of Carroll co., on the Obion River, 120 in. of Nashville.

Christology, *n.* [Gr. *Christos*, and *logos*, discourse.] A discourse or treatise concerning Christ.

Christopher, HENRI, King of Hayti, was an African slave, b. in Grenada, West Indies, 1767, who received his freedom as a reward of faithful service. On the outbreak of the negro insurrection in St. Domingo, 1801, C. became one of its leaders, and attracted by his energy and ability the attention of Toussaint l'Ouverture (q. v.), who conferred upon him a divisional military command. After the deposition of Toussaint, C. served under his successor, Dessalines, and waged a war of increasing ferocity against the French, who, in 1803, were compelled to evacuate the island. In 1811, C. obtained undisputed possession of a portion of the island with the title of *King of Hayti*. This mushroom monarch's reign was that of a sanguinary despot, occasioning ultimately a successful revolt of his black subjects, whereupon C. committed suicide in 1820.

Christopher I., KING OF DENMARK, succeeded to the throne by election in 1252, and, dying in 1259, was succeeded by his son Eric VII.

CHRISTOPHER II., KING OF DENMARK, son of Eric VII., b. 1276, succeeded his brother Eric VIII. in 1319. His reign was marked by continuous disputes with the Church, the nobility, and his own family. In 1325, C. was compelled to abandon his kingdom, which he recovered temporarily in 1330, was shortly after imprisoned by his nobles, and d. 1333.

CHRISTOPHER III., (OF BAVARIA) KING OF DENMARK, NORWAY, and SWEDEN, was elected to these several thrones in 1440, 1441, and 1442, respectively. In 1441, he put down a formidable revolt in Jütland; afterwards adopted many measures for the prosperity of his kingdom, and by transferring the seat of royalty from Renskilde to Copenhagen, made the latter city the cap. of Denmark, and the rival of the Hanseatic towns in commercial importance. This able monarch d. in 1448.

Christopher (St.), a Christian martyr who is supposed to have lived in the 3d century of our era. He was a native either of Syria or Palestine, and is believed to have suffered martyrdom by decapitation in the reign of the Roman emperor Decius. The Roman Catholic Church celebrates his festival on the 25th of July.

Christopher's (St.), in the West Indies. See KIT'S.

Christ's Hospital, a famous charitable educational establishment of London, founded in 1552, and commonly called the *Blue Coat School*.

Chromaces, *n. pl.* [Gr. *chroa*, color.] A genus of

pellucid gems, comprehending all those of various colors, as viewed in different lights. (Not technical.)

Chromate, *n.* (*Chem.*) Chromic acid combines with bases to form three classes of salt, — basic, neutral, and acid. Most of the chromates are highly colored. The more important are described under CHROMIC ACID, *q. v.*

Chromatic, *a.* [*Fr. chromatique; Gr. chrōmatikos*, from *chroma*, color.] Relating to color; as, a *chromatic tint*.

(*Mus.*) Applied to a series of notes at the distance of a semitone from each other. Such a series is produced by dividing the whole tones of the diatonic scale into semitones, so that with the two diatonic semitones, already in the natural scale, the octave is divided into 12 semitones. Ascending *C*. passages are formed by the whole tones of the diatonic scale being raised or elevated by a sharp or a natural, according to key, and descending passages by their being lowered by a flat or a natural. It is usual to speak of the *C*. scale, but that is wrong, as it is only a melodious progression of semitones, certain notes of which belong to, and form the diatonic scale, showing that the foundation of the system of music does not rest on a *C*. basis, but on the natural diatonic progression of sounds. — The term *C*. probably denotes that the musical characters were written in colors, or suggests the variety of shades which, figuratively, characterize the *C*. series of notes.

Chromatic thermometer. See THERMOMETER.

Chromatically, *adv.* In a chromatic manner.

Chromatics, *n. sing.* (*Optics.*) That part of the science which treats of the colors of light and of natural bodies. This is a very important branch of physical science, and one which of late years has been prosecuted with an assiduity every day rewarded by important discoveries. Desirous of availing ourselves of the latest possible information, we refer to the article SPECTRUM (CHROMATIC), for an account of that science, as it will then stand.

Chromatography, *n.* [*Gr. chrōma*, color, and *graphein*, to describe.] A treatise on colors.

Chromatology, *n.* [*Gr. chrōma*, and *logos*, a discourse.] Same as Chromatography.

Chromatophore, *n.* [*Gr. chrōma*, and *pherein*, to carry.] One of the pigment cells in animals.

Chrome, *n.* See CHROMIUM.

Chrome Iron-ore, or CHROMITE, *n.* (*Chem.*) An important ore of chromium, from which are obtained the salts of chromine used in commerce. The mineral, which consists of protoxide of iron and sesquioxide of chromium, is reduced to powder, fused in a reverberatory furnace with half its weight of nitre, and stirred continually. In this manner the chromium is converted into chromate of potash. The mass is dissolved out with hot water, and the silica and alumina are precipitated by some strong acid, which at the same time converts the neutral chromate into the acid bichromate.

Chrome-green, *n.* (*Painting.*) A compound dark-green pigment of which chrome-yellow is the principal coloring substance.

Chrome-orange, *n.* (*Painting.*) Dichromate of lead, which is of a splendid orange color, is obtained by adding to a solution of nitrate of lead a solution of chromate of potash, to which an equivalent of hydrate of potash has been added. It is obtained of a still more brilliant color by fusing together five parts of nitre and one part of chromate of lead. Chromate of potash and dichromate of lead are formed, and the former salt is removed by washing.

Chrome-red, *n.* (*Painting.*) A red pigment obtained from a preparation of red lead.

Chrome-yellow, *n.* (*Painting.*) A modern yellow pigment, of which there are many varieties, mostly chromates of lead, in which the latter metal more or less abounds. They are distinguished by the purity, beauty, and brilliancy of their colors.

Chromic Acid, *n.* (*Chem.*) This acid occurs in nature in combination with lead as chrome-yellow, and with iron as chrome iron-ore. It is prepared by adding one measure of a warm saturated solution of bichromate of potash to one and a half of concentrated sulphuric acid. The acid is added in small portions at a time, the solution being allowed to cool between each addition. Chromic acid crystallizes out, and bisulphate of potash remains in solution. The crystals of chromic acid must be removed with a platinum knife, and set to drain in a funnel stopped with asbestos. They must not be heated or brought into contact with organic substances. As soon as the best part of the sulphuric acid has drained away, the crystals are dissolved again and re-crystallized under the air-pump. Chromic acid crystallizes in fine red needles, which are very deliquescent, and soluble in water. Although chromic acid is one of the most powerful oxidizing agents known, it is easily decomposed by light and organic substances. When absolute alcohol is poured on crystals of chromic acid, the former is oxidized with sufficient energy to cause combustion, the chromic acid being reduced to sesquioxide of chromium. Sugar and other organic substances have the same power of decomposing chromic acid. Chromic acid bears great analogy to sulphuric acid. Both these acids are isomorphous; they are both monobasic, and they form an acid and a neutral salt. The most useful of these compounds of chromic acid is the bichromate of potash, which forms fine red tubular crystals, which are anhydrous, and remain unchanged by exposure to the air. Bichromate of potash dissolves in ten parts of cold water, the solution having a fine red color and an acid reaction. The chromate is easily formed from the bichromate by neutralizing its solution with carbonate of potash, and crystallizing. Both the chromate and the bichromate are extensively used in dyeing and calico-printing. Bichromate of potash is employed in con-

junction with sulphuric acid in the laboratory as an oxidizing agent, and in commerce in the same manner in bleaching sperm-oil. The bichromate of ammonia is used in photography. Except the chromate of lead, which is described under CHROME-YELLOW, the other chromates and bichromates are unimportant.

Chromite, *n.* (*Min.*) See CHROME IRON-ORE.

Chromium, CHROMIUM ORE, CHROME, *n.* [*Gr. chroma*, color; *Fr. chrome*.] (*Chem.*) A pretty rare element, first shown to be a metal by Vanquelin, in 1797. Its most important ore is the chrome iron-stone, a compound of protoxide of iron and sesquioxide of chromium. It is also found as chromate of lead, from which mineral Vanquelin first obtained it in the metallic state. To effect its reduction, oxide of chromium is intimately mixed with powdered charcoal, and made into a paste with oil. It is then introduced into a crucible lined with charcoal, and carefully luted down. The whole is exposed to the action of a powerful wind-furnace for several hours, and an impure mixture of carbon and chromium is formed in the crucible. Mr. Fremy has lately succeeded in procuring chromium in the form of cubical metallic masses, by passing the vapor of sodium over the sesquioxide heated to redness. By heating sesquichloride of chromium with potassium, a gray metallic powder is formed, which consists of chromium in an allotropic condition. Chromium is a light-gray metal, very brittle, non-volatile, and non-magnetic. As might be inferred from the difficulty with which it is reduced, chromium, in the metallic state, has not yet received any useful application. Its oxide and many of the chromates have received useful applications in calico-printing and china-painting. — Equivalent, 52.1; sp. grav., 5.9; symbol, Cr.

Oxides of Cr. Chromium forms several compounds with oxygen, of which the most important are four: — Protoxide, CrO; sesquioxide, Cr₂O₃; chromic acid, CrO₃; perchromic acid, Cr₂O₇. — *Protoxide of chromium* can only be obtained in the state of hydrate on adding caustic potash to a solution of the protochloride. It absorbs oxygen with great avidity, decomposing water and setting free the hydrogen, becoming converted into a hydrated intermediate oxide. The protoxide of chromium forms a double sulphate with sulphate of potash, closely corresponding to the double sulphate of iron and potash in form and composition. The crystals are of a fine blue color. — *Sesquioxide of chromium* is easily obtained as a grayish-green hydrate, by boiling with alcohol a solution of bichromate of potash acidulated with sulphuric acid. The alcohol seizes half the oxygen of the chromic acid, leaving the sesquioxide free to form a sulphate with the sulphuric acid. On the addition of ammonia, a bulky, gelatinous, grayish-green precipitate of hydrated sesquioxide is produced, which, when dry, contains ten equivalents of water. In the hydrated condition it is readily soluble in acids, forming salts which do not crystallize. These salts, like the oxide, exist under several conditions, each condition giving rise to dissimilar properties. As this subject is rather complicated, the reader is referred to the article ISOMERISM, where the subject is fully treated. The anhydrous green oxide is not decomposed by heat; hence it is of great use in china and enamel-painting. It is generally prepared for this purpose by exposing chromate of mercury to a red heat. The difficulty with which this oxide is decomposed by ordinary chemical reagents has rendered it useful as a pigment for printing bankers' cheques and other important documents; but a great objection to its use is the fact of its being so hard that the pens used for writing upon drafts printed by it are speedily worn out. Oxide of chromium is the coloring-matter of the emerald, pyrope, greenstone, and other minerals. — *Chromic acid* has already been considered, under that head. — *Perchromic acid* is formed by adding an aqueous solution of peroxide of hydrogen to chromic acid. The liquid assumes a deep-blue color, but is rapidly decomposed with evolution of oxygen. If, however, the solution is agitated with ether, the perchromic acid is isolated without decomposition, and may be made to form pretty stable salts with ammonia and certain organic bases. Strong acids decompose these salts, setting free the blue perchromic acid.

Chlorides of Cr. There are two principal chlorides of chromium, — the *protochloride*, CrCl, and the *sesquichloride*, Cr₂Cl₃. The former is formed by passing a dry current of hydrogen over the sesquichloride heated to redness; hydrochloric acid is given off, and the protochloride remains in the form of a white powder, soluble in water, with which it forms a bluish-green solution that rapidly absorbs oxygen from the air. — *Sesquichloride of chromium* is formed in beautiful transparent plates of the color of peach-blossoms by passing a current of dry chlorine over a mixture of sesquioxide of chromium mixed with charcoal contained in a porcelain tube heated to redness. Being volatile, the sesquichloride condenses at the cool end of the tube in the beautiful form just described. Thus prepared, it is quite insoluble in water and acids. Solution of sesquichloride of chromium is prepared from the hydrated sesquioxide by dissolving it in hydrochloric acid. The solution, on evaporation, yields green crystals, containing two equivalents of hydrochloric acid and ten equivalents of water. It is a singular fact that only two-thirds of the chlorine contained in the solution of this salt is precipitated by nitrate of silver.

Chromograph, *n.* [*Gr. chroma*, color, and *grapho*, to write.] A colored engraving.

Chromo-lithography, *a.* Relating to, or printed by, chromo-lithography.

Chromo-lithography, *n.* An adaptation of lithography to oil-printing. See LITHOGRAPHY.

Chromule, *n.* (*Bot.*) Same as CHLOROPHYL, *q. v.*

Chronic, **Chronical**, *a.* [*Fr. chronique; Gr. chronikos*, from *chronos*, time, duration.] Relating to time.

(*Med.*) Continuing or remaining for a long time; opposed to *acute*, and applied to all diseases which have passed their first or active stage without being cured.

Chronicle, (*kron'-kl.*) *n.* [*Fr. chronique*.] (*Liter.*) An historical account of facts or events disposed chronologically or in the order of time. Most of the historians of the Middle Ages were chroniclers who set down the events which happened within the range of their information, according to the succession of years.

(*Script.*) The name of two books in the canon of Scripture. They consist of an abridgment of sacred history from its commencement down to the return of the Jews from the Babylonish captivity, and are called by the Septuagint *παράλειπόμενα* (lit. *things omitted*), because they contain many supplemental relations omitted in the other historical books. It has been supposed by Eichhorn, and many other writers, that the Chronicles were compiled by Ezra, though circumstances are not wanting to diminish the probability of this conjecture.

— *a.* To record facts or events in the order of time; to register; to keep an account of; as, to *chronicle* the history of a reign.

"To suckle fools, and chronicle small beer." — *Shaks.*

Chronicler, (*kron'-ik-ler*), *n.* A writer of a chronicle or chronicles; a historian; one who records facts and events.

"Such an honest chronicler as Griffith." — *Shaks.*

Chronogram, **Chronograph**, *n.* [*From Gr. chronos*, time, and *gramma*, a letter.] An inscription comprehending a date, which may be read by selecting all or some of the numeral letters, which are frequently written in these curious trifles in larger characters than the rest; as the motto of a medal struck by Gustavus Adolphus in 1632:

"ChrIstVs DVX ergo trIVMphVs."

Chronogrammatic, **Chronogrammatical**, *a.* Belonging to, or containing, a chronogram.

Chronogrammatist, *n.* A writer of chronograms.

Chronographer, *n.* [*Gr. chronos*, and *graphein*, to write.] One who writes concerning time, or the events of time; a chronologist.

Chronography, *n.* The description of time past.

Chronologer, **Chronologist**, *n.* [*See CHRONOLOGY.*] One who studies or is versed in chronology; one who attempts to discover the true dates of past events and transactions, and to arrange them under their proper years.

Chronologic, **Chronological**, *a.* Relating to chronology; according to the order of time; as, in *chronological succession*.

Chronologically, *adv.* In a chronological manner.

Chronology, *n.* [*Fr. chronos*, and *logos*, doctrine.] The doctrine or science of time, or of computing dates; the method of ascertaining the true periods, or years, when past events took place, and arranging them in their proper order, according to their dates.

"Transmit a true chronology to succeeding ages." — *Holder.*

Chronometer, *n.* [*Gr. chronos*, and *metron*, measure.] A watch of peculiar construction, and great perfection of workmanship, used for determining geographical longitudes, or other purposes where time must be measured with extreme accuracy. The *C*. differs from the ordinary watch in the principle of its escapement, which is so constructed that the balance is entirely free from the wheels during the greater part of its vibration; and also in having the balance compensated for variation of temperature. Marine *C*. generally beat half-second and are hung in gimbals, in boxes about 6 or 8 inches square. The pocket-*C*. does not differ in appearance from the ordinary watch, excepting that it is generally a little larger. *C*. are of immense utility in navigation and ships going on distant voyages are usually furnished with several, for the purpose of checking one another and also to guard against the effects of accidental derangement in any single one. The accuracy with which *C*. have been found to perform is truly astonishing; the error in the mean daily rate in a two-months' voyage sometimes not exceeding two or three seconds.

(*Mus.*) An instrument to measure the time of a musical movement.

Chronometric, **Chronometrical**, *a.* Pertaining to a chronometer; measured by a chronometer.

Chronometry, *n.* [*Fr. chronométrie*.] The art of measuring time; the measuring of time by periods or divisions.

Chronoscope, *n.* [*Gr. chronos*, and *skopein*, to observe to view.] An instrument to measure the duration luminous impressions on the retina.

Chrysalid, (*kris'-a-lid*), *a.* Pertaining to a chrysalis.

Chrysalid, *n.* See CHRYSALES.

Chrysalis, (*kris'-a-lis*), *n.*; *pl.* CHRYSALES, (*kris'-al-déz*). [*Lat. chrysalis; Gr. chrysalis*, from *chryso*, gold. (*Zoöl.*) The particular form which butterflies, moths and some other insects assume, before they arrive at the winged or perfect state. (See *Fig. 538*.) It is also called *aurelia*, from *aurum*, gold. In this form, the animal in a state of rest or insensibility; having no organs taking nourishment, nor wings nor legs. The exterior covering is cartilaginous, and usually smooth and glossy, sometimes hairy. The name is taken from the yellow color of certain species; but they are of different colors as green, black, &c.

Chrysanthic Acid, *n.* (*Chem.*) A bluish-red precipitate formed when an acid is added to a solution of indigo in potash.

Chrysanthine, or ANILINE YELLOW See ROSANILINE.

hrysanthemum, *n.* [Lat., from Gr. *chrysos*, gold, and *anthemon*, a flower.] See CORYMBIFERÆ.

hryselephantine, *n.* [Gr. *chrysos*, gold, and *elephantinus*, composed of ivory.] (*Sculpt.*) A name given by the Greek sculptors to those statues which were overlaid with ivory and gold. The most celebrated of these were the colossal works executed by Phidias, in the age of Pericles; the greatest being the Pallas of the Parthenon, 26 cubits high, and representing the goddess in armor covered with a long robe.

hrysid'idæ, *n. pl.* (*Zoöl.*) The Chrysis family, called also Golden Wasps, a family of hymenopterous insects, most of which seek the nests of other insects, wherein to deposit their eggs. They are generally distinguished by a peculiar brilliancy of color, are very active, and are seen flying about in the sunshine, settling upon old walls, palings, &c.

hrysid'pus, a Stoic philosopher, b. at Soli, B. C. 280. He succeeded Cleanthus as head of that school, and was looked on as a column of the *Porch*. He combated the philosophy of the Epicureans and Academicians, his principal opponent being Carneades. His industry was great, and his erudition profound. He is said to have left behind him 705 works, of which only some fragments have come down to us. D. 207 B. C.

hrysobalanaceæ, *n. pl.* [Gr. *chrysos*, gold, *balanos*, a nut.] An order of plants, alliance *Rosales*. *Diag.* Polypetalous or apetalous flowers, which are nearly or quite regular; a solitary carpel, and a style proceeding from its base. They are trees or shrubs, principally natives of the tropical parts of this continent or Africa. Many of them produce edible drupaceous fruits. The typical genus *Chrysobalanus* includes two valuable fruit-trees. *C. icico* yields the cocoplum of the W. Indies; and in Brazil the roots, bark, and leaves are prescribed against diarrhoea and other similar maladies. *C. luteus* yields a fruit which is eaten in Sierra Leone.

hrysoberyl, *n.* [Gr. *chrysos*, gold, and *beryllos*, a beryl.] (*Min.*) An aluminate of glucina, composed of 80.2 alumina and 19.8 glucina. It occurs in small rounded masses about the size of a pea, but sometimes crystallized in eight-sided prisms with six-sided summits which are transparent or translucent, very hard, and of various tints of greenish-yellow, sometimes with a bluish opalescence internally. It is principally obtained in Brazil and Ceylon from the alluvial deposits of the rivers. Though not much employed in jewelry, the *C.* sometimes forms a beautiful stone almost equal in appearance to the yellow diamond. The *C.* of the ancients was a different stone, probably the Chrysoprase of the moderns.

hrysochloris, *n.* (*Zoöl.*) A species of mole, *C. capensis*, inhabiting the Cape of Good Hope, the fur of which reflects most brilliant metallic hues of green and gold.

hrysoecolla, *n.* [Lat.; from Gr. *chrysos*, gold, and *chloros*, green.] (*Min.*) A hydrated silicate of copper. The color is verdigris or emerald-green, passing into a sky-blue, and inclining to brown when impure; with a shining or dull resinous lustre, and opaque or only slightly translucent. It occurs stalactitic, and massive, but oftener investing malachite and other ores of copper. It is found in Wisconsin, Missouri, &c. It was so named by the ancients, because it was employed, along with silver and gold, in the soldering of the latter metal. — *C.* was also the Greek name for *borax*.

hryso-graphy, *n.* [Gr. *chrysos*, and *graphô*, to write.] The art of writing in letters of gold; also, a document or piece of writing executed in golden letters.

hrysolite, *n.* [Gr. *chrysos*, and *lithos*, a stone.] (*Min.*) The name applied to the paler and more transparent kinds of Olivine. It rarely occurs crystallized, but generally in angular or rolled pieces of a greenish or golden-yellow color, imbedded in basalt or lava. It is a silicate of magnesia and iron, and is sometimes used in jewelry. — It is supposed to have been the topaz of the ancients.

hrysol'ogy, *n.* [Gr. *chrysos*, and *logos*, discourse.] That department of political economy which refers to the production and accumulation of wealth.

hrysomel'idæ, *n. pl.* (*Zoöl.*) An extensive family, embracing beetles which have an hemispherical or ovate form, small and sunken head, and antennæ inserted wide apart. They are blue, green, and golden. The genus *Chrysomela* is very gayly colored. — Among the most elegant species found in the U. States is the *C. scalaris*, literally the Ladder-beetle, (*Fig.* 596.) The head, thorax, and under side of its body are dark green, the wing-coverts silvery white, ornamented with small green spots on the sides, and a broad jagged stripe along the suture or inner edges; the antennæ and legs are rust-red, and the wings are rose-colored.

It is a beautiful object when flying, with its silvery wing-coverts embossed with green, raised up, and its rose-red wings spread out beneath them. These beetles inhabit the elm and lime-trees. *Fig.* 596. LADDER-BEETLE. (*C. scalaris*.)

hryso-phyl'lum, *n.* [Gr. *chrysos*, gold, *phyllon*, a leaf.] (*Bot.*) A genus of tropical trees, order *Sapotaceæ*. The species *C. cainito* yields a delicious fruit known as the Star-apple. *C. Baranhrim* furnishes the astringent bark called Monesia bark, which has been much employed in Europe. This bark contains an acrid principle called *momesine*, which is analogous to *saponine*.

hryso-prase, *n.* [Gr. *chrysos*, and *prason*, a leek.] (*Min.*) An apple-green or leek-green variety of Chalcedony, found in Lower Silesia, and in Vermont. The color is caused by oxide of nickel. It is much esteemed as an article of jewelry, and is probably the stone called Chrysoberyl by the ancients.

Fig. 596. LADDER-BEETLE.

Chrysos'tom, *St. John*. [Gr. *chryso-stomos*, golden-mouthed, — so named from the splendor of his eloquence,] was born at Antioch, of a noble family, A. D. 347. He was originally intended for the bar, but abandoned an already successful practice to become a teacher of Christianity. For six years *C.* dwelt in monastic seclusion among the mountains, in company with other proselytes, and maintained during this time a daily life of the most rigorous austerity, so much so indeed that he was at length obliged to return to Antioch, and begin another mode of existence. Soon after his return he was ordained deacon by Meletius, in 381. In 386 *C.* was ordained presbyter by Flavian, bishop of Antioch, from which time his reputation as a preacher became increasingly great, till it attained a climax in his famous *Discourses of the Statues* — after a popular riot in which the statues of the Emperor Theodosius, and of the empress were thrown down. In 397, *C.* was consecrated bishop of Constantinople, in which position he effected strenuous measures of reform within the church. A formidable opposition becoming organized against him, summoned him to appear before a synod in 403, there to answer to the charges alleged against him. *C.*, however, refused to attend, on the plea that the court was an incompetent one; whereupon the Emperor deposed him from office, and banished him first to Bithynia, then to Chesus, a city on the borders of Armenia and Cilicia, and finally to Pityus, a town of Pontus on the Euxine, where he d. in 407. — *C.* was the most eloquent though not the most learned of the Fathers. He was more of the practical, ethical divine, than the logical theologian, conserving rather than advancing theology. The works of *C.* consist of commentaries, homilies, liturgies, treatises, and epistles. The most valuable are the homilies on the New Testament and on the Psalms, most of which have been translated and published in the Oxford Library of the Fathers. The best and most complete edition is that of Montfaucou, in 13 vols. fol., Paris, 1718-1738. — The Roman Catholic Church celebrates his festival on the 27th of January.

Chryso'type, *n.* [Gr. *chrysos*, and *typos*, form.] (*Photog.*) A process of taking pictures by photography, on paper impregnated with a neutral solution of chloride of gold. — A picture produced by this process.

Chna'pa, a river of Chili. It rises on the W. slope of the Andes, forms the S. boundary of the prov. of Chiquimbo, and enters the Pacific after a course of 125 m.

Chub, *n.* [A. S. *copp*; Ger. *kopf*, from the root of Lat. *caput*, the head.] (*Zoöl.*) A river-fish. See CYPRINÆ.

Chub'bed, *Chub'by*, *a.* [Fr. *joufflu*, from *joue*, the cheek, the jaw.] Round; full; plump; short and thick; having a large fat face: as, a *chubby* infant.

Chub'bedness, *n.* State or condition of being chubby.

Chub'-faced, *n.* Having a plump, round, chubby face.

Chu-Chow', in China. See TCHOO-TCHOO.

Chuck, (*chuk*), *v. a.* [Formed from the sound.] To make the clucking noise of a hen when she calls her chickens. — To laugh in a jeering, offensive manner: to chuckle.

— To call, as a hen her young.

"Then crowing clapp'd his wings th' appointed call
To chuck his wives together in the hail." — Beau. and Fletcher.

Chuck, *v. a.* [Fr. *choquer*; formed in imitation of a small sharp sound, like that of pebbles when clashed together.] To strike or hit gently: to tap: to pat.

"He chucked the barmaid under the chin." — Irving.

— To throw with quick motion: to pitch; to cast; as, to *chuck* a stone at anything. (A vulgarism.)

(*Mech.*) To place or hold by means of a chuck, as in turning.

— *n.* The call of a hen: the voice of a hen.

— An appellation of fondness or endearment; a modification of chick.

"Come, your promise. — What promise, *chuck*?" — Shakespeare.

— A slight blow or pat under the chin.

(*Turnery*.) A piece of wood or metal affixed to the end of the mandril of a lathe for keeping fast the body to be turned.

Chuck'aby, *n.* A term of childish fondness.

Chuck'atuck, in Virginia, a post-village of Nausemound co., 10 m. N. of Suffolk.

Chuck'-farthing, *n.* A game or play in which a farthing or other small coin is pitched into a hole in the ground.

Chuck'-hole, *n.* A deep rut or hole made by the wheel of a wagon.

Chuckle, (*chuk'l*), *v. i.* [From Icel. *kok*, *quok*, the throat; Scot. *chouks*, the throat, the jaw.] To laugh in the throat; to laugh so as to produce a guttural sound, expressive of inward triumph or exultation.

"Some things are of that nature as to make
One's fancy *chuckle*, while his heart doth ache." — Bunyan.

— *n.* A short, broken, and suppressed laugh in the throat, as indicative of secret triumph or derision.

— *v. a.* To call, as a hen her chickens; to chuck.

"If these birds are within distance, here 's that will *chuckle* 'em together." — Dryden.

— To cocker; to caress; to fondle.

"Your confessor . . . must *chuckle* you, and moan you." — Dryden.

Chuck'le-head, *n.* One who has a thick head (implying a scarcity or density of brain); a numskull; a stupid fellow.

Chuck'le-headed, *a.* Thick-headed; obtuse; ignorant; stupid: as, a *chuckle-headed* lad.

Chuck'-will's-wid'ow, *n.* (*Zoöl.*) See GOAT-SUCKER.

Chucui'to, or CHUCUYTO, in Bolivia, a town, cap. of province of the same name, dep. of Puno. It is situated on the W. border of Lake Titicaca, 20 m. S.E. of Puno, and 85 E. of Arequipa. It has beautiful remains of antiquity, and in the province are gold and silver mines. *Pop.* of prov. 80,000.

Chuen-pee', a fortified sea-port of China, on an island in Canton River, 35 m. S.E. of Canton. It was taken by the British in the war of 1841.

Chu'fa, *n.* (*Bot.*) See CYPERUS.

Chuff, *n.* [W. *cyf*, a stock or stem.] A clown; a rustic; a coarse, heavy, dull, or surly fellow; as, "fat *chuffs*." *Shak.* — *a.* Ill-tempered; coarse; surly; brutish. (Used as an English provincialism.)

Chuffily, *adv.* In a clownish or surly manner.

Chuffiness, *n.* Clownishness; surliness; coarseness.

Chuffy, *a.* [Fr. *joufflu*.] Fat; bloated; puffed out; swollen: as, *chuffy*-cheeked.

— Blunt; surly; rude; coarse-mannered; as, a *chuffy* fellow.

Chuganserai', a small river and town of Afghanistan. The former rises in Kafiristan, and connects with the Cabul near Jellalabad. The town is 80 m. N.E. of Cabul, in Lat. 34° 45' N., Lon. 70° 8' E.

Chu'la Depot, in Virginia, a post-village of Amelia co., 30 m. W.S.W. of Richmond.

Chulaho'ma, in Mississippi, a post-village of Marshall co., 15 m. S.W. of Holy Springs.

Chulas'ky, in Pennsylvania, a post-village of Northumberland co., 3 m. W. of Danville.

Chu'le, in Peru, a small port, department of Arequipa, about 60 m. S.E. of the city of that name.

Chuluwan', or HOLY ISLAND, a small island in the Mozambique channel, S.E. coast of Africa, in Lat. 30° 28' S., Lon. 24° 53' E.

Chum, *n.* [Armoric *choum*, for *chouma*, to remain. fix one's self, abide.] A chamber-fellow; one who shares the same room with another; hence a close companion, a comrade; as, a college *chum*.

"The merry days when we were *chums* together." — *Præd.*

— *v. i.* To occupy a room jointly with another; as, to *chum* together. Hence, by extension, to be on intimate terms.

Chum'ba, a town of Hindostan, in the Pnnjab, on the Ravee, at the base of the Himalayas, 120 m. N.E. of Lahore; Lat. 32° 22' N., Lon. 75° 50' E. It is built of wood, and is a place of some importance. *Pop.* abt. 6,000.

Chum'bul, in Hindostan, (supposed to be the *Sinhus* of Arrian,) a river rising in Malwah prov., and emptying into the Jumna, about 25 m. below Etawah, after a N.E. course of about 500 m.

Chum'ie, a range of mountains in S. Africa, Cape Colony, between Lat. 32° and 35° S., and near the meridian of 27° E. Lon. — A river of same name, rises in this range and empties into the Keiskamma, after a S. S.E. course.

Chump, *n.* A short, thick, heavy piece of wood, less than a block in size. — A collop of butcher's meat; as, a *chump* chop.

Chumpawut', a town of Hindostan, and former cap. of Kumaon, 35 m. S.E. of Almora. It has some curious Hindoo temples.

Chuan'm, *n.* A stucco or calcareous cement used in India.

Chunargur', a fortified town of Hindostan, prov. Bengal, on the Ganges, 17 m. S.W. of Benares; *pop.* abt. 12,000.

Chun'chos, an Indian tribe of Central S. America, prov. Ecuador, dist. Jaen.

Chund, an eminent Hindoo poet, of the Rajpoot nation, who lived in the 12th cent. His poems are still popular among the Rajpoots. The principal one is a kind of heroic epic, said to contain 100,000 verses, in which he gives a general history of the times he lived in, and of the kings and worthies who then flourished.

Chunk, *n.* A short, thick piece of anything; as, a *chunk* of wood, a *chunk* of bread. (Vulgarly used in the U. States, and in England.)

Chun-khing', a city of China, prov. Tze-chuen, on a tributary of the Yang-tse-kiang, 115 m. E. of Ching-te-foo.

Chunk'y, *a.* Squat; short; thick; lumpy; as, a *chunky* boy. (American.)

Chun-ning', a city of China, prov. of, and 170 m. from Yun-nan.

Chun-te, a city of China, prov. Chih-le, 220 m. S.S.W. of Pekin.

Chupat', in Patagonia, a river which empties into the Atlantic, Lat. 14° 15' S., Lon. 65° W.

Chu'pee Creek, in Georgia, flows S.E. through Bibb and Monroe cos., and runs into the Ocmulgee abt. 9 m. S. of Macon.

Chup'parah, a town of Hindostan, British pres. of Bengal, 90 m. N.N.E. of Nagpoor.

Chup'rah, in Hindostan, a town, in prov. Bahar, dist. Sarun, of which it is the cap., on the Ganges, 33 m. W. by N. of Patna. Lat. 25° 45' N., Lon. 84° 48' E. *Pop.* abt. 40,000.

Chuquatan'cha Creek, in Mississippi, in Chickasaw co., flows into the Oklibbeha River.

Chuquibam'ba, in Peru, a town, 15 m. N.W. of Arequipa, at the foot of a mountain of the same name, 21,000 feet in height; Lat. 15° 50' S., Lon. 72° 20' W.

Chuquisaca, (commonly called *SUCRE*.) (*choo'-sa'ka*), a city of S. America, cap. of republic of Bolivia, on the N. bank of the Cachimaya, 55 m. E.N.E. of Potosi, and 220 S.W. of Santa Cruz de la Sierra; Lat. 19° 29' S., Lon. 66° 40' W. It is, generally, a handsome city, with public fountains and pleasant gardens. *Clim.* Mild, but subjected to heavy rains and frequent storms. *C.* was founded in 1539. *Estim. pop.* 20,000. It is also called CHARCAS, or LA PLATA.

Chur, or COIRE, (*shoor*), a city of Switzerland, cap. of cant. of Grisons, in the valley of the Upper Rhine; Lat. 46° 30' N., Lon. 9° 35' E. It is a quaint, old-world place, with manufactures of zinc-ware and cutlery. *Pop.* 6,990.

Church, *n.* [Gr. *Kyria-kon*, from *Kyrios*, the Lord, (a doubtful derivation.) A. S. *circe*, *circ*, or *cyric*: Du. *kerk*.

Ger. kirche; literally, the Lord's house.] This word is used in various significations, answering to those of the Greek *ἐκκλησία* (*Fr. église*), which, from its original meaning of a *convened assembly*, is employed, 1st, to denote the whole body of true believers, or the visible church; 2a, in addition to these, the spirits of the just made perfect, or the invisible Church; 3d, any congregation of Christians met together in a single place, or the body of believers resident in a town or district; and 4th, the edifice in which they meet for divine worship. To these we may add a fifth sense of the modern term *church*, when it is applied to a distinct religious community; as, the Roman Catholic, the Lutheran, the Baptist, &c. The true definition of the visible Church has been a matter of much controversy. In this matter, as in any question relating to differences of Christian creeds, we decline to enter the field.

(*Arch.*) Having described the forms of the earliest ecclesiastical structures of the Christians under the term *BASILICA*, and the general divisions of a church under the head of *CATHEDRA*, we have here but to add that the churches are usually classed as follows in all countries where distinctions are recognized in them: *pontifical*, as St. Peter's at Rome, where the Pope occasionally officiates; *patriarchal*, where the government of the church is vested in a patriarch; *metropolitan*, when it is the see of an archbishop; *cathedral*, where a bishop presides; *collegiate*, when the building in question is attached to a college; *parochial*, when it is attached to a parish; and *conventual*, when it is attached to a convent.

(*Hist.*) See CHRISTIANITY.

Church, *FREDERIC EDWIN*, an eminent American artist, b. at Hartford, Conn., in 1826. In his walk of art—landscape painting—C. holds a distinguished place both in this country and in Europe. In 1853, and, again, in 1857, he visited S. America, returning home to enrich American art with some choice examples of tropical scenery. C.'s *chef-d'œuvre*, however, is probably his noble picture of the "Falls of Niagara," which commanded the highest admiration in England and in France, as well as in his own country. Mr. C. has largely contributed to impress the Europeans with the conviction, somewhat new to them, that art is not confined to the Old World.

Church'-ale, *n.* In England, a wake, or feast commemorative of the dedication of the church; when much ale is drank.

Church'-attire, *n.* The habit in which men officiate in divine service.

Church'-authority, *n.* Ecclesiastical power; spiritual jurisdiction.

"This point of church-authority I have sifted."—*Atterbury*.

Church'-bench, *n.* The seat or bench in the porch of a church.

Church'-burial, *n.* Burial according to the rites of the Church.

Church'-discipline, *n.* Discipline of the Church, intended to correct the offences of its members.

Church'-dom, *n.* Government or authority of the Church.

Church, (*Fathers of the*) (*Ecl. Hist.*) A title usually confined to those theologians who wrote during the first five centuries of the Christian era; but which is extended by some to writers who come down as low as the 14th century, or even later. They are classed according as they belonged to the Eastern or Western Church, or as they wrote in Greek, or in Latin, into the Greek fathers and the Latin fathers. There is a third division—those who lived in, or next to, the apostolic age, and are distinguished by the name of the Apostolic Fathers; these are Barnabas, Clements Romans, Ignatius, Polycarp, and the unknown authors of two works, respectively entitled *Epistole ad Diognetum*, and *Herma Pastor*. In order to know how the first Christians opposed the attacks of their Gentile opponents, the writings of the ancient apologists, as they are termed from their *Apologia*, or *Vindications of Christianity*, should be carefully studied. The chief apologists are Justin Martyr, Minutius Felix, Tertullian, Origen, against Celsus, and Eusebius in his *Præparatio et Demonstratio Evangelica*. Eusebius in Greek, and St. Augustine, *D: Civitate Dei*, in Latin, have rifled the Gentile stores, and made heathen learning subservient to the overthrowing of the heathen religion; whilst in Justin Martyr's *Dial que with Trypho*, the Jew, we see what weapons the first Christians used against their opponents of that nation. The first disputes of the Christians among themselves were concerning the mysteries of our faith. The earlier heresies, previously to the empire's becoming Christian under Constantine, were for the most part monstrous, not far extended, and short-lived. Irenæus and Epiphanius may be advantageously consulted respecting them. The later and more abiding controversies may be studied in the ecclesiastical histories of Socrates (the scholastic), Sozomen, and Theodoretus. As respects commentaries upon the New Testament, of all the works of the fathers, those of St. Chrysostom are the most valuable. A plain, brief, and clear epitome of his commentaries has been drawn up by Theophylact, who flourished about the beginning of the 13th century.

Church'-founder, *n.* He that builds or endows a church.

Church'-goer, *n.* A habitual attendant at church.

Church'-going, *n.* Going regularly to church; usually attending church.—Calling or summoning to church.

"The sound of the church-going bell."—*Cowper*.

Church Hill, in *Kentucky*, a post-vill. of Christian co.

Church Hill, in *Maryland*, a post-office of Queen Anne co., about 45 m. E.N.E. of Annapolis.

Church Hill, in *Mississippi*, a P. O. of Jefferson co.

Church Hill, in *Ohio*, a post-village of Trumbull co.

Church'-history, *n.* Ecclesiastical history; history of the Christian Church.

Church'-ill, *CHARLES*, an English poet and satirist, b. 1731. He early entered the Church of England, but finding himself ill-adapted for that sacred profession, he shook off its trammels, and entered upon a career as an idler about town and man of letters. His first contribution to literature was the *Rosciad*, a pungent satire upon the theatrical *illuminati* of the time. In 1762, forming an intimacy with the celebrated John Wilkes (*q. v.*), C. wrote many articles for his famous journal the *North Briton*; and achieved his poetical acmé in the *Prophecy of Famine*, a satirical onslaught against Lord Bute's govt. and Scotchmen in general. D. at Boulogne, France, in 1764.

Church'-ill, *JOHN*. See MARLBOROUGH, (DUKE OF.)

Church'-ill, in *Nevada*, a W. central co.; area, about 8,000 sq. m. Its W. part is intersected by the Carson River. The surface is irregular, and partly mountainous; the soil poor. Its streams are small, and are dried up by the sandy desert. Silver mines are worked, and are productive. *Cap.* Stillwater. *Pop.*, 710.

Church'-ing, *n.* The act or form of offering thanks in church after childbirth; as, the *churching* of women.

Church'-ism, *n.* Fanaticism, or ultra-attachment to the forms or tenets of some particular Church.

Church'-judicatories, *n. pl.* (*Ecl. Hist.*) A term applied to designate the ecclesiastical courts of the Church of Scotland; viz., *kirk-sessions*; *presbyteries*; *provincial synods*; and *general assemblies*.

Church'-land, *n.* Land belonging to a church; land vested in an ecclesiastical body or chapter.

Church'-land, in *Virginia*, a P. O. of Norfolk co.

Church'-less, *a.* Destitute of a church; deprived of religious influences.

Church'-like, *a.* Becoming the Church.

Church'-liness, *n.* Devotedness to the interests, polity, ritual, &c., of the church.

Church'-man, *n.* A clergyman or ecclesiastic; one who administers the rites and ceremonies of the Church.—An Episcopalian;—used in contradistinction to a Presbyterian or Congregationalist; as, a staunch *churchman*.

Church'-manly, *a.* Becoming a churchman.

Church'-manship, *n.* State or position of being a churchman.

Church'-member, *n.* A professor of religion; a member in communion with a Church.

Church'-membership, *n.* State or quality of being a church-member.

Church'-militant, *n.* The Church as warring against spiritual evil of whatsoever kind.

Church'-modes, *n. pl.* (*Mus.*) The modes formerly used as scales in church-music.

Church'-music, *n.* Music suited to church-service; the service of singing or chanting in a church.

Church of God, (*Ecl. Hist.*) This Christian sect originated in 1830, in a movement in which John Winebrenner, previously a minister in the German Reformed Church, was most prominent. A new society was organized by him, and others who accepted his views, which took the name of the *Church of God*. It exists principally in Pennsylvania and the W. States, and there is an eldership in Texas. The Church has a college at Centralia, Kansas. Its periodicals are the *Church Advocate*, at Lancaster, Pa., and a Sunday-school periodical. The govt. of the *C. of G.* is Congregational, with a supervising Church Council, composed of the preachers in charge, the elders, and deacons. Associations, or conferences of Churches, called Elderships, meet annually, and a General Eldership meets every three years. The *C. of G.* holds the doctrines of the Evangelical churches, with baptism by immersion only, subsequent to faith; feet-washing; the administration of the Lord's Supper in the evening; all the instrumentalities of revivals; and protests against the trade in intoxicating drinks. In 1895 there were 560 churches, 36,000 church members, and church property valued at \$700,000.

Church'-rate, *n.* A tax formerly levied on parishes in England for repairing, maintaining, &c., the churches of the Establishment. The tax, as a compulsory assessment, has been abolished for a number of years, and the payment of church-rates is now altogether voluntary.

Church'-service, *n.* The ritual of public worship performed according to the forms of the Anglican Church.

Church'-ship, *n.* Institution of the church.

Church'-town, in *California*, a village of Shasta co., 7 m. N.E. of Shasta.

Church'-town, in *New York*, a P. O. of Columbia co.

Church'-town, in *Pennsylvania*, a village of Cumberland co.

—A post-village of Lancaster co., 52 m. E. of Harrisburg.

Church'-view, in *Virginia*, a P. O. of Middlesex co.

Church'-ville, in *Maryland*, a post-village of Hartford co., 30 m. N.E. of Baltimore.

Churchville, in *Missouri*, a village of Clarke co., near the mouth of the Des Moines River.

Church'-ville, in *New York*, a post-village of Monroe co., 15 m. W.S.W. of Rochester.

Churchville, in *Virginia*, a post-village of Augusta co., 128 m. N.W. of Richmond.

Church'-warden, *n.* A keeper or guardian of the church, and a representative of the parish.

—A clay tobacco-pipe with a long, slender tube, made at Broseley in England.

"A church-warden pipe, and pot of beer."—*Wolcot*.

Church'-way, *n.* The road, street, or passage leading to a church.

Church'-work, *n.* Work performed in behalf of a church;—hence, a proverbial metaphor for work slowly executed.

Church'y, *a.* Relating to a church.

Church'-yard, *n.* The yard or enclosed ground adjoining to a church, in which the dead are interred; a cemetery.

Churl, (*chêrl*) *n.* [*A. S. cœorl*; *Ger. kerk*; *Dan. karle*; *Icel. karl*, a boor; *O. Ger. karl*, a man, a husband, a lover; allied to *Lat. vir*, a man; *Goth. vair*; *W. gur*; *Sansk. vira*, a man.] A countryman; a rustic; a husbandman; a bumpkin.

"Prepares the country-churls to mischief, hate, and wars."—*Dryden*.

—A rude, surly, ill-bred man; a boor.

"A churl's courtesy rarely comes but . . . for falsehood."—*Sidney*.

—A miser; a niggard; a covetous, selfish person.

"O churl, drink all and leave no friendly drop."—*Shaks.*

Churl'-ish, *a.* Like a churl; surly; sullen; boorish; unfeeling; rude; as, a *churlish* answer.—Avaricious; selfish; narrow-minded.—Intractable; unmanageable; harsh; cross-grained; unyielding; as, a *churlish* hunk. Unpliant; numalleable; hard; as, a *churlish* metal.

Churl'-ishly, *adv.* In a churlish manner; roughly; rudely.

Churl'-ishness, *n.* Quality of being churlish; rudeness of manners or temper; indisposition to kindness or courtesy; sullenness.

"Better is the churlishness of a man than a courteous woman."—*Eccles. xlii. 14.*

Churn, *n.* [*A. S. cerene*, *ciern*, from *cyran*, *ceran*, to turn.] A vessel or machine in which cream is turned, agitated, or beaten, in order to produce butter.

—*n. a.* To stir or agitate cream in the operation of making butter.

—To shake or agitate with violence or continued motion.

"Churned in his teeth the foamy venom rose."—*Addison*.

Churn'-ing, *n.* The operation of making butter from cream by continued agitation.

—As much butter as is made at once; as, cream enough for one *churning*.

Churn'-staff, *n.* A staff or instrument used in churning.

Churubus'-co, a village of Mexico, on the Rio de Churubusco, about 6 m. S. of the city of Mexico. At this place, and at Contreras, 7 m. distant, 2 battles were fought, 20th of Aug., 1847, between the American army commanded by Gen. Scott, and the Mexicans under Santa Anna, in both of which the former achieved a decisive victory. At Contreras, the Mexicans were badly beaten, with a loss of 1,700 men killed and wounded, 800 prisoners, and 22 pieces of artillery, besides 500 pack-mules, and a large amount of munitions of war. The action at C., fought shortly afterwards, was hotly contested, but ended eventually in a stampede of the Mexican army, who again lost heavily,—4,000 killed and wounded, 3,000 prisoners, including 8 generals, and 37 guns being left by them on the field, or in the hands of the victors. The American losses in both engagements numbered 1,053, of whom 139 were killed, including 16 officers.

Churubus'-co, in *Indiana*, a post-village of Whitley co., 16 m. N.W. of Fort Wayne.

Churubusco, in *New York*, a P. O. of Clinton co.

Chusan', the principal of a group of islands on the E. coast of China, prov. Che-kiang, 45 m. N.E. of Ningpo, opposite the estuary of the Yang-tse-kiang. Lat. 30° 40' N., Lon. 121° 48' E. It is mountainous, has a circuit of about 50 m., and has some fine, fertile, well-cultivated valleys. *Prod.* Tea, camphor, bamboo, &c. *Clim.* Temperate during nine months of the year. *Cap.* Ting-hai taken by the British in 1840 and 1860, successively.

Chus'-han-Rishath'-am, a king of Mesopotamia, who oppressed the Israelites 8 years, A. M. 2591–9, but was defeated by Othniel, Caleo's nephew. (*Judg. iii. 8–10.*)

Chute, (*shōot*) *n.* [*Fr. chute*; *Pg. cauzta*.] A fall or descent in a river.—An aperture in a mill-dam. See SHOOT.

Chyla'-ceous, *a.* Belonging to, or consisting of, chyle.

Chyla'-queous, *a.* [*Lat. chylus*, chyle, and *agua* water.] Consisting of chyle highly diluted with water.

Chyle, (*kîl*) *n.* (*Physiol.*) A thin milky liquid, which is the concentrated essence of the chyme, and the nutritive principle of all nourishment taken into the system. It is composed, like the blood, of a fluid, *liquor chyli*, and of chyle corpuscles or globules, the average size of which is about 1-4600th of an inch. See CHYMIFICATION.

Chylifac'-tion, *n.* Same as CHYMIFICATION.

Chylifac'-tive, *Chylific*, **Chylificatory**, *a.*

Forming or changing into chyle; having the power to make chyle.

Chyliferous, *a.* [*Gr. chylus*, and *Lat. fero*.] Transmitting chyle, as the *chyliferous* vessels.

Chylifica'-tion, *n.* (*Physiol.*) Formation of chyle during the digestive processes. See CHYMIFICATION.

Chylopoetic, (*kîl-o-po-ét'ik*) *a.* [*Gr. chylus*, and *poi-ein*, to make.] Chylifactive; making chyle; having the power to change into chyle.

Chylons, (*kîlus*) *a.* [*Fr. chyleux*.] Consisting, or partaking of, chyle.

Chyme, (*kîm*) *n.* [*Gr. zymos*, juice.] (*Physiol.*) One of the most important fluids in the human body. It is of a thick, creamy consistence, of a grayish-white appearance, obtained by the process of CHYMIFICATION, *q. v.*

Chymifica'-tion, *n.* (*Physiol.*) Next to the circulation of the blood, if not of equal importance with it, is the system of nutrition, or the circulation of the liquid nutriment obtained from the food digested in the stomach. This fluid, which contains all the elements of which the body is composed, both solid and fluid, and is the source and fountain of the blood itself, is called in the first instance the *chyme*,—the process by which it is separated from the food being denominated chymification,—the stomach being the only organ concerned in this stage

of the process. The food received into the stomach is collected in one heap in the lowest and widest part of that organ, where it is surrounded by the gastric juice, a sharp, pungent fluid, of an extremely acid character, which has the power of dissolving or so far softening all the substances taken into the stomach, that in a space of time varying from four to eight hours, the whole is converted into a soft, semi-fluid pulp, which, passing through the lower or pyloric opening of the stomach, enters the commencement of the intestines, or

Fig. 597. — CHYLE-VESSELS OF THE MESENTERY.

1, aorta; 2, thoracic canal; 3, lymphatics; 4, radicles of the chyle-vessels; 5, intestine; 6, mesentery; 7, lymphatic vessels.

the duodenum. — This pulpy mass, now called the chyme, is in the duodenum subjected to the influence of two other fluids, the secretion from the liver (the bile), and that from the pancreas (the pancreatic juice). These two fluids act on the chyme much as *rennet* does on milk, separating it into two distinct parts — a white, creamy fluid, the quintessence of the nutriment, called CHYLE, and a brown, solid, feculent matter, from which almost all the chyle has been extracted, but which, in its steady progress through the rest of the alimentary tube, is everywhere surrounded by a number of small vessels, called *lacteals*, whose open mouths absorb every particle of nutriment which may have escaped with the mass out of the duodenum: till evacuation of the mass *per anum*. The juice from the chyme in the duodenum is immediately absorbed by the surrounding lacteal vessels, and carried to a fine, delicate membrane connecting the bowels to the spine, the mesentery (see Fig. 597), where all the more remote lacteals from the small and large intestines join or anastomose with them. The lacteals thus united diverge in several groups, each group or set of vessels entering a gland (2, Fig. 597), from which gland they re-issue on the opposite side, fewer in number but larger in size; when, after forming a second intimate union, they enter a second system of glands (3, Fig. 597), from whence they converge, and, uniting the *receptaculum chyli*, or the reservoir of the chyle, — made up of the lymphatic vessels from all the lower parts of the body, — then proceed upwards to form the *thoracic canal*, or the great trunk of the absorbent system. The thoracic canal, or duct, the replenisher of the heart, loaded with its nutrient fluid, ascends through the abdomen and chest to the commencement of the neck; when, receiving the lymphatics of the superior extremities and the head, it enters the left subclavian vein, mingles with the venous blood, and is immediately carried to the right side of the heart, to be sent from thence to the lungs, there to be vitalized with the oxygen of the air. The organs employed in the process of chylofication are the duodenum, small intestines, liver, and pancreas. The process by which *chyme* is obtained from the digested food, (*chyle* is separated from the chyme, and is eventually converted into blood,) is called *assimilation*. Chyle, the product of the last process of digestion, is an albuminous fluid, composed of innumerable granules or corpuscles, consisting of albumen, fatty matter, and water. The chyle, in the whole of its course from the duodenum to the vein that carries it to the heart, is constantly going through some higher degree of change; thus, after passing the first set of mesenteric glands, it is found to be more highly organized than it was before entering them. In the same way, a further change is observed after traversing the second set of glands, and so on, till the chyle, having reached the upper part of the thoracic duct, attains its final organization, and becomes exactly analogous — except in the red coloring-matter — to the blood, with which it is directly after mingled.

Chymify (*ki'mi-fi*), v. a. and v. i. [Lat. *chymus*, from Gr. *chymos*, and *facio* to make.] To convert into chyme, or to become chyme. — To form or become chyme.

Chymous, (*kim'us*), a. Pertaining to chyme.

Chialdini, ENRICO, (*chal-de'ne*), a distinguished Italian general, b. 1811. He marched with Gen. Zucchi to aid the Romagna insurrectionists in 1831, and, after the Austrian intervention in Central Italy, was compelled to emigrate to Paris, where he studied chemistry, and

was preparing to study medicine, when he accepted an offer to go to Spain, where he took part in the War of Succession. When the revolution of 1848 broke out, he was a lieutenant in the Spanish service. Being called by Mazzini, he came to Italy, joined the army of Charles Albert, and was severely wounded at Vicenza. In 1856 he was sent to the Crimea by the Sardinian government with the rank of general, and distinguished himself in the battle of Tchernaya. In the war in Italy, in 1859, C. was the first in the allied army who fired a shot at the enemy, executing the passage of the Sesia under the fire of the Austrians, whom he drove from their position. His *corps d'armée* then went into the mountains to act in Tyrol. The peace of Villafranca checked him in his career. In 1860 he defeated the Papal army under Gen. Lamoricière, at the battle of Castellidardo; and, in 1861, he took Gaëta after a bombardment of 17 days, and captured the citadel of Messina a fortnight after. He had been made a major-general after the campaign of Umbria, and after the capture of Messina the king nominated him general of the army, a rank equivalent to that of field-marshal. In 1861 C. was appointed Viceroy of Naples, was made a senator in 1864, and took a prominent part in the campaign against Austria in 1866. He was sent as ambassador to Paris in 1876, and was recalled in 1881. Died 1892.

Ciba'o, a principal mountain in Hayti, in the central part of the island, celebrated for the rich gold mines it formerly contained. It is about 4,500 feet.

Ciba'rious, a. [Lat. *cibarius*, from *cibus*, food.] Pertaining to food; useful for food; edible.

Cib'ber, CARUS GABRIEL, an eminent sculptor, b. at Flensburg, Denmark, 1630. Among his finest works are the figures of *Melancholy* and *Raving Madness*. D. 1700.

Cib'ber, COLLEY, son of the preceding, and a celebrated English dramatist, b. 1651. His principal works are the well-known plays *The Careless Husband*; the *Nonjuror*; and his *Apology for my Life*, published in 1740, which has been frequently reprinted. D. 1757.

Cib'ol, n. A kind of small onion used in salads. — See ONION.

Cibo'lo, in Texas, a small river rising near the W. part of Comal co., flows S.E. and enters the San Antonio.

Cibo'rium, n.; pl. CIBORIA. [Lat., from Gr. *kiborion*, the Egyptian bean, and a drinking-cup made of its leaves.] Arch. An isolated erection, open on each side, with arches, and having a dome of an ogee form supported by four columns. It is placed on the altar of Roman Catholic churches, and contains the *Host*, or consecrated water.

Cibo'tium, n. (Bot.) A genus of ferns, order *Filices*, including several species which produce silky hairs useful to man. The styptic called *penawair*, which is often used in Holland and Germany, consists of the fine hairs from the caudex of *C. Barometz*, the "Scythian lamb" of old writers. These hairs are imported from Sumatra, and are sometimes employed for stuffing cushions. Similar hairs are brought from the Sandwich Islands, and are known under the name of *pulu*. Three different species are said to yield pulu.

Cicada'ria, n. pl. [From Lat. *cicada*, grasshopper; French *cigale*.] Zool. A family of hemipterous insects, common in tropical and warm, temperate regions, and remarkable for the loudness of the sounds they emit. The organs that produce these shrill sounds consist of membranes and fibres connected with powerful muscles, and situated on the under side of the abdomen. The largest insect of this genus does not exceed an inch in length; yet it is asserted that they may be heard in the still night at a distance of at least half a mile, and that the sound they emit is like grinding a knife on a whetstone. The seventeen-year *Cicada* is said to appear in the same localities only at intervals of 17 years, and hence its specific name. It makes its appearance in the early part of summer. Sometimes the *C.* of this species come in such immense swarms as to bend, and even break, the limbs of the forest-tree upon which they alight, and the woods are filled from morning till night with the noise of their rattling drums. The Dog-day, or Harvest-fly, (*C. canicularis*), has the body black above, ornamented with olive-green, and the under side covered more or less with a white substance resembling flour. It makes its appearance with the beginning of dog-days, and its singing may be heard among the trees through the middle of the day. The pupæ of this species, as well as of the preceding, as they come out of the ground and crawl up the trees, look like large beetles. — The *C.* have been celebrated in all ages for their powers of song or shrill sound: — from Virgil: "El cantu querule rumpent arbusta cicada." — *Georgics* III. down to Lord Byron —

"The shrill *Cicada*, people of the pine."

Cic'atrice, CICATRICES, n.; pl. CICATRICES. [Lat. *cicatrix*; Fr. *cicatrice*.] A scar, seam, or mark left behind on the skin after the skinning over of a wound or abrasion.

Cic'atriele, (*sik'a-trik-el*), n. [Fr. *cicatrice*, from Lat. *cicatrix*, a scar.] The germinating or fetal point in the embryo of a seed, or yolk of an egg.

Cic'atrivive, a. Tending to promote the formation of a cicatrix.

Cic'atrizant, Cic'atrisant, n. (Med.) An application that induces a cicatrix.

Cicatrization, n. [Fr. *cicatrisation*.] The healing, or skinning over, of an ulcer or broken surface of the skin.

Cic'atrize, v. a. [Fr. *cicatriser*, from L. Lat. *cicatrix*; Lat. *cicatrix*, a scar.] To heal, or induce the formation of a cicatrix or scar, in wounded or ulcerated flesh.

— v. i. To heal or be healed; to be skinned over.

Cic'ely, n. (Bot.) See OSMORHIZA.

Cic'eer, n. [From Gr. *kikys*, strength, in reference to its qualities.] (Bot.) A genus of plants, order *F. bacca*. *C. arivinum*, a native of the countries around the Mediterranean, produces the edible seeds called chick-peas. These are extensively used as food, either boiled or roasted, and are the most common perched pulse of the East. The herbage affords a nutritious food for cattle.

Cic'ero, MARCUS TULLIUS, b. at Arpinum, an ancient city of Latium, B. C. 106; the same year which gave birth to Pompey. He was educated at Rome under the best masters of the time; and, B. C. 89, he served his first and only campaign under Pompeius Strabo. Having thus complied with the custom of his age, C. devoted the next 6 years to the studies which were necessary to raise him to distinction as a lawyer and an orator. At the age of 25 he came forward as a pleader, and, even at the risk of incurring the displeasure of Sulla, defended clients who were obnoxious to the dictator. But his health, which was naturally feeble, gave way under incessant application to study; and, for the purpose of invigorating his constitution, as well as correcting certain defects in his style of oratory, he visited Athens (B. C. 79), made a tour of Asia Minor, and for some time resumed his studies at Rhodes, under Molo, from whom he had received instructions at Rome. After an absence of 2 years, he returned to Rome with renewed health and enlarged knowledge, and speedily placed himself at the head of the Roman bar. He was elected quaestor in B. C. 76, and reached the consulship in B. C. 63. During his consulship he was called upon to grapple with the famous Catilinarian conspiracy; and the courage, prudence, and decision which he manifested in directing the difficult and complicated investigations that led to the detection and punishment of the conspirators, called forth the encomiums of all classes of the citizens. The public enthusiasm heaped upon him unwonted honors: in the senate and in the forum he was saluted as *pater patriæ* (the father of his country); thanksgivings in his name were voted to the gods; and all Italy united in testifying their admiration and gratitude. But his unexampled good fortune had excited the jealousy of many of the leading nobility; and his irrepressible vanity exposed him to the ridicule and assaults of his enemies. It had been judged necessary to put to death 5 of the ringleaders in the conspiracy; and though this was done in virtue of the dictatorial authority with which the consuls were invested by the senate, and with the consent and approval of that body, C. was indicted for having put a Roman citizen to death untried, and forced to go into banishment in April, B. C. 58. But private malice soon expended itself, and public feeling, reverting to his signal services in rescuing his country from impending ruin, recalled him after an interval of 17 months. His reception at Rome cheered his dejected spirits; but the circumstances which led to his banishment prevented him from ever after recovering his former position. In B. C. 53 he was admitted a member of the college of augurs, and towards the end of B. C. 52 he was appointed proconsul of Cilicia. He administered the affairs of his province with the strictest impartiality, and realized in practice the precepts which he had inculcated in his writings. He returned to Italy in B. C. 49, at the commencement of the civil war between Cæsar and Pompey, and finally resolving to espouse the cause of the latter, followed him to Greece. After the battle of Pharsalia, B. C. 48, at which he was not present, he again returned to Italy, and was received into favor by Cæsar. Separating himself now entirely from all parties in the State, he arranged and published during the next 3 years nearly all his most important works on rhetoric and philosophy. But the tumults excited by Antony after the murder of Cæsar, B. C. 44, again drew him from his seclusion; and Augustus, knowing the value of such an ally, and carefully concealing from him his real intentions, gladly availed himself of his services as leader of the senate. C.'s zeal, which was not always tempered with discretion, now exhibited itself in his famous philippics against Antony, which again made him the idol of the Roman people. But the formation of the second triumvirate sealed the fate of the great Roman orator. His name appeared in the list of the proscribed, having been placed there by Antony as one of the conditions of the league; and after an unsuccessful attempt to escape, he stretched forward his head to his executioners, and called upon them to strike (B. C. 43). His head and hands were conveyed to Rome, and, by the orders of Antony, nailed to the rostra. After his admirable *Orations*, his principal works are his treatises *De Oratore*, *De Republica*, *De Legibus*, *De Natura Deorum*, *De Senectute*, *De Amicitia*, *De Officiis*, &c. They

Fig. 599. — CICERO.

Fig. 598.

DOG-DAY HARVEST-FLY.
(*C. canicularis*.)

have been repeatedly published, both as a whole and in detached portions.

Cic'ero, in *Illinois*, a post-township of Cook co., 3 m. W. of Chicago.

Cic'ero or **Cic'erotown**, in *Indiana*, a post-village of Hamilton co., on Cicero Creek, 26 m. N. of Indianapolis.

—A township of Tipton co., containing Tipton, the county seat.

Cic'ero, in *New York*, a post-village and township of Onondaga co., 10 m. N.E. of Syracuse, on the S.W. shore of Lake Oneida.

Cicero Creek, in *Indiana*, of Hamilton co., enters White River near Noblesville.

Cicerone, (*teich-e-ro'ne*), *n.* [It., from *Cicero*.] A name originally given by the Italians to those persons who pointed out to travellers the interesting objects with which Italy abounds; but applied universally at present to any one who acts as a *guide*. This application of the term *cicerone* has probably its origin in the well-known garrulity of the Italian guides.

Cicero'nian, *a.* Relating to Cicero; after the manner of Cicero; as, a *Ciceronian* style.

Cicero'nianism, *n.* Imitation of, or resemblance to, the style or manner of Cicero.

Chicoraceous, (*sik-o-rā'shus*), *a.* (*Bot.*) Having the qualities of succory, or chicory.

Chicor'ium, *n.* (*Bot.*) A genus of plants, order *Asteraceæ*. The species *C. intybus* is the Wild Chicory or succory, an European plant, having numerous heads of bright-blue handsome flowers. It is extensively cultivated for the sake of its roots, which are sliced, roasted, and ground, to form the chicory of the shops, which is sold as a substitute for, or more frequently as an addition to, ground coffee. Nearly 100,000,000 lbs. are annually consumed in Europe. Though so extensively used instead of coffee, *C.*—nearly unknown in the U. States—does not possess in any degree the peculiar exciting, soothing, and hunger-staying properties of that valuable product. A blue dye may be prepared from the leaves. *C. endiva* is the garden succory or endive, the leaves of which, when blanched, form a wholesome salad.

Cicinde'la, *n.* **Cicindel'idæ**, *n. pl.* (*Zoöl.*) The Tiger-beetle, a genus and family of coleopterous insects, remarkable for the celerity and vigor of their flight; characterized by the great projection of the eyes, long and sharply pointed jaws; thorax depressed and nearly square; and the legs and antennæ long and slender. They are generally seen on the wing in the hottest part of the day; chiefly frequenting dry meadows, sandy plains or heaths, or the banks of rivers. One of the most striking genera is the *Manticora*, found in South Africa. The common green tiger-beetle (*Cicindela campestris*), one of most common of our species, is a highly beautiful insect, being of a bright grass-green, with the elytra each marked by five small, round, cream-colored spots; the head, thorax, and limbs are of a rich gilded cast; the eyes black and prominent; the legs long and slender. The larva of this insect lives in cylindrical burrows, excavated by itself, and varying from six inches to a foot in depth. The head is very large, and slightly concave; the jaws are curved and strong; and the body is humped near the middle of the back, at which part there are two hooked tubercles. In the process of excavation they use their jaws and feet, and load the concave back of their heads with the grains of earth which they have detached; thus loaded, they ascend backwards, resting at intervals, and affix themselves to the inner walls of their burrow by the assistance of the two hooked tubercles on the back; and when arrived at the orifice, they jerk off their load to a distance. The Cicindelæ are all voracious; and when their prey comes within their reach, they rush upon it with great ferocity.

Fig. 600.

MANTICORA-MAXILLOSA.

Cicis'beism, *n.* State or occupation of a cicisbeo.

Cicisbeo, (*che-chis'bā-o*), *n.* [It.] A dangle about females; a name given since the 17th century, in Italy, to the professed gallant of a married woman.

"The word was formerly a cicisbeo, but that is now grown vulgar and indecent."—Byron.

Cinco'nia, *n.* **Cinco'nide**, *n. pl.* [Lat., a stork.] (*Zoöl.*) A genus and family of Grallatores.—See STORK.

Cicu'ia, *n.* (*Bot.*) A genus of plants, order *Apiaceæ*. *C. virosa*, the Water-hemlock, or Cow-bane, is of a highly poisonous nature. *C. maculata*, common in wet meadows, in the U. States, has very poisonous roots, which, from having been mistaken for those of harmless *Umbellifera*, have not unfrequently led to fatal results.

Cid Campe'ador, (*The*) (*sid*), [Arab. *seid*, lord.] whose real name was DON RODRIGO DIAZ DE BIVAR, the national hero of Spain, was b. at Burgos abt. 1040. The facts of his career have been wrapped by his admiring countrymen in such a haze of glorifying myths that it is scarcely possible to detect them. His life, however, appears to have been entirely spent in fierce warfare with the Moors, then masters of a great part of Spain. His exploits are set forth in a special chronicle, and in a poem of considerable interest, written not long after his death. His last achievement was the capture of Valencia, where he died in 1099.—His exploits are celebrated

in a Spanish poem supposed to have been published in the 12th or 13th century, from which Corneille has taken the subject of his masterpiece, *Le Cid*.

Cider, *n.* [Fr. *cidre*; It. *sitro*; Sp. *sidra*; Gr. *sikera*, and Lat. *sicera*, strong drink.] A cool and refreshing beverage made by pressing the juice from apples; almost all varieties of apples are used, but to insure good *C.*, they should be sound. The fruit, having been gathered, is ground in a strong mill, the pulp pressed, and the juice forced into vats; it is then kept at a certain temperature to ferment (in case fermentation is desired, much *C.* being drunk without fermentation), and lastly to fine, and then is drawn into casks, and kept in a cool place, when it is drawn off into fresh casks, or bottled for use. To persons in health, and when taken in moderation, *C.* is a refreshing, wholesome drink, and very grateful in hot weather, but should be sparingly taken at any time by persons of weak digestion. *C.* is largely produced in the U. States and Canada, and in Normandy, France. Champagne or sparkling *C.* has become a large article of manufacture in the U. States.

Cid'er-brandy, *n.* A spirituous liquid distilled from cider.

Cid'erist, *n.* A maker of cider.

Cid'erkin, *n.* The liquor made of the gross matter of apples, after the cider is pressed out, and a quantity of boiling water is added; the whole steeping 48 hours.

Ci-devant, (*sē-da-vōng'*), *a.* [Fr.] Formerly; heretofore; previously existing; quondam; as, a *ci-devant* governor.

Cienfue'gos, a sea-port town of Cuba, dept. Centro; Lat. near 22° 15' N., Lon. 81° W. Pop. about 5,000.

Cierge, (*sērij*), *n.* [Fr.] A wax candle used in the celebration of religious rites.

Cie'za, or **Zie'za**, (anc. *Catina* or *Curtela*), a town of Spain, prov. Murcia, on the Segura, 24 m. N.W. of the cap.; pop. 10,467.

Cigar, (sometimes written SEGAR), *n.* [Fr. *cigare*; Sp. *cigarro*.] A small roll of tobacco, made into an elliptical form, and used for smoking; as, a Havana cigar. See TOBACCO.

Cigarette, (*se-gār-ēt'*), *n.* A small cigar; a small quantity of mild tobacco rolled in prepared paper for smoking. See TOBACCO.

Cigar-ship, *n.* (*Naut.*) An iron screw steam-yacht, constructed in the form of a cigar, was launched at Millwall, England, in 1866, and named the *Ross Winsans*.

Cil'ery, *n.* (*Arch.*) The drapery or leafage that is wrought upon the heads of pillars.

Cil'ia, *n.* [Lat. pl. of *cilium*, an eyelash.] (*Physiol.*) The hair which grows from the margin of the eyelids.—The term is also applied to microscopic filaments, or plates which project from animal membranes and are endowed with quick vibratile motion. In most of the lower animals the respiratory function is effected by means of the vibratile cilia; many animalcules and the gemmules of the Acrites move by a similar mechanism; and it has recently been ascertained that vibratile cilia have a share in the performance of some important functions in the highest classes of the animal kingdom, where they have been detected on the membrane lining the female generative and respiratory passages, and the ventricles of the brain.

(*Bot.*) The long hairs situated upon the margin of a vegetable body, as on the leaves of the *Sempervivum tectorum*.

Cil'iary, *a.* [Fr. *ciliaire*, from Lat. *cilium*, an eyelid; allied to Gr. *kyla*, the parts under the eyes.] Belonging to the eyelids, or to processes resembling them in animals or vegetables; as, "*ciliary* ligaments."

Cil'iate, **Cil'iated**, *a.* [From *CILIA*.] Provided with cilia.

(*Bot.*) Applied to the leaves, stem, or other parts of a plant, when furnished with long and fringed hairs, like the eyelashes.

Cil'ice, *n.* A hair-cloth garment worn instead of a shirt by devotees.

Cilicia, (*si-lish'e-a*), (*Anc. Geog.*) An ancient division of Asia Minor, now comprised in the Turkish pashalic Itshilla. Formerly, its boundaries were the Taurus range on the N., the Cilician Sea on the E., the Gulf of Issus on the S., and Pamphylia on the W.; Lat. between 36° and 38° N., Lon. between 32° 10' and 37° 8' E.

Cil'ician, *a.* Relating to Cilicia.

Cil'icious, *a.* [Gr. *kilikion*; Lat. *cilicium*, a cloth made of Cilician goat's-hair.] Made of, or consisting of, hair.

Ciliogra'da, *n.* (*Zoöl.*) An order of *Cicalepha*, formed by Linnaeus, and including all the species distinguished by their continually agitating the cilia with which their contractile bodies are provided;—organs which possess the phosphorescent faculty in a very high degree, as the *Beroe* and *Medusa*.

Cil'iform, *a.* Fine and slender; resembling the form of cilia.

Cil'lo, *n.* [Gr. *killo*, to move.] (*Med.*) A name sometimes applied to persons whose upper eyelid is perpetually tremulous;—a trembling which, in some cases, is called *Life's blood*. Vogel calls it *cillosis*.

Cillo'sis, *n.* (*Med.*) See CILLO.

Ci'ma, *n.* (*Arch.*) See CYMA.

Cinabue, GIOVANNI, (or GIOVANNI GAULTIERI), (*sim'a-bo-ai*), a very distinguished Florentine painter, b. 1240. Very little is known of his life, but he is said to have been a disciple of Giotto of Pisa; and he was one of the earliest painters who left off copying the hard and unnatural drawing of the Byzantine school, studied nature for himself, and contributed powerfully to the revival of art. The colossal Madonna, which he painted for the Rucellai chapel, in the church of Santa Maria Novella, Florence, is said to have excited extraordinary enthusiasm, and to have been carried in procession to the

church, where it still remains. It was *C.* who first discovered the genius of Giotto. D. about 1302.

Cimar, *n.* (*Ecol.*) See SIMAR.

Cimaro'sa, DOMENICO, a celebrated musical composer, b. at Aversa, in S. Italy, in 1755. In 1789, he was appointed by the empress Catharine II. director of the Imperial opera at St. Petersburg and chamber-musician to the empress. In 1792, he went to Vienna to fill the post of director of the Court opera there. In the political troubles that disturbed Naples towards the close of the last century, *C.* became involved; an event which led to his incarceration in prison for a year. D. at Venice in 1801. *C.*'s greatest works are his operas, *Il Matrimonio Segreto*; *Il Convito di Pietra*, &c. *C.* wrote altogether about 90 operas, besides an almost countless number of masses, sacred cantatas, &c.

Cim'bia, **Cim'ia**, *n.* (*Arch.*) A fillet or band placed round the shaft of a column to strengthen it.

Cim'bri, *n. pl.* (*Hist.*) This Celtic tribe, inhabiting Jutland, having joined with the Teutones, entered Illyria, where they defeated Cn. Papirius Carbo, at the head of a consular army, B. C. 113. After this triumph they advanced into Gaul, B. C. 112, passed into Spain, and, reappearing in the frontiers of Transalpine Gaul, defeated two Roman armies B. C. 109 and 107. They inflicted a terrible defeat at Arausio on another Roman army led by two consuls, Oct. 6, B. C. 105, after which they withdrew into Spain. The Celtiberians drove them out B. C. 103; whereupon the Cim'bri returned into Gaul. Marius collected a large army and went to oppose them. The Cim'bri and Teutones separated into two bodies, the former taking the road through Helvetia, and the latter pressing forward to assail the Roman army. Their intention was to reunite their forces on the Lombard plains. The Teutones were attacked and overwhelmed by the Romans, and 100,000 men are said to have perished on that occasion, B. C. 102. The Cim'bri in the meantime had reached the valley of the Adige, where they defeated the Roman army under Quintus Catulus. He formed a junction with Marins and allured them into an unfavorable position, in which they were defeated and exterminated, B. C. 101. The women, having put their children to death, committed suicide.

Cim'bric, *a.* Pertaining, or relating, to the CIMBRI, *q. v.*

Cim'eter, *n.* See SCIMITAR.

Cim'ex, *n.*; **CIMICIDÆ**, *n. pl.* (*Zoöl.*) A family of Hemiptera comprising bugs which have the body very flat, and their antennæ terminating abruptly in the form of a seta. The genus *Cim'ex* contains the Bed-bug.—See BUG.

Cimici'fuga, *n.* [Lat. *cimex*, a bug, and *fugo*, to drive away; alluding to its offensive odor.] (*Bot.*) A genus of plants, order *Ranunculacææ*. *C. racemosa*, the black-snake-root, or bug-weed of America, found in upland woods, is a tall, leafy plant, with the aspect of an *Actæa*; stem 4-8 ft. high, with long, paniced racemes of white sepalled and monogynous flowers; 4-6 small petals; about 100 stamens to each flower, giving the raceme the appearance of a slender plum; flowers very fetid in June and July.

Cim'me'rii, CIMMERIANS. (*Hist.*) This nomadic race, inhabiting the Crimea, and parts of the neighboring country, having been expelled by the Scythians, passed along the shores of the Euxine, invaded Asia Minor, and pillaged Sardis, the cap. of Lydia, B. C. 635. In that country they were said to have remained until about B. C. 617, when they were defeated and driven out of Asia Minor. Little authentic is known of this people. Homer refers to another people of the same name, fabled to have dwelt in a land of perpetual darkness. Hence the term *Cimmerian gloom*.

Cin'olite, *n.* See FULLER'S EARTH.

Cin'on, a famous Athenian statesman, and general, was the son of Miltiades (*q. v.*), and B. 519 B. C. *C.* brought himself into notice on the invasion of Greece by Xerxes; but his first memorable exploit was the capture of the important town of Eion on the Strymon, 476 B. C. His next, and most brilliant success was at the Eurymedon in Pamphylia, 466 B. C., where he destroyed a large Persian fleet, then disembarked his men, defeated the army which was drawn upon shore to protect the ships, and finally entrapped and destroyed a squadron of Phœnician ships which was on its way to reinforce the Persians. As the leader of the oligarchy, *C.* was for some years the most powerful citizen in Athens, but the democratic party headed by Pericles, eventually became strong enough to procure sentence of banishment against *C.* for ten years, 461 B. C. Five years afterwards he was recalled by a decree proposed by Pericles himself. In 450, a peace was concluded between Athens and Sparta, mainly through *C.*'s influence, and next year the war with Persia being renewed, *C.* set sail for Cyprus and besieged Citium, where he died, B. C. 449.

Cinalo'a, or **SINALO'A**, in Mexico, a state, reaching from the river Mayo to the river Bayona, or about 220 m., between the Gulf of California and Durango; area, 35,721 sq. m. The surface is cut through by mountains almost barren; the soil sandy along the coast. Cap. Culiacan. Pop. 161,157.

—A town in the above State, on a small stream, 50 m. from the Gulf of California, about 300 m. N.W. of Durango. Pop. abt. 9,000. Lat. 22° 45' N., Lon. 108° 7' W.

Cincho'na, *n.* (*Bot.*) The typical genus of the order *Cinchonacææ*. The plants of this genus are natives of the intertropical valleys of the Andes, and are found principally on the eastern face of the Cordilleras, growing commonly at heights varying from about 4,000 to nearly 12,000 feet above the level of the sea. The cinchona region extends from Santa Cruz de la Sierra, in Bolivia, in about 19° S. Lat., through Peru and Colombia, nearly to Caracas, in about 10° N. Lat. The plants are small shrubs or large forest-trees, with evergreen

leaves, and commonly, showy flowers. They appear to require great moisture, and a mean temperature of about 62°. These plants are largely cultivated in India, Ceylon, Java, and elsewhere. The barks of several species and varieties are extensively used in medicine, and are undoubtedly the most valuable drugs known. They are imported into this country under the names of *Cinchona*, *Peruvian* and *Jesuit's bark*. 36 different varieties have been described by Pereira; and Weddell has enumerated no less than 39. The most important are *Loza*, or crown bark; gray-silver, or *Huanuco* bark; *Calisaya*, or yellow bark; and red bark. These four are official in our pharmacopœias, and are the principal sources of the precious alkaloids *quina* or *quinine*, *cinchonina*, and *quinidia*, which are all used in medicine, and possess in an eminent degree tonic, febrifugal, and antiperiodic properties. The barks themselves have similar properties, and are, moreover, slightly astringent. The name *cinchona* was given to the genus by Linnæus, in compliment to the countess of Cinchon, whose husband was the viceroy of Peru. She had derived great benefit from the bark during her residence in S. America; and on her return to Europe, in 1639, she brought with her several specimens. The native names, curiously enough, are very similar to the scientific one, being *quinquino* and *quina-quina*. The medicinal use of the bark was first made known in Europe by the Jesuits.

Cinchona, *n. pl. (Bot.)* An order of plants, alliance *Cinchonales*. DIAG. Epipetalous stamens, straight anthers bursting longitudinally, and leaves with interpetiolar stipules. — They are trees, shrubs, or herbs, with opposite, simple, entire leaves, and stipules between the leaf-stalks on each side interpetiolar. The calyx is superior, the corolla regular; the stamens are equal in number to the teeth of the calyx and segments of the corolla, being alternate with the latter; they are attached to the corolla (epipetalous). The ovary is inferior, and 2- or more-celled; the fruit inferior, with one seed, or sometimes more than one. The *Cinchonaceæ* are almost exclusively natives of tropical and warm regions. They yield many valuable medicinal agents, the most important being quinine (see CINCHONA) and ipecacuanha (see CEPHÆLIS). They also furnish man with many substances useful in the arts and domestic economy; such as dyestuffs, tanning agents, edible fruits and seeds, and ornamental woods. The coffee-plant belongs to this extensive order. See COFFEA. Most of the plants have beautiful and fragrant flowers, and many have been introduced into our stores. The order includes about 2,550 species, which are grouped into 313 genera.

Cinchonaceæ, *n. pl. (Bot.)* *Cinchonaceæ*, *n. pl. (Bot.)* An alliance of Epigynous xogen plants. DIAG. Dichlamydeous monopetalous flowers, and a minute embryo lying in a large quantity of albumen. The plants of this important and numerous alliance are grouped into the five orders VACCINEÆ, OLUCELLACEÆ, CINCHONACEÆ, CAPUFIACEÆ, and GALLACEÆ, *q. v.*

Cinchonidine, *n. (Chem.)* When a salt of cinchonia is exposed to heat, with certain precautions, the alkaloid is changed into another, isomeric with itself, to which this name has been given. *C.* and its sulphate possess the same medical properties as cinchonia and its salts.

Cinchonidine, *n. (Chem.)* An alkaloid existing in small quantity in many cinchona barks, but abundantly in those of Maracibo and Bogota. It crystallizes readily and forms crystalline salts with acids.

Cinchonine, *n. (Chem.)* The active principle of *cinchonia lancifolia*. See QUININE.

Cincinnati, *n. (Indiana)*, a village of Greene co.

Cincinnati, *n. (Missouri)*, a village of Ralls co.

Cincinnati, *n. (Nebraska)*, a post-village of Pawnee co.

Cincinnati, *n. (Ohio)*, a large and important city, capital of the State, and the principal town in the State, is situated on the N. bank of the Ohio river, opposite the mouth of the Licking, 100 m. N. of Lexington, Ky., 120 W. of Columbus, 340 E. of St. Louis, 280 m. S.E. of Chicago, and 610 m. W. by N. of Washington; Lat. 39° 6' N., Lon. 84° 27' W. The city is built on two inclined plateaus rising from the river, one about 50 feet higher than the other, on the north side of the Ohio, which separates it from the suburban cities of Covington and Newport, Ky., located on the S., and divided from each other by the Licking River. It now extends from these plateaus over the neighboring highlands, on which and most of the handsome residences. The site of *C.* is one of great beauty, it standing in the center of an amphitheatre backed by a circular horizon of wooded hills, which rise to an altitude of some 300 feet. Access to this inclosed plain is chiefly by the narrow valley of the Ohio and the wider one of Mill Creek, which is more than half a mile wide and extends northward by gentle undulations, offering an easy access through the hills for highways and railroads. *C.* has an area of 36 sq. miles, and is laid out on a rectangular plan, Philadelphia having been its model, though beyond the original site its regularity disappears, the course of the streets being governed by the lines of the ravines and the slopes of the hills. The streets are wide, generally 66 feet, and the principal ones are well paved with granite or asphalt. The hill portion of the city is perhaps unequalled for beauty and picturesqueness by any other city in this country, its numerous lawns and open spaces giving it an aspect of a well-kept park, while its elevation affords an attractive point of view. The river front of the city is about 10 miles long, its average width northward about 2 miles; but up Mill Creek valley it extends about 1/2 miles. It is surrounded by numerous villages, which completely enclose it, while opposite in Kentucky

lie the cities of Covington and Newport, connected with *C.* by a magnificent wrought-iron bridge and a splendid suspension bridge, 2,252 feet long. — *Buildings, &c.* The most notable public buildings of *C.* are the U. S. Post Office and Court Building, constructed at a cost of \$5,000,000; the City Hall, recently finished, a handsome and spacious structure; the Music Hall, seating 5000 people; The Chamber of Commerce building; the Cincinnati College, Public Library, Masonic Temple, City Hospital, and the noble Art Museum in Eden Park. The residences of the city were long mainly plain brick structures, but these are now giving way to much more handsome residences, much to the improvement of the appearance of the city. There are two large public parks of 216 acres, and Burnett Woods, 170 acres, and a

Fig. 601. — THE NEWPORT AND CINCINNATI BRIDGE.

number of smaller ones. Spring Grove Cemetery, one of the handsomest in the West, contains 600 acres, and is approached by a handsome avenue, 100 feet wide. The Zoological Garden, near the northern boundary of the city, embraces 60 acres of picturesque hills and ravines, and is well stocked with animals. Water is supplied by a number of reservoirs, filled from the Ohio River, that in Eden Park holding 100,000,000 gallons. — *Commerce and Manufactures.* The Ohio River here 600 yards wide, gives *C.* commercial access to all the Mississippi valley, with whose cities an extensive river commerce has grown up. The city is also a railroad center, and has ample means of communication with all sections of the U. S. *C.* is, however, more particularly a manufacturing city. In 1890 it had 7994 manufacturing establishments, employing 89,528 hands, and producing merchandise to the value of \$175,650,185. It comes strongly into competition with Chicago in the pork-packing industry, its abattoirs covering many acres and disposing annually of an enormous number of swine. — *History.* *C.* was first settled in 1788, its original name being Losantiville, which was changed to *C.* in 1790 by General St. Clair, a member of the Society of the Cincinnati. In 1815 the first steamboat from New Orleans reached *C.*, and an extensive river commerce was soon inaugurated. It was chartered as a city in 1819, and from 1845 to 1860 received a large German immigration. In 1870 its area was increased by the addition of about 17 sq. m. of adjoining villages. Its population in 1890 was 296,908, which has since increased to about 350,000, with about 100,000 in adjoining villages.

Cincinnati, (SOCIETY OF THE). An association formed by officers of the American army, May 13th, 1783, to perpetuate the remembrance of the revolutionary war, and the mutual friendships formed under the pressure of common danger, and, in many instances, cemented by the blood of the parties. The Society was named in veneration for the character of Lucius Quinctius Cincinnatus; as the officers, following his example, resolved to return to their citizenship and its peaceful pursuits. The principles which form the basis of the Society, are: 1st. An incessant attention to preserve inviolate those exalted rights and national liberties for which they fought and bled; 2d. An unalterable determination to perpetuate and cherish the union of the respective States and the honor of the American nation; 3d. To render permanent the cordial affection subsisting among the members, and to extend substantial acts of beneficence towards unfortunate officers and their families.

It included officers of the revolution, the eldest male lineal descendants, if elected, of those who were members, and a limited number of honorary members, under certain restrictions. The badge of the Society was designed by Major L'Enfant, and consists of a bald eagle of gold, carrying on its breast the following emblems: — "The principal figure Cincinnatus; three senators presenting him with a sword and other military ensigns; on a field, in the background, his wife standing at the door of their cottage, near it a plough and instruments of husbandry; and around the whole the motto, *Omnia reliquit servare rempublicam*. — On the reverse: a rising sun, a city with open gates, and vessels entering the port; Fame crowning Cincinnatus with a wreath, inscribed *Virtutis primum*. Below — hands joined, supporting a heart, with the motto, *Esto perpetua*; and around the whole, *Societas Cincinnati, instituta A. D. 1783*." It is worn at the third button-hole, suspended by a deep blue ribbon two inches wide, edged with white, descriptive of the union of

Fig. 602.

BADGE OF THE C. S.

France and America." (See fig. 602.) The Order, because of its being an hereditary distinction, was regarded by many eminently wise and patriotic men of that day as containing the germ of a future aristocracy, and dangerous to the character of the Republic, and was therefore most violently attacked. It, nevertheless, still flourishes in several of the States. Its members assemble annually on the 4th day of July.

Cincinnatus, LUCIUS QUINCTUS, a famous Roman consul, and a model of integrity and simplicity of manners, was B. about 519 B. C. In 457 B. C. he was chosen consul in the room of P. Valerius; and when the messengers went to announce his election, they found him cultivating his farm with his own hands. Soon after, in 456 B. C., he was again called to leave his rural obscurity and assume the dictatorship, in consequence of the perilous position in which the Roman consul and army had been placed by the Æqui. *C.* rescued the army, inflicted a signal defeat upon the enemy, and then returned to his farm after holding the office of dictator for only 16 days. He was a second time appointed dictator at the age of 80 B. C. 439, for the purpose of suppressing the alleged seditious machinations of Sp. Maelius.

Cincinnati, *n. (Indiana)*, a village of Hendricks co., 27 m. W. by S. of Indianapolis.

Cincinnati, *n. (New York)*, a post-village and township of Cortland county, 30 miles N. of Binghamton.

Cinclidæ, *n. pl. (Zool.)* In the classification of Gray, a sub-family of birds, corresponding to the family HÆMATOPODIDÆ, *q. v.*

Cinco'idæ, *n. pl. (Zool.)* A family of birds of the order *Grallatoræ*; the *STORK*, *q. v.*

Cinco-Señores, in Mexico, a town of the State of Durango, and 136 m. N. by W. of that city. It was a mission-settlement of the Jesuits, and was inhabited by Indians.

Cincture, *n.* [Fr. *cinture*; Lat. *cinctura*, from *cingere*, to surround, to gird.] A belt, a girdle, or something worn round the body.

"He binds the sacred cincture round his breast." — Pope.

—An inclasure: anything which surrounds or inclines.

"The court and prison being within the cincture of one wall." Bacon.

(Arch.) A ring, list, or fillet, at the top and bottom of a column, serving to divide the shaft from the capital and its base.

Cinctured, *a.* Having a cincture or girdle.

Cinder, *n.* (Chiefly used in the plural, *cinders*.) [Fr. *cendre*; Lat. *cinis*—*cineris*, ashes; allied to Gr. *konis*, *konis*, dust, ashes.] The dross or refuse of burned coals, &c.

—A hot coal that has ceased to flame: an ember.

—A scale or chip of metal struck off in the forging of metal.

Cinder-frame, *n.* [Steam Engineering.] In a locomotive engine, a wire-work frame placed in front of the tubes, to arrest the ascent of large pieces of ignited coke.

Cinder-wench, *Cinder-woman*, *n.* [Fr. *chiffonnière*.] A woman who rakes into heaps of ashes in search of cinders.

"In the black form of cinder-wench she came." — Gay.

Cindery, *a.* Resembling cinders, or composed of them. **Cin'eas**, an eminent Thessalian orator, the friend and minister of Pyrrhus, king of Epirus. He was the most eloquent man of his day, and Pyrrhus was wont to say that "the words of *C.* had won him more towns than all his own armies." He was a strenuous advocate of peace with the Romans, and was sent to Rome with proposals for a treaty after the battle of Heraclea, 280 B. C. Two years later *C.* was sent a second time to negotiate a peace, but without effect, and appears to have died soon after.

Cinematic, *Cinematical*, *a.* Belonging, or relating, to cinematics.

Cinematic curves. Curves made by machinery.

Cinematic, *n. sing.* [Gr. *linō*, to move.] See KINEMATICS.

Cinereous, *Cinereous*, *a.* [Lat. *cinereus*, from *cinis*—*cineris*.] Like ashes; ashy; having the color of wood-ashes; gray.

Cinera'ria, *n.* [Lat. *cinis*, *cineris*, ashes.] (Bot.) A genus of exotic plants, order *Asleracea*, so called on account of the soft white down on the lower surface of the leaves.

Cin'erary, *a.* [Lat. *cinerarius*, from *cinis*, *cineris*.] Pertaining to ashes; as, *cinerary* particles.

Cin'erary urns. See URNS.

Cinera'tion, *n.* The reducing of anything to ashes by combustion.

Cin'eritions, (*sin-e-rish'us*), *a.* [Lat. *cinericius*.] Having the color of ashes; containing ashy substance.

Cingalese, (*sin-ga-lēz*), *a.* Pertaining, or relating, to Ceylon, or to its inhabitants.

—*n. sing. and pl.* A native or inhabitant of the island of Ceylon; a Ceylonese.

Cingle, *n.* [Saildery.] See SURCINGLE.

Cingulum, *n.; pl. CINGULA*. [Lat.] (Zool.) A name applied to the neck of a tooth, or to that more or less distinct construction which separates the crown from the fang. The term *cingula* is also given to the traverse series of bony pieces connected by tegumentary flexible joints, as the middle part of the armor of the Armadillo.

Cinna, LUCIUS CORNELIUS, a Roman patrician, an associate of Marius, and the leader of the popular party during the absence of Sulla in the E. In 86 B. C. he was elected consul along with Cn. Octavius, and in violation of his oath to Sulla, *C.* attempted to overpower the senate, and to procure the recall of Marius and his party from banishment. In the contest which ensued, he was

defeated by his colleague and driven from the city. His office thus became vacant, and the senate appointed another consul in his stead. He soon returned, however, along with Marius, and laid siege to Rome. The senate were forced to capitulate; but while the votes of the people were being taken for the repeal of the sentence against Marius, he broke into the city, massacred the friends of Sulla, and allowed his partisans to commit frightful excesses. C. was consul for the next 3 years; but Sulla, having brought the Mithridatic war to a close, resolved (84 B. C.) to return to Italy to inflict condign punishment on his enemies. C. prepared to resist him by force of arms, but was prematurely slain by a mutiny among his own troops.

Cin'na, *n.* (*Bot.*) A genus of plants, order *Graminaceae*. *C. arundinacea*, 3-5 feet high, is a beautiful grass, found in rich shady soils in the U. States, and sought by cattle.

Cin'nabar, *n.* [*Gr. kinnabari*; *Lat. cinnabaris*; *Fr. cinabre*.] (*Min.*) An Indian name given, according to Pliny, to a mixture of the blood of the dragon and elephant, and to other substances of similar color. It is now exclusively applied to the red pigment called *vermilion*, and to the mineral of which the former is an artificial preparation. The ore from which the mercury of commerce is obtained is a protosulphide of mercury, composed, when pure, of 86.21 per cent. of mercury, and 13.79 of sulphur. The principal mines of this mineral are those of Idria in Carniola, and Almaden in Spain; but it is also abundant in China, at New Almaden in California, in Mexico, and in Tuscany.

Cin'nabarine, *a.* [*Fr. cinabarin*.] Containing cinabar, or relating to the same; consisting of cinabar.

Cinnam'ic Acid, *n.* (*Chem.*) When the essential oil of cinnamon is exposed to air, it gradually absorbs oxygen, and deposits crystals of cinnamic acid = $C_{15}H_{12}O_2$. It much resembles benzoic acid, into which it is converted when mixed with bichromate of potash and sulphuric acid. This acid is found, together with benzoic acid, in Peruvian and in Tulu balsam, from the latter of which it is readily obtained.

Cin'naminson, in *New Jersey*, a post-township of Burlington co., abt. 5 m. above Camden, on the Delaware.

Cinnamo'mum, *n.* [See CINNAMON.] A genus of plants, order *Lauraceae*, including many species remarkable for their aromatic properties.

Fig. 603. — CINNAMON-TREE.
(*C. zeylanicum*.)

C. zeylanicum, formerly *Laurus cinnamomum*, the Cinnamon-tree, a native of Ceylon, is extensively cultivated in that island, also on the Malabar coast, and in Java and Cayenne for the sake of the aromatic bark of the young branches, which forms the true cinnamon of commerce. Cinnamon is much employed as a spice, and medicinally as a cordial, stimulant, carminative, astringent, anti-spasmodic agent, and as an adjunct to other medicines. It owes its properties to the presence of a volatile oil and tannin. The volatile oil is imported from Ceylon, where it is obtained from the rejected bark by distillation. It is known by the name of *oil of cinnamon*, and used medicinally as a stimulant, and by cooks and confectioners for flavoring. From the leaves of the tree another volatile oil, similar to oil of cloves in odor and taste, is prepared. From the ripe fruits a concrete fatty substance, called *cinnamon-suet*, is obtained by expression. The cinnamon-tree is the "kinman" or "kinman" of the Bible. *C. cassia*, a native of China, yields the *cassia bark* of commerce, which possesses analogous properties to those of cinnamon. From this bark the fragrant oil of *cassia* is obtained. The *cassia buds* of commerce, which are now much used as a condiment, are said to be the flower-buds of this plant. The *cassia-tree* is the "kiddah" or *cassia* of the Bible. Several other species of *C.* yield aromatic barks.

Cin'namon, *n.* [*Gr. kinnamon*, *kinnamōmon*; *Lat. cinnamomum*; *Heb. kinamon*. Etymology uncertain.] See CINNAMOMUM.

Cin'namon-stone, *n.* (*Min.*) A variety of lime-garnet, of a clear cinnamon-brown color. It is very abundant in Ceylon, and is occasionally cut and polished for jewelry; in fact, most of the stones sold as hyacinths are in reality *C.-S.* It is a silicate of alumina and lead.

Cin'namyle, *n.* (*Chem.*) The supposed radical of oil of cinnamon, of which the oil is the *hydruret*. The formula of *C.* is $C_{15}H_{12}O_2$, and that of oil of cinnamon, $C_{15}H_{12}O_2 + H$.

Cinque, (*singl.*) *n.* [*Lat. quinqua*; *It. cinque*; *Fr. cinq*.] A five of anything; the number five upon dice, or in cards.

Cinq-Mars, HENRI COIFFIER DE RUZÉ, MARQUIS DE, B. in France, 1620. At the age of 18 he was presented at

court by Cardinal de Richelieu, and soon obtained the favor of Louis XIII., to whom he became Master of the Horse. Chafing at the restraint under which Richelieu held him, and ambitious of political power, C. framed a conspiracy to overthrow the cardinal, of which the king himself and his brother Gaston, duke d'Orleans, were members. But Louis was weak and fickle, Gaston perfidious, and Richelieu not the man to be put down by a youth just turned of 20. C. was delivered up to the cardinal, and beheaded at Lyons, along with his friend, the councillor De Thou, Sept. 12, 1642. C. is the hero of a splendid historical novel by Alfred de Vigny.

Cinquecento, (*ching'kwé-chen'to*), *n.* [*It.* five hundred; an abbreviation for *mille cinquecento*, or fifteen hundred.] (*Fine Arts*.) A term applied to designate the art styles of the 16th century, or such as were developed about, or after, 1500. In like manner the terms *trecento* and *quattrocento* denote art of the 14th and 15th centuries. The *C.* is the period of the highest perfection of the arts of the Revival or Renaissance.

Cinque-foil, *n.* [*Cinque*, and *Lat. folium*, *It. foglia*, *Fr. feuille*, a leaf.] (*Bot.*) The name of a species of the genus *Potentilla*, *q. v.*, which have fingered leaves.

(*Arch.*) An ornamental foliation or feathering, used in the arches of the lights and tracery of windows, paucelling, etc.

Cinque-pace, *n.* [*Fr. cinq*, five, and *pas*, a step.] (*Dancing*.) A kind of grave, stately dance, in which the steps were regulated by the number 5.

Cinque Ports, ("Five Ports.")

(*Eng. Hist.*) The sea-port towns of Dover, Sandwich, Hastings, Hythe, and Romney; to which three others were afterwards added, viz., Winchelsea, Rye, and Seaford. These towns are incorporated, with peculiar privileges; are under the government of a lord warden, to whom writs for the return of members to parliament from them are directed; and the members so returned are termed *Barons of the Cinque Ports*.

Cinque-spotted, *a.* Showing five spots.

"On her left breast a mole, cinque-spotted."—Shaks.

Cintra, (*sin'tra*), a small town of Portugal, prov. of Estremadura, picturesquely situated on the declivity of the Sierra da Cintra, 15 m. W.N.W. of Lisbon; pop. 4,500. Here was concluded, between the French and English, Aug. 22d, 1808, the convention by which the former agreed to evacuate Portugal.

Cintre, (*sin'ter*), *n.* (*Arch.*) The timber framing erected in apertures between piers, to support vousoirs, or materials of an arch while building. See CENTRING.

Cion. See SCION.

Ciotat, (*La*), (*se'ô-tâ*), a town of France, dep. Bouches-du-Rhône, on a bay in the Mediterranean, 15 m. S.E. of Marseilles, in the midst of a district clad with olive, orange, and pomegranate plantations. Pop. 10,017.

Cipers, *n.* [From *Cyprus*.] A kind of fine gauze, originally from Cyprus.

Ciper-tim'nel, *n.* (*Arch.*) A false chimney placed on a house by way of ornament.

Cipher, (formerly written *CYPHER*), (*si'fer*), *n.* [*L. Lat. ciphra*; *ziphra*, numeral marks or characters; *Fr. chiffre*; *It. cifra*; *Heb. sapfar*, to number.] (*Arith.*) Any arithmetical character or mark; any mark used in numbering; an arithmetical character, thus (0), which, standing by itself, expresses nothing; but which, placed on the right hand of other figures, increases their value in a tenfold degree; and when placed on the left, in decimal arithmetic, diminishes the value of other figures in the same proportion.

—An intertexture of letters as the initials of a name; a device; a monogram; as, an engraver's cipher.

—A secret or disguised method of writing; a secret character used for this mode of writing.

"This book, . . . in cipher writ, or new-made idioms."—Donne.

—A person without influence or force of character; as, he is a mere cipher.

—*v. i.* To compute by figures; to practise arithmetic.

"'Twas certain he could write and cipher too."—Goldsmith.

—*v. a.* To write in secret or occult characters.

"His notes he cipher'd with Greek characters."—Hayward.

Cipher-key, *n.* A key to guide the reader of a letter in cipher.

Cip'olin, *Cipollino*, (*chip-ol-lé'no*), *n.* [*It.*] A name given by the Italians to an impure marble, containing veins of schistose, which decomposes and falls off in flakes like the coats of an onion.

Cir'ea, *n.* [From *CIRCE*, *q. v.*, who was supposed to have used these plants in her enchantments.] (*Bot.*) A genus of plants, ord. *Onagraceae*. The species *C. Lutetiana*. Large Eucharter's Nightshade, found from Carolina W. to Illinois, in damp shades and thickets, has a stem 1 to 2 feet high, sparingly branched, tumid at the nodes; leaves dark-green, smooth, and small; rose-colored flowers, in long, terminal, and axillary racemes; fruit obovate, with conspicuous hooks. *C. Alpina*, Alpine Eucharter's Nightshade, is a common plant in rocky woodlands, from Canada W. to Oregon.

Cir'ear, *n.* [*Hind. sarkār*.] In India, a province or territory.

Cir'ears, in Hindostan. See NORTHERN CIRCARS.

Circas'sia, (or *CHERKESSIA*), a country of Asia, occupying a great part of the territory between the Black and Caspian seas. It comprises the northern, and part of the southern declivity of the Caucasus, and is now embraced within the limits of the Russian empire. Desc. Mountainous, intersected by extensive fertile valleys,

producing wheat, grapes, and most of the fruits of the temperate zone. Cattle-rearing, however, is the principal branch of industry, and the breed of horses is of superior quality. *Minerals*. Iron, lead, nitre, and salt. *Manuf.* Unimportant. *Pop.* Perhaps 250,000. The Circassians are distinguished by the elegance of their appearance. The men are tall, and of an athletic, though slender form; their features are expressive, and their haughty and martial. The beauty of the females has long been celebrated throughout Europe; and Circassian captives are considered as the brightest ornaments of an Eastern seraglio. This people are famous for their long and fruitless struggle to maintain their independence against the aggression of Russia.—See ASIA.

Circassian, (*sir-kash'yan*), *a.* Relating, or pertaining to Circassia.

—*n.* A native or inhabitant of Circassia.

Cippus, *n.*; *pl. Cippi*. [*Lat.*] (*Antiq.*) A name applied to Roman sepulchral monuments which consisted of low column, whether round or rectangular. Cippi, with distances engraved upon them, served also as milestones.

Fig. 605. — CIPPUS.

Cir'ee, or **Cir'ee**, (*Myth.*) A daughter of Sol and Per celebrated for her skill in magic and poisonous her. She married a Sarmatian prince of Colchis, whom she murdered to obtain the kingdom, but was expelled her subjects, and carried, by her father, to an island called *Æa*, on the coast of Italy. Ulysses, on his return from the Trojan war, visited her coasts; and all his companions, who ran headlong into pleasure and voluptuousness, were changed by C's potions into swine. Ulysses fortified against all enchantments by an herb called *moly*, which he had received from Mercury, demanded from the restoration of his companions to their former state. She complied, loading the hero with honors; and, for whole year, he forgot his glory in his devotion to pleasure.

Cir'ean, *a.* Relating to CIRCE, *q. v.* Beguiling; seducing.

Circen'sial, **Circen'sian**, *a.* [*Lat. circenses*, *fr. circus*.] Pertaining to the Roman Circus; as, a *circens* show.

Cir'cinal, **Cir'cinate**, *a.* [*Fr. circinal*, from *l. circinus*.] (*Bot.*) Applied to a leaf when spirally rolled up from the apex towards the base, as in ferns.

Cir'cinate, *v. a.* [*Lat. circinare*, to make round.] To make a circle; to compass.

Cir'cims, *n.* [*Lat.*; from *Gr. kirkinos*, a circle (*Astron.*) The Compasses; a constellation of four stars near the S. Pole.

Cir'cinn, *n.* (*Bot.*) A name of the gen. *CARDUUS*, or *Circum*, around: *Gr. kirkos*, *kirkos*, a ring, a circle; *Heb. kikkar*, a ring, a circle, from *karar*, to go or move in a circle.] (*Grom.*) A circle is, according to Loel's definition, a "line continued till it ends where it begins, having all its parts equidistant from a common centre." (Fig. 606.) The bounding line is called the *circumference* or *periphery*. Any straight line, as A B, D C, drawn through the centre and terminating in the circumference, is called a *diameter*. The *C.* is one of the elements of plane geometry, the right line being the other; and those constructions only are regarded as geometrical which can be made by the aid of these two elements. In modern geometry, however, a *C.* is classed with the conical sections among quadrics or curves of the 2d order, which have the property of cutting every line in two real or imaginary parts. The *C.* derives its chief importance from application in trigonometry to the measurement of angles. This application is dependent on the fact that if circles of the same radii be described from

Fig. 606.

the vertices of angles as centres, the arcs of the circles intercepted between the sides are always proportional to the angles. It is for this reason that the *C.* is almost always employed to compare angles with each other. For this purpose the circumference of the *C.* is divided into four equal parts, each of which is called a quadrant; each quadrant is divided into 90 equal parts, called degrees; each degree is divided into 60 equal parts, called minutes; each minute into 60 equal parts, called seconds. — The rectification of the *C.*, or the determination of the ratio of the circumference to the diameter, is a problem which has exercised the ingenuity of mathematicians in all ages. It cannot be expressed in finite numbers; but numerous series have been invented from which it may be computed to any required degree of precision. Archimedes, in his treatise *De Dimensione Circuli*, proved that if the diameter is expressed by 7, the circumference is very nearly 22. A nearer ratio, which is generally used in ordinary measurements, is 113 to 355; and it has the advantage of being easily remembered, the numbers being formed of the first 3 odd numbers, each repeated. — *Circle of Contact*, or *Osculatory Circle*. The circle which fits closest to any given curve at a given point. A circle being determined by 3 points, we can only demand from it that it shall have 3 consecutive points in common with the curve; the contact, therefore, will be *three-pointed*, or of the *second order*. In general, the circle of contact will cut the curve. — *Circle of Curvature*. The circle whose curvature, or amount of bending, is the same as that of a given curve at any given point.

(*Astron.*) Instruments used to measure angles. — See **CIRCULAR CIRCLE, MERIDIAN, QUADRANT, TRANSIT INSTRUMENT.**

(*Logic.*) A kind of false reasoning, in which the principle is supposed which it is intended to prove, and afterwards the principle is proved by the thing which it is intended to have proved. The same fault takes place in definitions, when an idea is defined by others which suppose the knowledge of the first.

Circuit: enclosure; compass; as, a Druidical *circle*.

"Obscured in the circle of the forest." — *Shaks.*

A class, company, or society; a coterie; a clique; a set. "Ever since that time Lyssander visits in every circle." — *Tatler*. A province; a territorial division; as a *Circle*, or *Kreis*, in Germany.

(*Astron. and Geog.*) *Circle of a sphere*, a circle which has its plane tangent to the sphere and has its periphery either in its movable surface as the meridian; or in another movable, continuous, or equidistant surface, as the ecliptic, equator, and its parallels. — *Circle of altitude*, or *Almucantar*, a circle parallel to the horizon, having its pole in the zenith, and diminishing as it approaches the zenith. — *Circle of latitude*, a great circle perpendicular to the plane of the ecliptic, passing through its poles and through every star and planet. — *Circle of longitude*, a lesser circle parallel to the ecliptic, diminishing as it recedes from it. — *Circle of perpetual apparition*, one of the lesser circles, parallel to the equator, described by any point of the sphere touching the northern point of the horizon, and carried about with the diurnal motion. The stars within this circle never set. — *Circle of perpetual occultation*, another lesser circle at a like distance from the equator, which includes all the stars which never appear in our hemisphere. — *Diurnal circle*, an immovable circle supposed to be described by the several stars and other points in the heavens, in their diurnal rotation round the earth, or rather in the rotation of the earth around its axis. — *Hourly circles*, in Dialing, the lines which show the hours on dials. — *Circle of curvature*, or *circle of equicurvatures*, a circle having the same curvature at a given curve at a certain point. — *Great circle of a sphere*, a circle made by a plane passing through the centre of the sphere. Hence all great circles of the same sphere are equal, and any two of them bisect each other. A section of a sphere, by a plane not passing through the centre, is called a *less circle* or a *small circle* of the sphere. — *Circles of declination* are great circles, which are secondaries to the equator, and which pass through the poles of the world. — *Hourly circle*, or *hour-circle*, the globe, is a small brass circle fixed to the N. pole, divided into 24 hours, and furnished with an index to point them out. — *Circle of position*, circles passing through the intersections of the horizon and meridian, and through any degree of the ecliptic, or the centre of any star, or any other point in the heavens. They are used for finding out the situation or position of any star. — *Druidical circles*. (*Archæol.*) Ancient enclosures formed of stone circles circularly arranged. See **STONEHENGE**. — *Magic circle*. The circle or space within which magicians worked their enchantments, and which were believed to protect them from the evil spirits which they raised.

2. To move or revolve around.

"Another Cynthia her new journey runs."

And other planets circle their suns." — *Pope*.

3. To encircle; to encompass; to surround; to enclose.

"A power whose morning drum-beat . . . circles the earth with continuous and unbroken strain of the martial airs of England." — *Daniel Webster*.

4. To circle in. To hem in; to make compact; to keep together; to confine.

"Do not require . . . another body to limit and circle them in." — *Digby*.

5. To move circularly; to end at the beginning; as, the circling glass.

"The well-fraught bowl circles incessant." — *Philips*.

Circled, *a.* Having the form of a circle; round.

"Th' inconstant moon."

That monthly changes in her circled orb." — *Shaks.*

Circlet, *n.* A little circle; a circle; an orb, as of gold.

"Till Hesperus display'd

His golden circlet in the western shade." — *Pope*.

— A circular mat or piece of wood, used to support a dish at table.

Circleville, in *Illinois*, a post-village of Tazewell co.

Circleville, in *Indiana*, a village of Cass co., opposite Lewisburg, and 8 m. E. of Logansport, on Wabash River.

Circleville, in *New York*, a post-office of Orange co.

Circleville, in *Ohio*, an important manuf. city, cap. of Pickaway co., 25 m. S. of Columbus and 20 N. of Chillicothe, on the Scioto river. Here are remarkable remains of the Mound Builders (*q. v.*). Pop. (1857) about 7,500.

Circleville, in *West Va.*, a post-office of Pendleton co.

Circuit, (*sēr'kūt*), *n.* [Fr. *circuit*; Lat. *circuitus* — *circu*, *circum*, and *eo*, *itum*, to go.] Act of going, moving, or passing round; as, "his periodical circuit round the sun." — *Watts*.

— The space enclosed in a circle, or within certain limits.

— Space or extent measured by travelling round.

"The lake of Bolsena is reckoned one-and-twenty miles in circuit." — *Addison*.

— That which encircles, as a ring or coronet.

"The golden circuit on my head." — *Shaks.*

(*Law.*) A division of a country, appointed for a particular judge to visit for the trial of causes, or for the administration of justice. The U. States are divided into nine circuits. — The term is more generally applied to the periodical journeys of the judges through their various circuits.

Circuit Courts: The term is applied distinctively to a class of the Federal courts of the U. States, of which terms are held in two or more places successively, in the various circuits into which the whole country is divided for the purpose; — and, in some of the States, to courts of general jurisdiction, of which terms are held in the various counties or districts of the State. Such courts sit in some instances as courts of nisi prius; in others, either as nisi prius or in banco. They may have an equity as well as a common-law jurisdiction, and may be both civil and criminal courts. The systems of the various States are very different in these respects.

Circuit, *v. a.* To move round in.

Circuiteer, *n.* One who travels a circuit; — a travelling advocate.

Circuitous, *a.* Going in a circuit; round-about; not direct; as, a circuitous road.

Circuitously, *adv.* In a circuitous manner.

Circuituity, *n.* An indirect course; a motion in, or round, a circle.

Circulable, *a.* That which may be circulated.

Circular, *a.* [Fr. *circulaire*; Lat. *circularis*, from *circulus*, a circle.] In the form of a circle; round; pertaining to, or circumscribed by, a circle. — Successive in order; always returning; repeating itself.

"From whence th' innumerable race of things

By circular succession order springs." — *Roscommon*.

— Addressed to a circle, or to a number of persons having a common interest; as, a circular note.

— Vulgar; mean; circumforaneous; as, "a circular poet." — *Dennis*.

Circular Lines. (*Geom.*) Straight lines divided from the divisions made in the arc of a circle, as sines, tangents, and secants, &c. — *Circular arc*, any part of the circumference of a circle. — *Circular instruments*, mathematical instruments for the admeasurement of angles. — *Circular saw*, a saw revolving upon an axis, which has the advantage of acting continually in the same direction, and no force is lost by a backward stroke; it is also susceptible of much greater velocity than the reciprocating saw, an advantage which enables it to cut more smoothly; it is used principally for cutting mahogany for veneering, and for other woods cut into thin layers. — *Circular sailing*. (*Naut.*) That mode of sailing performed in the arc of a great circle. — *Circular numbers*. (*Arith.*) Those numbers whose powers end in the same digits as the roots themselves.

— A letter or printed paper addressed to a number of individuals so as to circulate among them; as, a trade-circular.

Circularity, *n.* [L. Lat. *circularitas*.] State of being circular.

Circularly, *adv.* In a circular manner.

"Trade, which, like blood, should circularly flow." — *Dryden*.

Circulate, *v. i.* [Fr. *circuler*; Lat. *circulo* — *circulatus*, from *circulus*, a circle.] To move in a circle; to run around; to move round, and return to the same point.

"Our knowledge like our blood must circulate." — *Denham*.

— To spread; to be dispersed; to have currency; as, news circulates.

Circulating medium. See **MEDIUM**. — *C. decimal*. (*Arith.*) See **DECIMAL**. — *C. library*. See **LIBRARY**.

— *v. a.* To cause to move round; to put about; to spread; to propagate; to give currency to; as, to circulate a report.

"In the civil wars, the money spent on both sides was circulated at home." — *Swift*.

Circulation, *n.* [Fr. from Lat. *circulatio*.] Act of circulating; state of being circulated; circular motion; as, the circulation of the blood. — Act of going and returning, or of passing from place to place, or from person to person.

"To deny us the blessings of peace, and to keep us in a circulation of miseries." — *King Charles I.*

— Diffusion; dissemination; propagation; as, the circulation of a newspaper.

— Currency; circulating coin, or notes, bills, &c., current for coin.

Circulation of the blood, *n.* (*Physiol.*) The

course of the blood through the body, from the heart to the capillaries, and from the capillaries back again to the heart. This, after respiration, is the most important function performed by the body, if between the two there can be any difference in the degree of their importance, as one cannot exist for a moment without the other. That this most interesting vital function should be clearly and thoroughly understood, we must anticipate, in a slight degree, some of our remarks on the heart. Though the ancients had some vague idea about the up and down motion of the blood, and had acquired a tolerably correct opinion of the course of that fluid as far as the abdominal organs and particularly the liver was concerned, yet the knowledge of the great and beautiful fact that the blood performed a perfect circuit through the body, was left to the immortal Harvey (*q. v.*) to discover. The heart (see fig. 201), which may be called the great reservoir of the blood, is divided into a right and left side, each side having two cavities or receptacles, one being situated above the other. The two upper cavities are called respectively the right and left auricle; and the two lower receptacles the right and left ventricle. All the impure blood coursing in the veins of the lower extremities is collected in one large vein, the *vena cava ascendens*; and all the venous blood in the upper extremities, including that from the head, neck, arms, and chest, is received also in one large vessel, called the *vena cava descendens*. These two large tubes, carrying all the venous or purple blood of the body, pour their contents into the upper chamber on the right side of the heart — the right auricle; by means of a valve between the upper and lower chamber, the blood passes from the auricle into the right ventricle. From the side of this latter cavity rises a large vessel called the *pulmonary artery*, — though in reality a vein, — which, receiving all the blood from the right ventricle, carries it to the lungs, where it becomes purified by absorbing oxygen from the air and giving off its carbon in the form of carbonic acid, and being re-collected by the *pulmonary vein*, properly artery, is brought back to the heart in the form of a bright scarlet fluid, loaded with all the elements of vitality; but instead of returning to the locality from which the pulmonary artery started, it terminates in the third chamber, or *left auricle*, thus completing one circle — the lesser, or, as it is called, the pulmonary circulation. The arterial blood poured into the left auricle from the lungs, passes by means of a valve into the space below it, or the *left ventricle*, from the upper side of which arises the great parent artery of the body, the *aorta* (see figs. 120 and 201), by which the blood is conveyed upwards and downwards to every portion of the body, to build up the frame, repair deficiencies, give heat to the system, and supply those fluid secretions so perpetually required to maintain the healthy economy of the system. The arteries having carried their blood to the skin, muscles, bones, and every tissue of the body, and expended in the journey all its vital and constructive properties, the capillaries collect the refuse blood, and then, merging into the veins, these in turn, after collecting the impure stream from all quarters, bring it back by the two large veins, the ascending and descending *vena cava*, to the right auricle of the heart, from which, as before stated, it passes into the right ventricle, the opposite cavity to that from which the *aorta* started, thus completing the second great circle, or the systematic circulation of the blood. — See **ARTERY, AORTA, BRONCHI, BLOOD, HEART, LUNGS, RESPIRATION, &c.**

Circulative, *a.* Circulating; tending to increase circulation. (*R.*)

Circulator, *n.* The person who, or thing which, circulates.

Circulatory, *a.* [Fr. *circulatoire*.] Circular; as a *circulatory letter*, — Addressing the organs of circulation.

— *n.* A chemical vessel, in which that which rises from the vessel on the fire is collected and cooled in another fixed upon it, and falls down again.

Circulus, *n.* [Dim. of Lat. *circus*, a circle.] (*Anat.*) Any part of the body, which is round or annular, as *C. oculi*, the globe or orb of the eye. It is also applied to objects which by no means form a circle, as to the *C. of Willis*, which is an *anastomotic circle* at the base of the brain formed by the anterior and the posterior cerebral arteries, and the communicating arteries of Willis.

Circum, *prep.* [Lat., around] Used as a prefix in many English words.

Circumagitate, *v. a.* [Lat. *circum*, and Eng. *agitate*.] To shake round; to agitate on all sides.

Circumambience, *n.* The act of encompassing.

Circumambient, *a.* [Lat. *circum*, and *ambiens*, going round, from *ambio* — *am*; Gr. *amphi*, round, and *eo*, to go.] Going round about; surrounding, encompassing, including, or being on all sides; as, "circumambient coldness." — *Wilkins*.

Circumambulate, *v. i.* [Lat. *circumambulo* — *circum*, and *ambulo*, *ambulum*, to walk.] To walk round about.

Circumambulation, *n.* The act of walking round about.

Circumbendibus, *n.* A vulgarism, denoting a circuitous route.

Circumcellion, (*Ecl. Hist.*) a disciple of Donatus, bishop of Carthage; one of a number sent by him in 342, into different parts of Africa, to preach his peculiar doctrines at fairs, markets, and places of public resort. They were called *circumcelliones*, or vagrants, from the *cellar*, cottages of the peasants, where, having no fixed residence, they sought a refuge. Having committed various excesses, they were punished with great severity.

Circumcise, *v. a.* [Fr. *circumciser*; It. *circumcidere*; Lat. *circumcido*, *circumcidens* — *circum*, and *caedo*, to cut.] To

cut off the prepuce or foreskin, according to the Jewish law.

"They came to *circumcise* the child."—*Luke*.

Circumciser, *n.* One who performs the rite of circumcision.

Circumcision, (*si-kum-sizh'un*), *n.* An operation consisting in removing circularly the prepuce of infants. —God commanded Abraham to use *C.*, as a sign of his covenant; and in obedience to this order, the patriarch at 99 years of age was circumcised, as also his son Ishmael, and all the males of his household, (Gen. xvii. 10-12.) God repeated the precept to Moses, and ordered that all who intended to partake of the Paschal sacrifice should receive *C.*; and that this rite should be performed on children on the eighth day after their birth, (Ex. xii. 44.) The Jews and all the other nations sprung from Abraham, as the Ishmaelites, the Arabians, &c., have always been very exact in observing this ceremony. At the present day it is an essential rite of the Mohammedan religion, and though not enjoined in the Koran, prevails wherever this religion is found. A similar operation is performed, among the Egyptians, Arabians, and Persians, on the females. —The Jews esteemed uncircumcision as a very great impurity; and the greatest offence they could receive was to be called *uncircumcised*. Paul frequently mentions the Gentiles under this term, not opprobriously (Rom. ii. 26), but in opposition to the Jews, whom he names "the circumcised," &c.

Feast of C. A festival observed in the Roman Catholic Church, and in some other denominations, in commemoration of the Circumcision of Jesus Christ. It is held on the 8th day of Christmas, or the 1st of January.

Circumclution, *n.* [Lat. *circumcludere*.] Act of inclosing on all sides.

Circumduct, *v. a.* [Lat. *circumducere*.] To lead about or astray.

(*Law*.) To contravene; to nullify.

Circumduction, *n.* [Lat. *circumductio*.] A leading about or astray. (*R.*)

(*Law*.) Nullification; cancellation.

Circumference, *n.* [Lat. *circumferentia* — *circum*, and *fero*, *ferens*, to carry or bear.] The line that is carried or goes round or encompasses a figure; a periphery.

"This be thy just circumference, O world!" — *Milton*.

—The bounding line of a circle's sphere, or round body; the space inclosed in a circle. See **CIRCLE**.

"The whole circumference a mile around." — *Dryden*.

—The external surface of an orbicular body.

"If the clouds were viewed through it, the colour at its circumference would be blue." — *Browne*.

Circumferential, *a.* [Fr. *circonference*; It. *circonferenza*; Sp. *circunferencia*; Lat. *circumferentia*.] Pertaining, or relating, to the circumference.

Circumferentor, *n.* [Lat. *circumferre*, from *circum*, and *ferre*, to bear.] An instrument used in surveying for measuring angles, consisting of a brass circle, an index with sights, and a compass, and mounted on a staff with a ball and socket.

Circumflex, *v. a.* To place the circumflex on a word.

Circumflex, (*si-kum-fleks*), *n.* [Lat. *circumflexus* — *circum*, and *flecto*, *flectus*, to bend.] A character or accent denoting a rise and fall of the voice on the same long syllable, marked in Greek thus $\acute{\circ}$, and in Latin thus $\acute{\circ}$. In French it is marked as in Latin, and indicates a full broad sound, as in Rhône (*Rhône*).

—A wavering or modulation of the voice.

(*Anat.*) A professional term applied to such arteries, nerves, or other tubes as wind round a joint, or any particular part, and of which there are several varieties.

—*v. a.* To mark or pronounce with the accent called a circumflex.

—*a.* Moving or turning round. (*R.*)

Circumflexion, *n.* The act of giving a circular direction or figure.

—A circuit; a winding about.

Circumfluence, *n.* A flowing round on all sides, as of waters.

Circumfluent, **Circumfluous**, *a.* [Lat. *circumfluens* — *circum*, and *fluo*, to flow.] Flowing round; surrounding, as a fluid.

Circumforanean, **Circumforaneons**, *a.* [Lat. *circumforaneus* — *circum*, and *forum*, a market.] Walking, wandering, or strolling about from market to market, or from house to house.

Circumfuse, *v. a.* [Lat. *circumfusus* — *circum*, and *fundo*, *fusus*, to pour.] To pour around, as a fluid; to spread around; to surround.

"With all his winding waters circumfus'd." — *Addison*.

Circumfusile, *a.* [Lat. *circum*, and *fusilis*, from *fundo*.] That may be poured and spread round; as, "circumfusile gold." — *Pope*.

Circumfusion, *n.* [Lat. *circumfusio*.] Act of pouring or spreading round; the state of being poured around.

Circumgyrate, **Circumgyre**, *v. a.* [Lat. *circum*, and *gyralis*, from *gyro*, to turn, or wheel round.] To roll around; to make a rotatory or circular motion.

Circumgyration, *n.* Act of turning, rolling, or whirling around; the turning of a limb in its socket.

Circumincidence, *n.* [Lat. *circum*, and *incedo*, a walking.] (*Theol.*) The reciprocal existence in each other of the three persons of the Trinity.

Circumjacent, *n.* Condition of being circumjacent

Circumjacent, *a.* [Lat. *circumjacens* — *circum*, and *jaceo*, to lie.] Lying round about; bordering on every side.

Circumlittoral, *a.* [Lat. *circum*, and *littus*, shore.] Adjoining the shore.

Circumlocution, *n.* [Lat. *circumlocutio* — *circum*, and *loquor*, *locutus*, to speak.] A circuitous mode of expression, used either when the proper term for express-

ing an idea does not naturally and immediately occur, or when a person wishes to avoid expressing in direct terms something disagreeable or inconvenient.

Circumlocutional, *a.* Periphrastic; circuitous; containing circumlocutions.

Circumlocutory, *a.* Pertaining to circumlocution; periphrastic; as, *circumlocutory language*.

Circummured, *a.* [Lat. *circum*, and Eng. *mured*.] Walled round, or encompassed with a wall.

"He hath a garden circummured with bricks." — *Shaks*.

Circumnavigable, *a.* That may be sailed around.

Circumnavigate, *v. a.* [Lat. *circumnavigo* — *circum*, and *navigo*, *navigatus*, to sail over, to navigate.] To navigate or sail round; to pass round by water; as, to *circumnavigate* the globe.

Circumnavigation, *n.* Act of circumnavigating, or of sailing round; usually applied to the act of sailing round the world. The first to circumnavigate the world was Magellan, or Magalhaens, a Portuguese, in 1519. Fifty years ago the *C.* of the globe was still looked upon as a great enterprise, but it is now become a matter of common performance.

Circumnavigator, *n.* One who sails around the world.

Circumplexion, *n.* [Lat. *circumplexare* — *circum*, and *plexare*, to fold.] State of being wrapped or folded round.

Circumpolar, *a.* [Lat. *circum*, and Eng. *polar*.] Situated about or near the pole.

(*Astron.*) *C.* stars are stars which are so near the pole, N. or S., as to revolve around it without setting. Their number varies according to the latitude of the observer.

Circumposition, *n.* [Lat. *circumpositio*.] The act of placing anything in a circular position.

"Now is your season for circumposition, by tiles or baskets of earth." — *Evelyn*.

Circumrotation, *n.* [Lat. *circum*, and *rotatio*, from *roto*, *rotatus*, to turn round, as a wheel, from *rota*, a wheel.] Act of turning, rolling, or revolving round, as a wheel; circumvolution; the state of being whirled round.

Circumrotatory, **Circumrotary**, *a.* Turning, rolling, or whirling round, as a wheel.

Circumscissile, *a.* [Lat. *circumscindere*.] (*Bot.*) Applied to pods which open by a circular horizontal line cutting off the upper part of a lid, as in the fruit of the Purslane (fig. 607). A pod characterized by this mode of dehiscence is called *Pyxis* or *Pyxidium*.

Circumscribable, *a.* Capable of being circumscribed.

Circumscribe, *v. a.* [Lat. *circum*, and *scribo*, to write.] To write or inscribe around; to draw a line or lines round. — To inclose within a certain limit; to limit; to bound; to confine; to restrict.

Fig. 607.

FRUIT OF PURSLANE.

"You are above

The little forms which circumscribe your sex." — *Southern*.

Circumscriber, *n.* He who, or that which, circumscribes.

Circumscribable, *a.* That which may be limited or circumscribed.

Circumscription, *n.* Act of circumscribing; a circular inscription. (*R.*) — The line that limits; determination of particular form or magnitude.

"In the circumscription of many leaves . . . nature affects a regular figure." — *Ray*.

—Limitation; bound; confinement; margin.

"I would not any unbounded free condition Put into circumscription and confine." — *Shaks*.

Circumscriptive, *a.* Defining the outward form or limit; inclosing the superficies of a body.

Circumscriptively, *adv.* In a limited manner.

Circumspect, *a.* [Fr. *circonspect*, from Lat. *circum*, and *specto*, *spectus*, to look or view.] Looking around cautiously; watchful on all sides; cautious; prudent; wary; thoughtful; as, *circumspect* behavior.

Circumspection, *n.* [Fr. *circonspection*, from Lat. *circum*, and *specto*.] A looking around cautiously; caution; watchfulness; deliberation; wariness; thoughtfulness; as, "with sly *circumspection*."

Circumspective, *a.* Looking around every way; attentive; wary; vigilant; cautious.

"All sly, slow things, with circumspective eyes." — *Pope*.

Circumspectively, *adv.* Cautiously; warily; watchfully; vigilantly; carefully.

Circumspectly, *adv.* With watchfulness every way; cautiously; attentively; warily; as, to examine a matter *circumspectly*.

Circumspectness, *n.* Quality of being circumspect; caution; vigilance; circumspection.

Circumstance, *n.* [Fr. *circonstance*; It. *circonstanza*; Lat. *circumstantio* — *circum*, and *sto*, *stans*, to stand.] Something attending, appendant, or relative to a main fact or case; adjunct of a fact; something adventitious; accident; incident; event.

"And breasts the blows of circumstance." — *Tennyson*.

—Condition of things surrounding or attending an event.

"Pride, pomp, and circumstance of glorious war." — *Shaks*.

—*pl.* State of affairs; one's state or condition in life; station; situation; as, to be in good *circumstances*.

—*v. a.* To place in a particular situation, or in relation to certain things.

"And such as they are circumstanced they be." — *Donne*.

Circumstant, *a.* [Lat. *circumstant*.] Surrounding; environing; as, "circumstant bodies."

Circumstantial, *a.* Consisting in, or pertaining to, circumstances; attending; relating to; casual; as, *circumstantial evidence*. — Abounding with circumstances; minute; particular; detailed; as, "circumstantial recitals." — *Prior*.

Circumstantial evidence. (*Law*.) See **EVIDENCE**.

—*n.* Anything incidental to the main subject, and therefore of minor importance; in contradistinction to an *essential*; — used generally in the plural; as, the *circumstantials* of religion.

Circumstantiality, *n.* The appendage of circumstances; the state of anything as modified by circumstances.

—Minuteness; particularization; detail.

Circumstantially, *adv.* According to circumstances; not essentially; accidentally. — Minutely with exactness; in every particular or circumstance.

"Lucian agrees with Homer in every point circumstantially." — *Broome*.

Circumstantiate, *v. a.* To place in particular circumstances.

—To describe particularly, exactly, or minutely; to assure or confirm by circumstances; as, to *circumstantiate* evidence.

Circumterreneous, *a.* [Lat. *circum*, and *terre*, earth.] Dwelling or moving around the earth.

Circumundulate, *v. a.* [Lat. *circum*, and *undulatus* — *unda*, wave.] To flow around, as waves. (*R.*)

Circumvallate, *v. a.* To surround with a wall or rampart; to enclose with a trench or fortification.

Circumvallation, *n.* [From Lat. *circum*, and *vallum* — *vallum*, a palisaded rampart, an intrenchment, from *vallus*, a stake, a pale.] (*Fort.*) A series of works surrounding a place when under siege; not to serve offensively against the place, but to defend the besieger from an attack from without. It usually consists of a chain of redoubts, either isolated or connected by a line of parapets. Such lines were much used in the sieges of the ancient and Middle Ages; but in modern times they are not so necessary, because the use of artillery lessens the duration of a siege, and also because the besieger have generally a corps of observation in the open field ready to repel any force of the enemy about to succor the besieged.

Circumvent, *v. a.* [Lat. *circumvenio* — *circum*, and *venio* — *venitum*, to come.] To come round about; to encompass; to beset; to gain advantage over another; to ensnare; to deceive; to delude; to impose on; to cheat.

"Should man

Fall circumvented thus by fraud?" — *Milton*.

Circumvention, *n.* Act of circumventing; deception; fraud; imposture; delusion.

Circumventive, *a.* Deceiving by artifices; deluding.

Circumvest, *v. a.* To cover around, as with a garnish.

Circumvolation, *n.* [Lat., from *circum*, and *volare*, to fly.] The act of flying around.

Circumvolution, *n.* [Fr. *circumvolution*; It. *circumvoluzione*. See **CIRCUMVOLV**.] Act of turning or rolling around; the state of being rolled; the thing rolled around another.

Circumvolve, *v. a.* [Lat. *circumvolvo* — *circum*, and *volvo*, to roll.] To roll around; to cause to revolve; put into a circular motion.

—*v. i.* To roll around; to revolve.

Circus, *n.*; *pl.* Eng. **CIRCUSES**, *pl.* Lat. **CIRCI**. [Lat. Gr. *kirkos*. See **CIRCLE**.] (*Roman Antiq.*) A round oval-shaped edifice, which was used for the exhibition of games and shows called *circuses*. The *C.* was most especially adapted for races, an amusement of which the Romans were passionately fond. The *Ludus Triclus* was a mock conflict between young men on horseback. A regular battle was sometimes represented (*Pugna Equestris et Pedestris*). By the formation of canals and the introduction of vessels, a *Naumachia*, or sea-fight, was occasionally exhibited; but, under the empire, this species of exhibition, as well as the *Venatio*, was gradually transferred to the Amphitheatre, *q. v.*, to which the circus was generally alike in its inner dispositions. There were many circi in Rome, of which the *C. Maximus* and *C. Agonalis* were probably the largest. According to different authorities, the former was capable of holding between 200,000 and 400,000 spectators. The *C. of Nero* was begun by Caligula; part of it is now occupied by the Basilica of St. Peter's. All circi which existed in ancient Rome are completely destroyed; but near the tomb of Cæcilia Metellus, not from the Appian Way, about two miles from Rome, there is a *C.*, commonly called the *C. of Caracalla*, in high state of preservation; it is small in size, but probably resembles closely the larger circi in general. In length, the *C. of Caracalla* is about 1,300 feet, 300 feet wide. The long sides are not quite parallel.

Fig. 608. — NAUMACHIA, OR NAVAL CIRCUS (Ancient Rome.)

one end is semi-circular, and the *carceres*, or covered stalls, furnished with gates, are there situated. In the *carceres* the chariots and horses remained till the starter gave the signal, when the gates were opened. Modern circuses of different form and distinction exist in France, England, Italy, and Spain; the largest being that of Madrid, for bull-fights (Fig. 447), which affords room for 12,000 spectators.

The term *C.* is also popularly applied to the company of persons who perform in a circus, with their appurtenances and equipage; as, an equestrian *circus*. See *CIRQUE*.

(Zool.) A genus of birds, fam. *Falconidae*, including the Marsh-hawk, or Harrier, *C. hudsonius*, of N. America and Cuba, which is from 19 to 21 inches long. Its upper parts and breast are pale, bluish-cinereous; the upper tail-coverts and under parts, white.

ireucester, (*sis'is-ter*), a town of England, in Gloucestershire, on the Churn, 16 m. S.E. of Gloucester. *Manf.* Carpets, woollens, and cutlery. *Pop.* 6,326.

irl-bunting, *n.* (Zool.) See *PLECTROPHANES*.

irque (*s'rk*), *n.* [Fr.] a circular space; a circus; as, the *Cirque Olympique*, Paris.

irrhose, **Cirrhous**, *CTR'ROSE*. See *CIRROUS*.

irriferosus, *a.* [Lat. *cirrus*, a curl, and *ferre*, to hear.] Producing tendrils, as a plant.

irriform, *a.* [Lat. *cirrus*, and *forma*, form.] Of tendril-like form.

irrig'erous, *a.* [Lat. *cirrus*, and *gerere*, to carry.] Having curled locks of hair.

ir'rigrade, *a.* [Lat. *cirrus*, and *gradi*, to walk.] Moved by cirrus, or curl-like appendages.

ir'riped, *n.* One of the cirripedia.

irripe'dia, **Cirripe'des**, **Cirrhipe'dia**, **Cirrhopo'da**, *n. pl.* [Lat., from *cirrus*, a curl, and *pes*, *pedis*, a foot.] (Zool.) A sub-class of crustaceous animals, so named from the curled and ciliate branchiae which protrude from the ovate aperture of the shells. The *Barnacles* and *Balanus*, or Acorn-shells, are the most familiar examples of *C.*

irro-cu'mulus, *n.* [Lat. *cirrus*, and *cumulus*.] (*Meteor.*) See *CLOUD*.

ir'rose, *a.* See *CIRROUS*.

irro-stratus, *n.* [Lat. *cirrus*, and *stratus*, *q. v.*] (*Meteor.*) The wave-cloud. See *CLOUD*.

ir'rous, *a.* [Lat. *cirrus*, a curl.] (*Bot.*) Terminating in a curl or tendril, as a leaf. Also written *Cirrhose*, *Cirrhous*, and *Cirrose*.

ir'rus, *n.* [Lat.; probably from *crinis*, hair.] (*Bot.*) A clasper or tendril; a long spiral body issuing from various parts of plants.

(Zool.) A lock of curling hair, as in the acorn-shells.

(*Meteor.*) See *CLOUD*.

ir'soccele, *n.* [Gr. *kirsokete*, from *kirsos*, a blood-vessel, and *kēlē*, a hernia.] (*Med.*) The varicose dilatation of the spermatic veins.

ir'sot'omy, *n.* [From Gr. *kirsos*, and *tomē*, an incision.] (*Surg.*) Any operation for the removal of varices by incision.

is, *n.* [Gr. *kis*, a wood-worm.] (Zool.) A genus of coleopterous insects.

isal'pina (**Gallia**). (*Anc. Geog.*) A part of Gaul, called also *Citerior* and *Togata*. Its farthest boundary was near the Rubicon, and it touched the Alps on the Italian side.

isal'pine, *a.* [Lat. *Cisalpinus*, from *cis*, on this side, and *Alpinus*, Alpine, from *Alpes*, the Alps.] On the side of the Alps nearest to Rome, or, in other words, on the S. side of the Alps;—in contradistinction to *transalpine*, i. e., on the further, or N. side.

isalpine Republic. (*Hist.*) A former State of Italy, comprising parts of Mantua, Milan, the Valteline, the Venetian territory W. and S. of the Adige, Modena, and the N. part of the Pontifical States. It was founded by Napoleon in 1797, and in 1802 was named the Italian Republic. In 1805, it formed the greater part of the kingdom of Italy.

isatlan'tic, *a.* [Lat. *cis*, on the hither side, and *Atlanticus*, the Atlantic.] On the hither or American side of the Atlantic,—in opposition to *transatlantic*, *q. v.*

is'co, *n.* (Zool.) A fish of the herring kind, found in Lake Ontario.

iseau, (*si'zo*), *n.* [Fr.: from Lat. *scindere*, *scissum*, to cut.] (*Surg.*) An instrument, composed of a flattened rod of metal, sharpened at one extremity, and used in anatomical preparations, and in certain surgical operations, for dividing bones.

is'matan, *n.* See *CASSIA*.

ismon'tane, *a.* On this, or the hither, side of the mountains.

is'padane, *a.* [Lat. *cis*, and *Padanus*, from *Padus*, the river Po, in Italy.] On the S. side of the Po, as relating to Rome.

is'padane Republic. (*Hist.*) In 1796, Napoleon I. conceived the design of forming two republics from the Italian territories, wrested from Austria and other states. They were called the *Cispadane* and *Transpadane Republics*, and were both merged, in 1797, in the Cisalpine Republic, (*q. v.*)

issam'pelos, *n.* [Gr. *kissos*, ivy, *ampelos*, a vine.] (*Bot.*) A genus of plants, order *Menispermaceae*. The root of *C. Pareira*, a climbing plant indigenous in Brazil, is an article of the Materia medica, and is commonly known as *Pareira brava*. It possesses bitter, tonic, and diuretic properties, which are chiefly due to the presence of an uncrystallizable alkaloid named *cissampeline* or *pelosine*.

is'soid, *n.* [Gr. *kissosidēs*.] (*Geom.*) A curve line of the second order, invented by Diocles, with a view to the solution of the famous problem of the duplication

of the cube, or the insertion of two mean proportions between two given straight lines.

Cis'sus, **AMPELOPSIS**, *n.* [Gr. *kissos*, ivy.] (*Bot.*) A genus of plants, order *Vitaceae*. The Woodbine, *C. quinquefolia*, found wild in woods and thickets, is a vigorous climber, supporting itself firmly upon trees by means of its radiating tendrils, and ascending to the height of 50 ft. In the same manner it ascends and overspreads walls and buildings. The large quinate leaves constitute a luxuriant foliage of dark, glossy green. Flowers inconspicuous, greenish, in dichotomous clusters. Berries dark blue, smaller than peas, acid.

Cist, (*sist*), *n.* [Gr. *kistē*. See *CHEST*.] (*Archæol.*) A stone coffin of the Bronze period, or place of interment, formed of two parallel rows of stones placed on their ends, and covered by similar flat stones, in length about 7 feet.

Cist, **Cista**, *n.* [Lat.; from Gr. *kistē*.] (*Rom. Antiq.*) A small box or chest, carried in procession in the festivals of Ceres or Bacchus. These boxes, which were always kept closed in the public processions, contained sacred things connected with the worship of these deities. In the representations of Dionysiac processions on ancient vases, women carrying *cistæ* are frequently introduced.—The *C.* was also the name of the ballot-box, into which those who voted in the comitia and in the courts of justice cast their tabellæ.—See *CYST*.

Cista'ceæ, *n. pl.* [Gr. *kiste*, a *CIST*, *q. v.*] (*Bot.*) The Rock-rose family, an order of plants, alliance *Cistales*. *DIAG.* Trimerous or pentamerous flowers, stamens never tetradynamous, closed up fruit, and albuminous seeds.—They are shrubs or herbs, chiefly natives of the S. of Europe and North of Africa.

The leaves are entire; the sepals and petals have a ternary or quinary arrangement, and are twisted in aestivation, the former being persistent and the latter caducous; the stamens are hypogynous and distinct; the ovary has parietal placentas, and a single style with a simple stigma; the fruit is capsular; the seeds have mealy albumen and embryos inverted, curved, or spiral. The *Cistaceæ* have resinous and balsamic properties. From species of the typical genus *Cistus*, a fragrant resinous substance, called *Ladanum*, is obtained in the Levant. This is used medicinally as an expectorant and emmenagogue, and is much esteemed by the Turks as a perfume. A gum called *Kuteera*, which is sometimes substituted in India for tragacanth, is the produce of a plant of this order, named *Cochlospermum Gossypium*. *Cistus purpureus*, a sub-evergreen low bush of the Levant, is one of the most beautiful species in this order. It is 3-4 feet high, and has large bright-reddish purple flowers, with a yellow spot at the base. The order consists of 7 genera and 155 species.

Cistales, *n. pl.* (*Bot.*) An alliance of hypogynous exogen plants. *DIAG.* Monodichlamydeous flowers, parietal or sutural placentæ, and a curved or spiral embryo, with little or no albumen. The cistal alliance consists of the 4 orders *Cistaceæ*, *Brassicaceæ*, *Resedaceæ*, and *Capparidaceæ*.

Cist'ed, *a.* Inclosed in a cist, or bag.

Cister'cians, **Cister'cian Monks**, *n. pl.* (*Ecccl. Hist.*) This religious order was founded in 1098, by Robert, a Benedictine abbot of Molesme, in Burgundy, and received its name from *Cîteaux*, in which forest, near Dijon, the first convent was situated. Its members increased rapidly, although their rules were extremely severe. They had a dispute with the Cluniacs or *Cluniacians*, who accused them of too great austerity, while the *C.* in return taxed the Cluniacs with having abandoned their regular discipline. The *C.* followed the rule of St. Benedict, and having been reformed early in the 12th cent., by Bernard, Abbot of Clairvaux, were afterwards called *BERNARDINES*, (*q. v.*) There were nuns of this order.

Cist'ern, *n.* [Lat. *cisterna*, from *cista*; Gr. *kistē*, a chest or box.] An artificial reservoir or receptacle for holding water or other liquids.

—A natural reservoir; a hollow place containing water.

"In the wide cisterns of the lakes confined."—*Blackmore*.

(*Steam Engineering*.) The vessel which surrounds the condenser of a steam-engine, and contains the injection water.

Cist'ern, in *Texas*, a post-office of Fayette co.

Cis'tic, *a.* See *CYSTIC*.

Cis'tus, *n.*; Eng. *pl.* *CISTUSES*; Lat. *pl.* *CISTIL*. (*Bot.*) See *CISTACEÆ*.

Cit, *n.* [An abbreviated form of *citizen*.] A citizen; a burgher; a pert, smug townsman;—used in a contemptuous sense.

"Your family will dwindle into *cits* or squires, or run up into wits or madmen."—*Taiter*.

Cit'able, *a.* That which may be cited or quoted.

Cit'adel, *n.* [Fr. *citadelle*; It. *cittadella*, dim. of *citta*, a city.] A fortress or castle in or near a city, intended for keeping the inhabitants in subjection; or, in case of a siege, to form a place of retreat for the defenders, and enable them to hold out after the rest of the town has been captured. A *C.* must command the other fortifications of the city.

Citadel'la, a town of N. Italy, on the Brentella, 14 m. N.E. of Vicenza; *pop.* 7,742.

Cit'al, *n.* [From *CITE*, *q. v.*] A summons to appear in court.—Quotation: citation. (*R.*)

Cita'ra, a town of the U. States of Colombia, dep. Cauca, on the Atrato River, about 80 m. S.W. of Antioquia; *pop.* 3,500.

Citation, *n.* [Fr.: from Lat. *citatio*, from *cito*, *citatus*, to cite, to call.] (*Law*.) A writ issued out of a court of competent jurisdiction, commanding a person therein named to appear on a day appointed and do something therein mentioned, or show cause why he should not.—The act by which a person is so summoned or cited.

—A reference to an authority or precedent in the course of a pleading.—Hence, the common use of the word in the same sense with quotation, allegation of instances, &c.

Cita'tor, *n.* One who cites. (*R.*)

Cit'atory, *a.* Citing; calling; having the power or form of citation.

"Though an appeal be inhibited in the letters *citatory*."—*Ayliffe*.

Cite, *v. a.* [Lat. *cito*, from *cio*, anciently *cio*, to cause to go.] To summon to appear in a court of law or jurisdiction; to call authoritatively.—To quote, or repeat upon the authority of a book, or the words of another person.

"That passage from Plato, which I *cited* before."—*Bacon*.

—To bring forward or produce, in support, proof, or confirmation of; as, to *cite* a case in point.

Cit'er, *n.* One who cites or summons into court.

—One who quotes or repeats from another.

Cit'ess, *n.* A city woman; the wife of a cit or citizen. (*R.*)

Citha'ron, a king who gave his name to a mountain of Bœotia. This mountain was at the south of the river Asopus. It was sacred to Jupiter and the Muses. Actæon was torn to pieces by his own dogs upon it; and Hercules there killed an immense lion. It is now called Helatea, and forms a part of the boundary between Attica and Thebes. *Height*, 4,620 feet.

Cith'ara, *n.* [Lat.] (*Mus.*) See *CITHERN*.

Cithar'istic, *a.* Pertaining to the cithara, or cithern.

Cith'ern, **Cith'ern**, **Cith'ara**, *n.* [Lat. *cithara*; Gr. *kithara*.] (*Mus.*) A kind of stringed musical instrument, anciently used. Its precise construction is not well known, but it is supposed to have resembled the lyre.

Cit'icism, *n.* [From *cit*.] The manners or habits of a cit, or citizen.

Cit'ico, in *Tennessee*, a post-office of Monroe co.

Cit'ied, *a.* Resembling, or pertaining to, a city; as, "Smoky, *citied* towns."—*Drayton*.

Cit'iner, *n.* A person born and bred in a city.

Cit'iole, *n.* [O. Sp. *cithola*, a cithern.] (*Mus.*) A dulcimer; a stringed musical instrument.

Cit'izen, *n.* [Fr. *citoyen*; It. *cittadino*, from *citta*, a city.] A freeman of a city; one who possesses the privileges acquired by citizenship; a person who enjoys a city franchise;—as opposed to an alien inhabitant, foreigner, or slave.

"All inhabitants within these walls are not properly *citizens* but only such as are called freemen."—*Sir W. Raleigh*.

—A townsman; an inhabitant; a dweller or trader in any place.

"Sweep on, you fat and greasy *citizens*."—*Shaks*.

(U. States.) A person, whether native-born or naturalized, who, under the Constitution and laws of this country, has a right to vote for representatives in Congress, and other public officers, and who is qualified to fill offices in the gift of the people. Native *C.* may fill any office; naturalized *C.* may be elected or appointed to any office under the Constitution of the U. States, except the offices of president and vice-president. The Constitution provides that "the citizens of each State shall be entitled to all the privileges and immunities of citizens in the several States."—*U. S. Const.*, Art. 4, s. 2.

—*a.* Having the qualities of a citizen; as, a *citizen-guard*.

Cit'izeness, *n.* A female citizen. (*R.*)

Cit'izenship, *n.* State of being vested with the rights and privileges of a citizen.

Cit'rate, *n.* [From Lat. *citrus*, citron.] (*Chem.*) A salt formed by the combination of citric acid with a base. See *CITRIC ACID*.

Cit'ric Acid, *n.* (*Chem.*) A powerful tribasic acid found principally in the lemon, lime, orange, and other members of the *Aurantiaceæ* fam. It also occurs in other acid fruits, such as the gooseberry, raspberry, strawberry, and tamarind. It is procured by neutralizing lemon or lime juice with chalk, and decomposing the insoluble citrate thus formed with sulphuric acid. Citric acid is very soluble in water. It crystallizes in transparent, colorless, rhombic prisms, which have an agreeable acid taste. Citric acid is a tribasic acid, and forms three citrates of soda; for instance, containing one, two, and three equivalents of acid united to an equivalent of base. The alkaline citrates are all soluble in water; so also are many of the metallic citrates. The most important of these is the citrate of lime, by the decomposition of which citric acid is formed. When subjected to destructive distillation, citric acid undergoes a remarkable change. It first melts, and parts with its water of crystallization. At 350° Fahr. decomposition commences, gases are given off, and the residue consists of *aconitic acid*, an acid found in aconite. If the heat be continued, *itaconic acid* is formed. Citric acid may be looked upon as the hydrated tetroxide of ceteryl, a hypothetical radicle. Citric acid is very valuable as a mordant in calico-printing; it is also used in pharmacy, in the manufacture of lemonade and syrups, and occasionally in photography. Combinations of citric acid with iron and ammonia are much used in medicine. It is also used in the preparation of effervescent draughts. The anti-scorbutic properties of lemon-juice are due to the presence of citric acid. *Form.* $H_3C_6H_5O_7$.

Fig. 609. — ROCK-ROSE.
(*Cistus purpureus*.)

Citrina'tion, n. [Lat. *citrinatio*.] The process of turning to a yellow color.

Citrine, a. [Fr. *citrine*.] (Painting.) Lemon or citron color; the first of the tertiary class of colors, or ultimate compounds of the primary triad—yellow, red, and blue, in which yellow is the *archeus* or predominating color, and blue the extreme subordinate; for, *C.* being an immediate compound of the secondaries, orange and green, of both of which yellow is a constituent, the latter color is of doubtful occurrence therein, while the other two primaries enter singly into the composition of *C.*; its meaner middle hue comprehending 8 blue, 5 red, and 6 yellow, of equal intensities.

Citrine like, a. A durable and bitter dyeing species of brown pink, prepared from the quercitron bark.

Citrine ointment. (Med.) An ointment containing nitrate of mercury; it has a lemon-yellow color. The *unquantum hydrargyri nitratis* of the pharmacopœia.

Citron, n. [Fr., from Lat. *citreum*.] The fruit of the citron-tree.

Citronelle, n. in Alabama, a post-village of Mobile co., 33 m. N.N.W. of Mobile.

Citron-tree, n. (Bot.) The *Citrus medica*. See CITRUS.

Citrus, n. (Bot.) The Pumpkin. See CUCURBITA.

Citrus, n. (Bot.) A genus of plants, order *Aurantaceæ*.

The different species and varieties of this genus yield the fruits known under the names of orange, lemon, lime, shaddock, pomelo, forbidden fruit, kumquat, and citron. The species *C. Aurantium* (fig. 239), and its varieties, produce all the various descriptions of sweet oranges. *C. Bigaradia*, or *vulgaris*, yields the bitter, or Seville orange. The orange-tree is remarkable for its prolificness; thus a single plant will sometimes produce as many as 20,000 good oranges. The small unripe fruits of *C. Aurantium*, as well as those of *C. Bigaradia*, are used for flavoring curaçoa, being called *orange-berries*; when polished in a lathe, they constitute the ordinary *issue-peas* of the shops. The leaves of both species, when distilled with water, yield a volatile oil, which is called *oil of orange-leaf*, or *essence de petit grain*. Their flowers yield the fragrant oil known as *oil of Neroli*, which is the most important ingredient in *eau-de-Cologne*. The distilled water of the flowers is named *orange-flower water*. By distilling the rind of the ripe, sweet orange with water, a fragrant oil, named *essential oil of sweet orange*, is obtained. The rind itself is used in medicine as an aromatic, stimulant, and tonic. The juice of the fruit forms a refreshing beverage, and in medicine a valuable refrigerant. The bitter orange is chiefly used for making marmalade. Its rind yields a volatile oil called *essential oil of bitter orange*, and is used medicinally, and for making *candied orange-peel*. *C. Limonium* and its varieties produce the fruits called lemons, the chief varieties of which are, the wax-lemon, the imperial lemon, and the Gaeta lemon. Both the rind and juice are employed in medicine, the former as an aromatic and stomachic, and the latter for its refrigerant and antiscorbutic effects. The juice contains a large quantity of citric acid, and is extensively used for flavoring; and to form the refreshing beverage called lemonade. The rind contains a large quantity of essential oil, which is obtained from it by expression and by distillation, and is known as the *essential oil*, or *essence of lemon*. This oil is principally used as a flavoring agent in confectionery and medicine, and occasionally in perfumery. *Candied lemon-peel* is a common ingredient in puddings and cakes. *C. Limettars* produces the lime. Its juice is employed, with that of the lemon, in the preparation of citric acid. *C. Medica* yields the fruit called the citron, which is supposed to be the Hebrew *tappuah*. This word is translated in the English version of the Old Testament as "apple." The rind of the citron is imported in a preserved state, and is used in confectionery. The pulp is less acid and juicy than that of the lemon. Two essential oils used in perfumery are obtained from *C. medica*. They are named respectively *essence*, or *essential oil of citron*, and *essence of cedrat*, or *cedra*. The citron, lime, and lemon are distinguished from the orange by their adherent rinds, their more lengthened form, and by the occurrence of a more or less prominent protuberance at the apex. *C. Bergamia*, which yields the Bergamot orange, so largely used in perfumery, is generally regarded as a mere variety of *C. Limetta*. (See BERGAMOT.) Besides the above fruits obtained from the genus *Citrus*, we have the shaddock, from the species *C. decumana*; the forbidden fruit, *C. Paradisi*; the pomelo, from *C. Pomelous*; and the kumquat of China, from *C. Japonica*.—The orange, lemon, lime, citron, and shaddock, are all successfully produced in Florida, Louisiana, and California. Immense quantities are also imported from the West Indies. The citron is commercially known in the U. States as a preserved confection, imported from the Mediterranean in oblong boxes, weighing from 20 to 25 pounds each, and is used by families as an addition to fruit-cake, pies, &c.

Citta Vecchia, (cheel'tā vek'ke-ā,) a strong inland town of Malta, 6 m. from Valetta; pop. 4,364.

Cit'tern, n. (Mus.) See CITHERN.

Cit'tern-head, n. A dunce; a blockhead. (R.)

City, n. [Fr. *cité*; Lat. *civitas*—*civitas*, from *civis*, a citizen.] A town, or collective body of inhabitants, incorporated and governed by a mayor and aldermen.

—The collective body of citizens, or the inhabitants of a city.

"I do suspect I have done some offence
That seems disgracious in the city's eyes."—Shaks.

—In England, a corporate town or borough; properly one which is, or has been, the seat of a bishop, or the capital of his episcopal see.

—a. Pertaining to a city; relating to a city.

Cit'y, in New York, a post-office of Dutchess co.

City-court, n. In the U. States, the municipal court having jurisdiction over a city, constituted of the mayor and aldermen.

City Island, in New York, a P. O. of Westchester co.

City of David. (Script.) It usually denotes Mount Zion, the S.W. section of Jerusalem, which David took from the Jebusites, and occupied by a palace and city called by his own name. In Luke ii. 11, this name is applied to Bethlehem, the native city of David.

City of God. (Script.) A name of Jerusalem. (Deut. xii. 5; Psalms xlii.)

City of Rocks, in Idaho, a village, abt. 165 m. S.S.E. of Idaho City, near the S. boundary.

City Point, in Virginia, a post-village and port of entry in Prince George co., on the James, at the mouth of the Appomattox, 34 m. S.E. of Richmond, and 10 E. N.E. of Petersburg. It commands a large trade both from Richmond, Petersburg, and from other places. This place was occupied by a Union force under Gen. Butler, in 1864.

City West, in Indiana, a village of Porter co., on Lake Michigan, abt. 33 m. by water S.E. of Chicago.

Cinda Della, (the'oo-da dail'la,) a town of Minorea, on its N.W. coast, about 30 m. N.W. of Port Mahon. The cathedral is a spacious and imposing edifice. Pop. about 8,000.

Ciudad Real, (the'oo-dath rai'al,) in Mexico, a town of the dep. Chiapa, in a plain on the Rio de los Teldes. 285 m. S.E. of Vera Cruz; Lat. 16° 30' N., Lon. 92° 40' W. Pop. about 8,000.

Ciudad Real, a mountainous and generally sterile province of Spain, occupying the S. of New Castile, and enclosed by Toledo on the N., Albacete on the E., Cordova and Jaen on the S., and Badajoz and Caceres on the W. Area, 11,768 sq. m. Pop. 247,991.

CIUDAD REAL, the capital of the above province, 97 m. S. of Madrid. Manuf. Woollens and glove-leather. Pop. 9,000.

Ciudad Rod'rigo, a fortified town of Spain, in Leon, on the Agueda, crossed here by a magnificent bridge, 30 m. N.E. of Coimbra; pop. 5,000. It was taken by the French in 1810, and retaken by the British in 1812, after a memorable siege.

Civet, n. (Zool.) A genus of carnivorous quadrupeds of the family Viverridae. The Viverra-civita, commonly called Civet-cat, a native of Africa and India, is about 2 feet 6 inches in length, and 10 or 12 inches in height; head long; muzzle sharp, as in the weasel, and a narrow, bristly mane runs from the poll of the neck to the tail. Its color is brownish-gray, with black bands and spots. It is a carnivorous animal, and preys on birds, small quadrupeds, and reptiles. The true *C.*'s most remarkable feature consists of a sort of pouch between the anus and sexual organs, in which collects an odorous liquid of considerable value in the perfume market. For the sake of this it is very commonly kept in confinement. The perfume is removed from the pouch about twice a week. The quantity yielded is about a drachm at each removal. In any quantity the odor is overpoweringly disgusting; but diluted infinitesimally, its perfume is most agreeable. It has been extensively used by perfumers. The American variety, found from Texas to California, is arboreal and easily tamed.

Fig. 610. — AMERICAN CIVET-CAT.

Civet, v. a. To scent or perfume with civet.

Civale, JEAN, an eminent French physician, b. 1792. About 1807 he studied under Dupuytren at the Hôtel Dieu in Paris, and soon obtained great reputation for his skill in operations for the stone. He first performed lithotomy in 1826; an operation since known by his name. Two prizes of 6,000 and 10,000 frs. were awarded to him in 1826 and 1827. He was elected member of the Academy of Medicine in 1833; and a member of the Academy of Sciences in 1847. Among his works, which are numerous, we quote here his *Traité de la Lithotritie, ou du Broiement de la Pierre dans la vessie* (1826); and his *Traité de l'Urethrotomie, ou de quelques procédés peu usités de traiter les Rétrécissements de l'Uretre*, (1849.) D. 1867.

Civ'ie, a. [Lat. *civicus*.] Pertaining to a city or citizen; civil; municipal; relating to civil affairs or honors; as, a *civie* feast.

Civie crown. (Rom. Antiq.) A garland of oak-leaves, given as a coronal of honor to a soldier who had saved the life of a citizen in battle.

Civida'le, a town of N. Italy, 10 m. E.N.E. of Udine, on the Natisone; pop. 6,925.

Civ'il, a. [Fr., from Lat. *civilis*, from *civis*, a citizen.] Of, or pertaining to, citizens; relating to a public community, or to the polity and government of a city or state; (used as distinct from *military*.) as, *civil* government, *civil* law, &c.; municipal; pertaining to an order of citizens, or any organized community; as, *civil* power.

"What dire effects from civil discord rise."—Addison.

—Having refinement of manners, or the manners of a city; urbane; polished; well-bred; courteous; complaisant; with manners, habits, and customs,—as opposed to those of rustics, and uncivilized persons.

"And civil life was by the Muses taught."—Roscommon.

—Grave; sober; not gay or showy; habit or deportment distinguishing a private citizen from a soldier, &c.

"Thus night oft see me in thy pale career,
Till civil suited morn appear."—Milton.

—Relating to domestic law, or actions at law other than military or criminal suits.

Civ'il Action, n. (Law.) In civil law, a personal action which is instituted to compel payment; or the doing some other thing which is purely civil. At common law an action which has for its object the recovery of private or civil rights, or compensation for their infraction.

Civil Architecture, n. That class of architecture applicable to the civil and domestic requirements of society;—in contradistinction to military, religious, and naval architecture.

Civilization, n. A cant term for intoxication. (R.)

Civil Commotion, n. (Law.) A general insurrection of the people; though it may not amount to rebellion, where a usurped power is ruling.

Civil Death, n. (Law.) That change of state of person, which is considered in the eye of the law as equivalent to actual demise.

Civil Engineering, n. The art or science of constructing such public works as are necessary to the civil requirements of society, as canals, docks, railroad bridges, &c. (Used in contradistinction to *military engineering*, which is exclusively devoted to war purposes.)

Civilian, n. One skilled in the civil law; one versed in law and government.

"The professors of that law, called civilians, because the civil law is their guide."—Bacon.

—One engaged in civil, not military or clerical pursuits, as, the "garb of a civilian."

—A university student of the civil law.

Civilist, n. A civilian. (R.)

Civility, n. [Lat. *civilitas*, from *civilis*, pertaining to citizens, civil.] Quality of being civil; good breeding; politeness; urbanity; courtesy; complaisance; refinement.

"Arts, learning, and civility were spread."—Derham.

—(pl.) Acts of good breeding or politeness; kindly courtesies.

"And shame, with love at strife,
Soon taught the sweet civilities of life."—Dryden.

Civilizable, a. Susceptible of being civilized.

Civilization, n. [Fr. *civilisation*; It. *civilizzazione*; Sp. *civilizacion*.] One of those words in common use which it is difficult accurately to define in words.

It derived from the Latin word *civis*, a citizen, probably from those who live in cities being more civilized than those who inhabit country parts, or from the living cities being one of the great characteristics of civilization. "Whatever," says J. S. Mill, "be the characteristics of what we call savage life, the contrary of these, the qualities which society puts on as it throws off the constitution of savagery." According to Guizot, the fundamental idea of *C.* is progress or development,—the perfecting of civil life or of society, properly so called, but comprising, also, the development of the individual internal life, the development of man himself, of his faculties, his sentiments, his ideas. Hence *C.* subsists on two conditions, and manifests itself by two symptoms—the development of social activity, and that of individual activity,—the progress of society, and the progress of humanity. *C.* denotes a state of advancement from the savage state to that higher and more perfect condition which both reason and revelation lead us to believe to be the ultimate destiny of the human race. The history of *C.* is the history of this progress either in nations or in the race. It is a subject of the utmost importance, and, as yet, little has been done towards its elucidation.

Civilize, v. a. [Fr. *civiliser*.] To reclaim from a savage, or barbarous state; to introduce civility and manners among a people, and instruct them in the arts and occupations of regular life; to refine.

Civilized, a. Reclaimed from savage life and manners; instructed in arts, learning, and civil observance; as, a *civilized* community.

Civilizer, n. He who reclaims others from a wild or savage life; one who teaches the rules and customs of a civilized society.

"The civilizers! the disturbers say;
The robbers, the corrupters of mankind."—Philips.

—That which tends to reclaim from savagery.

Civil Law. (Law.) By this term is generally designated the Roman jurisprudence, *Jus civile Romanorum*. In France, previously to the introduction of the *C. Civil*, as in many other countries, the Roman law was the common law; and even at the present time it exercises dominion in every state in Europe except England. In America, it is the foundation of the law of Louisiana, Canada, Mexico, and of all the republics of S. America. Its influence on the formation of the common law of England is evident, and it is generally admitted that the whole equity jurisprudence prevailing in England and the United States is mainly based on the civil law.

ROMAN LAW.

Civ'il List, n. (Polit.) A term applied in Europe to the money allowance granted by the parliament, or national chamber of representatives of a constitutional State, for the maintenance of a reigning monarch's household.

Civ'ily, adv. In a civil or courteous manner; with civility.

"I will deal civ'ily with his poems."—Dryden.

—In a manner concerning private rights or immunities—used in opposition to *criminally*.

"That accusation is either *civ'ily* commenced for the satisfaction of the party injured; or else *criminally*, that is some public punishment."—Ayliffe.

—Not according to nature, but by force of law.

“Civilly defunct, before naturally dead.”—Fuller.

—In a manner relating to government, or to the rights or character of a member of the community.

Civil Remedy, n. (Law.) The remedy which a party injured by the commission of a tortious act has by action against the party committing it; as distinguished from the proceeding by indictment, by which the wrong-doer is made to expiate the injury done to society.

Civil Service. The term applied to the body of men by whom the executive business of a country is carried on;—used in contradistinction to naval and military services. See CIVIL SERVICE REFORM, in SECTION II.

Civil State, n. (Polit.) The whole of the body-politic, not included under the states military, naval, and ecclesiastical.

Civil Suit, n. (Law.) See CIVIL ACTION.

Civil War, n. An internecine war, or a conflict entered into between citizens of the same country;—in opposition to a foreign war, or a struggle with another nation. The wars of the Roses, and the war between Charles I. and the Parliament, in England; and, in this country, the stupendous war caused by the secession of the Southern States, are the most notable civil wars of modern times.

Civil Year, n. See YEAR.

Civism, n. [Fr. *civisme*.] State of citizenship.

Civita Castellana, (the anc. *Fabryna Vetus*), a town of Central Italy, 30 m. N.E. of Rome; pop. 4,436.

Civita de Penna, (the anc. *Pina Vestina*), a town of S. Italy, 10 m. W. of Pescara; noted for its manufactures of silk flowers. Pop. 11,000.

Civita San Angelo, a town of S. Italy, near the Adriatic, 25 m. S.E. of Teramo; pop. 7,455.

Civita Vecchia, (che'-ve-ta vek'-ke-a), (the anc. *Centum Cellæ*), a town of Central Italy, on the Mediterranean, 38 m. W.N.W. of Rome; Lat. 42° 4' N., Lon. 11° 45' E. The harbor, which is excellent, and was constructed by the Emperor Trajan, is formed by two artificial moles projecting into the sea, while a third, constructed between the two, serves to protect the harbor from the heavy sea; upon this third and outward mole there is a good light-house, some 80 feet above the level of the sea. Within the port, there is a small dock, and an arsenal. The town of C. V. is small, and has no buildings of note. The land side is protected by fortifications, the principal of these is the Castle erected for Pope Julius II, after a design attributed to Michael Angelo. Under the Popes this port enjoyed commercial freedom and sundry special privileges.

Civitella del Tronto, a town of S. Italy, 10 m. N. of Teramo. Here in 1053, Robert Guiscard gained a complete victory over the forces of Pope Leo IX., and the Emperor Henry III. of Germany. Pop. 6,156.

Clabber, n. Same as BONNY-CLABBER, *q. v.*

Clachan, (klak'-an), [Scot., from Gael. *clach*, a Druidical stone.] In Scotland, a small hamlet containing a church; as, the clachan of Aberfoyle.

Clack, (klak), n. [W. *clac*, a sharp noise; Fr. *clacquet*, the clapper of a mill; formed from the sound.] A sharp abrupt sound continually repeated, made by striking another object; a click.

“His tongue with its everlasting clack.”—Hudibras.

An instrument resembling a bell, used in a mill by way of a signal.

“And mark the clack how justly it will sound.”—Betterton.

Continual or excessive talk; prate; chatter; as, a woman's clack.
